V.2

AN  
EXPOSITORY LEXICON  
OF  
MEDICINE AND THE ALLIED SCIENCES.

VOL. II.

**Cetra'ria**, B. Ph. (L. *cetra*, a shield. F. *mousse d'Islande*; G. *Islandisches Moos*, *Lang-enmoos*.) The entire lichen *Cetraria islandica*. It is foliaceous, lobed, crisp and brittle when dry, soft, leathery, and cartilaginous after being soaked in water. It has a bitter, mucilaginous taste. It contains lichenin, cetraric acid, lichen-stearic and fumaric acids, and thallochlor. It is nutritious, demulcent, and tonic, and is used in pulmonary affections and in chronic diarrhoea and dysentery.

Also, a Genus of the Family *Ramalinae*, Group *Lichenes gymnocarpi*.

**C. islandica**, Ach. (G. *Islandische Flechte*.) Iceland moss. Supplies *Cetraria*.

**C. nivalis**, Ach. (L. *nivalis*, belonging to snow.) Hab. mountains in Europe. Used as *C. islandica*.

**Cetraric acid**.  $C_{15}H_{16}O_8$ . The bitter principle of the *Cetraria islandica*, or Iceland moss, found chiefly in the outer layer. It consists of fine needles, colourless, almost insoluble in water, soluble in boiling alcohol.

**Cetrarin**. A synonym of *Cetraric acid*.

**Cetrarinum**. Same as *Cetrarin*.

**Cetrarium**. Same as *Cetrarin*.

**Cettona**. Italy; in Tuscany. A carbonated chalybeate water, called *Acqua del Pantano*, is found here.

**Cetyl**. (L. *cetaceum*, spermaceti;  $\epsilon\lambda\upsilon$ , the material of which anything is made.) A radicle, the oxide or alcohol of which exists in spermaceti.

**C. alcohol**.  $C_{16}H_{34}O$ . A white crystalline substance, which, combined with palmitic acid, constitutes the chief part of spermaceti. It melts at  $50^{\circ}$  C. ( $122^{\circ}$  F.), is insoluble in water, soluble in alcohol and ether; also called *ethyl*. By some, it is believed not to be a definite compound.

**C. hydrate**. Same as *C. alcohol*.

**C. palmitate**.  $C_{32}H_{64}O_2$ , or  $C_{16}H_{32}O_2$ . The substance which, with a little sperm oil, constitutes spermaceti. Also called *Cetin*.

**Cetylene**. Same as *Cetin*.

**Cetyllic**. Relating to *Cetyl*.

**C. alcohol**. Same as *Cetyl alcohol*.

**C. palmitate**. Same as *Cetyl palmitate*.

**Cetylid**.  $C_{22}H_{42}O_5$ . A derivative of cetyl alcohol obtained by the action of strong sulphuric acid on cerebrin.

**Ceuthorrhynchus**. (Κεῦρω, to conceal;  $\rho\acute{\upsilon}\chi\omicron\varsigma$ , a snout.) A Genus of the Group *Cryptopentamera*, Order *Coleoptera*, Class

*Insecta*. The larvae attack various kinds of coleworts, *C. assimilis* being found in young turnip and rape seeds. *C. nupsi* in the stems of turnip, and *C. macula alba* in poppy heads.

**Cevadic acid**. (F. *acide cévadique*; G. *Cevadinsäure*.) A volatile fatty acid found in the seeds of *Veratrum sabadilla*. It crystallises in white macreous needles, fusing at  $29^{\circ}$  C. ( $85^{\circ}$  F.), and smells like butyric acid. Also called *Sabadillic acid*, and latterly regarded as *Methylcrotonic acid*.

**Cevadilla**. (Span. *cebada*, barley.) See *Sabadilla*.

**C. hispanorum**. (L. *Hispania*, Spain.) The *Veratrum sabadilla*.

**Cevadina**.  $C_{22}H_{43}NO_9$ . A later name for the crystallisable base found by Merck in *sabadilla*, and called by him *veratria*.

**Cevil**. A Paracelsian term for a certain hard substance in the earth, similar to a calculus in man, indurated from an earthy tartar by the spirit of urine, which is in the liquor of the earth. It was thought to be an appropriate remedy against the formation of stone or gravel.

**Cevina**.  $C_{27}H_{43}NO_8$ . A base obtained along with cevadic acid by the saponification of cevadina.

**Ceylon'**. An island in the Indian Ocean, separated on the north-west from the extreme south-east coast of India by the Gulf of Manaar. The climate is warm and moist, with a slight daily variation in the lowlands; at elevations of 6000 feet, where there are two or three hill stations, it is dry and bracing in the dry season, with a considerable daily range; and in the wet season very moist, but not unhealthy. The chief diseases are ague, dysentery, and cholera. The climate is said to be beneficial in nervous disorders, liver affections, dyspepsia, and phthisis.

**C. cardamom**. See *Cardamom*, *Ceylon*.

**C. cinnamom**. See *Cinnamon*, *Ceylon*.

**C. moss**. The *Gracilaria lichenoides*. A seaweed of the Indian ocean, used as a demulcent and nutritive.

**C. sickness**. A synonym of *Beriberi*.

**Cha'ab**. The fruit of *Piper longum*.

**Cha'at**. The dried leaves of *Catha edulis*. Used as tea in Northern Africa.

**Chabetout**. France; Département du Puy de Dôme. Mineral water from three sources, of a temperature of  $14^{\circ}$  C. ( $57.2^{\circ}$  F.), containing a little bicarbonate of soda, a small amount of iron, and much carbonic acid. Used in dyspepsia, hepatic congestion, and gravel, in

# CHACA—CHAIR.

an emic and scrofulous persons; also, as a collyrium in conjunctivitis and scrofulous keratitis.

**Cha'ca.** The fruit of *Sechium edule*.

**Chaca'ca.** The bark of *Tinospora cordifolia*.

**Chac'arilla.** Same as *Cascarilla*.

**Cha'co Indians.** Inhabitants of the South American desert Gran Chaco. An inferior race, with low foreheads, high cheek-bones, wide nostrils, projecting under lips, and tattooed cheeks.

**Chad.** Same as *Shad*.

**Chadlock.** The *Brassica sinapistrum*.

**Chænina.** (*Χαίνω*, to open wide.) Name for diastase in reference to its converting powers.

**Chænon.** Same as *Chænina*.

**Chæradodia.** A Genus of the Nat. Order *Amoryllidaceæ*.

**C. chilensis.** An infusion of the leaves is used as a diuretic and purgative.

**Chæraphrosynê.** (*Χαίρω*, to rejoice; ἀφροσύνη, senselessness. F. *chæraphrosyne*; G. *die lustige Wahnsinn*.) Term for mental derangement with cheerfulness of disposition.

**Chærefolium.** Same as *Cerefolium*.

**Chæromania.** (*Χαίρω*, to rejoice; *μανία*, madness.) A form of insanity in which the patient is very cheerful.

**Chærophyllum.** (*Χαίρω*, to rejoice; φύλλον, a leaf; from its luxuriant foliage.) A Genus of the Nat. Order *Umbellifere*.

**C. angulatum.** (*L. angulatus*, furnished with corners.) The *Anthriscus sylvestris*.

**C. anthriscus.** The *Anthriscus vulgaris*.

**C. aromaticum.** Jacq. (*L. aromaticus*, fragrant.) Musk chervil. Had a reputation as a diuretic and lithontriptic.

**C. bulbosum.** Willd. (*L. bulbosus*, a bulb. F. *cerfuit bulbeux*.) Bulbous root esculent.

**C. cicutaria.** Vill. (*L. cicuta*, the hemlock.) The root and leaves are said to be poisonous.

**C. cerefolium.** The *Anthriscus cerefolium*.

**C. monogynum.** (*Μόνος*, single; *γυνή*, a female.) The *Anthriscus sylvestris*.

**C. odoratum.** The *Myrrhis odorata*, or sweet cicely.

**C. sativum.** (*L. sativus*, that which is sown.) The *Anthriscus cerefolium*, or officinal chervil.

**C. sylvestre.** The *Anthriscus sylvestris*.

**C. temulum.** (*L. temulus*, for *temulentus*, intoxicated.) The *Anthriscus sylvestris*.

**C. verticillatus.** (*L. verticillus*, the whirl of a spindle.) The *Anthriscus sylvestris*.

**Chæta.** (*Χαίτη*, flowing hair.) Used in Botany for a bristle.

**Chætê.** (*Χαίτη*, the mane of quadrupeds.) Old term for the hair at the back of the head; also the hair about the temples. (Gorrens.)

**Chætognatha.** (*Χαίτη*; *γνάθος*, the jaw.) A Class of the Subkingdom *Vermes*. Free, elongate, marine, transparent, monœcious animals, having a head possessing 4 to 6 sets of preoral setæ, and prehensile hook-like bristles on each side of the mouth, a body with a fin-like membrane on each side, and a tail possessing a striated fin. The intestine is straight. The nervous system consists of a ventral ganglion, sending a pair of lateral branches forwards to unite in a preoral hexagonal ganglion and a pair of lateral branches running backwards. The class contains one genus, which has by some been looked on as a vertebrate, by others, as a mollusc.

**Chætoph'ora.** (*Χαίτη*; *φορέω*, to carry.) A term which includes the Annelids which have bristle-bearing foot-tubercles, such as tube-worms and sand-worms; and also those which have locomotive bristles, such as earth-worms.

**Chætop'oda.** (*Χαίτη*; *πούς*, a foot.) An Order of the Class *Annelida*. Marine worm-like animals, with tubular, bristle-bearing feet. It includes all the true worms. Body rounded, elongated, with muscular septa dividing it into rings, and with the mouth and anus at the opposite poles. Skin chitinous, thin in the water-inhabiting, thicker in the land species, with pores for the ducts of mucous glands, possessing in different instances many various appendages. Locomotion creeping or swimming, aided by bristles, often more or less modified. Nervous system a chain of double ganglia, with well-marked cephalic masses. Circulating system sometimes lacunar, sometimes with definite vessels, but rarely with a distinct heart. Respiration performed through the skin, or sometimes by the intestine. Sexes usually separate, sometimes monœcious, and occasionally presenting alternations of generation. Development sometimes without, sometimes with, manifold metamorphosis.

**Chætosis.** (*Χαίτη*, the hair. F. *chétose*; G. *das Borststücken der Haare*.) Term for a bristly state of the hair.

**Chafe.** (Old F. *chauser*, to warm; from Low L. *calefacio*, to warm.) Originally, to warm; now, to inflame by rubbing.

**C. weed.** The *Gnaphalium germanicum*, from its use against chafing.

**Chaff.** (Sax. *ceaf*, chaff. F. *paille*; G. *Spreu*, *Spreublätchen*.) The dry scales or husks constituting the refuse after winnowing of corn.

In Botany, applied to small scales, and dry bracts, and also to the glumes of grasses.

**Chaff bone.** (Sax. *ceaf*, the jaw; Dan. *kjæft*, the jaw.) The lower jaw-bone.

**Chaf'fy.** (Sax. *ceaf*.) Of the nature of, like, or consisting of, or possessing, chaff.

**Chaf'ing.** (Same etymon as *Chafe*.) The red inflamed condition of skin which occurs from friction, as between the thighs from walking, or between the folds of skin in fat infants.

**Châgres.** Indians inhabiting the Atlantic side of the Isthmus of Panama.

**Chag'ual gum.** A gum obtained from the *Papa banuginosa*, and other species.

**Chai.** Negroes of the Nile, inhabiting the district of Sobal, near the Nikuar.

**Chaille'tia.** A Genus of the Nat. Order *Chaillietaceæ*.

**C. toxicaria.** (*Τοξικόν*, a poison.) The fruit is poisonous, and goes by the name of ratsbane.

**Chaillietia'ceæ.** A Nat. Order of monochlamydeous Exogens, having polypetalous flowers, valvate calyx, stamens alternate with the petals, and pendulous seeds.

**Chain.** (F. *chaîne*, from L. *catena*.) A series of links.

**C. electric.** See *Electric chain*.

**C. vip'er.** A name given by the Europeans in India to the *Diabola Russellii*.

**Chair.** (Old F. *chaïere*, from L. *cathedra*, a raised seat; from *καθίζω*, a seat. F. *chaïse*; I. *sedia*, *cattedra*; G. *Stuhl*.) A movable seat with a support for the back.

**C., obstetric.** (*L. obstetrix*, a midwife.

# CHAIROMANIA—CHALICOSIS.

*F. chaise d'accouchement*; *G. Geburtsstuhl*.) A chair in which a woman is, in some countries, placed during the birth of the child.

**C., whirling.** A chair so arranged that it could be revolved with great rapidity. Formerly in use to put a violent maniac into for the purpose of quieting him by the rapid motion round and round.

**Chairomania.** Same as *Cheromania*.

**Chala'cium.** The same as *Chalazion*.

**Chalasis.** (*Χαλᾶω*, to relax, or grow languid.) Old term, used by Hippocrates, 6, *Epid.* vii, 29, and Galen, *de Tū. San.* iii, 6, for relaxation or languor.

Also (*F. chalasia*), a partial separation of the cornea from the sclerotic.

Also, improperly used by Helling to denote obliteration of the pupil by deposit of lymph.

Also, Sauvages' term for struma in pigs.

**Chalas'mus.** Same as *Chalasis*.

**Chalasoder'mia.** See *Chalasodermia*.

**Chalastic.** (*Χαλᾶω*, to relax.) Relaxing, or having the property of producing relaxation.

Applied to medicines that reduce, or undo tension of parts, according to Galen, *de Semp. Fac.* v, 11.

Also, applied to laxative medicines.

**Chalastoder'mia.** (*Χαλαστός*, relaxed; *δέρμα*, skin.) Flabbiness of skin.

**Chalas'trum.** (*Χαλαστρα*, a place on the Thermaic Gulf in Macedonia.) Saltpetre, because a fine kind was found there.

**Chalaza.** (*Χάλαζα*, hail.) Same as *Chalazion*.

Also (*F. chalaze*; *G. Eidotterhändchen*), a twisted or spiral cord, extending from each polar extremity of the yolk to the adjacent extremity of the bird's egg; it consists of membranous albumen coiled into opaque white knots, whence its name; its outer end nearly reaches the outer layer of albumen, and the inner end dilates and loses itself in the dense layer of albumen next outside the fluid granular layer surrounding the yolk. The chalazae have been supposed to support the yolk by some, and to admit of its rotation in the general mass of albumen, so that in whatever position the egg is placed the cleavricula, or embryo, is uppermost and nearest to the heat afforded by the breast of the fowl; by others, they have been thought to act as buffers.

Also (*G. Hahnentritt*), a synonym of the *Cleavricula*, or tread of the bird's egg. It is possible that there is some confusion in this application, as the chalazae have been called the tread.

Also (*F. chalaze*; *G. Hagelhecke*), the organic base of the nucleus of the ovule, being the place where the vessels enter the ovule from the placenta, and where the nucleus and the coats of the seed are intimately connected.

**Chalaz'al.** Relating to a *Chalaza*.

**C. aril'ius.** See *Arillus*.

**Chalazif'erous.** (*Chalaza*; *L. fero*, to bear.) Having or bearing chalazae.

**C. mem'brane.** The layer of albumen round the yolk of a bird's egg, to which the chalazae are attached.

**Chalaz'ion.** (*Χαλαζιον*, dim. of *χάλαζα*, hail. *F. chalazion*; *L. grandine*; *G. Hagelkorn*.) A tumour of the eyelid caused by retention of the Meibomian secretion from inflammation of the ducts or of the glands. It may grow to the size of a pea, or larger, and appear as a bluish or yellowish-white projection on the inside of the eyelid; sometimes it projects outwardly.

**C. terreum.** (*L. terreus*, earthen.) A chalazion containing salts from inspissation of, and calcareous deposit in, the Meibomian secretion.

**Chalaziophy'ma.** (*Χαλαζιον*; *φύμα*, a tumour.) A chalazion-like tumour.

**Chalaz'ium.** Same as *Chalazion*.

**Chalazonephritis.** (*Χάλαζα*, hail; *νεφρίτις*, disease of the kidneys.) A granular disease of the kidney, or Bright's disease.

**Chalazo'sis.** (*Χαλαζωσις*.) The same as *Chalaza* and *Chalazion*.

**Chal'banē.** (*Χαλβάνη*.) An old term for galbanum.

**Chalcant'hē.** (*Χαλκάνθη*.) The same as *Chalcanthum*.

**Chalcant'hos.** Same as *Chalcanthum*.

**Chalcant'hūm.** (*Χαλκάνθον*.) A kind of ink made of sulphate of copper.

Also, sulphate of iron.

Also (*Χαλκός*, brass; *άνθος*, a flower), flowers of brass or verdigris.

**C. al'bum.** (*L. albus*, white.) Sulphate of zinc.

**Chalce'don.** Same as *Chalcedonius*.

**Chalcedon'ic.** Relating to the *Chalcedony*.

**Chalcedo'nus.** Old epithet of a medicine against inveterate purulent affections of the ears, mentioned by Galen.

Also, a name for carnelian.

**Chalce'dony.** (*Χαλκηδών*, a town of Bithynia.) A siliceous mineral, allied to the opal; formerly used in medicine.

**Chalce'tum.** Old name for a kind of herb; supposed to be the *Valerianella olitoria*.

**Chal'cha Mong'ols.** One of the two chief divisions of the Eastern Mongols inhabiting the region to the north of the desert of Gobi.

**Chalci'tis.** (*Χαλκίτις*.) Another name for the substance coleothar, or the brownish-red oxide of iron, remaining after distillation of the acid from sulphate of iron.

**Chalcoideum os.** Old term for the os cuneiforme of the tarsus; of which, however, there are three.

**Chal'cos.** (*Χαλκός*.) An old name for brass.

**Chal'cus.** (*Χαλκός*.) Name of an ancient weight, the sixth part of an obolus, and so the twelfth of a scruple.

**Chaldæ'ans.** Same as *Chaldees*.

**Chal'dees.** (*G. Chaldæer*.) The inhabitants of Chaldaea or Babylonia, especially of the south-western part of the modern Pashaliks of Basra and Bagdad. They are a semitic race, and were a dominant race 650 B.C. They are probably descendants of the Assyrians.

**Chaldet'te.** France; Département de la Lozère. Mineral waters, temp. 31° C. (87.8° F.), containing calcium and magnesium carbonate, and chloride of sodium, with traces of a bituminous substance. Used in gastric and bronchial affections, anaemia, and chlorosis; and as baths in chronic articular rheumatism.

**Chalicog'enous.** (*Χάλιξ*, rubble; *γενος*, kind.) Same as *Calceiferous*.

**Chalicoph'orous.** (*Χάλιξ*, rubble; *φίρω*, to bear.) Same as *Calceiferous*.

**Chalico'sis.** (*Χάλιξ*.) The pulmonary affection produced by the inhalation of fine siliceous dust or sand by stone-masons, pearl-shell cutters, and such like workers. It is a form of *Pneumonoconiosis*.

**C. pulmo'num.** (*L. pulmo*, the lung. *G. Kalkungen, Kieslungen*.) The disease occurs

# CHALICRATUM—CHAMÆDRYS.

in stonemasons, potters, and those exposed to the breathing of dust containing silica. It produces cough and expectoration of sputa containing silica, shortness of breath, loss of flesh, sometimes hæmoptysis, and then the signs of cavities in the lungs. These organs contain numerous hard nodules, containing silica and carbon, which often soften and break down into cavities.

**Chalicratum.** (Χάλις, pure wine; κερ-  
ρατῆναι, to mix.) An old term for a mixture of  
wine and water.

**Chal'ni.** (Χαλινός, a bridle.) Those  
parts of the cheeks contiguous to the angles of  
the mouth, or where the bridle is inserted in the  
horse, were anciently so termed according to  
Blancardus.

**Chal'inoplasty.** (Χαλινός; πλάσσω, to  
form.) The operation for forming a new frænum,  
or angle of the mouth.

**Chalk.** (Sax. *ceale*, from *L. calx*, lime. F.  
*cray*; I. *creta*; G. *Kreide*.) Carbonate of lime.  
See *Creta*.

**C., camph'orated.** A mixture of pow-  
dered camphor and chalk in the proportion of 1  
to 8 or 15, used as a dentifrice.

**C. eating.** A form of diseased appetite in  
which there is a longing for chalk.

**C., French.**  $4\text{MgSiO}_3 \cdot 8\text{SiO}_2 \cdot 4\text{H}_2\text{O}$ . A form  
of steatite, a silicated magnesian mineral. Used  
in powder as a desiccative.

**C. mixture.** See *Mistura cretæ*.

**C., precip'itated.** See *Creta præcipitata*.

**C., prepa'ed.** See *Creta præparata*.

**C., red.** Ruddle; a red argillaceous ore of  
iron, being decomposed hæmatite. It was for-  
merly used in the manufacture of some plasters.

**C. stones.** (F. *calcul arthritique*; G.  
*Kreidestein*.) The concretions deposited in the  
auricle, and the joint ends of the bones, espe-  
cially of the hands and feet, of those who are  
severely afflicted with gout; so called from their  
resemblance to chalk. They are composed in  
great part of urate of soda; with, sometimes,  
phosphate and carbonate of lime.

**Chalk Creek Springs.** America; 5  
miles from Arkansas River. Altitude 8000 feet.  
Temp. various, highest 150° F. Some of them  
are ferruginous; one is a clay or mud bath.

**Challes.** France; Département de la  
Haute-Savoie, near Aix-les-Bains. Mineral  
waters, temp. 15° C. (59° F.), containing sul-  
phuret of sodium and minute quantities of  
sodium bromide, and potassium iodide. Used as  
adjuncts to the waters of Aix-les-Bains.

**Chal'onnes.** France; Département de  
Maine-et-Loire; known in the neighbourhood as  
Fontaine Sainte-Maurille. A very weak chaly-  
beate water.

**Chalot'.** The *Allium asculonicum*. See  
*Shallot*.

**Chalusset.** A mineral water arising at  
a little distance from, and of the same nature as,  
*Bromont*.

**Chalybeate.** (Χάλυβ, iron, or steel. F.  
*chalybé*; G. *eisenartig*, *stahlartig*.) Belong-  
ing to, or partaking of the nature or quality of, or  
containing, iron.

**C. bread.** Bread containing a grain of  
lactate of iron to the ounce.

**C. plas'ter.** The *Euplastrum ferri*.

**Chalybeated.** (Same etymon.) Con-  
taining iron.

**C. tartar.** The *Ferrum tartaratum*.

**Chalybis rubigo præpara'ta.**

(L. *chalybs*, steel; *rubigo*, rust; *præparatus*,  
prepared.) Same as *Rubigo ferri*.

**Chalybocrenæ.** (Χάλυβ, steel; κρήνη,  
a spring.) Chalybeate mineral waters or springs.

**Chalybopegæ.** (Χάλυβ; πηγή, a  
spring.) Chalybeate mineral waters or springs.

**Chalybs.** (Χάλυβ. F. *acier*; G. *Stahl*.)  
Steel.

**C. tartariza'tus.** A name for *ferrum*  
*tartaratum*.

**Cha'ma.** (Χήμη, a cockle.) Old name for  
a measure of about two teaspoonfuls, or two  
drachms; being about the size of a cockle-shell.  
Also called *Cheme*.

**Chamæacte.** (Χαμαί, on the ground;  
ἀκτῆ, the elder tree.) The dwarf elder tree,  
*Sambucus ebulus*.

**Chamæbalanus.** (Χαμαί, on the  
ground; βάλλανος, an acorn. G. *Erdnuss*.) Old  
name for a plant, supposed to be the *Lathyrus*  
*tuberosus*.

**Chamæbatus.** (Χαμαί, on the ground;  
βάτος, a brauble.) Old name for the dewberry,  
*Rubus cœsius*.

**Chamæbux'us.** (Χαμαί, on the ground;  
πύξος, the box tree.) The *Polygala chamæ-*  
*buxus*.

**Chamæcedrus.** (Χαμαί, on the ground;  
αἰῶρος, the cedar tree.) The *Artemisia san-*  
*tonica*.

**Chamæceph'alous.** (Χαμαί, on the  
earth, hence low, dwarfish; κεφαλή, the head.)  
The same as *Platycephalus*, having a vertical  
index of less than 70 per cent.

**Chamæceras'us.** (Χαμαί; κερασός,  
the cherry tree.) The honeysuckle, *Lonicera*  
*periclymenum*.

**Chamæcis'sus.** (Χαμαί, on the ground;  
κισσός, the ivy plant.) The ground ivy, *Gle-*  
*choma hederacea*.

**Chamæcle'ma.** (Χαμαί, on the ground;  
κλήμα, a young shoot.) The ground ivy, *Gle-*  
*choma hederacea*.

**Chamæcrista.** (Χαμαί; L. *crista*, a  
crest or plume.) The *Cuscuta chamæcrista*.

**Chamæcycē.** (Χαμαί; σκυῖ, a fig tree.)  
The *Euphorbia chamæcycē*.

**Chamæcypariss'sus.** (Χαμαί; κυπά-  
ρισσος, the cypress. G. *Erdcypresse*.) The *Sau-*  
*tolina chamæcyparissus*.

**Chamædaph'ne.** (Χαμαί; δάφνη, the  
laurel.) Old name applied to the *Ruscus hypo-*  
*glosson*, or Alexandrian laurel; to the *Pinea*  
*minor*, or periwinkle; and to the *Daphne lau-*  
*reola*, or spurge laurel, and the *D. mezereon*.

**Chamædrops.** The same as *Chamædryds*.

**Chamædryites.** Old name for a wine  
in which germander, *Teucrium chamædryds*, has  
been steeped.

**Chamædry's.** (Χαμαί, on the ground;  
ἔρως, the oak.) The germander, *Teucrium*  
*chamædryds*; because it grows low, and its leaves  
are like those of the oak.

Also, the *Veronica chamædry's*.

**C. inca'na marit'ima.** (L. *incanus*,  
hoary; *maritimus*, belonging to the sea.) The  
*Teucrium marum*.

**C. mi'nor re'pens.** (L. *minor*, less; *re-*  
*pens*, creeping.) The *Teucrium chamædry's*.

**C. officina'lis.** Mönch. The *Teucrium*  
*chamædry's*.

**C. palus'tris.** (L. *paluster*, marshy.) The  
water germander, *Teucrium scordium*.

**C. scor'dium.** The *Teucrium scordium*.

# CHAMEGEIRON—CHAMESPARTIUM.

**C. spuria.** (*L. spurius*, false.) The *Perronica officinalis*.

**C. sylvestris.** (*L. sylvestris*, belonging to a wood.) The *Ferula chamaedrys*.

**C. vulgaris.** (*L. vulgaris*, common.) The *Teucrium chamaedrys*.

**Chamægeiron.** (*Xaui*; αἰγυρον, the black poplar.) The colt's foot, *Tussilago farfara*.

**Chamælæa.** (*Xaui*; ἐλάτα, the olive tree.) The dwarf olive tree, *Daphne alpina*.

Also, the *Cnicorum triecorum*.

**Chamælæg'nus.** (*Xaui*; ἐλάτρυος, a Boeotian marsh plant.) The Dutch myrtle, *Myrica gale*.

**Chamælæites.** Old name for a wine impregnated with the *Chamæleon*.

**Chamælaucia'ceæ.** A Nat. Order of epigynous calycifloral Exogens, having a one-celled ovary, ascending ovules, axile placenta, dotted leaves, and the embryo fused into a solid mass.

Or, a Tribe of the Family *Myrtaceæ*, having a dry unilobular fruit, basilar seeds, five-lobed calyx, and free stamens.

**Chamæleon.** (*Xaui*, on the ground; λέων, a lion.) A Genus of lizards of the Sub-order *Dendrosauria*, Order *Sauria*, remarkable for the great size of their lungs, and for their power of changing colour under irritation or excitement. The blood and gall were formerly believed to be medicinal.

A name given to certain thistles, from the variety and uncertainty of their colours, like the changing hues of the chamæleon.

Also, a name given by Dioscorides to a composite plant used in medicine, and which has been variously referred to the Genera *Cirsium*, *Acaena*, *Carlina*, *Atractylis*, and *Cardopathium*.

**C. albus.** (*L. albus*, white.) The *Atractylis gummifera*.

**C. mineralis.** Mineral chamæleon. Name for a green-coloured mass obtained by mixing peroxide of manganese with an equal weight of nitre or carbonate of potash, and fusing at a red heat; this, dissolved in water, is at first green, then blue, purple, and red successively; it then throws down a brown precipitate, and becomes colourless altogether.

**C. niger.** (*L. niger*, black.) The *Cardopathium corymbosum*.

**C. verus.** (*L. verus*, true.) The *Cnicus lanatus*, or distaff thistle.

**Chamæleucæ.** (*Xaui*, on the ground; λεύκον, the white poplar.) The colt's foot, *Tussilago farfara*, the *Petasitis officinalis*, and also the *Caltha palustris*.

**Chamælinum.** (*Xaui*; λίνον, flax.) The *Linum catharticum*.

**Chamæliretin.** A resinous body which, along with glucose, is produced by the action of dilute acids on chamælinin. It is soluble in alcohol and ether, insoluble in water.

**Chamælinin.** A yellowish neutral bitter powder obtained from the root of *Chamælinum lateum*. It is soluble in water and alcohol, and the solutions froth like those of saponin.

**Chamælinrium.** (*Xaui*; λείριον, a lily.) A Genus of the Nat. Order *Melanthaceæ*.

**C. carolinianum.** The *C. luteum*.

**C. luteum.** Gray. (*L. luteus*, yellowish.) Blazing star, devil's bit. Hab. North America. The root is bitter and contains chamælinin; it is

used in atonic dyspepsia, and as an anthelmintic.

**Chamæmelon.** Same as *Chamæmelum*.

**Chamæmelum.** (*Xaui*, on the ground; μήλον, an apple.) The chamomile, *Anthemis nobilis*, from its odour being like that of the apple.

**C. arvens'e.** The *Anthemis arvensis*.

**C. chrysanthemum.** The great ox-eye daisy, *Chrysanthemum leucanthemum*.

**C. cotula.** The *Anthemis cotula*.

**C. foetidum.** (*L. foetidus*, stinking.) The stinking chamomile, *Anthemis cotula*.

**C. nob'ile.** (*L. nobilis*, celebrated.) The chamomile, *Anthemis nobilis*.

**C. odora'tum.** (*L. odoratus*, fragrant.) The *Anthemis nobilis*.

**C. tinctorium.** The *Anthemis tinctoria*.

**C. vulga're.** (*L. vulgaris*, common.) The wild chamomile, *Matricaria chamomilla*.

**Chamæmorus.** (*Xaui*; μύρτα, the mulberry tree.) The cloudberry, *Rubus chamæmorus*.

Also, the ground pine, *Ajuga chamaepitys*.

**C. norveg'ica.** The *Rubus chamaemorus*.

**Chamæmyrtus.** (*Xaui*; μύρτος, the myrtle tree.) The dwarf myrtle, *Ruscus aculeatus*, and also the *Polygala vulgaris*.

**Chamænerion monta'num.** (*Xaui*; νίπτον, the olander; *L. montanum*, belonging to a mountain.) The *Epilobium montanum*.

**Chamæpeu'ce.** (*Xaui*; πεύκη, the pine tree.) The stinking ground pine, *Camporosma monspeliensis*.

Also, a Genus of the Nat. Order *Compositæ*.

**C. casabonæ.** De Cand. Fish thistles. Used as a pot-herb when young.

**Chamæpitys.** (*Xaui*; πύρος, the pine tree. *G. Felciopressæ*.) The common ground pine, *Ajuga chamaepitys*.

**C. anthyllus.** (*Ἀνθύλλος*, a doubtful plant.) The *Ajuga iva*.

**C. moscha'ta.** (*Mod. L. moschatus*, musky.) The French ground pine, *Ajuga iva*.

**Chamæplion.** The Jack-in-the-hedge, *Sisymbrium albaria*.

**Chamæplium officina'le.** The *Sisymbrium officinale*.

**Chamæraphanus.** (*Xaui*, on the ground; ραφάνος, the radish.) Old name for the upper part of the root of *Apium graveolens*; also, for the dwarf radish.

**Chamærhododen'dron.** (*Xaui*; ροδόδενδρον, the rose laurel.) A name for the *Azalea pontica*. See *Egolettron*.

**Chamæriphe's.** (*Χαμαίριφός*, thrown to the ground.) The *Chamaerops humilis*.

**Chamæarithos.** The *Gypsophila struthium* and the *Saponaria officinalis*.

**Chamærops.** (*Xaui*; ρόνη, a low shrub.) A Genus of the Nat. Order *Palmaceæ*.

**C. humilis.** (*L. humilis*, lowly.) Hab. South Europe. Said to yield a form of bdellium. Its fruit, the wild date, is astringent.

**C. serratula.** (*L. serratulus*, from *serrula*, a small saw.) A starch prepared from the roots is used by Indians of Florida as a food.

**Chamærubus.** (*Xaui*; rubus, a blackberry bush.) The cloudberry tree, *Rubus chamæmorus*.

Also, the *Rubus saxatilis*.

**Chamæspartium.** (*Xaui*; σπάρτιον,

# CHAMÆSYCĒ—CHANCRE.

the Spanish broom plant.) The dyer's broom, *Genista tinctoria*.

**Chamæsyce.** The *Euphorbia chamæsyce*.

**Cham'bar.** (Arab.) An old term for mag-nesia.

**Cham'ber.** (F. *chambre*; L. *camera*; Gr. *καмера*, a vault. I. *camera*; S. *camara*; G. *Kammer*.) A room; an enclosed space.

**C., air.** See *Air chamber*.

**C., air, of egg.** See *Air chamber of egg*.

**C., albuminip'arous.** (L. *albumin*; *pario*, to produce. F. *chambre albuminipare*.) That longitudinally-folded chief part of the oviduct of birds which furnishes the albuminous covering to the egg in its passage from the ovary.

**C., barometric.** (Βάρος, weight; μέτρον, measure.) A synonym of *Torrillian vacuum*.

**C., calcip'arous.** (L. *calx*, lime; *pario*, to produce. F. *chambre coquillière*.) The lower dilated part of the oviduct of birds where the shell of the egg is formed; it is shaggy on its inner surface and contains calcif'erous glands. Also called *Orisac*.

**C., larynge'al.** (Λάρυγξ, the larynx.) That part of the vocal tube which lies in the larynx.

**C., ling'ual.** (L. *lingua*, the tongue.) That part of the vocal tube lying between the anterior opening of the mouth and the upper part of the larynx.

**C., moist.** An arrangement for keeping damp an object during a prolonged microscopic examination.

**C. of eye, ante'rior.** (F. *chambre antérieure de l'œil*; G. *vordere Augenkammer*.) The space lying behind the cornea and in front of the iris and the anterior part of the capsule of the crystalline lens. It contains the aqueous humour.

**C. of eye, poste'rior.** (F. *chambre postérieure de l'œil*; G. *hintere Augenkammer*.) The space which was at one time supposed to exist between the iris and the capsule of the lens; it is now known to be a mere circumferential ring at the angle of junction of the iris and ciliary body, the remainder of the iris being closely applied to the capsule of the lens.

**Chambered.** Having a *Chamber*.

**C. ovary.** In Botany, a unilocular ovary into the interior of which the coherent margins of the carpels project somewhat.

**Chamberlen.** English obstetricians; a father and three sons, living in the seventeenth century, who, prior to the year 1647, used the forceps in midwifery. It is probable that the father, Dr. Paul Chamberlen, was the one who devised the instrument.

**C.'s forceps.** This instrument consists of two blades, each of which is fenestrated at one end for application to the child's head, formed like a scissors handle at the other, and articulated with its fellow at the shank by means of a pivot.

**Chambr'oäs.** Indians of the Araguay in Brazil.

**Cham'bon.** France; Département du Puy-de-Dôme. Mineral waters from five sources, temperature 12° C. (53.6° F.), containing small quantities of sodium and calcium bicarbonate, and a trace of iron. Used in chlorosis and anemia.

**Chames.** Indians inhabiting the Pacific coast of the Isthmus of Panama.

**Chamico'cos.** Indians inhabiting the right bank of the Paraguay in Gran Chaco.

**Cham'ois.** (Old High G. *gamz*, I. *camoscio*; S. *gamaza*; G. *Genase*.) The *Rupicapra tragus*. It furnishes excellent eating.

**Cham'omile.** (Low L. *camomilla*; from Gr. *χαμαί*, on the ground; *μήλον*, an apple. F. *camomille romaine*; G. *Römische Kamille*.) The herb, but in common language the flowers, of the *Anthemis nobilis*.

**C., corn.** The *Anthemis arvensis*.

**C., dog's.** The *Matricaria chamomilla*. Also, the *Anthemis cotula*.

**C., dyer's.** The *Anthemis tinctoria*.

**C., English.** The *Anthemis nobilis*.

**C., flower's.** See *Anthemidis flores*.

**C., German.** The *Matricaria chamomilla*.

**C., heads.** Same as *Anthemidis flores*.

**C., Ro man.** The *Anthemis nobilis*.

**C., Span'ish.** The *Anticyclus pyrethrum*.

**C., stink'ing.** The *Anthemis cotula*.

**C., wild.** The *Anthemis cotula*; also, the *Matricaria glabrata*.

**Chamomilla.** (*Xamai*, on the ground; *μήλον*, an apple.) The chamomile, *Anthemis nobilis*.

**C. fœ'tida.** (L. *fœtidus*, stinking.) The *Anthemis cotula*.

**C. nob'ilis.** The *Anthemis nobilis*.

**C. nos'tras.** (L. *nostras*, native.) The *Matricaria chamomilla*.

**C. officina'lis.** Koch. The *Matricaria chamomilla*.

**C. roma'na.** (L. *romanus*, Roman.) The common chamomile plant, *Anthemis nobilis*.

**Cham'ounix.** France; Département de la Haute-Savoie. An Alpine village, 3445 feet above sea level, opposite Mont Blanc, in the neighbourhood of large glacier fields. Near it is a mineral spring of the same quality as the waters of *Saint Gervais*.

**Champ'ac.** The *Melichia champaca*.

**Champagne.** An effervescent French wine, chiefly from the Marne Department. It contains from 5 to 13 per cent. of proof spirit. Its stimulant action is rapid in accession and speedy in departure. It is believed to allay irritability of the stomach.

**Champ'igneulle.** France; Département de l'Yonne. Very weak chalybeate waters, containing doubtful traces of manganese.

**Champ'ignon.** (F. *champignon*, a mushroom; from Low L. *campinio*, from *campus*, a field.) The *Agaricus pratensis*.

**C., black.** The *Boletus aeneus*.

**Champoleon.** France; Département des Hautes-Alpes. Mineral waters, temperature 8° C. (46.4° F.), containing small quantities of sulphurets of calcium and potassium, and carbonates of calcium and magnesium. Used in bronchial affections and eczema.

**Champoo'ing.** See *Shampooing*.

**Cham'sin.** See *Kham'sin*.

**Chan'cas.** A once powerful tribe of North America.

**Chance'bone.** The ischium.

**Chancela'gua.** The *Chironia chilensis*.

**Chancre.** (F. *chancre*, an ulcer; from L. *cancer*, the disease. I. *cancro*; G. *Schanker*.) A sore, with special characteristics, seated on a cutaneous or mucous surface, arising from venereal infection, and having a capability of propa-

# CHANCRELLA—CHAP.

gation by inoculation; it is from the nature of its origin most frequently situated on the genital organs. Its typical characters are its more or less circular form, its grey, unhealthy-looking, pus-secreting, depressed surface, and its abrupt edges, with a surrounding blush of redness. To this sore succeed frequently bubo and warts, but not constitutional syphilis; for, according to most modern authorities, this soft chancre or local contagious ulcer, as it is called, is not a syphilitic, although a venereal, disease, the Hunterian or hard chancre being the local manifestation of syphilis; others, on the contrary, believe the hard and soft chancre to be varieties of the same syphilitic virus.

From irritating applications, or other causes, a chancre may become somewhat hardened at the base, but it is never so earthy as to the feel as that of a true Hunterian chancre, and the hardness does not persist from the beginning.

**C., Celsus's.** A synonym of *C., soft*.

**C., chron'ic.** A synonym of *C., soft*.

**C., diphtheritic.** (Διφθερία, a piece of leather.) A form of soft chancre in which it becomes covered by a yellowish-white, adherent, tough substance.

**C., ecthymatous.** (Ecthyma.) A synonym of *C., soft*.

**C., fungating.** (L. fungus, a mushroom. F. chancre fungus.) A soft chancre in which there are soft, rapidly growing granulations.

**C., Galen's.** A synonym of *C., soft*.

**C., gangrenous.** (Γάγγραινα, mortification.) A soft chancre with a foul sloughing surface.

**C., hard.** (F. chancre dur; G. eigentlich syphilitische Geschwür, indurirten Chancre.) A chancre with a hardened base, the typical syphilitic chancre as described under *C., Hunterian*.

**C., Hunterian.** (Hunter, John, after whom it is called. F. chancre hunterien; G. Hunterscher Shanker.) The special venereal sore from which constitutional syphilis takes origin. It is a circular, elevated ulceration; its characteristic being a distinct and well defined hardness of the base and the sides from its earliest condition; it discharges a thin, generally non-purulent fluid, and is covered with a grey film of epithelium and other debris.

**C., indurated.** (L. induro, to harden. F. chancre induré; G. primäres indurirtes Geschwür.) Same as *C., Hunterian*.

**C., infecting.** (L. inficio, to taint.) The sore described under *C., Hunterian*, because it results in constitutional syphilis.

**C., larvée.** (L. larva, a mask.) A term applied by Ricord to a chancre hidden within the lips of the urethra.

**C., mixed.** (F. chancre mixte.) A term given to a sore in which the characteristics of both a hard and a soft chancre are supposed to exist.

**C., non-in'cubatory.** (L. non, not; incubatio, a brooding.) A synonym of *C., soft*.

**C., non-infecting.** (L. non, not; inficio, to taint.) A soft chancre, because it is supposed not to be followed by constitutional syphilis.

**C., non-sup'purating.** A synonym of *C., Hunterian*.

**C., parch'ment-like.** (F. chancre parcheminé.) A hard chancre which, when pinched up between the finger and thumb, gives a sensa-

tion as if it were planted on a piece of parchment.

**C., phagedæ'nic.** (Φαγέδαινα, a cancerous sore. F. chancre phagédainique; G. phagedanischer Shanker.) A form of soft chancre with a marked tendency to erosion; it may occur with or without slough.

**C., serpig'inous.** (L. serpo, to creep.)

A phagedenic chancre which spreads on the surface from various points, progress being made in the form of a segment of a circle.

**C., simple.** Same as *C., soft*.

**C., sloughing.** A non-syphilitic chancre of a phagedenic nature, accompanied by rapid gangrene.

**C., soft.** (F. chancre mou; G. weicher Shanker.) A shallow chancre with no hardness or base, individually small, often several, and situated by the frænum or at the base of the glans penis. This is the non-syphilitic Chancre, as distinguished from the syphilitic *C., Hunterian*.

**C., syphilitic.** Same as *C., Hunterian*.

**C., true.** The *C., Hunterian*.

**C., ure'thral.** (Ουρηθρα.) A chancre within the lips of the urethra; less frequently it is deeper seated, and occasionally there are many; a bloody discharge and a knotty hardness of the urethra are accompaniments. Same as *C., larvée*.

**Chancrella.** (Dim. of chancre.) A soft chancre.

**Chan'roid.** (Chancre; εἶδος, likeness. F. chancreoïde; G. Shankerartig.) Like to a chancre. A synonym of *Soft chancre*.

**Chancrous.** (Chancre. F. chancreux; G. shankerartig.) Like to, or of the nature of, a chancre.

**C. excoriation.** (L. excoria, to strip off the skin. F. chancreux.) A synonym of *Chancre, soft*.

**Chan'es'es.** A tribe of the Tupi Guaratos of South America.

**Change.** (F. changer, from late L. cambio, to change.) Alteration; a passing from one stage or form to another.

**C. of life.** A popular term for the cessation of the catamenia, and the constitutional disturbance often attending it.

**Chan'gos.** A tribe of the Quichuas of South America.

**Chan'grai.** A wild mountain race inhabiting the region named Kha by the Siamese.

**Changue'nes.** A race inhabiting the Bay of Chiriqui in Central America.

**Chan'nelled.** (L. canalis, a canal. F. canaliculé; G. gerinult, gerinut, rinig, rinckenformig.) Having a little canal or furrow.

**Chan'terelle.** (F. chanter, to sing.) The *Cantharellus aurantiacus*.

**Chaomant'ia.** (Chaos, in Paracelsian language, air; μαντία, power of divination.) The art of predicting the future from observation of the air. (Dunghison.)

**Chaos, lu'minous.** (L. chaos, empty space; lumen, light. F. chaos lumineux.) Term applied to subjective sensations of light perceived even in total darkness, due probably to changes in the cerebral cells, or to variations in the circulatory activity in the brain, optic nerves, or retina.

**Chaos'da.** A Paracelsian term for the plague.

**Chap.** (Mid. Eng. choppen, to cut; Dut.

*kappen*; *κόπτω*, to smite. F. *gercure*; L. *fessura*; S. *grata*; G. *Spalt*.) A crack in the skin.

Also, see *Rhagades*.

**Chapara mantica.** A name of the bark of *Pyramnia crassifolia*.

**Chapdes Beaufort.** France; Département du Puy-de-Dôme. Mineral waters, temperature 10° C. (50 F.), containing small quantities of sodium, magnesium, and calcium carbonates, and traces of iron. Used in chlorosis and anæmia.

**Chapelle Godefroy.** France; Département de l'Aube. Mineral waters, temperature 12° C. (53.6° F.), containing 3 per 1000 of calcium and iron carbonate, and much carbonic acid, according to published analysis, which is probably erroneous. Used in anæmia.

**Chapelle sur Er'dro.** France; Département de la Loire-Inférieure. Mineral waters, temperature 12° C. (53.6° F.), containing a little iron. Used in anæmic affections with gastric trouble.

**Char.** (A Celtic word from *car*, blood.) The *Salmo salar*, named from its red belly. A delicate lake fish.

**Char'abe.** The same as *Carabé*.

**Characeæ.** A Natural Order of acrogenous acetylenous water plants, with a distinct stem having whorled branches; they are multiplied by spiral-coated nucules filled with starch; or an Order of the Class *Algae*.

**Characin.** A camphorous substance found in Chara, Vaucheria, Nostoe, and other freshwater Algae.

**Character.** (L. *character*, a distinguishing mark; from *χαράσσω*, from *χαράσσω*, to engrave. F. *caractère*; L. *caratteri*; G. *Zeichen*.) The mark or peculiar quality of a thing; the disposition or bias of a person or a disease.

**Charadrius.** (*Χαράδιος*, a yellowish bird.) The sight of this bird, the identity of which is doubtful, although it was probably a curlew of some species, was supposed to cure the jaundice.

**Charagottos.** A race allied to the Caribbees of South America.

**Charantia.** The *Momordica elaterium*, or wild cucumber.

**Charas.** The impure resin of the *Cannabis indica*.

**Charbon.** (F. *charbon*, coal.) A term given in France to malignant pustule.

**Charbonnières.** France; Département du Rhône. Mineral waters, temperature 12° C. (53.6° F.), containing a small quantity of iron.

**Charcoal.** (Sax. *cyrran*, to turn. F. *charbon*; L. *carbō*; S. *carbon*; G. *Holzkohle*.) Charred wood; so called from its appearance, as of wood turned to coal.

**C., animal.** See *Carbo animalis*.

**C. bis'cuits.** Biscuits made with charcoal and flour. Used in dyspepsia, constipation, and other gastro-intestinal disturbances.

**C., blood.** Charcoal obtained by heating dried blood with carbonate of potash, washing the product with water, and drying.

**C., bone.** Same as *Carbo animalis*, B. Ph.

**C. poultice.** See *Cataplasma carbonis*.

**C. respirator.** See *Respirator*, charcoal.

**C. va'pours.** The gases given off in the burning of charcoal. They consist chiefly of carbonic acid and carbonic oxide, and in a closed room are very dangerous to life.

**C., wood.** See *Carbo ligni*.

**Char'cot.** A distinguished French physician now living.

**C.'s crystals.** Colourless, pointed, octohedral or rhomboidal crystals found in the expectoration in asthmatic and other bronchial affections. He, with Robin, also noticed similar crystals, insoluble in water, but soluble in acids and alkalies, in the blood, liver, and spleen of leucocythæmic patients. It has been suggested that they are tyrosin.

Schreiner believes them to be a phosphate of a base, for which he gives the probable formula  $C_2H_2N$ .

**C. disease'.** A name which has been proposed by Althaus for disseminated insular sclerosis of the nervous centres.

**Chard.** The blanched leaf-stalks of the artichoke, *Cynara scolymus*.

**Chardinia.** A Genus of the Nat. Order *Compositæ*.

**C. xeranthemoides.** Desfont. (*Ξηρός*, dry; *ἄνθεμον*, a flower; *είδος*, likeness.) A plant which is said to produce hydrocyanic acid.

**Char'don.** (F. from L. *carduus*, a thistle.) An old name for the artichoke, *Cynara scolymus*.

**Char'donin.** (F. *chardon*, a thistle.) Name by Morin for a peculiar bitter principle found in the *Carduus benedictus*.

**Charge.** (F. *charger*, to load; from Low L. *carrico*, to load a car; from L. *carrus*, a car.) To load.

Applied to the act of loading a thing or person with electricity.

Also, applied to the quantity of electricity put into a thing or person.

**Charianthææ.** A Tribe of the Family *Melastomaceæ*, having longitudinally-opening anthers.

**Charistoloch'ia.** (*Χάρις*, favour; *λόγος*, paritition.) The mugwort, *Artemisia vulgaris*, because supposed to be useful to women in childbirth.

**Charles, the law of.** The volume of a given mass of gas, under a constant pressure, varies directly as the absolute temperature, being 1-273rd for each degree Centigrade.

**Charlock.** (Sax. *cerlic*.) The *Brassica sinapistrum*.

**C., joint'ed.** The *Raphanus raphanistrum*.

**C., yellow.** The *Brassica sinapistrum*.

**Charlot'tenbrunn.** Germany; in the district of Breslau, 1300 feet above sea level. Mineral waters, containing a little sodium and calcium carbonate, with a little iron. There is a whey-cure establishment, and it is used as an air-cure for phthisis.

**Charlot'tenburg.** Germany; near Berlin. A chalybeate water, containing sodium chloride and calcium carbonate.

**Charlot'teville.** Canada; near Dover, on Lake Erie. A mineral water, containing a large amount of hydrogen sulphide.

**Charpie.** (Old F. *charpie*, from L. *carpo*, to pluck.) Very narrow, thread-like strips of linen torn off so as to leave fringed edges. Used for the dressing of wounds.

**Char'qui.** A South American name of beef cut into strips, dried in the sun, and sprinkled with maize.

**Char'ruas.** A race of men inhabiting the left bank of the Uruguay River.

**Char'ta.** (*Χάρτης*, paper made from the separated leaves of the papyrus. F. *papier*; G. *Papier*.) The substance paper.

# CHARTA.

Also, a piece of paper for wrapping up a substance.

**C. ad cautēres**, Fr. Codex. (L. *ad*, to; *cauter*, a branding-iron. F. *papier à cautères*.) Purified white pitch 45 parts, yellow wax 60, Venice turpentine 10, black balsam of Peru 2; to be melted together and spread upon paper.

**C. ad fonticūlos**. (L. *fonticulus*, a little spring.) Turpentine 2 oz., mutton suet 4 oz., yellow wax  $\frac{1}{2}$  lb., yellow resin 1 lb., verdigris  $\frac{1}{2}$  oz.; to be melted, mixed, and spread on slips of paper.

**C. adhæsiva**. (L. *adhæreo*, to stick.) Paper covered with solution of gum.

**C. antiarthritica**. (Avti, against; ἀρθρις, the gout.) A synonym of *C. resinosa*.

**C. antiasthmatica crassa**. (L. *crassus*, thick.) The *C. fumifera*.

**C. antiasthmatica densa'ta**. (L. *densus*, thick.) The *C. fumifera*.

**C. antirheumatica**. (Avti; rheumatism.) A synonym of *C. resinosa*.

**C. arsenicalis**, Fr. Codex. (F. *papier arsenical, cigarrettes arsenicales*.) Arseniate of soda is dissolved in thirty parts of water, and filter paper is soaked in it and dried; it is then cut into pieces, each containing five centigrammes of the salt, which are rolled into the form of a cigarette for smoking.

**C. atropina'ta**. Very fine paper impregnated with a solution of atropin, and cut into pieces containing one milligramme of the alkaloid; for application within the eyelid to dilate the pupil.

**C. bib'ula**. (L. *bibulus*, absorbing moisture.) Filtering paper.

**C. calabarica**. Very fine paper impregnated with a solution of the extract of Calabar bean, and cut into pieces, each containing two milligrammes of the extract; for introduction within the lower eyelid as a myotic.

**C. cantharidis**, U.S. Ph. Cantharides paper. Boil white wax 4 troy oz., spermaceti  $1\frac{1}{2}$  troy oz., olive oil 2 troy oz., Canada turpentine and powdered cantharides, of each  $\frac{1}{2}$  a troy oz., with water 5 fluid oz., for two hours. Filter and cut strips of paper; a blistering agent.

**C. carbolisa'ta**. Paper impregnated with carbolic acid. Used as a dressing for wounds.

**C. cera'ta**. (L. *cera*, wax.) Waxed paper, being paper charged with melted wax. Used for covering plasters or enclosing odoriferous substances.

**C. chem'ica**, Fr. Codex. (F. *papier chimique*.) Tissue paper is rendered impermeable by covering with a mixture of linseed oil 100 parts, garlic 10, turpentine 80, oxide of iron 40, and carbonate of lead, ground with oil 15. It is then coated with a melted mixture of olive oil 200 parts, red lead 100, and yellow wax 6.

**C. cum extract'o Gnidii**, Fr. Codex. (F. *papier au garon*.) Yellow wax 240 parts, spermaceti 90, olive oil 120, Venice turpentine 30, ethereal extract of Daphne Gnidium 15, dissolved in 50 parts of alcohol; melt, and spread on paper.

**C. densa'ta**. (L. *densus*, thick. G. *Pappdeckel*.) Pasteboard.

**C. emolliens**. (L. *emollio*, to soften.) Paper is coated with a solution of caoutchouc in carbon disulphide, and this is covered with linseed meal and dried. The paper when used is moistened in water, and applied as a poultice.

**C. empore'tica**. (L. *emporeticus*, belong-

ing to trade.) Old term for soft and porous paper for packing.

**C. epispas'tica**, B. Ph. (Επισπαστικός, drawing to one's self. F. *papier épispastique*; G. *Spanischfliegen Papier*.) Blistering paper. White wax 4 oz., spermaceti  $1\frac{1}{2}$  oz., olive oil 2 oz., resin  $\frac{3}{4}$  oz., powdered cantharides 1 oz., distilled water 6 oz., are digested in a water bath for two hours; the plaster is separated and melted with Canada balsam  $\frac{1}{2}$  oz., in a shallow vessel. Strips of paper are applied to the surface, so as to obtain a coating. Used as a vesicant.

**C. explorato'ria**. (L. *exploro*, to search out. G. *Reagenzpapier*.) Test paper.

**C. exploratoria cærulea**. (L. *cæruleus*, sky-blue.) Blue litmus paper.

**C. exploratoria fla'va**. (L. *flavus*, yellow.) Turmeric paper.

**C. exploratoria lu'tea**. (L. *luteus*, yellowish.) Turmeric paper.

**C. exploratoria rubefac'ta**. (L. *rubus*, red; *facio*, to make.) Red litmus paper.

**C. fumif'era**, Fr. Codex. (L. *fumus*, smoke; *fero*, to bear. F. *carton fumigatoire*.) Bibulous paper 120 parts, nitrate of potash 60, belladonna, stramonium, digitalis, lobelia inflata, and oenanthe phellandrium, of each 5, myrrh 10, and olibanum 10; mixed with water into a paste, and dried. Used as fumigation in asthma.

**C. gummo'sa**. (L. *gummi*, gum.) Parchment paper.

**C. meze'rii epispas'tica**. (Mezeron; ἐπισπαστικός, drawing to one's self.) The *C. cum extract'o Gnidii*.

**C. nitra'ta**, G. Ph. (L. *nitrat*, containing nitre. G. *Salpeterpapier*.) One part of nitre is dissolved in four parts of water, and with it white filter paper is saturated and then dried. Used for burning to create a smoke, which is breathed for the relief of asthma.

**C. oleo'sa**. (L. *oleosus*, oily.) Paper soaked in linseed oil. Used for protecting and sheathing an inflamed skin, or preserving the moisture of applications.

**C. paraffina'ta**. Paper saturated with paraffin. Used as a protective.

**C. phenyla'ta**. (Phenyl.) Paper impregnated with paraffin in which carbolic acid has been dissolved. Used in the treatment of wounds.

**C. pica'ta**, Fr. Codex. (L. *picatus*, pitchy. F. *papier goudronné, emplâtre du pauvre homme*.) Colophony 3 parts, purified pitch 2, yellow wax 1; melted, and spread on paper.

**C. pic'ea**. (L. *piccus*, of pitch.) The *C. pica'ta*.

**C. resino'sa**, G. Ph. (L. *resinosus*, resinous. G. *Gichtpapier*.) Pitch, turpentine, of each 6 parts, yellow wax 4, resin 10, melted together, strained, and spread upon paper. Used as an external remedy in chronic gout and rheumatism.

**C. sinapina'ta**. Same as *C. sinapis*.

**C. sina'pis**, B. Ph., U.S. Ph. (L. *sinapis*, mustard. F. *papier sinapisé*; G. *Senfpapier*.) Mustard paper. An ounce of powdered black mustard seeds is mixed with a sufficiency of solution of gutta percha to make it of a semi-fluid consistence; and strips of cartridge paper are coated with it. Used, after damping, as a mustard poultice.

**C. sumbuli'na**. Paper impregnated with

# CHARTACEOUS—CHECK.

alcoholic extract of sumbul. Used locally in rheumatic pains.

**C. vesicatoria.** (L. *vesica*, a blister. G. *Zugpapier*.) A synonym of *C. cantharidis* and *C. epispastica*.

**C. virgin'ea.** (L. *virginus*, virgin.) An old term for the amnion, from its resemblance to fine virgin, or unprinted, unused paper.

**Charta'ceous.** (L. *charta*.) Having the appearance, or the thinness, of paper.

**Char'tæ.** (L. *charta*, paper. F. *papiers sparadrapique*; G. *medicamentirte Papiere*.) Medicated papers.

**Char'treuse.** A liqueur made by the monks of La Grande Chartreuse, a Carthusian monastery in France; Département de l'Isère. It contains many aromatics, among which clove, carnations, species of artemisia, and pine buds, are said to be included.

**Charts, thermometric.** See *Thermometric charts*.

**Chartula.** (L. dim. of *charta*, paper.) A small paper for wrapping up a powder or such thing.

**Chasch'isch.** Same as *Haschisch*.

**Chas'mie.** Term formerly used for loss of the sense of smelling. (Quincy.)

**Chasmanth'era.** (*Xáσua*, an open mouth; *ἀνθία*, to blossom.) A Genus of the Nat. Order *Menispermaceæ*.

**C. colum'ba.** The *Jateorrhiza palmata*.

**C. cordifo'lia.** H. Br. The *Tinospora cordifolia*, Miels.

**C. palma'ta.** The *Jateorrhiza palmata*.

**Chas'matophyte.** (*Xάσua*, a gulf; *φυτόν*, a plant.) Name by Necker for a didynamious plant the flower of which presents a kind of gape.

**Chas'me.** (*Χάσμα*, a gaping. G. *Gahnkraupf*.) Old name for pandiculation or morbid yawning.

**Chasme'sis.** Same as *Chasme*.

**Chasmog'amy.** (*Χάσμα*; *γάμος*, marriage.) The opening of the perianth at the time of flowering prior to fertilisation.

**Chas'mus.** Same as *Chasme*.

**C. hyster'icus.** (*Υστέρια*, the womb.) Hysterical yawning.

**Chassa'ignac.** A French surgeon of the nineteenth century.

**C.'s drain'age-tube.** A fine tube of india rubber, containing perforations at one end, which is introduced into the cavity of an abscess, for the purpose of constantly removing the contents.

**C.'s e'craseur.** (F. *écraser*, to crush.) A stem of steel through or along which runs a jointed chain of steel in a double strand, and so arranged that, while projecting in a loop at one extremity, and so able to enclose a tumour, the ends may be attached to a mechanism at the other extremity, which on being turned pulls in the chain, makes the loop less and less, strangles the tumour, and by degrees crushes through it.

**Chaste' tree.** The *Vitæ agnus castus*.

**Chate.** Old term for a species of *Cucumis*; Egyptian cucumber. (Quincy.)

**Chateau Gon'thier.** France; Département de la Mayenne. Mineral waters, containing calcium bicarbonate, magnesium sulphate, and iron carbonate in small quantities, with free carbonic acid. Used in chlorosis and anæmia.

**Chateaucneuf les bains.** France; Département du Puy-de-Dôme, on the banks of

the Sioule. Mineral waters from fifteen sources, of various temperatures from 15° C. to 38° C. (59° F. to 100·4° F.), containing potassium, sodium, and iron carbonates in small quantities, with free carbonic acid. Used in anæmic conditions generally, and in the sequelæ of intermittent fever.

**Chat'eldon.** France; Département du Puy-de-Dôme. Mineral waters from three sources, containing small quantities of sodium, magnesium, and calcium carbonates, with a minute amount of iron and much carbonic acid. A stimulating tonic.

**Chatelguy'on.** France; Département du Puy-de-Dôme. Mineral waters from many sources, of a temperature varying from 21° C. to 32° C. (75·2° F. to 89·6° F.), and containing sodium and magnesium chloride, and calcium, magnesium, and iron carbonate. Used in anæmic conditions.

**Chat'enois.** France; Département du Bas-Rhin. Athermal waters, with little mineralisation, and that chiefly sodium chloride; arsenic has been found in minute quantity. Used in dyspepsia, constipation, and abdominal engorgements.

**Chaudes, eaux.** See *Eaux chaudes*.

**Chaudesaigues.** France; Département du Cantal. Mineral waters from six sources, of a temperature varying from 35° C. to 81° C. (95° F. to 177·8° F.), and containing sodium carbonate, with a little iron and minute quantities of iodine, bromine, and arsenic. Used in rheumatism, neuralgia, bronchial and laryngeal affections, scrofula, and some skin diseases.

**Chaud fontaine.** Belgium; Province de Liège. A mineral water, temp. varying from 33° C. to 35° C. (91·4° F. to 95° F.), containing a small amount of earthy carbonates. Used in rheumatism and dyspepsia, neuralgia, dysmenorrhœa, and uterine congestions.

**Chaulmug'ra.** The *Gynocardia odorata*.

**C. odora'ta.** The *Gynocardia odorata*.

**C. oil.** See *Oleum gynocardiæ*.

**C. oint'ment.** See *Unguentum gynocardiæ*.

**C. seeds.** See *Gynocardia*.

**Chau'mont.** France; Département de Maine-et-Loire. Mineral waters, temperature 12° C. (53·6° F.), containing a little iron.

**Chaus'sier, Fran'çois.** A French surgeon and anatomist; born at Dijon in 1746, died at Paris in 1828. His new nomenclature of anatomy has been in considerable part adopted by the French school.

**Chavi'ca betlê,** Miq. A synonym of *Piper betle*.

**C. officina'rum,** Miq. The *Piper longum*.

**C. Roxburgh'ii,** Miq. The *Piper longum*.

**C. siribo'a,** Miq. The *Piper sirihoo*.

**Chav'icin.** A constituent of black pepper allied to piperin.

**Chay root.** The root of *Oldenlandia umbellata*.

**Chay'a.** The *Ærua lanata*.

**C.-vair.** The root of *Oldenlandia umbellata*.

**Chayot'te.** The *Sechium edule*.

**Check.** (F. *échee*, from Pers. *shah*, a king; or Old High G. *schah*, booty.) A sudden stop.

**C. lig'aments.** The odontoid ligaments, because they limit the rotation of the head.

**Check'erberr'y.** The *Arctostaphylos uva-ursi*; also, the *Mitchella repens*.

**Cheek.** (Sax. *ceace*. F. *joue*; I. *guancia*; S. *carillo*; G. *Baekke, Waenge*.) The side parts of the face extending to the lips. The cheeks are composed externally of skin, internally of mucous membrane, and between these, muscles, connective and fatty tissue, blood-vessels, lymphatics, nerves, and glands.

**C. bone.** (Sax. *caeban*. F. *l'os de la joue*; I. *osso jugale*; S. *juante*; G. *Bauckenbein, Bauckenknocken, Jochbein*.) The malar bone.

**C. compres'sor.** An instrument consisting of a pad for each cheek, connected by a spring and head straps for retention. Used to compress the cheeks and prevent movement after operation for hare-lip.

**C. pouch.** Same as *Buccal pouch*.

**C. teeth.** The molar teeth.

**Cheese.** (Sax. *cēse*; L. *caseus*. F. *fromage*, I. *formaggio*; S. *queso*; G. *Käse*.) The coagulated compressed casein of milk, with some butter and salts. An average composition is water 368.59, albuminous matter 334.65, fat 242.63, salts 54.13. The richer cheeses contain much more fat.

**C. mag'got.** The larva of *Piophilæ casei*.

**C. mite.** The *Acarus domesticus*.

**C. mould, blue.** The *Aspergillus glaucus*.

**C. mould, green.** The *Aspergillus glaucus*.

**C. mould, red.** The *Torula sporendonema*.

**C. poi'soning.** Serious symptoms have occurred from the eating of cheese in which no extraneous poison could be discovered. It would seem that under certain circumstances, as of partial putrefaction, deleterious compounds, as yet unrecognised, may be found.

**C. ren'net.** (Dutch *rennen*, to curdle.) The lady's-bed straw, *Galium verum*; from its supposed power of curdling milk.

**C. ren'ning.** Same as *C. rennet*.

**Chees'y.** (Same etymon.) Of the nature, or appearance, or consistence, of cheese. Same as *Cuscous*.

**C. fo'cus.** (L. *focus*, a hearth.) A term applied to a product of inflammation, usually serofulous, which has undergone caseation, and which is believed in a large majority of instances to be the infecting centre from which acute tuberculosis takes origin, by the detachment of minute particles, their transference by means of the blood, their arrest in the capillaries of some tissue, and the consequent local textural changes.

**C. tubercle.** A term which has been applied to the desiccated and caseated contents of a bone-abscess.

**Cheila'gia.** (Xεῖλος, the lip; ἄλγος, pain. F. *cheilalgie*; G. *Lippen Schmerz*.) Pain of the lip.

**Cheileocarcino'ma.** (Xεῖλος, the lip; καρκίνωμα, cancer. F. *cheilocarcinome*; G. *Lippenkrebs*.) Cancer of the lips.

**Cheilochoreopsellismus.** (Xεῖλος, the lip; choreopsellismus. F. *cheilochoreopsellisme*; G. *das Feiststanzartige Lippenstottern*.) Term for a choreal stuttering with the lips.

**Cheili'tis.** (Xεῖλος, the lip. F. *cheilite*; G. *Lippenentzündung*.) Inflammation of the lip.

**Cheiloangios'copy.** (Xεῖλος, the lip; ἀγγείον, a vessel; σκοπέω, to observe.) A method

of observing the circulation of blood in the minute vessels of the mucous membrane of the lip, accomplished by evertng and fixing the lip, concentrating a bright light on it, and observing by means of a microscope.

**Cheilocac'é.** (Xεῖλος, the lip; κακός, evil.) Old term for a kind of cancerous oris, or cancer of the mouth; said to be common among the children in England and Ireland, according to Arn. Boottius.

Also, the thick upper lip of strumous children.

**Cheilodiæresis.** (Xεῖλος; διαίρεσις, separation.) A synonym of *Hare-lip*.

**Cheilomala'cia.** (Xεῖλος; μαλακία, softness.) Gangrenous stomatitis.

**Cheil'on.** (Xεῖλος, a lip. G. *Grosslipp, Dicklipp*.) A thick lip; also, one who has a thick lip.

**Cheilon'cus.** (Xεῖλος; ὄγκος, a tumour. F. *cheilomeus*; G. *cine harte Lippengeschwulst*.) A hard swelling or tumour of the lip.

**Cheilophy'ma.** (Xεῖλος; φῆμα, a tumour. F. *cheilophymie*; G. *Lippengeschwulst*.) A swelling of the lip.

**Cheiloplas'tic.** Of, or belonging to, the operation of *Cheiloplasty*.

**Cheiloplasty.** (Xεῖλος, the lip; πλάσσω, to form.) Term for the operation of supplying deficiencies of the lips by appropriating a sufficient portion of the neighbouring healthy substance to that purpose.

**Cheilorrrha'gia.** (Xεῖλος; ῥήγνυμι, to burst forth. F. *cheilorrrhagie*; G. *Lippenblutung*.) Term for bleeding from the lip.

**Cheil'os.** (Xεῖλος.) A lip.

**Cheilos'chisis.** (Xεῖλος; σχίσις, a cleaving. G. *Haesenscharte*.) Hare-lip.

**C. complica'ta.** (L. *completo*, to fold together.) Hare-lip complicated with fissure of the bony parts.

**Cheilostomatoplasty.** (Xεῖλος; στόμα, the mouth; πλάσσω, to form.) An operation, devised by Desgranges, for the restoration of the buccal opening after removal of an epithelioma of the lower lip.

**Cheim'a.** (Χεῖμα, winter weather.) Cold, frost.

**Cheimeth'lon.** Same as *Cheimetlon*.

**Cheimet'lon.** (Χεῖμα, winter; θλάω, to bruise; or τλάω, to suffer.) Old term for chilblain. (Quincy.)

**Cheim'ia.** (Χεῖμειω, to shiver.) A rigor.

**Cheir.** (Χεῖρ, the hand.) The hand.

**Cheiracanth'us.** (Χεῖρ; ἄκανθα, a thorn.) A Genus of the Order *Nematoda*, Class *Nemathelmintha*.

**C. grac'ilis.** (L. *gracilis*, slender.) Found in the stomach of *Fastres Curieri*.

**C. hispid'us.** (L. *hispidus*, bristly.) Found in the coats of the stomach of *Sus scrofa*.

**C. horrid'us.** (L. *horridus*, rough.) Found in the stomach of *Alligator mississippiensis*.

**C. robu'stus.** (L. *robustus*, firm.) A parasite of the tiger, puma, and other Carnivora.

**C. socia'lis.** (L. *socialis*, companionable.) Found in the stomach of *Factorius luteola*.

**Cheirag'ra.** (Χεῖρ; ἄγρα, seizure.) Gout in the hand.

**Cheiran'thus.** (Χεῖρ, the hand; ἄνθος, a flower; because suited for carrying in the hand, so it is said.) A Genus of the Nat. Order *Cruciferae*. See *Cheiri*.

**C. chei'ri.** Linn. (*Cheiri*. F. *gireftée*

# CHEIRAP'SIA—CHELIDONIUM.

*jaune*; L. *viola gialla*; S. *alci*; G. *Gold-luck*.) The wallflower. The flowers have a pleasant smell and nauseous bitter taste; they have been used in infusion as a diuretic, cephalic, and anti-pasmodic; they, as well as the leaves, have been used as an emmenagogue, and they are said to be oxytocic. The juice is used in France as a diuretic in dropsy and in gravel, and the powdered seeds in dysentery. An oil obtained from the seeds has been used externally in bruises and rheumatic pains.

**C. inca'us.** The *Mathiola incana*.

**Cheiraps'ia.** (*Χειραψία*, a touching with the hands; from *χείρ*; *ἅπτω*, to touch.) Manipulation, as in shampooing.

Also, the so-called mesmerism by touching gently with the hands.

Also, a synonym of scratching, as in cutaneous itching.

**Cheirarthroc'acē.** (*Χείρ*, the hand; *ἄρθρον*, a joint; *κακός*, evil.) Joint disease in the hand.

**Cheiri.** (As if *keiri*, a word used by Hadrianus Junius, for the wallflower, or, as some say, the stock gillyflower.) The wallflower.

Also, an alchemical term, applied by some to hydrargyrum or quicksilver, according to Castellus; by others, to *Aurum potabile*, and by others, to antimonium. (Ruland and Johnson.)

**C. no' res.** (L. *flos*, a flower.) The flowers of the *Cheiranthus cheiri*.

**Cheiriater.** (*Χείρ*, the hand; *ιατρός*, a physician.) Old term for a surgeon, whose office it was to remove or cure diseases by prescriptions and manual operations, as well as by medicines.

**Cheiris'ma.** See *Cheirismus*.

**Cheiris'mus.** (*Χειρισμός*, a handling.) The handling of a diseased or injured part; or of a sick person.

**Cheirix'is.** (*Χειρίξις*, from *χειρίζομαι*, to handle.) Old term, used by Galen, *Comment. in Hippocr.* "De Fract." i, 49, vol. viii, pt. ii, p. 407, ed. Kühn, for the art of surgery; manual interference, touch or handling.

**Cheiroc'acē.** (*Χείρ*, the hand; *κακός*, evil.) The same as *Carpocace*.

**Cheiron'omy.** (*Χειρονομία*, measured motion with the hands.) Methodical use of the hands, as in gymnastic exercises.

**Cheirople'thes.** (*Χειροπληθής*, filling the hand.) Used in pharmaceutical directions to signify a handful.

**Cheirop'odous.** (*Χείρ*, the hand; *πούς*, a foot.) Having the hallux opposable, so that the foot acts like a hand.

**Cheiopom'pholyx.** (*Χείρ*; *πομφόλυξ*, a water-bubble.) A disease which occurs in the hands, manifested by the eruption of vesicles over a papilla, which, by uniting, form bullae containing serum and leucocytes. This disease has been called dysidrosia by Tillmury Fox, but late observations tend to show that the sweat-glands remain healthy, and that this term, given by Hutchinson, is more appropriate, although the disorder may attack the feet also.

**Cheiop'tera.** (*Χείρ*, the hand; *πτερόν*, a wing.) Bats. An Order of the Class *Mammalia*, having a fold of membrane, the patagium, commencing at the sides of the neck and body, and extending between the fore-feet and the extremities of the hind toes, and sometimes to the tail, and which serves for flight. The pollex, and

sometimes the next finger, is unguiculate, as well as all the toes; the bones do not contain air.

**Cheiop'terous.** (Same etymon.) Relating to, or like, the bats, or *Cheiroptera*.

**Cheiropteryg'ium.** (*Χείρ*; *πτερύγιον*, a little wing.) A term applied to the rudimentary limb of the higher Vertebrata, as distinguished from that of fishes, called the Iethyopterygium.

**Chela.** (*Χηλή*, a claw, or talon.) The cleft of the eyelids when closed.

The claw or forceps of the crab.

Term formerly used for a fissure or chap on the hands, feet, or pudendum.

Old name for the forked probe for extracting polypi from the nose.

**Chelæ.** (Same etymon.) Claws. The prehensile claws of certain of the Crustacea, as crabs and lobsters.

**C. cancro'rum.** (L. *cancer*, a crab. F. *pinces d'écrevisses*; G. *Krebsschere*.) The claws of the common crab, *Cancer pagurus*. Formerly used as an antacid.

**C. palpebra'rum.** (L. *palpebra*, an eyelid.) The tarsal cartilages.

**Chela'pa.** The jalap plant, *Exogonium purga*.

**Chelate.** (*Χηλή*, a claw.) Possessing claws.

**Chelē.** The same as *Chela*.

**Chelerythrin.** (*Chelidonium*; *ερυθρός*, red.)  $C_{19}H_{17}NO_4$ . An alkaloidal substance obtained from the *Chelidonium majus*, the *Glaucium luteum*, and the *Sanguinaria canadensis*. It is believed to be identical with *Sanguinarin*.

**Chelic'erae.** (*Χηλή*, a claw; *κίρας*, a horn.) The prehensile claws of the side of the mouth of scorpions, supposed to be homologous to antennae.

**Chel'idon.** (*Χελιδόν*, a swallow.) The hollow above the bend of the elbow; so called from the forked appearance of a swallow's tail on each side of the biceps tendon.

**Chelidoner'ythrin.** Same as *Chelerythrin*.

**Chelido'nia lap'is.** (*Χελιδόν*, a swallow; L. *lapis*, a stone.) Old name given to two stones said to be found in the stomach of young swallows, one black, the other of a dull red, about the size and form of a hemp seed; they were believed to be antiepileptic in their quality.

**C. rotundifolia mi'nor.** (L. *rotundus*, round; *folium*, a leaf; *minor*, less.) The lessercelandine, *Reineneus ficaria*; because it flowers when the swallow appears.

**Chelido'nic acid.**  $C_7H_4O_6$ . (G. *Schöllkraut-säure*.) Occurs as a calcium salt, and, perhaps, in combination with chelidonium and chelerythrin, in *Chelidonium majus*; it crystallises in silky needles, containing one molecule of water. By some it is believed to be identical with succinic acid.

**Chelido'nin.**  $C_{15}H_{17}N_3O_3$ . Applied by Maier to the narcotic principle of the *Chelidonium majus*.

**Chelidonin'ic ac'id.** ( $C_7H_{10}O_6$ ) $_2$  +  $H_2O$ , uncertain. An acid found in the *Chelidonium majus*. It crystallises in white rhomboidal prisms, easily soluble in water, alcohol, and ether.

**Chelidonium.** (*Χελιδόν*, the swallow. G. *Schwalbenkraut*.) A Genus of the Nat. Order *Papaveraceae*; so called because it flowers when the swallow appears. Thecelandine.

Also, a synonym of *Bryonia alba*.

**C. diphyllum.** (Δίς, twice; φύλλον, a leaf.) The *Stylophorum diphyllum*.

**C. glaucum.** (Γλαυκός, bluish grey.) An extract of this species has been used to adulterate opium, and poisonous effects have been reported from its use. Also called *Glaucium flavum*.

**C. hæmatoïdes.** (Αἱματώδες, of the nature of blood.) The *C. majus*.

**C. majus.** Linn. (*L. major*, greater. F. *grande chélidoïne*; G. *grosses Schöllkraut*.) The greatcelandine, or tetterwort; the herb and root have a faint unpleasant smell, and a bitter, acrid, durable taste, stronger in the roots than in the leaves; used as aperient and diuretic in jaundice.

**C. minus.** (L. *minor*, less. F. *l'herbe aux hemorrhoides*; G. *Feigwarzenkraut, kleine Schöllkraut*.) The pilewort, *Ranunculus ficaria*.

**Chelidoxanthin.** (*Chelidonium*; Έλευθός, yellow.) A yellow substance found in the leaves and flowers of *Chelidonium majus*; it consists of small needles, bitter to the taste, and freely soluble in hot water.

**Cheliferidæa.** (Χηλή, a claw; *fero*, to bear.) An Order of the Class *Arachnida*, having a segmented abdomen, not distinctly separated from the cephalothorax, and didactyle maxillary palpi. These pseudo-scorpions are of small size, and are found in damp places.

**Cheliferous.** (Χηλή, a claw; *fero*, to bear. F. *chelifère*; G. *scheerentragend*.) Bearing claws or pincers.

**Cheliform.** (Χηλή, a claw; L. *forma*, likeness. F. *cheliforme*; G. *scheerenähnlich*.) Claw-like.

**Chelis.** (Χηλή, a claw.) Same as *Cheloid*.

**Cheloid.** (Χηλή, a claw; or, by some, χέλυς, a tortoise; είδος, likeness.) A skin disease first described and named by Alibert on account of the peculiar processes which radiate from its extremities, and appear like to the claws of a crab. Now usually called *Keloid*.

**Cheloides.** Same as *Cheloid*.

**Chelois.** Same as *Cheloid*.

**Cheloma.** (Χηλή, a crab's claw.) A synonym of *Cheloid*.

**Chelone.** (Χελώνη.) The tortoise.

Also, an old name given to an instrument for extending a limb, from its slow movement like that of a tortoise. Oribasius, in *Machinamentis*. Also, a Genus of the Nat. Order *Scrophulariaceæ*.

**C. glabra.** Linn. (L. *glaber*, smooth.) Balmony, turtlehead. Hab. North America. A bitter laxative; used in jaundice and intestinal worms.

**Chelonía.** (Χελώνη, a tortoise.) Tortoises and turtles. An Order of the Class *Reptilia*, having an external thoracic-abdominal case formed by the expanded dorsal vertebrae and ribs and the sternum; no teeth; the jaws encased in horn; lungs extend into the abdominal cavity; heart three-chambered.

Also (G. *Meerschuldkröte*), a Genus of the Order *Chelonía*.

**C. imbricata.** Linn. (L. *imbricatus*, part. of *imbrico*, to cover with gutter tiles. F. *écuret*.) The hawk's-bill turtle. The flesh is not much thought of, but the eggs are good.

**C. midas.** The green turtle. Largely used as food; the eggs also are eaten.

**Chelonion.** (Χελώνιον, a tortoise shell.) Old term for a hump, or gibbosity, on the back, from its likeness to a tortoise shell. (Gorran.)

Also, the natural projection of the back near the shoulders.

**Chelonite.** (Χελώνη, a tortoise.) See *Bufole*.

**Chelonobatrachia.** (Χελώνη; βάτραχος, a frog.) A term applied to the amphibious Anoura.

**Chelodous.** (Χηλή, a claw; πούς, a foot. F. *chelopode*; G. *klaupfüssig*.) Having the toes armed with hooked claws.

**Chelsea pensioner.** Name given to a preparation for rheumatism, from a pensioner having cured Lord Amherst by it; composed of gum guaiacum 1 dr., rhubarb 2 drs., cream of tartar 1 oz., flowers of sulphur 1 oz., one powdered nutmeg, and clarified honey 1 lb.

**Cheltenham.** Gloucestershire; on the Chelt, from which it derives its name. Pleasantly situated at the foot of the Cotswold Hills, with a mildish, somewhat relaxing climate; the winter is sometimes cold. There are several springs, containing, in varying proportions, sodium sulphate and chloride, with, in some, traces of iron. The waters were formerly much used in the hepatic diseases of those who had lived in India; and also in constipation, dyspepsia, kidney disorders, scrofula, anæmia, and chlorosis.

**C. salts.** The salts deposited in crystalline form from evaporation of Cheltenham water.

They are also formed artificially by mixing sodium sulphate 34 grains, magnesium sulphate 23, sodium chloride 50; this is dissolved in a pint of water for use. In some formulæ a minute quantity of iron is added.

**Chelys.** (Χέλυς, the chest, from its likeness to a tortoise's back.) The thorax.

**Chelyscion.** (Χελύσκιον.) Old term for a short, dry cough. (Gorran.)

**Chemé.** Same as *Chama*.

**Cheméuticé.** (Χημευτική.) Chemistry.

**Chemía.** (Χημία.) Chemistry.

**Chemiatría.** (Χημία; ιατρεία, healing.) A doctrine of the middle ages, adopted by Paracelsus, van Helmont, Sylvius, and others, according to which the conditions and functions of the body in health and in disease were explained by the chemical doctrines of the time, and morbid conditions were referred to disturbances of fermentations, effervescence of humours, and such like, and were treated accordingly.

**Chemiatric.** Relating to *Chemiatría*.

**C. school.** The doctrines of, and the believers in, *Chemiatría*.

**Chemia'trus.** (Χημία, chemistry; ιατρός, a physician. F. *chémiateur*.) A physician of the chemical or chemiatic school.

**Chemical.** (Χημία. F. *chimique*; G. *chemisch, scheidekünstlerisch*.) Of, or belonging to, the art or science of chemistry.

**C. action.** That which occurs when two or more substances so act upon one another as to produce a third substance, differing altogether from the original one in properties; or when one substance is brought under such conditions that it forms two or more bodies differing from the original one in properties. (Roscoe.)

**C. affinity.** See *Affinity*, chemical.

**C. analysis.** See *Analysis*, chemical.

**C. combination.** (L. *combinatio*, to unite.)

The act of two or more distinct substances uniting to form a new substance; chemical combination always occurs in fixed and definite proportions, the same always for the same substance.

# CHEMICOHISTOLOGY—CHENOCOPRUS.

**C. compound.** (L. *compono*, to join together into one whole.) A substance formed by the combination of definite and invariable proportions of two or more substances, in such manner that it possesses essentially different properties and an individuality of its own.

**C. current.** A term employed by Wood to designate that form of galvanism which is generated in the galvanic cell.

**C. decomposition.** (L. *de*, a prefix signifying separation; *compono*, to put together.) The act of a compound body being resolved into other distinct bodies.

**C. equation.** (L. *æquatio*, an equalising.) The setting out of chemical decompositions in symbolic terms, showing the transfer of the different elements of the original compounds into new compounds, or into simple substances, as in the following equation, which shows the decomposition of selenium monochloride by water:  $2\text{Se}_2\text{Cl}_2 + 3\text{H}_2\text{O} = \text{H}_2\text{SeCl}_2 + 3\text{Se} + 4\text{HCl}$ .

**C. equivalents.** (L. *æquivalo*; from *æquus*, equal; *valo*, to avail.) The relative quantities of different elements which can replace each other in chemical compounds.

**C. food.** A syrup containing iron and other phosphates. Parrish's formula is: 600 grains of ferrous sulphate, dissolved in boiling water, are mixed with a solution of 720 grains of sodium phosphate, and the precipitate washed; 720 grains of calcium phosphate are dissolved in 4 ounces of hot water by the aid of hydrochloric acid, then precipitated by ammonia, and the precipitate washed. These freshly prepared phosphates are dissolved in a solution of 1200 grains of glacial phosphoric acid; 40 grains of sodium carbonate, and 60 grains of potassium carbonate, are added to the solution, and any precipitate formed dissolved by phosphoric acid. The solution is now made up with water to 20 fluid ounces, and 120 grains of powdered cochineal, and 36 Troy ounces of sugar are added; the syrup is then strained, and flavoured with 10 minims of oil of orange.

**C. formulæ.** (L. *formula*, a form; dim. of *forma*.) The representation of the elements contained in a compound substance by symbols, as when the substance carbonic acid and its composition are denoted by the symbols  $\text{CO}_2$ .

**C. nomenclature.** See *Nomenclature*, chemical.

**C. notation.** (L. *noto*, to mark.) The mode of indicating the composition of chemical compounds by symbols.

**C. rays.** Same as *Actinic rays*.

**C. symbols.** See *Symbols*, chemical.

**Chemicohistology.** (*Chymia*, chemistry; *hístos*, a web; *lógos*, an account.) A description of the chemistry of the minute tissues.

**Chemicometric.** (Same etymon.) Relating to *Chemicometria*.

**C. sense.** (F. *sens chymicométrique*.) The fifth of the sixteen senses, according to Recamier; the sense of taste.

**Chemicometrica.** (*Chymia*; *uîpov*, a measure.) The measurement of the chemical constituents of a body.

**Chemicus.** (*Chymia*) A chemist.

**Chemillé.** France. Département de Maine-et-Loire. An athermal, weak, chalybeate water, containing some carbonic acid. Used as a tonic.

**Chemismus.** (*Chymia*, chemistry; F.

*chymisme*; G. *Chymismus*.) The chemical conditions of a part or function.

Also, a satirical term to denote the abuse of chemistry in its applications to physiology and pathology.

**Chemist.** (*Chymia*.) One who practises chemistry.

**Chemistry.** (*Chymia*, chemistry; through the Ar. *al-kimya*. F. *chimie*; G. *Chemie*, *Chymie*, *Schvedekunst*.) A branch of natural philosophy which has been defined to be "the science which investigates the composition of natural substances, and the permanent changes of constitution which their mutual actions produce."

**C., animal.** (L. *animal*, a living being.) The chemistry of the structures and functions of the animal body.

**C., inorganic.** (L. *in*, neg.; *organum*, an organ.) The chemistry of substances derived from the mineral world.

**C., organic.** (*Organon*, an instrument.) A term originally applied to the chemistry of things derived from animals and plants, and which were thought to be developed by the aid of vital force; also called the chemistry of the carbon compounds, in consequence of the great preponderance of this element in organic structures.

**C., pathological.** (*Hístos*, disease; *lógos*, an account.) The chemistry of diseased organs or products.

**C., physiological.** (*Hístos*, nature; *lógos*, an account.) The chemistry of the organs of the body and of their functions and products.

**Chemography.** (*Chymia*; *γράφω*, to write. F. *chemographie*.) Term for a history or relation of the art of delineating or representing objects, by chemical means, as in photography.

**Chemolysis.** (*Chymia*, chemistry; *λύω*, to unbind.) Name by Thudichum for the decomposition of organic compounds into more simple substances by merely chemical agents, such as sulphuric acid or baryta.

**Chemolytic.** Relating to *Chemolysis*.

**Chemosis.** (*Chymosis*, a swelling around the cornea, like *χέω*, a yawning. F. *chemosis*.) Inflammation of the conjunctiva of the eye, in which there is effusion into the cellular substance connecting it with the eyeball; which causes it to be elevated and projected over the edge of the cornea, so as to give the appearance of a gap or aperture along the middle of the eye. It may be non-inflammatory, and due to the escape of aqueous humour through an ulcer or a fistula, and it may be inflammatory, and consequent upon venous stasis.

**Chemoticiæ.** (*Chymia*.) Chemistry.

**Chenna.** The *Indicum pilosum*.

**Chennaile.** See mineral waters of *Roches-Savine (Saint-Amant)*.

**Chenoboscon.** (*Chin*, a goose; *βοσκός*, food.) The *Potentilla anserina*.

**Chenocholic acid.** (*Chin*; *χολὴ*, bile.)  $\text{C}_{22}\text{H}_{40}\text{O}_7$ . Obtained, along with taurine, by boiling chenotanchoic acid with baryta water. It crystallises with difficulty; it is soluble in ether and alcohol, insoluble in water; its solutions have an acid reaction, and are coloured by Pettenkofer's test for bile.

**Chenocholic acid.** Same as *Chenocholic acid*.

**Chenocoprus.** (*Chin*, a goose; *κόπρος*, du. z. G. *Ganskotth*.) Goose dung. This was

## CHENODYLSYN—CHERRY.

formerly given, when dried, as a resolvent and diuretic, and particularly against jaundice.

**Chenodylsyn.**  $C_7H_{12}O_3$ . A product obtained by the heating to 200° C. (392° F.) of chenocholic acid. See *Dyslysin*.

**Chenomorphæ.** (*Χέν; μορφή*, form.) An Order of the Subclass *Carinatae*, Class *Aras*. The geese and like birds. Water birds with a beak as long as the head, hard at the tip, and having transverse soft or horny lamellæ at the edge; the maxillo-palatines are lamellar and desmognathous; feet webbed.

**Chenopodæ.** Same as *Chenopodiaceæ*.

**Chenopodiaceæ.** (*Chenopodium*.) A Nat. Order of monoclamydeons Exogens, or a Family of the Order *Caryophyllineæ*, having separate flat sepals opposite the stamens, two-celled anthers, a single one-seeded ovary, and herbaceous naked flowers.

**Chenopodiomorus.** (*Chenopodium*; *morus*, the mulberry; because like the *Chenopodium*, and having leaves like a mulberry tree.) The mulberry blite, *Blitum capitatum*.

**Chenopodium.** (*Χέν; a goose; ποίς*, a foot; from its resemblance. *G. Gansfuss*.) A Genus of the Nat. Order *Chenopodiaceæ*.

Also, the name, U.S. Ph. (*F. semences de chenopode anthelmintique*; *G. Amerikanischer Wurmsamen*), for the fruit of the *Chenopodium anthelminticum*, or worm seed; it is .84 inch long, greenish, and somewhat globular, containing a brownish-black glossy seed, with an aromatic odour and a bitterish pungent taste; it contains an oil. See *Oleum chenopodii*.

**C. album.** Linn. (*L. albus*, white. *F. ansérine sauvage*; *G. weisser Gansfuss*.) Lambquarters, pigweed. Hab. United States. Used as an antiscorbutic.

**C. ambrosiacum.** The *C. ambrosioides*.

**C. ambrosioides.** Linn. (*F. ambrosie du mexique, thé du mexique*; *G. Mexikanisches Traubenkraut*.) The Mexican tea plant; called also Mexico tea, Spanish tea, Artemesian botrys; it is recommended, in decoction, for paralysis; it is also given as an anthelmintic.

**C. anthelminticum.** Linn. (*Αντί, against; Ελμύς*, a worm. *F. ansérine vermifuge*.) Name of a plant, the seeds of which, and an oil obtained from them, are in high repute in America as remedies against worms. See *Chenopodium*.

**C. baryosmon.** Röm. and Sch. (*Βαρίος, strong; ὀσμή*, a smell.) Hab. Egypt. Used as *C. olivum*.

**C. bonus Henricus.** Linn. (*L. bonus*, good; *Henricus*, Henry. *F. bon Henri*; *G. guter Heinrich*.) English mercury, or allgood. Eaten as spinach, when cultivated; the leaves are considered emollient, and used in decoctions for clysters; they were also popular as a vulnerary.

**C. botrys.** Linn. (*Βότρυς*, a cluster of grapes. *F. chenopode à grappes*; *G. Traubenkraut*.) The Jerusalem oak. Used as an emmenagogue and anthelmintic, and in disease of the chest.

**C. foetidum.** (*L. fetidus*, stinking.) The *Chenopodium vulvaria*.

**C. leiospermum.** De Cand. (*Λείος*, smooth; *σπίρμη*, a seed.) A variety of *C. viride*.

**C. mura'le.** Linn. (*L. muralis*, belonging to a wall.) Goosefoot. Hab. Europe. Used as *C. bonus Henricus*.

**C. ol'idum.** Cust. (*L. olidus*, stinking.) The *C. vulvaria*.

**C. qu'inoa.** Willd. Quinoa. Hab. Peru. Leaves used as a pot-herb; seeds boiled and eaten like rice.

**C. sagitta'tum.** (*L. sagitta*, an arrow.) The *C. bonus Henricus*.

**C. suffruticosum.** (*L. suff*, from *sub*, under; *frutex*, a shrub.) The *C. ambrosioides*.

**C. viride.** Linn. (*L. viridis*, green.) A variety of *C. album*. Seeds laxative; used in jaundice; bruised plant applied to whitlows.

**C. vulvaria.** Linn. (*L. vulva*, the womb. *F. vulvaire*.) The stinking orache, formerly used as emmenagogue, antispasmodic, and nervine.

**Chenopus.** Same etymon and meaning as *Chenopodium*.

**Chenotaurocholic acid.** (*Χέν; ταυρος*, a bull; *χολή*, bile.)  $(C_{20}H_{35}NSO_6)$ . An acid found in goose-bile; very similar to taurocholic acid. It is soluble in water and alcohol, and is coloured by Pettenkofer's test for bile.

**Cheopina.** Same as *Chopine*.

**Cheoplastic.** (*Χέν; to pour; πλαστικός*, fit for moulding.) A term applied to a process for mounting artificial teeth, which consists in pouring an alloy of metals into a properly prepared matrix. (Dunglison.)

**Chequer.** (Old *F. eschequier*, a chess-board.) To mark like a chess-board.

**C. berry.** The *Gaultheria procumbens*, the *Arbutus urea ursi*, and also the *Mitchella repens*, from the chequered marks on the fruit.

**C. flower.** The *Colechicum variegatum*.

**Cherag'ra.** Same as *Chéragra*.

**Cheramella.** The *Cicca disticha*.

**Cheramis.** (*Χηραμίς*, a scallop shell) Same as *Cheme*.

**Cherbachem.** The *Veratrum album*.

**Cherbus.** The lettuce.

**Cherefolium.** A misspelling of *Cherophyllum*.

**Cherimoyer.** The edible fruit of *Annona cherimolia*.

**Cheris.** A name of extract of Indian hemp.

**Cher'mes.** Same as *Kermes*.

Also, a Genus of the Suborder *Phytophthiria*, Order *Hemiptera*.

**C. berry.** See *Kermes berry*.

**C. min'eral.** See *Kermes mineral*.

**C. vermilio.** *G. Planch.* A coccus living on the *Quercus coccifera*, producing a vermilion dye.

**Chernibium.** (*Χερνίβιον*, a chamber-pot.) A prinal.

**Cherokees.** (*G. Tschiroki*.) The most northerly of the Appalachian race of men, inhabiting the banks of the Holston River, in North America.

**Cher'ris.** A name of the crude resin of *Cannabis sativa*, var. *indica*.

**Cherry.** (*F. cerise*, from *L. cerasus*, from *Gr. κίρατος*, a cherry tree. *F. cerise*; *L. cerasia*; *S. ceriza*; *G. Kirsche*.) The common name for the fruit of several species of the Genus *Prunus*. The amount of sugar varies in the different kinds from 8.56 to 13.1 per cent., acid from .35 to 1.27, albuminous and pectous matters from 1.68 to 3.52, ash from .56 to .83, induble matters, as seeds and skins, from 4.1 to 7.38.

**C., Barba'does.** The *Malpighia glabra*.

**C. bay.** The *Prunus lauro-cerasus*.

**C. birch.** The *Betula lenta*.

# CHERRY ROCK—CHEYNE-STOKES'S RESPIRATION.

**C., bird.** The *Prunus padus*.  
**C., black.** The *Prunus avium*. See also *Cerasus nigra*.  
**C., choke.** The *Prunus virginiana*.  
**C., cluster, wild.** The *Prunus avium*.  
**C., corne'llian.** The *Cornus mas*.  
**C., English.** See *Cerasus anglica*.  
**C., garden.** The fruit of cultivated varieties of *Prunus cerasus*.

**C., ground.** The *Physalis viscosa*.  
**C., gum.** A gummy exudation from various species of *Prunus*. It occurs in irregular, nodular masses, of an amber or brown colour, translucent, and only imperfectly soluble in water. The insoluble matter is said not to be bassorin.

**C., laur'el.** (F. *lauro-cérise*; G. *Kirsche-lorbeer*.) The *Prunus lauro-cerasus*.

**C., laur'el leaves.** See *Lauro-cerasi folia*.

**C., pep'per.** The fruit of *Capsicum cerasiforme*.

**C., red.** The *Prunus cerasus*.

**C., tree.** (F. *cériseur*; G. *Kirschbaum*.) The *Prunus cerasus*.

**C., wild.** The *Prunus cerasus*, and the *P. virginiana*.

**C., win'ter.** (F. *coqueret*; G. *Juden-kirsche*.) The *Physalis alkekengi*; and also the *Solanum pseudo-capsicum*.

**Cherry Rock.** Gloucestershire; near Kingswood. A saline water, somewhat like that of Cheltenham.

**Cher'sæ.** Faeces. (Dunglison.)

**Chert.** (Perhaps a provincial derivative of a Celtic word, as *car*, a rock.) The flinty or siliceous strata of limestone or other rocks.

**Cher'vil.** (*Cherophyllum*.) The *Anthriscus cerefolium*.

**C., broad-leav'ed.** The *Cherophyllum aromaticum*.

**C., garden.** The *Anthriscus cerefolium*.

**C., hem'lock.** The *Anthriscus cicutaria*.

**C., musk.** The *Cherophyllum aromaticum*.

**C., rough.** The *Anthriscus vulgaris*.

**C., wild.** The *Anthriscus sylvestris*.

**Chervil'um.** Same as *Cher'vil*.

**Ches'elden, William.** An English surgeon, born in Leicestershire in 1688, died at Bath in 1752. He was surgeon to St. Thomas's Hospital, London.

**C.'s knives.** Cheselden used two knives in the operation of lithotomy. The incision through the integuments was made with a knife having a blade 2.65 inches long, with sharp point situated centrally, slightly convex cutting edge, and the back a little ground off near the point. The second incision through the walls of the bladder was made with a falciform knife.

**C.'s operation for artificial pupil.** An incision through the sclerotic dividing the fibres of the iris. Cheselden was the first to perform an operation for artificial pupil.

**Ches'is.** (X'ice, to ease one's self.) A too frequent desire to empty the bowels.

**Chest.** (L. *cista*, from Gr. *κίστη*, a box. F. *poitrine*; I. *petto*, *torace*; S. *pecho*; G. *Brust*.) The thorax.

**C., a'lar.** (L. *ala*, a wing.) See *Alar chest*.

**C., flat.** A chest which has lost its rounded front, and has become flat. It indicates a tendency to phthisis.

**C. goniom'eter.** (Γωνία, an angle; μέτρον, a measure.) An instrument invented by

Scott Alison for the purpose of measuring the angles of the chest.

**C. meas'urer.** Same as *Stethometer*.

Also, see *Sibson's chest measurer*.

**C., phthin'oid.** (Φθισώδης, consumptive.) A term applied to alar and flat chests, inasmuch as they conduce to phthisis.

**C., phthis'ical.** (Φθίσις, consumption.) A flattened, alar chest, depressed below the clavicles.

**C., re'gions of.** See *Thorax, regions of*.

**C., tapp'ing of.** See *Paracentesis thoracis*.

**C. voice.** The ordinary voice in which vocal resonance occurs in the chest.

**Chestnut.** (F. *châtaigne*; from L. *castanea*; from Gr. *κάστανος*, a chestnut. I. *castagna*; S. *castana*; G. *Kastanie*.) The fruit of the *Fagus castanea*.

**C., earth.** The root of *Cyperus esculentus*.

**C., horse.** The fruit of the *Esculus hippocastanum*.

**C. leaves.** See *Castanea*.

**C., Span'ish.** The *Castanea vesca*.

**C., sweet.** The *Castanea vesca*.

**C., wild.** The *Bunium* or *Carum bulbocastanum*, or earth nut.

**Che'tum.** (Χαίτη, a bristle. F. *chête*.) Applied by Robineau-Desvoidy to a triarticulated piece of the antenna of certain *Myodarie*, ordinarily termed a bristle or filament.

**Chevas'tre.** (Fr.) A double-headed roller, the middle of which was applied to the chin; it was then carried on each side to, and crossed on the top of, the head, from which it was continued down to the nape of the neck, again crossed, and then passed under the chin; and so on till the whole was exhausted.

**Chev'rette.** The *Hydnum repandum*.

**Chevron bones.** (F. *chevron*, a rafter.) Hypapophysial processes, often forming arches, found in the caudal vertebrae of some Vertebrata.

**Cheyle'tes.** (Χέω, to pour out, to be extended; ἄλν, wood.) A Genus of the Family Tyroglyphidae, Order Acarida, Class Arachnida. Small acarids found in bran, flour, decayed wood, and other powders. One species is said by Leroy de Méricourt to have been found in a purulent discharge from the ear. This species has been called *Acaropsis*, *Cheyletes*, and *Tyroglyphus Mericourtii*; it is said by Megnin to be the *C. cruditus*, a species found in old linen and old books, and to have been present accidentally.

**C. heteropal'pus.** Megnin. (Έτερος, different; *palpus*.) A species found living at the base of the feathers of many birds of the pigeon and sparrow kind.

**C. macron'yus.** Megnin. (Μακρός, long; ὄνυξ, the nail.) A species found at the base of the feathers of some exotic passerine birds.

**C. Mericour'til.** See under chief heading.

**C. parasit'ivo'rax.** Megnin. (L. *parasitus*, a parasite; *vorax*, to devour.) Found at the base of the hairs of rabbits; it lives on the soft parasites of that animal, especially those of the Genus *Listrophorus*.

**C. scabi'ol.** A synonym of *Sarcoptes scabiei*.

**Cheyne, John.** A Scotch physician, born at Leith in 1777. He practised in Dublin for many years, and died in Buckinghamshire in 1836.

**Cheyne-Stokes's respiration.** (L. *respiro*, to breathe again.) A term applied

to a peculiar form of dyspnoea occurring in cerebral and cardiac diseases, first described by Cheyne in 1818, and then by Stokes in 1846. It consists, according to Dr. Stokes, in the occurrence of a series of inspirations, increasing to a maximum, and then declining in force and length until a state of apparent apnoea is established; when, after a more or less lengthened period, sometimes of apparent death, a low inspiration, followed by one more decided, marks the commencement of a new ascending and then descending series of inspirations. It has been attributed to a low degree of excitability to venous blood of the respiratory centre; and has been observed in fatty and other diseases of the heart, in brain affections, and in narcotic poisoning.

**Chezananc's.** (*Xéw*, to go to stool; *ἀνάγκη*, necessity.) Old name for an ointment applied to the anus, according to Paulus Ægineta, vii, 9; and to a plaster applied to the navel, according to Aëtius, to promote intestinal evacuation.

**Chia.** The Mexican name of the seeds of the *Salvia hispanica*, which are used as a demulcent.

**Chia terra.** (*Xios*, the island Chios; *L. terra*, earth.) Name for an earth brought in greyish-white masses from Chios, or Scio; formerly applied to burns, according to Galen; it was also used as a sudorific in fevers.

**Chiacum.** (*Xios*, the island of Chios, or Scio.) Old name, used by Paulus Ægineta, vii, 16, Adams's Translation, vol. iii, p. 549, for a collyrium chiefly formed of wine of Chios; also applied to various collyria by Aëtius.

**Chiadus.** Old term for furunculus, or a boil.

**Chiaje'an organ.** A caecal pouch containing gelatinous tissue and fusiform or stellate cells, and opening into the oesophagus. Found in some Gasteropods, and named after Delle Chiaje.

**Chian turpentine.** See *Turpentine*, *Chian*.

**Chiancia'no.** Italy; district of Sienna, near Montepulciano. There are four chieff springs: Aequa di St. Agnese, an earthy carbonated water, of temp. 38° C. (100·4° F.); Aequa del Palazzo, an iron water, temp. 15° C. (59° F.); Aequa Santa, an iron water containing sulphur, temp. 29° C. (84·2° F.); and the Aequa del Bagno Casuccini, a saline water, temp. 30° C. (86° F.).

**Chias'ma.** (*Χίασμα*, two lines placed crossways like the letter X.) Term for the decussation or crossing of the fibres of the optic nerve. See *Commissure*, *optic*.

In some fishes the optic nerves cross to the opposite eye, but there is no blending to form a chiasma.

**Chias'mus.** Same etymon and meaning as *Chiastre*.

**Chiasmom'eter.** (*Χίασμός*, arranged diagonally; *μέτρον*, a measure.) An instrument, invented by Landolt, to determine the distance between the two eyes by convergence. It consists of an oblong box, divided in the centre by a septum with a vertical slit in it; one end of the box is perforated with two holes for the two eyes, and the opposite end is composed of two movable halves, each of which has a slit; the right half is moved till the slit is seen through the slit in the septum by the left eye, and *vice versa*. As the distance of the centre of revolution of the eyes from the

septum is equal to the distance of the septum from the terminal slits, the distance between these is equal to the distance between the eyes, and can be easily measured.

**Chias'tos.** Same etymon and meaning as *Chiastre*.

**Chias'tre.** (*Χιάζω*, to form like the Greek letter X, or *Chi*.) A double-headed roller for securing the compress over the wound when the temporal artery has been opened; also called *Chiasmus*, and *Chias'tos*.

**Chiavari.** Italy; in Piedmont, on the south-westerly spurs of the Apennines, a well-frequented air-cure place, with a pleasant climate.

**Chi'bou.** French name of a spurious species of gum *Elemi*, not known in England.

**Chi'bur.** Arabic for sulphur.

**Ch'ica.** The *Bignonia chica*. It supplies a colouring matter which is astringent. It is used as a diaphoretic in syphilis, and locally to prevent the attacks of insects.

**Ch'icha.** Name of a fermented liquor used in Peru, made from Indian meal and water; the grain is frequently chewed prior to fermentation.

Also, a similar drink made from the sweet pods of the *Prosopis algaroba*.

**Chichi'ke.** The root of an unknown plant found in Guatemala, and used in intermittent fevers.

**Chich'im.** The seeds of *Cassia absus*, and perhaps of *C. akakulis*. Used in Africa in the treatment of ophthalmia.

**Chick.** Same as *Chicken*.

**C-pea.** (*F. chicke*; *I. cece*; *S. chicharo*; *G. Kikur*.) The *Cicer arietinum*.

**Chick'en.** (*Sax. ciecn*, dim. of *cocce*, a cock. *F. poulet*; *I. pulcino*; *S. polluelo*; *G. Huhnchen*.) The young of the domestic fowl.

**C-breasted.** Having a prominent sternum.

**C.broth.** The flesh and bones of a chicken gently boiled or simmered in water, with or without rice, flour, or other farinaceous thickening.

**C.pepper.** The *Ranunculus abortivus*.

**C.pox.** (*F. poulet*; *G. Windblattern*.) A synonym of *Favicella*.

**C-wort.** The *Stellaria media*.

**Chickras'sia tabularis.** Linn. The *Srietenia chickrassa*.

**Chick'weed.** The *Stellaria media*; so called because chickens and cage birds feed on it.

**C., field.** The *Cerastium arvense*.

**C., marsh, great.** The *Stellaria aquatica*.

**C., sea.** The *Polycarpon tetraphyllum*.

**C., speedwell.** The *Veronica arvensis*.

**C., umbelliferous, jag'ged.** The *Holostem umbellatum*.

**Chicla'na.** Spain; near to Cadiz. Mineral waters, of a temperature of 18° C. (64·4° F.), containing a little calcium sulphate and a small quantity of sulphur. Used in chronic catarrhal affections and eczematous diseases.

**Chicon'go.** The name of a tree used in Congo as an antisyphilitic and purgative.

**Chicora'ceæ.** Same as *Cichoraceæ*.

**Chicorium verrucarium.** The *Zacintha verrucosa*.

**Chic'ory.** (*F. chicorde*; *L. cichorium*; *Gr. κίχονα*, *chicory*.) The root of *Cichorium intybus*. It is 10' to 12' long, branched, wrinkled longi-

# CHIGGRE—CHIMAPHILA.

tudinally, light brown on the outside, whitish within; the bark is thin, white, and striated radially by the brown milk-vessels; the cambium layer is brown, and the wood porous and yellow. It contains inulin and a bitter principle. It is said to act like dandelion, but it is chiefly used to adulterate, or to mix with, or as a substitute for, coffee.

**Chiggre.** Same as *Chigoe*.

**Chigoe.** (*S. chuo*, small.) The West Indian name of the *Sarcophylla penetrans*, the female of which penetrates the skin and locates itself in the subcutaneous reticular or cellular membrane of the soles of the feet and toes, and sometimes of the fingers; familiarly termed by natives the "gizger."

In this situation its abdomen grows greatly, it deposits its ova, and then it dies. At first there is some local inflammation and pain without sensible swelling. As the abdomen of the insect enlarges there is a whitish swelling, and when full grown the eggs may escape through the original aperture, and the dead insect become exfoliated, or inflammation and ulceration may ensue from the eggs hatching before expulsion or from other causes.

**Chilalgia.** Properly *Chilalgia*.

**Chilblain.** (*Sax. cèle, cold; blegen*, a boil. *F. engelure; I. gelone; S. sabanons; G. Frostbeule.*) A painful deep purple or lead-colored inflammatory swelling on the fingers, toes, heels, or other extreme part of the body, consequent on exposure to severe cold.

**Child.** (*Sax. cild. F. enfant; I. enfante; G. Kind.*) A son or daughter.

**C. bearing.** Same as *Parturition*.

**C. bed.** (*G. Kindbett.*) The condition of a parturient female.

**C. bed fever.** (*G. Kindbetterinfieber.*) Popular term for puerperal fever.

**C. birth.** See *Parturition*.

**C. crowing.** A synonym of *Laryngismus stridulus*.

**C. murder.** See *Infanticide*.

**Childhood.** (*Sax. cild; hnd, state.*) The state or condition of being a child. It extends from infancy to puberty.

**Children.** Plural of *Child*.

**C.'s bane.** The *Conium maculatum*.

**C.'s mercury.** The *Mercurialis tomentosa*.

**Chili.** A state on the western side of South America, extending from the Bay of Mejillones to Cape Horn. Some of the high lying places are much esteemed as climatic resorts in pulmonary diseases. See *C. mineral waters of*.

**C. balsamum de.** Name given to a peculiar balsam said to be brought from Chili; the Barbadoes star mixed up with a few drops of anise oil is made to pass for it.

**C. hazel nut.** The *Guerinea arellana*.

**C. mineral waters of.** These are very numerous; the most celebrated are those of Chili in 2050 feet above sea level, which are both thermal and cold, sulphurous, chalybeate, alkaline, and saline; at Apoquinda, C. lina, Canquenes, Mondaca, Nabuehuapi, and other places, are also mineral springs.

**C. net tles.** The plants of the Nat. Order *Loasaceæ*.

**C. saltpe'tre.** A name of sodium nitrate, occurring in nature in South Peru and Bolivia. When recrystallized it contains about 97.7 per cent. of pure nitrate of sodium, with some sodium

chloride, sodium sulphate, and water. It is used largely in the manufacture of nitric acid and as an ingredient in artificial manures.

**Chilodynamon.** (*Xáλov*, a thousand; δύναμις, power.) Old name given to an herb, because of its numerous virtues; supposed to be the *Centaurea behen*, or white behen.

**Chiliogramma.** Same as *Kilogramme*.

**Chillometrum.** Same as *Kilometre*.

**Chiliophyllon.** (*Xáλov*, a thousand; φύλλον, a leaf.) An old name for the *Achillea millefolium*, or milfoil, from the great number of its leaflets.

**Chillitis.** See *Cheilitis*.

**Chill.** (*Sax. cyle, cile*, chilliness, cold.) A rigor; also, a catching cold.

**C., dumb.** Same as *Ague, dumb*.

**Chilli.** Capsicum fruit.

**Chillies.** The fruit of *Capsicum fastigiatum*.

**Chillness.** (*Sax. cèle, cold.*) A minor degree of rigor.

**Chilogantha.** (*Xáλov*, the lip; γάθος, the jaw.) An Order of the Class *Myriapoda*, in which the second pair of maxillæ are united to form a lower lip; and the body is segmented, each segment being provided with two pairs of legs, except the first five or six.

**Chilogramma.** (*Xáλov*, the lip; γράμμα, that which is drawn. *F. chilogramme; G. Lippenzug.*) The labial tract or course, being from the angles of the mouth to the lower part of the face, said by Jadelot to be a characteristic sign of lung or heart disease in children.

**Chiloma.** (*Xáλov*, the lip. *F. chilôme, mylie; G. Maule.*) The muzzle or labial extremity of the nose, in the Mammifera, taken collectively with the lip when it is tumefied and humid.

**Chilon.** (*Xáλov*, the lip.) Old term for an inflamed and swelled lip. (Quincy.)

Also, applied to one who has a thick lip.

**Chiloplastica.** See *Cheiloplasty*.

**Chiloplasty.** See *Cheiloplasty*.

**Chilopoda.** (*Xáλov*, the upper lip; ποός, a foot.) An Order of the Class *Myriapoda*, which have two anterior pairs of legs converted into foot-jaws; the body is segmented, each segment having one pair of legs.

**Chiloschisma.** (*Xáλov*, the lip; σχίσμα, a cleft.) Harelip.

**Chilostomata.** (*Xáλov*; στόμα, the mouth.) A Suborder of the Order *Gymnolamata*, Class *Polyzoa*, in which the cell-mouth is closed by a movable lip.

**Chilostomatoplasty.** (*Xáλov*, a lip; στόμα, the mouth. πλάσσω, to form.) An operation for restoring the mouth, after removal of the lip for disease, by the formation of a new lip from neighbouring structure.

**Chimala tus.** A name for the *Helianthus annuus*.

**Chimaphila.** (*Xéiua*, winter; φίλος, to love.) The pharmacopœial name (U.S. Ph.) of *Chimaphila umbellata*.

Also, a Genus of the Nat. Order *Pyrolacææ*.

**C. corymbosa.** Pursh. (*L. corymbus*, a cluster of ivy berries.) The *C. umbellata*.

**C. maculata.** Pursh. (*L. maculatus*, spotted.) Spotted wintergreen. Used as *C. umbellata*.

**C. umbellata.** Nutt. (*L. umbella*, an umbrella. *F. pyrolæ ombellæ; G. doidenblutiges Harnkraut, Wintergrün.*) Pipsissewa,

# CHIMAPHILIN—CHINCHONA.

prince's pine, wintergreen. Leaves inodorous, with a sweetish, then an astringent and bitterish, taste; they contain chimaphilin and arbutin. Used as a diuretic, tonic, and astringent in bladder diseases, hæmaturia, and in rheumatism; it has also been used in scrofula, ague, chronic diarrhœa, leucorrhœa, and gleet. The fresh leaves bruised, when applied to the skin, are rubefacient or vesicant.

**Chimaphilin** A substance found in the leaves of *Chimaphila umbellata*. It occurs in golden-yellow crystals, inodorous, tasteless, slightly soluble in water, freely in alcohol, ether, and oil.

**Chimethlon.** (Χίμετλον, a chilblain.) A chilblain.

**Chimetlophy'ma.** (Χίμετλον; φῦμα, a tumour.) A chilblain.

**Chim'ia.** Same as *Chemia*.

**Chim'ia'ter.** The same as *Chym'ia'ter*.

**Chimney.** (F. *cheminée*, a chimney; from L. *caminus*, a hearth. I. *camino*; S. *chimenea*; G. *Schornstein*.) A flue of a fireplace.

**C. sweepers' cancer.** See *Cancer*, chimney-sweepers'.

**Chimo.** A narcotic and masticatory in use amongst the inhabitants of the Western States of Venezuela. It is made of the juice of tobacco, inspissated to the consistence of syrup, and mixed with powdered urao or carbonate of soda. It is black, and a small quantity is placed between the cheeks and the gums and slowly swallowed as it dissolves in the saliva.

**Chimo'lea lax'a.** An obscure Paracelsian term for the powder separated from the flowers of saline ores.

**Chimon.** (Χειμών, wintry weather.) A chilblain.

**Chin.** (Sax. *cin*. F. *menton*; I. *mento*; S. *barba*; G. *Kinn*.) The lower part of the face, being the prominence of the lower jaw. The possession of a chin is said to be one of the distinctive features of man.

**China.** The China root, *Smilax China*, because it is obtained from China.

Also, a name of *Cinchona* bark.

**C. abom'alies.** The bark of *Cinchona pubescens*.

**C., Amer'ican.** The *Smilax pseudo-china*.

**C. bas'tard.** The *Smilax pseudo-china*.

**C. bicolor'a'ta.** (L. *bis*, twice; *color*, colour.) A name of *Pitaya* bark.

**C., Calis'a'ya.** The bark of *Cinchona cordifolia*.

**C. cas'sia.** Same as *Chinese cinnamon*.

**C. chin'æ.** A name for Peruvian bark.

**C. ciner'ea.** (L. *cinereus*, ash-coloured.) The pale *Cinchona* bark.

**C. europ'æ'a.** European quinine. A name for the bark of the ash, *Fraxinus excelsior*.

**C. fe'bris.** (L. *febris*, a fever.) An old name for *Cinchona* bark.

**C. fla'va du'ra.** (L. *flavus*, yellow; *durus*, hard.) The bark of *Cinchona cordifolia*.

**C. fla'va fibro'sa.** (L. *fibrosus*, fibrous.) The bark of *Cinchona lancifolia*.

**C. fus'ea.** (L. *fuscus*, dusky.) The pale *Cinchona* bark.

**C. gris'ea.** (Mod. L. *griseus*, ash-grey.) The pale *Cinchona* bark.

**C., Guam'alles.** Same as *C., Huam'alles*.

**C., Huam'alles.** The bark of *Cinchona pubescens*.

**C., Huanu'co.** Same as *Bark, Huanuco*.

**C. in'dica spino'sa.** (L. *indicus*, Indian; *spinosus*, thorny.) The *Smilax pseudo-china*.

**C. jaën.** The bark of *Cinchona subcavata*.

**C., Lox'a.** Same as *Bark, Loxa*.

**C. no'va.** (L. *novus*, new.) The bark of *Eucna magnifolia*.

**C. occiden'talis.** (L. *occidentalis*, western.) The *Smilax pseudo-china*.

**C. officina'lis.** The bark of *Cinchona officinalis*.

**C. or'ange.** The *Citrus aurantium*.

**C. orienta'lis.** (L. *orientalis*, eastern.) The *Smilax China*.

**C. pall'ida.** (L. *pallidus*, pale.) The pale *Cinchona* bark.

**C. peruvia'na.** The root of *Smilax purhampuy*, Ruiz.

**C. pondero'sa.** (L. *ponderosus*, heavy.) The *Smilax china*.

**C. pseudolo'sa.** (Ψευδής, false.) The bark of *Cinchona Humboldtiana*.

**C. pseudore'gia.** (Ψευδής; L. *regius*, royal.) A variety of Carthagena bark.

**C. re'gia.** (L. *regius*, royal.) The *Cinchona cordifolia*.

**C. root.** (G. *Chinawurzel*.) The root of *Smilax china*.

**C. root, American.** The root of *Smilax pseudo-china*, and probably other species.

**C. rubigino'sa.** (L. *rubiginosus*, rusty.) The bark of a variety of *Cinchona pubescens*.

**C. ru'bra.** (L. *ruber*, red.) The red *Cinchona* bark.

**C. spu'ria nodo'sa.** (L. *spurius*, false; *nodosus*, knotty.) The *Smilax pseudo-china*.

**C. suppos'ita.** (L. *suppositus*, part, of *suppono*, to put under, to esteem less.) The *Smilax pseudo-china*, or bastard china.

**C. te'na.** The bark of *Cinchona subcordata*.

**C. te'nu.** Same as *C. tena*.

**C. ve'ra.** (L. *verus*, true.) The *Smilax china*.

**C. wax.** The product of *Coccus sinensis*, which lives on the bark of the *Fraxinus chinensis*. It is white, crystalline, soluble in alcohol, and melts at 82° C. (179.6° F.); it is used to make candles. It consists of *Ceryl crotonate*.

**C., West Indian.** The *Smilax pseudo-china*.

**Chinam'icin.** C<sub>19</sub>H<sub>23</sub>N<sub>2</sub>O<sub>2</sub>. Occurs along with some chinamidin when quininin is dissolved in dilute sulphuric acid and the solution evaporated at a gentle heat. It is a white amorphous substance.

**Chinamidin.** C<sub>19</sub>H<sub>23</sub>N<sub>2</sub>O<sub>2</sub>. An amorphous substance obtained by the prolonged action of dilute sulphuric acid on quininin.

**Chin'amin.** Same as *Quininin*.

**Chincapin.** The *Custanea pumila*.

**C., wa'ter.** The *Nelumbium luteum*.

**Chin'chin.** The *Polygala thesioides*.

**Chinch'ina.** A name for *Cinchona*.

**Chinchona.** Same as *Cinchona*. So called after the Countess of Chinchon, a Spanish lady, whose husband was Viceroy of Peru; she, being cured of a tertian ague by means of the bark, spread the knowledge and distributed the drug in Spain. The tree was first described by De la Comdamine and called *Quinquina*; subsequently Linnæus called it *Cinchona* in honour of the Countess, and latterly the spelling of the word has been altered by some to *Chinchona*, as more

# CHINCHUNCHULLI—CHININUM.

especially representing the name of the lady after whom it was named.

**Chinchunchulli.** The *Ipomoea purpurea*.

**Chin-cough.** Commonly chin-cough: has a meaning: a disorder for which in compliance it has been derived the form *G. Chin*, a child, but improperly. A popular term for pertussis or hoarse-cough.

**Chinese.** Belonging to China. This race is believed to have brought the *Quina* to the *Indo-China* region. Their language is Chinese.

**C. blis tering fly.** The *Myiobora trichotis* and the *M. phaeocephala*.

**C. camphor.** See *Camphora*, China.

**C. cardamoms.** See *Cardamom*, Chinese.

**C. cinnamon.** The produce of *Cinnamomum aromaticum*.

**C. galls.** See *Galls*, Chinese.

**C. gelatin.** The *Gracilaria tikvahiae*, and other species.

**C. musk.** See *Musk*, Chinese.

**C. mustard.** The *Sinapis chinensis*.

**C. nut-galls.** The galls of the *Aspidiotus chinensis* on the *Indica* tree.

**C. persimmon.** The fruit of *Diospyros kaki*.

**C. rhubarb.** The *Rheum chinensis*.

**C. sugar-cane.** The *Saccharum sinense*, and the *S. officinarum*.

**C. su mach.** The *Albizia saminiensis*.

**C. tallow-tree.** The *Shorea robusta*.

**C. turmeric.** See *Turmeric*, Chinese.

**C. wax.** The *Cera sinensis*.

**C. worm-wood.** The *Artemisia chinensis*.

**Chinic acid.** Same as *Quina* acid.

**Chinin.** *Cy. Chin.* An amorphous substance obtained from quinine and cinchonine, but not found in cinchona bark.

**Chinidin.** Same as *Quinidin*.

**Chinina.** Same as *Quina*.

**Chininometry.** See *Quininometry*.

**Chininum.** Same as *Quina*.

**C. amorpheum.** See *Quina*, amorphous.

**C. amorpheum chinovicum.** Same as *Quina chinensis*.

**C. amorpheum hydrochloricum.** Same as *Quina chinensis*, hydrochloride.

**C. arsenicum.** See *Quina*, arsenic.

**C. bimuriaticum carbamida tum.** Same as *Quina bimuriaticum*.

**C. bisalicilicum.** A salt of quinine obtained by dissolving the sulphate of quinine in 50 parts of water, and adding 500 parts of 50% alcohol.

**C. bisulfuricum.** *G. Ph.* (G. *Quina bisulfurica* Chin.) Same as *Quina bisulfurica*.

**C. carbolicum.** Same as *Carbide* of quinine.

**C. carbonicum.** *G. Jodensen-Chinin.* A carbonate of quinine. Not declared official, soluble in carbonic acid and water. Used as the sulphate of quinine in cases of uremic acid.

**C. chinicum.** Same as *Quina chinensis*.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

**C. citricum.** Same as *Quina citra*.

**C. citrothymolicum.** *Chinidylate* of quinine. Four parts of quinine and ten of citric acid are dissolved by the aid of spirit and 100 parts of water. The solution is evaporated to a syrupy consistency and then solidified.

so that a yellowish semicrystalline mass deposits, which is redissolved, filtered and evaporated, when white crystals are produced, soluble in water and alcohol, bitter to the taste, and smelling of oil of thyme.

**C. dulce.** (L. *ducis*, sweet.) Sulphate of quinine mixed with liquorice powder.

**C. ferro-citricum.** *G. Ph.* (G. *citron-nouris* Eden-Chinin.) The *Ferri et quina citra*.

**C. ferrocyanatum.** (G. *Ferrocyan-Chinin*.) Ferrocyanide of quinine, obtained by heating sulphate of quinine with ferrocyanide of potassium. Used in Italy in like manner as valerianate of quinine.

**C. ferrojoda tum.** (G. *Jodensen-Chinin*.) A compound of equal quantities of iodide of quinine and iodide of iron.

**C. hydrobromatum.** Same as *Quinine hydrobromate*.

**C. hydrobromicum.** Same as *Quinine hydrobromate*.

**C. hydrochloratum.** The *Quina hydrochlorica*.

**C. hydrochloricum.** *G. Ph.* (G. *sal-nouris* Chin.) See *Quina hydrochlorica*.

**C. lac ticum.** The *Quina lacta*.

**C. muriaticum.** The *Quina hydrochlorica*.

**C. nitricum.** Same as *Quina nitra*.

**C. phenylicum.** A synonym of *Carbide* of quinine.

**C. phosphoricum.** See *Quina phosphas*.

**C. purum.** (L. *purum*, pure.) The uncombined alkaloid quinine.

**C. salicylicum.** See *Quina salicyla*.

**C. stearinicum.** (G. *stearinaures* Chin.) Quinine & parts, stearic acid 6-8, melted in a water bath and mixed. Dose, .6 to 3 grammes in the day; externally as an ointment, 1 part to 5 or 10 of lard.

**C. stibicum.** (L. *stibum*, G. *antimon-nouris* Chin.) An unstable and uncertain compound of antimony and quinine.

**C. sulfathylicum.** A crystalline salt obtained by the action of ethylsulphate of barium on sulphate of quinine. It has been used in severe intermittents.

**C. sulfurico-tartaricum.** Equal parts of sulphate of quinine and tartaric acid dissolved in water.

**C. sulfuricum.** *G. Ph.* (G. *schwefelsaurer Chinin*.) Same as *Quina sulphas*.

**C. sulfuricum acidum.** The *C. bisulfuricum*.

**C. sulfuricum ba'sicum.** The ordinary *Quina sulphas*.

**C. sulfuricum neutrale.** (L. *neutra*, German to neutral, A synonym of *Quina bisulfurica*.)

**C. sulph'o-thymolicum.** A white substance, slightly soluble in water, soluble in dilute acids, ether, and alcohol, obtained by treating sulphate of quinine with thyme.

**C. tan nicum.** *G. Ph.* (G. *gerbaurer Chinin*.) Same as *Quina tanica*.

**C. tartaricum.** (G. *weinsaurer Chinin*.) Tartrate of quinine; of the same nature as citrate of quinine.

**C. ureohydrochloricum.** Chloride of quinine 3000 parts, hydrochloric acid, of sp. gr. 1.07, 250, and pure urea 50, are dissolved in water and allowed to crystallize; it consists of white crystals, soluble in an equal quantity of

τις, belonging to the joints. *F. chiroarthrite*; *G. Handgelenkentzündung*.) Inflammation of the joint of the hand.

**Chirarthrocacē.** (*Χείρ*, the hand; *ἄρθρον*, a joint; *κακός*, evil. *F. chiroarthrocacē*; *G. Handgelenkkrankheit*.) Disease of the joints of the hand.

**Chirata**, *B. Ph.* (*Tam. shayracat*. *F. chortte*; *G. Chiretta*.) The entire plant, *Ophelia chirata*, consisting of stems 3' long, of the thickness of a goose-quill, round, smooth, pale brown, branched, flowers panicle, small; the whole plant very bitter. It contains two bitter principles, opheleic acid and chiratin. It is used as a stomachic, tonic, febrifuge, and deobstruent, and in chronic bronchitis, in infusion or tincture.

**Chiratin.**  $C_{20}H_{14}O_{15}$ . One of the two bitter constituents of chirata. It is a yellow, somewhat hygroscopic powder, freely soluble in alcohol and ether, less so in water. When boiled with dilute hydrochloric acid, it forms opheleic acid and chirato-genin.

**Chirato-genin.**  $C_{13}H_{22}O_3$ . Formed along with opheleic acid, by boiling chiratin with dilute hydrochloric acid. It is a yellowish-brown, amorphous, bitter substance, nearly insoluble in water, soluble in alcohol. By some it is believed to be present in chirata.

**Chirayit gentian.** The *Ophelia chirata*.

**Chirayita.** Same as *Chirata*.

**Chirayta.** Same as *Chirata*.

**Chiret'ta**, *U.S. Ph.* Same as *Chirata*.

**C., hill.** The *Ophelia angustifolia*.

**C., purple.** The *Ecacina tetragonum*.

**C., small.** The *Ocucia hyssopifolia*.

**C., southern.** The *Ophelia chirata*.

**Chirheuma.** Same as *Chirorrheuma*.

**Chiriatria.** (*Χείρ*, the hand; *ιατρεία*, medical treatment.) Surgery.

**Chiriater.** See *Chiriater*.

**Chirimoya.** The *Annona cherimoya*.

**Chirimus.** (*Χείρ*, the hand.) A term for spasm of the wrists, the hands, or the fingers, as a symptom of convulsive affection.

Also (*Gr. χειρουργός*), a surgical operation.

**Chirixis.** See *Chirixis*.

**Chirocacc.** See *Chirocacc*.

**Chirocyrtoma.** (*Χείρ*, the hand; *κύρτωμα*, convexity. *F. chirocyrtome*; *G. Handkrümmung*.) Incurvation of the hand.

**Chirocyrtosis.** (Same etymon.) The formation or progress of *Chirocyrtoma*.

**Chiromania.** (*Χείρ*; *μανία*, madness.) A synonym of *Maniobation*.

**Chironax.** (*Χειρωναξ*, one who is master of his hands.) A surgeon.

**Chironergia.** (*Χείρ*, the hand; *ἐργον*, a work.) Surgery.

**Chirones.** (*Χείρ*, the hand.) Old term for pustules on the hands and feet, in each of which was said to be the larva of an Acanus. Also called *Sirones*.

**Chironia.** (*Chiron*, the centaur, who first used it on himself.) A Genus of the Nat. Order *Gentianeace*.

Also, the *Tamus communis*.

Also, an old term for an affection of the hand, consisting in the presence of *Chirones*.

**C. angularis.** The *Sabbatia angularis*.

**C. campaula'ta**, *Linn.* (*Mod. L. campaula*, a small bell.) The *Sabbatia gracilis*.

**C. centaureum.** The lesser centaury, *Erythraea centaureum*.

**C. centauroides.** The *Erythraea Roxburghii*.

**C. chilensis**, *Willd.* (*F. herbe à la pleurésie*.) Canelagua. *Ilab. Chili*. A bitter stomachic used in infusion as an anti-teretic, antipleuritic, and febrifuge.

**C. gracilis**, *Mielix*. The *Sabbatia gracilis*.

**Chironian ulcer.** Same as *Chironius*.

**Chironius.** (*Χειρώνιος*, from *Χείρ*, a famous surgeon; because for its cure it needed his aid.) Old term for a malignant ulcer with callous edges, difficult to heal.

**Chironomia.** See *Chironomy*.

**Chiropleyometrcsis.** See *Pelyo-chiropleyometrcsis*.

**Chiropodalgia.** (*Χείρ*; *πῶς*, the foot; *ἄλγος*, pain.) A synonym of *Acradynia*.

**Chiropodist.** (*Χείρ*; *πῶς*.) One who treats diseases of the hands and feet; usually restricted now to one who treats corns and bunions.

**Chiropodology.** (*Χείρ*, the hand; *πῶς*, a foot; *λόγος*, a discourse.) A treatise on corns, warts, bunions, and their causes.

**Chirop'tera.** See *Chiroptera*.

**Chirorrheuma.** (*Χείρ*; *ῥέμα*, a fluxion.) Rheumatism of the hands.

**Chiostrophi'sis.** (*Χείρ*; *στρίφω*, to twist.) Distortion of the hand.

**Chirotheca.** (*Χείρ*, the hand; *θηκή*, a case; from *τίθημι*, to put.) Old term for the scarfskin of the hand, with the nails adhering, entirely removed from the dead subject, the cuticle having been separated from the parts under it by their putrefaction.

Also, a spiral bandage for the hand.

Also (*G. Handschuh*), a glove.

**C. comple'ta.** (*L. completus*, perfect.) A term applied to the bandage when the whole hand and all the fingers were enveloped.

**C. incomple'ta.** (*L. in, neg.*; *completus*, *G. Fingerbinde*.) A term applied when only a finger was bandaged.

**Chirotribia.** (*Χειροτριβία*; from *χείρ*; *τριβω*, to rub.) A term applied to medical treatment of the nature of shampooing; also, surgical or medical treatment generally.

**Chirrhœuma.** Same as *Chirorrheuma*.

**Chirurgæon.** (*Χειρουργός*, a working by hand. *G. Wundarzt*.) A surgeon.

**Chirurgia.** (*Χειρουργία*; from *χείρ*, the hand; *ἔργον*, to work; because its operations are performed with the hands. *F. chirurgie*; *G. chirurgie*, *Wundarzneikunde*.) That part of medicine which deals with the operations of the hands, but not excluding other remedies; surgery, or chirurgery.

**C. anaplastica.** (*Ἀναπλάσσω*, to form anew.) The surgical restoration of lost parts; plastic surgery.

**C. curtorum.** (*L. curtus*, mutilated.) Same as *C. anaplastica*.

**C. infusorum.** (*L. infusus*, part. of *infundo*, to pour into.) Injection of medicinal or other substances into the veins.

**C. militaris.** (*L. militaris*, belonging to a soldier.) Military surgery.

**C. transfusoria.** (*L. transfundo*, to pour out from one vessel into another.) The transfusion of blood from one person into another's veins.

**Chirurgical.** (*Χειρουργία*, surgery. *F.*

# CHIRURGICÆ—CHLORA.

*chirurgique*; G. *chirurgisch*, *wundarztneulich*.) Of, or belonging to, surgery.

**Chirurgicæ.** The same as *Chirurgia*.

**Chirurgorganeuma.** (Χειρουργία, surgery; *ὄργανον*, an instrument.) A surgical instrument chest.

**Chirurgorgano-ma.** (Same etymon.) Same as *Chirurgorganeuma*.

**Chirurgorganum.** (Same etymon.) A surgical instrument.

**Chirurgus.** (Χειρουργός. F. *chirurgien*; G. *Chirurg*, *Wundarzt*.) A surgeon, or surgeon.

**Chismobranchiate.** (Σχισμός, a cleaving; *βράγχια*, the gills. F. *chismobranchie*; G. *spaltkeimig*.) Having the branchiæ in a cavity communicating externally by a broad slit.

**Chismopneî.** (Σχισμός; πνέω, to breathe. F. *chismopne*; G. *spaltathmend*.) Applied by Duméril to an Order of the *Chondropterygi*, the branchiæ of which, without opercula, are covered by a membrane having a slit on each side of the neck.

**Chist.** (Arabie.) The sixth part of a gallon.

**Chitenin.**  $C_{19}H_{22}N_2O_4 + 4H_2O$ . A product of the oxidation of quinine; same as *Dihydrochinin*.

**Chitigna'no.** Italy; near Rosina, in Tuscany. A mineral water, containing small quantities of carbonates of soda, magnesia, lime, and iron, with free carbonic acid.

**Chitin.** (Χιτίνη, a doublet. F. *chitine*.)  $C_{11}H_{25}N_2O_{10}$  and  $C_{11}H_{13}NO_6$  have been assigned as its formula. The substance which forms the outward tegument of insects, especially the elytra of the Coleoptera, and is found in the carapace of Crustacea, and in many epidermic structures and in the membrane of the ovum of many Invertebrata. It is resolved by boiling with dilute acids into glucose and lactamide, or, according to some, in glucosamide and acetic acid, itself being a nitrogenous glucoside.

**Chitinous.** (Same etymon.) Consisting, or having the nature, of *Chitin*.

**C. tissue.** The substance composing the elytra of Coleoptera and the hard integument of insects. See *Chitin*.

**Chiton.** (Χιτών.) A tunic.

**Chitoniscus.** (Χιτωνίσκος, a short frock.) A synonym of the *Amnion*.

**Chito'samin.**  $C_6H_{12}NO_5$ . A base obtained by the action of hydrochloric acid on chitin.

**Chitose.** A sugar obtained by the action of sulphuric acid on chitin.

**Chittem bark.** The bark of *Rhamnus purshiana*.

**Chit tick's rem'edy for stone.** A medicine which was formerly in high repute, consisted merely of a fixed alkali dissolved in veal broth.

**Chittramoolum.** The *Plumbago zeylanica*.

**Chium vinum.** (Χίος, Chios or Scio, the island it came from.) Chian or Scian wine, used by the Greeks and Romans.

**Chives.** Old name for the stamens.

Also, the *Allium schuoprasum*.

**Chladni.** An Italian physicist.

**C's figures.** (G. *Klangfiguren*.) The figures assumed by sand dusted over vibrating plates. They show the nodal points and lines.

**Chlænæcæ.** (Χλαίνα, a cloak. F. *chlainées*.) An Order of thalamifloral Exogens,

or of the Alliance *Geraniales*, having regular unsymmetrical flowers in a permanent cup-like involucre, monadelphous stamens, and much albumen.

**Chlam'ydate.** (Χλαμός.) Having a mantle. Applied to certain Branchioga-teropods having a mantle.

**Chlamydeous.** (Χλαμός.) Pertaining to, or possessing, a *Chlamys*.

**Chlamydoblastous.** (Χλαμός, a cloak; *βλαστός*, a sprout. G. *verhülltheimig*.) Applied by Bartling to a group of dioecious plants having the embryo in a special sac.

**Chlam'ys.** (Χλαμός, a cloak.) Used in Botany to signify the floral envelope.

**Chliarolutrum.** (Χλιαρός, warm; *λουτρον*, a bath.) A tepid bath.

**Chliaros.** (Χλιαίω, to make warm.) Old term (Gr. *χλιαρός*), applied by Galen, *Aph.* 37, to fevers which are not very intense; also, tepid, between warm and cold, *Med. Med.* i, 7.

**Chlias'ma.** (Χλιασμα, from *χλιαίω*, to make warm.) Old term for a fomentation, or a warm poultice.

**Chloasma.** (Χλοάω, to be green.) Greenness.

Term for a form of cutaneous affection which shows itself in spots and patches of yellowish brown or even blackish colour; the *Pityriasis versicolor* of Willan, *Tinea versicolor* of other writers. It is accompanied by the growth of a fungus, the *Microsporon furfur*.

Also (G. *Löbberlech*), used by Hebra to signify simply pigmentary discoloration, unaccompanied by fungous growth, as in *Tinea versicolor*, and not covered by scales. It is caused by deposit of pigment in the epidermic cells.

**C. album.** (L. *albus*, white.) A synonym of *Leucoderma*.

**C. cachectico'rum.** (Καχεξία, a bad habit of body.) Chloasma occurring in unhealthy conditions of the body, as those produced by malaria, cancer, and Addison's disease.

**C. calor'icum.** (L. *calor*, heat.) The bronzed condition of skin produced by exposure to the direct rays of the sun, or even to the air at a moderate temperature.

**C. gravid'a'rum.** (L. *gravida*, a pregnant woman.) Chloasma occurring during pregnancy.

**C. hepaticum.** (Ηπατικός, of the liver.) Ordinary chloasma; so called from its liver colour.

**C. idiopath'icum.** (Ίδιος, peculiar; *πάθος*, affection.) Acquired chloasma not depending on disease of another organ.

**C. symptomaticum.** (Συμπτωμα, anything that has fallen on.) Chloasma depending on some alteration of another part of the body, as the uterus.

**C. tox'icum.** (Τοξικόν, poison.) Chloasma, the result of the application of mustard plasters, blisters, or other vesicants.

**C. traumaticum.** (Τραυματικός, belonging to wounds.) Chloasma, the result of a contusion, or pressure, or scratching with the nails, or such like.

**C. uter'inum.** (L. *uterus*, the womb.) Chloasma depending on disturbance of the female genital organs; occurring during pregnancy, or accompanying ovarian tumours, uterine fibroids, and such like.

**Chlo'in.** (Χλόα, the first light green shoot of plants.) A name for chlorophyll.

**Chlora.** Same as *Chlorine*.

**Chlo'ra.** (*Χλωρός*, yellow.) A Genus of the Nat. Order *Gentianac.*

**C. perfoliata**, Linn. (*L. per.*, very; *foliatus*, leaved.) Yellow centaury. Root bitter, with the same properties as gentian.

**Chlorac'e'tals.** Early products of the action of chlorine on anhydrous alcohol after the conversion into aldehyde; they are mono-, di-, and trichloracetal.

**Chloracetic acid.** When chlorine is allowed to act on acetic acid in sunshine, three acids are formed, *Monochloracetic acid*,  $C_2H_3ClO$ ; *Dichloracetic acid*,  $C_2H_2Cl_2O_2$ ; and *Trichloracetic acid*,  $C_2HCl_3O_2$ .

**Chlorac'tisation.** A term applied to the production of local anaesthesia by the application of a mixture of equal quantities of chloroform and glacial acetic acid.

**Chlorac'etones.** Compounds formed by the direct action of chlorine and acetone.

**Chlorac'id.** An acid in which chlorine is supposed to play the part of acidifying principle.

**Chloræ'a.** A Genus of the Nat. Order *Orchidacæe*.

**C. disoi'des.** A species supposed to be a galactagogue.

**Chloræ'matin.** See *Chlorhæmatin*.

**Chloral.** (Formed from the first syllables of *chlorine* and *alcohol*, which are concerned in its formation.)  $CCl_3.CHO$ . A thin, colourless, oily liquid, formed by passing chlorine gas into absolute alcohol as long as hydrochloric acid gas is evolved, and agitating the product with three times its volume of strong sulphuric acid; it is then gently heated, the oily liquid floating on the top, which is impure chloral, is collected, and purified first by distillation from sulphuric acid, and then from quicklime. Chloral has a pungent odour and little taste; it has a density of 1.502, and boils at  $94^\circ C.$  ( $201.2^\circ F.$ ); in time it becomes converted into a white solid; it is soluble in water, alcohol, and ether. It possesses anaesthetic properties.

Also, the pharmacopœial name, U.S.A., of *Chloral hydras*, B. Ph.

**C. al'coholate.**  $CCl_3.CH.OH.-OC_2H_5$ . The final product of the action of chlorine on anhydrous alcohol. It is crystalline, melts at  $56^\circ C.$  ( $132.8^\circ F.$ ), and boils at about  $114^\circ C.$  ( $237.2^\circ F.$ ).

Also, a pharmaceutical term for a compound obtained by treating chloral with absolute alcohol; it is soluble in alcohol, but almost insoluble in water. It has somewhat the same properties as chloral hydrate.

**C., anhy'drous.** (*Ἀνέκτος*, without water.) Same as *Chloral*.

**C. butyl'icum.** (*F. hydrate de chloral butylique*; G. *Butylchloralhydrat.*)  $C_4H_9Cl_3O$ .  $H_2O$ . Butylchloral hydrate. Prepared by passing chlorine gas into acetic aldehyde, subjecting the result to fractional distillation, until the product boils between  $163^\circ C.$  and  $165^\circ C.$  ( $325.4^\circ F.$  and  $329^\circ F.$ ); this is butylchloral, which, when dissolved in water and crystallised, forms butylchloral hydrate. It occurs in thin, white, silky scales, freely soluble in alcohol, hot water, and glycerin, sparingly in cold water; its taste is acid. It produces sleep, and has been recommended in preference to chloral hydrate in cases of heart disease, in neuralgia of the fifth pair of nerves, in nervous headache, and in dysmenorrhœa. Dose, 3 to 10 grains. Also called croton-chloral.

**C., cam'phorated.** Same as *Camphor chloral*.

**C., cro'ton.** Same as *C. butyl'icum*.

**C. glyc'cite.** A solution of one drachm of chloral hydrate in four drachms of glycerin. Used as a solvent of the alkaloids, such as morphia, veratria.

**C. hy'dras**, B. Ph. (*F. hydrate de chloral*; G. *Chloralhydrat.*)  $C_2HCl_3O.H_2O$ . Hydrate of chloral, obtained by the addition of water to chloral. It occurs in colourless crystals or white crystalline masses, which, in a dry atmosphere, evaporate slowly without deliquescent. It fuses to a colourless transparent liquid at  $56^\circ C.$  to  $58^\circ C.$  ( $132.8^\circ F.$  to  $136.4^\circ F.$ ), solidifies on cooling at about  $50^\circ C.$  ( $122^\circ F.$ ), boils about  $95^\circ C.$  ( $203^\circ F.$ ), and volatilises without leaving any residue. It is soluble in less than its own weight of distilled water, rectified spirits, and ether, and in four times its weight of chloroform; it dissolves in fixed and volatile oils. It has a pungent, somewhat aromatic odour, and a pungent, rather bitter taste, leaving an unpleasantness about the fauces. It is hypnotic and anæsthetic, affecting consecutively, it is said, the brain, the voluntary muscles, the respiratory muscles, and lastly, the heart; the blood-corpuscles have been seen to be disorganised when it is injected into the veins. Its mode of action is unsettled; the early suggestion that it was decomposed in the blood into formic acid and chloroform has not been confirmed. Chloral hydrate is chiefly used to procure sleep; it has been given in delirium tremens, in mania, and nervous headache, in angina pectoris, tetanus, strychnia poisoning, epilepsy, paralysis agitans, laryngismus stridulus, chronic cough, hiccough, and as an anæsthetic in labour. Externally it has been used in diphtheria and foul ulcers, and in parasitic skin diseases. Dose, 5 to 30 grains.

**C. hy'drate.** See *C. hydras*.

**C. hydrosulphate.** Same as *C., sulphuretted*.

**C., insol'uble.** Chloral which, by keeping, has assumed the condition of a white mass or powder; it retains the composition of liquid chloral.

**C., mesit'ic.** A synonym of *Dichloracetone*.

**C. pois'oning.** Fatal doses produce failure of heart's action, coldness of extremities, lividity of face, and sometimes convulsions. Death has resulted after a dose of ten grains; recovery has taken place after a dose of 350 grains. Warmth, caffeine, and strychnia, have been recommended as antidotes. See *Chloralism*.

**C., sulph'uretted.**  $C_2HCl_3O.2HS$ . Hydrate of chloral in which water is replaced by hydrogen sulphide. It has been used as a hypnotic.

**Chloral'dehydes.** These halogen derivatives of aldehyde are three in number: *Monochloraldehyde*, *Dichloraldehyde*, and *Trichloraldehyde* or *Chloral*.

**Chloralic.** Relating to *Chloral*.

**Chloralism.** The morbid condition of system produced by the long-continued use of chloral hydrate in ordinary doses. It has been said that cerebral anæmia, melancholia, feeble mental power, weakness and want of control of muscles, joint pains, feeble action of heart, gastric disturbance, and skin irritation have been induced. It is probable that in a large number of instances, where injurious effects have been sup-

# CHLORALOID—CHLORETUM.

posed to follow the use of chloral, the evils produced by accompanying drugs and circumstances, such as alcohol, and the disturbed nervous condition leading to the use of the drug, have not been eliminated.

**Chloraloin.** (*Chlorine*; *aloin*.)  $C_{24}H_{30}Cl_{14} + 6H_2O$ . A yellow non-crystalline derivative of barbaloin by the action of chlorine.

**Chloralum.** A substance used as a disinfectant, consisting of aluminum chloride and sulphate, with some impurities.

Also, the same as *Chloral*.

**C. butyli hydratum.** Same as *Chloral butylicum*.

**C. crotonis hydratum.** A synonym of *Chloral butylicum*.

**C. hydratum.** Same as *Chloral hydras*.

**C. hydratum camphoratum.** Same as *Camphor chloral*.

**C. hydratum crystallisatum.** G. Ph. (*G. krystallisirtes Chloralhydrat*.) Hydrate of chloral in crystals. See *Chloral hydras*.

**Chloraluric acid.** A product of the action of chlorous acid on uric acid. It crystallises in nacreous scales.

**Chloramide of mercur.** A synonym of *Hydrargyrum ammoniatum*.

**Chlorammonium.** The *Ammonii chloridum*.

**Chloramyl.** A mixture of one pound of chloroform with two drachms of amyl nitrite. Used as an anæsthetic inhalation.

**Chloranil.**  $C_6Cl_2O_2$ . A product of the action of chlorine on a solution of aloes or on some benzene derivative, as anilin or carbolic acid. It occurs in bright golden-yellow laminae, insoluble in water, soluble in hot alcohol and in ether.

**Chlorantha'ceæ.** (*Χλωρός*, green; *ἄνθος*, a flower.) An Order of monoclamydeous Angiosperms, or of the Alliance *Piperales*, or a Family of the Order *Piperinæ*, having a one-celled ovary, with a solitary pendulous carpel, a naked embryo, and opposite leaves with intermediate stipules.

**Chloranth'ia.** (*Χλωρός*, green; *ἄνθος*, a flower. *G. Vergrünungen*.) A condition of regressive metamorphosis of a plant in which the floral organs (sepals, petals, stamens, and carpels) return to the condition of leaves, both as to colour and, often, form.

**Chloranthous.** (Same etymon. *F. chloranthæ*; *G. grünblümig*.) Having green flowers.

**Chloranth'us.** (Same etymon.) A Genus of the Nat. Order *Chloranthaceæ*.

**C. brachystachys.** (*Βραχύς*, short; *στάχυς*, an ear of corn.) An aromatic herb with a camphorous odour and a somewhat bitter taste, the root of which is used as a stimulant in malignant fevers.

**C. inconspic'uus.** (*L. in*, not; *conspicuus*, striking.) Leaves used in China to flavour tea.

**C. officina'lis.** (*L. officina*, a shop.) Used as *C. brachystachys*.

**Chloranth'y.** Same as *Chloranthia*.

**Chloras.** A *Chlorate*.

**C. kal'icus.** (*G. chloresaures Kali*.) The *Potassæ chloras*.

**C. ka'licus depura'tus.** (*Kali*; *L. depuro*, to purify.) A synonym of *Potassæ chloras*.

**C. lixiv'ia.** (*L. lixivia*, lye.) Same as *Potassæ chloras*.

**C. na'tricus.** (*Natrium*.) The *Sodium chlorate*.

**C. potas'sæ.** The *Potassæ chloras*.

**C. potas'sicus.** The *Potassæ chloras*.

**C. so'dæ.** The *Sodium chlorate*.

**Chloras'ma.** (*Χλωρός*, green.) Greenness; paleness. A synonym of *Chlorosis*.

**Chlorate.** (*F. chlorate*; *G. chloresaures Salz*.) A salt of chloric acid; formerly termed a hyperoxymuriate.

**Chloraur'ate.** (*L. aurum*, gold.) A salt of *Chlorauric acid*.

**C. of ammon'ium.**  $NH_4AuCl_4$ . Obtained when one part of terechloride of gold is dissolved, by the aid of a few drops of nitromuriatic acid, with two parts of ammonium chloride in distilled water, and evaporated to dryness. Used in amenorrhœa and dysmenorrhœa. Dose, a tenth of a grain.

**Chlorau'ric.** (*L. aurum*, gold.) Relating to, or containing, gold and chlorine.

**C. acid.**  $HAuCl_4 + 4H_2O$ . Obtained when hydrochloric acid is added to a neutral solution of auric chloride. It occurs in long, yellow, deliquescent needles, of a bitter taste, and poisonous. It stains the skin purple red.

**Chlo'razol.** An oily fluid, sp. gr. 1.555, obtained by treating albumin, gluten, or dried muscle, with fuming nitric acid, adding an equal quantity of strong hydrochloric acid, and then distilling; the chlorazol falls to the bottom of the acid distillate in oily drops. It has an acid reaction and a strong but not disagreeable smell. It is soluble in alcohol and ether, almost insoluble in water; when heated rapidly its vapour detonates. It is very poisonous.

**Chlorazo'tic.** (*Azote*.) Same as *Chloronitric*.

**Chlorepati'tis.** (*Χλωρός*, green. *F. chlorepatite*; *G. Leberentzündung mit Bleichsucht*.) Inflammation of the liver in a chlorotic person.

**Chlorephidro'sis.** (*Χλωρός*, green; *ἐπίδροσις*, superficial perspiration. *F. chlorephidrose*; *G. grüne Schweiss*.) Greenish perspiration.

**Chlore'thane.** Same as *Ethyl chloride*.

**Chlore'thene.** Same as *Vinyl chloride*.

**Chlore'tum.** A *Chloride*.

**C. ammo'niæ.** The *Ammonii chloridum*.

**C. ammon'icum.** The *Ammonii chloridum*.

**C. antimo'ni.** Antimonious chloride.

**C. au'ri.** The *Auri chloridum*.

**C. au'ri cum chlore tum na'trii.** Same as *Auronatrium chloratum*.

**C. au'ri natrona'tum.** The *Aurona-trium chloratum*.

**C. aur'icum.** The *Auri chloridum*.

**C. ba'ryi.** The *Barium chloride*.

**C. bary'ticum.** The *Barium chloride*.

**C. bro'mi.** The *Bromine chloride*.

**C. calca'riæ.** (*L. calcaria*, belonging to lime.) Chlorinated lime.

**C. fer'ricum.** The *Ferri perchloridum*.

**C. ferro'sum.** The *Ferri chloridum*.

**C. hydrargy'ricum.** The *Hydrargyri perchloridum*.

**C. hydrargyro'sum.** The *Hydrargyri subchloridum*.

**C. na'trii.** (*Natrum*.) Sodium chloride.

**C. stib'ii.** (*Stibium*.) Antimonious chloride.

**C. zin'ci.** Zinc chloride.

# CHLORHEMATIN—CHLORODYNE.

**Chlorhæmatin.** (*Chlorine; hæmatin.*) A yellow substance obtained from a solution of dry hæmatin in dilute nitric acid.

Also, the same as *Hæmin*.

**Chlorhydras.** Same as *Hydrochlorate*.

**C. ammoniac.** The *Ammonii chloridum*.

**C. morphicus.** The *Morphic hydrochloras*.

**Chlorhydrate.** Same as *Hydrochlorate*.

**Chlorhydric.** Same as *Hydrochloric*.

**C. acid.** Same as *Hydrochloric acid*.

**C. ether, chlorinated.** See *Chlorinated chlorohydric ether*.

**Chlorhydrins.** Products of the action of hydrochloric acid on glycerin, by the substitution of one, two, or three molecules of chlorine for an equal proportion of hydroxyl, forming chlorhydrin, dichlorhydrin, and trichlorhydrin.

**Chlorhydroquinones.** Substitution products of hydroquinone, not obtained directly from hydroquinone, but by the reduction of chloroquinones by sulphurous acid.

**Chloriasis.** Same as *Chlorosis*.

**Chloric.** (*Chlorine.*) Of, or belonging to, chlorine.

**C. acid.**  $\text{HClO}_3$ . Prepared by decomposing barium chloride by dilute sulphuric acid; or by decomposing potassium chlorate by hydrofluosilicic acid, when it is left in solution. It is colourless, has a pungent smell, and bleaches vegetable colours.

**C. ether.** A solution of chloroform in rectified spirit. See *Spiritus chloroformi*.

**Chloride.** (*G. Chlorid.*) A combination of chlorine with a base.

**Chloridum.** A *Chloride*.

**C. æthylhydrargyricum.** Same as *Hydrargyrum æthylchloratum*.

**C. calcicum.** (*L. calx, lime.*) The *Calcii chloridum*.

**C. ferrium.** The *Ferri chloridum*, U.S. Ph.

**C. ferrosum.** The *Ferrum chloratum*, G. Ph.

**C. hydricum.** Hydrochloric acid.

**C. methyltrichlorati sulfurosum.** Same as *Methylum trichloratum sulfuroso chloridum*.

**C. stibicum.** (*L. stibium, antimony.*) The *Liquor antimonii chloridum*, B. Ph.

**Chlorimetry.** (*Chlorine; μέτρον, a measure.*) The mode of determining the amount of chlorine which may be obtained from a given specimen of bleaching powder or chloride of lime by the addition of hydrochloric or sulphuric acid.

**Chlorina.** Same as *Chlorine*.

**C. liquida.** (*L. liquidus, fluid.*) The *Liquor chlori*.

**Chlorinated.** Containing chlorine.

**C. chlorohydric ether.** A colourless mobile liquid, with an aromatic ethereal odour and a sweet, spirituous taste. Its composition is uncertain. It was used as an anæsthetic.

**C. lime.** See *Calx chlorinata*.

**C. muriatic ether.** Same as *C. chlorohydric ether*.

**C. soda.** See *Liquor sodæ chloratæ*.

**Chlorine.** (*Χλωρός, green; because of its colour. F. chlore; G. Chlor, Chlorine.*) Symbol Cl; at. weight 35.37; density 3.127. An elementary body found in nature in combination chiefly with the alkali metals. It may be obtained by heating manganese dioxide with strong hydro-

chloric acid. It is a greenish-yellow, transparent gas, of a disagreeable and suffocating odour, producing cough and irritation of the eyes and nose, and, if inhaled pure for a short time, death. When subjected to a pressure of six atmospheres it condenses to a yellow liquid. It possesses disinfecting and bleaching properties. It has been recommended in diluted form as an inhalation in phthisis and chronic bronchitis.

**C. bath.** See *Bath, chlorine*.

**C., bisulphuret of.** Same as *Sulphur dichloride*.

**C. fumigation.** See *Suffumigatio Guytoniana*.

**C. hydrate.**  $\text{Cl} + 5\text{H}_2\text{O}$ . A solid crystalline compound formed when chlorine is passed through water a little above freezing point.

**C. monoxide.** Same as *Hypochlorous oxide*.

**C. peroxide.**  $\text{ClO}_2$ . A heavy, dark yellow gas obtained, along with perchloric acid and water, by adding potassium chlorate in repeated small quantities to concentrated sulphuric acid and heating. It is an active oxidising agent, and very explosive.

**C. poultice.** The *Cataplasma sodæ chloratæ*.

**C. trioxide.**  $\text{Cl}_2\text{O}_3$ . A greenish-yellow irritating gas, obtained by heating potassium chlorate, arsenic trioxide, and dilute nitric or sulphuric acids. In contact with water it forms a solid hydrate.

**C. water.** See *Aqua chlorinæ*.

**Chloris.** A *Chlorite*.

**C. calcicus.** A synonym of *Chlorinated lime*.

**Chlorite.** A salt of chlorous acid.

**Chlorium.** Same as *Chlorine*.

**Chloroanæmia.** (*Χλωρός, green; αν, neg.; αἷμα, blood.*) A synonym of *Chlorosis*.

**Chloraurate.** Same as *Chloraurate*.

**Chlorauric.** Same as *Chlorauric*.

**Chlorobenzoic acid.**  $\text{C}_7\text{H}_5\text{ClO}_2$ . Monochlorobenzoic acid is prepared by treating salicylic acid with phosphorus pentachloride, and decomposing the resulting chloride with boiling water. It occurs in colourless crystals; when taken into the body it is found in the urine as *Chlorhippuric acid*.

**Chlorocarbon.** A Synonym of *Carbon tetrachloride*.

**Chlorocarbonic acid.** A synonym of phosgene gas, or *Carbonyl chloride*.

**Chlorocarpous.** (*Χλωρός, green; καρπός, fruit. F. chlorocarpe; G. grünfruchtig.*) Having yellow or greenish fruit.

**Chlorocodid.**  $\text{C}_{18}\text{H}_{20}\text{ClNO}_2$ . A compound obtained by heating codia and hydrochloric acid, which, on being heated further in a sealed tube, splits up into methyl chloride and apomorphia.

**Chlorocruorin.** (*Χλωρός, green; cruorin.*) A green substance which, according to Ray Lankester, is the cause of the green colour of the blood of some species of *Sabella*, *Siphonostomata*, and other Annelids; it appears to exist in two states of oxidation like hæmoglobin, and its decomposition products seem identical with some derivatives of hæmatin.

**Chlorodyne.** A well-known narcotic, said to be composed of hydrochloric acid 5 parts, ether, chloroform, tincture of Indian hemp, tincture of capsicum, of each 10 parts, morphia, prussic acid, of each 2 parts, oil of peppermint 1

# CHLOROFORM—CHLOROPHANE.

part, tinctures of henbane and aconite, of each 3 parts, and syrup 50 parts.

Another formula is: chloroform 60 drachms, chloric ether 1 drachm, oil of peppermint 2 drops, muriate of morphia, 8 grains, Scheele's prussic acid 12 drops, perchloric acid 20 drops, tincture of Indian hemp 1 drachm, treacle 1 drachm.

**Chloroform.** See *Chloroformum*, B. Ph. **C., camphorated.** See *Camphorated chloroform*.

**C., gelatinised.** A gelatinous compound obtained by mixing equal parts of chloroform and white of egg.

**C., methylic.** Chloroform made from wood spirit instead of rectified spirit.

**C., phosphorised.** A solution of one part of phosphorus in four parts of chloroform. Also, see *Chloroformium phosphoratum*.

**C. tincture.** Same as *Spiritus chloroformi*.

**C. wa'ter**, B. Ph. A drachm of chloroform dissolved in twenty-five fluid ounces of water. Dose, half to two ounces.

**Chloroformic.** Relating to chloroform.

**Chloroformisation.** The occurrence or the induction of the sleep and anaesthesia caused by the inhalation of chloroform.

**Chloroformise.** To put a person under the influence of chloroform.

**Chloroform'ium**, G. Ph. Same as *Chloroformum*.

**C. phosphora'tum.** Phosphorus one part dissolved in ten parts of chloroform. Used locally in neuralgia, toothache, and rheumatism.

**Chloroform'um**, B. Ph. (*Χλωρός*, green; *formyl*.)  $\text{CHCl}_3$ . Molecular weight 119.5. Methanylechloride. Thirty fluid ounces of rectified spirit, mixed with three gallons of water, are placed in a still and heated to  $100^\circ\text{F}$ . ( $37.7^\circ\text{C}$ ), 10 pounds of chlorinated lime and 5 pounds of slaked lime are added, and the mixture distilled till 50 ounces are obtained; the lower stratum of the distillate is separated, washed with water, then agitated with sulphuric acid; and, lastly, distilled from chloride of calcium and slaked lime. It is a limpid, colourless liquid, of agreeable ethereal odour and pungent, sweet taste. Its density is 1.499 at  $15^\circ\text{C}$ . ( $59^\circ\text{F}$ ), its vapour density is 4.2, it boils at  $62^\circ\text{C}$ . ( $143.6^\circ\text{F}$ ), and burns with difficulty with a greenish flame. Locally, it acts as an irritant and vesicant, with slight anaesthetic properties. Inhaled as a vapour, it produces anaesthesia and insensibility after a preliminary excitement; then profound narcosis and death. When administered by the mouth it acts as a stimulant, emunctive, and sedative. It is used, in vapour by the lungs, to produce insensibility during operations and manipulations and in labour, in spasmodic asthma, tetanus, infantile and puerperal convulsions, chorea, and angina pectoris; in substance, by the mouth to relieve colic, spasm, and neuralgia, and to avert a paroxysm of ague, and as a general stimulant in small doses; locally, it is used in painful affections, such as neuralgia and chronic rheumatism. Dose, 3 to 10 minims.

**C. purifica'tum**, U.S. Ph. (*L. purifico*, to purify.) Commercial chloroform, 100 troy ounces, is mixed, and occasionally shaken, with 20 troy ounces of sulphuric acid, for twenty-four hours; the lighter liquid is then separated, and 5 troy ounces of carbonate of sodium, dissolved in 10 fluid ounces of water, is added to it, shaken

for half an hour, and set aside; the chloroform is now separated from the supernatant layer and mixed with 12 fluid drachms of strong alcohol; when the mixture has again separated into two layers the chloroform is placed in a dry retort, half a troy ounce of lime in coarse powder added, and it is distilled in a water-bath, at a temperature not above  $67.2^\circ\text{C}$ . ( $153^\circ\text{F}$ ), until one troy ounce of residue is left.

**C. vena'le**, U.S. Ph. (*L. venalis*, for sale. *F. chloroforme vena'l*; *G. käufliches Chloroform*.) Chloroform as it may be bought in the market.

**Chlorofu'cin.** (*Χλωρός*; *L. fucus*, a seaweed.) A variety of the chlorophyll found in seaweeds.

**Chlorogenic acid**, Payen. (*G. Kaffee gerbsäure*.)  $\text{C}_{15}\text{H}_{13}\text{O}_8$ . An acid probably identical with the tannic acid of coffee, or perhaps only impure quinic acid. It is contained in coffee, in the leaves of *Ilex aquifolium*, and in the root of *Chlorococc racemosa*.

**Chlorog'enin.**  $\text{C}_{21}\text{H}_{20}\text{N}_2\text{O}_4 + \text{H}_2\text{O}$ . An alkaloid said to be contained in *Alstonia bark*, and in the root of *Rubia tinctorum*.

**Chlorogonid'ium.** (*Χλωρός*; *gonidium*. *F. chlorogonidie*; *G. grüne Brutzelle*.) Name for a gonidium of a golden yellow colour.

**Chlorogon'im'on.** (*Χλωρός*; *γόγγυμος*, productive.) A term applied to the gonidial layer when it is green.

**Chlorohæ'matin.** (*Χλωρός*; *αἷμα*, blood. *G. salzsaures Hæmatin*.) The same as *Hæmin*.

**Chlorohippu'ric acid.** An acid found in the urine after the administration of chlorobenzoic acid.

**Chlorohy'dric acid.** Same as *Hydrochloric acid*.

**Chlor'oid.** (*Chlorine*; *είδος*, likeness.) A term applied to the negative plate of a voltaic battery; in opposition to the zincoid or positive plate.

**Chlor'oides.** (Same etymon.) A family of simple elements consisting of chlorine, fluorine, bromine, and iodine.

**Chloroleuc'ous.** (*Χλωρός*; *λευκός*, white. *F. chloroleuque*; *G. grünweissig*.) Of a green and white or a greenish-white colour.

**Chloro'ma.** (*Χλωρός*, green.) A form of tumour, of a greenish colour, occurring chiefly in connection with the periosteum of the cranial and facial bones. It is probably allied to, or identical with, myeloid sarcoma.

**Chlorom'eter.** (*Χλωρός*; *μέτρον*, a measure. *F. chloromètre*; *G. Chlormesser*.) An apparatus for estimating the quantity of chlorine in combination with water or with a base.

**Chlorometh'ane.** Same as *Methyl chloride*.

**Chlorometh'yl.** Same as *Methylene bichloride*.

**Chlorom'etry.** The determination of the amount of chlorine by means of the *Chlorometer*.

**Chloron'ita.** Same as *Chlorophyll*.

**Chloronit'ric acid.**  $\text{NOCl}_2$ . A gaseous compound said to be formed, along with nitrosyl chloride at one period, when nitrohydrochloric acid is heated.

**Chloronit'rous acid.** Same as *Nitrosyl chloride*.

**Chlorophan.** (*Χλωρός*; *φαίνω*, to bring into sight.) The greenish-yellow form of *Chromophan*; it becomes decolorised the quickest of all the varieties.

# CHLOROPHANOUS—CHLOROXYLON.

**Chlorophanous.** (Χλωρός; φαίνω, to shine. *F. chlorophane*; *G. grünschimmernd.*) Of a yellow or yellowish appearance.

**Chlorophthisis.** (Χλωρός; φθίσις, a wasting. *F. chlorophthisis*; *G. Bleichsucht mit Schwindsucht.*) Pulmonary phthisis with chlorosis.

**Chlorophyll.** (Χλωρός, green; φύλλον, a leaf. *F. chlorophyll*; *G. Blattgrün, Grünstoff.*) The green colouring matter of leaves, which in autumn becomes reddened by the production of acid. It is contained in the colourless matrix of the chlorophyll granules found in the cells of plants, such as those of the leaves and bark, which are exposed to light. Its chemical composition is unknown, it is believed to contain iron, but no nitrogen. It is by some looked on as a combination of two other colouring matters, phylloxanthin and phylloerythrin, while others have found four bodies. It is soluble in alcohol and ether, and forms a green solution with concentrated hydrochloric acid, from which it is precipitated by water. It is reported to have been found in the urine of man.

**C., amorphous.** (A. neg.; μορφή, form.) The form in which chlorophyll occurs in some Algae when it consists of masses without distinct shape.

**C. corpuscles.** (*L. corpuscula*, a little body.) Same as *C. granules*.

**C., crystalline.** A term applied to a substance obtained from chlorophyll by Gautier.

**C. granules.** (*L. granula*, a small grain. *G. Chlorophyllkörner.*) Granular masses embedded in the protoplasm of the leaf- and bark-cells of plants, which consist of a colourless matrix infiltrated with *Chlorophyll*. In the lower Algae the green matter does not appear in the form of granules, but occurs in plates, or stars, or spiral bands. The chlorophyll granules undergo a rotatory motion along with the protoplasm in the cells; starch cells frequently develop in their interior. Chlorophyll granules, or bodies closely resembling them, are found in the structures of the lower animals as high up as Crustacea.

**C., white.** According to Gautier, a modification of chlorophyll containing little or no oxygen or more hydrogen.

**Chlorophyllan.** A substance contained in chlorophyll; probably identical with what is called crystalline chlorophyll.

**Chlorophyte.** (Χλωρός; φυτόν, a plant. *F. chlorophyte*; *G. Grünpflanze.*) Applied to all plants having a successive evolution, and green parts or expansions.

**Chloroproteic acid.** (*Chlorine*; *protein.*) According to Mulder, a white, insoluble body, formed by the action of chlorine on a solution of protein.

**Chloroquinones.** A series of compounds formed by the action of chlorine on quinone.

**Chlorosis.** (Χλωρός, green; from the greenish hue of the skin in those affected with it. *F. chlorosis*; *G. Bleichsucht.*) Green sickness. A disease almost peculiar to young females about the period of puberty. Its essential feature is anaemia and suppression, or great irregularity, of menstruation, and their consequences; among which are pallor and greenness of the complexion, palpitation, breathlessness on exertion; a soft systolic cardiac

murmur heard over the aortic or the pulmonary valve, and along the aorta; bruit de diable in the jugular veins, especially that of the right side; feeble digestion, not infrequently painful; constipation, urine of low specific gravity; and generally some disturbance of mental functions, as hysteria, or irritability, or depraved appetites. It has been variously regarded as a disorder of the sympathetic nervous system, as a disorder of the reproductive organs, and as a disorder of the digestive system in its origin, but its pathology is doubtful.

In Botany, this term has been used in two senses. In the one it expresses the turning green of some part naturally other-coloured, as in the retrograde metamorphosis of the sepals; in the other it signifies the loss of green colour, as when a green leaf becomes blanched or yellow; and this may occur either from the absence of light, or of iron from the soil.

**C. ægyptiaca.** Egyptian chlorosis. A term for the condition produced by the *Anchylostomum duodenale*.

**C. æthiopum.** (*L. æthiops*, a black man.) A synonym of *Chelexia africana*.

**C. amatoria.** (*L. amatorius*, belonging to love.) A synonym of *Hætic fever*.

**C. gigantea.** (*L. giganteus*, belonging to the giants.) A form of congenital chlorosis in children with great corpulence.

**C. hæmorrhagica.** (Αἱμορραγικός, liable to hæmorrhage.) A term applied to menorrhagia occurring in anæmic hysterical persons.

**C. præmatura.** (*L. præmaturus*, too early.) The form which occurs in girls before the normal time of puberty.

**C. tropica.** A synonym of *Anæmia, tropical*.

**Chlorosma.** Same as *Chlorosis*.  
**Chlorosochrous.** (Χλωρός; ὀχρός, pale yellow. *F. chlorosocrace.*) Greenish, tinged with reddish yellow.

**Chlorospermæ.** (Χλωρός; σπέρμα, a seed.) Same as *Chlorospora*.

**Chlorosporæ.** (Χλωρός; σπόρος, a spore.) A suborder of the Order *Algae*, having green spores.

**Chlorotanin.** (Χλωρός.) A term for tannin when coloured with chlorophyll.

**Chlorotic.** (*G. bleichsüchtig.*) Suffering from *Chlorosis*.

**Chlorous.** (*Chlorine*. *F. chloreux*; *G. chlorig.*) Of, or belonging to, or full of chlorine.

**C. acid.**  $\text{HClO}_2$ . Formed when chlorine trioxide gas is dissolved in cold water.

**C. attraction.** See *C. pole*.

**C. elements.** Acid or electro-positive elements. See *Electro-chemical theory*.

**C. pole.** A term founded on the theory that the particles of matter are susceptible of polarity. Hence that pole of a particle of zinc or hydrochloric acid which has the attraction or affinity which is characteristic of chlorine, or chlorous attraction, is called the chlorous pole. See *Zincous pole*. (Hoblyn.)

**Chloroxanthous.** (Χλωρός; ξανθός, yellow. *F. chloroxanthe.*) Of a green or olive and yellow colour.

**Chloroxylon.** (Χλωρός; ξύλον, wood.) A Genus of the Nat. Order *Cedrelaceæ*.

**C. Dupata.** The *Vateria malabarica*.

**C. Swietenia.** De Cand. (*Swieten*, a

# CHLORRHODINIC ACID—CHERADENTEROPHTHISIS.

Dutch botanist. The satin-wood tree. Said to be an occasional source of Gurjun oil.

**Chlorrhodin'ic acid.** (Χλωρός; ῥόδου, the rose.) A crystalline acid found by Bodeker in pus; its composition and its existence is yet unsettled. Its name was given because chlorine water colours it rose-colour.

**Chlorru'bin.** (Χλωρός; ruber, red.)  $C_{12}H_8O_4$ . A dark green powder, formed, together with formic acid, by the action of muriatic acid on rubichloric acid.

**Chlorum.** Same as Chlorine.

**C. gasiforme.** (Du. *gas*, an air, a word invented by Van Helmont; L. *forma*, shape.) Chlorine gas.

**C. solu'tum.** (L. *solvo*, to dissolve.) The Aqua chlorinii.

**Chloruret.** (F. *chlorure*; G. *Chlorur*.) A synonym of Chloride.

**Chlorure tum.** A chloruret, or chloride.

**C. ammon'icum.** The Ammonii chloridum.

**C. aur'ico-so'dicum,** Fr. Codex. (F. *chlorure d'or et de sodium*.) Same as Auro-natrium chloratum.

**C. aur'icum,** Fr. Codex. (F. *chlorure d'or*.) See Auri chloridum.

**C. bary'ticum,** Fr. Codex. (F. *chlorure de baryum*.) The Barium chloride.

**C. cal'cium,** Fr. Codex. (F. *chlorure de calcium*.) The Calci chloridum.

**C. cal'cis.** The Calx chlorinata.

**C. fer'ricum.** The Ferri chloridum.

**C. fer'ricum a'qua solu'tum,** Fr. Codex. (L. *aqua*, water; *solvo*, to dissolve. F. *solution officinale de perchlorure de fer*.) A solution of 26 parts of perchloride of iron in 74 of water.

**C. hydrargy'ricum,** Fr. Codex. (F. *deutochlorure de mercure sublimé*.) The Hydrargyri perchloridum.

**C. hydrargy'ricum a'qua solu'tum.** (L. *aqua*, water; *solvo*, to dissolve. F. *deutochlorure de mercure en solution*.) A solution of perchloride of mercury, one part, in 100 parts of alcohol and 900 of water.

**C. hydrargy'rosum.** The Hydrargyri subchloridum.

**C. magnes'icum cum a'qua,** Fr. Codex. (L. *cum*, with; *aqua*, water. F. *chlorure de magnésium cristallisé*.) The Magnesium chloride.

**C. ox'i'di calc'ii.** A synonym of chlorinated lime.

**C. potas'sicum,** Fr. Codex. (F. *chlorure de potassium*.) Same as Potassii chloridum.

**C. so'dicum,** Fr. Codex. (F. *chlorure de sodium*.) The Sodii chloridum.

**C. stib'icum,** Fr. Codex. (L. *stibium*, antimony. F. *protochlorure d'antimoine*.) The Liquor antimonii chloridum.

**C. zin'icum,** Fr. Codex. (F. *chlorure de zinc*.) The Zinci chloridum.

**Chnoöph'ora.** (Χνός, fine down; φopίω, to bear.) A Genus of the Tribe Polypodiæ, Order Filices.

**C. tomento'sa.** (L. *tomentosus*, woolly.) Hairs used as an hemostatic in Java.

**Cho'ana.** (Χοάνη, a funnel.) Old name, used by Hippocrates, de Cord. i, 12, for the infundibulum of the brain.

Also, a synonym of the pelvis.

**C. cer'e'br'i.** (L. *cerebrum*, the brain) The infundibulum of the brain.

**Cho'anæ.** Plural of Choana.

**C. na'r'ium.** (L. *naris*, a nostril.) The openings of the posterior nares.

**Cho'anas.** (Same etymon.) Old name for a furnace, made like a funnel, for melting metals. (Quincy.)

**Cho'anæ.** Same as Choana.

**Cho'anoid.** (Χοάνη, a funnel; εἶδος, likeness. G. *trichterförmig*.) Funnel-shaped.

**C. mus'cle.** (Χοάνη; εἶδος, likeness.) A muscle of the eye of many Vertebrata. It arises from around the border of the optic foramen, and, passing forward, embraces the eyeball, and is inserted into its circumference a little behind the middle.

**Choanorrh'agia.** (Choanæ; Gr. ῥήγνυμι, to burst forth.) Bleeding from the posterior nares.

**Cho'anus.** Same as Choanas.

**Choa'va.** A name for coffee.

**Cho'co.** The *Sechium edule*.

**Chocola'ta.** See Chocolate.

**C. amy'li maran'tæ.** (L. *amylum*, starch; *maranta*, arrowroot.) Chocolate 100 parts, mixed with 3 of arrowroot.

**C. amy'li tapio'cæ.** Chocolate 100 parts, mixed with 3 of tapioca.

**C. ci'næ.** (Cina.) Chocolate 50 parts, mixed with 10 of santonica, and 2 of powdered jalap. A vermifuge.

**C. cum cetra'ria.** (L. *cum*, with; *cetra-ria*.) Same as C. de lichene islandico.

**C. cum fer'ro,** Fr. Codex. (L. *ferrum*, iron. F. *chocolat ferrugineux*.) A mixture of 1000 parts of chocolate with 20 of limatura ferri supra porphyritem levigata.

**C. cum osmaz'ina.** See Osmazome chocolate.

**C. cum sa'lep,** Fr. Codex. (L. *chocolat au salep*.) A mixture of 1000 parts of chocolate and 30 of salep.

**C. cum vanil'la,** Fr. Codex. (L. *cum*, with; *vanilla*. F. *chocolat à la vanille*.) Chocolate 1000 parts, mixed with 40 of powdered vanilla.

**C. de lich'ene island'ico,** Fr. Codex. (F. *chocolat au lichen d'islande*.) Saccharatum de lichene islandico 100 parts, chocolate 1000; mix.

**C. simplic'ior,** Fr. Codex. (L. *simplex*, simple. F. *chocolat, c. de santé*.) The kernels of 3000 parts each of Caracæas and Maragnon cacao are reduced to a paste in a heated mortar, mixed with 5000 parts of sugar and 30 of the powdered bark of canella alba, and made into moulds.

**Choc'olate.** (Ind. *choco*, sound; *atte*, water; from the noise made in preparing it—a very doubtful etymology. F. *chocolate*; L. *ciocolate*; S. *chocolate*; G. *Chokolade*.) A substance formed out of the ground seed of the *Theobroma cacao*. Used as an article of diet.

**C. nuts.** The kernels of the fruit of *Theobroma cacao*.

**C. root.** The *Gum rivale*, and the *G. virginianum*.

**C. tree.** (F. *cacaotier des Indes*.) The *Theobroma cacao*.

**Chœn'icis.** (Χοαινίς, the nave of a wheel.) Old name for the trepan. (Galen, Celsus, and Paulus Aegineta.)

**Chœradenterophth'isis.** (Χοιράδες, scrofulous swellings; εντερον, an intestine; φθίσις, consumption. F. *chœradenterophthisie*; G. *scrofulose Darmuschwindsucht*.) Scrofulous intestinal phthisis.

# CHCRADES—CHOLECYST.

**Chœrades.** Plural of *Chœras*.  
**Chœradodes.** (Χοιράδες; ἰδὸς, likeness.) Of the nature of, or affected with, serofula.

**Chœradolethron.** (Χοιράδες; ὀλεθρος, destruction.) The *Xanthium strumarium*; so called because it was said to be useful in serofula.

**Chœradology.** (Χοιράδες; λόγος, a discourse.) The doctrine of serofula.

**Chœrangioceratoditis.** (Χοιράς, serofula; ἄγγειον, a vessel; κέρατοιδής, horn-like, the cornea. F. *chœrangioceratodite*; G. *serofulose Hornhautentzündung mit Gefässentwicklung*.) Serofulous inflammation of the cornea, with development of blood-vessels.

**Chœras.** (Χοίρος, a swine.) Old term for serofula, or a serofulous gland.

**Chœrocalymma.** (Χοίρος, the female pudenda; κάλυμμα, a covering. F. *chœrocalymme*; G. *Schamhülle*.) The velamen vulvæ, as of the Hottentot; probably the enlarged nymphæ.

**Chœrocnes mus.** (Χοίρος, the female pudenda; κνησμός, an itching.) Pruritus of the vulva.

**Chœrolymphoceratoditis.** (Χοίρος, serofula; *lymphoceratoditis*.) Serofulous lymphatic inflammation of the cornea.

**Chœromorpha.** (Χοίρος, a young swine; μορφή, form.) A synonym of the Suborder *Artiodactyla*, Order *Ungulata*.

**Chœromyces.** (Χοίρος, a young swine; μύκης, a mushroom.) A Genus of the Suborder *Tubracei*, Order *Ascomycetes*, Class *Carposporæ*. Truffle-like fungi growing in Europe.

**C. mæandriiformis**, Vitt. (L. *mæandrius*, winding; *forma*, shape.) The white truffle. Found over Europe in dry, sandy spots, especially under oak, beech, and birch. Pleasant to the smell, and esculent.

**Chœrus.** (Χοίρος.) The vulva.

**Choke.** (Probably an English word. F. *étouffer*; I. *soffocare*; S. *ahogar*; G. *ersticken*.) To throttle, to strangle.

**C. cher'ry.** The *Prunus virginiana*.

**C. damp.** (Dut. *damp*; G. *dampff*, a vapour or exhalation.) A term given to the gas which is left after the explosion of fire-damp or methane; it consists chiefly of carbonic acid gas, mixed with some nitrogen.

The term is also applied to carbonic acid gas, however generated, and by miners to all irrespirable gases or vapours.

**Choked.** (Same etymon.) Obstructed.

**C. disc.** (L. *discus*, a circular plate.) A term applied to a condition of the optic disc seen in connection with intracranial tumours, hydrocephalus, and meningitis, in which it becomes swollen, darkish or bright in colour, with a radiated surface and an ill-defined and irregular margin; the retinal veins are distended and tortuous.

**Choking.** (Same etymon.) The act of suffocation, generally confined to that form which is dependent on the mechanical obstruction of the air tubes by a piece of food or other substance.

**Chol'a.** (Χολή, bile.) Bile.

**Cholades.** (Χολή, bile.) Old term for the smaller intestines, because they contain bile. (Quincy.)

**Cholæmia.** (Χολή, bile; αἷμα, blood. G. *Gallenblut*.) Term for the presence of bile-

pigment in the blood, especially applied to severe cases of jaundice when convulsions, coma, or hæmorrhages have occurred.

**Chol'ago.** The same as *Chol'as*.

**Chol'agogue.** (Χολή, bile; ἄγω, to bring, or lead out. F. *cholagogue*; G. *galleabführend*.) A term applied to a medicine which has the property of increasing the evacuation of bile; leading out, or carrying out the bile.

**Cholal'ic acid.** (G. *Cholalsäure*.) A synonym of *Cholic acid*.

**Chol'amide.** (Χολή, amide.)  $C_{21}H_{41}NO_4$ . Obtained by heating cholic ether in a sealed tube with ammonia. It occurs in silky, hygroscopic crystals.

**Cholangiol'itis.** (Χολή; ἄγγειον, a vessel.) Inflammation of the bile-ducts.

**C. catarrh'al'is.** (L. *catarrhus*, a catarrh.) Catarrhal inflammation of the bile-ducts generally, originating in the duodenum, and usually producing jaundice from obstruction to the passage of bile by the swollen mucous lining of the ducts.

**C. croup'osa.** (Croupous.) A variety in which, as well as redness of mucous membrane and purulent secretion, there are greyish or greenish patches of false membrane adherent to the walls of the bile passages, or forming a tubular lining.

**C. diphtherit'ica.** (Διφθέρ'ια, a piece of leather.) A form in which a false membrane is deposited on the mucous lining, which may result in abrasion and ulceration.

**C. exulcerans.** (L. *exulcerro*, to cause to ulcerate.) Inflammation of the bile-ducts, with ulceration of the mucous lining, seen in cholera, yellow fever, pyæmia, dysentery, and such like. According to some the ulcerations are probably the result of diphtheritic deposit.

**C. hæmorrhag'ica.** (Αἱμορραγικός, liable to bleed.) A form of *C. exulcerans*, in which there has been bleeding from the abraded surface.

**C. suppurat'iva.** (L. *sub*, under; *pus*, matter.) Purulent inflammation of the bile-ducts, generally caused by foreign bodies, as gall-stones and parasitic worms.

**Cholan'ic acid.** (Χολή.) Impure cholelithic acid, produced by the decomposition of glycocholates.

**Cholans'is.** (Χόλανσις, from *χολαίνω*, to go lame.) Same as *Cholosis*.

**Chol'as.** (Χολή, bile, because the liver is contained in it; or *κοίλος*, hollow, as if *choilas*.) Old term, according to Gaza, for the cavity of the hypochondria.

Also, for the intestines.

**Cholas'ma.** (Χόλασμα, lameness.) Same as *Cholosis*.

**Chol'ate.** Same as *Cholate*.

**Chol'e.** (Χολή, bile. F. *bile*; G. *Galle*.) The bile.

**Chole'ate.** A salt of cholic acid.

**Cholec'hysis.** (Χολή, bile; ἐκχύνω, to pour out. F. *cholecchysse*; G. *Gallenerygussung*.) A discharge of bile.

**Cholec'hlor'in.** (Χολή; χλωρός, green.) A synonym of *Biliverdin*.

**Cholec'hro'in.** (Χολή; χρώω, to colour.) A green resinous substance found in the bile. It is a mixture of biliverdin and fatty substances.

**Cholechrome.** Same as *Choleochrome*.

**Cholecyst.** Same as *Cholecystis*.

# CHOLECYSTECTASIS—CHOLERA.

**Cholecystectasia.** (Χολή; κύστις, a bladder; ἐκτασις, extension.) Dilatation of the gall-bladder.

**Cholecysteurysma.** (Χολή; κύστις; εὐρύς, wide. F. *cholecysteurysme*; G. *Gallenblasenerweiterung*.) Dilatation of the gall-bladder.

**Cholecystitis.** (Χολή, bile; κύστις. F. *cholecyste*; G. *Gallenblase*.) The gall-bladder.

**Cholecystitis.** (Χολή; κύστις. F. *cholecystite*; G. *Gallenblasenentzündung*.) Inflammation of the gall-bladder. Varieties have been described similar to those of *Cholangitis*.

**Cholecystoncus.** (Χολή; κύστις; ὄγκος, a tumour. F. *cholecystoncus*; G. *Ausdehnung der Gallenblase mit Verhärtung*.) Swelling, with hardening, of the gall-bladder.

**Cholecystotomy.** (Χολή; κύστις; τομή, a section.) The opening of the gall-bladder through the abdominal parietes for the purpose of removing gall-stones.

**Choledochiactia.** (Χολή; δόχος, containing; L. *actio*, to narrow.) Constriction or obliteration of the canal of the ductus communis choledochus.

**Choledochitis.** Inflammation of the *Ductus communis choledochus*.

**Choledochus.** (Χολή, bile; δόχος, containing; from δέχομαι, to receive.) Receiving, or containing, gall or bile. See *Ductus communis choledochus*.

**Choledographia.** Same as *Cholography*.

**Choledology.** Same as *Chology*.  
**Cholegon.** Old term, the same as *Chologogue*.

**Cholographia.** Same as *Cholography*.  
**Cholehaemia.** (Χολή; αίμα, blood.) Bile in the blood; jaundice.

**Choleia.** (Χωλία, lameness.) Limping from whatever cause.

**Choleic.** (Χολή, bile. F. *cholérique*.) Of, or belonging to, or relating to, bile.

**C. acid.** A synonym of *Taurocholic acid*. Also, applied by Demarçay to an impure taurocholic acid.

**Cholein.** (Χολή.) Term used by Hänefeld for a non-nitrogenous fatty matter obtained from the bile.

**Choleina.** Same as *Cholein*.  
**Choleinic acid.** A term formerly applied to a substance which was a mixture of taurocholic and glycocholic acids.

Also, a synonym of *Taurocholic acid*.  
**Cholelith.** (Χολή; λίθος, a stone.) A gall-stone.

**Cholelithia.** Same as *Cholelithiasis*.  
**C. icterus.** Icterus or jaundice from gall-stones.

**Cholelithiasis.** (Same etymon. F. *cholelithiase*; G. *Gallensteinkrankheit*.) Gall-stone disease.

**Cholelogy.** Same as *Chology*.  
**Cholemesia.** Same as *Cholemesis*.  
**Cholemesis.** (Χολή, bile; ἔμεσις, vomiting.) Bilious vomiting.

**Cholenchysis.** Same as *Cholechysis*.

**Cholepoiesis.** (Χολή, bile; ποίησις, from ποίω, to make. F. *cholepoïse*; G. *Gallenbereitung*.) Term by Ortolan for generation or secretion of bile.

**Cholepoietic.** (Same etymon.) Relating to, or serving for, the secretion of bile.

**Cholepyra.** Same as *Cholepyretus*.

**Cholepyretus.** (Χολή; πυρετός, fever. F. *cholepyre*; G. *Gallenfieber*.) Bilious fever.

**Cholepyrrhin.** (Χολή, bile; πυρρός, flame-coloured.) A synonym of *Biliphoen*.

**Cholera.** (Χολέρα, or χολερά, from χολή, bile; ῥέω, to flow; or from χολάειν, the intestines; ῥέω, to flow; or from χολέρα, the gutter of a roof. F. *choléra*; G. *Brechrühr*, *Gallensucht*.) A term used to designate certain diseases characterised by diarrhoea and vomiting, with abdominal pain and cramps of the legs.

It is often used as a synonym of malignant cholera especially.

**C. algide.** (L. *algidus*, cold.) A synonym of malignant cholera, from the coldness of surface which occurs in the stage of collapse.

**C. Asiatic.** A synonym of *C. malignant*, from its place of origin.

**C. biliosa.** (L. *bilis*, bile.) A term for copious and frequent vomiting, at first of the alimentary and fecal matters, with redundancy of bile, and spasms of the legs and thighs.

**C. cells.** Same as *C. fungus*.

**C. chick'en.** (F. *cholera des poules*.) An infectious disease of chickens, which is very destructive in the poultry farms of France. The affected bird is weak and tottering, with erect feathers and drooping wings; it is very sleepy, and dies shortly with evidences of great distress. There is no diarrhoea, and the disease was thus named from its prevalence during a cholera epidemic in France. The most notable morbid changes are tumefaction of the cervical and cranial lymphatic glands, which are marked by blood stains, inflammation of, and effusion into, the pericardium, and intestinal congestion and ulceration. It is believed to be caused by a microbion, probably identical with, or closely allied to, the organism which produces septicæmia. Pasteur affirms that the microbion may be cultivated in chicken broth, and that its virulence may be continued through any number of separate cultivations in the same material, one from the other, if the inoculation of each succeeding term of the series is accomplished while the organism is growing and active; but that if some time elapse between each cultivation the microbion gradually loses its virulence, and when introduced into a fowl produces only a mild and local manifestation of the original disease, but sufficient to protect the animal for a longer or shorter period from the attack of the malignant form.

**C. corpuscles.** Same as *C. fungus*.

**C. dust.** A term applied to dust which has been contaminated by cholera dejections, and then rapidly dried by the sun; and which, it is supposed, may become, on moistening again, the means of propagating the disease.

**C. English.** Same as *C. summer*.

**C. epidemic.** (Ἐπιδήμιος, prevalent among a people.) A synonym of *C. malignant*, from its method of spreading.

**C. European.** A synonym of *C. simple*.

**C. fever.** A term applied to a febrile condition into which, towards the decline of a cholera epidemic, cases of choleraic diarrhoea pass; it does not appear to be accurately understood.

**C. flatulent'a.** (L. *flatus*, to blow up.) A form, according to Mason Good, when the vomiting and purging is rare or absent, but there is great and oppressive flatulence, with retching and flatulent dejections and eructations.

**C. fowl.** See *C. chicken*.

**C. fungus.** At various times observers

## CHOLERAD—CHOLERAPHONIA.

have described low forms of vegetable growth occurring in the dejections of those suffering from malignant cholera, which they supposed to be the cause of the disease, but this term has specially been given to certain objects found by Hüllner, and which he believed to be spore cases with spores and derived cells or granules in gelatinous matter, of a form of a polymorphous fungus growing on rice. These observations have not been confirmed as regards their causative influence, although the presence of various forms of micrococci, urocystis, vibrio, and other fungi is admitted.

**C. hand.** The special livid appearance of the hand seen in the collapse stage of malignant cholera.

**C., Ind'ian.** A synonym of malignant cholera, from its chief place of origin.

**C. indica.** Same as *C. Indian*.

**C., indig'eous.** (*L. indigenus*, native. *G. cinkeimische Brechrühr.*) Same as *C., simple*.

**C. infant'um.** (*L. infans*, a young child.) A disease so termed by American physicians. It occurs generally in the middle states of the Union in June or July, and continues during the hot weather. The chief symptoms are vomiting, purging of green or yellow matter, slime, or blood, attended with pain or uneasiness, and swelling of the abdomen, with some pyrexia, generally. The heat of the weather seems to be the predisposing, if not the exciting, cause. It is a fatal disease in towns.

**C., inva'ding.** (*L. invado*, to enter.) A term applied by Bryden to the steady progress of cholera wave from the endemic area.

**C., malignant.** (*L. malignus*, of an evil nature. *F. cholera asiaticque*; *L. colera asiatico*, *colera maligna*; *S. colera morbo*; *G. Asiatische Cholera.*) Serous, spasmodic, or Asiatic cholera; cholera-morbus. A disease endemic during the whole year in a large part of India, and becoming epidemic at irregular intervals over other parts of the earth. It occurs after an incubatory period of a few hours or two or three days, and is generally preceded by some feeling of illness, and more or less diarrhoea, but its accession, especially in hot climates, is not infrequently sudden. It is characterised by vomiting, purging of dirty evacuations like rice-water, holding whitish flocculi in suspension, burning heat at the stomach, severe cramps in the limbs and the abdomen, and then collapse, with sunken eyes, livid, cold surface, shrivelled fingers, shrunken limbs, ghastly countenance, hoarse or falsetto voice, thready quick pulse, rapid shallow respiration, cold breath, and suppression of urine. During this stage the temperature in the mouth and axilla falls, it may be as much as 4° F. or 6° F., while that of the rectum rises 3° F. or 4° F., or more. Death occurs in a few hours, or reaction may set in, and secondary fever result; this may be slight or severe; in the tropics it is said to be not infrequently absent. During its occurrence the patient may die from lung congestion, from cerebral disturbance accompanied by coma or convulsions, from recurrent diarrhoea, from uræmic poisoning, or from asthenia. The cause of cholera is unknown; it has been discovered in malarious conditions of the ground or water, in alteration of the electrical and chemical conditions of the atmosphere, and in some obscure telluric influence; it has been found in the fungoid growths which are present in the intestinal contents, and in a zymotic unorganised principle called chole-

rine; and it has been demonstrated as a miasm produced by a conjunction of cholera feces and fouled subsoil water. But as yet the master-key of the various phenomena is wanting.

**C. mor'bus.** (*L. morbus*, disease.) A synonym of *C., malignant*.

**C. nos'tras.** (*L. nostras*, of our country.) A synonym of *C., simple*.

**C., Orient'al.** A synonym of malignant cholera, because it originates in Eastern or Asiatic countries.

**C. pestif'era.** (*L. pestis*, a deadly disease; *fero*, to bear.) Malignant cholera, from its fatality and its epidemic character.

**C., revit'alized.** (*L. re*, again; *vita*, life.) A term applied by Bryden to the re-development of cholera from a centre outside the endemic area.

**C., se'rous.** (*L. serum*, the liquid part of blood.) Malignant cholera, from the watery character of the evacuations.

**C. sic'ca.** (*L. siccus*, dry.) A term for flatulent colic.

Also, the form of malignant cholera in which symptoms of collapse occur at an early period with great coldness and blueness of surface, and death takes place in a few hours without any alvine evacuation, although after death the intestines may be found full of the characteristic cholera stools.

**C., sim'ple.** Same as *C., summer*.

**C., spasmodic.** (*Σπασμὸς*, a spasm.) Malignant cholera, from the severe cramps which accompany it.

**C., sporad'ic.** (*Σποραδικός*, scattered.) A synonym of *C., simple*, because it is not epidemic.

**C., sum'mer.** A term for the diarrhoea, with vomiting and purging of bile, great stomach-ache, cramps, and collapse, which occurs in late summer or early autumn.

**C.-ty'phoid.** (*Typhoid*.) A term applied sometimes to the secondary fever of malignant cholera, especially when it is long continued.

**C. vulga'ris.** (*L. vulgaris*, common.) A synonym of simple cholera.

**Cholerad.** A term applied by Farr to the zymotic or molecular agent present during, and perhaps causing, an attack of cholera.

**Cholera'genic.** (*Χολέρα; γεννώω*, to produce.) Causing, or producing, cholera.

**Cholera'ic.** Relating to, or resembling, *Cholera*.

**C. catarrh'.** A synonym of *Diarrhœa, choleraic*.

**C. diarrhœ'a.** See *Diarrhœa, choleraic*.

**C. iacc.** The sharp, pinched, livid, wan facial expression of malignant cholera.

**C. fe'ver.** (*F. fièvre cholérique*.) The secondary fever of malignant cholera.

**C. voice.** The feeble, hoarse, or squeaking voice, which accompanies the collapse stage of malignant cholera.

**Choleraï'des.** (*Χολέρα; εἶδος*, likeness.) Hypothetical animalcules which exist in the air, and propagate malignant cholera.

**Choleraisa'tion.** (*Cholera*.) The artificial communication of cholera to the lower animals.

**Cholera'pho'bia.** (*Χολέρα; φόβος*, fear.) The absence of dread of cholera.

**Cholera'pho'nia.** (*Χολέρα; φωνή*, voice. *F. cholraphonie*; *G. cholerische Stimmlosigkeit*.) See *Choleraic voice*.

# CHOLERIC—CHOLIC.

**Chol'eric.** (F. *cholérique*; G. *cholerisch*.) Of, or belonging to, the disease *Cholera*.

Also, bilious, or relating to bile.

**C. fe'ver, in'fantile.** Same as *Cholera infantum*.

**C. temp'erament.** See *Temperament, choleric*.

**Chol'eriform.** (L. *cholera*; *forma*, likeness.) Resembling cholera.

**Chol'erine.** (Dim. of *cholera*.) A term applied to the milder cases of choleraic diarrhœa which often occur during the prevalence of malignant cholera.

Also, applied to the early stage of malignant cholera.

Also, a term proposed for the zymotic cause of malignant cholera.

**Chol'erised.** (Χολή, bile.) A term applied to the blood of the portal vein indicating its possession of bile constituents.

**Chol'erodiarrhœ'a.** Same as *Diarrhœa, choleraic*.

**Chol'eroid.** (Χολίρα; εἶδος, likeness.) Resembling cholera; applied to diseases of this character.

**Chol'eromy'ia.** (Χολέρα; μυῖα, a fly.) Same as *Cholerales*.

**Chol'erophô'bia.** (Χολίρα; φόβος, fear. F. *cholérôphobie*; G. *Cholerascheu*.) A dread of cholera.

**Chol'erophôn'ë.** Same as *Choleraephonia*.

**Chol'eroproso'pon.** (Χολίρα; πρόσωπον, a face.) Same as *Choleraic face*.

**Chol'eropsis.** (Χολίρα; ὄψις, the visage. F. *cholérôpsis*; G. *Choleraesicht*.) The *Cholera face*.

**Chol'eroty'phus.** (*Cholera*; *typhus*.) Malignant cholera in its worst form.

**Chol'errrha'gia.** (Χολή; ῥήγνυμι, to break forth.) Profuse discharge of bile; bilious diarrhœa.

Also, a synonym of simple cholera, and of malignant cholera.

**Chol'errhœ'a.** (Χολή; ῥοία, a flow.) Bilious diarrhœa.

**C. lymphat'ica.** (L. *lymphæa*, water.) Malignant cholera, from the watery evacuations.

**Chol'er'ythrin.** (Χολή; ἐρυθρός, red.) Same as *Bilirubin*.

**Chol'estearino'ma.** Same as *Cholesteatoma*.

**Chol'este'atin.** Same as *Cholesterin*.

**Chol'esteato'ma.** (Χολή, bile; στεάτωμα, a sebaceous tumour.) A tumour consisting of a white, laminated, spermaceti-like substance, generally enclosed in a fine capsule, and sometimes containing hairs. It consists of flattened, delicate, generally non-nucleated cells, fat globules and crystals of cholesterine. The tumours have a pearl-like appearance, and are single or aggregated; they most frequently occur in the pia mater at the base of the brain, sometimes in the subcutaneous connective tissue, rarely in other organs. It is probable that several varieties of tumour have been included under this name. See also *Epithelioma, pearly*.

**Chol'esteato'matous.** (Same etymon.) Of, or of the nature of, *Cholesteatoma*.

**Chol'esteræ'mia.** (*Cholesterin*; αἷμα, blood.) A diseased condition in which cholesterin is believed to be present in the blood.

The symptoms described by Flint under this heading appear to be those which by others are

called *Cholæmia*, but by him they were attributed to the accumulation of cholesterin in the blood. The injection of a solution of cholesterin into the veins has not produced toxic symptoms.

**Cholester'ic.** (*Cholesterin*. F. *cholésterique*.) Of, or belonging to, cholesterin.

**C. acid.** The same as *Cholesterinic acid*.

**Cholest'erilins.** (*Cholesterin*.)  $C_{26}H_{42}$  Isomeric hydrocarbons formed when cholesterin is treated with equal quantities of sulphuric acid and water.

**Cholester'in.** (Χολή, bile; στεῖρον, stiff fat. F. *choléstérine*; G. *Gallenconcretionenfett, Gallenfett*.)  $C_{26}H_{44}O + H_2O$ . A tasteless, inodorous, fatty substance, forming the chief constituent of biliary calculi, and found in the bile, blood, and nervous tissue; in ovarian cysts, hydrocele fluid, pus, atheromatous and tuberculous degenerations, and in the feces; it is also found in peas and beans, and many vegetables. It crystallises from ethereal solutions in anhydrous silky needles and from alcoholic solutions in flat rhomboidal plates, containing water of crystallisation. It is soluble in ether and in hot alcohol, very slightly in cold alcohol, and not at all in water. Anhydrous cholesterin melts at  $145^{\circ}C$ . ( $293^{\circ}F$ .); it is levo-rotatory in solution. Treated with strong sulphuric acid, then a little iodine, a play of blue, green, and red colours is seen; treated with ferric chloride and hydrochloric acid, it becomes of a violet colour. It is a monatomic alcohol, analogous to cinnyl alcohol.

**C. disea'se.** A term applied to certain forms of amyloid or lardaceous degeneration.

**Cholester'ic acid.** (*Cholesterin*. F. *l'acide choléstérique*; G. *Cholesterinsäure, Gallenfettsäure*.)  $C_8H_{16}O_5$ . An acid formed by the oxidation of cholesterin, cholic acid, or choloidinic acid, with nitric acid, indicating a connection between the biliary fats and the biliary acids; it is in yellowish-white crystals, slightly soluble in water, but abundantly so in boiling alcohol.

**Cholester'itis.** (*Cholesterin*.) A term applied to sparkling synchysis due to the presence of cholesterin crystals floating in the humours of the eye. See *Synchysis, sparkling*.

**Cholest'eron's.** (*Cholesterin*.)  $C_27H_{48}$ . Two isomeric hydrocarbons formed when cholesterin is treated with dilute phosphoric acid.

**Chol'et'elin.**  $C_{16}H_{18}N_2O_6$ . A body described as resulting from the action of oxidising agents on bilirubin. By some it has been thought to be identical with *Hydrobilirubin*.

**Choleuma.** (Χόλευμα, a lameness.) A synonym of *Cholosis*.

**Chol'ever'din.** (Χολή; L. *viridis*, green.) A pigment resulting from the action of oxidizing agents on bilirubin.

**Chol'hæ'mia.** Same as *Cholæmia*.

**Chol'ia.** A synonym of *Cholosis*.

**Cholic.** (Χολή, bile.) Relating, or belonging, to bile.

**C. ac'id.** (F. *acide cholique*; G. *Cholsäure*.)  $C_{21}H_{40}O_5$ . Obtained, along with glycochin, by boiling glycocholic acid with alkalis; united with taurine it forms taurocholic acid. It crystallises in shining quadratic octohedra, soluble in alcohol and ether; or in an amorphous form. It is found in small quantities in the contents of the small intestine, more copiously in those of the large intestine; in the gall-stones of oxen; and traces of it are found in the urine

# CHOLICELE—CHOLURIA.

of jaundice. On its reaction with sulphuric acid is based *Rottenkoffer's test* for bile.

The name has been given to various impure substances obtained from the bile.

**Cholicole.** (Χολή; *cholē*, a tumour.) A tumour formed by a distended gall-bladder.

**Cholicous.** (Χολικός.) Bilious.

**Cholihæmia.** Same as *Cholæmia*.

**Chololith.** Same as *Chololith*.

**Cholin.** (Χολή, bile.) Same as *Neurin*. According to Thudichum, the cholin of bile is an organic base of the composition  $C_5H_{13}NO_2$ ; neurin being  $C_5H_{12}N$ .

**Cholin'ic.** (Χολή, bile.) Pertaining to the bile.

**C. ac'id.** Term applied by Berzelius to a resinous substance obtained from the decomposition of ox-bile, which is probably a mixture of several substances.

Also, a synonym of *Cholic acid*.

**Cholious.** (Χολή, bile.) Bilious.

**Cholocatar'rophæ.** (Χολος, bile; *καταρροφία*, to gulp down. *F. cholocatarrophæ*; *G. Einsaugung von Galle*.) Absorption of the bile.

**Cholochlo'in.** (Χολος, bile; *χλόος*, greenish-yellow.) A synonym of *Biliverdin*.

**Cholochlo'rin.** (Χολος; *χλωρός*, green.) A synonym of *Biliverdin*.

**Cholochrome.** (Χολος; *χρώμα*, colour.) A general term for all the varieties of biliary colouring matter.

**Cholocy'anin.** (Χολος; *κύανος*, dark blue.) A substance said to be formed when an ammoniacal solution of bilirubin is treated with concentrated nitric acid.

**Cholocystec'tasis.** (Χολος; *κύστις*, a bladder; *έκτασις*, extension. *F. Cholocystectasie*; *G. Gallenblasenerweiterung*.) Dilatation of the gall-bladder.

**Cholocyst'itis.** Same as *Cholecystitis*.

**Cholocyston'cus.** See *Cholecystoncus*.

**Cholocystopleur'itis.** (Χολος, bile; *κύστις*, a bladder; *πλευριτις*, pleurisy. *F. cholocystopleurite*; *G. Gallenblasen und Brustfellentzündung*.) Inflammation of the gall-bladder and pleura.

**Cholocystot'omy.** (Χολος; *κύστις*; *τομή*, a section. *F. cholecystotomie*; *G. Gallenblasenschnitt*.) See *Cholecystotomy*.

**Cholodes.** (Χολώδης. *G. gallenähnlich*, *gallicht*.) Resembling bile; bilious.

**Cholodiarrhœ'a.** (Χολος; *διάρροια*, a flowing through. *F. cholodiarrhœe*; *G. galllichte Durchfall*.) Bilious diarrhœa.

**Cholodysenter'ia.** (Χολος; *δυσεντερία*, dysentery. *G. Gallenruhr*.) Dysentery, with unusual flow of bile.

**Cholography.** (Χολος; *γράφω*, to write.) A treatise on the bile.

**Choloid.** (Χολος; *είδος*, likeness.) Resembling bile.

**Choloidan'ic ac'id.**  $C_{16}H_{24}O_7$ . A white acid, crystallising in acicular prisms, formed at the same time and in the same manner as *Cholesterinic acid*. It is insoluble in cold water, soluble in alcohol.

**Choloid'ic ac'id.** (Χολος, bile; *είδος*, likeness.)  $C_{21}H_{36}O_4$ . A product, along with glycochin, obtained by boiling cholic acid with a mineral acid; it is amorphous, insoluble in water, sparingly in ether, very soluble in alcohol.

**Cholol'ic.** (Χολος, bile.) A term synonymous with *Cholic*.

**Chol'olith.** (Χολος, bile; *λίθος*, a stone. *G. Gallenstein*.) A gall-stone, or biliary calculus.

**Chololith'ic.** (Same etymon.) Of, or belonging to, a chololith, or gall-stone.

**Chololithus.** See *Chololith*.

**C. me'ans.** (*L. meo*, to go.) A gall-stone in the act of passing the bile-ducts.

**C. quies'cens.** (*L. quiesco*, to rest.) A gall-stone at rest in the liver or the gall-bladder.

**Cholology.** (Χολος; *λόγος*, a discourse.) A discourse or history of the bile.

**Choloma.** (Χόλωμα, lameness.) Old term, used by Galen, *de Artic.* iv, 11, for any kind of distortion or lameness.

**Cholone'matin.** (Χολος; *νήμα*, that which is spun.) A colouring matter obtained by dissolving the residue from the alcoholic extract of colouring matter from human gall-stones in ether. It shows a spectrum of four bands, two of which are thread-like, hence its name. (Thudichum.)

**Cholon'ic ac'id.** (Χολος, bile. *G. Cholorsauric*.)  $C_{26}H_{41}NO_3$ . An amorphous body deposited on heating a solution of glycocholic acid in concentrated sulphuric acid.

**Cholophœ'in.** (Χολος; *φαίος*, dusky.) A synonym of *Biliphœin*.

According to Thudichum, it is a brownish form of bilirubin.

**Cholopla'nia.** (Χολος; *πλανάω*, to lead astray.) A synonym of jaundice.

**Cholopoë'sis.** Same as *Cholepoësis*.

**Cholopoë'tic.** Same as *Cholepoëtic*.

**Cholorrhæ'gia.** (Χολος; *ρήγνυμι*, to burst forth.) A sudden discharge of bile.

**Cholorrhœ'a.** (Χολος; *ροία*, a flow.) An abundant flow of bile; also, a synonym of bilious diarrhœa.

**Choloses.** (Χολος. *F. choleose*; *G. Gallenkrankheiten*.) Term by Alibert and Eiseumann for biliary diseases.

**Cholo'sis.** (Χόλωσις, lameness.) An old term for lameness, and especially of one hand.

Also (*χόλος*, bile), a synonym of jaundice.

**C. America'na.** The yellow fever.

**Choloste'arin.** Same as *Cholesterin*.

**Choloste'aroma.** See *Cholesteatoma*.

**Choloste'atin.** Same as *Cholesterin*.

**Cholostegno'sis.** (Χολος; *στέγνωσις*, a making close. *F. cholestegnose*; *G. Gallenverdickung*.) A thickening of the bile.

**Choloster'ina.** Same as *Cholesterin*.

**Cholotes.** (Χολότης.) Lameness.

**Cholothall'in.** (Χολος; *θαλλός*, a young shoot.)  $C_8H_{11}NO_3$ . One of the products of the action of concentrated sulphuric acid on bilirubin, and the subsequent addition of water. It is an hydrated cholophœin or bilirubin, an isomer of tyrostin. (Thudichum.)

**Choloxygeno'sia.** Lavater's term for malignant cholera.

**Choloz'e'mia febrilis.** (Χολος; *ζημία*, damage; *L. febrilis*, feverish.) Bilious fever.

**Chol'rine.** Same as *Cholerine*.

**Cholum.** The great millet, *Sorghum vulgare*.

**Cholu'ria.** (Χολή, bile; *ούρον*, urine.) The presence of bile pigments and bile salts in the urine.

Also, a term applied to the greenish colouration of the urine occasionally seen as hamaturia is declining.

# CHOLUS—CHONDROCRANIUM.

**Chol'us.** (Χολός.) Bile.

**Cho'ma.** (Χομα, earth thrown up.) A mud bath.

**Chondoden'dron.** A Genus of the Nat. Order *Menispermaceæ*.

**C. tomento'sum**, Ruiz and Pavon. (L. *tomentum*, a cushion stuffing.) The plant which furnishes *Parreira radix*; the *Cissampelos pareira* was formerly, but erroneously, supposed to be the source.

**Chondral'gia.** (Χόνδρος, cartilage; ἄλγος, pain. G. *Knorpelschmerz*.) Pain, rheumatic, arthritic, or inflammatory, of the cartilages.

**Chondrarthroc'acë.** (Χόνδρος; ἄρθρον, a joint; κακός, evil.) Disease of the articular cartilages.

**Chondrexarthro'ma.** (Χόνδρος; ἐξ-άρθρωμα, a dislocation. F. *chondrexarthrose*; G. *Knorpelverrenkung*.) Displacement of a cartilage.

**Chondrexarthro'sis.** Similar to the preceding.

**Chond'ric.** (Χόνδρος. G. *knorpelig*.) Cartilaginous.

**Chondrifica'tion.** (Χόνδρος; L. *facio*, to make.) The development of, or the conversion into, cartilage.

**Chondrigen.** (Χόνδρος; γεννάω, to generate.) The substance of which the matrix of hyaline cartilage is composed. It is insoluble in cold water, swells slightly in acetic acid, and is soluble in caustic alkalis and in strong mineral acids. Heated in a closed vessel, at 120° C. (248° F.), it dissolves and produces chondrin.

**Chondrig'enons.** (Χόνδρος; γεννάω, to engender.) A term applied to tissues which furnish chondrin.

**Chondriglu'cose.** (Χόνδρος; γλυκός, sweet. G. *Knorpelzucker*.) A substance formed, along with a body like acid-albumen, when cartilage is boiled with dilute sulphuric or hydrochloric acid. It has the characters of a sugar, is sweet to the taste, and turns the plane of polarisation to the left.

**Chondrilla.** (Χόνδρος, a grain of corn; because it emits small particles of gum, which resemble grains.) A Genus of the Nat. Order *Compositæ*.

**C. gramin'ea.** (L. *gramineus*, of grass.) The root on incision yields a milky juice which, when inspissated, is used as a mastiatory.

**C. jun'cea.** Linn. (L. *juncus*, rush-like. G. *Knorpelsalat*.) Rushy gum succory. Hab. Europe. Laxative and diuretic.

**C. pri'ma.** (L. *primus*, first.) The *Lactuca perennis*.

**Chond'rin.** (Χόνδρος, cartilage. F. *chondrine*; G. *Knorpelstoff*, *Knorpelleim*.) Term for a form of gelatin which is obtained from the permanent cartilages, the cornea, and from bones, by boiling under pressure, or for a long time. It is a firm transparent substance when dry, having neither taste nor smell; it is insoluble in alcohol, ether, and cold water; soluble in hot water, and gelatinises on cooling. It has been thought to be a mixture of gelatin, mucin, and salts; but its exact relationship is not yet made out, nor is it certain that it exists as such in cartilage. It contains oxygen 31.04, hydrogen 6.76, nitrogen 13.87, carbon 47.74, and sulphur .6 per cent., or about that.

**Chondrin'ogen.** (Χόνδρος; γεννάω, to

beget.) Cartilage substance. Same as *Chondrigen*.

**Chon'drinous.** (Χόνδρος.) Consisting of cartilage.

**Chondrit'is.** (Χόνδρος. F. *chondrite*; G. *Knorpelentzündung*.) Inflammation of cartilage.

**C. hyperplas'tica tubero'sa.** (Υπέρ, in excess; πλάσσω, to form; L. *tuber*, a swelling.) A synonym of *Arthritis deformans*.

**Chondrocatag'ma.** (Χόνδρος; κάταγμα, a breakage. G. *Knorpelbruch*.) Fracture of cartilage.

**Chon'drocele.** (Χόνδρος; κύλη, a tumour.) A sarcocele of cartilaginous hardness.

**Chondroclasis.** (Χόνδρος; κλάσις, a breaking. G. *Knorpelzerquetschung*.) A crush or bruise of a cartilage.

**Chondroco'stal.** (Χόνδρος; L. *costa*, a rib.) Relating to the ribs and the costal cartilages.

**C. articula'tions.** (L. *articulus*, a joint.) The junction of the ribs with their cartilages. The extremity of the cartilage is convex, that of the rib concave, both are rugose; the periosteum is continuous from one to the other.

**Chondrocrani'um.** (Χόνδρος; κρανιον, the skull.) The unsegmented capsule of the enlarged neural axis of the head, homologous, as a whole, with the segmented tube, which contains the lesser neural axis of the body. It is primarily composed of a cartilaginous base, side walls, and often roof or tegmen. It is formed upon and around the anterior part of the notochord, which extends only as far as the postclinal wall. The cartilage on each side of the notochord does not end with the notochord, but is continued forwards around and in front of the pituitary space, as the trabeculae cranii. From these basal plates walls arise, which grow over the brain to a greater or less extent, as the tegmen cranii. When well-developed, as in sharks, skates, and frogs, the cranial nerves only pierce this continuous structure, but in higher forms the originally continuous cartilage may become notched down to a nerve-passage, as in the ale of the sphenoid of man. The fore part of the cartilage, after surrounding the pituitary space, is continued as far as to the front of the nasal capsules. In low forms (skate) the nasal capsules lie widely separated on the edges of the flat floor, but in higher types (frog) a septum is formed between the nasal capsules, which have now become approximate. In still more specialised forms, as in high-headed osseous fishes, in lizards, turtles, crocodiles, and birds, this crest is continued as far as to the exit of the optic nerves, and thus is formed an orbito-nasal septum, on the top of which the fore part of the brain rests behind, the nasal capsules being on either side, and opening into the cavity of the cranium. The orbits are simply deep depressions on each side, only divided in high-skulled types by the orbital septum, but by the whole width of the depressed cranium in a shark or frog. The auditory capsules are implanted in the posterior part of the walls, fitting into the space like a solid operculum. Posteriorly the chondrocranium articulates with the front of the spine, either by a mass of notochordal jelly intervening, or by one or two condyles. The inverted visceral arches primarily swing from the edges of the basal plate. In man, from the immense size of the brain, there is no tegmen except in the occi-

# CHONDRODESMA—CHONDROS.

pital region, where it forms the supraoccipital, the lateral walls are but slightly raised above the floor. The orbito-septal plate is really well developed in man, as shown in sectional views; the inferior hind part being the presphenoid, the middle part the perpendicular lamina of the ethmoid, and the fore part the unossified nasal septum.

**Chondrodesma.** (Χόνδρος; δίσμα, a hand.) A ligament of cartilaginous structure or consistence.

**Chondrodialysis.** (Χόνδρος; διάλυσις, a loosing.) Mechanical or chemical decomposition of cartilage.

**Chondrodynia.** (Χόνδρος; δύνω, pain. G. *Knorpelschmerz*.) Pain in a cartilage.

**Chondrogenesis.** (Χόνδρος; γένεσις, generation. G. *Knorpelbildung*.) The development of cartilage.

**Chondro glossus.** (Χόνδρος, a cartilage; γλῶσσα, the tongue. G. *Knorpelzungen-muskel*.) That part of the hypoglossus muscle which arises from the lesser cornu of the hyoid bone.

**Chondroglucose.** Same as *Chondri-glucose*.

**Chondrographia.** (Χόνδρος; γράφω, to write. G. *Knorpelbeschreibung*.) A history of cartilage.

**Chondroid.** (Χόνδρος, a cartilage; εἶδος, likeness. G. *knorpelähnlich*, *knorpelartig*.) Resembling cartilage.

**C. layer.** (F. *couche chondroïde*.) The zone of epiphyseal cartilage situated at the point of union of the cartilage of the epiphysis with the diaphysis. It is of a bluish colour, and consists of cartilage in course of proliferation.

**C. tissue.** Same as *C. layer*.

**C. tumour.** Same as *Enchondroma*.

**Chondroitic acid.** Bodeker's name for *Chondrose*.

**Chondrology.** (Χόνδρος, a cartilage; λόγος, a discourse. G. *Knorpellehre*.) A dissertation, or discourse, on cartilages.

**Chondroma.** (Χόνδρος. F. *chondrôme*; G. *Knorpelgebilde*.) A cartilaginous tumour. Same as *Enchondroma*.

By some writers the term *chondroma* is used to denote cartilaginous tumours generally, whilst *enchondroma* is reserved for heterologous cartilaginous tumours situated within the substance of a structure, and *echondrosis* signifies an outgrowth from a normal cartilage.

**Chondromalacia.** (Χόνδρος; μαλακία, softness. F. *chondromalacie*; G. *Knorpelweichheit*.) Softness, or softening, of the cartilages.

**Chondromalacosis.** (Same etymon.) The progress, or formation, of *Chondromalacia*.

**Chondromycetes.** (Χόνδρος; μύκης, a fungus. F. *chondromycète*; G. *Knorpelschamm*.) Fungating granulations on a cartilage.

**Chondroperiostoma.** (Χόνδρος; *p. rostoma*.) Cartilaginous periosteoma.

**Chondro pharyngeus.** (Χόνδρος, a cartilage; φάρυγξ, the pharynx. F. *chondropharyngien*.) The part of the middle constrictor muscle of the pharynx which arises from the lesser cornu of the hyoid bone.

**Chondrophyma.** (Χόνδρος; φόμα, a tumour.) A cartilaginous tumour.

**Chondrophyte.** (Χόνδρος; φυτόν, a plant.) A growth, or tumour, or vegetation, arising from a cartilage.

**Chondroplacenta.** (Χόνδρος; *placenta*. F. *chondroplacente*; G. *knorplichter Mutterkuchen*.) A cartilaginous placenta.

**Chondroplast.** (Χόνδρος; πλάσσω, to form.) A term applied to the cavities in the matrix of cartilage which contain the cartilage cells.

**Chondropodous.** (Χόνδρος; πούς, a foot.) Applied to Ophidia, having the rudiment of a foot, consisting in a simple cartilaginous filament.

**Chondropterygia.** See *Chondropterygia*.

**Chondropterygii.** (Χόνδρος, a cartilage; *πτερόν*, a little wing. F. *chondropterygien*; G. *Knorpelfische*.) An Order of the Class *Pisces*, having a cartilaginous skeleton, a skull without sutures, heterocercal tail, no air-bladder, and gills in a cavity with five to seven narrow external apertures.

**Chondrorrhexis.** (Χόνδρος; ῥήξις, a breaking.) Fracture of a cartilage.

**Chondros.** (Χόνδρος.) A cartilage. Also, a name for the xiphoid cartilage.

Also, an old name for a grumous concretion. Also, a kind of food used by the ancients.

**Chondrosarcoma.** (Χόνδρος; *sarcoma*.) A sarcomatous tumour of the spindle-celled or small round-celled variety associated with a chondroma.

**Chondrose.** Same as *Chondriglucose*.

**Chondrosis.** (Χόνδρος. F. *chondrose*; G. *Knorpelbildung*.) The formation of cartilage.

**Chondrospongosis.** The formation of *Chondrospungus*.

**Chondrospungus.** (Χόνδρος; σπύγγος, a fungus.) The same as *Chondromycetes*.

**Chondrosternal.** (Χόνδρος; *L. sternum*, the breast-bone.) Relating to the sternum, and to the cartilages of the ribs.

**C. articulations.** The junction of the costal cartilages with the sternum. The first cartilage is directly united to the sternum, the rest by means of ligaments, with a synovial sac interposed; the synovial sacs of the second and seventh are divided into two by a ligamentous process arising from the junction of the prester-num and the mesosternum in the one case, and that of the mesosternum and the metasternum in the other.

**Chondrosyndesmus.** (Χόνδρος, a cartilage; *σύνδεσμος*, a ligament.) Old term, used by Galen, for the union of bones by fibro-cartilage.

**Chondrotomy.** (Χόνδρος; τέμνω, to cut.) The dissection, or examination, or cutting, of cartilage.

**Chondroxiphoid.** (Χόνδρος; ξίφος, a sword; εἶδος, likeness.) Relating to the xiphoid cartilage.

**Chondrus.** (Χόνδρος, a cartilage. F. *cartilage*; G. *Knorpel*.) Term for cartilage, or gristle.

Also, the same as *Chondros*. Also, the pharmacopoeial name (U.S.A.) for *Chondrus crispus*, or Irish moss. See *Carrageen moss*.

Also, a Genus of the Family *Gigartinae*, Order *Floridæ*, Class *Carposporæ*.

**C. alica.** (L. *alica*, nourishing.) The *C. crispus*.

**C. canaliculatus.** Greville. (L. *canaliculatus*, pipe-shaped, channelled.) Used for food.

**C. crispus**, Greville. The Irish moss. See *Carrageen moss*.

**C. mamillo'sus**, Greville. (L. *mamilla*, a pap.) A species collected with *C. crispus*, and used in like fashion. Also called *Gigartina mamillosa*.

**C. membranifolius**, Greville. (L. *membrana*, a skin; *folium*, a leaf.) *Daberlochs*. Common on the European coasts. Esculent.

**C. polymorph'us**, Lamix. (Hóλός, many; μορφή, form.) The *C. crispus*.

**Chone**. (Χώνη, cont. from χόανη, a funnel.) Old term, the same as *Choana*; used by Galen, de *Anat. Operat.* ix, 1.

**Chonemorph'a antidysenter'ica**. The *Holarythia antidysenterica*.

**Chonus**. (Χῶνος, contr. from χόανος, a mould, a funnel.) The infundibulum of the brain.

**Choorie**. The product of the Indian butter tree, *Bassia butyrica*.

**Chopart, Francois**. A French surgeon, born in Paris 1743, died 1795.

**C's operation**. Amputation of the foot, through the articulation between the astragalus and calcaneum on the one side, and the scaphoid and cuboid bones on the other.

**Chopine**. A pint measure.

**Chop-nut**. The Calabar bean.

**Chora**. (Χώρα, a place, space, or region.) Formerly applied to the cavities of the eyes.

Also, applied to any empty space.

**Choranche**. France; Département de l'Isère. A weak chalybeate water containing some hydrogen sulphide.

**Chord**. (Χορδή, an intestine; because strings for musical instruments are formed out of the intestines of certain animals.) A string of a harp.

Term for a right line drawn from one extremity of an arch to another; also called a subtense. See *Chorda*.

**C., testicular**. (L. *testes*, the testicles.) The spermatic cord.

**Chorda**. (Χορδή. F. *corde*; G. *Saite*, *Strick*.) A string of a bow, or of a musical instrument; a collection of fibres; a chord or cord.

Also, applied to the tendon of a muscle.

Also, a Paracelsian name for the penis.

Formerly applied to the painful affection termed chordee.

**C. dorsalis**. (L. *dorsum*, the back.) A synonym of *Notochord*.

**C. ductus arterio'si**. The short fibrous cord connecting the pulmonary artery with the concavity of the arch of the aorta, being the remains of the foetal *Ductus arteriosus*.

**C. ductus veno'si**. (L. *vena*, a vein.) The remains in adult life of the ductus venosus of the fetus. It appears as a fibrous cord connected with the left branch of the vena portæ.

**C. Hippoc'ratis**. (*Hippocrates*.) The tendo Achillis.

**C. longitudinalis corporis callo'si**. The *Stria longitudinalis* of the corpus callosum.

**C. magna**. (L. *magnus*, great.) A term for the tendo Achillis.

**C. obli'qua**. (L. *obliquus*, oblique.) The same as *C. transversa*.

**C. pe'nis**. (L. *penis*, the male organ.) A synonym of *Chordee*.

**C. pistilla'ris**. (*Pistil*.) The parenchymatous tissue forming the canal of the style.

**C. transver'sa**. (L. *trans*, across; *versus*, from *verto*, to turn.) The round eubitoradial or radioular interosseous ligament.

**C. tympani**. (Τύμπανον, a drum. F. *la corde du tympan* or *du tambour*; G. *Paukensaite*.) A branch of the facial nerve in the stylomastoid canal, which enters the tympanum through a distinct canal, opening between the base of the pyramid and the ring of bone for the membrana tympani; covered by mucous membrane it runs forwards between the handle of the malleus and the long process of the incus to the inner end of the Glaserian fissure, where it enters the canal of Huguier, passes downwards and forwards between the pterygoid muscles, meets the gustatory nerve at an acute angle, accompanies it to the submaxillary gland, and is distributed partly to the submaxillary ganglion, and partly to the lingualis muscle. By some, the chorda tympani is regarded as the continuation of the nervus petrosus superficialis major; by others, as the continuation of the portio intermedia of the root of the facial nerve.

**C. ve'næ umbilica'lis**. (L. *umbilicus*, the navel.) A fibrous band connected with the left branch of the vena portæ, and constituting the remains of the umbilical vein of the fetus.

**C. Ven'eri's**. (L. *Venus*, the goddess of love.) Chordee.

**Chordæ**. (*Chorda*, a chord or cord.) Cords. Also applied by Paracelsus, de *Orig. et Cur. Morb. Gall.* vii, 11, and viii, 3, as a term for the pudenda, according to Castellus's view of the expression *curam cordarum*.

Also, a synonym of *Chordee*.

**C. acust'icæ**. (L. *acusticus*, belonging to hearing.) The same as *Stria acusticæ*.

**C. arteria'rum umbilica'lium**. (L. *umbilicus*, the navel.) The remains in the adult of the umbilical arteries of the fetus. They lie in the lateral ligaments of the bladder.

**C. Ferren'tii**. Ferren's, or the vocal, cords.

**C. internun'ciæ**. (L. *internuncius*, a messenger between two persons.) Hunter's term for the nerves.

**C. Lancis'ii**. Same as *C. longitudinales Lancisii*.

**C. longitudina'les Lancis'ii**. (*Lancisi*.) The *Stria longitudinales* of the corpus callosum.

**C. tendin'æ**. (Τένων, a tendon. F. *cordes tendineuses*; G. *Sehnensaden*.) Tendinous cord-like attachments which connect certain of the carnae columnæ of the ventricles to the auricular valves of the heart.

**C. transversa'les Willis'ii**. See *Willis*, *cords of*.

**C. voca'les**. The *Vocal chords*.

**C. Willis'ii**. See *Willis*, *cords of*.

**Chordap'sus**. (Χορδή, a chord; ἄπτω, to tie.) Old term for a painful colic, in which the intestines seem tied into knots.

Also (G. *Darmerinschnürung*), an old term for internal strangulation of the intestines.

**Chorda'ta gonorrhœa**. (L. *chorda*.) A gonorrhœa attended with chordee.

**Chor'dee**. (F. *chorde*, from χορδή, an intestine, of which music strings are made; a string or cord. F. *corde*; G. *Chorda*, *Verkrümmung des Penis*.) A painful erection, with a downward curve of the penis, occurring in gonorrhœa; the curved condition is caused, according to some, by spasm of the muscular fibres surrounding the urethra, according to others, by inflammatory

effusion into the corpus spongiosum, whereby it is rendered less extensible than natural, and than the corpora cavernosa.

**Chordeuma.** (*Χορδύμα*.) A sausage.  
**Chorditis.** (*Chorda*.) Inflammation of a cord, as the spermatie cord or the vocal cords.

**C. vocalis.** (*L. vocalis*, speaking. *G. Stimmhondenzündung*.) Inflammation of the vocal cords.

**C. vocalis inferior hypertrophica.** (*L. vocalis*; *inferior*, lower; *ὑπέρ*, in excess; *τροφή*, nutrition.) A condition sometimes occurring as a result of chronic laryngitis, and consisting in a thickening of the connective tissue of the vocal cords.

**Chordurethritis.** (*L. chorda*, a cord; *urethritis*.) The same as *Chordee*.

**Chorea.** (*Χορεία*, a dancing. *F. chorée*, *danse de St. Guy*, *danse de St. Hyt*; *I. and S. cora*; *G. St. Vitstanz*.) St. Vitus's dance. A convulsive disorder, usually occurring in early life, and more frequently in females than in males, characterised by irregular, non-rhythmic, clonic contractions of the voluntary muscles, at first usually of one side of the body, but afterwards becoming general; the face and arm are more frequently affected than the leg, and the movements cease during sleep. The affected muscles are euectile, and there is some impairment of general sensibility, as well as often of some special sense, as the eyesight. Recovery is usual. The disease frequently originates in fear or emotion, and is often associated with rheumatism and heart affections. It has been supposed to take origin in minute embolisms of the small arteries supplying the corpora striata and the neighbouring parts of the brain, but this view is by many believed to be too limited, and they look to some more general disturbance of the normal conditions of the central nervous system as the cause of the disease.

**C. anglo-rum.** (*L. Angli*, English.) Same as *C. minor*.

**C. cardiaca.** (*Καρδια*, the heart.) Chorea associated with disease of the heart.

**C. chron'ic.** (*Χρόνος*, time.) A term given to spasm of the facial muscles, or convulsive tic.

**C. congenital.** (*L. congenitus*, born together.) Chorea existing at birth.

**C. cor'dis.** (*L. cor*, the heart.) Idiopathic irregularity of the action of the heart.

**C., diaphragmatic.** (*Διαφραγμα*, a partition wall.) A term applied to cases of facial spasm, accompanied by an involuntary cry, produced by contraction of the diaphragm.

**C. dimidia'ta.** (*L. dimidio*, to divide into halves.) Chorea of one side of the body only. See *Hemichorea*.

**C. electric.** The name of a disease which has only been observed in Lombardy. It is characterised by rapid rhythmic, clonic, convulsive, shock-like movements, regularly succeeding at the rate of from 20 to 80 in the minute; generally beginning in the hand, and extending to the one or other of the limbs; general convulsions sometimes occur with or without insensibility; sometimes the affected limbs become paralysed; and there is often vertigo, headache, and delirium. The disease is very fatal.

**C., epidem'ic.** (*Ἐπιδήμιος*, among the people.) A term applied to the convulsive dances which, in different periods of the middle ages, spread among the people as an epidemic.

**C., fa'cial.** (*L. facies*, the face.) Spasm

of the facial muscles, called also convulsive tic.

**C. festi'nans.** (*L. festino*, to hasten.) The form in which the patient is irresistibly compelled to run forwards or backwards.

**C. Germano'rum.** (*L. Germani*, the Germans.) Same as *C. magna*.

**C. gesticulato'ria.** (*L. gesticulator*, a pantomimic actor.) Chorea affecting, among other parts, the arms; being the ordinary form.

**C. gravida'rum.** (*L. gravidus*, pregnant.) Chorea occurring during pregnancy.

**C., hyster'ical.** Chorea accompanied by hysteria.

**C., larynge'al.** (*Λάρυγξ*, the larynx.) Same as *C. diaphragmatic*.

**C. magna.** (*L. magnus*, great. *G. grosser Feitstanz*.) A term applied to severe associated muscular contractions of a choreic character, but which do not seem to be a special disease, but rather a form of hysteria, or some psychocosis, or it may be malingering. The epidemic disease *Tarantulism*.

**C., major.** (*L. major*, greater.) Same as *C. magna*.

**C., method'ical.** (*Μεθοδικός*, going to work by rule.) The form in which the movements take place at definite intervals.

**C., mimet'ic.** (*Μιμητικός*, imitative.) Chorea which has been caused, as sometimes happens, by imitation.

**C., mi'nor.** (*L. minor*, less.) A term formerly applied to that form of chorea in which the convulsive movements are moderate.

**C. neural'gica.** (*Νεύρον*, a nerve; *άλγος*, pain.) A synonym of *tic douloureux*.

**C. nu'tans.** (*L. nuto*, to nod.) Chorea characterised by nodding movements of the head.

**C. oscillato'ria.** (*L. oscillo*, to swing.) The form characterised by irregular or measured oscillations, partial or general, of the head, trunk, or limbs.

**C., paralytic.** (*Παράλυσις*, palsy.) A term applied to those cases in which muscular weakness is the prominent symptom, and inco-ordination of movement and choreic jerks are less noticeable; the affection is usually confined to one arm.

**C., par'tial.** A term for the spasm of the facial muscles, called convulsive tic.

**C. procursi'va.** (*L. procursu*, to run forth.) A synonym of *C. festinans*.

**C., re'flex.** (*L. reflecto*, to turn back.) Chorea originating in peripheral lesions or cicatricial contractions. The term is also applied to that form which occurs during pregnancy and ceases soon after delivery.

**C., rhyth'mic.** (*Ρυθμός*, measured motion.) Same as *C. methodical*.

**C. rotato'ria.** (*L. rotator*, one who turns a thing round.) A form characterised by rotation or oscillation of the head, trunk, or limb, many times in a minute. It is sometimes fatal.

**C. saltato'ria.** (*L. saltator*, a dancer.) A form in which the patient involuntarily makes jumps either rhythmically or irregularly.

**C. Sanct'i Johan'nis.** St. John's dance; a synonym of *Chorea*.

**C. Sanct'i Modes'ti.** A synonym of *Chorea*.

**C. Sanct'i Valent'ni.** A synonym of *Chorea*.

**C. Sanct'i Vi'ti.** (*F. danse de St. Guy*; *G. Feitstanz*.) St. Vitus's dance; a synonym of

ordinary *Chorea*. The name was originally given to the epidemic of dancing madness in the fourteenth century, because it was supposed to be cured by the help of St. Vitus (called Guy in France, Veit in Germany) at his chapels at Ulm, Zabern, and other places.

**C. scriptorūm.** (*L. scriptor*, a writer.) A synonym of *Writer's cramp*.

**C. senilis.** (*L. senilis*, belonging to old age.) A synonym of paralysis agitans, and also of the trembling of old age; as well as true chorea occurring in old people.

**C., symptomatic.** (*Συμπτωμα*, a symptom. *F. chorée chronique*.) Choreas lasting many years or throughout life; usually consequent on lesions of the brain and cord.

**C. vibratoria.** (*L. vibro*, to set in tremulous motion.) A variety in which the movements are rhythmically vibratile.

**Chorea-demonomania.** (*Χορεία*; *δαίμων*, a demon; *μανία*, madness.) Same as *Choromania*.

**Choregia.** (*Χορηγία*.) Used by Hippocrates to signify the whole armamentum of a medical man.

**Choreic.** Appertaining to, or suffering from, *Chorea*.

**C. convulsion.** The twitching movement which occurs in chorea.

**C. insanity.** A form of insanity in which chorea-like attacks occur. It is often associated with rheumatic symptoms, which condition is regarded by some as the causative agent both of the insanity and the chorea.

The term is also applied to the mental weakness which occasionally accompanies chorea.

**Choremania.** (*Χορεία*, a dancing; *μανία*, madness.) Same as *Choromania*.

**Choreoditis.** Same as *Choroiditis*.

**Choreomania.** Same as *Choromania*.

**Choriocapillaris.** (*Choroid*; *capilla*, a hair.) The inner or capillary layer of blood-vessels of the choroid coat of the eye.

**Choriocapillary layer of the choroid.** The same as *Choriocapillaris*.

**Choriocelc.** (*Chorion*; *κύβη*, a tumour.) A hernial protrusion of the chorion.

**Choriodes.** Same as *Choroid*.

**Chorioidea.** The choroid tunic of the eye.

**Chorioides.** Same as *Choroid*.

**Chorioiditis.** Same as *Choroiditis*.

**Chorion.** (*Χόριον*, the membrane that encloses the fetus. *F. chorion*; *L. and S. corio*; *G. Lederhaut*.) The external membrane of the mammalian fetus, which originates in a few days after the arrival of the fecundated ovum in the uterus, in a manner which has not yet been completely ascertained, but probably from an extension of the epiblast. At an early period the chorion exhibits on its surface a large number of villous processes, which speedily become vascular from extension of the umbilical vessels of the allantois, and are implanted into the uterine lining membrane or into a development of that membrane, which, becoming separated at birth, is called the decidua. The villi in time become concentrated on one spot, either by ceasing to grow in other parts or by a development of non-villous chorion, and become the fetal part of the placenta.

In oviparous animals the chorion lies immediately under the shell, and is formed from the

outer primitive coat of the amnion and the remains of the vitelline membrane; it is the membrane of the shell of the egg.

Also, the same as *Corium*.

Also, a synonym of the *Zona pellucida*.

Also, in Botany, Malpighi's term for the third coat of the nucleus of the ovule before fecundation, usually called *Tercine*.

**C., cystic degeneration of.** Same as *Mole, vesicular*.

**C., cystic disease of.** Same as *Mole, hydatidiform*.

**C., embryonic.** (*Εμβρυον*, an embryo.) A name given to the zona pellucida or vitelline membrane.

**C. frondosum.** (*L. frondosus*, leafy.) The shaggy chorion of the human fetus.

**C. fungosum.** (*L. fungosus*, spongy.) The decidua.

**C., hydatidiform disease of.** Same as *Mole, vesicular*.

**C. laeve.** (*L. laevis*, light.) The non-villous part of the chorion.

**C. of mucous membranes.** (*F. chorion de muqueuses*.) The layer of connective tissue subjacent to the epithelium of mucous membranes.

**C., primitive.** (*L. primitivus*, the earliest of its kind. *F. chorion primitif*, *c. premier*.) The vitelline membrane, or *Zona pellucida*.

**C. reticulatum.** (*L. reticulatus*, net-like.) The decidua.

**C., second.** (*F. chorion secondaire*, *chorion deuxième*.) The chorion at the time that it is composed of the vitelline membrane externally, and an epiblastic layer of cells internally. It is coincident with the formation of the amnion.

**C., shaggy.** A term which has been applied both to the decidua and the chorion; latterly it has been restricted to the chorion when completely covered by villi.

**C., smooth.** (*F. chorion lisse*.) The *C., primitive*; in other words, the chorion before the formation of villi.

**C., spongy.** The decidua.

**C., third.** (*F. troisième chorion*.) The chorion from the time of the coalescence of the allantois with the second chorion.

**C. tomentosum.** (*L. tomentum*, a cushion stuffing.) The decidua.

**C., vesicular degeneration of.** Same as *Mole, vesicular*.

**C., villi of.** (*Villus*. *G. Chorionzotte*.) Projections from the surface of the chorion which penetrate the maternal structures. See *Chorion*.

**Chorionitis.** (*Χόριον*, for *L. corium*, the true skin. *G. Lederhautentzündung*.) Inflammation of the skin. A term applied to a slowly-progressing inflammation of the corium of the skin, producing thickening and contraction in irregular lines to such an extent as sometimes to impede the motions of the joints.

**Chorioptes.** (*Χόριον*; *κόπτω*, to strike with a weapon.) A Genus of the Family *Sarcoptidae*, Order *Acaridea*.

**C. ecaudatus.** Megnin. (*L. e*, neg.; *cauda*, a tail.) A parasite living in the anfractuities of the external ear, and in the auditory canal of cats, dogs, and ferrets. It is said to have caused epilepsy in dogs.

**C. setiferus.** Megnin. (*L. seta*, a bristle; *fero*, to bear.) A parasite on the ears

and tail of the fox, in which it causes alopecia. A variety lives on the hyena.

**C. spathiferus**, Meguin. (L. *spatha*, a broad blade; *fero*, to bear.) A parasite of the horse and cow on the limbs and hind quarters.

**Chorioretinitis**. (Choroid tunic; retina.) See *Retino-choroiditis*.

**C. centralis**. (L. *centralis*, in the middle.) A form of plastic choroiditis affecting the macula lutea and the immediately surrounding parts. It is slow in its progress, but seriously impairs vision, the choroid and retina undergoing atrophy. See *Choroiditis disseminata circumscripta*.

**C. pigmentosa**. (L. *pigmentum*, paint.) See *Retino-choroiditis pigmentosa*.

**C. specifera**. (L. *species*, outward form.) The same as *Choroiditis disseminata specifica*.

**Choripetalæ**. (Χορίς, separately; πέταλον, a leaf.) A synonym of *Eleutheropetalæ*.

**Choripetalous**. (Χορίς; πέταλον.) Having the petals distinct. Same as *Polyptalous*.

**Chorisanthærous**. (Χορίς, separately; ανθή, anther.) Applied to plants which have distinct anthers.

**Chorisation**. Same as *Chorisis*.

**Chorisepalous**. (Χορίς; σέpal.) Having the sepals distinct. Same as *Polysepalous*.

**Chorisis**. (Χορίς, from χωρίζω, to separate.) The splitting of an organ into parts, each of which is perfect as its original, as the stamens of *Hypericum*.

**C., collateral**. (Mod. L. *collateralis*, from *col*, with; *lateralis*, belonging to the side.) The form in which the parts, being split off perpendicularly to the axis, stand side by side.

**C., median**. (L. *medius*, in the middle.) Same as *C., transverse*.

**C., transverse**. (L. *transversus*, lying across.) The form in which the parts lie in front of each other, the splitting being transversely to the axis.

**C., vertical**. (L. *vortex*, the top.) Same as *C., transverse*.

**Choriselepoidous**. (Χορίς, separately; λεπίς, a scale.) Applied to the perichium of the Composite when the scales forming it are free.

**Chorisophyte**. (Χορίς, separately; φυτόν, a plant.) Name by Necker for a plant with distinct stamens.

**Choristophyllous**. (Χοριστός, separated; φύλλον, a leaf.) Having separate leaves.

**Choristosporeæ**. (Χοριστός; σπόρος, seed.) A division of *Algae*, according to DeCaisne, in which the fronds are formed of articulated cells, and the spores are formed in fours or threes in a transparent perispore.

**Chorium**. Same as *Corium*.

**Chorœficients**. (Χορεία, a dance; facio, to make.) Certain metallic agents, as mercury, which cause trembling of the limbs by their action on the nervous system.

**Chorography**. (Χώρα, a country; γράφω, to write.) A description of the physical conditions of a region, country, or district.

**Choroid**. (Χορίον, the chorion; εἶδος, likeness.) Resembling the chorion as to its vascularity. A word often used alone to signify the *C. tunic*.

**C., apoplexy of**. (Ἀποπληξία. G. *Choroideublutung*, *Blutergüsse der Choroidea*.) Effusion of blood into the substance or on the surface of the choroid. It is apt to occur in

Bright's disease when, with diseased vessels, violent exertions are made, or when the tension of the globe is suddenly relieved, as in operations for the relief of glaucoma, or as a result of blows on the eye.

**C. artery**. (F. *artère du plexus choroïde*, *a. choroïdienne*; G. *Adernetzschlagader*.) One of the four terminal divisions of the internal carotid artery; it passes backwards through the transverse fissure to the choroid plexus, which it contributes to form, and it gives branches to the hippocampus major, the corpus fimbriatum, the tubercula quadrigemina, and the optic thalamus. There is occasionally more than one.

**C. artery, anterior**. Same as *C. artery*.

**C. artery, posterior**. (L. *posterior*, hinder. F. *a. choroïdienne postérieure*.) A branch of the posterior cerebral artery external to the junction of the communicating artery; it runs backwards to the choroid plexus, with which it passes into the third ventricle; it supplies branches to the crus cerebri, the tubercula quadrigemina, and the velum interpositum.

**C. coat of eye**. Same as *C. tunic*.

**C., coloboma of**. (Κολόβωμα, the part taken away in mutilation.) A partial congenital defect of the choroid, due to imperfect closure of the fetal fissure of the eye, and often associated with coloboma of the iris. It is recognised by the ophthalmoscope during life as a slightly pigmented or wholly unpigmented part of the fundus of the globe. The defective area is usually oval in form, extending in a meridional direction at the lower part of the globe, from near the entrance of the optic nerve to the ciliary region. The borders of the area are usually deeply pigmented. Under the ophthalmoscope the area is whitish or greenish in hue, and the surface often shaded or marbled, owing to irregular protrusion of the sclerotic. The central vision of the eye is usually, but not always, defective. That part of the field which corresponds to the coloboma is blind or very defective. It may occur in both eyes or in only one, and in the latter case the left is most frequently affected. The area of the coloboma is occupied with connective tissue, partly continuous with the margins of the choroid, partly with the retina. The retina is sometimes absent, but sometimes present in an attenuated form, all the elements being present, but appearing, so to speak, stretched.

**C., detachment of**. (L. *de*, from; *tango*, to touch. G. *Abhebung der Choroidea*.) Separation of the choroid from the sclerotic. A rare affection; it has been observed in cases of circumscribed staphyloma of the sclerotic; as a consequence of choroiditis, and after cataract operations, with great loss of vitreous body.

**C. gland**. (G. *Choroidealdrüse*.) A gland-like body described by Müller, composed of a close plexus of blood-vessels embedded in the choroid between the lamina argentea and pigment layer. It sometimes forms a ring around the optic nerve, sometimes a horseshoe-like swelling, with the opening towards the nerve. It is formed by an artery named the arteria ophthalmica magna, and is found in the osseous fishes.

**C. muscle**. Same as *Ciliary muscle*.

**C., ossification of**. (L. *os*, bone; *facio*, to make. G. *Knochenbildung in der Choroidea*.) True bone forms as a result of inflammation of the choroid, and chiefly on its inner surface, the blood-vessels of the bone being continuous with

## CHOROÏDAL—CHOROÏDEA ARGENTEA.

those of the chorioecapillaris. A complete shell, presenting the form of the posterior thirds of the eye, extending from the optic disc to the ora serrata, is thus sometimes seen. At the ora serrata the borders of the shell may turn in, and even unite in the centre behind the lens, so as to form a capsule. The retina is atrophied or thickened, and often detached. It is usually the result of injuries. Slight injuries affecting such an eye, leading to nerve irritation or hæmorrhage, may cause, after the lapse of many years, sympathetic ophthalmia of the opposite eye.

**C. plexus.** (L. *plexus*, a plaiting. F. *plexus choroïde*; G. *Adergeflecht*.) A long, reddish, highly vascular, cord-like border on each side of the velum interpositum in the lateral ventricle of the brain, tapering towards its anterior extremity, communicating with its fellow in the foramen of Monro, and descending into the middle cornu of the lateral ventricle, where it unites with the pia mater in the transverse fissure of the cerebrium. It is composed of arterial and venous branches and capillaries, connected by a villous membrane covered by an epithelium, which consists of large spheroidal corpuscles containing a central nucleus, several yellowish granules, and some oil globules. Vascular branches pass to the corpora striata and the neighbouring parts. The arterial supply is from the choroid and the posterior choroid arteries, and the veins converge to form the *venæ Galeni*.

**C. plexus of fourth ventricle.** A small vascular process projecting on each side into the fourth ventricle, extending from the apex of the inferior vermiform process to the outer border of the restiform body.

**C. plexus of lateral ventricle.** Same as *C. plexus*.

**C. plexus of third ventricle.** Two slight vascular fringes depending from the under surface of the velum interpositum into the third ventricle; they are nearer to each other in front than behind.

**C., rupture of.** (L. *rumpo*, to break through. F. *rupture de la choroïde*; G. *Zerrei-sungen der Aderhaut, Aderhautriss*.) A rent of the choroid tunic, not uncommonly seen as a consequence of violent blows or gunshot wounds in or on the eye or the adjoining parts. It at first presents the aspect of a yellowish-red stria, with rounded margins, surrounded by an ecchymosis of the choroid; at a later date it is yellowish-white. It is usually found in the region between the optic disc and the yellow spot, its greatest breadth being about one third of the diameter of the disc. Small rents may heal up and leave no after results; large ones may lead to detachment of the retina and permanent impairment of vision.

**C., sarcoma of.** The form of sarcoma affecting the choroid is usually melanosisarcoma. Myosarcoma has been only seen once. In the former variety the pigment is contained in long fusiform cells, or occasionally in spheroidal cells. The tumour usually springs from the anterior or ciliary region of the choroid. It grows for a time with little pain, but detachment of the retina and glaucomatous symptoms ensue, rendering removal of the eye necessary. It is apt to recur.

**C., separation of.** (L. *separatio*, a sundering.) The same as *C., detachment of*.

**C. tunic.** (F. *choroïde*; I. *coroïde*; G. *Gefüßhaut*.) The vascular coat of the eye,

situated between the sclerotic and the retina, and extending from the periphery of the optic disc to the iris, with which it is continuous. Its thickness is in front 0·08, behind from ·11 to ·15 mm. It is composed of connective tissue, with numerous stellate pigment cells containing *Fuscin* distributed through it. The larger veins, named the *venæ vorticosæ*, and the arteries which are derived from the short ciliaries, form an external layer, covered by a fine plexus of elastic fibres, the *membrana suprachorioidea*, whilst the capillaries form an internal layer, named the *chorio-capillaris* or *Tunica Ruyschiana*. The choroid contains also many ciliary nerves from the third, fifth, and sympathetic. Bounding the capillary layer internally is a basement membrane, the *lamina vitrea*. At the anterior part the choroid presents the ciliary processes internally, and the ciliary muscles externally.

**C. vein of cerebrium.** A vein in the outer border of each choroid plexus, receiving supply also from veins from the hippocampus major, the fornix, and the corpus callosum, and uniting with the vein of the corpus striatum to form the vein of Galen.

Also, a name given to the *Vena Galeni*.

**C. web.** The *Velum interpositum* or *tela choroidea*.

**Choroïdal.** (Same etymon.) Relating to the choroid tunic.

**C. atrophy.** (*Ατροφία*, want of nourishment. F. *atrophie choroïdienne*.) A condition presenting various degrees of intensity, from diminution of the pigment to complete abolition of the choroid membrane. In the slight degrees the pigment and capillary vessels disappear, either generally or in patches of variable extent, permitting the *venæ vorticosæ* to be perceived. The pigment is often irregularly accumulated, and the choroid becomes so attenuated that the sclerotic shines through it. It is generally the result of inflammatory changes.

**C. fissure.** (L. *fissura*, a cleft.) An aperture on the under surface of the rudimentary eye produced by the absence of growth at this part of the optic cup; it remains open only a short time. In mammals it closes after the mesoblast process which passes through it has formed the vitreous humour; in birds a process of mesoblast, in addition to that which fills it up, forms the pecten.

**C. fold.** (Sax. *fealdan*, to double together.) The edge of the *C. fissure*.

**C. hypertrophy.** (*Υπερ*, excess; *τροφία*, nutrition.) Thickening of the choroidal tissue from hyperplasia of the connective-tissue elements.

**C. rupture.** (L. *rumpo*, to break through.) See *Choroid, rupture of*.

**C. sarcoma.** (G. *Choroïdealsarkom*.) See *Choroid, sarcoma of*.

**Choroïdea argentea.** (*Χρόιον; ἄδος*; L. *argenteus*, made of silver.) A well-defined lamina, composed of iridescent crystals, found in osseous fishes between the *membrana fusca* and the choroid coat.

**C. inferior.** (L. *inferior*, that which is below. I. *tela choroidea inferiore*.) The choroid plexus of the fourth ventricle.

**C. superior.** (L. *superior*, that which is above. I. *tela choroidea superiore*.) The choroid plexus of the lateral ventricles.

**C. tela.** (L. *tela*, a web.) The *Velum interpositum*.

**C. tunica.** See *Choroid tunic*.

## CHOROÏDEÆ VENÆ—CHOROÏDITIS.

**Choroïdeæ venæ.** The veins of the choroid plexus, and the *Venæ Galeni*.

**Choroïdeitis.** Same as *Choroiditis*.

**Choroïderemia.** (*Choroid*; *ipnûta*, want or imperfection.) Absence of the choroid. In one case observed by Mauthner the patient suffered from night blindness.

**Choroïdes.** Same as *Choroid*.

**Choroïdeus.** Same as *Choroid*.

**Choroiditis.** (*Choroid*. *F. choroidite*; *l. coroidite*; *G. Chorioiditis*, *Gefasshautentzündung*, *Aderhautentzündung*.) Inflammation of the choroid tunic of the eye. It may occur alone or associated with inflammation of the iris and ciliary body, the retina, and the sclera. It is met with at all ages, and sometimes without apparent cause. There is more or less perikeratic redness, punctiform deposit on the membrane of Descemet, hyperemia of the iris, cloudiness of the vitreous, and exudation, which may either be serous, plastic, or purulent, into the choroid coat. See *Cyclitis*, *Irido-cyclitis*, *Irido-choroiditis*, *Sclero-choroiditis*, *Retino-choroiditis*, and *Sympathetic ophthalmia*.

**C. areolaris.** (*L. areola*, dim. of *area*, an open space.) A form of choroiditis disseminata simplex, from which it only differs in the areolated form of the knots and cicatrices produced by their partial coalescence.

**C. atrophica.** (*Ἀτροφία*, want of nourishment. *F. choroidite atrophique*.) Term applied to that form of choroidal atrophy which accompanies progressive myopia. The inflammatory symptoms of choroiditis are often but little accentuated, though the choroidal tissues almost entirely disappear.

**C. circumscripta.** The same as *C. disseminata circumscripta*.

**C. disseminata circumscripta.** (*L. circumscriptus*, part. of *circumscribo*, to enclose in a circle.) A form of choroiditis in which the pathological changes are limited to the macula lutea and immediately surrounding parts. It is a swelling commencing in the choroid, and composed of cells, irregular masses of pigment, and fibrillar connective tissue, which projects into the retina and reduces it to a fibrous tissue. Under the ophthalmoscope it at first appears as a reddish, and subsequently as a white or yellow, sharply defined, round or oval spot, the margins of which are pigmented. The symptoms are metamorphopsia, amblyopia, and a strongly expressed scotoma in the centre of the field of vision; lateral vision is long preserved.

**C. disseminata simplex.** (*L. disseminata*, to spread abroad; *simplex*, plain.) Spots of inflammatory or degenerative change chiefly confined to the equatorial region of the choroid; one form affects the lamina vitrea of the choroid, and another the stroma of the venous tunics. The former appears as yellowish, rounded spots, which are outgrowths of the hyaline lamella. These may subsequently become free, and come to lie in the nerve fibre layer of the retina. The other form commences in the equatorial zone by slight swellings, composed of closely compressed cells and of masses of exudation, resembling, in the absence of fibrils, tubercular knots, and of a yellowish colour. These gradually disappear, leaving a kind of cicatrix, to which the retina becomes adherent by its radial fibres, whilst pigment accumulates in the adjoining cells. Atrophied spots of various form and size are thus produced, which appear white or yellowish under the

ophthalmoscope, owing to the sclerotic shining through them, and which are surrounded by a zone of pigment. Even when well marked they are not attended as a rule with much impairment of vision.

**C. disseminata specifica.** (*L. disseminata*; *specificus*, forming a particular kind.) A disease in which the vitreous body exhibits at first fine dust-like mobile particles, subsequently uniting into flocculi. The retina becomes greyish and cloudy, and there is a peripapillary halo. Sometimes the choroid presents bright red or whitish spots near the macula. It may clear up without trace, or be followed by atrophy of the retina and choroid, and the occurrence of white spots and irregular accumulation of pigment.

**C., embolic.** (*Ἐμβόλις*, that which is put in.) See *C. parenchymatosa*.

**C. exsudativa.** (*L. exsudio*, to sweat out.) The same as *C. plastica*.

**C. metastatica.** (*Μετάστασις*, a being put in a different place.) The same as *C. parenchymatosa*. Occurring in pyæmic and septicæmic states of the system.

**C. parenchymatosa.** (*Παράγχυμα*, that which is poured in. *F. choroidite exsudative, c. plastique*.) Inflammation of the choroid and uveal tract resulting from emboli and thrombi. This affection has been observed in various purperal and pyæmic conditions of the system. The choroid and other tissues, as the retina, vitreous, lens, and even the cornea, become infiltrated with pus, and sometimes with blood, the external coats of the eye slough or break down, and the globe atrophies. It usually affects only one eye, and runs a rapid course. The eye appears intensely inflamed, the pupil early gives a dull grey reflex from the infiltrated vitreous body, so that no ophthalmoscopic examination of the fundus can be made. Posterior synechie form early. Vision quickly fails.

**C. plastica.** (*Πλαστικός*, fit for moulding.) Inflammation of the choroid, attended with the exudation of lymph and the proliferation of cells; it is held to include *C. disseminata simplex*, *C. areolaris*, *C. disseminata circumscripta*, and *C. disseminata specifica*.

**C., puerperal.** (*L. puerpera*, a woman recently confined.) The same as *C. parenchymatosa*, when occurring after childbirth.

**C. purulenta.** (*L. purulentus*, festering.) A violent form of *C. parenchymatosa* passing into suppuration.

**C. serosa.** (*L. serum*, the watery part of a thing.) A term synonymous with *Glaucoma*.

**C. suppurativa.** (*L. suppurare*, to form pus. *G. citrige Choroiditis*.) Inflammation resulting in infiltration of the choroid with pus, following penetrating wounds, rupture of the globe, and the entrance of foreign bodies into the eye. The iris becomes discoloured and thickened, the aqueous cloudy, synechie form, and the choroid and vitreous suppurate. The globe of the eye becomes an abscess, which bursts at some point through the sclerotic or cornea, and atrophy of the bulb results. Vision is early lost. The pain during the maturation of the abscess is usually intense.

**C., syphilitic.** The same as *C. disseminata specifica*.

**C. tuberculo'sa.** (*F. choroidite tuberculeuse*.) The formation in the substance of the choroid, usually of both eyes, near the optic discs,

either of small isolated masses of tubercles, or of a more general tubercular infiltration.

**Choroïdo-cyclitis.** (Χοροῖδος, a circle. I. *choroïdo-cyclite*.) Inflammation of the choroïd and of the ciliary processes, characterised by a strongly-marked zone of redness around the cornea, turbidity of the vitreous, pain, and impairment of vision.

**Choroidiritis.** See *Iridochoroiditis*.  
**Choromania.** (Χορός, a dance; μανία, madness. F. *choromanie*; G. *Tanzwuth*, *Tanzsucht*.) The dancing madness, or chorea. The dancing mania which at different times and in different places has seized certain persons, and then spread amongst the people like an epidemic.

**Choromegma.** (Κόρη, pupil; μέγας, great.) A synonym of *Atropine*, on account of its power of dilating the pupil.

**Chorosynclonus.** (Chorea; *synclonus*. F. *chorosynclone*; G. *allgemeine Feitzstanz*.) A name for general or universal chorea.

**Chortasthma.** (Χόρτος, hay; ἄσθμα.) Name for hay-asthma, or hay-fever.

**Chortodiphyte.** (Χορτώδης, like grass; φυτόν, a plant.) Name by Necker for a plant which resembles the grasses.

**Chortopyretus.** (Χόρτος, hay; πυρετός, a fever. F. *chortopyrète*; G. *Heufieber*.) Hay-asthma or fever.

**Chosis.** (Χώσις, a heaping up.) A synonym of *Arenation*.

**Chrematology.** (Χρήμα, property; λόγος, a discourse.) A collection of useful things or doctrines; the opposite of *Onomatology*.

**Chremma.** (Χρήμα, spittle.) Saliva.

**Chrempsis.** (Χρεμψις, a hawking and spitting.) The expectoration of buccal and faucal secretion.

**Chrisis.** (Χρίσις, from χρίω, to anoint. G. *Einsalben*.) Old term for the unction or anointing of any part.

**Chrisma.** (Χρίσμα.) Ointment, or other substance, used for unction.

Also, the act of unction.

**Christ's thorn.** The *Paliurus aculeatus*, or Palestine buckthorn.

**Christau, Saint.** See *Saint Christau*.

**Christi manus.** (L. *Christus*, Christ; manus, the hand.) A term applied to troches made of purified sugar dissolved in rose water.

**C. manus perlata.** (Mod. L. *perlatus*, of pearls.) The same as the above, with the addition of pearls.

**Christmas rose.** (Because of the time of its flowering and the shape of its corolla.) The *Helleborus niger*, or black hellebore.

**Christophe - en - Brionnais, Saint.** See *Saint Christophe-en-Brionnais*.

**Christopher, herb.** The *Actaea spicata*.

**Christophoria'na americana.** The *Actaea spicata*.

**C. canadensis racemo'sa.** The *Actaea racemosa*.

**C. spica'ta.** The *Actaea spicata*.

**Christus.** (Χριστός, anointed.) An ointment or liniment.

**Chro'a.** (Χρόα, Attic for χροῖά.) The surface of the body; the skin; the colour of the skin, or of a thing.

**Chroizolytes.** (Χρωίζω, to colour; λυτός, soluble.) A name by Ampère for a class

of elementary bodies, comprising the metals, which give, with colourless acids, coloured solutions.

**Chroma.** (Χρώμα.) Same as *Chroa*.

**Chromaphore.** (Χρώμα, colour; φέρω, to bear. F. *chromaphore*.) Applied to the coloured follicles or globules on the body of the Cephalopoda, first observed by Sau-Giovanni.

**Chromascope.** (Χρώμα; σκοπέω, to see.) An instrument, invented by Ludicke, for the determination of the refractive index of coloured rays of light.

**Chroma'sia oculi.** (Χρώμα, colour; L. *oculus*, the eye.) A term applied to the dispersion of light that takes place in the eye, owing to the violet rays of white light being more refrangible, and therefore brought to a focus sooner than the red rays. The distance between the focus of the violet and red rays is about 0.6 mm.

**Chromate.** (F. *chromate*; G. *chromsaures Salz*.) A salt of chromic acid.

**Chromateloipsis.** (Χρώμα, colour; ἀτελής, imperfect; ὄψις, sight.) Imperfect sight as to colours. Same as *Daltonism*.

**Chromatic.** (Χρώμα, colour. F. *chromatique*; G. *gefärbt*, *farbig*.) Of, or belonging to, or possessing, colour.

**C. aberration.** See *Aberration, chromatic*.

**C. vision.** (L. *visus*, sight.) The subjective perception of coloured rings and haloes observed in glaucoma, consequent in part upon irritation of the retina, and in part upon the hazy condition of the media of the eye.

**Chromatics.** (Χρώμα.) The investigation and laws of colours.

**Chromatigenous.** Same as *Chromatogenous*.

**Chromatin.** (Χρώμα.) A term applied to the convolution wreath, star, and double star appearing in various embryonic cells undergoing division, which stain with dyes, and have been thus named by Fleming in opposition to the spindle or fusiform mass of fibrils connecting the double stars, which does not stain with dyes.

**Chromatism.** (Χρωματίζω, to tinge or colour. F. *chromatic*; G. *Farbung*.) The natural tinge or colour of anything.

Term in Optics for the aberration of refrangibility, by which the rays of light are decomposed, and the correctness of their transmission through a convex lens destroyed.

**Chromatodysopsia.** Same as *Dyschromatopsia*.

**Chromatog'enous.** (Χρώμα, colour; γεννῶ, to generate. G. *farbenerzeugend*.) Generating or forming colour.

**C. apparatus.** A term applied to a supposed glandular parenchyma placed on the true skin, whose function it was to secrete the colouring matter.

**C. disea'ses.** Diseases accompanied by discolorations of the skin.

**Chromatol'gy.** (Χρώμα, colour; λόγος, a discourse. F. *chromatologie*; G. *Farbenlehre*.) The doctrine of colour.

Also, a term applied by Sorby to the investigation of colouring matters by spectrum analysis and other modes of research.

**C., comparative.** (L. *comparativus*, from *compara*, to put in connection.) The relationship between colouring matters, as exhibited by the spectroscope.

**Chromatometablepsia.** (Χρῶμα, colour; μετα, prefix signifying change; βλέπω, to look. G. *Falschfarbsehen*.) Term for false vision as to colours. See *Colour-blindness*.

**Chromatophobia.** (Χρῶμα; φοβίω, to terrify.) Morbid sensibility of the eye in regard to certain colours.

**Chromatophore.** (Χρῶμα; φορέω, to bear.) A connective-tissue cell containing pigment, and possessing contractile processes, found in layers in the integument of Cephalopoda. By their contraction and change of shape the skin of the animal is changed in colour. To similar cells in Batrachia, Mollusca, and other animals, is given the term *Chromoblast*.

**Chromatoporous.** Bearing chromatophores.

**Chromatopseudoblepsia.** (Χρῶμα; ψευδής, false; βλέπω, to see.) False perception as to colours. See *Colour-blindness*.

**Chromatopseudopsis.** (Χρῶμα; ψευδής; ὄψis, sight.) False perception as to colours. See *Colour-blindness*.

**Chromatopsis.** (Χρῶμα, colour; ὄψis, vision. F. *chromatopsie*; G. *Farbsehen*.) Term for coloured vision; chromatic vision. It may result from irritation of the retina, or from the use of certain drugs, as *santonin*.

**Chromatoptometry.** (Χρῶμα; ὄψis; μέτρον, a measure. G. *Prüfung der Farbensinnens.*) Testing the sensibility of the eye for colours. One mode consists in placing squares of coloured paper on black velvet, and ascertaining the distance at which they can be severally distinguished. Donders found that bright-coloured squares of paper of 1 mm. size could be distinguished at 5 meters' distance. More exact methods may be practised with a revolving disc, on which the primary colours are painted, or with the spectroscope.

**Chromatoscopy.** (Χρῶμα; σκοπέω, to view.) The examination of the colour of bodies.

**Chromatosis.** (Χρῶμα.) Same as *Melanosis*, or *Pigmentation*.

**Chromatoskiameter.** (Χρῶμα, colour; σκία, a shade; μέτρον, measure.) A means, suggested by Holmgren, of testing the sense of colour possessed by the eye. It consists of a lamp and a screen of white porcelain, on which the shadow of a pencil placed in front of different coloured glasses is received. A scale attached enables the observer to state when the shadows are of equal brightness.

**Chromaturia.** (Χρῶμα; οὖρον, urine.) The existence of an abnormal colour in the urine.

**Chrome.** Same as *Chromium*.

**C. alum.**  $K_2SO_4 + Cr_2(SO_4)_3 + 24H_2O$ . Potassium chromic sulphate obtained in the manufacture of artificial alizarine from anthracene, or by reducing potassium dichromate by means of sulphuric acid, and passing sulphur dioxide or alcohol through the solution. An astringent.

**C.-orange.** A mixture of *C.-red* and *C.-yellow*.

**C.-red.**  $Pb_2CrO_5$ . Basic lead chromate.

**C.-yellow.**  $PbCrO_4$ . Lead chromate.

**Chromhidrosis.** (Χρῶμα, colour; ιδρώς, sweat. G. *farbiger Schweiß*.) Term for the abnormal coloration of the perspiratory secretion. The colouring matter is usually bluish or black,

but it may be green or red, and the disorder is almost invariably confined to some part of the face, especially the eyelids, although it has been observed on other parts of the body. The colouring substance has been supposed to be indurated altered by exposure to the air, though occasionally the colour has appeared to be derived from salts of iron or copper. The disease has been simulated, and it generally occurs in hysterical women.

**C., blue.** See *Cyanhydrosis*.

**C., red.** See *Hæmorrhidrosis*.

**Chromic.** (F. *chromique*; G. *chromsaur*.) Of, or belonging to, chromium.

**C. acid.** (F. *acide chromique*; G. *Chromsäure*.)  $CrO_3H_2O$ . Chromium trioxide. Obtained by adding 1.5 volumes of concentrated sulphuric acid to one of a cold saturated solution of potassium bichromate, from which it crystallises in long needles, forming a red woolly mass, or as crimson-red rhombic prisms. It is deliquescent and very soluble in water; it has a sp. gr. of 2.78, and melts at 193° C. (379.4° F.). It is a very active caustic, and is used for the purpose of removing warty growths, condylomata, and urethral caruncle, for the destruction of lupus and foul ulcers, and for the relief of uterine hemorrhage.

**C. anhydride.** (Ἀνὕδρις, without water.) A synonym of *Chromium trioxide*.

**Chromides.** (Χρῶμα.) A term by Ampère for a family of elementary bodies containing chromium, tungsten, molybdenum, vanadium, and columbium.

**Chromidrosis.** Same as *Chromhidrosis*.

**Chromism.** (Χρῶμα.) A term applied to the abnormal excess of coloration in plants.

**Chromite.** (Χρῶμα.) A term applied to animal and vegetable colouring matters.

**Chromium.** (Χρῶμα, colour; because it gives colour to all its combinations. F. *chrome*; G. *Chrom*.) Sym. Cr; atomic weight 52.4. A hexad metal found in conjunction with lead or iron chromate, but never free. It is a light green, glistening powder, consisting of an aggregation of crystals, and has a sp. gr. variously stated as 6.81 and 7.3. It forms two basic oxides, chromous and chromic oxides; and one acid-forming oxide, chromium trioxide or chromic acid.

**C., hydrated sesquioxide of.**  $Cr_2(OH)_6 + 4H_2O$ . Obtained as a pale blue precipitate by adding ammonia to a solution of a chromic salt. It has been used as an astringent in infantile diarrhoea.

**C. trioxide.**  $CrO_3$ . The substance called *Chromic acid*.

**Chromoblast.** (Χρῶμα; βλαστός, a sprout.) A variety of connective-tissue corpuscles found under the skin and in the parenchyma of Batrachia, Mollusca, Annelida, and some fishes. It possesses ramified processes, and contains a black pigment. See *Chromatophore*.

**Chromocrinia.** (Χρῶμα; κρίνω, to separate. F. *chromocrinie*.) The secretion of coloured matter, as by the skin.

**Chromogen.** (Χρῶμα, colour; γινώω, to generate.) A former term for a supposed vegetable colouring matter which is acted upon by acids and alkalis in producing red, yellow, or green tints.

**Chromophan.** (Χρῶμα; φαίνω, to bring into sight.) A generic term applied to the different colouring matters of the inner segments

of the cones of the retina of animals where they are held in solution by a fat. They may be extracted by exhausting with ether; they give a blue colour when treated with iodine solution; and are decolorised by light and even in the dark. Three varieties have been described—*Chlorophan*, *Rhodophan*, and *Xanthophan*.

**Chromopseudopsis.** (Χρόμα; ψευδής, false; ὄψις, vision.) False perception of colours.

**Chromop'sia.** (Χρόμα, colour; ὄψις, the eye. G. *Farbsehen*.) The perception of subjective sensations of light in the form of white or coloured clouds or rings in cases of hyperæsthesia of the retina.

**Chromoptometer.** (Χρόμα, colour; μέτρον, a measure.) An instrument for determining the sharpness of the colour sense in man, suggested by A. Weber. It consists of a number of small coloured pieces of paper, pasted on black velvet, and increasing in size at a fixed ratio. The distance at which the colour of the disc can be recognised constitutes a measure of the acuteness of perception for colour of the subject. The individual limits of colour perception vary greatly. In Cohn's experiments the distance at which red pieces of 1 mm. square appeared distinctly red was 11·5, 13·13, 14 and 15 meters in five different persons; green 8, 9, 13, 13 and 14; blue 0·5, 1, 2, 3, and 8; yellow 1, 3, 4, 5, and 6; orange 3, 3, 3, 7, and 8; violet 1, 1·5, 2, 3, 4.

**Chromosporeæ.** (Χρόμα; σπόρος, seed.) A Section of the *Agaricium* having coloured spores.

**Chromosteato'des.** (Χρόμα; στεατώδης, tallowy.) A disorder consisting in alteration in the colour of the sebaceous secretion of the skin.

**Chrom'ule.** (Χρόμα, colour; ὕλη, any material from which a thing is made.) A term applied to the various coloured principles, not being chlorophyll, obtained from the leaves and flowers of plants.

Also, by De Candolle, to chlorophyll.

**Chromiarteritis.** (Χρονικός, concerning time; arteritis.) Chronic arteritis.

**Chronic.** (Χρονικός, concerning time. F. *chronique*; G. *chronisch*, *zeitlich*, *langwähren*, *langwierig*.) Long continued; a term applied to diseases and affections, and used in contradistinction to acute or such as are sudden in their access and rapid in their progress.

**Chronicity.** (Same etymon.) The condition of long duration.

**Chronizo'ic.** (Χρονίζω, to last long.) A term applied to preparations of drugs which, being unchangeable for a longer or shorter period, should always be kept ready made.

**Chronizo'spore.** (Χρονίζω; ζῶον, an animal; σπόρος, a seed.) A form of motile spore in certain Alge which, retaining its life after dying, may propagate at the end of a long time.

**Chronogyn'ea.** (Χρόνος, time; γυνή, a woman.) A term for *Menstruation*.

**Chronometry.** (Χρόνος; μέτρον, a measure.) The measuring of time.

**C. of life.** A term which has been used to express the relationship which exists between the organic processes of living beings and time, independent of external conditions.

**Chronon'osus.** (Χρόνος, time; νόσος, a disease. F. *mal chronique*; G. *chronische Krankheit*.) Chronic disease.

**Chronopath'ia.** (Χρόνος, time; πάθος,

affection. F. *chronopathie*; G. *chronisches Leiden*.) A chronic affection.

**Chronother'mal.** (Χρόνος, a period of time; θερμῆ, heat.) Relating to time and temperature. Term applied by Dr. S. Dickson to a system based on the theory that all diseases occur in fits, and have periodic intermissions, with alternate chills and heats, and that remedies for diseases must alter the motions of the system and modify the electricity.

**Chroölepid.** (Χρόος, for χρῶς, colour; λεπίς, a scale.) Having small coloured scales.

**Chroöps'ia.** (Χρόα, colour; ὄψις, vision. G. *Farbsehen*.) Coloured vision. Subjective sensation of light in the form of flashes and rings. A symptom often noticed as premonitory of an attack of glaucoma.

**Chrotici.** (Χρῶς, the skin.) Skin diseases.

**Chrotop'sia.** Same as *Chroöpsia*.

**Chrup'sia.** Same etymon and meaning as *Chroöpsia*.

**Chrysa fibraur'ea.** (Χρυσός, gold; L. *fibra*, a thread; *aureus*, golden.) The *Coptis trifolia*.

**Chrysa'lea.** An old name of nitromuriatic acid.

**Chrys'alid.** Same as *Chrysalis*.

**Chrys'alis.** (Χρυσάλλις, from χρυσός, gold. F. *chrysalide*; I. *crisalide*; S. *crisalida*; G. *Puppe*.) The pupa or second stage in the growth of a lepidopterous insect, so called because of its golden colour in some species.

**Chrysammic acid.** (Χρυσός, ἄμμος, sand.)  $C_{14}H_2(NO_2)_4(OH)_2O_2$ . Obtained in golden-coloured scales by heating aloes with strong nitric acid.

**Chrysam'mos.** (Χρύσαμμος, from χρυσός, gold; ἄμμος, sand.) Golden sand, or sand in which gold was found.

**Chrysan'ilin.** (Χρυσός; anilin.)  $C_{20}H_{17}N_3$ . Aniline yellow. A secondary product of the process for obtaining rosanilin.

**Chrysanthel'ium.** A Genus of the Nat. Order *Compositæ*.

**C. indicum.** De Cand. David's flower. Used by the natives in India as an aperient in affections of the brain; also in calculus and to remove despondency.

**Chrysanthémous.** (Χρυσός, gold; ἄνθεμον, a flower. F. *chrysanthéme*; G. *gelbblüthig*.) Having yellow flowers.

**Chrysanthemum.** (Χρυσός, gold; ἄνθεμον, a flower. G. *Wackerblume*.) A Genus of the Nat. Order *Compositæ*.

Also, the *Calendula officinalis*.

**C., corn.** The *C. segetum*.

**C. coronarium.** Linn. (L. *coronarius*, belonging to a wreath.) Flowers used as a discutient of sebaceous tumours.

**C. Dioscor'idis.** The *C. coronarium*.

**C., garden.** The *C. coronarium*.

**C. leucanthemum.** Linn. (Λευκός, white; ἄνθεμον, a flower. G. *grosse Masluche*.) The great ox-eye daisy, or maundwort. Used in chest diseases.

**C. parthen'ium.** Pers. (Παρθένιον. F. *matricaire officinale*; G. *Mutterkraut*.) Feverfew. The volatile oil contains a laevo-rotatory camphor. Used in flatulent dyspepsia, amenorrhœa, dysmenorrhœa, intermittent fever, and nervous debility. Externally the infusion is used in toothache, rheumatism, and suppurations.

**C. Roxburgh'il.** Desv. Hab. India.

# CHRYSANTHOUS—CHRYSOPHYLLUM.

Flowers used as ordinary chamomile. They and the root communicate a tingling sensation to the tongue. Used by the natives with black pepper in gonorrhœa.

**C. segetum**, Linn. (*L. seges*, a cornfield.) Corn marigold. Used in asthma and jaundice; externally as a discutient.

**Chrysanthous**. (*Χρυσός*; *ἄθος*, a flower. *G. goldblumig*.) Having yellow flowers.

**Chrysaroba**. Same as *Chrysarobin*.

**Chrysarobin**. (*Χρυσός*; *arabica*.) A synonym of *Goa powder*.

**Chrysê**. (*Χρυσός*, gold.) Old name, from its yellow colour, for a plaster which was applied to bloody wounds, according to Paulus Ægineta, vii, 17. It was composed of frankincense, alum, lead, colophony, resin, oil, and orpiment, boiled in vinegar.

**Chryseletrum**. (*Χρυσός*, gold; *ἄλκτρον*, amber.) Name for amber of a golden yellow colour.

**Chrysene**. (*Χρυσός*, gold.)  $C_{12}H_{12}$ . A solid substance extracted by distillation from pitch; it is a pure crystalline powder of a golden colour, which fuses by heat, and sublimes without much decomposition; so called from its colour.

**Chrysidês**. (*Χρυσός*, gold.) Name by Ampère for a class of simple bodies, having gold for their type, and containing also rhodium, iridium, platinum, and palladium.

**Chrysin**. (*Χρυσός*.) A yellow crystallisable colouring matter found in the buds of the poplar, *Populus nigra*.

**Chrysinic acid**. (*Χρυσός*.) A crystallisable acid found in the buds of the *Populus nigra*.

**Chrysitis**. (*Χρυσός*, gold.) Old term for a certain herb, supposed to be the *Gnaphalium orientale*.

Also, a term used by Dioscorides, τ, 102, for lithargyrum auri, or litharge of gold.

**Chrysobalanaceæ**. Same as *Chrysobalanaceæ*.

**Chrysobalanaceæ**. (*Chrysobalanus*.) A Suborder of the Order *Rosaceæ*, having simple leaves, free stipules, a solitary carpel, two erect ovules, and a basilar style.

This is by some ereeted into a natural order.

**Chrysobalanus**. (*Χρυσός*, gold; *βάλανος*, a nut.) Old term for a certain fruit; supposed to be the nutmeg, according to Galen, *de U. M. sec. Loc.* viii, 3.

Also, a Genus of the Suborder *Chrysobalanaceæ*, Nat. Order *Rosaceæ*.

**C. Galeñi**. The nutmeg.

**C. leuco**, Linn. *Coccoloba plum.* Hab. West Indies, Brazil. Fruit edible; root, bark, and leaves used in leucorrhœa, diarrhœa, and dysentery.

**C. luteus**. (*L. luteus*, yellow.) Hab. Sierra Leone. Fruit esculent.

**C. oblongifolius**, Michx. Hab. Southern United States. Fruit esculent.

**Chrysocarpous**. (*Χρυσός*, gold; *καρπός*, fruit. *F. chrysocarpa*; *G. goldfruchtig*.) Having golden or yellow fruit.

**Chrysoceraunius**. The same as *Ceraunochrysos*.

**Chrysochalcos**. (*Χρυσός*, gold; *χαλκός*, brass or copper.) The same as *Aurichalcum*. (Ruland and Johnson.)

**Chrysochlorous**. (*Χρυσός*, gold; *χλωρός*, green.) Of a golden or yellowish green.

**Chrysococcous**. (*Χρυσός*; *κόκκος*, a

berry. *G. goldbeerg*.) Having golden-coloured berries.

**Chrysocolla**. (*Χρυσός*, gold; *κόλλα*, glue or cement.) Old name for native borax, because employed in soldering gold.

**Chrysocoma**. (*Χρυσός*, gold; *κόμη*, hair.) A name for the *Linum catharticum*, or goldlocks, from its golden hair-like appearance. Also, a Genus of the Nat. Order *Compositæ*.

**C. sericea**, Linn., fil. (*L. sericeus*, silky.) Hab. Canary Islands. Used in toothache.

**Chrysocome**. (Same etymon.) The *Helichrysum orientale*.

**Chrysogonia**. (*Χρυσός*, gold; *γονή*, seed.) Old alchemical term for an aurific tincture of a gold or reddish colour.

**Chrysogonidium**. (*Χρυσός*; *gonidium*. *G. gelbe Brutzelle*.) A golden-coloured gonidium.

**Chrysogonum**. The *Leontice chrysogonum*.

**Chrysolachanon**. (*Χρυσός*, gold; *λάχανον*, a pot-herb; from its yellow leaves.) The *Chenopodium bonus-Henricus*.

**Chrysolapis**. (*Χρυσός*; *L. lapis*, a stone.) The *Lapis boloniensis*.

**Chrysolepic acid**. (*Χρυσός*; *λεπίς*, a scale.) A synonym of picric acid, because it occurs in yellow scales.

**Chrysolite**. (*Χρυσός*, gold; *λίθος*, a stone. *F. chrysolithe*.) Name anciently given to the topaz, which was used as a cardiac.

**Chrysolith**. Same as *Chrysolite*.

**Chrysomela**. (*Χρυσός*; *μήλον*, an apple.) A Genus of cryptopentamerous *Coloptera*.

**C. fastuosa**, Linn. (*L. fastuosus*, superb. *G. Goldhahnkäfer*, *Blutkäfer*.) Used as an adulterant of cantharides.

**Chrysomelon**. (*Χρυσός*; *μήλον*, an apple.) A kind of quince.

Also, a name of the orange.

**Chrysophan**. (*Χρυσός*; *φαίνω*, to bring into sight.)  $C_{15}H_{10}O_4$ . An orange-coloured bitter substance obtained from rhubarb. It is soluble in water and alcohol, insoluble in ether; when acted on by acids it is decomposed into a sugar and chrysophanic acid.

**Chrysophanic acid**. (*Χρυσός*, gold; *φαίνω*, to bring into sight. *F. acide chrysophanique*; *G. Chrysophansäure*.)  $C_{15}H_{10}O_4$ . One of the two modifications of dioxymethylantraquinone. It was first obtained from theichen *Turmelia parietina*; since then it has been found in the root of many species of *Rhum* and *Rumex*, in the leaves of *Cassia lanceolata* and *C. obovata*, but chiefly in *Goa powder*. It is a granular, pale or orange-yellow, inodorous, almost tasteless powder, crystallising in brilliant, yellow, partially sublimable prisms, which fuse at 162° C. (323·6° F.) It is almost insoluble in water, slightly in alcohol, and easily in ether. It is said to be a purgative in doses of seven or eight grains. Externally, 15 to 60 grains to an ounce of lard, it is used in psoriasis, pityriasis, and tinea tonsurans. It stains the skin yellow, and the clothing a dirty purple colour.

Also called *Rhum*.

**Chrysophanin**. (*Χρυσός*; *φαίνω*.) One of the principles which, according to Bourgoign, goes to make up cathartin.

**Chrysophyll**. (*Χρυσός*, gold; *φύλλον*, a leaf.) The yellow colouring matter of plants.

**Chrysophyllum**. (*Χρυσός*; *φύλλον*, a

leaf. *G. Goldblatt.*) A Genus of the Nat. Order *Sapotaceæ*.

**C. buran'hem**, Riedel. Yields *Monesia bark*.

**C. cainito**, Linn. Hab. West Indies. Furnishes an excellent fruit called star apple, the juice of which when unripe is very astringent.

**C. glycephlœum**, Casaretti. (Γλυκός, sweet; φλοιός, the inner bark of trees.) The *C. buran'hem*.

**C. jamaicenses**. A variety of *C. cainito*.

**Chrysopic'rin**. (Χρυσός; πικρός, bitter.) A bitter principle found in the *Parmelia parietina*.

**Chrysops**. (Χρυσός; ὤψ, the eye.) A Genus of the Suborder *Brachycera*, Order *Diptera*.

**C. cæcutiens**, Linn. (*L. cæcutio*, to be blind. *F. petit taon aveuglant*; *G. Blindbremse*.) An African fly which attacks the eyes of horses.

**Chrysopus**. (Χρυσόπους, golden-footed.) Gamboge.

**Chrysoretin**. A yellow resin found in senna.

**Chrysorham'nin**. (Χρυσός.) Same as *Rhamnin*.

**Chrysosperm'um**. (Χρυσός, gold; σπέρμα, seed.) The *Sempervivum tectorum*.

**Chrysosplenium**. (Χρυσός, gold; ἄσπλημον, spleenwort. *G. Milckraut*.) A Genus of the Nat. Order *Saxifragaceæ*.

**C. alternifolium**, Linn. (*L. alternus*, by turns; *folium*, a leaf. *G. Goldmiltz*, *Steinkresse*.) Golden saxifrage. Used as *C. oppositifolium*.

**C. oppositifolium**, Linn. (*L. oppositus*, placed opposite; *folium*.) Common golden saxifrage. Used as an aperient, diuretic, antiasthmatic, and pectoral.

**Chrysul'ca**. (Χρυσός, gold; ἔλκω, to suck.) Old name for aqua regia, because it dissolves gold.

**Chrysun**. (Χρυσούν.) A name formerly applied either to a collyrium or to a pessary in inflammations of the womb, according to Aëtius, vii.

**Chrysus**. (Χρυσός.) Gold.

**Chthonascidiæ**. (Χθών, the earth; ascidia.) A synonym of *Ascidioidea*.

Also, an Order of the Class *Tunicata*, containing the fixed ascidians.

**Chthonog'raphy**. (Χθών, the ground; γράφω, to write. *F. chthonographie*; *G. Bodenkunde*.) A history or description of soils.

**Chthononology**. (Χθών, the earth; νόσος, disease; λόγος, an account. *F. chthononologie*.) The geography of diseases.

**Chthonophagia**. (Χθών, the earth; φαγέω, to eat.) Dirt eating. See *Cachexia aquosa*.

**Chu**. Same as *Chus*.

**Chub**. A fresh-water fish, *Leuciscus cephalus*, so called from its shortness and stoutness. Its flesh is eaten, but it is coarse.

**Chulin**. Same as *Chylin*.

**Chumosis**. Same as *Chymosis*.

**Chu'nu**. A name given in Peru to a form of eczema produced by extreme heat.

**Chuquira'ga**. A Genus of the Nat. Order *Compositæ*.

**C. insignis**, Juss. (*L. insignis*, remarkable.) Hab. Peru. Used in fevers.

**Church**. (Κυριακός, a church.) The Lord's house.

**C. bug**. The *Oniscus asellus*.

**C. louse**. The *Oniscus asellus*.

**Church Hill al'um water**. United States; Virginia, near Richmond. A mineral water, containing ferrous sulphate 29.99 grains, ferric sulphate (neutral) 51.27, ferric sulphate (one third basic) 83.355, aluminium sulphate 72.928, magnesium sulphate 86, calcium sulphate 88.8, and silica 10.429 grains in a gallon, besides smaller quantities of other substances.

**Churning sound**. A term applied to a sound, such as is produced in a churn, heard within the pleura or the pericardium during breathing or cardiac action, when there is fluid entangled in the meshes of exudation substance.

**Chur'rus**. Name given to *Cannabis indica*.

**Churwald'en**. Switzerland; near Chur. 3976 feet above sea level. An air-cure place for chest affections; also frequented for the whey cure.

**Chus**. (Χοῦς, a vessel in which water was given for the hands at table.) Old name of a liquid measure of various capacity, according to the substance measured; commonly about nine pints.

**Chy'azate**. A name for hydrocyanate. See *Chyazic*.

**Chyazic**. (Initial letters of carbon, hydrogen, and azote.) Of, or belonging to, a combination of carbon, hydrogen, and azote; applied to prussic acid.

**Chy'bur**. (Arab.) Old name for sulphur. (Paracelsus, Johnson.)

**Chyla'queous**. (Χολός, juice; *L. aqua*, water.) Composed of chyle and water.

**C. canals**. (*L. canalis*, a channel.) Four or more radiating canals found in the Medusæ, consisting of a prolongation of the endodermal lining of the central polypite or manubrium, which run to the periphery of the nectoclyx, where they are connected by a circular canal. An analogous set of vessels are found in Rotifera, where they appear as pyriform or ovate vesicles, each containing a cilium, and which communicate on the one hand with the so-called respiratory tubes, and on the other with the perivisceral cavity.

**C. fluid**. (*L. fluidus*, liquid.) A transparent colourless fluid, consisting partly of water derived from without and partly of the products of digestion occupying the somatic cavity or perivisceral space in various Annelids and Echinoderms; special vessels, *Chyloqueous canals*, serve in some instances for its conduction.

**C. ves'sels**. The same as *C. canals*.

**Chylar'iose**. (Χολάριον, dim. of χολός.) A term for levulose or fruit sugar when obtained from honey.

**Chyle**. (Χολός, juice. *F. chyle*; *I. chilo*; *S. quilo*; *G. Chylus*, *Milchsaft*, *Nahrungsmilch*, *Nahrungssaft*.) The fluid contained in the lacteals, or, in other words, the lymph of the intestinal lymphatics. It is a white opaque fluid, neutral or slightly alkaline, of a saltish taste and a faint odour; in the thoracic duct it is sometimes reddish; when removed from the vessels it coagulates, and the surface of the clot sometimes becomes pink after exposure to the air. It consists of chyle corpuscles like white blood corpuscles; a small number of apparently immature red corpuscles; numerous oil globules, and of various sizes; a large number of very minute granules, soluble in ether, and uniform in size, called the molecular base of chyle; certain minute

# CHYLECCHYSIS—CHYLOSIS.

spheroids insoluble in ether; and a liquid, the plasma, holding these in suspension, and containing fibrin. The composition of chyle varies in different animals, and in the same animal at different times; analysis shows serum- and other albumins, with a little fibrin, varying from 2 to 7 per cent.; fats from 4 to 7, or much more, in dogs largely fed on fat; extractives, containing cholesterolin, leucin, tyrosin, pepsin, urea, sugar, and other matters, 1 to 3 per cent.; the gas is carbonic acid, with a very little nitrogen. The chyle of fasting animals contains much less fat than that of animals recently fed, and hardly any of the molecular basis; it is clear and transparent. The amount entering the blood in twenty-four hours is supposed to be equal to half the whole amount of the blood; and an equivalent proportion supplied by the general lymphatics.

The term has been used to designate the fluid in the intestines just before absorption.

**C. clot.** The solid matter resulting from the coagulation of chyle. It consists of fibrin entangling the corpuscles, the molecular basis, and much of the other solid matters of the chyle.

**C. corpuscles.** (*L. corpuscula*, a small body. *F. leucocytes du chyle*; *G. Chyluskorperchen*.) The bodies contained in chyle which resemble white blood corpuscles. They are probably in part formed from Peyer's patches, the solitary glands of the intestine, and the lymphoid intestinal tissue, but the larger number proceed from the mesenteric glands.

**C., distribution of.** See *Anadosis*.

**C. ferment.** A diastatic ferment has been found by Gröhé to be present in the chyle, which is probably absorbed from the intestine.

**C. globules.** Same as *C. corpuscles*.

**C. granules.** (*L. granula*, a small grain. *G. Chyluskornchen*.) The granules of the molecular basis of chyle.

**C., molecular basis of.** (*L. molecula*, dim. of *mole*, a mass; *basis*, that on which a thing rests.) Very minute and uniform granules exhibiting the Brownian movement. They are probably fatty, as they are almost entirely soluble in ether, which renders the chyle almost transparent; by some they are said to be surrounded by an albuminous envelope.

**C. plasma.** (*Πλάσμα*, anything formed.) The liquid part of the chyle before coagulation. It contains the fibrin and crystalloids.

**C., reservoir of.** The *Receptaculum chyli*.

**C. serum.** (*L. serum*, the watery part of a thing.) The fluid matter resulting from the coagulation of chyle. It consists of water holding the salts in solution, and retaining much of the fatty matter and the molecular basis.

**C. spaces.** (*G. Chylusraum*.) The central cavity of a villus into which the fluid absorbed from the intestine enters to be transmitted to the plexus of chyle vessels in the wall of the intestine.

**C. vessels.** (*G. Chylusgefässe*.) The *Lactals*.

**Chylccchysis.** (*Χυλός; ἔκχυσις*, a pouring out. *F. chylechyse*; *G. Ergiessung des Chylus*.) An overflow of chyle.

**Chylectica.** (*Chylē; hectic*. *F. chylectique*; *G. Milchhectik*.) Chylous hectic. A generic term for diseases with discharge of a milky fluid from different parts, as in chylodibetcs, chylodiarrhœa, chyloptyalismus.

**Chylidrosis.** (*Χυλός; ἱδρωσις*, a

sweating. *F. chylidrose*; *G. Milchschiweiss*.) Chylous sweat.

**Chylificient.** (*L. chylus*, chyle; *facio*, to make.) Forming chyle.

**Chyliferous.** (*L. chylus*, chyle; *fero*, to bear. *F. chylifere*.) Bearing or carrying chyle.

**C. vessels.** (*G. Chylusgefässe*.) The *Lactals*.

**Chylific.** (*L. chylus*; *facio*, to make.) Chyle producing.

**C. stomach.** The dilatation of the alimentary canal in insects, which succeeds the proventriculus or gizzard; it is the true digestive cavity.

**Chylification.** (*L. chylus*, the chyle; *facio*, to make. *F. chylification*; *G. Milchsaffbereitung*.) Term for the process by which chyle is separated from the chyme. The process by which the fatty particles ingested as food are broken up to form an emulsion, are absorbed by the villi of the small intestine, and are then propelled along the lymphatic vessels to the lacteals lying in the mesentery.

**Chylinë.** The *Cyclamen europæum*.

**Chylisma.** (*Χυλός*, juice.) Old term (*Gr. χυλίσμα*), used by Dioscorides, iii, 25, for expressed juice, especially of vegetables.

**Chylocleptsis.** (*Χυλός; κλέπτω*, to steal.) The gradual loss or diminution of the chyle.

**Chylocystis.** (*Χυλός; κύστις*, a bag.) A name for the *Receptaculum chyli*, the chylous bag.

**Chyloides.** (*Χυλώδης*, juicy.) Resembling chyle; chylous.

**Chyloidiabetes.** (*Chyle*; *diabetes*. *G. chylöse Harnruhr*.) A synonym of *Chyluria*.

**Chyloidiarrhœa.** Same as *Diarrhœa chylota*.

**Chylodochium.** (*Χυλός; δέχομαι*, to receive.) A chyle receiver, the *Receptaculum chyli*.

**Chyloleucorrhœa.** (*Chyle*; *leucorrhœa*.) An old term for a leucorrhœa supposed to contain chyle.

**Chylophorous.** (*Χυλός; φέρω*, to bear.) Chyle-bearing.

**Chylophtharsis.** (*Χυλός; φθάρσις*, corruption.) Decomposition or putrefaction of the chyle.

**Chylopoiesis.** (*Χυλός; ποιῶ*, to make. *F. chylopoiese*; *G. Bereitung des Chylus*.) The preparation of chyle. See *Chylification*.

**Chylopoietic.** (*Χυλός; ποιῶ*, to make. *F. chylopoétique*.) Belonging to, or connected with, the formation of chyle.

**Chyloptyalismus.** (*Χυλός; πτώω*, to spit. *G. chylöser Speichelfluss*.) Salivation when the saliva is milky looking.

**Chylorrhœa.** (*Χυλός; ροία*, a flow. *F. chylorrhée*.) A morbid overflow of chyle.

The term is applied to cases of catarrhal diarrhœa in which the evacuations have a milky appearance.

**C. pectoris.** (*L. pectus*, the chest.) Same as *Chylothorax*.

**C. renalis.** (*L. ren*, the kidney.) Same as *Chyluria*.

**C. urinæ.** (*L. urina*, urine.) Same as *Chyluria*.

**Chylosis.** (*Χύλωσις*. *F. chylöse*.) Another term for chylification, or the converting of the food into chyle.

**Chylostag'ma.** (Χυλός, juice; σταῖζω, to fall in drops.) Term for the distillation or expression of any juice, or humid part, from the rest.

**C. diaphoreticum Mindere'ri.** A distillation of Venice treacle, mithridate, and other alexipharmics, with tormentil, ash bark, and some other substances.

**Chylothorax.** (Χυλός; θώραξ, the chest.) Effusion of chyle into the thorax from rupture of the thoracic duct.

**Chyl'ous.** (Χυλός. F. *chyleux*.) Having, or full of, or resembling, chyle.

**C. ascit'es.** See *Ascites*, *chylosus*.

**C. blood.** Same as *Piarrhœmia*.

**C. flu'id.** A liquid resembling chyle.

**C. ur'ine.** See *Chyluria*.

**Chyluria.** (Χυλός; οὖρον, urine. F. *chylurie*; I. *chiluria*; G. *Chyluria*.) An affection characterised by the passage of milky-looking urine, which coagulates on standing, and subsequently liquefies again, when it throws up a fatty scum, and deposits a sediment often coloured by changed blood-corpuscles; it contains fat, fibrin, and albumen; the fat is most plentiful after meals, and occasionally it is absent. It has been suggested in explanation that by some defect of assimilation the chyle does not undergo its normal change into blood, and so is removed as such by the kidneys; and also that in some cases the unnatural constituents of the urine proceed from ruptured dilated lymphatic vessels on the mucous surface of the bladder. Late observations make clear the presence of the *Filaria sanguinis hominis* in the blood of some persons suffering from chyluria. It is most common in the tropics, and in adult females.

**Chylurophthi'sis.** (*Chyluria*; *phthi-sis*.) A name for the wasting accompanying chyluria.

**Chylus.** (Χυλός, juice extracted by decoction.) The substance termed chyle.

Also, a decoction.

Also, any juice.

**Chyme.** (Χυμός, juice. F. *chyme*; I. *chimo*; S. *quimo*; G. *Chymus*, *Speisebrei*.) The pulpy, acid contents of the small intestine, consisting of the semi-digested food which has undergone gastric digestion. In its passage down the intestine it is subjected to the action of the bile, the pancreatic juice, and the secretion of the intestinal glands, and becomes fitted for absorption as chyle.

Also, a term for the sap of plants.

**C. mass.** The central semifluid sarcode in the interior of Infusoria.

**Chymec'chysis.** (Χυμός; ἔκχυσις, a pouring out.) A discharge of chyme, as from a wound of the bowel.

**Chym'i.** (Χυμός.) Humours.

**Chym'ia.** (Χυμεία.) Chemistry.

**C. organ'ica.** Organic chemistry.

**C. pharmaceut'ica.** Pharmaceutical chemistry.

**Chymia'ter.** (Χυμεία, chemistry; ια-τρος, a physician.) Old term for a chemical physician, or one whose practice was guided by the result of experimental chemistry; also called iatrochymicus.

**Chymiat'ria.** (Χυμεία, chemistry; ια-τροεία, medical treatment.) Old term for the art of healing disease by applying chemistry to the uses of medicine.

**Chym'ical.** (Χυμικός, of juices.) Relating to *Chymistry*.

**Chymicohistology.** (Χυμικοί, chemistry; ιστος, a web; λόγος, an account.) The chemical constitution of the tissues.

**Chymicophanta.** (Χυμική, chemistry; φαίνω, to bring to light.) A chemist.

**Chymif'erous.** (L. *chymus*; fero, to bear.) Bearing, or containing, chyme.

**Chymification.** (L. *chymus*; facio, to make.) The conversion of food into chyme by gastric digestion; or the whole process of digestion until the food is made into chyle, including the action of the salivary, gastric, and intestinal glands, with the influence of the biliary and pancreatic secretions.

**Chymis'mus.** (Etymon as *Chymistry*.) Same as *Chymismus*.

**Chym'ist.** (Etymon as *Chymistry*.) Same as *Chemist*.

**Chym'istry.** (Χυμεία, a mingling; through Ar. *alchemy*, a variant of *alchemy*.) Same as *Chemistry*.

**Chymoch'e'zia.** (Χυμός; χίζω, to ease one's self.) A synonym of *Diarrhœa chyl'osa*.

**Chymodiarrhœ'a.** Same as *Chylor-rhœa*.

**Chymod'ochus.** (Χυμός; εἰσχεμαί, to take.) Taking up, or carrying, chyme.

**Chymophore.** (Χυμός; φορέω, to bear.) A term applied to the lactiferous vessels of plants and to other juice-bearing canals.

**Chymoph'orous.** (Χυμός; φέρω, to bear.) Same as *Chymiferous*.

**Chymopla'nia.** (Χυμός; πλάνη, a wandering. F. *chymoplantie*; G. *Safterversetzung*.) Deviation, or transposition, or retention, of the chyme.

**Chymorrhœ'a.** (Χυμός; ῥοία, a flow.) A discharge of chyme, either by wound into the peritoneum, or outwardly.

Also, a synonym of *Diarrhœa chyl'osa*.

**Chymosep'sis.** (Χυμός; σήψις, putrefaction. F. *chymosepsie*; G. *Faulnis des Speisebreies*.) A corrupt condition of the chyme.

**Chymosin.** (Χυμός.) A synonym of *Pepsin*.

**Chymo'sis.** Same as *Chemosis*.

Also, the same as *Chymification*.

**Chym'ous.** (Χυμός. F. *chymeux*.) Relating to, or resembling, chyme.

**Chymoze'mia.** (Χυμός; ζημία, loss.) A morbid increase of the intestinal evacuations.

**Chymus.** Same as *Chyme*.

**Chyn'len.** A cylindrical root, of the thickness of a goose-quill, brought from China, bitter, and giving a yellow tinge to the saliva; esteemed as stomachic by the Chinese. It is said to belong either to the *Strychnos colubrina*, or to the *Ophiorhizon serpentinum*.

**Chyt'lon.** (Χύτλον, from χέω, to pour.) Old term for an injection, or anointing with oil and water. (Galen, *Œsius*.)

**Chytridæ.** Same as *Chytridiaceæ*.

**Chytridia'ceæ.** (Χυτρίδιον, a small cup.) An Order of Fungi having no mycelium, and often consisting of a single cell, which itself becomes a sporangium and develops zoogonidia. They are parasitic in the cells of many phanerogamous plants.

**Ci'atome.** (Κίον, a column; τέμνω, to cut.) An instrument for dividing pseudo-membranous bands in the rectum and bladder.

# CICATRISANTIA—CICHORIUM.

*vernarhend*.) Having power to cause wounds or ulcers to heal and take on a skin.

**Cicatrissantia.** Same etymon and meaning as *Cicatrissant*.

**Cicatrization.** (L. *cicatrizo*, to heal, leaving a scar. F. *cicatrization*; G. *Vernarbung*.) Term for the process by which a cicatrix is formed. It consists essentially in the formation of an embryonic tissue, which has a tendency gradually to take on the characters of the tissue in which it is formed; in certain tissues, as the connective tissue and bone, the cicatrization is complete; the new tissue is like the old. In more highly organized structures, as nerve and muscle, the reproduction of the adult form is much less frequently, according to some never, complete.

**Cicatrization.** (L. *cicatrizo*, to heal, leaving a scar. F. *cicatrissé*.) Having a scar; scarred. Cicatrized; applied to the irregular appearance of the skin of healed ulcers and wounds.

**Cicatrix.** (L. *cicatrix*, a scar. Gr. *ὥλη*; F. *cicatrice*; I. *cicatrice*; S. *cicatriz*; G. *Narbe*.) Term for the scar or seam of a healed wound, sore, or ulcer.

Also, a term for the truncated apex of the basal joint of the antennæ of some *Longicorn coleoptera*.

In Botany, the scar left by the fall of a leaf, or other organ.

**C., cheiloid.** (Xηλός, the nippers of a lobster; *cheilos*, likeness.) That form in which the cicatrix is thick, more or less projecting, irregular, dense, and perhaps adherent. Such cicatrices often contract, and produce deformity or impair function.

**C., exuberant.** (L. part. of *exuberare*, to swell out.) A synonym of *C. cheiloid*.

**C., linear.** (L. *linea*, a line.) A narrow long scar.

**C., painful.** The same as *Neuroma*.

**C. variolæ.** (Dim. of L. *varus*, a pimple.) The scar or pit left after an attack of small-pox.

**C., vicious.** (F. *cicatrice vicieuse*.) A cicatrix which impairs the function or movement of any part.

**Cicatrose.** (L. *cicatrix*.) Showing scars or cicatrices.

**Cicca.** A Genus of the Nat. Order *Euphorbiaceæ*.

**C. disticha.** Willd. (*dis*, twice; *stichos*, row.) Long-leaved cicca, country gooseberry. An Indian bush, the leaves of which are sudorific, and have been used as an antisypilitic. The root and the seeds are violently purgative. The fruit is subacid, cooling, and wholesome.

**C. nodiflora.** (L. *nodus*, a knot; *flos*, a flower.) The *C. disticha*.

**C. racemosa.** (L. *racemosus*, clustering.) This plant resembles in its properties the *C. disticha*.

**Cicum.** The same as *Ciccus*.

**Cic'cus.** (*Kikkos*, the core of a pomegranate. G. *Kerngehäuse im Obst*.) Ancient term for the disseminations of the fruit of the pomegranate.

**Cicely.** (Σεισελί, an umbelliferous plant.) The *Myrrhis odorata*.

**C., rough.** The *Camalis anthriscus*.

**C., sweet.** The *Myrrhis odorata*; also, *Charophyllum odoratum*; also, *Osmorrhiza longistylis*; also, *Sandix odorata*.

**C., wild.** The *Charophyllum sylvestre*.

**Cicen'dia.** (G. *Bitterblott*.) A Genus of the Nat. Order *Gentianaceæ*, Tribe *Chironia*, Subtribe *Erythraæ*.

**C. hyssopifolia.** Wight and Arnold. (L. *hyssopium*, hyssop; *folium*, a leaf. Hind. *chota-chiretta*; G. *Bitterblott*.) Hab. India. A stomachic, with mild laxative properties.

**Cic'cr.** (L. *cicer*, from Persian *kikr*, a pea, the plant from which the Cicerones took their name; or from Heb. *kikar*, round. F. *chiche*; G. *Kichererbse*.) A Genus of the Nat. Order *Leguminosæ*, Suborder *Viceæ*.

**C. arietinum.** Linn. (L. *aries*, a ram, from the gibbous and mucronate form of the seeds. F. *pois chiche*, garbanzo, pesette; I. *cice*; S. *garbanzos*; G. *Zwigerbse*, *Kichererbse*; Dut. *sisers*; Swed. *kikærter*.) The plant yielding gram, or chick peas. An acid fluid is extracted by the hairs of the stalk, leaves, and pods, which contains acetic, oxalic, and, perhaps, malic acids. The peas and leaves were formerly employed, in the form of decoction, as diuretics and lithontriptics. The seeds are by some roasted and used as coffee; by others ground into a flour for bread. The arillus of the seed is white, red, or black, and so the plant is distinguished into *Cicer album*, *rubrum*, and *nigrum*.

**C. lens.** (L. *lens*, a louse's egg. F. *lentille*.) The lentil.

**C. sativum flore candido.** (L. *sativus*, that which is sown; *flos*, flower; *candidus*, white.) The same as *C. arietinum*.

**Cicera.** (L. *cicer*, the vetch.) Old name for a small pill of the size of a vetch.

**C. tartari.** Old term for a small pill, made of turpentine and cream of tartar, of the size of a vetch.

**Cicer'bita.** A name applied by Pliny to the *Sonchus arvensis*, and now, in Italy, to the *Sonchus oleraceus*.

**C. alpina.** Wallr. The *Malgedium alpinum*.

**Cicer'cula.** (L. dim. of *cicer*, the chick pea.) Name applied in the Renaissance period to various leguminous plants, as *Lathyrus* and *Cicera*.

**Ciceric acid.** (F. *cicérique*.) An acid exuding from the hairs of the stem of the *Cicer arietinum*.

**Cich.** The same as *Cicer*.

**Ciches.** The same as *Cicer*.

**Cichling.** The vetch.

**Cichora'ceæ.** (*Cichorium*, F. *chicorée*; G. *Cichoriengewächse*.) A Suborder of the *Compositæ*. Herbs with milky juice; leaves alternate, radical; capitula homogenous; flowers usually all hermaphrodite; corolla gamopetalous; tube short, and ligulate.

**Cichora'ceous.** (L. *cichorium*, the plant succory, or cichory. F. *chicorée*.) Having an arrangement of parts, as in the Genus *Cichorium*.

**Cicho'reum.** The same as *Cichorium*.

**Cichoria'ceæ.** The same as *Cichoraceæ*.

**Cichorium.** (*Kichora*, or *κίχόρα*, undive.) A Genus of the Nat. Order *Compositæ*. Also, the official name, U.S. Ph., of the root of *C. intybus*.

**C. agreste.** (L. *agrestis*, belonging to the fields.) The *C. intybus*.

**C. angustifolium.** (L. *angustus*, narrow; *folium*, a leaf. F. *scariole*, *escarole*.) A species cultivated for salad.

**C. endivia.** Linn. (F. *chicorée des jardins*,

*endive*; *G. endive*.) Chicory, succory. Hab. East Indies. Cultivated in gardens. It is slightly bitter; when partially etiolated it is largely employed as a winter salad; it is also used when cooked.

**C. in'tybus**, Linn. (Supposed to be from *L. in*, in; *tubus*, a tube, from the hollow form of the stem. *F. chicorée sauvage*, *c. crispé*, *intybe*; *L. ciceria*; *S. chicoria*; *G. Cichorie*, *Wegwart*; *Port. almaris*; *Arab. agor*, *seicoria*.) Wild succory, chicory. Hab. Banks on chalk or gravel all over Europe. It contains a volatile oil and a bitter principle. The plant is cultivated for the root, which, when roasted, is ground and added to coffee. It is bitter to the taste, and is regarded as a laxative. The etiolated leaves are also sold in Paris under the name of *Barbe-de-capucin*. The milky juice taken in large quantities, frequently repeated, is stated to have been found an efficacious remedy in phthisis pulmonalis, in jaundice, cachexy, intermittent fevers, and in chronic cutaneous disease.

**C. officinarum**. (*L. officina*, a shop.) The same as *C. intybus*.

**C. sylvestre**. (*L. sylvestris*, living in woods.) The same as *C. intybus*.

**Cichory**. Same as *Chicory*.

**Cici**. (*Kiki*, *G. Wunderbaum*.) The *Ricinus communis*.

**Cicilia'na**. The *Hypericum androsaemum*.

**C. dichotomy**. (*Δίχα*, in two parts; *τομή*, division.) A scorpion-like form of division resembling some monopodial systems. It is common in shoots of *Selaginella*.

**Cicinal**. Same as *Cicinnal*.

**Cicindela**. (*L. dim. cundela*, from the light it emits. *P. ver luisant*; *G. Johanniskraut*.) The *Lampyris nocturna*, or glow-worm. Formerly supposed to be anodyne and lithontriptic.

**Cicin'nal**. (*Kikinnos*, a curl of hair.) Curled.

**C. cyme**. See *Cyme*, *cicinnal*.

**Cicin'nus**. (*Kikinnos*, a curl of hair.) The hair on the temples.

**Cicinobolus fruit**. (*Kikinnos*; *βόλος*, a thorn.) A term applied to a form of fructification of the vine fungus *Erysiphe Tuckeri*, which consists of a terminal oval body with a cellular coat, and containing sporules, which it discharges through an apical dehiscence in a tendril-like form, hence its name. At one time this structure was supposed to be a distinct genus.

**Cicinum oleum**. (*Kiki*, the *Ricinus*.) Name for an oil obtained by boiling the seeds of the *Jatropha curcas*, somewhat resembling castor oil.

**Cic'inus**. (*Kikinnos*.) A synonym of *Ricinus*.

**Cicla**. A name for the *Beta alba*, or white beet, from which sugar can be obtained.

**Cicongius**. A measure containing twelve pints.

**Cico'nia**. (*L. Cicones*, the people of Thrace, who held this bird in veneration. *F. cicogne*; *G. Storch*.) The stork.

**Cicuta**. (*L. cicuta*, a Roman name for hemlock.) Nat. Order *Umbellifera*, Tribe *Amminice*, Subtribe *Euanminice*.

Also, name for the hemlock, *Conium maculatum*.

**C. amomum**, Cranz. The *Sium amomum*.

**C. angustifolia**, W. and Kit. (*L. an-*

*gustus*, narrow; *folium*, a leaf.) A small-leaved variety of *C. virosa*.

**C. aquatica**. (*L. aquaticus*, living in water.) A name for the *Cicuta virosa*.

**C. cynapium**, Targ. The *Ethusa cynapium*, Linn.

**C. macula'ta**. (*L. maculatus*, spotted.) A synonym of *Conium maculatum*.

Also, American water hemlock. An indigenous North American plant, having similar properties to the *C. virosa*.

**C. major**. (*L. major*, greater.) The same as *Conium maculatum*.

**C. major foetida**. (*L. major*, greater; *foetidus*, stinking.) An old name for *Conium maculatum*.

**C. minor**. (*L. minor*, lesser.) An old name for *Ethusa cynapium*.

**C. Storkii**. The *Conium maculatum*.

**C. terres tris**. (*L. terrestris*, belonging to the earth.) The *Conium maculatum*.

**C. viro'sa**, Linn. (*L. virosus*, poisonous. *F. cigue*, *viruse*, *ciculaire aquatique*; *L. cicutaria*; *G. Wasserscherling*, *Wütherich*; *Dan. vandpastinak*, *setsnape*, *spengrod*.) Water hemlock, cow bean, cowbane. Hab. Ditches and river sides. Indigenous. An active poison, apt to be eaten by mistake for the *Apium graveolens*. It contains cymol. It is said to be used as a local application in gout, rheumatism, and neuralgia. The active principle is *Cicutoxin*.

**Cicuta folia**. (*L. cicuta*, hemlock; *folium*, a leaf.) Same as *Conii folia*.

**C. herba**. (*L. cicuta*; *herba*, springing vegetation.) The same as *Conium maculatum*.

**Cicuta'ria**. (*L. cicuta*, hemlock.) A name for the *Anthriscus sylvestris*, or bastard hemlock.

**C. aquat'ica**. The *Cicuta virosa*, and also the *Phellodendron aquaticum*.

**C. fatua**. (*L. fatuus*, foolish.) The *Ethusa cynapium*.

**C. odor'ata**. The *Charophyllum odoratum*.

**C. viro'sa**. A name for the *Cicuta virosa*.

**C. vulgaris**. (*L. vulgaris*, common.) The *Anthriscus sylvestris*.

**Cicutene**. (*L. cicuta*.) A volatile oil obtained from *Cicuta virosa*; apparently identical with that of cummin and isomeric with oil of turpentine.

**Cicutin**. (*L. cicuta*, hemlock. *F. cicutine*.) The same as *Cicin*.

Also, a volatile alkaloid, found in *Cicuta virosa*, probably *Cicutoxin*.

**Cicutoxin**. (*L. cicuta*.) The resinous, active constituent of *Cicuta virosa*. It stimulates the medulla oblongata, causing peculiar convulsions, acceleration and then arrest of the respiration and diminution of blood pressure. It excites the vagus; the brain and spinal cord are either not at all or only secondarily affected.

**Cidariform**. (*Kicaps*, a bonnet; *L. forma*, likeness. *F. cidariforme*.) Formed like a bonnet.

**Cider**. (*F. cidre*, from *L. sicera*, from *Gr. σικερα*, from *Heb. shekar*, strong drink. *I. sidro*; *S. sidra*; *G. Obstwein*, *Apfelwein*.) The fermented juice of the apple, *Pyrus malus*. It is bright light yellow, sparkling, with sweetish, subacidulous taste and pleasant odour. The highest average of alcohol found by Brande was 9.87, and the lowest 5.21 by measure. Blyth

## CIDERA—CILIARES GLANDULÆ.

found the composition by weight of a good specimen to be water 938.36, alcohol 40, sugar 10, ash 3, volatile acid (acetic?) 1.55, fixed acid (malic?) 3.35, extractives 3.74. A wholesome drink. It has been found useful in senility.

**C. colic.** Colic occasioned by drinking acid cider.

**C. tree.** Australian name for *Eucalyptus Gunnii*.

**C. vin'egar.** See *Vinegar, cider*.

**Cidera.** Same as *Cider*.

**Ciderage.** (*F. cidrage*.) The *Polygonum hydropiper*.

**Cidonium malum.** (*L. malus*, an apple. *F. le coing*; *G. Quette*.) The quince or fruit of the *Pyrus cydonia*.

**Ciechocinek.** Russia; a village in Poland, not far from Warsaw. Here is a strong common salt or sool bath.

**Cienkowskia'ceæ.** A Tribe of the Order *Calcarea*, Suborder *Myromyctes*, the chief character of which is its reticulated capillitium. The peridium is encrusted with amorphous calcareous granules.

**Cievola'me.** A term applied to various species of mullet, mugil, cephalus, capito, auratus, and others on the Italian coasts.

**Cigar.** (*S. cigarro*; *F. cigare*; *G. Cigarre*.) The dried leaves of tobacco rolled into a fusiform body, about three or four inches in length, and from half to one inch in diameter.

**C., aromatic.** Species *aromatice*, *Fr.* Codex, rolled into a cigar.

**C., camphor.** See *Camphor cigars*.

**C., medicated.** A cigar made of the leaves of stramonium, hyoscyamus, or other plant, sometimes with the addition of other drugs.

**C., opium.** Three grammes of belladonna leaves soaked in a solution of .15 gramme of extract of opium, dried, and made into a cigar for smoking in asthma.

**Cigaretæ antiasthmaticæ,** Belg. Ph. Belladonna leaves 60 parts, benbane leaves 30, stramonium leaves 30, seeds of *Oenanthe phellandrium* 10, extract of opium 3, made into cigarettes with cherry-laurel water. Used in asthma.

**C. arsenical'es.** See *Arsenical cigarettes*.

**C. balsam'icæ.** Same as *C. benzoicæ*.

**C. belladonnæ.** A gramme of cut belladonna leaves enclosed in a combustible tube. Used in asthma.

**C. benzo'icæ,** Belg. Ph. Filter paper, soaked in a solution of 1 part of nitre to 16 of water, is dried and charged with a fluid composed of 1 part of benzoic acid dissolved in 8 of tincture of benzoin. Smoked in aphonia and asthmatic troubles.

**C. hyoscy'ami.** Made with hyoscyamus leaves like *C. belladonnæ*, and used for smoking in asthma.

**C. ioda'tæ.** See *Cigarettes, iodised*.

**C. mercurial'es.** Filter paper, soaked in a solution of 1 part of corrosive sublimate and 2 of nitre in 25 of water. Smoked in syphilitic ulcerations of throat and larynx.

**C. stramo'ni.** Prepared with stramonium leaves as *C. belladonnæ*, and smoked in asthma.

**Cigaret'tes.** The leaves of tobacco or other medicinal plants finely divided and rolled in paper.

**C., antispasmod'ic.** Thirty grammes of stramonium leaves, soaked in a watery solution

of extract of opium 2 to 25 parts, dried, and rolled in cigarette paper.

**C., aromatic.** Cigarettes made of *Species aromatice* rolled in paper.

**C., arsenical, of Bou'din.** Cigarettes made of paper impregnated with an arsenical solution.

**C., cam'phor.** See *Camphor cigars of Raspail*.

**C., fu'cus.** Made with the fronds of *Fucus vesiculosus*, to which are sometimes added stramonium and sage leaves. Employed in phthisis.

**C., i'odised.** Prepared with the *Species aromatice* soaked in tincture of iodine.

**C., iodo-camph'orated.** Granulated camphor impregnated with iodine vapour, placed in a glass tube stopped with cotton wool, for inhalation.

**C., iodoform.** Made of belladonna leaves soaked in an alcoholic solution of iodoform.

**C., naph'thaline.** Made like the *Camphor cigars of Raspail*, substituting naphthaline.

**C., Raspai's.** Same as *Camphor cigars of Raspail*.

**Cigar'ra.** A cigar.

**Cig'nus.** Old name for a liquid measure of two drachms, mentioned by Rhodius, *ex Aric.* lxii. 6, and 31.

**Cilia.** (*L. cilium*, an eyelash. *F. cils*; *G. Cilien*, *Augenwimpern*.) The cilia or eyelashes of the eyelids. They are short, stiff-curved hairs, growing by roots of from 1—2 mm. in depth from the anterior border of the edge of the upper and lower eyelids, and arranged in two or three rows; there are from 100—150 in the upper, and from 50—75 in the lower lid; the convexity of the hairs of the upper lid is directed downwards, that of the lower upwards; the length of the longest in the upper lid is from 8—12 mm., in the lower 6—8 mm.; each cilium lives about 100 days; the sebaceous glands in connection with them are small. See also *Cilium*.

Also, hairs on any part of the body.

Also, same as *C., vibratile*.

Also, in Botany, marginal hairs on a leaf or flower.

**C., extrac'tion of.** (*L. extraho*, to draw out.) A proceeding often adopted in cases of ciliary blepharitis, and for the relief of the inconvenience arising from distichiasis and inversion of the lids. Each hair should be seized separately near the root and slowly extracted without breaking it.

**C., inver'sion of.** (*L. inverto*, to turn back.) Turning in of the eyelashes to the ball of the eye. See *Distichiasis* and *Trichiasis*.

**C., transposition of.** (*L. transpono*, to transpose.) A mode of treating *trichiasis* and *distichiasis*. A fine needle is threaded double with a hair, so as to form a loop. The point is then entered at the base of the cilium, and brought out at the point of the future position of the cilium; as the hair follows the needle, the loop catches the cilium and alters its direction.

**C., vi'bratile.** (*L. vibro*, to set in tremulous motion. *F. cils vibratiles*; *G. Wimperzilien*.) Fine hyaline, transparent, homogeneous hair-like processes on the surface of structures, such as an epithelial cell, a zoospore, or a spermatozoon.

**Ciliares glandulæ.** (*L. cilium*, an eyelid; *glandula*, dim. of *glaus*, an acorn.) A synonym of the *Meibomian follicles*, from their position at the margin of the eyelids.

# CILIARIS—CILIARY.

**Cilia'ris.** (L. *cilium*.) Relating to vibratile cilia, or to an eyelash, or to the eyelid.

In Botany, the same as *Ciliate*.

**C. Riola'nti.** (*Riolan*.) That portion of the orbicularis palpebrarum muscle which traverses the eyelids.

**Ciliary.** (L. *cilium*, the eyelid, or eyelash. L. *ciliaris*; F. *ciliaire*; G. *Wimperartig*.) Of, or belonging to, the eyelid, or eyelash.

**C. appara'tus.** (L. *apparatus*, a preparing for.) The several tissues situated in immediate relation with the ciliary processes, as the ciliary muscle, ligament, and nerves, the root of the iris, and the canals of Schlemm and Fontana.

**C. ar'teries, ante'rior.** (L. *arteria ciliares antea*; G. *vorderen Ciliararterien*.) Small twigs given off from the branches of the ophthalmic artery supplying the recti muscles; two from each, except from that of the external rectus, which only supplies one. They give off some superficial branches to the conjunctiva, sclerotic, and cornea, and, after perforating the sclerotic near the tendon of each muscle, join with the branches of the long and short ciliary arteries to supply the ciliary processes and to aid in forming the *Circulus major*.

**C. ar'teries, long.** The same as *C. ar'teries, poste'rior*.

**C. ar'teries, poste'rior, long.** (G. *langen hinteren Ciliararterien*.) These are two in number, arise from the ophthalmic artery or its first branches, perforate the sclerotic obliquely at the posterior part, but in front of the short ciliares and near the horizontal meridian of the eye, one on the inner and the other on the outer side. They supply the iris, the ciliary body, and the anterior part of the choroid. See *Circulus major* and *C. minor*.

**C. ar'teries, poste'rior, short.** (G. *kurzen hinteren Ciliararterien*.) These are four to six in number, and arise from the ophthalmic artery or its first branches. They accompany the optic nerve, divide into about twenty branches, which penetrate the sclerotic round the entrance of the optic nerve, and supply the nerve and the sclerotic, as well as the posterior part of the choroid.

**C. blephar'i'tis.** (*Blepharion*, the eyelid.) Inflammation of the margins of the lids implicating chiefly the roots of the hairs. It may result from want of cleanliness, bad ventilation, and exposure to cold, especially in scrofulous persons, and from errors of refraction, especially hypermetropia. In the last-named case long-continued efforts of accommodation fatigue the eye, and lead to congestion of the conjunctiva and hypertrophy of the epithelium; the excessive secretions cause the lids to adhere after sleep, and if the lids are rudely separated the edges become swollen, raw, and painful, and small scabs, the result of abscesses and ulcers at the root of the hairs, are formed. It is persistent, unless the cause be removed.

**C. body.** (L. *corona ciliaris, orbiculus ciliaris*. F. *corps ciliaire*; G. *Strahlenkörper*.) A term first applied by Fallopius to the thickening of the anterior part of the choroid, which includes the ciliary muscle and the pars plicata and non-plicata of the ciliary processes. Henle limits it to the ciliary muscle and the pars plicata.

**C. canal.** (L. *canalis*, a channel.) The canal of Fontana.

**C. circle.** (F. *cercle*, or *ligament ciliaire*;

G. *Strahlenband*.) Another term for the ciliary muscle.

**C. crown.** (G. *Ciliarkranz*.) The same as *C. zone*.

**C. disk.** The same as *C. zone*.

**C. ducts.** The canals of the Meibomian glands.

**C. epithe'lium.** Same as *Epithelium, ciliated*.

**C. for'ceps.** (L. *forceps*, pincers.) Forceps with either smooth or transversely fluted gripping surfaces, fitting accurately. Used for extracting the cilia.

**C. ganglion.** (*Γάγγλιον*, a kind of swelling.) A ganglion, about 2 mm. in diameter, situated at the back part of the orbit between the optic nerve and the external rectus muscle, and below or on the outer side of the ophthalmic artery. It has three roots, one long, from the nasal branch of the ophthalmic, which enters its upper border; a second, short, from the branch of the third which supplies the inferior oblique and enters it below; and a third, from the cavernous plexus of the sympathetic. It is sometimes connected with the sphenopalmate ganglion, with the branches of the third to the superior, inferior, and internal recti, and with the sixth. It gives off ten or twelve small branches in two groups from its upper and lower angles in front, which, running forwards, perforate the sclera, and run between the sclera and the choroid to the ciliary muscle and iris, and it also supplies a branch to the lachrymal gland.

**C. glands.** (F. *glandes ciliares*.) The Meibomian glands.

**C. li'gament.** (L. *ligamentum*, a band. F. *cercle*, or *ligament ciliaire*; G. *Strahlenband*.) Term for the grey-coloured ring, about a line and a half or two lines in breadth, which corresponds to the junction of the iris with the choroid membrane, and of the cornea with the sclerotic coat of the eye. It is now known to consist chiefly of unstriated muscular tissue, the ciliary muscle, with nerve. The term was at one time applied to the processus ciliares. See *C. muscle*.

**C. mar'gin.** (L. *margo*, a border. F. *bord ciliaire*; G. *Augenlidrande*.) The free border of the eyelid, to which the cilia are attached, and on which the Meibomian glands open.

**C. motion.** (L. *motio*, a moving.) The flexion and extension which constitutes the regular undulating movement of the cilia of epithelium and other structures. It is intensified by heat and alkaline solutions, diminished by cold and acids, arrested by chloroform, and uninduced by electricity; it is retained for some time after death, but ceases when decomposition sets in. By the movement of the cilia of epithelium foreign bodies and secretions are moved on, and by the vibration of the cilia of zoospores and spermatozoa locomotion is effected.

**C. mus'cle.** (L. *musculus*, a muscle. G. *ciliarmuskel*.) A band of unstriated muscular tissue situated beneath the sclero-corneal junction, behind the iris and around the margin of the lens, from which it is separated by the ciliary process and a small interval which is bridged over by the suspensory ligament of the lens. The fibres run in two directions, circularly as regards the border of the lens, and meridionally. The meridional fibres are externally placed, and arise from the inner surface of the sclerotic and cornea, just at the point of junction of these two

parts. At first forming a thick mass they gradually become less prominent as they radiate backwards over the choroid coat, in which they are lost; this part of the muscle is sometimes called the tensor choroideæ of Brücke. The circular fibres, also known as the compressor lentis of H. Müller, lie internally to the meridional fibres, and just over the ciliary processes. The muscle is supplied by the third, fifth, and sympathetic nerves, which form a plexus containing many ganglion cells. Its action is to draw the choroid forward, and by thus relaxing the elastic ligament of the lens to permit this body to become thicker in the antero-posterior direction, and hence adapted for vision of near objects. In animals many pigment cells are distributed through the muscle. It is highly developed in birds, in which it consists essentially of meridional fibres, and in which its independence of the choroid, except where inserted into it, may be seen. It is absent in the frog, and probably in fishes.

**C. muscle of Riola'nus.** (*Riolan.*) That part of the orbicularis palpebrarum which traverses the upper lid from side to side. The term is specially applied also to a few fasciculi of this muscle situated near the free margin of the lid, partly lying between the Meibomian follicles and the posterior row of cilia, and partly between the Meibomian follicles and the conjunctiva.

**C. nerves, long.** (*L. nervus*, a nerve.) Two or three filaments given off from the nasal nerve as it crosses the optic nerve. They lie on the inner side of the optic nerve, join the short ciliary nerves, and accompany them in their distribution.

**C. nerves, short.** (*L. nervus*, a sinew or nerve. *F. nerfs ciliaires.*) Delicate nerves springing from the upper and lower anterior angles of the ophthalmic ganglion in two bundles of six or eight each. They run forwards, perforate the sclerotic near and around the entrance of the optic nerve, and run between the sclerotic and the choroid to the ciliary muscles, where by their intercommunication they form a circular plexus. Some of the fibres from this plexus traverse the sclerotic again, and then enter the superficial layers of the cornea, others ramify in the ciliary muscle and in the iris.

**C. neural'gia.** (*Νεύρον*, a nerve; *ἄλγος*, pain.) Pain extending over the brow, temple, and side of the nose. It is common in inflammatory and glaucomatous affections of the eyes, and is attributed to irritation of the long and short ciliary nerves extending to other branches of the fifth nerve. Bertherand has described an epidemic of this affection, in which several persons were simultaneously affected with pain, photophobia, and lachrymation.

**C. ophthalm'ia.** (*Ὀφθαλμία*, a disease of the eyes, accompanied with discharge.) The same as *C. blepharitis*.

**C. plexus of veins.** A plexus of veins, varying in number, situated in front of, and external to, the canal of Schlemm. Leber regards the canal of Schlemm itself as part of this plexus.

**C. pro'cesses.** (*L. processus*, a going forward. *F. proces ciliaris*, *rayons sous-iris*; *F. processi ciliari*; *G. Ciliarfortsätze*, *Ciliarfortsätze*.) A series of about seventy small folds or plaits of the anterior part of the choroid membrane of the eye, arranged circularly around the lens imme-

diately behind the iris, with which they are continuous in front. They are composed of blood-vessels lying in connective tissue, with much pigment; externally, and between them and the sclerotic, is the ciliary muscle. Posteriorly they become less and less prominent, and some smaller plaits, the *placæ ciliares*, intervene between them.

**C. region.** (*L. regio*, a tract.) That part of the globe of the eye which corresponds to the ciliary muscle and the ciliary processes. It is just external to the cornea.

**C. ring.** The same as *C. ligament*.

**C. staphylo'ma.** (*Σταφύλη*, a bunch of grapes.) A single projection, or several nodular protrusions, of the sclerotic near its corneal margin.

**C. stri'æ.** (*L. stria*, a furrow.) Delicate elevations of the choroid coat, which extend from the ora serrata towards the ciliary processes. Some of them are continuous with the ciliary processes, whilst others run between them and are lost.

**C. veins, ante'rior.** (*L. venæ ciliares anticae*. *G. vordere ciliarvenen*.) Branches of veins which commence in the ciliary muscle, and discharge themselves into the veins of the recti muscles. They are smaller than the corresponding arteries.

**C. veins, poste'rior.** (*L. venæ ciliares posticae*.) The chief of these, sometimes called the *venæ vorticosæ*, are four trunks, which receive the blood from the choroidal vessels and iris, and after perforating the sclerotic at opposite points, a little behind its equator, discharge themselves into the ophthalmic vein or the muscular veins. There are, in addition, many smaller veins, which issue irregularly from the sclerotic.

**C. ves'sels.** (*L. vas*, a vessel. *G. Ciliar-gefässsystem*.) Branches of the ophthalmic artery supplying the sclerotic, choroid, and iris. They communicate directly and indirectly with the retinal vessels. Direct connection takes place between the vessels forming the inner border of the opening in the choroid through which the optic nerve passes, and the vessels in the optic nerve itself. Indirect connection occurs through the intermediation of the *circulus arteriosus nervi optici*, which is formed by the short posterior ciliary arteries, and which communicates, on the one hand, with the vessels of the optic nerve, and on the other with those of the choroid coat.

**C. zone.** (*Ζώνη*, a belt.) Term for the appearance which the pigment between the ciliary processes leaves on the hyaloid membrane, like the disc of a flower; also called the *Corona ciliaris*, or ciliary crown, and the ciliary disc.

**C. zone of Zinn.** See *Zinn, zone of*.

**Cilia'ta.** (*L. cilium*, an eyelash.) A Section of *Infusoria*, which were formerly divided into *Ciliata*, or those provided with cilia; and *Flagellata*, or those with one or more long whip-like cilia.

**Ciliate.** (*L. cilium*, an eyelash. *F. cilie*; *G. geimpert*.) Provided with cilia or fine hairs.

In Botany, applied to parts or organs, the margins of which are fringed with hairs.

**Ciliated.** (*L. cilium*.) The same as *Ciliate*.

**C. cells.** Cells, such as epithelium, with many cilia, or as a spermatozoon with one cilium.

**C. epithe'lium.** See *Epithelium, ciliated*.  
**Ciliatifoliate.** (*L. cilium*; *folium*, a

leaf. *F. ciliatifolius*; *G. wimperblattrig.*) Having ciliated leaves.

**Ciliatopetalous.** (*L. cilium*; *petalum*, a petal.) Having a ciliated or fringed petal.

**Cilicinus.** (*L. cilicium*, a covering originally made of Cilician goat's hair. *G. Haaren-verfertigt.*) Made of haircloth.

**Cilicium.** (*L. cilicium*. *G. Haardecke.*) Haircloth. Tissue woven from hair. A sieve made of hair.

**Cilicor'nis.** (*L. cilium*; *cornu*, a horn.) Having hairy antennae.

**Ciliferous.** (*L. cilium*, an eyelid; *fero*, to bear. *F. cilifere*; *G. augenlidtragend.*) Having eyelids or cilia.

**Ciliform.** (*L. cilium*, an eyelash; *forma*, likeness.) Like an eyelash, or a cilium.

**Ciligerous.** (*L. cilium*; *gero*, to bear.) Same as *Ciliferous*.

**Cilibrachia'ti pol'ypi.** (*L. cilium*, an eyelash; *βραχίον*, the arm; *πολύπους*, many-footed.) A synonym of *Polyzoa*.

**Cilibranchia'ta.** (*L. cilium*; *branchia*. *F. ciliobranchie.*) Applied to a Class of the *Mollusca* having the mantle bordered with cilia, supposed to be branchiae.

Also, a synonym of *Polyzoa*.

**Cilioflagella'tae.** (*L. cilium*, an eyelash; *flagellum*, a scourge.) A Group of flagellate Infusoria, characterised by the presence of a row or whorl of cilia on the body. Examples are found in Peridinium and Ceratium.

**Ciliograda.** (*L. cilium*, an eyelash; *gradior*, to walk.) The Order of *Acalephæ* which swim by the action of cilia, a typical example of which is the Beroë. A synonym of *Ctenophora*.

**Ciliograde.** (Same etymon.) Progressing by means of cilia.

**Ciliolum.** (*L. dim. of cilium.*) A small hair-like body.

**Ciliospinal centre.** See *Centre*, *ciliospinal*.

**Cilipes.** (*L. cilium*; *pes*, a foot. *F. cili-pède.*) Having the feet garnished with cilia.

**Cilium.** (*L. cilium*, an eyelid. *F. cil*; *G. Wimper*, *Wimperhaar.*) The eyelid, but more strictly the utmost edge of the upper eyelid; also, an eyelash.

**Cillo.** (*L. cillo*, to stir or move.) Old term for one in whom the upper eyelid is continually trembling.

**Cillo'sis.** (*L. cillo*, to stir or move. *F. cilliose*; *G. ein chronisches Blinzeln.*) Term for a spasmodic trembling or agitation of the eyelids; the sensation of what is called live blood.

**Cima.** (*G. Spross*, *Keim.*) A sprout or bud.

**Cim'bia.** (*Κυβίον*, a word used in Architecture to denote a band or fillet about a pillar.) A slender, white band, which crosses the ventral surface of the crura cerebri. It forms a distinct ridge in the cat.

**Cimex.** (*L. cimex*, a bug. *F. punaise*; *G. Wanze*, *Wandlaus*, *Häuswanze*, *Brittlause.*) A Genus of the Family *Membranaceæ*, Suborder *Heteroptera*, Subclass *Ametabolica*, Class *Insecta*.

**C. ciliata.** (*L. cilium*, an eyelash.) Hab. Réunion. Larger than the *C. lectularius*.

**C. columba'rius**, Jen. (*L. columbarium*, a dove-cot.) A species common in pigeon-cots; probably the same as *C. lectularius*.

**C. hiru'dinis**, H. S. (*L. hirundo*, a

swallow.) A species found in swallows' nests; probably the *C. lectularius*.

**C. lectula'rius**, Fab. (*L. lectus*, a bed; *G. Bettwanze.*) The bed bug, introduced into England in the sixteenth century. Six or seven of this species have been given internally, to enroague, just before the fets come on, and like other things which excite disgust, have sometimes proved effectual. Bug-bites produce in some persons a form of urticaria, and the itching induces such severe scratching that excoriations sometimes result.

**C. rotunda'tus.** (*L. rotundus*, round.) Hab. Kasau. The bite is very painful, and produces much inflammation.

**Cimicic acid.**  $C_{15}H_{25}O_2$ . A yellowish, crystallisable, rancid-smelling acid, obtained from the secretion of the bug, *Rhaphigaster punetipennis*.

**Cimicif'uga.** (*L. cimex*, a wall louse; *fugo*, to drive away.) A Genus of the Nat. Order *Ranunculaceæ*.

**C. foetida**, Linn. (*L. foetidus*, stinking.) Hab. Siberia. Used to kill bugs.

**C. racemo'sa**, Ell. (*L. racemosus*, clustering.) Black cohort, bugbane. Hab. United States. Also called *Aetæa racemosa*, which see.

**C. serpenta'ria**, Pursh. The *C. racemosa*.

**Cimicifu'gæ ra'dix.** (*L. cimex*, a bug; *fugo*, to fly; *radix*, a root. *G. schwarze Schlangengewurzel.*) Black snake root, black cohort, bugbane. The root of *Cimicifuga racemosa*.

**Cimicif'ugin.** (*L. cimex*, a bug; *fugo*, to fly.) An impure resin obtained from the *Aetæa* or *Cimicifuga racemosa*, in which it exists in the proportion of about 3·5 per cent.

**Cimicin'ic acid.** Same as *Cimicic acid*.

**Cimic'inous.** (*L. cimex*, a bug.) Having the odour of a bug.

**Cimicoid.** (*L. cimex*; *ειδος*, likeness.) Resembling a bug.

**Cim'iez.** France. A health resort, about three miles from Nice. It is at a moderate elevation, and is well sheltered from cold winds and from the glare of the sea; the air is not so keen as that of Nice.

**Ciminalis pneumonanthe**, Borkh. The *Gentiana pneumonanthe*.

**Cim'mol.** A synonym of *Cinnamyl hydride*.

**Cim'myl.**  $C_9H_7$ . The radical of cinnamic acid.

**Cimo'lia.** (*Κιμωλία*, from *Cimulus*, an island in the Cretan sea, where it is found.) A generic term (*terra* being understood) for cimolite or Cimolian earth. See *Cimolite*.

**C. alba.** (*L. albus*, white.) White cimolite or *Cimolia terra*.

**C. purpures'cens.** (*L. purpurascens*, to become purple.) The systematic name of fuller's earth.

**C. ter'ra.** (*L. terra*, the earth. *G. Walk-erde*, *Wassererde.*) See *Cimolite*.

**Cimolite.** (*Κιμωλία*.) A term for fuller's earth, of a greyish-white colour, consisting of silex, alumina, oxide of iron, and water. Formerly used as an astringent; also termed *Cimolia terra*.

**Cina**, Aust. Pb. (*F. armoise santonique*; *G. Wurmsamen*, *Zitterversamen*.) The flowers or capitula of *Artemisia contra*, Vahl, and *A. Fahliana*, Kestel. They are small, elongated, prismatic, greenish-yellow, smooth flowerets,

# CINABARIS—CINCHONA.

about 2 mm. long, with imbricated, keeled bracts, the outermost of which are oval; taste and smell disagreeable. See *Santonica*.

**C. cinæ.** A synonym of *Cinchona*.

**C. levantica.** The *Artemisia Fahliana*.

**Cinab'aris.** Cinnabar.

**Cinabarium.** Cinnabar.

**Cinab'ra.** (Κινάβρα, the rank smell of a he-goat.) A rank smell like that of the armpit.

**Cinæbene.**  $C_{10}H_{18}$ . A hydrocarbon obtained from *Artemisia maritima*, santonica or wormseed; isomeric with terebinthene.

**C. camphor.**  $C_{10}H_{18}O$ . A camphor contained in oil of *Artemisia maritima*, santonica or wormseed.

**Cinædia.** (Κινάδια, unnatural lust. G. *Knabenschanderei*.) Unnatural sexual connection with a boy; also, masturbation.

**Cinædus.** One on whom *Cinædia* is practised.

**Cin'ara.** (Κινάρα, the artichoke. F. *artichaut*; G. *Artischocke*.) The artichoke.

**C. hortensis.** (L. *hortus*, a garden.) The same as *C. scolymus*.

**C. scolymus.** (F. *l'artichaut commun*.) The artichoke, *Cynara scolymus*.

**Cinaracephalous.** (Κινάρα, the artichoke; κεφαλή, the head. F. *cinarocéphale*.) Artichoke-headed.

**Cin'cater.** A person who has entered his fiftieth year. (Halliwell.)

**Cinchofulvic acid.** (*Cinchona*; L. *fulvus*, reddish-yellow.) A synonym of *Cinchonic red*.

**Cincho'lein.** Same as *Quinolcin*.

**Cinchomeric acid.** A product of the action of heated hydrochloric acid on quinine.

**Cincho'na.** (Named after the Countess of Chinchon, at Lima, who was signally cured by its use in 1638. F. *quinquina*; G. *Chinabaum*.) The pharmacopœial name for several species of cinchona; Peruvian bark.

Also, a Genus of the Nat. Order *Cinchonaceæ*. The cinchona, or Peruvian-bark tree.

The different species of the genus have been arranged by Weddell in five families or stirps, the Stirps cinchonæ officinalis, Stirps cinchonæ rugosæ, Stirps cinchonæ micranthæ, Stirps cinchonæ calisayæ, and Stirps cinchonæ ovate.

**C. académica.** Guib. (L. *academicus*, belonging to the academy.) A synonym of *C. Condaminæ*.

**C. acids.** Kinic acid, Cinchotannic acid, and Quinovic or Chinovic acid.

**C. acutifolia.** Ruiz and Pav. (L. *acutus*, sharp-pointed; *folium*, a leaf.) A species of little worth.

**C. am'nis.** Weddell. (L. *affinis*, allied.) A variety, with oblong oboval leaves, of *C. micrantha*, Weddell.

**C. alba granaten'sis.** (L. *albus*, white.) The *Quinia blanca* of Mutis, the bark of *Ladenbergia macrocarpa*.

**C. alkaloids.** The principal are Quinine, Quinidin, Cinchonin, Cinchonidin, and Quinamin; smaller quantities of Paricin, Paytin, Ariein, and some other doubtful alkaloids, have been described.

**C. almaguerensis.** The same as *C. Pitaya*.

**C. amygdalifolia.** Wedd. (L. *amygdalus*, an almond; *folium*, a leaf.) A species of Weddell's *Stirps cinchonæ officinalis*. Hab.

Peru, Bolivia. Yields a poor bark not now imported.

**C. angustifolia.** Ruiz and Pavon. (L. *angustus*, narrow; *folium*, a leaf.) A variety of *C. lancifolia*.

**C. asperifolia.** Wedd. (L. *asper*, rough; *folium*, a leaf.) A species of Weddell's *Stirps cinchonæ rugosæ*. Hab. Bolivia. Bark not collected.

**C. australis.** Wedd. (L. *australis*, southern.) A species of Weddell's *Stirps cinchonæ micranthæ*. Hab. South Bolivia. Bast cells very thin. An inferior kind of bark mixed with Calisaya.

**C. Barbacoën'sis.** Karsten. (*Barbacoa*, a town of Granada.) A doubtful species of this genus.

**C. bark.** (F. *écorce de quinquina*; G. *Chinarinde*.) Under this name the bark of about thirty-six species of Cinchona is included. They are all natives of the western side of South America, inhabiting the mountain regions of Peru, Bolivia, Ecuador, New Granada, and Venezuela, but the species found to be most valuable have been cultivated in India, Java, Jamaica, and Ceylon. See *Cinchona flavæ cortex*, *C. pallidæ cortex*, and *C. rubræ cortex*.

**C. bark, pale.** See *Cinchona pallidæ cortex*.

**C. bark, red.** This bark is yielded by *C. succirubra*. It occurs in flat or channelled pieces, sometimes half an inch in thickness. It contains from 3 to 4 per cent. of alkaloids. The quill red bark of the Indian plantations yields 5 to 10 per cent. of alkaloids, more than a third of which is quinine, and a fourth cinchonidin, the remainder being cinchonin and quinidin. See *Cinchona rubræ cortex*.

**C. bark, yellow.** This bark is produced by *C. calisaya*. See *Cinchona flavæ cortex*.

**C. bicolorata.** (L. *bicolor*, of two colours.) A name for the bark of a species of *Ladenbergia*, growing in Guayaquil, from its patchy appearance.

**C. Bolivia'na.** Wedd. (Bolivia, the country of that name.) The same as *C. calisaya*, var. *morada*, Planch. It is thinner than ordinary Calisaya bark. The bast cells form 4—6 closely-arranged series.

**C. Bonplandia'na.** How. (Bonpland, the botanist.) A variety of *C. officinalis*.

**C. brachycarpa.** Swartz. The *Ezostemma brachycarpum*.

**C. brasiliensis.** (Brazil, the name of a country.) The same as *C. rubra* of Rio de Janeiro.

**C. caduciflora.** Bonpl. (L. *caducus*, falling; *flos*, a flower.) A species not known to be used as a supply of bark.

**C., Calisaya.** Wedd. (*Calisaya*, incorrectly said to be a Bolivian province; according to Weddell, derived from the local words *colli*, red, and *saya*, sort. F. *quinquina calisaya*; G. *Königschina*.) The type of Weddell's *Stirps cinchonæ calisayæ*, and of Berg and Garcke's *Cortices flari*, v. *aurantiaci*. Hab. Bolivia and Peru, at a height of 4500—4600 feet. Cultivated in India, Ceylon, Java, Jamaica, and Mexico. A lofty tree. Leaves 3—6 inches long, usually oblong; flowers in panicles, pink; capsules ovate. Yields the barks named Calisaya bark, Bolivian bark, and yellow bark. Some of it is imported with the epidermis, named China calisaya tecta, or convoluta; (F. *quinquina*

# CINCHONA.

*calisaya roulei*; *G. beddeckte Calisaya*); and some without the epidermis, named, China calisaya nuda, or plana; (*P. quinquina calisaya plát*; *G. unbedeckte Calisaya*).

**C. calop tera**, Miq. (*Kalós*, beautiful; *πτέρων*, a feather.) Probably a variety of *C. pubescens*.

**C. Candollii**. (*De Candolle*, the great botanist.) The *C. macrocalyx*.

**C. Carabayen'sis**, Wedd. (*Carabaya*, the name of a place.) A species of Weddell's *Stirps cinchonae rugosae*. Hab. Peru, Bolivia. The bark of this species is not collected.

**C. Caribæa**. (*Caribbean Sea*, in which Jamaica lies. *G. Jamaïkische Fiebertinde*.) The systematic name of the bark of *Exostemma caribæa*, s. *fontuensis*, the Caribbean-bark tree, growing in Jamaica, and there called seaside beech; its bark is similar in power to the Peruvian bark, but less astringent.

**C. carolinia na**. The *Pinkneya pubens*.

**C., Carthage'na**. (*Carthage*, a seaport of the United States of Columbia.) The bark of *C. lanceifolia*.

**C. ca'va**, Pavon. (*L. carus*, hollow.) Probably a casearilla.

**C. Chahuargue'ra**, Pav. A variety of *C. officinalis*, How. Hab. Ecuador. A tree, 6—12 feet high, growing in the provinces of Loja and Quito, at an altitude of 6000—9000 feet. One of the species producing Loja bark.

**C. Chomella'na**, Weddell. A doubtful species of this genus.

**C. ciner'ea**. (*L. cinereus*, ash coloured.) The pharmacopœial name (E. and D. Ph.) of the bark of the *C. micrantha*; the grey bark, silver bark, or Huanuco bark.

**C. coccin'ea**, Pav. (*L. coccineus*, scarlet.) A bark similar to *C. micrantha*, or perhaps a variety of *C. officinalis*.

**C. Coudamin'ea**, Humb. and Bonp. (*Coudamine*, the naturalist.) A name including several species now separated, as *C. Uritusungu*, *C. obtusifolia*, *C. chahuarguena*, *C. macrocalyx*, *C. Pitayensis*. Formerly held to be a species producing pale cinchona bark.

**C. conglomer'a'ta**, Pavon. (*L. conglomerata*, to crowd together.) Probably a variety of *C. Humboldtiana*.

**C. cordifolia**, Mutis. (*L. cor*, heart; *folium*, a leaf.) A species of Weddell's *Stirps cinchonae ovate*. A tree 30 feet high. Hab. New Granada and Peru. Yields part of the supply of Columbian bark, and is used in the manufacture of quinine. Karsten considers it valueless; but others have obtained 12—4 per cent. of quinine and 0.5—0.6 per cent. of cinchonin sulphate.

**C. coria'cea**. The *Exostemma coriaceum*.

**C. coro'næ**. (*L. corona*, a crown.) The former pharmacopœial name (E.) for the bark of the *C. coudaminea*, the crown bark.

**C. corymbosa**, Karsten. (*L. corymbus*, a cluster of flowers.) A New Granada species.

**C. crassifolia**, Pavon. (*L. crassus*, thick; *folium*, a leaf.) An uncertain species.

**C. cris'pa**, Tafalla. (*L. crispus*, curly.) A variety of *C. officinalis*, How. Hab. Mountains of Loja and Cuzco.

Also, a variety of *C. Mutisi*.

**C. cu'prea**. (*L. cupreus*, of copper.) A copper-coloured bark, containing a little quinine, of unknown origin.

**C., Cus'co**. (*Cuzco*, a town of Peru.) The

bark of *C. pubescens*, Wedd. It is identical with the *Ecorce d'Arica* of Pelletier and Coriol.

**C. de Para'**. (*Para*, a province of Brazil, at the mouth of the Amazon.) A bark which is probably the produce of a *Ladenbergia*.

**C. decurrentifolia**, Pavon. (*L. decurre*, to run down; *folium*, a leaf.) The *C. purpurascens*.

**C. Delondria'na**, Wedd. A variety of *C. scrobiculata*.

**C. dichot'oma**, H. Per. (*Δίχα*, doubly; *τίμνω*, to divide.) An uncertain species.

**C. dis'color**, Weddell. (*L. discolor*, having different colours.) The bark of this species is seldom or never seen.

**C. du'ra læ'vis**. (*L. durus*, hard; *lævis*, light.) A bark yielded by *C. cordifolia*, Mutis, from New Granada.

**C. du'ra subero'sa**. (*L. durus*, hard; *suberosus*, made of cork.) Cinchona bark yielded by *C. pubescens*, Weddell, and *C. lutea*, Pav.

**C. ellip'tica**, Wedd. (*L. ellipticus*, elongated, circular.) A species of Weddell's *Stirps cinchonae calisayæ*. Hab. Peru; yields Carabaya bark.

**C. erythranth'a**, Pav. (*Ερυθρός*, red; *ἄθος*, a flower.) Perhaps a variety of *C. officinalis*.

**C. erythroder'ma**. (*Ερυθρός*, red; *ἐπίμα*, skin.) The *C. succirubra*.

**C. euneu'ra**, Miq. (*Eñ*, well; *νεῦρον*, a nerve.) Probably the same as *C. elliptica*.

**C. excel'sa**, Roxb. (*L. excelsus*, lofty.) An Indian tree. The bark contains neither quinine nor cinchonin.

Also called *Hymenodictyon excelsum*.

**C. ferrugin'ea**, St. Hilaire. The *Remijia ferruginea*.

**C. fla'va**, U.S. Ph. (*L. flavus*, yellow. *F. la quinquina calisaya* or *juane royal*; *G. gelbe* or *Königs Chimbannu*.) The bark of *C. calisaya*, yellow bark or yellow cinchona. See *Cinchone flave cortex*.

**C. fla'va du'ra**. (*L. flavus*, yellow; *durus*, hard.) Two kinds of bark with this name occur in commerce, the *C. dura lævis* and the *C. dura suberosa*.

**C. fla'va fibro'sa**. (*L. flavus*, yellow; *fibrosus*, full of fibres.) The bark of *C. lanceifolia*, Mutis, Bogota bark, Carthagea bark.

**C. floribun'da**. (*L. flos*, a flower; *abundo*, to be numerous.) The systematic name of the tree which affords the St. Lucia bark. It is astringent and bitter, somewhat like gentian. Used in intermittent fever, typhoid dysentery, and dyspepsia, but requires to be joined with some aromatic substance; in its recent state it is emetic and cathartic.

**C. fus'ca**. (*L. fuscus*, reddish brown.) The same as *C. grisea*.

**C. glandulif'era**, Ruiz and Pav. (*L. glandulosus*, dim. of *glands*, an acorn; *fero*, to bear.) A species of Weddell's *Stirps cinchonae rugosae*. Hab. Peru. Bark not known as a distinct sort.

**C. Gondotia'na**, Klotzsch. A synonym of *C. cordifolia*.

**C. granaten'sis**. (*Granada*.) The bark of *C. cordifolia*, Mutis.

**C. grandiflo'ra**, Ruiz and Pavon. (*L. grandis*, great; *flos*, a flower.) The *Buena obtusifolia*.

**C. grandifolia**. (*L. grandis*; *folium*, a leaf.) The *C. obtusifolia*.

**C. gris'ea**. (*L. griseus*, grey.) Grey bark.

# CINCHONA.

A term employed by Berg and Garcke to include Huanuco, Loxa, Pseudoloxa, Huamalis, and Jaen pallida barks. They present the characters in common of being in tubes or half cylinders, externally grey or brownish, internally reddish brown, delicately fissured externally, with smooth or short splintery fracture.

**C. Guama lies.** The same as *C. Huamalis*.

**C. Guano'co.** The same as *C. Huanuco*.  
**C. heterophylla**, Pavou. ("Ετερος, other; φύλλον, a leaf.) A species the bark of which is sometimes found mixed with Calisaya bark.

**C. hexand'ra.** The *Buena hexandra*.  
**C. hirsu'ta**, Ruiz and Pavon. (*L. hirsutus*, hairy.) A species of Weddell's *Stirps cinchonae rugosa*. Hab. Peru.

**C. Howardia'na**, Kuntze. One of four species into which Kuntze proposes to reduce all the forms of cinchona which grow in Java.

**C. Huama lies.** (*Huamalis*, a province of Peru.) The thicker pieces of *C. micrantha*, *C. glandulifera*, *C. Patton*, and *C. lanceolata*.

**C., Huanu'co.** (*Huanuco*, a town of Peru.) The younger bark of *C. micrantha*, Ruiz and Pav., *C. subcordata*, Pav., *C. suberosa*, Pav., and *C. umbellulifera*, Pav. A smaller kind is yielded by *C. purpurea*, Ruiz and Pav.

**C. Humboldtia'na**, Lamb. (After Humboldt, the naturalist.) A species of Weddell's *Stirps cinchonae rugosa*. Hab. Peru. Produces false Loxa bark or Jaen bark. A bad bark.

**C. Ja'en nigricans.** (*Jaen*, a town of Peru; *L. niger*, black.) Pseudoloxa bark. The younger bark of *C. nitida*, Ruiz and Pav., *C. stipitata*, Pav., and *C. scrobiculata*, Hab. and Epl.

**C. Ja'en pallida.** (*L. pallidus*, pale.) Pseudoloxa bark from Guayaquil.

**C. jamaicensis.** (*Jamaica*, the island of that name.) The *Exostemma caribaeum*.

**C. Josephia'na.** A shrub-like variety of *C. calisaya*.

**C. laccif'era.** (*L. lac*, milk-like juice; *fero*, to bear.) A synonym of *Condaminea tinctoria*.

**C. lanceola'ta**, Ruiz and Pavon. (*L. lanceolatus*, lanceolate-shaped.) A species of Weddell's *Stirps cinchonae officinalis*. Hab. Peru. It yields Carthagena bark.

**C. lancifo'lia**, Mutis. (*L. lancea*, a lance; *folium*, a leaf.) A species of Weddell's *Stirps cinchonae officinalis*. Hab. New Granada. It yields Columbian bark.

**C. lancifo'lia oblon'ga.** Same as *C. oblonga*.

**C., Lox'a.** (*Loxa*, a district of Ecuador.) The bark of the younger branches of *C. urutisinga*, Pav., *C. Condaminea*, Humb., *C. chakuaruana*, Pav., *C. macrocarpa*, Pav., *C. conglomerata*, Pav., *C. glandulifera*, Ruiz and Pav., *C. heterophylla*, Pav., *C. hirsuta*, Pav., *C. Patton*, Pav., *C. microphylla*, Pav. The pieces are grey externally, with circular fissures at some distance from each other.

**C. lucumae'lia**, Pav. (*L. lucuma*, a plant of that name; *folium*, a leaf.) A species of Weddell's *Stirps cinchonae officinalis*. A tree 30 feet high. Hab. Ecuador, Peru. Supplies some Carthagena bark.

**C. lu'tea**, Pavon. (*L. luteus*, yellow.) A variety of *C. cordifolia*.

**C. Luzia'na.** The *Exostemma floribundum*.

**C. macroca'lyx**, Pav. (*Μακρός*, long;

*καλός*, a calyx.) A species of Weddell's *Stirps cinchonae officinalis*. Hab. Peru and Ecuador. A tree 18—20 feet high. It yields ashy crown bark, which contains but a small quantity of the alkaloids, quinine, cinchonin, and cinchonidin.

**C. macrocar'pa**, Vahl. (*Μακρός*; καρπός, fruit.) The *Cascarilla macrocarpa*, Weddell.

**C. magnifo'lia**, Ruiz and Pavon. A false cinchona, the *Cascarilla magnifolia*, Weddell.

**C. Martinicen'sis.** The bark of *Exostemma floribundum*, Willd.

**C. micran'tha**, Wedd. (*Μικρός*, small; άνθος, a flower.) A species and the type of Weddell's *Stirps cinchonae micrantha*. Hab. Peru. A tree 60—90 feet high. The mesoderm contains few or no stone cells and no laticiferous vessels. Bast cells 60—100  $\mu$  in thickness, for the most part with interrupted radial arrangement. It is one of the sources of grey Huanuco or Lima bark.

**C. microcar'pa**, Wedd. (*Μικρός*; καρπός, fruit.) A variety of *C. Calisaya*.

**C. microphy'lia**, Mutis. (*Μικρός*; φύλλον, a leaf.) A variety of *C. Mutisi*.

**C., monta'na**, Badier. (*L. mons*, a mountain.) The *Exostemma floribundum*, Willd.

**C. mora'da**, Planch. A variety of Calisaya bark. The same as *C. Boliviana*, Wedd.

**C. Mutis'ii**, Lamb. (*Mutis*, a naturalist of that name.) A species of Weddell's *Stirps cinchonae rugosa*. Hab. Ecuador. This bark only contains ariuin.

**C. Muzonen'sis.** An uncertain species.

**C. nit'ida**, Ruiz and Pavon. (*L. nitidus*, shining.) A species of Weddell's *Stirps cinchonae micrantha*. It is one of the sources of grey Huanuco or Lima bark, which is chiefly used on the Continent.

**C. no'va.** (*L. novus*, new.) The bark of *C. nova granatensis*, *Quina roja*, Mutis, *Ladenbergia oblongifolia*, Karst., *L. magnifolia*, Kl.

**C. oblon'ga**, Howard. (*L. oblongus*, elongated.) A variety of *C. lancifolia*. It yields soft Columbian bark.

**C. oblongifo'lia**, Mutis. (*L. oblongus* oblong; *folium*, a leaf.) The *Cascarilla mayni*, folia.

**C. obtusif'o'lia.** (*L. obtusus*, blunt; *folium*, a leaf.) A tree, twelve feet high. Hab. Ecuador. A variety of *C. officinalis*.

**C. officina'lis**, Hook. (*L. officinalis*, official.) One of the three kinds of cinchona barks admitted for pharmaceutical use. Hab. Ecuador and Peru. Cultivated in India, Ceylon, and Java. A large tree, with lanceolate or ovate leaves, glabrous superiorly, scrobiculate inferiorly. The flowers small, in lax panicles, succeeded by oblong capsules. Yields Loxa, or brown bark, pale bark. It is the type of Weddell's *Stirps cinchonae officinalis*.

**C. ovalifo'lia**, Mutis. (*L. ovalis*, egg-shaped; *folium*, a leaf.) The *Cascarilla macrocarpa*.

**C. ova'ta**, Ruiz and Pav. (*L. ovatus*, egg-shaped.) The type of Weddell's *Stirps cinchonae ovata*. Hab. Peru and Bolivia. Yields inferior brown and grey barks.

**C. Pahudia'na**, Howard. A species of Weddell's *Stirps cinchonae rugosa*. Hab. Peru and Bolivia, at an altitude of 5000 or 6000 feet. Formerly, but not now, cultivated in India and Java. A poor bark, containing only about 0.5 per cent. of cinchonidia. This is one of Kuntze's four typical forms of Java cinchona.

# CINCHONA.

**C. pallida**, U.S. Ph. (*C. pallidus*, pallid. *F. quinquina gris*; *G. braune* or *grau* *Chinarinde*.) The bark of *C. officinalis* and *C. micrantha*. See *Cinchona pallide cortex*.

**C. Palton**, Pav. Hab. Loxa. A tree, twenty-five feet high, yielding Palton bark. The bark closely resembles that of *C. macrocalyx*.

**C. parabolica**, Kinol. (Παραβολή, the conic section parabola.) The *C. Mutisii*, var. *Crispa*.

**C. Pavonia'na**. (*Pavon*, the botanist.) One of the four typical forms to which Kuntze reduces the cinchonas growing in Java.

**C. pelal'ba**, De Cand. A doubtful species.

**C. Pelletieriana**. (*Pelletier*, a chemist of that name.) A variety of *C. pubescens*, furnishing Cusco bark.

**C. Peruviana**, How. (*Peru*, a country of South America.) A species of Weddell's *Stirps cinchona micrantha*. It contributes, with *C. nitida* and *C. micrantha*, to yield grey Huancayo or Lima bark. Hab. Peru. Cultivated in India.

Also, the bark obtained from *C. lutea*, Pav., and *C. pubescens*, Wedd.

**C. Pitay'a**. The bark of *C. Pitayensis*, Wedd., and probably of *C. lanceifolia*, Mntis.

**C. Pitayensis**, Wedd. (*Pitayo*, an Indian village east of Popayan.) A species of Weddell's *Stirps cinchona rugosa*. A tree 60 feet high. Hab. New Granada. Cultivated in India. It yields the valuable Pitaya bark, from which large quantities of quinine, and especially of quinidin, are made.

**C. Pi'ton**. The bark of *Exostemma floribundum*.

**C. pseudolox'a**. (Ψευδός, false; *Loxa*, a district of Ecuador.) Cinchona bark obtained from the younger branches of *C. nitida*, Ruiz and Pav., *C. stuppea*, Pav., and *C. serobiculata*, Hb. and Bpl.

**C. pubes'cens**, Vahl. (*C. pubescens*, covered with short, soft hairs.) A species of Weddell's *Stirps cinchona ovata*. Hab. Ecuador, Peru, and Bolivia. A tree 60 feet high. Yields Ariea bark (Cusco bark, from var. *Pelletieriana*). Some of the varieties contain arioin.

**C. purpurascens**, Wedd. (*C. purpurascens*, purplish red.) A species of Weddell's *Stirps cinchona ovata*. Hab. Bolivia. The bark is unknown in commerce.

**C. purpu'rea**, Ruiz and Pavon. (*C. purpureus*, purplish red.) A species of Weddell's *Stirps cinchona ovata*. Hab. Peru (Huamalis). Yields Huamalis bark, not now imported. It also forms a part of Huancayo cinchona.

**C. quercifo'lia**, Pav. (*C. quercus*, an oak; *folium*, a leaf.) The *C. Mutisii*, var. *Crispa*.

**C. red**. Same as *Cinchona red*.

**C. re'gia**. (*C. regius*, royal. *G. Königs-china*.) Term applied to the yellow or orange-coloured barks coming from Ecuador and Peru, and especially the true Calisaya bark.

**C. ro'sea**, Ruiz and Pavon. (*C. roseus*, rose-coloured.) Infusion not bitter, but astringent.

**C. rosulen'ta**, Howard. (*C. rosula*, a little rose.) A New Granada species.

**C. rotundifo'lia**, Pav. (*C. rotundus*, round; *folium*, a leaf.) A variety of *C. cordifolia*.

**C. ru'bra**, U.S. Ph. (*C. ruber*, red. *F. quinquina rouge*; *G. rothe Chinarinde*.) The bark of *C. succirubra*. See *Cinchona rubra cortex*.

**C. ru'bra de Ri'o Janel'ro**. The bark, according to Weddell, of *Ladenbergia Riedeliana*, a tree growing in Brazil.

**C. ru'fner'vis**, Wedd. (*C. rufus*, red; *nervus*, a nerve.) A species of Weddell's *Stirps cinchona ovata*. Hab. Peru, Bolivia. Yields a kind of light calisaya bark.

**C. ru'go'sa**, Humb. and Flückiger. (*C. rugosus*, wrinkled.) Hab. Peru. Bark unknown, probably valueless. The type of Weddell's *Stirps cinchona rugosa*.

**C. ru'go'sa**, Pav. A variety of *C. Mutisii*.

**C. Sanc'ta Fe'**. Name for several species of cinchona at Santa Fé, affording bark, both pale and red.

**C. Sanc'tæ Lu'zizæ**, David. (*G. St. Lucienrinde*.) The *Exostemma floribundum*.

**C. scrobicu'la'ta**, Hb. and Bpl. (*C. scrobiculus*, dim. of *scrobis*, a ditch, or trench.) A species of Weddell's *Stirps cinchona micrantha*. The bark formerly known as red Cusco bark, or Santa Anna bark. Hab. Peru; also in Provinces of Jaen Cuzco and Carabaya.

**C. stup'pea**, Lav. (*C. stuppeus*, made of tow.) One of the species supplying false Loxa bark.

**C. subcorda'ta**, Pav. (*C. sub*, under; *cordatus*, heart-shaped.) A species which supplies, according to some, the ash-coloured cinchona bark.

**C. subero'sa**, Pavon. (*C. suber*, the cork tree.) A species sometimes found mixed with grey bark.

**C. succiru'bra**, Pav. (*C. succus*, juice; *ruber*, red.) A species of Weddell's *Stirps cinchona ovata*. Hab. Ecuador. Cultivated in India, Ceylon, Java, and Jamaica. Yields red bark, an official species. A lofty tree, growing from 600—1500 feet above sea level.

**C. Ta'ron-Ta'ron**. The *Lasionema roseum*.

**C. Ten**. Cinchona obtained from *C. riridifolia*, Pav., and partly also from *C. ovata*, Ruiz, *C. purpurea*, and a variety of *C. lucumafolia*, Pav. According to Weddell, it is yielded by his *C. pubescens*, which is not identical with the *C. pubescens*, Vahl.

**C. Triana'e**, Karst. (*Triana*, a naturalist of that name.) The same as *C. pitayensis*.

**C. tri'fo'ra**, Wright. (*C. tres*, three; *flos*, a flower.) A Jamaica species, the bark of which is emetic.

**C. Tucujen'sis**, Karst. A species of Weddell's *Stirps cinchona ovata*. Hab. Venezuela and New Granada. Yields Maracaybo bark.

**C. umbellulif'era**, Pav. (*C. umbellula*, dim. of *umbella*, an umbel; *fero*, to bear.) A species of Weddell's *Stirps cinchona rugosa*. Hab. Peru. Characters of bark not well known.

**C. undula'ta**, Kinol. (*C. undulatus*, waved.) The *C. glandulifera*.

**C. Uritusing'a**, Pavon. A variety of *C. officinalis*.

**C. ve'ra**. (*C. verus*, true.) An old name for a variety probably of *C. Calisaya*.

**C. villo'sa**, Pavon. (*C. villosus*, hairy.) The *C. Humboldtiana*.

**C. viola'cea**. (*C. violaceus*, violet-coloured.) The *C. officinalis*.

**C. Virginien'sis**. (*C. Virginia*, the State of that name.) The *Magnolia glauca*.

**C. viridifo'lia**, Pav. (*C. viridis*, green; *folium*, a leaf.) A species of grey cinchona yielding pale Jacu or Ten bark.

# CINCHONACEÆ—CINCHONIDIN.

**C. vulgaris.** (*L. vulgaris*, common.) One of the varieties of *C. orata*.

**C. Weddelliana.** (Weddell, the botanist.) One of the four typical forms to which Kuntze reduces the Java cinchona trees.

**C. wine.** See *Vinum cinchonæ*.

**C. Yuama'lies.** The same as *C. Huama'lies*.

**Cinchona'ceæ.** (*G. Cinchonengewächse*.) An Order of epigynous corollidial Exogens, having epipetalous stamens, straight anthers bursting longitudinally, and leaves with interpetiolar stipules.

**Cinchona'ceous.** (*Cinchona*, the Peruvian-bark tree. *F. cinchonacæ*.) Having an arrangement of parts, as in the Genus *Cinchona*.

**Cinchonads.** The plants of the Order *Cinchonaceæ*.

**Cinchonæ fla'væ cor'tex.** B. Ph. (*L. flavus*, yellowish; *cortex*, bark.) Yellow cinchona or Cahsaya bark, obtained from *Cinchona calisaya*, and collected in Bolivia and Southern Peru. It is in flat pieces, uncoated, or deprived of periderm, rarely in coated quills, 6" to 18" long, 1" to 3" wide, and 2" to 4" thick; outer surface brown, marked by broad, shallow, irregular, longitudinal depressions; inner surface tawny-yellow, fibrous; transverse fracture short and finely fibrous; powder cinnamon-brown, somewhat aromatic, persistently bitter. Yellow cinchona bark contains quinine, quinidin, cinchonin, cinchonidin, and quinamin, combined with quinic, quinic, and cinchotannic acids, cinchonic red, a butyaceous volatile oil, wax, gum, sugar, and ash; paricin, aricin, cinchovatin, cusconin, are found in some of the other barks. *Cinchona* is essentially an antiperiodic; for this purpose sulphate of quinine is preferred. It is used as a tonic. Dose, 10 to 60 grains.

**C. pallidæ cor'tex.** B. Ph. (*L. pallidus*, pale.) Pale cinchona bark, obtained from *Cinchona condaminea*, De Cand., vars. *chahuarguara*, Pavon, and *erispa*, Tafalla, and collected about Loja in Ecuador. It is 5" to 1" thick, in single or double quills 6" to 15" long, 2" to 8" in diameter, brittle, easily splitting longitudinally, and breaking with a short transverse fracture; outer surface brown and wrinkled, or grey and speckled with adherent lichens, with or without numerous transverse cracks; inner surface bright orange or cinnamon brown. Powder pale brown, slightly bitter, very astringent. Used as *C. flave cortex*.

**C. ru bræ cor'tex.** B. Ph. (*L. ruber*, red.) Red cinchona bark, obtained from the *Cinchona succirubra*, Pavon, and collected on the western slopes of Chimborazo. It is in flat or incurved pieces, less frequently in quills, coated with the periderm, varying in length from a few inches to two feet, from 1" to 3" wide, and 2" to 6" thick, compact and heavy; outer surface brown or reddish brown, rarely white from adherent lichens, rugged or wrinkled longitudinally, frequently warty, and crossed by deep transverse cracks; inner surface redder, fractured surface often approaching to brick red; transverse fracture finely fibrous. Powder red-brown, taste bitter and astringent. It contains, in addition to the ordinary cinchona alkaloids, paricin. In addition to its antiperiodic properties, red cinchona bark has latterly been vaunted as a cure for drunkenness.

**Cinchona'les.** (*Cinchona*.) In Lindley's classification an Alliance of epigynous Exogens,

with the flowers dichlamydeous and monopetalous, and a small embryo lying in a large quantity of albumen. It includes *Vaccina'ceæ*, *Columellaceæ*, *Cinchonaceæ*, *Caprifoliaceæ*, and *Galiaceæ*.

**Cincho'nææ.** A Suborder or Tribe of the Order *Cinchonaceæ*, or a Subfamily of the Family *Rubiaceæ*, having scaly stipules and many-seeded loculi.

**Cinchon'etin.** A product of the disintegration of cinchonin under the action of sulphuric acid and peroxide of lead. It is amorphous, deliquesces in moist air, dissolves with red tint in water and spirit of wine, is insoluble in ether, and tastes bitter.

**Cincho'nia.** The same as *Cinchonin*.

**C., acid sulphate of.**  $C_{20}H_{24}N_2O \cdot H_2SO_4 \cdot 4H_2O$ . Obtained by dissolving sulphate of cinchonin in dilute sulphuric acid and crystallising.

**Cincho'niæ sulphas.** U.S. Ph.  $2(C_{20}H_{24}N_2O) \cdot H_2SO_4 \cdot 2H_2O$ . Obtained by adding a solution of soda to the mother-water left after the preparation of sulphate of quinine, washing the precipitate formed in water, drying and then washing with small quantities of alcohol, afterwards it is heated with dilute sulphuric acid, boiled with animal charcoal, and set aside to crystallise. It occurs in hard, transparent, glassy oblique prisms. Used in intermittents as sulphate of quinine, but in larger doses. It is said to produce frontal pain in large doses, but not buzzing in the ears.

**Cincho'nic.** (*Cinchona*.) Of, or belonging to, cinchona.

**C. acid.**  $C_{11}H_{14}O_9$ . An amorphous acid substance obtained from cinchomeronic and oxy-cinchomeronic acids by the action of sodium amalgam in alcoholic solution.

**C. bit'ter.** (*F. amer cinchonique*.) Kinovic acid.

**C. red.** (*F. rouge cinchonique*.)  $C_{28}H_{22}O_{14}$ . Found in all cinchona barks in greater or less quantity; soluble in alcohol and alkalies, nearly insoluble in water and ether.

**Cinchonic'ia.** Same as *Cinchonin*.

**Cinchon'ic.**  $C_{20}H_{24}N_2O$ . A product of the action of diluted sulphuric acid, at a temp. of 120°—130° C. (248° F.—271° F.), upon cinchonin and cinchonidin sulphate. It is a strong base, dissolving easily in alcohol, ether, chloroform, and acetone, but less easily in water. Its solutions possess a feeble dextro-rotatory power on light, and taste bitter.

**Cinchonid'ia.** Same as *Cinchonidin*.

**Cinchonid'ia sulphas.** See *Cinchonidin sulphate*.

**Cinchonidin.**  $C_{20}H_{24}N_2O$ , or  $C_{10}H_{12}N_2O$ . A substance obtained from various cinchona barks. On spontaneous evaporation of the alcoholic solution it forms large brilliant prisms. These melt at 206.5° C. (391° F.) It dissolves easily in chloroform. Its solution in dilute sulphuric acid presents no fluorescence, and the ammoniated alcoholic solution is not coloured green with chlorine. It is powerfully levorotatory.

**C. hydrobro'mate.** Recommended for hypodermic injection on account of its unirritating properties.

**C. sulphate.**  $2(C_{20}H_{24}N_2O) \cdot H_2SO_4 \cdot 4H_2O$ . Obtained by concentrating the mother-liquor, after the crystallisation of the sulphate of quinine, in thin quadrangular silky needles; soluble

in alcohol and in 100 parts of water, insoluble in ether. Has the same action as, but weaker than, quinine.

**Cinchonin.**  $C_{20}H_{21}N_2O$ . A substance commonly associated with quinine in various cinchona barks. It appears in the form of anhydrous white prisms, which begin to sublime at  $220^\circ C.$  ( $428^\circ F.$ ), and melt and carbonise at  $210^\circ$ — $250^\circ C.$  ( $464^\circ F.$ — $482^\circ F.$ ). At  $10^\circ C.$  it dissolves in 3810 parts of water, and consequently has only a feebly bitter taste. Its solutions have a powerful dextro-rotatory power over light.

**C. hydrochlorate.**  $C_{20}H_{21}N_2O \cdot HCl$ .  $2H_2O$ . Obtained by treating an excess of cinchonin with dilute hydrochloric acid. It crystallises in white needles, soluble in 24 parts of water, and in 1.3 parts of alcohol; it is not fluorescent in an acid solution. Used as an antiperiodic.

**C. kinate.** See *C. quinate*.

**C. quinate.** Bitter, astringent, soluble in water and alcohol; crystallises with difficulty. Used as an antiperiodic.

**C. sulphate.** See *Cinchonia sulphas*.

**Cinchoninum.** G. Ph. The same as *Cinchonin*.

**C. sulphuricum.** G. Ph. (*G. schwefelsaures Cinchonin*.) Same as *Cinchonia sulphas*.

**Cinchonism.** A disordered condition of the system, due to the excessive use of quinine, characterised by pallor, yellowness of conjunctivæ, trembling of the limbs, singing in the ears, and headache.

**Cinchonium.** Same as *Cinchonin*.

**C. chlorhydricum.** The same as *C. muraticum*.

**C. muraticum.** (*G. salzsaure Cinchonin*.) Same as *Cinchonin hydrochlorate*.

**Cinchonology.** (*Cinchona*; λόγος, a discourse.) A treatise, or discourse, devoted to the subject of the varieties, composition, and cultivation of the cinchona barks.

**Cinchonometry.** (*Cinchona*; μέτρον, a measure.) The mode of determining the proportionate amount of alkaloids in cinchona bark.

**Cinchotannic acid.** This is precipitated from a decoction of bark by acetate of lead, after the decoction has been freed from cinchona red by means of magnesia. The cinchotannate of lead, decomposed by  $H_2S$  and evaporated, yields an amorphous hygroscopic substance, readily soluble in water, alcohol, and ether.

**Cincho'tenin.**  $C_{15}H_{20}N_2O_3 + 3H_2O$ . A substance obtained by the action of 19 parts of potassium permanganate on cinchonin sulphate dissolved in a little sulphuric acid. It forms brilliant white crystals, dissolves with difficulty in water and alcohol, easily in acids and dilute alkalis. Its solutions have a dextro-rotatory power on polarised light.

**Cinchotin.** The same as *Quinidin*. Also, a name proposed by Strauss for *Hydrocinchonin*.

**Cincho'vatin.** The same as *Arcin*, which again is identical with *Cinchonidin*.

**Cinchovin.** The same as *Cinchonidin*.

**Cincia'no.** Italy; between Florence and Sienna. A mineral water, containing small quantities of sodium and magnesium sulphates and carbonates, with a little iron. Used as a tonic in relaxations of the various mucous membranes.

**Cincin'nal.** (*L. cincinnus*, a curl.) In

Botany, a term applied to a scorpoid cyme, the secondary axes of which are uniparous.

**Cincinnallis.** (*L. cincinnus*, a curl. *G. lockhartig, gekockt, gekrauselt*.) Curled, or curly, folded, rolled up.

**Cincinulus.** (*L. dim. of cincinnus*.) A small lock, or curl, of hair.

**Cincin'us.** (*L. cincinnus*, akin to *κίκινος*, a ringlet. *G. Wickel*.) A curl of hair. Applied to the hair on the temples.

In Botany, the name of a uniparous scorpoid cyme, as seen in the forget-me-not.

**Cinclides.** (*Κίγκλεις*, a latticed gate.) Small openings found in the Actinozoa, through which the craspeda protrude.

**Cinclisis.** The same as *Cinclismus*.

**Cinclismus.** (*Κίγκλισμος*, a quick jerking movement. *F. cinclise, cinclisme*.) Old term for repeated motion of the eyelids.

Also, the rapid movement of the thorax in dyspnoea.

**Cinclus.** (*Κίγκλος*.) The dipper, one of the Turdidae.

**Cinctipes.** (*L. cinctus*, surrounded; *pes*, a foot.) Having feet surrounded by a coloured ring.

**Cine.** A synonym of *Ruscus aculeatus*.

**Cinebene.** Same as *Cinebue*.

**Cinefaction.** (*L. cinefacio*, to reduce to ashes. *G. Einascherung, Verbrennung*.) Burning to a cinder; incineration.

**Cineficatum.** (*L. cineficatus*, made into ashes.) The same as *Calcined*.

**Cinema.** (*Κίνημα*, from *κινέω*, to move.) Motion.

**Cinenchyma.** (*Κινέω*, to move; *εγγχυμα*, that which is poured in.) Laticiferous tissue, composed of anastomosing vessels conveying latex. See *Laticiferous vessels*.

**Cinenchymatous.** (Same etymon.) Having laticiferous vessels.

**Cinene.** A hydrocarbon, probably with the composition  $C_{10}H_{16}$ , obtained from wormseed, *Semen cinæ*.

**Cinera'ceous.** (*L. cinis*, ash. *G. aschenahntlich, aschgrau*.) Of an ash-grey colour.

**Cinera'ria.** (*L. cinis*, ashes. *G. Aschenpflanz*.) A Genus of the Nat. Order *Compositæ*.

**C. corymbosa.** Mönck. The *Senectis annua*.

**C. heterophylla.** Pursk. (*"Ετερος*, other; *φύλλον*, a leaf.) The *Senecio tomentosus*.

**C. maritima.** (*L. maritimus*. *F. jacobæ maritime, armoise blanche*.) A plant growing on the coasts of the Mediterranean. It is reputed to be antihysterical, diuretic, deobstruent, and emmenagogue. It is supposed to be the *Achæva abai* of ancient writers.

Also called *Senecio cineraria*.

**C. sibirica.** Linn. The *Ligularia sibirica*.

**Cinera'rium.** (*L. cinis*, ashes.) Name for the ash-pit of a furnace.

**Cinerascent.** (*L. cinis*, ashes. *G. hell aschgrau*.) Of an ash-grey colour.

**Cinera'tion.** (*L. cinratio*, a reducing to ashes. *G. Einascherung*.) The reduction of an organic body to ashes.

**Cinerea.** (*L. cinereus*.) Ash-coloured.

**C. gelatinosa substantia.** (*L. substantia, substance*.) The grey matter of the nervous organs.

**Cinereo-albidus.** (L. *cinereus*; *albus*, white. G. *weisslichgrau*.) Greyish white.

**C.-argenteus.** (L. *argenteus*, silvery. G. *silbergrau*.) Silvery white.

**C.-flavescens.** (L. *flavescens*, gold-coloured. G. *gelblichgrau*.) Yellowish grey.

**C.-fuscus.** (L. *fuscus*, brown. G. *grau-braun*.) Greyish brown.

**C.-niger.** (L. *niger*, black. G. *grauschwarz*.) Greyish black.

**C.-tomentosus.** (L. *tomentum*, a stuffing for couches. G. *grauflüzig*.) Hairy grey.

**Cinereous.** (L. *cinis*, the ash remaining after burning any substance. F. *cendré*; G. *aschgrau*.) Of, or belonging to, ashes; ash-like. Of an ash colour.

**Cineres.** (L. *cinis*, ash. F. *cendres*; G. *Asche*.) A name for impure potash; ashes.

**C. clavellati.** (L. *clavus*, a nail.) Term for the wood ashes from which potash is prepared, because the wood has been cut into slips before burning, or because the ashes were sharpened like nails owing to the separation of the insoluble parts.

**C. rusfici.** The *Potassii carbonas impura*. Potash.

**Cineritious.** (L. *cinis*, the ash remaining after burning any substance. F. *cendré*; G. *aschgrau*.) Of, or belonging to, or resembling, ashes. Of the appearance, or colour, of ashes.

**C. substance.** The grey cortical substance of the brain.

**C. tubercle.** The *Tuber cinereum*.

**Cineritium.** (L. *cinis*, ashes.) Old term for a eupel, because vegetables or bones are reduced to ashes in it, or because it was often made of vegetable or bone ash. (Ruland.)

**Cinerula.** (Dim. L. *cinis*, ashes.) Term for the dross of burnt metals, not unlike to ashes; formerly applied to the substance otherwise called spodium.

**Cine'sia.** (Κίνησις. F. *cinesie*.) The art, according to Dally, of bodily exercises and curative movements in their relation to the natural movements of the human body.

**Cinesialgia.** (Κίνησις. motion; ἄλγος, pain. F. *cinesalgie*.) A term applied by Gubler to the state of a muscle, the contractility of which cannot be put into action without exciting in it a pain often severe and always sufficient to prevent the free use of the muscle.

According to him, the term includes all painful muscular conditions not included in the term myalgia, which is to be restricted to rheumatoid conditions.

**Cinesiolog'y.** (Κίνησις; λόγος, an account.) A term used by Dally to denote the educational, hygienic, or therapeutic applications of the artificial or natural movements of the organism, thus including gymnastics and calisthenics, the movement cure, and shampooing.

**Cinesiometric.** (Κίνησις; μέτρον, a measure.) Relating to the measurement of motion.

**C. sense.** (G. *Sinn der Bewegungsreaction*.) The seventh of the sixteen senses, according to Reclamier, being the sense by which movement is recognised.

**Cinesion'osus.** (Κίνησις; νόσος, a disease.) A disease or disorder of the organs of motion.

**Cinesip'athy.** (Κίνησις; πάθος, disease.) The mode of cure of disease by movements. See *Cinesiologia*.

**Cinesither'apy.** (Κίνησις; θεραπεία, medical treatment. F. *cinesithérapie*.) Dally's term for the cure of disease by movements.

**Cineth'mics.** (Κίνησις, to move.) The science of motion.

**Cinetic.** (Κίνητικός, for moving.) Having reference to motion.

**Cinética.** (Κίνητικός, for moving.) An Order of Mason Good's Class *Neurotica*, being diseases affecting the muscles.

Also, a term applied to agents affecting the voluntary and reflex spinal movement. Some affect the tone, others the irritability of the muscles, some increase, others diminish, the influence of the will over the muscles; while some exalt, others depress, the reflex activity of the spinal cord.

**Cinetus.** (Κίνητός, movable.) An old name for the diaphragm. Used by Bartholin, *Anat.* ii, 3.

**Cingil'lum.** (L. dim. of *cingulum*, a girdle.) A small girdle or band.

**Cingula.** (L. *cingulum*, a girdle.) The same as *Cingulum*.

**Cingularia.** (L. *cingulum*, a girdle.) A name for a plant supposed to be the *Lycopodium selago* of Linnaeus, because it grows in that shape.

**Cingulate.** (L. *cingulum*. G. *gürtelartig*.) Having a belt or band.

**Cingulum.** (L. *cingulum*, a girdle; from *cingo*, to gird around. G. *Gürtel*.) A girdle or cineture. A belly band; a broad quilted belt to keep the bowels in position in those who are fat and of flabby habit of body.

The waist of the body, being the part to which a girdle is applied.

Also (G. *Züringe*), a band of white nerve fibres running along the lateral border of the corpus callosum to the median side of the corpus medullare of the hemisphere; anteriorly bending round at the side of the genu of the corpus callosum, it enters the frontal lobes, and posteriorly lying at the side of the posterior genu of the corpus callosum it enters the occipital lobule, and, uniting with the medullary substance of the lobulus cinatus, passes downwards and forwards into the temporal lobe, terminating in the gyrus hippocampi. Its inferior median fasciculus is the stria longitudinalis corporis callosi.

Also, a band of dental substance surrounding the base of the crown of the tooth in some animals; it may develop accessory cusps.

Also, a synonym of *Clitellum*.

Also (G. *Gürtelflechte*), a synonym of *Herpes zoster*, from its usual shape.

**C. abdom'inis musculo'so aponeuro'ticum.** (L. *abdomen*, the belly; *musculus*, a muscle; *aponeurosis*.) The muscles and fasciæ forming the anterior walls of the abdomen.

**C. Hilda'ni.** (Hildanus. F. *ceinture de Hildane*.) A leathern girdle formerly employed in the reduction of dislocations.

**C. mercuria'le.** Old term for a mercurial girdle invented for the purpose of exciting salivation, described by Hartmannus. One form is: Mercury 3 drs., shaken with 2 oz. of lemon juice till the globules disappear, then separate the juice, and mix with the extinguished half the white of an egg, gum dragon 20 grs., and spread the whole on a bolt of flannel.

**C. pudicit'iaë.** (L. *pudicitia*, chastity.) The hymen.

**C. Sancti Johan'nis.** (L. *Sanctus*,

Saint; *Johannes*, John.) A name for the *Artemisia vulgaris*. (Quincy.)

**C. sapientiae.** (*L. sapientia*, wisdom.) The same as *C. mercuriale*.

**C. stultitiae.** (*L. stultitia*, folly.) The same as *C. mercuriale*.

**Cinin.** Same as *Santonin*.

**Cinninum.** A synonym of *Santoninum*.

**Cinis.** (*Kóvis*, dust. *F. cendre*; *G. Asche*.) The ash which remains after burning anything. The oxides, stable on exposure to heat, obtained by burning the metals, were formerly named *Cinis*. Hence *Cinis antimoni*, *C. joris*, *C. stanni*, and *C. zinci*.

**C. antimo'nti.** Antimony ash. An ash-grey powder produced by heating sulphuret of antimony to redness in contact with the air.

**C. fa'cum.** (*L. fixa*, lees.) Commercial potash obtained from the ashes of lees of wine.

**C. infecto'ria.** (*L. infectorius*, that serves for dyeing.) Same as *C. fa'cum*.

**C. os'sium.** (*L. os*, a bone.) The *Ossa usta alba*, Belg. Ph.

**Cinnabar.** (*Κιννάβαρι*, a pigment obtained from dragon's blood. *L. cinnabaris*; *F. cinabre*; *G. Zinnober*, ro'hes Schwefelquecksilber.) A term for the red sulphuret of mercury or mercuric sulphide, as it is met with in nature, from its similarity of colour.

**C., factitious.** (*L. factitius*, made by art. *F. vermillon*; *G. künstlicher Zinnober*.) Term for vermillion when prepared artificially.

**C. of antimony.** (*F. cinabre d'antimoine*; *G. Spiessglaszinnober*.) Name for cinnabar, or sulphuret of antimony, which was formed during an old process for making butter of antimony, in which mercury was used.

**Cinnabarine.** (*Cinnabar. F. cinnabarin*; *G. Zinnoberroth*.) Of, or belonging to, cinnabar; of the colour or appearance of cinnabar, and the light red of the *Papaver orientale*; a yellowish scarlet.

**Cinnabar'is.** Same as *Cinnabar*.

Also, a name of the madder, *Rubia tinctorum*, from its colour.

**C. factitia.** See *Cinnabar, factitious*.

**C. Græco'rum.** (*L. Græcus*, a Greek.) Old term for the *Sanguis draconis*, dragon's blood. (Quincy.)

**C. minera'lis.** (*L. mineralis*, mineral. *G. Bergzinnober*.) Native or mineral cinnabar.

**C. nat'iva.** (*L. nativus*, natural. *G. Bergzinnober*.) Native or mineral cinnabar.

**Cinnab'rion her'ba.** (*Cinnabar; herba*, a herb.) A name of madder, *Rubia tinctorum*, from the colour of the dye which it furnishes.

**Cinnamal'dehyde.** Same as *Cinnamic aldehyde*.

**Cinnamē'in.**  $C_{16}H_{14}O_2$ . A brownish aromatic liquid, sp. gr. 1.1, obtained by the evaporation of a solution of balsam of Peru in bisulphide of carbon. Also called benzyl cinnamate.

**Cinnamene.**  $C_8H_8$ . A substance identical with styrol, obtained by the dry distillation of cinnamic acid with baryta.

**Cinnamic acid.**  $C_9H_8O_2$ . (*G. Zimmtsaure*.) This acid is contained in Siam benzoin, balsams of Peru and Tolu, and may be obtained from storax by boiling it in water with sodium carbonate and lime, which yield sodium cinnamate, easily decomposable by acids. The acid is inodorous, has an acrid taste, fuses at 129° C.

(264° F.), at a dull red heat is resolved into carbonic acid and styrol, and dissolves easily in ether, alcohol, and hot water, sparingly in cold water. It crystallises in shining colourless prisms.

**C. al'dehyde.**  $C_9H_8O$ . A colourless heavy oil which forms the greater part of the oil of cinnamon.

**Cinnam'icyl.**  $C_9H_8O$ . The supposed biatomic radical of cinnamic acid.

**Cinnamoden'dron.** (*Κινναμόν*, cinnamon; *δένδρον*, a tree.) A Genus of the Nat. Order *Canellaceæ*, or of the Tribe *Canellæ*, Nat. Order *Magnoliaceæ*. Trees, inhabiting tropical America, with alternate exstipulate leaves.

**C. axillare**, Mart. (*L. axillaris*, from *axis*, an axle-tree.) A tree growing in Brazil, yielding a bark of strong and aromatic flavour, named paratado (good for everything) aromatic by the Brazilians, who employ it in the treatment of many diseases. The pieces are from two to six inches in length, one or two inches broad, and about one third of an inch thick, flat, hard, brown, and presenting a granular fracture.

**C. cortico'sum.** Miers. (*L. cortex*, bark.) A tree, inhabiting Jamaica, supplying a bark which is often substituted and sold for true winter's bark.

**Cinnamol.** A synonym of *Cinnamene*.

**Cinnamomeous.** (*L. cinnamomum*, cinnamon. *F. cannelle*; *G. zimmitfarbig*.) Of, or belonging to, cinnamon; of the colour or quality of cinnamon.

**Cinnamomi cortex.** B. Ph. (*L. cortex*, bark. *F. cannelle de Ceylan*; *G. Zimmt, Zeylonzimmt, Kanel, feiner Zimmt*.) Ceylon cinnamon; the inner bark of the young shoots of *Cinnamomum zeylanicum*, gathered in May and June and in November and December after the wet season; the bark of the smaller shoots is placed within that which has been stripped from the larger. The rolls are then dried in the sun. They are of a bright brown colour, brittle, fragrant, and of a saccharine, pungent, and aromatic taste. The quills consist chiefly of the endophloem. On section there appear under the microscope one to three rows of thick-walled cells, ten rows of parenchymatous thin-walled cells, and internally other thin-walled cells intersected by medullary rays. Ceylon cinnamon contains ethereal oil 3.77, resin soluble in ether 7.4, tannic acid 2.06, starch 2.82, mucus 3.7, ashes 4.96 per cent., and contains besides sugar and mannite. It is chiefly used as a spice, but also as a cordial and stimulant. It is often adulterated with cassia, and, when powdered, with baked wheat flour or baked starch.

Cinnamon is mentioned in the Mosaic writings, and in many ancient authors, as by Herodotus, Galen, and Dioscorides.

**C. chinensis cortex.** (*L. chinensis*, Chinese; *cortex*, bark. *F. cannelle de chine*; *G. Zimmtkassie, Chinesischer Zimmt*.) Chinese cinnamon; also called *Cassia bark*.

**Cinnamomic acid.** Same as *Cinnamic acid*.

**Cinnamo'min.** The same as *Mannite*.

**Cinnamomum.** (*Κινναμόμον*, cinnamon.) A Genus of the Nat. Order *Lauraceæ*.

Also, cinnamon, the pharmacopoeial name, U.S.A., of both the Ceylon and the Chinese cinnamon. See *Cinnamomi cortex* and *C. chinensis cortex*.

**C. acu'tum.** (*L. acutus*, pointed.) Ceylon cinnamon, the bark of *C. zeylanicum*.

# CINNAMON.

**C. al'bum.** (L. *albus*, white.) Same as *Canelle albe cortex*.

**C. aromaticum,** Ch. Nees. (L. *aromaticus*, fragrant.) The same as *C. cassia*, Blume.

**C. Burman'ni,** Blume. A tree supposed to be the source of part of the supply of Sumatra and Java cassia bark.

**C. cam'phora,** Nees. The *Camphora officinarum*.

**C. cas'sia,** Blume. (G. *Zimmtkassie*, brauner Kancel.) A tree growing naturally in China and Cochin China and cultivated elsewhere. The bark of the larger branches yields cassia bark and cassia buds.

**C. Ceylonen'se.** (L. *Ceylon*, the island of that name.) The same as *Cinnamomi cortex*.

**C. Chinen'se.** Chinese cinnamon, or *Cassia bark*.

**C. Culil'awan,** Blume. Hab. Indian islands. From this plant is obtained the Indian clove bark, so named on account of its odour. The bark is in large flat pieces.

**C. eucalyptoi'des,** Nees. (*Eucalyptus*, the plant of that name; *eidōs*, likeness.) The *C. nitidum*.

**C. glandulif'erum,** Meissner. (L. *glandula*, a little acorn; *fero*, to bear.) A species which supplies the sassafras of Nepal.

**C. In'dicum.** (L. *indicus*, Indian.) The same as *C. chinense*.

**C. in'ers,** Reinw. (L. *iners*, inactive.) A variable species growing in Continental India, Ceylon, Java, and Sumatra. Believed to yield the cassia bark or wild cinnamon of Southern India. The seeds and dried buds are used in diarrhoea, dysentery, and coughs, and the bark as a condiment. Probably a form of *C. zeylanicum*.

**C. Javan'icum,** Blume. (L. *Java*, the island of that name.) The tree producing true Sintoec bark.

**C. Ki'amis,** Nees. The plant producing *Cortex Massoy*.

**C. Loure'rii,** Nees. A tree inhabiting Cochin China. It yields in part the cassia buds of commerce.

**C. Magellan'icum.** (L. *Magellan*, a celebrated navigator.) The same as *Cortex Winteranus*.

**C. malabath'rum,** Batka. Said to supply *Cortex malabathri*.

**C. nitidum,** Hooker. (L. *nitidus*, shining.) The plant yielding part of the *Folia malabathri* of India. Probably the same as *C. iners*.

**C. obtusifolium,** Nees. (L. *obtus*, blunt; *folium*, a leaf.) A tree growing at 1000 to 4000 feet above the sea level in the Khasya Mountains in Eastern Bengal. It yields part of the supply of cassia. Probably a form of *C. zeylanicum*.

**C. parthenox'ylon,** Meissner. (Hap-  
θύων, a virgin; ἔθλον, wood.) Hab. Penang, Sumatra, Java. Fruit yields an oil which is used in rheumatism; root used in infusion as sassafras root.

**C. pauciflorum,** Nees. (L. *paucus*, few; *flor*, flower.) A tree growing 1000 to 4000 feet above the sea level in the Khasya Mountains in Eastern Bengal. It yields part of the supply of cassia bark.

**C. perpetuoflo'rens,** Burmann. (L. *perpetuus*, continuous; *floreo*, to bloom.) A species said to be one of those furnishing cassia buds.

**C. Ranwolf'ii,** Blume. Probably the same as *C. iners*.

**C. ru'brum,** Blume. (L. *ruber*, red.) The plant producing the *Cortex Culilawanii ruber*.

**C. sinen'se.** (Mod. L. *suensis*, from China.) Chinese cinnamon, the same as *Cassia bark*.

**C. Sin'toc,** Blume. A plant yielding a bark smelling of cloves, and analogous in its properties to the Culilawan bark.

**C. sylvestre america'num.** (L. *sylvestris*, belonging to a wood.) The *Nectandra cinnamoides*.

**C. Tam'ala,** Nees. (G. *Mutterzimmt*.) A tree growing in the East Indies. It yields part of the supply of *Folia* and *Cortex malabathri*, and of *Cassia bark*.

**C. ve'rum.** (L. *verus*, true.) The Ceylon cinnamon.

**C. xanthoneur'on,** Blume. (Ζάθος, yellow; νῆρον, a nerve.) The plant producing the *Cortex Culilawanii papuanus*.

**C. zeylan'icum,** Breyne. (F. *camellier*.) A tree, from 20 to 30 feet in height, inhabiting Ceylon, and cultivated in Brazil and some of the West India islands. Yields cinnamon. See *Cinnamomi cortex*.

**Cin'namon.** (Heb. *giannimon*, cinnamon.) See *Cinnamomi cortex*.

**C. bark.** See *Cinnamomi cortex*.

**C., Ceylon'.** See *Cinnamomi cortex*.

**C., Chine'se.** The produce of various species of cinnamon growing in the provinces of Kwangsi and Kweichan in Southern China. See *Cassia bark*.

**C. chips.** The smaller fragments or trimmings obtained in stripping the shoots of the cinnamon tree.

**C., In'dian.** Same as *C., Chinese*.

**C. leaf, oil of.** A brown, viscid, essential oil, of clove-like odour, sometimes exported from Ceylon. Sp. gr. 1.053. It is a mixture of eugenic acid, with a neutral hydrocarbon, having a formula  $C_{10}H_{16}$ , and a little benzoic acid.

**C., Malabar.** (G. *Holz Kassie*, Malabar Zimmt.) Cinnamon obtained from a variety of *Cinnamomum zeylanicum* growing on the Malabar coast of Southern India. The pieces are simple, not rolled one within the other, and are characterised by the large quantity of mucus they contain.

**C. of San'ta Fé.** The bark of *Nectandra cinnamoides*.

**C. of the Isle of France.** The bark of *Oreodaphne cupularis*, growing in the Mauritius.

**C., oil of.** A golden yellow liquid, sp. gr. 1.035, distilled from cinnamon bark. It has a strong odour of cinnamon, a sweet and aromatic, but burning taste, and slight levogyratory power on polarised light. It is composed chiefly of cinnamic aldehyde,  $C_9H_8O$ , and a variable proportion of hydrocarbons. At low temperatures it deposits camphor. It easily absorbs oxygen.

**C. root, oil of.** A yellow liquid, lighter than water, having a mixed odour of cinnamon and camphor and a strong camphoraceous taste.

**C. su'et.** A concrete oil probably obtained from the fruit of *Cinnamomum zeylanicum*.

**C., Tellicher'y.** Cinnamon of exceedingly good quality from the district of Tellichery in Southern India.

**C., Tinnevelly.** Cinnamon obtained from the district of Tinnevely in Southern India.

**C. trec.** (F. *cannellier*; G. *Zimmtbaum*.) The *Cinnamomum zeylanicum*.

**C. trec, wild.** The *Canella alba*.

**C. wood.** A synonym of *Sassafras wood*.

**Cinnamos'ma.** (Κινναμω, cinnamon; *κίωμ*, odour.) A Genus of the Nat. Order *Canelaceæ*, or of the Tribe *Canelleæ*, Nat. Order *Magnoliaceæ*.

**C. fragrans**, Baillon. (L. *fragrans*, sweet scented.) A species having the properties of *canella bark*.

**Cin'namoyl.**  $C_9H_7$ . A monatomic radical. (Weltzien.)

**Cin'namyl.**  $C_9H_7O$ . The radical supposed to exist in cinnamic acid. (Fehling.)

**C. alcohol.**  $C_{14}H_{10}O_2$ . (G. *Zimmtalkohol*.) Same as *Cinnyl alcohol*.

**Cinnamyl'ic cin'namate.** The same as *Styracin*.

**Cin'nyl alcohol.**  $C_9H_{10}O$ . A compound obtained by heating *styracin* with caustic alkalis. It crystallises in silky needles, which are sweet to the taste and pleasant to the smell; it boils at  $33^\circ C$ . ( $91.4^\circ F$ .)

Also, called *cinnamyl alcohol*.

**C. cin'namate.** Same as *Styracin*.

**C. ether.** (G. *Zimmtäther*.) ( $C_9H_9O$ ). An oily fluid heavier than water, and not soluble in it, obtained by heating *cinnyl alcohol* with anhydrous boric acid.

**C. oxide.** The same as *C. ether*.

**Cinon'osi.** (Κινίω, to move; νόσος, a disease.) Diseases affecting muscular motion.

**Cinon'osus.** (Κινίω, to move; νόσος, disease. G. *Krankheit der Bewegung*.) A disease affecting muscular motion.

**Cin'oper.** The same as *Cinnabar*.

**Cinoplane'sis.** (Κινίω, to move; πλάνησις, a making to wander. F. *cinoplantise*.) Irregularity of motion. An anomaly or aberration of muscular motion.

**Cinq racines.** (F. *cinq*, five; *racine*, a root.) In the French Codex this name is applied to the dried roots of asparagus, wild celery, fennel, parsley, and butcher's broom. Used to make an aperient syrup.

**Cinqu'efoil.** (F. *cinq*, five; *feuille*, a leaf. F. *quintefeuille*; G. *Potentilla*.) The species of the Genus *Potentilla*.

**C., common.** The *Potentilla canadensis*, Linn.

**C., creep'ing.** The *Potentilla reptans*, Linn.

**C., hoar'y.** The *Potentilla argentea*.

**C., marsh.** The *Comarum palustre*, or *Potentilla comara*.

**C., Nor'way.** The *Potentilla norvegica*.

**C., shrub'by.** The *Potentilla fruticosa*, Linn.

**C., sil'very.** The *Potentilla argentea*, Linn.

**Cinzil'la.** The same as *Zona*.

**C'ion.** (Κίω, a column. F. *lonette*; G. *Zapfen*.) Old name for the *uvula*.

Also, the septum between the nostrils.

**Cio'nis.** (Dim. κίω, a column. F. *cionis*.) The same as *Cion*.

Also, an old term for an enlargement and painful swelling of the *uvula*. (Quincy.)

**Cionit'is.** (Κίω, *uvula*. F. *cionite*; G. *Entzündung des Zapfchens*, *Zapfchenbräune*.) Inflammation of the *uvula*.

**Cionocra'nia.** (Κίω, κρᾶνιον, the

skull.) A Suborder of the Order *Sauria* or *Lucertilia*, which includes the British lizards, the scincoids, iguanas, and agamas. They are procelian lizards, with a columella, united pterygoid quadrate horns, and an interorbital septum. The parietals are fused and the frontals separate. They have usually eyelids and are scaly. It includes the *Cyclosaura* and *Geissosaura* of some authors.

**Cionopt'osis.** (Κίω; πτώσις, a falling down. G. *Zapfchenvorfall*.) A dropping down or elongation of the *uvula*.

**Cionorrhaph'ia.** (Κίω; ράφη, a seam. F. *cionorrhaphie*; G. *Zapfchenmath*.) The same as *Staphylo'rrhaphy*.

**Cio'notome.** (Κίω, *uvula*; τμήνω, to cut.) Bent scissors, adapted for the removal of the *uvula*.

**Cionot'omy.** (Κίω, *uvula*; τομή, section.) Excision of the *uvula* when hypertrophied or elongated.

**Cipi'pa.** (F. *moussache*.) The Brazilian name for *tapiaoca*.

**Cipol'io.** Italy; in the Valley of Nivole, on the right bank of the Salsero. A strong salt water, temperature  $26^\circ C$ . ( $78.8^\circ F$ .), containing magnesium sulphate 12.5 grains, sodium chloride 166, magnesium chloride 8, potassium iodide .799, with some calcium and magnesium carbonate, in 16 ounces.

**Circæ'a.** (Κίρκη, *Circæ*, the enchantress; because supposed to have been used by her; or, according to Lemony, because its fruit, which is bristly, adheres to the clothes and attracts men, as the *Circæ* of the poets attracted them by her enchantments. G. *Hexenkraut*.) A Genus of the Nat. Order *Onagraceæ*.

**C. lutetia'na.** Linn. (L. *Lutetia*, Paris. F. *herbe de Saint Etienne*; G. *Hexenkraut*.) The enchantress's nightshade. Formerly used as a resolvent, now fallen into disuse.

**C. ovalifo'lia.** Gray. (Mod. L. *ovalis*, egg-shaped; *folium*, a leaf.) The *C. lutetiana*.

**C. pubes'cens.** Polil. (L. *pubesce*, to put on down.) The *C. lutetiana*.

**C. vulga'ris.** Mönch. (L. *vulgaris*, common.) The *C. lutetiana*.

**Circæa'ceæ.** A synonym of *Onagraceæ*.

**Circell'is.** (L. dim. of *circulus*, a ring.) Small circles or rings.

**C. veno'si foram'inum intervertebra'lium.** (L. *venosus*, full of veins; *foramen*, an opening; *inter*, between; *vertebra*, a spine bone.) Small venous circles surrounding the inner orifice of the intervertebral foramina.

**C. veno'si spina'les.** (L. *venosus*; *spinalis*, belonging to the backbone.) A plexus formed in the vertebral canal, opposite each vertebra, by communicating branches between the anterior and posterior spinal veins.

**C. veno'si vertebra'les.** (L. *venosus*; *vertebra*.) The same as *C. venosi spinales*.

**Circell'us.** (L. dim. of *circulus*, a ring.) A ring or small circle.

See also *Circelli*.

**C. veno'sus hypoglos'si.** (L. *venosus*; ὑπό, beneath; γλῶσσα, the tongue.) A small plexus of veins surrounding the hypoglossal nerve in the anterior condyloid foramen. It communicates with the occipital sinus and the sinus circularis foraminis magni on the one hand, and with the internal jugular vein or termination of the sinus petrosus inferior on the other.

**Cir'cinal.** (L. *circine*, to make round. G.

*schneckenförmig, eingerollt.*) Rolled up from the tip into a coil.

**Cir'cinate.** (L. *circino*, to make round. G. *Kreisrund, schneckenförmig, eingerollt.*) Measured or compassed about: rounded; involute from the apex into a coil, as in the young fronds of ferns, sometimes coiled into a ring only.

**C. prefoliation.** (L. *præ*, before; *folium*, a leaf. G. *schneckenförmige Knospenlage.*) The arrangement of the leaves or fronds in an involute manner, like a bishop's crosier.

**C. verna'tion.** (L. *vernus*, belonging to the spring.) The same as *C. prefoliation*.

**Circin'us.** A term for the hair on the temples. Probably a misspelling of *Cincinnus*. See *Capillus*.

**Circinus.** (L. *circinus*, a circle.) Herpes zoster, from its shape.

**Circium arven'se.** A name for the *Serratula arvensis*.

**Circle.** (L. *circulus*, a ring. F. *cercle*; G. *Zirkel*.) A ring. A figure entirely bounded by one line, having all the right lines that can be drawn from its central point to any part of it equal. The periphery of every circle is supposed to be divided into 360 equal parts, called degrees.

**C., a'rea of.** The area of a circle is found by multiplying the square of the diameter by  $\frac{\pi}{4}$ .

**C., cil'iary.** See *Ciliary circle*.

**C., circum'ference of.** The circumference of a circle is found by multiplying the diameter by  $\pi$ .

**C., diam'eter of.** The diameter of a circle is equal to the circumference divided by  $\pi$ .

**C., galvan'ic.** See *Galvanic circle*.

**C. of diffu'sion.** (L. *diffundo*, to diffuse.) The confused image cast by a cone of monocentric light, which has passed through a convex lens, in front of or behind the true focus of that lens.

**C. of disper'sion.** (L. *dispergo*, to disperse.) The halo of colours which surrounds the image formed by a lens, in consequence of the unequal refrangibility of the different colours.

**C. of Haller.** See *Circulus callosus Halleri*.

**C. of sensibi'lity.** (L. *sensibilis*, that can be perceived by the senses.) The area of distribution of one nerve fibre, being the area within which the separated points of a pair of compasses are incapable of being distinguished as two.

**C. of Willis.** See *Circulus arteriosus Willisii*.

**C., po'lar, low'er.** (L. *polus*, the end of an axis.) A term applied by Barnes to an imaginary latitudinal circle at about one fourth of the height of the gravid uterus, which divides the cervical from the equatorial zone.

**C., po'lar, up'per.** (L. *polus*.) A term applied by Barnes to an imaginary latitudinal circle at about three fourths of the height of the gravid uterus, which divides the fundal from the equatorial zone.

**C., volta'ic.** See *Voltaic circle*.

**Circ'let.** (L. *circellus*, a little circle.) A small circle. Applied to such things as the circular row of hooks on the head of *Tenia solium*.

**Circ'cocele.** A corruption of *Circocèle*.

**Circ'cuit.** (F. *circuit*, from L. *circuitus*, a going about; from *circum*, around; and *eo*, to go.) The space enclosed in a circle, an orbit, a path.

Also, the period of a disease.

Also, the course traversed by an electric current.

**Cir'cular.** (L. *circulus*, a ring. F. *circulaire*; I. *circolare*; G. *kreisförmig, zirkelrund*.) Ring-shaped.

**C. amputa'tion.** See *Amputation, circular method of*.

**C. ban'dage.** See *Bandage, circular*.

**C. cau'tery.** See under *Cautery, actual*.

**C. crys'tals.** A term applied to the groups of radiating needles which form when solutions of oxalurate of ammonia, salicine, and other substances are evaporated in a thin layer on a microscopic slide. The groups attain a circular form, determined in size by contact with a neighbouring group; they are beautiful objects under the micropolariscope.

**C. insan'ity.** See *Insanity, circular*.

**C. mag'netism.** The action of a magnetic current which causes the connecting wire of a galvanic chain to rotate.

**C. mus'cle of Santor'ini.** See *Santorini, circular muscle of*.

**C. polarisa'tion.** (G. *Kreispolarisierung*.) See *Polarisation, circular*.

**C. si'nus.** See *Sinus, circular*.

**C. si'nus of Rid'ley.** A synonym of the *C. sinus*.

**Circu'lated.** (L. *circulatio*, a going round.) Moving in a circle.

**C. albu'men.** (G. *circulirendes Eiweiss, vorraths Eiweiss*.) A term applied by Voit to albumen absorbed from the intestine and circulating in a loosely-combined condition in the body generally. He regards it as a kind of store which, in the event of hunger, is used up before the tissues are oxidised.

**Circula'tion.** (L. *circulo*, to encircle, or to circulate. F. *circulation*; G. *Kreislauf, Umlauf*.) The act or process of circulating; especially applied to movement of the blood and other fluids in or around the living body.

In Chemistry, applied to a form of distillation in which the first distilled vapour returns to the still to be again distilled.

**C., allan'toid.** (*Allantois*.) The early stage of fetal circulation soon after the fifth week in the human foetus, when the umbilical vessels developed in the allantois are taking the place of the omphalo-mesenteric vessels of the umbilical vesicle.

**C., arte'rial.** (L. *arteria*, an artery.) The course pursued by the blood in traversing the arteries, of which there are two sets: those connected with the left ventricle through the aorta, and conducting arterialed or bright blood to the system at large; and those connected with the right ventricle through the pulmonary artery, and conducting venous blood to the lungs. The former constitute the systemic, the latter the pulmonary arterial circulation. The blood contained in the arteries, as a rule, passes into the capillaries, though occasionally anastomoses exist between arteries, and between them and veins.

**C., cap'illary.** (L. *capillus*, the hair of the head.) The passage of the blood through the minute thin-walled vessels which intervene between the arteries and the veins. The limits on either side are not very well defined, but, as a rule, the vessels are so small that only one or two corpuscles can move abreast.

**C., collat'er'al.** (L. *collatero*, to admit on both sides. I. *circolazione collaterale*.) Circulation carried on through lateral or secondary channels after stoppage or obstruction in the main vessels.

## CIRCULATION.

**C., derivative.** (*L. derivo*, to draw off from.) A term applied to a direct communication shown by Suequet to occur between arteries and veins, without the intermediation of capillaries. The connecting vessels are large and highly muscular, and, when dilated, permit the passage of so much blood as to reduce the capillary circulation beyond to a minimum. Such vessels are found in the extremities of the fingers and toes, over the knee and elbow, in the lips, cheeks, nose, eyelids, and mucous membrane of nose and tongue.

**C., embryonal.** (*Εμβρυον*, the fruit of the womb before birth.) The circulation of blood in the embryo which commences as soon as the omphalo-mesenteric vessels and the branches of the primitive aorta connect the vascular area of the umbilical vesicle and the heart.

**C., foetal.** (*L. fetus*, offspring. *F. circulation foetalis*; *G. der Kreislauf des Blutes beim Fetus*.) The foetal blood is not distinguishable into venous and arterial, but everywhere presents a dark red appearance. Proceeding from the placenta, the blood is conducted by the umbilical vein as far as the transverse fissure of the liver, where it divides into several branches, supplying the right and left lobes of the liver, the lobulus Spiegelii, and the lobulus quadratus. The branch to the right lobe is joined by the portal vein. The umbilical vein is then continued, under the name of the ductus venosus, to join the left hepatic vein, where this vessel enters the inferior vena cava. In the inferior vena cava the blood carried by the ductus venosus and hepatic veins becomes mixed with that returning from the lower extremities and viscera of the abdomen. It enters the right auricle and, guided by the Eustachian valve, passes into the left auricle through the foramen ovale, where it mingles with a small quantity of blood returned from the lungs by the pulmonary veins. It is driven by the contraction of the left auricle into the left ventricle, and thence into the aorta, by which it is conducted chiefly to the head and upper extremities, though a small quantity enters the descending aorta. From the head and upper extremities it is returned by the branches of the superior vena cava to the right auricle, and from thence into the right ventricle. This descending current is in front of that passing from the inferior vena cava to the foramen ovale. From the right ventricle the blood passes into the pulmonary artery, but owing to the small size and absence of functional activity of the lungs, only a small portion is transmitted to these organs, the greater part entering the right pulmonary artery, and then traversing a large trunk named the ductus arteriosus, by which it is conducted to the third part of the arch of the aorta to be distributed to the lower extremities and the viscera of the abdomen and pelvis; the greater part is conducted through the umbilical arteries, which are branches of the internal iliacs, to the placenta. The effects of this arrangement are that the blood of the fetus, aerated in the placenta, is sent almost directly to the head and upper extremities. Immediately after birth the umbilical arteries and veins cease to convey blood to and from the placenta; the foramen ovale closes, and the whole of the blood entering the right auricle passes into the right ventricle, and as respiration now commences the ductus arteriosus becomes obliterated, and the blood is conducted by the pulmonary arteries to

the lungs, from whence it returns to the left auricle.

**C., greater.** (*G. grosser Kreislauf*.) Same as *C., systemic*.

**C., intracellular.** (*l. intra*, within; *cellula*, a small cell.) The rotation of protoplasm in a vegetable cell.

**C., lacunar.** (*L. lacuna*, any natural cavity.) A more or less irregular current in the fluid occupying the lacunar spaces in Mollusca and Articulata. Its existence as a distinct circulation is doubtful.

**C., lesser.** (*G. kleiner Kreislauf*; *I. circolazione piccola*.) The same as *C., pulmonary*.

**C. of blood.** See *Circulatory system*.

**C. of chyle.** The chyme, as it flows over the villi, is believed by some to enter the columnar epithelial cells lining the intestine, and to be transmitted through one or more cell-like dilations to the central lacteal of the villi. Others think special goblet cells are the main agents in the absorption of the chyme; and others again that the chyme makes its way between the cells. All agree that it reaches the central lacteal, and then, assuming the characters of chyle, is conducted to a plexus of lacteals at the base of the villi; and from these it passes to the larger lacteals, in which valves appear, and to the mesenteric glands, and ultimately to the thoracic duct. The movement of the chyle absorbed into the villi seems to be effected by the contraction of the muscular fibre cells in the villi and in the larger lacteals by the contractions of the muscular coats of the intestines, aided by the valves of the lacteals themselves.

**C. of latex.** (*L. latex*, fluid.) The descending current of fluids elaborated by the leaves in plants. In some plants the circulation is chiefly effected through the cells and intercellular spaces, but in others there are true vessels. See *Latex*, *Laticiferous vessels*, *Sap*.

**C. of lymph.** (*Lymph*.) The lymph appears to occupy interspaces of the tissues, which in many places, if not everywhere, are lined with endothelium. These becoming more distinctly tubular and possessing valves, ultimately pour their contents, in man, into the thoracic duct, whence it passes into the left innominate vein. The pressure under which it circulates varies greatly, and is chiefly derived from the action of the heart, aided by the contraction of the surrounding muscles, and also in part from the contraction of the walls of the lymphatics, this contractility being in some animals developed at particular points into hearts, which pulsate rhythmically.

**C. of protoplasm.** (*Πρώτος*, first; *πλάσμα*, anything formed.) A term applied to those currents in the protoplasm of a vegetable cell which proceed from the nucleus to the periphery, as distinguished from the rotation of protoplasm.

**C. of sap.** (*F. circulation de sève*.) A complete account of this would include the intercellular movements of the vegetable fluids (see *Cyclosis* and *Protoplasm*), the movement of the fluids absorbed from without and destined to be elaborated in the green cells, and lastly the movement of the materials formed in the green cells to various parts of the plants, and destined either for their nutrition or to be kept in reserve for subsequent use. The fluids absorbed from the soil enter the cells of the root by endosmosis, and ascend through the porous fibro-vascular

tissue of the stem to the leaves, the movement being aided partly by capillarity, partly by imbibition, and in part also being a result of transpiration from the leaves; under certain conditions the leaves may also absorb moisture from the atmosphere. The chief channels of the ascending current from the soil are the woody fibres of the albumen, part traversing their lumen, and the pores by which adjoining cells communicate, and part passing along their walls by imbibition. The descending current from the leaves probably takes place through other but similar porous cells. In some groups the intercellular spaces or "respiration passages" exist, through which certain fluids elaborated by the leaves insipitate. In some *Compositæ* it is a yellow or red odoriferous oil; in *Umbellifere*, a mixture of gum mastic and oily or resinous substances; and in *Terebinthinaceæ*, a clear balsam. See *C. of latex*.

**C., placental.** The circulation of the blood in the placenta is double; foetal from the umbilical arteries through the capillaries of the villous tufts to the umbilical veins, and maternal from the coiled branches of the uterine arteries through the blood spaces, into which the villi project, and the utero-placental veins to the uterine veins.

**C., placentalary.** (*Placenta*.) The latter stage of foetal circulation when the allantois has carried the umbilical vessels to the villi of the chorion, which they have penetrated, and the placenta is formed.

**C., portal.** (*Portal vein*.) The circulation of the blood derived from the spleen, stomach, and intestines. The capillaries of these parts unite to form the portal vein. This divides (see *Portal vein*) into branches, supplying the lobules and the capillaries, reunites to form the hepatic vein, which discharges its contents into the inferior vena cava. The pressure under which the blood moves is low; it is derived from the heart. The veins contain no valves.

**C., primary.** (*L. primus*, first.) Same as *C., embryonal*.

**C., pulmonary.** (*L. pulmones*, the lungs. *F. circulation du pommou*; *I. circolazione pulmonale*.) The circulation of the blood from the right ventricle through the pulmonary artery, capillaries, and veins to the left auricle.

**C., second.** The *C., foetal*.

**C., spiral.** (*L. spira*, a coil.) Term applied by Schleiden to the peculiar circulation observed in the central cell of Chara.

**C. stage.** An apparatus enabling the circulation of the blood to be studied under the microscope. Mr. Reeves's consists of two parts, which can be separated, permitting the eyelid or tongue to be placed between two cover glasses, and kept moist by a stream of serum.

**C., systemic.** (*I. circolazione generale*, or *grande* or *del corpo*; *G. körperlichen Kreislauf*.) The circulation of the blood through the heart, aorta, capillaries, and veins, exclusive of the lungs.

**C., third.** The circulation of blood as it exists in the adult.

**C., umbilical-vesicular.** Same as *C., embryonal*.

**C., velocity of.** (*L. velox*, swift. *F. vitesse du sang*; *G. Geschwindigkeit der Blutbewegung*.) In the carotid of the calf the blood moves at the rate of about 232 mm. in the dog of 261 mm., and in the horse of 300 mm. per second. In the capillaries the rate in the frog is

0.5 mm. per second, in mammals about 0.8 mm. per second. In the veins the rate of movement is about one half that in the arteries. The duration of a complete circuit is accomplished in 27 systoles of the heart, and therefore in the horse in 31.5 seconds, in the squirrel 4.39, cat 6.69, hedgehog 7.61, rabbit 7.79, dog 16.7, cock 5.17, buzzard 6.73, duck 10.64, goose 10.86, and in man it is estimated at 23 seconds.

**C., venous.** The passage of the blood through the veins. It is effected partly by the action of the heart, which is here greatly diminished, partly by the contractility of the veins, and by muscular contraction, which, by means of the valves of the veins, assist the current onwards, and partly by the action of inspiration, which, by enlarging the thoracic cavity, effects by atmospheric pressure a freer passage of blood into it.

**Circulator.** (*L. circulo*, to move round.) Old name for a mountebank, or itinerant quack.

**Circulatorium.** (*L. circulo*, to move round about.) Name for a digesting vessel in which the fluid is made to perform a circulatory motion.

**Circulatory.** (*L. circulo*.) Relating to the circulation.

**C. anguish.** (*F. angoisse circulatoire*.) The more or less uncomfortable or distressing sensations which occur in a part when the flow of blood is nearly or altogether cut off.

**C. apparatus.** Same as *Circulatory system*.

**C. displacement.** See *Displacement, circulatory*.

**C. system.** (*Σύστημα*. *F. système circulatoire*; *G. Kreislaufsystem*.) The totality of the organs which serve for the circulation of the blood.

In *INVERTEBRATA* the circulatory system presents many types; in the lowest forms consisting of a pulsatile cavity only, but becoming gradually differentiated and specialised till it ultimately, as in *Cephalopoda*, becomes almost as complicated as in the higher vertebrata.

In *Protozoa*, represented by the Rhizopods and Sponges, the homogeneous nature of the body, and their relatively small size, render any circulatory apparatus unnecessary.

In *Celenterata* the circulatory system is entirely absent, its place being supplied by the more or less branched gastrovascular apparatus, by which the materials for the nutrition of the body are conveyed to all parts, and the essential function of a circulatory system fulfilled.

In the *Echinodermata* a highly-developed, closed, vascular system suddenly appears. The Asteroidea present two rings, one ventral around the mouth, the other dorsal around the anus, from which vessels pass into the rays, supplying the intestine and ambulacral vesicles. The circulation is maintained by a contractile vessel connecting the two rings; a similar disposition of parts is found in the Echinidea. In the Holothuriadae and Siphonoculidae—worm-like types—an artery or aorta runs along one side of the intestine, and a vein on the other. In Holothuria the artery ends anteriorly in a vascular ring surrounding the gullet, and gives off branches to the generative organs, Poli's vesicles, and adjoining parts. The aorta presents contractile enlargements or hearts. The blood, after entering the veins, is transmitted to the branchiae for aeration, and from thence passes again to the aorta. There

## CIRCULATORY.

is here, therefore, a double circulation, branchial and systemic.

In *MOLLUSCA* the circulation presents many grades of development; in the lowest the blood being only irregularly driven hither and thither in the body cavity, whilst the highest present many analogies with that of *Vertebrata*.

In *Tunicata* an elongated heart, acting peristaltically, drives the blood in one direction, and then, after a pause, in the opposite direction, so that the vessels in connection with it are alternately venous and arterial. The circulation is not closed, but the vessels end in lacunar passages and dilatations.

In *Lamellibranchiata* the heart, enclosed in a pericardium, lies at the posterior part of the back beneath the ligament in front of the rectum. It is composed of two auricles and a thicker ventricle, which is sometimes (Aren) double. Anteriorly it gives off two arms, which encircle the rectum, giving rise to the appearance that the heart is perforated by the intestine. From the ring the anterior aorta springs. The smaller vessels break up into erectile plexuses, especially in the mantle, foot, and in the septum between the branchia, and they in part lose themselves in lacunar passages. The veins collect and return the blood to two sinuses at the base of the branchia, and an azygous sinus for the foot veins. Part of the venous blood then passes into Bojanus' organ, part directly into the auricles, and part goes to the gills. There is a kind of portal circulation in Bojanus' organ, and the blood returns from that plexus into vessels which go to the gills (branchial arteries). The oxidised blood collects into three trunks, which convey the blood to the auricle.

In *Gasteropoda* the heart, enclosed in a pericardium, lies usually on the side opposite to the generative organs. It consists of a single ventricle and auricle, the latter being occasionally double. It sometimes surrounds the rectum. The aorta divides into an anterior and posterior branch, and is distributed to the body. The returning blood enters veins, which conduct it to the branchia, from whence, after aeration, it is returned to the auricle. The large veins of the pulmonata form a vascular ring, the *circulus venosus*, which surrounds the lungs. The veins have also large openings, through which the blood that has circulated through lacunar passages in the tissues is received. The Prosobranchiata have a renal portal circulation. The blood is colourless or bluish. It contains much lime and some copper. Planorbis has red blood, but the spectrum differs from haemoglobin.

*Cephalopoda* present a systemic and, in the dibranchiate division, two branchial hearts. The systemic heart lies in the middle line towards the posterior and inferior part of the body. It consists of two (or in nautilus four) auricles and a muscular ventricle, from which an anterior and posterior aorta arises. The vessels terminate partly in capillaries, partly in lacunar passages. The veins of the arms unite to form a circular sinus in the head, and the blood from this, in company with that of all the other veins, discharges itself into two pear-shaped and rhythmically contracting sinus venosi at the root of the branchia. In Tetrabranchiata there are four sinuses, but they are not contractile. From the gills the blood returns to the auricles of the systemic heart by two or four trunks. The blood is white, or bluish, greenish, or yellowish. The

blood-corpuscles are granular, and often nucleated.

In *VERTEBRATA* the circulation is reducible to three parts, arterial, venous, and lymphatic. The heart, enclosed in a pericardium, is absent only in Amphioxus. In fishes it is venous or branchial; in the Amphibia and Reptilia partly pulmonary or branchial, and partly systemic, and in the rest divisible into two parts, of which one is systemic and the other pulmonary.

In *Fishes* the heart, enclosed in a pericardium, lies above the pectoral fins and behind the gills. In Myxine, Plagiostomi, and Acipenseridae, the pericardium communicates with the peritoneal cavity. The heart consists of an auricle, which receives the venous systemic and portal blood, and of a strong ventricle, which is separated from the auricle by valves, and drives the blood, by rhythmical contraction of about twenty or thirty beats per minute, into a conus or bulbous arteriosus the interior of which presents valves. Continuous with this is the aorta, which gives off on each side four or five branches to the gills, when they break up into capillaries; the oxygenated blood returns to large veins or epibranchial arteries, which then join to form a dorsal vessel, and is distributed to the body. Secondary hearts are found in the caudal vein of the eel and in the portal vein of the Myxine. A portal vein transmits part of the venous blood of the intestines to the liver. In some fishes there is a renal portal circulation. The blood-corpuscles are circular in the Cyclostomata, but flat, elliptic, and nucleated elsewhere.

In *Amphibia* the heart has one ventricle, and present in the lower form one, and in the higher two, auricles. From the ventricle springs a bulbous arteriosus, which is continuous with the aorta. The aorta gives off branches to the gills when present. The returning vessels, as in fishes, form a dorsal aorta, the lower ones each giving off a branch to the lungs, which becomes greatly developed in those Batrachia that undergo a metamorphosis. There is an hepatic and a renal portal circulation. Blood-corpuscles biconvex, nucleated, large.

In *Reptilia* the heart has two auricles and a single ventricle. The right auricle receives the systemic, the left the pulmonary veins. In the higher members of this class the ventricle is nearly perfectly divided into two chambers by a vertical septum, though a mixture of the blood of the two chambers still takes place through the foramen of Panizza, and through a communicating branch between the right and left aortic arches before they join to form the aorta descendens.

In *Birds* there is a complete double circulation, the heart, situated in the middle line, consisting of two auricles and two ventricles, one auricle and ventricle being destined to drive the blood through the lungs for the purpose of aerating it, the other through the system; the ventricles sometimes communicate through a foramen ovale. The aorta is short and splits into three branches, the descending aorta and the right and left brachiocephalic arteries. There are two superior vena cava and an inferior vena cava. The veins have valves. The blood is warm, the corpuscles elliptic.

In *MAMMALIA* there is, as in birds, a complete double circulation effected by a heart with four chambers, one auricle and ventricle being pulmonary, the other systemic. The blood, poured by the ascending and descending vena cava into

the right auricle of the heart, is sent into the right ventricle; whence it is transmitted through the pulmonary artery to the lungs, where, having undergone its peculiar change from venous to arterial, it is carried back by the pulmonary vein to the left auricle of the heart, and is then discharged into the left ventricle, whence it is propelled through the aorta to every part of the system, to be returned by the veins to the venæ cavae as before.

**Circulatū.** A Paracelsian term for an oily liquor prepared from sea salt.

**C. minus.** (L. *minor*, less.) An old term for spirit of wine.

**Circulus.** (L. dim. *circus*, a ring. F. *cercle*; G. *Zirkel*.) A little ring. A circle. Applied to objects or parts that are of a circular form.

Applied to an iron instrument formerly used for dividing circular portions of glass; the instrument being heated and pressed close to the neck or rod of glass, and then cold being applied, division at the point desired was effected.

A name for several circular instruments used by the older surgeons.

**C. arteriosus iridis major.** (L. *arteria*, an artery; *iris*; *major*, greater.) An arterial plexus situated in the periphery of the iris, formed chiefly by the two long ciliary arteries, each of which divides into two branches after arriving at the anterior border of the ciliary muscle. These branches run in opposite directions till they meet and are joined by some branches of the anterior ciliary arteries. The circle supplies the iris and the ciliary processes.

**C. arteriosus iridis minor.** (L. *minor*, smaller.) A delicate arterial plexus situated on the anterior surface of the iris, near the pupillary border. It indicates the part to which the pupillary membrane of the fetus was attached, and, according to Arnold, it is only fully developed after the disappearance of this membrane.

**C. arteriosus musculi ciliaris.** (L. *cilium*, an eyelash.) An arterial plexus formed by the long ciliary arteries as soon as they have entered the substance of the ciliary muscle. This circle is posterior to the circulus arteriosus iridis major.

**C. arteriosus nervi optici.** (L. *arteria*; *nervus*, a nerve; *opticus*, relating to the eye. G. *hintern Skleralgefäßkranz*.) An arterial circle, first observed by Zinn, situated round the optic nerve as it traverses the sclerotic. It is composed of three or four small branches from the short posterior ciliary arteries, which form a plexus, and from which some branches pass outwards like the remaining short ciliary arteries into the choroid, whilst others pass inwards to the optic nerve. There is no corresponding venous circle.

**C. arteriosus umbilicalis.** (L. *arteria*, an artery; *umbilicus*, the navel.) The same as *C. umbilicalis*.

**C. arteriosus Willisii.** (Willis, the anatomist. G. *Willissen arteriellen Gefäßkranz*.) An arterial anastomosis formed at the base of the brain by the basilar and internal carotid arteries and their branches. The basilar, running forwards, divides at the anterior border of the pons into the two posterior cerebral arteries, which almost immediately give off posterior communicating arteries, which join with the internal carotid; the internal carotids of each side gives

off the anterior cerebral, and then after a short course communicate by a cross branch named the anterior communicating artery.

**C. articuli vasculosus.** (L. *articulus*, a joint; *vasculosus*, full of vessels.) The circle of anastomosing vessels which surrounds a joint.

**C. callosus Halleri.** (L. *callosus*; Haller, the physiologist.) The fibro-cartilaginous ring to which the mitral and tricuspid valves of the heart are attached.

**C. cephalicus.** (Κεφαλή, the head.) A vascular circle found in the head of osseous fishes, which is either formed directly from the epibranchial arteries of the upper arches, or by the junction of the main trunks.

Also, the arterial vessels at the base of the brain forming the *C. arteriosus Willisii*.

**C. ciliaris.** (L. *cilium*, an eyelash.) The ciliary muscle.

**C. Halleri.** See *C. callosus Halleri* and *C. venosus Halleri*.

**C. iridis major.** See *C. arteriosus iridis major*.

**C. iridis minor.** See *C. arteriosus iridis minor*.

**C. major.** Same as *C. arteriosus iridis major*.

**C. membranosus.** (L. *membranosus*, membranous.) The hymen.

**C. minor.** Same as *C. arteriosus iridis minor*.

**C. oculi.** (L. *oculus*, the eye.) The globe of the eye.

**C. osseus.** (L. *osseus*, bony. F. *cercle osseux*.) A name for a ring-like bone at the bottom of the cartilaginous meatus externus of the ear, and supporting the membrana tympani in the fetus. It is united to the meatus in the adult.

**C. quadruplex.** (L. *quadruplex*, fourfold.) The quadruple or fourfold circle. An old name for a particular kind of bandage.

**C. tonsillaris.** (L. *tonsilla*, the tonsil.) A nervous plexus formed by the branches of the glossopharyngeal nerve around the base of the tonsil.

**C. umbilicalis.** (L. *umbilicus*, the navel.) An arterial plexus found in the subperitoneal connective tissue around the navel. It is formed by branches of the superior and inferior epigastric arteries, the superior vesical artery.

**C. venosus.** (L. *venosus*, from *vena*, a vein.) The same as sinus terminalis or the marginal vessel surrounding the vascular area of the embryo.

Also, a large venous sinus, found in the pulmonate division of Gasteropoda, surrounding the lung, into which the veins returning the blood from the body open.

**C. venosus areolæ.** (L. *areola*, a small open space.) Same as *C. venosus mammae*.

**C. venosus ciliaris.** (Ciliary body.) A plexus situated near the insertion of the ciliary muscle in the substance of the sclerotic. According to Leber, it is represented by the canal of Schlemm and its tributaries. It is connected with the anterior ciliary veins and the veins of the ciliary muscle, but not with the veins of the iris, nor does it have any direct communication with the anterior chamber.

**C. venosus corneæ.** (Cornea.) The same as *C. venosus ciliaris*.

**C. venosus Halleri.** (Haller, the physiologist.) The same as *C. venosus mammae*.

**C. venosus Hovii.** (*Hovius*, a Dutch anatomist of the eighteenth century.) A plexus of blood-vessels described by Hovius in the ciliary region of the eye. Brücke has shown that it does not correspond either to Schlemm's or Fontana's canals, but is probably formed by the anterior branches of the venæ vorticosæ.

**C. venosus iridis.** (*L. iris*.) The plexus formed near the periphery of the iris by the anastomosis of the veins of that membrane.

**C. venosus ischiadicus.** (*ἰσχιαδικός*, of the hips.) A communication formed between the venæ circumflexæ femoris posterior and the venæ ischiadica.

**C. venosus mammaræ.** (*L. mamma*, a teat.) A plexus with polygonal meshes formed by the subcutaneous veins around the base of the nipple of the breast under the areola.

**C. venosus obturatorius.** (*L. obtura*, to stop up.) A circle of veins surrounding the obturator foramen. The veins communicate below with the internal circumflex vein, and above with the external and internal iliaes.

**C. venosus of nipple.** Same as *C. venosus mammaræ*.

**C. venosus retinæ anterior.** A terminal, but not complete, plexus of veins found in many mammals, as, for example, the ox, at the ora serrata. It is connected posteriorly with the retinal veins.

**C. venosus Ridleyi.** (*G. Ridley's venenkrantz*.) The circle of veins formed round the sella turcica by the cavernous sinuses laterally, the anterior intercavernous sinus in front, and the posterior intercavernous sinus behind. Also called *Sinus circularis Ridleyi*.

**C. venosus trachealis.** (*L. trachea*, the windpipe.) A plexus formed by the inferior thyroid veins and the inferior laryngeal vein on the trachea below the isthmus of the thyroid body.

**Circumactio.** (*L. circum*, around; *ago*, to drive. *G. Herumführung, Umlauf*.) Revolution; a turning round.

Also, the same as *Amphisphalsis*.

**Circumactus.** (*L. circum*, around; *ago*, to drive. *G. umgebogen, gekrümmt*.) Curved, bent, crooked.

**Circumagentes.** (*L. circum*; *ago*, to drive in a circle.) The oblique muscles of the eyes, from their action of rotation.

**Circumalate.** (*L. circum*; *alatus*, part. *alo*, to fly. *G. ringsum geflügelt*.) Provided with alæ in the form of a ring.

**Circumamictus.** (*L. circum*; *amicto*, to wrap around. *G. umhüllt, bedeckt*.) Invested; enveloped.

**Circumanal.** (*L. circum*, around; *anus*, the fundament.) Around the anus.

**C. glands.** (*G. Circumanaledrüsen*.) A set of large and closely-arranged sweat glands, with cylindrical epithelium, arranged circularly around the anus of man in a zone of 1 to 1.5 cm. breadth.

**Circumaxile.** (*L. circum*, about; *axis*. *F. circumaxile*.) Situate round an axis.

**Circumcualialis.** An old term for the tunica conjunctiva of the eye. (Quincy.)

**Circumcised.** (*L. circumcido*, to cut around.) Having had the prepuce removed by circumcision.

In Botany, applied to an apothecium, which is separated by a chink from the thallus. (Cooke.)

**Circumcisio.** See *Circumcision*.

**C. foeminarum.** (*L. femina*, a woman.) The removal of portions of the nymphæ, and sometimes of the clitoris, of the female, as practised by some Eastern nations.

**Circumcision.** (*L. circumcido*, to cut around. *F. circonceision*; *G. Beschneidung*.) Term for the operation of cutting off a circular piece of the prepuce, as is sometimes necessary to be done in cases of phymosis.

**C. of the conjunctiva.** The same as *Peritomy*.

**Circumcisu'ra.** Same etymon and meaning as *Circumcision*.

**Circumcisus.** (*L. circumcido*.) One who has been circumcised.

**Circumclulsion.** (*L. circumcludo*, to shut in.) A mode of compression of a blood-vessel by passing a needle through the skin, under the vessel, then out through the skin again, and tying a ligature over the two ends of the needle, so as to exercise pressure between itself and the part of the needle under the blood-vessel.

**Circumduction.** (*L. circum*, about; *duco*, to lead. *G. Herumführen, Umkreisen*.) A term for that movement of a limb by which it is made to describe a cone around an imaginary axis, with the apex at the joint. See also *Amphisphalsis*, *Perisphalsis*.

**Circumductionis o'pifex.** (*L. circumduco*; *opifex*, a worker.) An epithet for the superior oblique muscle of the eye.

**Circumference.** (*L. circum*, around; *fero*, to carry. *G. Umkreis, Peripherie*.) The outline, contour, or periphery of a circular figure.

**Circumferentia.** Same etymon and meaning as *Circumference*.

**C. articularis.** (*L. articulus*, a joint.) The lateral articulating surface on the head of the radius. It is partly in contact with the lesser sigmoid cavity of the ulna, partly with the annular ligament.

**Circumferential.** (*L. circumfero*, to carry round.) Relating to the circumference of a thing.

**C. fibro-cartilage.** A rim of fibro-cartilage surrounding and serving to deepen some articular cavities, like the glenoid of the scapula and cotyloid of the os innominatum.

**Circumflex.** (*L. circum*, around; *flecto*, to bend. *F. circumflex*; *l. circumflesso*; *S. circumflecto*; *G. umgebogen, gewunden*.) Bent circularly or around a thing.

**C. arteries of the knee.** (*G. Gelenkarterien der Kniekehle*.) The articular arteries of the knee-joint.

**C. artery of the arm, anterior.** (*L. arteria circumflexa humeri anterior*; *F. artère circumflexe antérieure*; *G. vordere Kranzschlagader des Armes*.) A small branch of the axillary which, running outwards beneath the coracobrachialis and short head of the biceps, reaches the bicipital groove, and divides into an ascending branch, which supplies the joint, and a descending branch to the deltoid. It anastomoses with the posterior circumflex and acromial thoracic arteries.

**C. artery of the arm, posterior.** (*L. arteria circumflexa humeri posterior*; *F. artère circumflexe postérieure*; *G. hintere Kranzschlagader des Armes*.) This artery arises from the axillary opposite the lower border of the subscapularis muscle, passes through the quadrangular space, bounded above by the teres minor,

below by the teres major, externally by the humerus, and internally by the long head of the triceps. It then runs round the back of the neck of the humerus, and supplies the joint and deltoid muscle. It anastomoses with the anterior circumflex, suprascapular and acromial thoracic arteries.

**C. artery of the scap'ula.** (*L. arteria circumflexa scapulae*; *G. Rückenast der Unter-schulterblattschlagader*.) The same as *Scapular artery, dorsal*.

**C. artery of the thigh, anterior.** The same as *C. artery of the thigh, external*.

**C. artery of the thigh, external.** (*F. artère circumflexe externe de la cuisse*; *G. äussere Kranzarterie des Oberschenkels*.) A branch of the profunda artery which runs outwards beneath the sartorius and rectus muscles, and divides into ascending, descending, and transverse branches. The ascending run beneath the tensor fascie femoris, and anastomose with the gluteal and circumflex iliac arteries; the descending lie on the vasti beneath the rectus, and anastomose with the superior articular branch of the popliteal artery; the transverse run over the cruraeus, and anastomose with the internal circumflex, sciatic, and superior perforating arteries.

**C. artery of the thigh, internal.** (*F. artère circumflexe interne de la cuisse*; *G. innere Kranzarterie des Oberschenkels*.) This artery arises from the inner and back part of the profunda, and winds round the inner side of the femur, first between the psoas and pectineus and then between the obturator externus and adductor brevis. On reaching the tendon of the obturator externus it gives off two branches, one of which runs upwards and supplies the adductor muscles, anastomosing with the obturator artery; whilst the other descends beneath the adductor brevis to supply it and the adductor magnus. The continuation of the trunk supplies the hip-joint, and appears between the adductor magnus and quadratus femoris muscles. It joins here the crucial anastomosis.

**C. artery of the thigh, lateral.** The same as *C. artery of the thigh, external*.

**C. artery of the thigh, middle.** The same as *C. artery of the thigh, internal*.

**C. artery of the thigh, posterior.** The same as *C. artery of the thigh, internal*.

**C. iliac artery, deep.** (*L. arteria circumflexa ili superficialis*; *F. artère circumflexe iliaque*; *G. Kranzschlagader der Hüfte*.) This artery arises from the outer side of the external iliac artery nearly opposite the epigastrie artery. It runs upwards and outwards behind Poupert's ligament to the crest of the ilium, and about the middle of the crest pierces the transversalis. It then passes backwards between the transversalis and the internal oblique to anastomose with the ilio-lumbar and gluteal arteries.

**C. iliac artery, superficial.** (*L. arteria circumflexa ili externa*; *F. artère circumflexe iliaque superficielle*; *G. äussere Kranzschlagader der Hüfte*.) A small branch arising from the femoral artery about half an inch below Poupert's ligament. It perforates the fascia lata, and, running towards the crest of the ilium, supplies the skin of the groin and the inguinal glands. It anastomoses with the circumflex iliac, the gluteal, and the external circumflex arteries.

**C. iliac vein, deep.** This vein, composed

of two branches, accompanies the artery of the same name, and joins the external iliac vein.

**C. iliac vein, superficial.** This vein, composed of two branches, accompanies the artery of the same name, and joins the internal saphenous vein at the saphenous opening.

**C. nerve of arm.** (*F. nerf axillaire* or *circumflexe*; *G. Achselnerv*.) This nerve arises from the posterior cord of the brachial plexus in common with the musculospinal nerve. It passes down behind the axillary artery and in front of the subscapularis, giving off a branch to the shoulder-joint. At the lower border of this muscle it divides into two branches: the upper winds round the neck of the humerus, and supplies the deltoid and skin; the lower supplies the teres minor and deltoid muscles and the skin. The nerve to the teres minor muscle has a ganglion upon it.

**C. veins of arm.** These accompany the arteries of the same name, and open into the axillary vein.

**C. veins of Kohl'rausch.** Branches of veins which proceed from the lower and anterior part of the corpus cavernosum of the penis, and, curving around the sides of the organ, join the dorsal vein of the penis.

**Circumflexion.** (*L. circum, around*; *flecto, to bend or turn*. *G. Biegung, Wendung*.) Turning, winding, or bending round.

**Circumflexus.** (*L. circumflecto, to bend about*. *F. circumflexe*; *G. umgebogen*.) Bowled, or bent about. Applied to arteries, veins, nerves, and to the tensor palati muscle.

**C. palati.** A synonym of the *Tensor palati muscle*.

**Circumforaneus.** (*L. circum, around*; *forum, a market place*. *F. charlatan*; *G. Marktschreier, Quacksalber*.) Wandering idly about market places. Applied to an itinerant quack (*C. medicus*) or pretender to knowledge of medicine.

**Circumfusa.** (*L. circum; fundo, to pour out*.) An old term signifying all the circumstances which surround man, as climate, air, mode of life, and such like, and which influence him from without.

**Circumfusion.** (*L. circum, around; fundo, to pour*. *G. Umflossung, Umgebung*.) A pouring around.

**Circumgyration.** (*L. circum; gyro, to turn round*.) Movement in a circular manner.

Also, a term for giddiness.

**Circumligatura.** (*L. circum, around; ligo, to bind*. *F. circumligature*; *G. Umbindung, Umwickelung*.) Casting a ligature around.

Also, the same as *Paraphimosis*.

**Circumlitio.** (*L. circumlitio, to anoint all over*.) Term for a liniment, particularly one for the eyelids. Scribonius Largus, *n.* 29.

**Circumnutate.** (*L. circum, around; nuto, to sway to and fro*.) To bend from side to side in a circular, oval, spiral, or elliptical manner.

**Circumnutation.** (*L. circum, around; nuto, to nod*.) A movement which has been observed by Darwin to occur in all growing parts of plants, but most easily demonstrable in the stems of climbing plants, which bend successively to all points of the compass, so that the tip revolves. The movement is not quite regularly circular, but irregularly oval or elliptical, being influenced by light, heat, moisture, gravitation, and growth. It sometimes consists of innumerable

# CIRCUMOCULAR--CIRRHOSES.

small oscillations. It is believed that through its modification many movements highly beneficial or necessary to plants have been acquired.

**Circumocular.** (L. *circum*, around; *oculus*, the eye. G. *das Auge umgehend*.) Running or extending round the eye.

**Circumoesophageal.** (L. *circum*; *oesophagus*, the gullet.) Lying around the oesophagus.

**Circumossalis.** (L. *circum*, about; *os*, a bone.) Covering, or being around, a bone. Applied to the periosteum and to the conjunctiva.

**C. membrana.** A term for the periosteum. (Castellus.)

**Circumpolar.** (L. *circum*, around; *polus*, the pole.) Being around the pole or axis of a thing.

**Circumpolarisation.** (L. *circum*; *polarisation* of light.) Same as *Polarisation*, *circular*.

**Circumscissile.** (L. *circum*; *scindo*, to divide.) Cut circularly and transversely; divided transversely.

**C. dehiscence.** (L. *dehisco*, to gape wide.) Term applied to an irregular form of dehiscence in which the upper part of the fruit falls off like a lid. It occurs in purslain, plantain, pimpernel, henbane, and amaranths.

**Circumscissus.** (L. *circumscindo*, to cut round about. F. *circoucis*; G. *ringumschnitten*.) Having a circular cut or fissure; divided transversely; cut round about.

**Circumscribed.** (L. *circum*; *scribo*, to write. F. *circoucrit*; I. *circoucritto*; S. *circumscrito*; G. *umgränzt*.) Bounded; confined within a distinct limit.

**Circumscription.** (L. *circum*, around; *scribo*, to write. G. *Umschreibung*, *Umgrenzung*, *Umfang*.) The general outline or margin of a surface.

**Circumsection.** (L. *circumseco*, to cut round. G. *ringsum beschneiden*, *umschneiden*.) The cutting circularly around, as in an amputation.

Also, a synonym of *Circumcision*.

**Circumsepient.** (L. *circumsepio*, to hedge around.) A term applied formerly to what was called the sleep of plants when the leaves, which in the day are more or less horizontal, assume in the night an upright position, so as to form a kind of funnel.

**Circumspection.** (L. *circum*; *specto*, to look at. F. *circoupection*; I. *circouspicione*; S. *circouspicection*; G. *Behutsamkeit*, *Vorsicht*.) According to Gall, a capacity of foresight existing in man and animals, and more or less developed in different species, races, and individuals.

**Circumuterine.** Same as *Periuterine*.

**Circumvallate.** (L. *circumvallo*, to surround on every side with a wall. G. *umschauzt*.) Enclosed by means of a prominence.

**C. papillæ.** The *Papillæ circumvallatæ*.

**Circumvolution.** (L. *circum*, around; *volvo*, to roll.) Applied both to the coils of the intestines in the abdomen and to the windings of the gyri of the brain. Same as *Convolution*.

**Circus.** (Kίρκος, a circle.) Old name for a circular bandage.

**C. movements.** (F. *mouvements de manège*.) A term applied to the movement in a circle which occurs in some unilateral diseases and injuries of the grey centres at the base of the brain.

**Cirones.** Same as *Sirones*.

**Cir'rate.** (L. *cirrus*, a curl. G. *kraushaarig*, *geflocht*.) Having, or being like, a cirrus or tendril.

**Cir'r'hagra.** (Cirrus; ἄγρα, a seizure. F. *cirrhagie*; G. *Weichselzopf*.) Term for *Placa polonica*.

**Cir'r'hate.** (L. *cirrus*.) A synonym of *Cucurbitacea*.

**Cir'r'hate.** Same as *Cirrate*.

**Cir'r'hi.** The same as *Cirri*.

**C. auditory.** See *Cirri*, *auditory*.

**Cir'r'hiferous.** Same as *Cirriferous*.

**Cir'r'hiform.** Same as *Cirriform*.

**Cir'r'hodes.** Same as *Cirroid*.

**Cir'r'hon'osis.** (Κίρρως, tawny; νόσος, disease.) A synonym of *Cirrhosis*, from the yellow colour of the liver when thus affected.

**Cir'r'hon'osus.** (Κίρρως, tawny; νόσος, a disease. F. *cirrhonose*; G. *Lohfarbkrankheit*.) A peculiar disease of the fetus in which the pleura, peritoneum, and similar membranes, are of a golden yellow appearance. (Lobstein.)

**Cir'r'hophorous.** (Φορέω, to bear.) Same as *Cirriferous*.

**Cir'r'hopoda.** Same as *Cirripedia*.

**Cir'r'hose.** See *Cirrose*.

**Cir'r'hosis.** (Κίρρως, reddish yellow, or tawny. F. *cirrhose*; I. *cirrosi*; S. *cirrosi*; G. *Cirrhose*.) A term originally applied by Laennec to a long-known disease of the liver, in consequence of the presence of yellowish granules, which he believed to be a deposit of new matter; this is now shown to be an error; there is new matter, but it is a thickening of the connective tissue, and the granules are the compressed, isolated, and bile-tinged acini of the organ. See *C. of liver*.

The term has been extended beyond its etymological meaning to diseases of other organs of like pathological character, but having no yellowness.

**C., an'nular.** (L. *annulus*, a ring.) Cirrhosis affecting larger or smaller groups of lobules in the liver which are thus encircled by a fibrous ring, in opposition to *C. insular*.

**C., atroph'ic.** (A, neg.; τροφή, nutrition.) The ordinary form of cirrhosis of the liver where contraction of the organ takes place.

**C., bil'ary.** (L. *bilis*, bile.) A form of cirrhosis of the liver supposed to originate in simple biliary stasis, from obstruction of the bile-ducts. It was at one time believed that the new formation of biliary ducts was confined to this form, but it is now known not to be so.

**C. cor'dis.** (L. *cor*, the heart.) Same as *Fibrosis, cardiac*.

**C. hep'atis.** (ἥπαρ, the liver. G. *Leberecirrhose*.) See *C. of liver*.

**C., hypertroph'ic.** (Υπέρ, above; τροφή, nutrition.) A term applied to that form of cirrhosis of liver in which contraction of the morbid interstitial tissue does not occur.

**C., in'sular.** (L. *insula*, an island.) A form of cirrhosis of the liver, in which the fibrous new growth first assumes the form of small islets in the interlobular spaces, then invests each lobule, and penetrates beneath the rows of hepatic cells, which finally undergo atrophy.

**C. intestino'rum.** (L. *intestina*, the intestines.) Same as *Fibrosis of intestines*.

**C. jecin'oris.** (L. *jejun*, the liver.) See *C. of liver*.

**C. mam'mæ.** (L. *mamma*, the female

# CIRRHOSE—CIRROID.

breast.) A term which has been applied to those cases of scirrhus of the breast in which shrinking has taken place; also called *Carcinoma atrophicans* and *C. cicatriciale*.

**C., monolobular.** (Μόνος, single; *lobulus*, dim. of *lobus*.) A term applied to cirrhosis of the liver when, by the further growth of the insular form, a single lobule only is surrounded by the fibroid tissue.

**C., multilobular.** (L. *multus*, many; *lobulus*.) The same as C., *annular*.

**C. of kidney.** A synonym of *Nephritis interstitial*.

**C. of liver.** A disease of the liver occurring most frequently in spirit drinkers, and consisting in a morbid change of the interlobular and the intercellular connective tissue, which becomes infiltrated with a material containing many small round and some spindle-shaped embryonic cells; this structure subsequently becomes fibrillated, and in the end resembles very closely cicatricial tissue. Early in its life a network of capillaries grows in it, probably from the interlobular arterioles, subsequently, as it becomes more fibrous, it undergoes contraction and shrivelling, and then blood-vessels disappear, the acini are compressed, and the hepatic cells become atrophied. Generally the morbid change, which is essentially an interstitial hepatitis, commences in the connective tissue around the smaller branches of the portal vein, and, spreading onward, involves the intercellular connective tissue of the whole organ; in the early stages the part of the liver involved is enlarged; in the later stages by the contraction of the morbid substance it is diminished in size; the two processes are in action often at the same time.

In certain cases, and especially in the form called biliary cirrhosis, biliary canaliculi are developed in the portal canals.

The early stages of the disease present no well-defined symptoms, but, as the liver atrophies, ascites and jaundice occur, and hamatemesis and melæna are frequent accompaniments.

**C. of lung.** A term applied to indurations of lung tissue produced by a development of cellular and fibroid tissue in or about the pulmonary connective tissue. See *Pneumonia interstitial*, *Phthisis fibroid*, and *Fibrosis of lung*.

**C. of the spleen.** (F. *cirrhose de la rate*.) A term applied to a condition of atrophy of the spleen. The surface presents many sulci resembling cicatrices, corresponding to fibrous bands, which traverse the surface of the organ. Ulcerations of the intestines, Bright's disease, and general dropsy often precede death.

**C. ovarii.** (L. *ovarium*, an egg-keeper.) A term applied to a hard, atrophied, fibrous ovary, the degenerative result, probably, of chronic inflammatory thickening of the parenchyma.

**C. peritonæi.** A synonym of *Peritonitis deformans*.

**C. pulmonis.** (L. *pulmo*, the lung.) See *C. of lung*.

**C. pulmonum tuberculo'sa.** (L. *pulmones*, the lungs; *tuberculosus*.) A term defined by Rindfleisch to signify a new growth of connective tissue caused by tubercular lymphangitis, which, proceeding from the root of the lung, accompanies and invests the chief bronchus and the pulmonary vessels. From this the hyperplasia extends to the secondary bronchi in the form of membranous-like septa, which limit and

isolate wedge-shaped portions of the lung. The whole process is accompanied by a chronic desquamative pneumonia. The sublobular divisions of the lung are brought into strong relief by a glistening, whitish, indurated tissue.

**C. renum.** (L. *ren*, the kidney.) A synonym of *Nephritis interstitial*.

**C. ventriculi.** (L. *ventriculus*, the stomach.) Same as *Fibrosis of stomach*.

**Cirrhotic.** (Κίρρως, yellow.) Presenting the characters of cirrhosis.

**C. crackling.** A term applied to a crepitating rhonchus of medium fineness, which is not altered by coughing, heard in the contracted lung of interstitial pneumonia.

**Cirrhus.** Same as *Cirrus*.

**Cirri.** (F. *cirres*.) Plural of *Cirrus*. In Mycology the term is applied to the spiral filaments surrounding the aperture of the perithecium, or of the pycnidia, of certain Sphaeriaceæ. They are formed of a gelatinous substance, investing spores or stylospores, and which, propelled upwards in a soft state, assume a spiral form, and become friable in dry weather, or liquefy in moist, so as to set free the reproductive organs.

The cirri are fleshy organs in the head of some fishes, which may probably remedy the imperfection of other organs of touch.

Applied to organs similar in their nature to those last mentioned, in different parts of various animals. See also *Cirrus*.

**C., auditory.** (L. *audio*, to hear.) Fine hairs projecting from the specially modified epithelial cells which clothe the equatorial septum of the ampullæ of the semicircular canals. Some think the hairs are the termination of the nerves, and run up between the epithelial cells.

**Cirrif'erous.** (L. *cirrus*, a fringe; *f'ero*, to bear. G. *rankentragend*.) Term applied to a plant or animal provided with cirri.

**Cirriflorous.** (L. *cirrus*; *flos*, a flower. F. *cirriflore*.) Applied to a peduncle changed into a cirrus; and also to a petiole fulfilling the functions of a cirrus.

**Cirriform.** (L. *cirrus*; *forma*, shape. G. *rankig*.) Like a cirrus.

**Cirrig'erous.** (L. *cirrus*; *gero*, to carry. G. *rankentragend*, *lockentragend*.) Bearing cirri or tendrils.

**Cirrigrade.** (L. *cirrus*; *gradior*, to walk. F. *cirrigrade*.) Progressing by means of cirri.

**Cirripe'dia.** (L. *cirrus*; *pes*, a foot. G. *Rankenfusser*.) A Subclass of the Class *Crustacea*, being animals enclosed in chitin, which, by the deposit of lime salts, forms an investment composed of several pieces. Articulated cirri project through the opening of the mantle. In the adult condition they are sessile; they are usually hermaphrodite, and have a regressive metamorphosis.

**Cirrobranch'ia.** (L. *cirrus*; *branchia*, gills. F. *cirrobranche*.) A synonym of *Scaphopoda*.

**Cirro-cumulo-stratus.** A cloud partaking of the characters of the three components of its name. Same as *Nimbus*.

**Cirrocu'mulus.** (L. *cirrus*; *cumulus*, a heap.) Small, roundish, well-defined masses of cloud, more or less regular in horizontal arrangement. They are spoken of as a mackerel sky and fleecy clouds.

**Cirroid.** (L. *cirrus*; *εἶδος*, likeness. G. *rankenformig*.) Like a curl or a tendril.

**Cirrophorous.** (L. *cirrus*; *φopίov*, to bear.) Same as *Cirriphorous*.

**Cirrophthalmia.** Same as *Cirsophthalmia*.

**Cirropodous.** (L. *cirrus*; *ποὺς*, a foot.) Having cirri on the feet.

**Cirrose.** (L. *cirrus*. G. *rankig*.) Tendril-like; having cirri.

**Cirrostomi.** (L. *cirrus*; *στόμα*, mouth.) An Order of *Hematozoa* in Owen's classification of animals; it is represented by the Genus *Braichostoma*. Same as *Pharyngostomi*.

**Cirrostratus.** (L. *cirrus*; *stratus*, the thing spread out, a bed.) Small whitish clouds, arranged in somewhat horizontal strata, appearing at the zenith as a number of thin clouds, at the horizon as a narrow band.

**Cirrous.** (L. *cirrus*, a tendril or elasper. F. *cirrhone*; G. *rankig*.) Terminating in, having, or full of, cirri, tendrils, or elaspers.

Also, being like the clouds called *Cirrus*.

**Cirrus.** (L. *cirrus*, a lock of curled hair, a fringe. F. *cirre*; I. *cirro*; G. *Ranke*, *Wickelranke*.) An organ having the shape of a curl.

In Botany, a tendril.

In Zoology, a tendril-like appendage, such as the beard or fringe about the mouth of fishes.

Also, the male copulatory organ of some of the *Platyhelmintha*.

Also, the feet of Cirripedes, from their shape.

Also, the lateral processes of the arms of Brachiopoda.

In Meteorology, small, light, whitish clouds, having a brush-like or wispy appearance, lying very high, and probably consisting of frozen particles. They are also called mare's tails.

See also *Cirri*.

**C. bag.** (G. *Cirrusbeutel*.) The sheath containing the penis or cirrus of trematode and other worms.

**C. corolla'ris.** (*Corolla*.) A tendril arising from the petals of a flower.

**C. folia'ris.** (L. *folium*, a leaf.) A tendril formed by an extension of the midrib of a leaf, as in the *Gloriosa superba*.

**C. peduncula'ris.** (*Peduncle*.) A tendril formed by the branching of the peduncle at the base of the lamina of a leaf.

**C. petiola'ris.** (L. *petiolus*, a stalk.) A tendril formed by the elongated petiole of a pinnate leaf, as in *Lathyrus aphaca*.

**Cirsellium humile.** The *Atractylis humilis*.

**Cirsdryosecheocelē.** (Κίρσός, a varix; *δέωv*, water; *δεχέov*, the serotum; *κῆλη*, a tumour. F. *cirsdryosechecele*.) A complication of varicocele and hydrocele.

**Cir'sion.** (Κίρσιον.) A name, by Dioscorides, for a plant used in the cure of varix (κίρσος), probably *Carduus parviflorus*, Linn.

**Cir'sium.** (Κίρσός, a varix.) A Genus of the Nat. Order *Compositae*. So called from the reputed value of some of the species in varix. The Chinese eat the roots and young plants of various species of *Cirsium*, which they regard as nutritive and antiscorbutic. They also employ them to restrain diarrhoea, and in puerperal affections.

Also, a synonym of *Cnicus*.

**C. arven'se.** The *Serratula arvensis*.

**C. eriophorum.** Scop. (Εριον, wool; *φopίov*, to bear.) A species which has been used as a cure for cancer.

**C. lana'tum.** Spreng. (L. *lanatus*, woolly.) Distaff thistle. Hab. India. Root used as a depurative.

**C. laniflorum.** Bieb. (L. *lana*, wool; *flos*, a flower.) Friar's crown. Receptacle used as food.

**C. macula'tum.** Scop. (L. *maculatus*, spotted.) The *Carduus marianus*.

**C. monspessula'num.** All. (L. *monspessulanus*, Montpellier.) Melancholy thistle. Hab. Spain, South of France. Used to relieve the pain of varicose veins.

**C. olera'ceum.** All. (L. *oleraceus*, herb-like.) Hab. Europe, Middle and Central. Used as a pot-herb.

**C. trispino'sum.** Mönch. (L. *tres*, three; *spina*, a thorn.) The *Chamaepeuce casabona*, De Cand.

**C. tubero'sum.** All. (L. *tuberosus*, full of swellings.) Said to relieve the pain of varices.

**Cirsoleph'aron.** (Κίρσός, a varix; *βλεφapov*, the eyelid. F. *cirsolephare*.) Varicose eyelid.

**Cir'socle.** (Κίρσός, a varix; *κῆλη*, a tumour. F. *cirsocele*; G. *Samenaderbruch*, *Samenadergeschwulst*.) A varicose distension and enlargement of the spermatic vein whilst in the spermatic cord.

Also, a synonym of *Varicocele* in whatever part it occurs, either in the serotum or the spermatic canal.

**Cirroid.** (Κίρσός, a varix. F. *cirsoide*.) Resembling a varix; applied to the upper part of the brain, and also to the spermatic veins.

**C. an'eurysm.** See *Aneurysm*, *cirroid*.

**Cir'som'phalos.** (Κίρσός, a varix; *δρυφαλος*, the navel. F. *cir'somphale*; G. *eine Adergeschwulst am Nabel*.) Term for a varicose condition of, or aneurismal varix around, the navel.

**Cir'sophthalmia.** (Κίρσός, a varix; *δρυθαλμος*, the eye. F. *cir'sophthalmie*; G. *ein varicoser Zustand des Augapfels*.) Term for a varicose condition of the conjunctival blood-vessels.

**Cir'sos.** (Κίρσός. F. *varice*; G. *Aderknuten*, *Blutaderknuten*, *Krampfaderknuten*, *Venenbruch*.) Old term for a varix or dilated vein.

**Cir'sos'cheum.** (Κίρσός; *δεχέov*, the serotum.) Scrotal varicocele.

**Cir'sot'omy.** (Κίρσός, a varix; *τίμνω*, to cut. F. *cir'sotomie*; G. *Krampfaderschnitt*.) Extirpation of a varix with the knife.

**Cir'soxero'sis.** (Κίρσός, a varix; *ξηρωσις*, a drying up. F. *cir'soxerose*; G. *Austrocknung der Krampfaderen*.) A drying up of varices.

**Cir'sul'cus.** (Κίρσός, a varix, *έλκος*, an ulcer. F. *cir'sulcere*; G. *varicose Geschwür*.) Varicose ulcer.

**Cir'sus.** (Κίρσός. G. *Krampfader*.) Varix.

**Cis'matan.** A name of the seeds of *Cassia absus*.

**Ciss.** An abbreviation of *Cicely*.

**Cis'sa.** (Κίσσα.) Old name for the magpie. Also, the disease called *Pica*.

**Cissampelia.** Same as *Cissampelin*.

**Cissampelin.** An alkaloid found in *Parcira brava*, which Flückiger has identified with *Buxin*.

**Cissampelos.** (Κισσάμπελος, from *κισσός*, ivy, *άμπελος*, the vine. F. *cissampelos*; G. *Kissampelos*.) A Genus of the Nat. Order *Menispermaceae*.

# CISSANTHEMON—CISTERNA.

**C. abu'tua**, Vell. The *Chondodendron tomentosum*.

**C. caape'ba**, Linn. One of the sources of *Caapeba* root, which closely resembles that of *Pareira brava*. It is a powerful diuretic, and is believed by the Brazilians to be specific against the poison of serpents; the root was formerly in repute as lithontriptic.

**C. capen'sis**. (*Cape* of Good Hope.) Root used as an emetic and cathartic by the Boers.

**C. convolvula'cea**, Moon. (*Convolvulus*.) The *Menispermum fenestratum*.

**C. ebractea'ta**, St. Hil. Possibly an occasional source of *Pareira brava*, and also used against serpent bites.

**C. glaber'rima**, St. Hil. (L. sup. of *glaber*, smooth.) An occasional source of *Pareira brava*; also used in Brazil against the bites of snakes.

**C. gla bra**. (L. *glaber*, smooth.) Root aerid.

**C. hernandifo'lia**, Wall. Root used in India as *Pareira brava*.

**C. mauritan'ica**, Dup. Thouars. A plant used as a tonic by the Mascarenes, very similar to *Pareira brava*. Perhaps *C. Mauritiana*.

**C. Mauritia na**, Dup. Thouars. (After Prince Maurice of Nassau.) A tonic and diuretic like *Pareira brava*.

**C. obtecta**. (L. *obtectus*, covered up.) Juice of root supplies an intoxicating spirit on fermentation.

**C. ovalifo'lia**, De Cand. (L. *ovalis*, oval; *folium*, a leaf.) A Brazilian plant used as a tonic.

**C. parei'ra**, Lamh. One of the sources of the root named *Pareira brava*, but, according to Hanbury, *Chondodendron tomentosum* is the real or chief source.

**Cissanthemom**. The same as *Cissanthemum*.

**Cissanthemum**. (Κισάνθεμον, from *κισός*, ivy; *άνθεμον*, a flower.) Old name for the cyclamen, or sow-bread.

**Cis'saron**. (Κισάρος, ivy.) One of the ancient names for ivy.

**Cis'sarus**. (F. *ciste de Crête*.) A name for the *Cistus creticus*.

**Cis'sinum**. (Κισσίνος, of ivy.) Name of a plaster of ivy leaves formerly prescribed for wounds of the tendons.

**Cis'sion**. (Κισσίον, dim. of *κισός*, ivy.) The name given by Dioscorides to *Vivetericium officinale*.

**Cis'soid**. (Κισσός, ivy; *είδος*, likeness.) Climbing like ivy.

**Cissophyllon**. The same as *Cissophyllum*.

**Cissophyllum**. (Κισσός, ivy; *φύλλον*, a leaf.) An old name for the cyclamen, or sow-bread.

**Cis'sos**. (Κισσός.) A synonym of the *Ivy*.

**Cis'sus**. (Κισσός.) A synonym of the Genus *Vitis*, Linn.

Also, a Genus of the Nat. Order *Ampelidaceæ*.

**C. ac'ida**, Linn. (L. *acidus*, sour.) Leaves applied to promote suppuration in tumours and also to piles.

**C. arbor'ea**, Försk. (L. *arbor*, a tree.) The *Salvadora persica*.

**C. digita'ta**, Lam. (L. *digitus*, a finger.) Hab. Arabia. Cooked leaves used in fever.

**C. quadrangula'ris**, Linn. The *Vitis quadrangularis*.

**C. quinquefo'lia**. (L. *quinque*, five; *folium*, a leaf.) The same as *Ampelopsis hedera'cea*.

**C. rotundifo'lia**, Vahl. (L. *rotundus*, round; *folium*, a leaf.) Hab. Arabia. Cooked leaves used for food.

**C. saluta'ris**, Kunth. (L. *salutaris*, pertaining to health.) Root used in dropsy.

**C. seto'sa**, Roxb. The *Vitis setosa*.

**C. terna'ta**, Gmelin. (L. *terni*, three each.) Hab. Arabia. Cooked leaves eaten as food.

**C. tilia'cea**, H. B. K. (L. *tilia*, a linden tree.) Hab. Mexico. Decoction of the plant used in rheumatism.

**C. vitigin'ea**, Linn. (L. *vitigineus*, vine-born.) Hab. India. Leaves and scraped roots applied to buboes.

**Cist**. An ancient measure of wine, equal to about four pounds. (Ruland.)

**Cista**. (Κίστη, a basket. F. *ciste*; G. *Kiste*.) A chest; an enclosure.

Name for the triple envelope of seeds when the external and middle coats are membranous, and the internal fleshy.

Also, a pericarp to the vault of which the seeds are attached.

Also, same as *Cyst*.

**Cista'cea**. (*Cistus*.) A Nat. Order of thalamidioral Exogens, having trimerous or pentamerous flowers; usually indefinite distinct stamens, capsular fruit, and albuminous seeds.

**Cistal alli'ance**. Hypogynous Exogens, with monochlamydeous flowers, parietal or sutural placentae, and a curved or spiral embryo, with little or no albumen. It comprises *Cistaceæ*, *Brassicaceæ*, *Rosaceæ*, and *Capparidaceæ*.

**Cistales**. Same as *Cistal alliance*.

**Cistella**. (L. dim. of *cista*, a coffer.) Term applied by Acharius to the apothecia of *Sphaerophoron*.

**Cistern**. See *Cisterna*.

**C. lum'bar**. (L. *lambus*, the loin.) The *Receptaculum chyli*.

**C. of Pecquet**. The *Receptaculum chyli*.

**C. barom'eter**. See *Barometer*, *cistern*.

**C. lymphatic**. (*Lymph*.) A term applied to the lymph sacs of the Amphibia.

**Cisterna**. (L. *cisterna*, a subterranean reservoir for water.) F. *citerne*.) A vessel; a hollow vault; a cistern.

Formerly applied to the fourth ventricle of the brain, and to other hollows.

Also, applied to the concourse of the lacteal vessels in the mammae of women who are suckling.

**C. am'biens**. (L. *ambio*, to go round.) The same as *Sinus arachnoidalis*.

**C. chias'matis**. (Χίασμα, two lines placed crosswise like the Greek letter X.) The sub-arachnoid space between the optic chiasma and the rostrum corporis callosi.

**C. chyli**. (G. *Nahrungsaftsbehälter*.) The same as *Receptaculum chyli*.

**C. fos'sæ Syl'vii**. (L. *fossa*, a ditch; *Sylvius*, the anatomist.) The space between the arachnoid and the fossa Sylvii.

**C. intercrura'lis profun'da**. (L. *inter*, between; *crus*, a leg; *profundus*, deep.) The space between the peduncles of the cerebrum and the arachnoid.

**C. intercrura'lis superficia'lis**. (L. *intercruralis*; *superficialis*, superficial.) The

space between the pons Varolii and optic commissure, on the one hand, and the arachnoid on the other.

**C. laminae cinereae terminallis.** (L. *lamina*, a layer; *cinereus*, ashen grey; *terminus*, the end.) The same as *C. chiasmatis*.

**C. lumbalis.** (L. *lumbus*, the loin.) The same as *Receptaculum chyl.*

**C. magna.** (L. *magnus*, large.) The space between the arachnoid and the transverse fissure of the cerebellum.

**Cistharus.** (Κίσθαρος. F. *ciste de Crète*.) A name for the *Cistus creticus*.

**Cistides.** (L. *cista*, a basket.) A term for the sterile cells of the hymenium of Fungi.

**Cistifloræ.** (L. *cistus*; *flos*, a flower.) An Order of plants of the Subclass *Eleuthero-petalæ*, having cyclic flowers with both calyx and corolla, generally pentamerous and hypogynous; gynœcium syncarpous; ovary with no false dissepiment.

**Cistineæ.** The same as *Cistaceæ*.

Also, a Family of the Order *Cistifloræ*.

**Cistocèle.** Same as *Cystocèle*.

**Cistolith.** (L. *cista*; λίθος, a stone.) A collection of raphides in a cell.

**Cistoma.** (Κίστη, a box.) A prolongation of the cuticle penetrating into the stomata of plants and lining the subjacent cavity.

**Cistome.** Same as *Cistoma*.

**Cistophorum.** (Κίστη, a box; φέρω, to bear.) A name given to the stipe of various agaries.

**Cistopteris.** See *Cystopteris*.

**Cistula.** (Dim. L. *cista*, a chest. F. *cistule*; G. *Kistchen*.) Name for the conceptacle of certain lichens.

**Cistus.** (Κίστη. F. *ciste*; G. *Cisten-roshen*.) A Genus of the Nat. Order *Cistaceæ*.

**C. canadensis.** (Canada.) The *Helianthemum canadense*.

**C. creticus.** Linn. (Κρήτη, Crete, the island of that name. F. *ciste de Crète*.) The plant which yields the substance ladanum, or labdanum; native of Syria and the islands of the Archipelago; the gum resin is exuded on the leaves.

**C. cyprius.** Lam. (Cyprus, the island of that name.) The same as *C. creticus*.

**C. dwarf.** The *Helianthemum vulgare*.

**C. foemina.** (L. *femina*, female.) The *C. salicifolius*.

**C. fuma'na.** The *Helianthemum fumanum*.

**C. gum.** The *C. creticus*.

**C. guttatus.** The *Helianthemum guttatum*.

**C. helianthemum.** The *Helianthemum vulgare*.

**C. ladaniferus.** Linn. (L. *ladanum*, the gum of that name; *fero*, to bear. F. *ciste ladanifère*.) A species growing in Spain, Portugal, and Provence; the young branches yield, by boiling in water, a substance analogous to the ladanum of the *C. creticus*.

**C. laurifolius.** Linn. (L. *laurus*, a laurel; *folium*, a leaf.) The systematic name of a species growing in the South of France, which affords a kind of ladanum.

**C. le'don.** Lamb. A name for the *Ledum palustre*, or *Kosmarinus sylvestris*.

**C. mas.** (L. *mas*, a male.) The *C. villosus*.

**C. mospeliensis.** Linn. Montpelier cistus. Used as an aromatic stimulant.

**C. palustris.** The *Parnassia palustris*.

**C. salvifolius.** Linn. (L. *salva*, the sage; *folium*, a leaf.) Female holly rose. Leaves and flowers astringent.

**C. Tauricus.** Presl. (L. *tauricus*, belonging to the Tauri, who lived in what is now called the Crimea.) The *C. creticus*.

**C. villosus.** Lamb. (L. *villosus*, hairy.) Male holly rose. Hab. Spain. Leaves and flowers astringent.

**Cistus rapes.** The plants of the Order *Cistaceæ*.

**Citamarit'mo.** An instrument, invented by Ceradini, for estimating the globular richness of the blood.

**Citharus.** (Κίθαρος, the chest, from κίθαρα, a lyre.) Old name for the breast, and also the side, according to Hippocrates, from its resemblance in shape to a cithara, or probably from the appearance of the ribs in the lateral aspect of the thorax in the skeleton.

**Citraconic acid.** (G. *Citronensäure*.)  $C_5H_7O_4 = C_3H_5 + (COOH)_2$ . A product of the dry distillation of citronic and of lactic acids.

**Citrago.** (L. *citrus*, a citron. F. and G. *mélisse*.) Old name for balm, *Melissa officinalis*, from its smell.

**C. chinicus.** The same as *Quina citras*.

**Citra'ria.** (L. *citrus*, a citron.) Balm, *Melissa officinalis*, from its smell.

**Cit'ras.** A citrate.

**C. ammoniofer'ricus.** The *Ferri et ammoniæ citras*.

**C. ferrico qu'nicus.** The *Ferri et quiniæ citras*.

**C. fer'ricus.** The *Ferri citras*.

**C. fer'ricus liquidus.** (L. *liquidus*, fluid.) The *Liquor ferri perchloridi fortior*.

**C. ka'licus.** (Kali.) The *Potassæ citras*.

**C. potas'sicus.** The *Potassæ citras*.

**Cit'rate.** (F. *citrate*; G. *citronsaures Salz*.) A salt of citric acid.

**Citrea mal'us.** (L. *citrus*, a citron; *malus*, an apple tree.) A name for the *Citrus medica*, or lemon tree.

**Citrene.** A colourless oil distilled, along with *Citrylene*, from oil of lemon.

**Citreolus.** (Dim. of L. *citrus*.) The cucumber plant, *Cucumis sativus*.

**Cit'reous.** (L. *citreum*, the citron. G. *citronfarbig*, *citronartig*.) Lemon-coloured, like a lemon.

**Cit'reum.** (L. *citrus*, a citron. F. *citronnier*; G. *Citronenbaum*.) The citron tree, a variety of the *Citrus medica*, or lemon tree.

**Cit'ric.** (L. *citrus*, the citron tree. F. *citrique*; G. *Citronisch*.) Of, or belonging to, the lemon.

**C. acid.** (F. *acide citrique*; G. *Citronensäure*.)  $C_6H_8O_7 = C_5H_7 + OH(COOH)_2$ . A tribasic tetratomic crystallisable acid found in many plants and parts of plants, as in roots, leaves, and fruits, and especially in the fruits of oranges, lemons, red and white currants, gooseberries, tamarinds, various species of vaccinium, the unripe fruits of *Solanum lycopersicon*, and in potatoes, and coffee. One ounce of lemon juice contains from 40—46 grains of citric acid, or about 9.5 per cent. It undergoes decomposition in the fresh fruit into glucose and carbonic acid, so that in lemons kept from February to December it is entirely absent. It is refrigerant and antiscorbutic, and is stated to allay the pain of cancerous ulceration.

# CITRI CORTEX—CITRUS

**C. ether.** See *Ether, citric*.  
**Cit'ri cortex.** Same as *Limonis cortex*.  
**Citridic acid.** A synonym of *Aconitic acid*.

**Citridinic acid.** A synonym of *Aconitic acid*.

**Cit'rilene.** ( $C_{20}H_{16}$ ) A liquid hydrocarbon obtained by decomposing the liquid camphor of oil of lemon by lime. It does not rotate a ray of polarised light.

**Citrination.** (*L. resuscitatio*; *G. Auferstehung*.) Alchemical term for complete digestion; also for revivification. (Ruland and Johnson.)

**Citrine.** (*L. citrus*, a lemon. *G. citron-gelb*.) Lemon-coloured.

**C. ointment.** The *Unguentum hydragyri nitratis*, so called from its colour.

**Citrinous.** (*L. citrus*, the citron tree. *F. citrin*; *G. citronenfarbig*.) Lemon-coloured.

**Citrinula.** (*L. dim. of citrus*, a citron.) A small citron or lemon.

Also, the herb spearwort, which resembles a citron in smell. (Turton.)

**Citrinulous.** The same as *Citrinous*.

**Citrinulus.** (*L. crystallus pallidus*; *G. bleicher Crystall*.) White crystal, i.e. calcined sulphate of copper. (Ruland.)

**Citrinus.** Old name for a kind of stone between a crystal and a beryl; formerly called saxifragus, and believed to be lithontriptic. (Paracelsus.)

**Citriodorous.** (*L. citrus*; *odor*, a smell. *G. citronduftend*.) Smelling like a lemon.

**Citriön.** (*Κίτριον*.) The citron tree, *Citrus medica*.

Also, an old term for lemon juice.

**Cit'ron.** (*Κίτρον*. *F. citrin*; *G. Citrone*.) The fruit of the *Citrus medica*, Risso.

**C. camphor.** The same as *Citropten*.

**C. oil camphor.** The same as *Citropten*.

**C. tree.** The *Citrus medica*.

**Citronade.** (*Fr.*) The same as *Lemonade*.

**Citronella oil.** (*G. Citronellöl*.) An ethereal oil obtained from the *Andropogon nardus*. Sp. gr. 0·874; boils at 200° C. (392° F.); odour agreeable.

**Citronelle.** (*Fr.*) A name for the *Melissa officinalis*, the *Lippia citriodora*, and also the *Artemisia abrotanum*, from their odour.

**Citronellol.**  $C_{10}H_{16}O$ . An oxidised oil obtained from citronella oil.

**Citronworts.** The plants of the Order *Aurantiaceae*.

**Citronyl.** A synonym of *Citrene*.

Also, a synonym of *Citryl*.

**Citropten.** ( $C_{10}H_{15}O_3$  or  $C_{20}H_{30}O_9$ .) A substance crystallising at low temperature in colourless transparent columns, found in the residue of the distillation of the fluid parts of oil of lemon. It dissolves easily in boiling water, in acetic acid, alcohol, and ether.

**Citrotartrate of soda.** See *Sodæ citrotartras effervescentes*.

**Cit'ul, Sicilian.** A name for the *Cucurbita citrullus*, or water melon.

**Citrullum.** (*F. citrouille*.) The citrul, or water melon, the fruit of the *Cucurbita citrullus*.

**Citrullus.** (*F. citrouille*.) The *Cucurbita citrullus*.

Also, Schrad., a Genus of the Nat. Order *Cucurbitaceae*.

**C. amarus.** (*L. amarus*, bitter.) Hab. Cape of Good Hope. Pulp cathartic.

**C. colocynthis**, Schrad. The colocynth plant or bitter cucumbers. It supplies *Colocynthis pulpa*.

**C. vulgaris**, Schrader. (*F. pastique*.) The *Cucurbita citrullus*.

**Citrulus.** The same as *Citrullus*.

**Citrus.** (*Κίτριον*, the citron tree. *F. orange*; *G. Pomeranzenbaum*.) A Genus of the Nat. Order *Aurantiaceae*.

**C. acida.** (*L. acidus*, sour.) The lime. A native of India and China, but long cultivated in the West Indies and the South of Europe. The fruit resembles, but is smaller than, the lemon, and is very acid.

**C. acriis**, Miller. (*L. acer*, sharp.) The species which produces limes.

**C. aurantium**, Risso. (*L. aurum*, gold. *F. orange*; *G. Apfelsinenbaum*.) The common or sweet orange tree.

**C. aurantium**, var. *ama'ra*, Linn. The *C. bigaradia* or *C. vulgaris*.

**C. aurantium**, var. *bergamia*, Linn. The *C. bergamia*, var. *vulgaris*, Risso and Poiteau.

**C. bergamia**, Risso. (*F. bergamotte*; *G. Bergamotte*.) Bergamotte. This plant is the source of bergamot oil, which is expressed from the rind of the unripe fruit; it is a variety of *C. limetta*.

**C. bigaradia**, Duhamel. (*F. orange*; *G. Pomeranzenbaum*.) The Seville or bitter orange. The leaves, flowers, and rind of the fruit are strongly aromatic. The ethereal oil has a sp. gr. of 0·85, rotatory power +85°.

**C. cedra**, Gall. A species of orange tree; the petioles are not alate.

**C. decumana**, Linn. (*L. decumanus*, of the tenth part, large.) The shaddock. A species grown in Java; the fruit is subacid and of pleasant flavour. The petioles of the leaves have also half an inch wide.

**C. dulcis**, Lamk. (*L. dulcis*, sweet.) The *C. aurantium*, Risso.

**C. japonica**. The kumquat. Hab. China. Bears an edible fruit.

**C. limetta**, Risso. (*F. limettier*.) The sweet lime. A variety of the common lime cultivated in the South of Europe. This plant yields limetta oil, which is a terpen ( $C_{20}H_{16}$ ); sp. gr. 0·93.

**C. limetta bergamium**. See *C. bergamia*.

**C. limonum**, Risso. (*F. citronnier*, *limonier*; *G. Citronenbaum*.) The lemon tree. The *C. bergamia* and *C. vulgaris* are probably only varieties of this species. See *Limonis cortex* and *L. succus* and *Olivum limonis*.

**C. lumia**, Risso. A species growing in Sicily and Calabria. A transparent and colourless oil, sp. gr. 0·91, with rotatory power of + 34, is obtained from it.

**C. medica**, Risso. (*L. medicus*, belonging to medicine. *F. cedratier*; *G. Cedrat-citron*.) The citron tree. The fruit is larger and less succulent than the lemon, but intensely acid. The juice is antiscorbutic. The candied peel is used as a preserve. This species was formerly cultivated in Palestine. The rind contains two ethereal oils, cedrat oil and oil of citron.

**C. medica**, var. *limonum*, Linn. The *C. limonum*, Risso.

**C. medica acida.** (*L. acidus*, sour.) The *C. limonum*, Risso.

**C. mella rosa**, Lamark. A name for a variety of the *Citrus medica*, produced accidentally by grafting a citron on a stock of a bergamot pear tree; the fruit of which partook both of the citron tree and pear tree; the essence prepared from this fruit is called essence of bergamotte, and *Essentia de cedra*. (Mayne.)

**C. paradisi**. Name for the plant which yields the Paradise apple, or Forbidden fruit; thus called, because fancied to be the fruit with which Eve was tempted; it somewhat resembles the shaddock, *C. decumana*, of which it is probably a variety.

**C. peretta**, Risso. (*G. Peretten*.) Fruit pear-shaped, pulp acid.

**C. pomelmoos**. The pomelo or pomelmoos. Fruit closely resembling the shaddock, *C. decumana*, of which it is sometimes regarded as a variety.

**C. sinensis**. (*L. sinensis*, belonging to China.) The *C. aurantium*, Risso.

**C. spatulora**. A variety of *C. vulgaris*.

**C. vulgaris**, Risso. (*L. vulgaris*, common. *F. bigaradier*; *G. Pommeranzbaum*.) The bitter or Seville orange tree; also called *C. bigarodia*. See *Aurantium*.

**Citryl**.  $C_6H_4O_4$ . The radical of citric acid, according to Blanchet-Sell.

**Citrylene**. A colorless oil distilled, along with *Citrene*, from oil of lemon.

**Citta**. (*Κίττα*.) Same as *Cessa*.

**Cittara**. Italy; in the island of Ischia. Mineral waters, containing sodium chloride 10 grains, magnesium chloride 5, calcium chloride 2.2, sodium sulphate 12, and magnesium sulphate 12 grains, in a pint. Formerly believed in as a remedy for sterility.

**Cittos**. (*Κίττος*.) Same as *Kissos*.

**Cittosis**. (*Κίτσα*, a craving for strange food.) A synonym of *Pica* and of *Chlorosis*, from the depraved appetite which frequently accompanies these disorders.

**Civadic**. Same as *Cevadic*.

**Civadilla**. Same as *Cvadilla*.

**Civet**. (*F. civette*, from *Ar. zabad*. *G. Zibeth*.) The substance civet, an odoriferous, unctuous drug, obtained from more than one species of the genus *Viverra*. It is a semi-liquid, unctuous, yellowish substance of a strong musky odour; it gets browner and thicker by time. It is secreted in a pouch which occurs in both sexes, and lies between the anus and the genital organs. It is used in perfumery, and was formerly employed in medicine as an antispasmodic and stimulant.

**C. cat**. (*F. la civette*; *G. Zibet Katze*.) The *Viverra civetta*.

**Civetia**. See *Civet*.

**Civiale**. A French surgeon; born at Saltilles, near Aurillac, in 1792, died in Paris in 1867. He first drew attention to lithotomy in 1817, when he constructed certain boring instruments. He performed the first operation of lithotomy on the living subject, January 13th. 1824.

**C's lithotrite**. (*Λίθος*, a stone; *τριβω*, to bruise. *F. écrabriser*.) This instrument is characterised by its mechanism enabling the operator to attach and release the male and female screw by turning a revolving cap.

**C's operation of lithotomy**. A modification of the median operation of lithotomy. It consisted in making a median perineal incision, followed by a transverse section of the pros-

tate, with a straight double-bladed lithotome, which is passed into the bladder through the membranous urethra along the groove of the staff. The blades of the instrument are then separated and withdrawn.

**C's trilabe**. (*L. ter*, three; *labium*, lip.) Another name for *C's lithotrite*.

**C's urethrotome**. (*Ουρήθρα*, the urethra; *τομή*, section.) An instrument in which a blade lies concealed in the bulbous extremity of a cylindrical sheath; by pressure on a disc connected with the sheath, the sheath is advanced and the blade protrudes. It is intended to cut from behind forwards.

**Civillina**. See *Recoaro*.

**Clabbergass**. The *Galium verum*.

**Cladanthous**. (*Κλαῖος*, a branch; *ἄνθος*, a flower.) Applied to the fructification or floral organs of mosses when they are found at the ends of lateral branches.

**Cladenchyma**. (*Κλαῖος*; *ἐγχυμα*, from *ἐγχύω*, to pour in.) Vegetable tissue composed of branched cells, as in some hairs.

**Clades glandularia**. (*L. clades*, injury, calamity; *glandula*, swollen glands.) An old name of the plague, from the glandular swellings which occur.

**Cladis'cus**. (*Κλαδίσκος*, dim. of *κλαῖος*, a young branch.) A small twig of a blood-vessel or such like.

**Cladobranchia**. (*Κλαῖος*; *βράγχια*, gills.) A Division of nudibranchiate Mollusca, having foliate, plumose, or branched branchiae.

**Cladocarpi**. (*Κλαῖος*, a shoot; *καρπός*, fruit. *F. cladocarpe*.) A Class of the *Musci*, having their fructification terminal and in form of a club.

**Cladocarpous**. (*Κλαῖος*, a branch; *καρπός*, fruit.) That which bears fruit on the smaller and finer branches.

**Cladocera**. (*Κλαῖος*, a branch; *κέρας*, a horn. *F. cladocère*.) An Order of the Subclass *Entomostraca*, Class *Crustacea*, having the second antenna large, like an arm on each side of the head, and divided into two or three branches, which act as swimming organs. The head is distinct; the body is enclosed in a bivalve carapace, the valves of which are joined together on the back; the eye is single.

**Cladodial**. (*Κλαῖος*, a branch. *F. cladodial*.) Relating to a *Cladodium*. Applied to a peduncle when it grows on a phyllocladum or phylloodium.

**Cladodium**. (*Κλαῖος*, a branch.) Term applied by Martius to an axis that is flattened and more or less leaf-like, though neither the form nor the nervation, which resembles that of a leaf, are of great importance. Good examples are afforded by *Xylophylla*, *Ruscus*, *Pachynema*, and some Leguminosae. The term has also been applied to some organs not flattened, but which, as in asparagus, occupy the axils of leaves and evidently result from the transformation of sterile axes. Their functions appear to be the same as those of leaves. They often present regularly-disposed foliar or floral organs.

**Cladogenus fructus**. (*Κλαῖος*, *ζῆνος*, a race; *fructus*, fruit.) Term applied in the mosses to fructification supported on branches.

**Cladonia**, Hoffm. (*Κλαῖος*, *G. Becherichte*.) A genus of gymnocarpous lichens.

**C. coccifera**, Flk. (*L. coccus*, a berry; *φίω*, to bear.) A species growing on heaths,

formerly used, under the name of *Muscus cocciferus*, or *Herba ignis*, in intermittent fevers.

**C. islandica.** The *Cetraria islandica*.

**C. pyxidata.** Flk. (*L. pyxidatus*, formed like a box.) A species growing on sterile heaths, and formerly in use for pectoral complaints, hooping-cough, and intermittent fevers.

**C. rangiferina.** Hoffm. (Lap. *rainigo*, the reindeer; *L. ferinus*, belonging to a wild beast. *G. Renntierflechte*.) Reindeer moss. A plant formerly regarded as pectoral and stomachic, now employed as a material for obtaining alcohol. It is the chief food of the reindeer in winter, and is also used as human food.

**C. sanguinea.** Eshw. (*L. sanguineus*, bloody.) Hab. Brazil. Used, when rubbed down with syrup, in thrush in infants.

**C. vermicularis.** De Cand. The *Thamnia vermicularis*, Ach.

**Cladoniaeae.** (*Cladonia*.) A Family of gymnocarpous Lichens, Order *Ascomycetes*, Class *Carposporae*. Group *Thallophyta*.

**Cladonic acid.** An acid said to be found in the lichen, *Usnea barbata*, Hoffm.

**Cladophyll.** (Κλάδος, a branch; φύλλον, a leaf.) A branch assuming the form and function of foliage, as in *Ruscus aculeatus*, the butcher's broom. See also *Cladodium*.

**Cladophytum.** (Κλάδος; φυτόν, a plant.) A name given by Leidy to a supposed Genus of Microphyta which he found in animals.

**C. coma tum.** Leidy. (*L. comatus*, having hair.) A species found in the small intestine of the *Julus marginatus*. It is probably the mycelium stage of a fungus.

**Cladopodous.** (Κλάδος, a branch; πούς, a foot. *F. cladopode*.) Having a branched foot or stipes.

**Cladopous.** Same as *Cladopodous*.

**Cladopsosis.** (Κλάδος; πτώσις, a fall.) In Botany, applied to the fall of branches as it occurs in Thuja, Taxodium, and others.

**Cladorhizous.** (Κλάδος; ρίζα, a root. *F. rhize*.) Having a branched root.

**Clad'os.** (Κλάδος, a branch. *L. ramus*; *G. Zweig, Reischen*.) A branch.

**Cladostachyous.** (Κλάδος; στάχυς, an ear. *F. stachye*.) Having a branched ear, or spike.

**Clad'othrix.** (Κλάδος, a branch; θρίξ, the hair.) One of the Schizomycetes. In this fungus the filaments, which are cylindrical, frequently bifurcate, and present a false ramification.

**C. dichotoma.** (Δίς, twice; τέμνω, to cut.) A whitish mucilage which forms on the surface of liquids in a state of putrefaction. The filaments have a diameter of 0.3 μ.

**Cladrastis.** A Genus of the Nat. Order *Leguminosae*.

**C. lutea.** (*L. luteus*, yellow.) This plant yields a yellow dye to spirit.

**C. tinctoria.** (*L. tinctorius*, belonging to dying.) Yellow ash; fustic tree, or yellow locust. A tree growing in America from Kentucky to Alabama. The bark of the tree and the roots are cathartic.

**Cladus.** (Κλάδος, a branch.) A branch, as of an artery.

**Claïrvoyance.** (*F. clair*, clear; *voir*, to see. *G. Hellsichtigkeit, Hellscherei*.) Term for the state of a person subjected to animal magnetism, in which, it is asserted, he sees perfectly, with his mind's eye, the most intricate

internal arrangements of his own or of another's body, of any place, domicile, or building, however distant, and which he has never seen before.

**C. Puysegur'ian.** So called because the phenomena of clairvoyance originated in the experiments of the Marquis of Puysegur, a disciple of Mesmer.

**Clam.** (Eng. from *clammy*, sticky; from Sax. *clam*, clay, a plaster.) To adhere as a viscous substance.

**Clamatores.** (*L. clam*, to call out.) A Suborder of Passerine birds. It includes the Australian lyre birds, the American ant bird, and others. The syrinx is tracheal or simple, only with lateral muscles; first primary feather longest; legs scutate in front.

Also, a synonym of *Gallinae*.

**Clammy.** (Sax. *clam*, clay. *F. pâteux*.) Viscous, glutinous, adhesive.

**C. mouth.** (*F. bouche pâteux*.) Applied to the mouth, when the inner surface of the cheeks and tongue are dry and adhere to each other.

**C. weed.** The *Polanisia graveolens*.

**Clamor.** (*L. clam*, to call out. *G. Geschrei, Geräusch*.) A crying out.

**Clamp.** (Dut. *klamp*. *F. crampon*; *G. Klampe*.) An instrument employed for the purpose of compressing the pedicle of a tumour, before its removal by the knife or cautery, to fix it, and to prevent bleeding. Such an instrument is employed sometimes in ovariectomy, castration, in the removal of piles, and other operations; it consists essentially of two metal blades capable of being approximated and fixed by a screw movement or a spring. Very numerous varieties have been invented by different persons.

Also, to fasten tightly.

**C., castration.** (*L. castra*, to remove the testes.) A clamp applied to the cord, before castration is performed, to prevent retraction of the vessels and the occurrence of uncontrollable hemorrhage.

**C., eye'lid.** An instrument to compress the eyelid, and thus to prevent hemorrhage during the performance of small operations. It resembles a pair of forceps, each blade of which is bifurcated at the extremity.

**C., hare'lip.** An instrument intended to approximate the edges of the wound in the operation for the cure of harelip, and retain them in apposition.

**C., ovariotomy.** An instrument constructed for the purpose of compressing the pedicle of the cyst, after its removal, to prevent hemorrhage. Various forms have been devised.

**C., perine'al.** A clamp intended to bring the edges of the wound together after perineal section and maintain them in apposition.

**Clandestina.** Tournef. (*L. clandestinus*, hidden.) A Genus of the Nat. Order *Orobanchaceae*.

**C. rectiflora.** Lam. (*L. rectus*, straight; *flos*, a flower.) Hab. Europe. Parasitic on the roots of the beech. Formerly esteemed as a remedy against sterility.

**Clan'gor.** (*L. clang*, to clang. *G. Geschrei, Geräusch*.) A noisy, shrill tone of voice.

**C. infantum.** (*L. infans*, a young child.) A synonym of *Laryngismus stridulus*.

**Clap.** (Old French word *clapises*, which were public shops of infamous character.) Gonorrhœa.

**C., external.** (L. *externus*, outward.) Gonorrhoea spuria. Balanitis.

**Clappede pouch.** (Dutch *klappen*, to rattle.) The *Capsella bursa pastoris*.

**Clapwort.** The *Orobanchae americana*.

**Claquement.** See *Bruit de claquement*.

**Clarendon.** United States of America; Vermont State. Mineral waters, temp. 9° C. to 12° C. (48.2° F. to 53.6° F.), containing carbonic acid, oxygen, and nitrogen, with little mineral constituent. Used in skin diseases and chronic catarrhs. (Dunglison.)

**Claret.** (Old F. *clairet*; from Low L. *claratum*, from *clarus*, clear.) The English name for a French wine from the district of Bordeaux. The amount of spirit varies in different growths from 7 to 13 per cent. of alcohol. Claret is a fully fermented wine, containing little sugar, and is considered an easily digestible stimulant.

**Clareta.** (L. *clarus*, clear.) Old term for the albumen of eggs. (Ruland.)

**Claretum.** (Low L. from L. *clarus*, clear. F. *clairet*; G. *Würzwein*.) The wine named claret.

Also, formerly applied to several factitious wines in which the wine was impregnated with an infusion of several aromatics sweetened with sugar. Hypocreas wine was named claretum because it was percolated and purified by a wine sac, through which it was drained from its dregs, called *Manica Hippocratis*.

**C. laxativum.** (L. *laxo*, to loosen.) Old name for wine impregnated with senna, mechoacan, turbeth, and aromatic substances; for purging of melancholy and pituitous humours.

**C. purgatorium.** (L. *purgo*, to cleanse.) Old name for a vinous solution of glass of antimony with cinnamon water and sugar. Used as emetic and purgative.

**Clarification.** (L. *clarus*, clear; *facio*, to make. F. *clarification*; G. *Abklärung*.) Term for the process of purifying or freeing a fluid from heterogeneous matter or impurities. The act of clarifying.

**Clarified.** (Same etymon. F. *clarifié*; G. *abgeklart*.) Freed from impurities.

**C. honey.** See *Mel depuratum*.

**Clarke, Joseph Lockhart.** An English microscopist of eminence; best known by his memoirs on the minute anatomy of the nervous system. Born 1817, died 1880.

**C.'s column.** A vertical column of cells situated in the dorsal region of the spinal cord, and in cross section occupying the region to the outer and posterior part of the central canal.

Also, called the posterior vesicular columns of the cord.

**Clarke's soap test.** See *Soap test*.

**Clary.** (Mod. Lat. *selarea*, from *ex*, out of, and *clarus*, clear. F. *sauge des prés*; I. *scharire*.) The *Salvia selarea*. Hab. Middle of Europe. The apothecaries termed it Clear-eye, translated into *Oculus Christi*—Godes-eye and See-bright, and eye salves were made of it. It is stimulant, aromatic, and bitter.

**C., purple-topped.** The *Salvia horminum*.

**C., wild.** The *Salvia verbenaca*.

**Clas'is.** (Κλάσις, from κλάω, to break.) A fracture.

**Clasma.** (Κλάσμα, from κλάω, to break.) The piece broken off in a fracture.

**Clasp.** (Mid. Eng. *clasper*.) A fastener. See *Ancter*. Also, to fasten.

**Clas'per.** (Same etymon. F. *tendron*.) A tendril.

Also, a term applied to an organ which exists in some male animals, as the Rays, and which is used for embracing the female in copulation.

**Class.** (F. *classe*, from L. *classis*, a class. G. *Klasse*.) A rank, a sort. Term for a primary division of bodies comprising one or several orders.

**Classification.** (L. *classis*, a distribution; *facio*, to make. F. *classification*; G. *Abtheilung in Classen*.) Term applied to the systematic arrangement of natural productions, and the morbid affections of the animal body, into sections or ranks of similar nature.

In Botany and Zoology, the sequence of the grades is KINGDOM, Series or Division, or Subkingdom; CLASS, Subclass, Cohort, or Alliance; ORDER or Family, Suborder; TRIBE, Subtribe; GENUS, Subgenus, Section, Subsection; SPECIES, Subspecies or Race, Variety, Subvariety.

**C., artificial.** (L. *artificialis*, of, or belonging to, art.) A classification in which one or more points of resemblance are singled out, and constitute the basis of the arrangement, convenience and facility of reference being the controlling principles. The classification of plants on the Linnaean system, in which the number of the stamens determines the class, and the number of the pistils the orders, and the alphabetical arrangement of words in a dictionary are examples of artificial classification.

**C., natural.** (L. *natura*, nature.) A classification in which objects, as plants or animals, are arranged into groups in a series of grades on a consideration of all their characters, so that those presenting the greatest number of points of resemblance stand nearest to each other. The arrangement of the words of a language under their roots, and with the derivative terms placed under the more primitive forms, and the arrangement of plants in accordance with their similarities of structure and form, are examples of a natural classification.

**Classy.** France; a town near Laon in Picardy. Here are chalybeate waters.

**Clastic.** (Κλάω, to break. L. *clasticus*, *fragilis*; F. *clastique*; G. *Zerbrechlich*.) Fragile; separable into fragments. Term applied to models which can be taken to pieces.

**C. anatomy.** See *Anatomy, clastic*.

**Clathrate.** (L. *clathri*, or Gr. κλῆθρα, a trellis. G. *schrag gegittert*.) In the form of a trellis or net-like.

In Botany, latticed.

**Clathrus.** (L. *clathri*.) A Genus of the Suborder *Gasteromycetes*, Order *Basidiomycetes*, or of the Group *Phalloidæ*, Order *Fungi*.

**C. cancellatus.** Linn. (L. *cancelli*, a lattice. F. *clathre*; G. *Gitterschwamm*.) A coral-like fungus of a fine red colour, branched so as to seem like a spherical lattice. It has a nauseous odour, and is said to be poisonous.

**Claudent.** (L. *claudo*, to shut in.) Enclosing, shutting in, drawing together.

**Claudiacon.** (Κλαυδιακόν.) Old name for a certain collyrium, described by Paulus Aegineta.

**Claudica'tio.** See *Claudication*.

**C. epizootica.** (Ἐπί, upon; ζῷον, an animal. G. *Klauenseuche*.) The epidemic disease of cattle called foot-and-mouth disease.

**Claudica'tion.** (L. *claudico*, to halt, or be lame. F. *claudication*, *boutement*; G. *Hinken*.)

Old term for lameness or halting. It may be caused by shortening or lengthening of the lower limbs, by ankylosis of a joint, by pain in some part of the limb which hinders movement, or by loss of power over some sets of muscles.

**C., spontaneous.** (G. *freiwillige Hinken*.) A symptom of the insidious approach of hip-joint disease in children, being a slight limp in walking.

**Clauditas.** (L. *clauditus*, from *claudus*, limping. G. *Lahmssein*.) Same as *Claudication*.

**Claudius, cells of.** (*Claudius*, a German anatomist of the present century.) The cells in the internal ear, which form the external epithelium of the *Canalis cochlearis*, covering the *Zona pectinata* of Todd and Bowman. They consist of a single row of transparent, tessellated epithelium cells, with a granular nucleus; their free surface is rounded.

**C., membrana tectoria of.** (L. *membrana*, a membrane; *tectorius*, belonging to a cover.) The same as *Corti, membrane of*.

**Clauseniae.** A Tribe of the Order *Aurantiaceae*, having diplostemonous flowers and twin superposed ovules.

**Clausile.** (L. *clausus*, closed. F. *clausile*.) Enclosing. Applied to an embryo the radicle of which, soldered by its two borders, completely encloses the rest.

**Clausilium.** (L. *clausus*, closed.) A temporary covering secreted by the side of the foot of pulmonate Mollusca to close in the body of the animal within the shell during hybernation.

**Claustrophobia.** (L. *claustra*, a bolt; *phobos*, fear.) A name given by Raggi to a mental affection in which the patient cannot, without great distress of mind and body, bear to be in any closed chamber. It was named in opposition to *Agoraphobia*. Also called *Cleithrophobia*.

**Clastrum.** (L. *claudo*, to shut. F. *barrière*.) A barrier. Also, any aperture that has the power of contracting itself or of closing its orifice; hence applied to the throat, or claustrum gutturis, the bar or entrance of the pharynx. Also called *Cleithron*.

Also (G. *Formauer*), a nearly vertical lamina of grey matter situated in the hemisphere of the brain externally to the lenticular nucleus, from which it is divided by the capsula externa. It is separated from the grey cortex of the convolutions of the island of Reil by a thin layer of white medullary substance which belongs to these convolutions. In vertical transverse section it appears as a slender line, becoming broader below, which does not rise quite so high as the lenticular nucleus; lesions of this part cause aphasia.

**C. gutturis.** (L. *guttur*, the throat.) The isthmus faucium.

**C. palati.** (L. *palatum*, the palate.) The velum pendulum palati.

**C. virginale.** (L. *virginalis*, belonging to a virgin.) The hymen.

**C. virginitalis.** (L. *virginitas*, maidenhood.) The hymen.

**Clausura.** (L. *claudo*, to shut. F. *imperforation*; G. *Undurchbohrtheit*.) Old term for an imperforated condition of any canal or cavity of the body.

**C. ani.** (L. *anus*.) Imperforate anus.

**C. uteri.** (L. *uterus*, the womb.) An imperforate state of the womb.

**Clausus.** (L. part. of *claudo*, to close or shut. F. *clos*, *fermé*, *infirmé*; G. *geschlossen*.)

Shut; inclosed; hid; closed; destitute of an aperture.

**Clauthmus.** (Κλαυθμός, from *κλαίω*, to weep.) Weeping; the shedding of tears observed in some forms of disease.

**Clava.** (L. *clava*, a club. G. *Keule*.) An enlargement at the upper part of the *Funiculus gracilis*. See *Clavæ*.

**C. rugosa.** (L. *rugosus*, wrinkled. F. *acore vrai*; G. *Kalmus*.) A name for the *Acorus calamus*, from the shape of its rhizome.

**Clavæ.** (L. pl. of *clavo*. G. *die Keulen*.) Term applied to the upper thickened extremities of the inner part of the two posterior pyramids or funiculi graciles where these abut on the inferior angle of the fourth ventricle.

**Clavæform.** (L. *clava*, a club; *forma*, likeness.) Club-shaped.

**Clavaria.** (L. *clava*, a club. F. *clavaire*; G. *Keulenschwamm*.) Club-shaped fungus, or club top. A Genus of the Suborder *Hymenomyces*, Order *Basidiomycetes*, of which the fleshy receptacle is never corky or coriaceous. They are branched or simple, without a distinctly substantial stem. The dry hymenium invests externally the whole of the pseudoparenchyma.

**C. amethystina.** Bull. (L. *amethystinus*, of the colour of amethyst.) Branches many, round, obtuse, violet. In mossy places; esculent.

**C. aurea.** Schaff. (L. *aureus*, golden.) Golden clavaria. Stalk pale and thick, with stiff, upright, quadrangular, yet low, branches; grows in pine woods, and is esculent and of pleasant taste.

**C. botrytis.** Pers. (Βότρυς, a cluster of grapes. G. *rother Hirschschwamm*, *Barcentatze*.) Red-tipped clavaria. Stalk thick, fleshy; branches many, unequal, swollen, reddish or brownish. In woods; esculent.

**C. cinerea.** Bull. (L. *cinereus*, ashy grey. F. *muinotte*, *harbe de bouc*.) The grey goatsbeard mushroom. A species sometimes eaten, but having little flavour, and perhaps somewhat injurious.

**C. coralloides.** Linn. (Κοράλλιον, coral; εἶδος, likeness. F. *clavaire corallin*; G. *Keulenschwamm*.) The goatsbeard mushroom, the *Fungus coralloides* of old writers. It is sometimes eaten, but has little flavour, and was formerly used as corroborant and astringent.

**C. flavæ.** Schaff. (L. *flavus*, yellow. G. *gelber Hirschschwamm*, *Ziegenbart*.) Branches alike in height, smooth, round; branchlets short, yellow. In woods; esculent.

**C. formosa.** Pers. (L. *formosus*, beautiful.) Grows in woods. Consists of many upright branches of a rosy orange colour. Esculent, and pleasant to the taste.

**Clavariæ.** (*Clavaria*.) A Suborder of the Order *Basidiomycetes*, being fungi having the fructification cylindrical, or clavate or clubbed, and covered with the hymenium.

**Clavate.** (L. *clava*, a club. F. *clavé*; G. *Keulenförmig*, *Kolbenförmig*.) Club shaped; clubbed. Applied to stigmata, and other organs, having this appearance.

**Clavatio.** (L. *clavus*, a nail. F. *clavation*.) The same as *Gomphosis*.

**Clavatulæ.** (L. *clavus*, a nail. F. *clavatulé*; G. *nagelförmig*.) Formed somewhat like a nail.

**Clavée.** France; Département de la Vienne. Milky, sulphurous-smelling mineral waters, tem-

perature 12° C. (53-6° F.), containing minute quantities of sodium sulphuret, and calcium and iron carbonate, with some free carbonic acid. Used in skin diseases and bronchial affections.

**Clavellate.** (L. *clavellum*, dim. of *clava*, a club. F. *clavelle*; G. *keulenformig*.) Formed like a small club. Applied to leaves, branches, and other structures.

**Clavellati cineres.** See *Cineres clavellati*.

**Clavelli.** Plural of *Clavellus*.

**C. cinnamomi.** (L. *cinnamomum*, cinnamon.) Cassia buds.

**Clavellöse.** Same as *Clavellate*.

**Clavellus.** (Dim. of L. *clavus*, a nail) A small nail.

**Claver.** (Dut. *klaver*.) The old and correct orthography of *Clover*.

**Claves.** (L. plural of *clavis*, a key.) Keys.

**C. calvariae.** (L. *calvarium*, a skull.) The Wormian bones; as if they were the keys by which the other bones were locked.

**Clavi.** (L. plural of *clavus*, a nail.) Term anciently applied to various fungi resembling ergot, as *Clavus secalis*, *C. siliginis*.

**Claviceps.** (L. *clava*, a club; *caput*, the head. F. *claviceps*; G. *keulenkopfig*.) A Genus of the Suborder *Pyrenomyces*, Order *Ascomycetes*, Class *Fungi*. So called from their somewhat club-shaped head.

**C. purpurea**, Tulane. (L. *purpureus*, purple. G. *Mutterkornpilz*.) The fungus which produces ergot. It first appears as a filamentous mycelium investing and penetrating the upper part of the ovary of grasses, especially of rye; the surface of the fungus is deeply furrowed, and presents a large number of conidia or basidia, arranged radially, embedded in a yellowish sugary mucus, which exudes between the paleae; in this stage it is called a *sphaecelia*; and was at one time believed to be a distinct fungus, *Sphaecelia segetum*. The conidia can germinate at once, and immediately again detach conidia, which can produce a *sphaecelia* in other grasses. In the next stage the ovary of the rye becomes covered with a thick felt of firm hyphae at its base, together with loose tissue of the *sphaecelia*; the surface soon assumes a dark violet colour, and grows to a horn-shaped body, often one inch in length; this is the *sclerotium*. In the meantime the *sphaecelia* ceases to grow, its tissue dies, and is ruptured beneath by the *sclerotium* and carried upwards on its summit, where it appears as a cap, and afterwards falls off. This stage also was formerly believed to be a distinct fungus, *Sclerotium clavus*. The ripe *sclerotium* remains dormant till the spring, when, upon exposure to moisture the formation of receptacles begins beneath the external surface; constituting the third stage of growth of the fungus. This is effected by a number of closely-packed branches developing at definite points from the medullary hyphae, the bundle breaks through the skin and grows up to a receptacle or stroma, consisting of a long stalk and a globular head. In the latter a large number of flask-shaped perithecia appear, which do not possess a clearly-defined wall. Each perithecium is filled from the bottom by a number of asci, in each of which several slender filiform spores are produced. These spores swell in damp situations, and, attaching themselves to the young flowers of rye, germinate and close the circuit of development of the fungus. This stage also was constituted a distinct fungus, *Cordiceps purpurea*.

**Clavicle.** (L. *clavicula*, dim. of *clavis*, a key, from its fancied likeness. F. *clavicule*; I. *clavicola*; G. *Schlüsselbein*.) The collar-bone. One of the elements of the shoulder-girdle, or pectoral arch. It is of sigmoid form, and occupies a horizontal position at the upper and front part of the thorax. It is rounded in its inner two thirds, flattened externally from above downwards. It articulates internally with the sternum through the intervention of an interarticular fibro-cartilage, and a double synovial membrane, and by a small facet with the cartilage of the first rib. Externally it articulates with the acromion process. The muscles attached to it are the sternomastoid, trapezius, pectoralis major, deltoid, subclavius, sternohyoid, and platysma. The ligaments are the acromio-clavicular, the coraco-clavicular or conoid and trapezoid, the sterno-clavicular, costo-clavicular or rhomboid, and the interclavicular. It ossifies in two centres: one for the shaft, which is the first point to ossify in the body, the ossifying point appearing in the cartilage at the fifth week of fetal life; and one for the sternal end of the bone, which appears about the eighteenth year.

The clavicle consists of four originally separate parts, the body, or clavicle proper; the acromial end, meso-scapular segment; the sternal epiphysis, or precoracoid bone; and the omio-sternum, or episternum; this last is represented by the sterno-clavicular interarticular fibro-cartilage in man.

The clavicle is absent, among Mammals, in Ungulata and Cetacea, and in many Carnivora and Rodentia; it exists in a rudimentary form, attached by long ligaments to the scapula and sternum, in the rabbit, and some other Rodents; in the mole it assists, with the coracoid process of the scapula, to form a complex cuboid bone, connected with the scapula by a fibrous band. In most birds the clavicles are united centrally to form the furculum, or merry-thought. In Chelonians the precoracoid segment is predominant; in most lizards the clavicle proper is well developed, and in fishes enormously so.

The term also signifies a tendril, clasper, or cirrus.

**C. dislocation of.** The sternal and the acromial end of the clavicle may either of them, or, in rare instances, both, be dislocated. The sternal end may be displaced forwards, or upwards, or backwards; the acromial end may, when dislocated, lie on the upper surface of the acromion, on the anterior part of the spine of the scapula, under the acromion, or under the coracoid process.

**C. fracture of.** (L. *frango*, to break.) The clavicle may be broken by direct violence, or by muscular action, and at any point; the symptoms vary with the seat of the fracture.

**Clavicornes.** (L. *clava*, a club; *cornu*, a horn. F. *clavicorne*.) Club-horned. Applied to a Family of the *Coleoptera*, in which the antennae are thick at the extremity.

**Clavicula.** (L. dim. of *clavis*.) The clavicle.

**Clavicular.** (L. *clavicula*, the clavicle. F. *claviculaire*.) Of, or belonging to, the clavicle.

**C. artery.** A small branch of the acromio-thoracic artery, which supplies the subclavius muscle.

**C. nerves.** (F. *rameaux susclavien-laires*; G. *Oberschlüsselbeinnerven*.) Descending branches of the superficial cervical plexus. They

## CLAVICULATE—CLAYTONIA.

arise from the third and fourth cervical nerves, and supply the skin over the pectoral and deltoid muscles. They anastomose with the cutaneous branches of the upper intercostal nerves.

**C. région.** The region of the chest which is covered by the clavicle; a term used in medicine.

**Claviculate.** (L. *clavicula*, the clavicle. F. *claviculé*.) Having, or provided with, clavicles, as man and the Simia.

In Botany, furnished with clavicle, that is, with tendrils, hooks, or other appliances for climbing.

**C. animals.** A term which includes the Linnæan Order *Primates* and some *Rodentia*.

**Claviculi.** (L. dim. plural of *clavus*, a nail.) Term applied to the fibres that connect or bind together lamellæ or plates of bone. They are sometimes called *Sharpey's fibres*.

**Claviculus.** (L. dim. of *clavus*.) The clavicle.

**Clavifoliate.** (L. *clava*, a club; *folium*, a leaf. F. *clavifolié*.) Having claviform leaves.

**Claviform.** (L. *clava*, a club; *forma*, resemblance. F. *claviforme*, *en forme de massue*; G. *keulenförmig*.) Having the form of a club; club-shaped.

Also (L. *clavus*, a nail. G. *Nagelförmig*), nail-shaped.

**Clavimanous.** (L. *clava*, a club; *manus*, a hand.) Having the hand like a club.

**Clavipalpi.** (L. *clava*; *palpus*.) A Division of tetramerous Coleoptera having the last three joints of the antennæ like the thick end of a club.

**Clavipectoral region.** (L. *clavicle*; *pectus*, the chest.) Term applied by Richet to the region situated superficial to and beneath the clavicle.

**Clavipede.** (L. *clava*, a club; *pes*, a foot.) Having the foot like a club.

**Clavis.** (L. *clavis*, a key. F. *clef*; G. *Schlüssel*.) A key, the instrument used for extracting a tooth.

Formerly used by Galen for the clavicle.

**C. anglica.** (Mod. L. *anglicus*, English.) The tooth-extracting instrument called *Key*.

**Clavism.** (L. *clavus*, a nail; a modern term for ergot of rye. I. *clavismo*.) The same as *Ergotism*.

**Clavisternal.** (Clavicle; *sternum*.) Having relation to the clavicle and to the sternum.

**C. bone.** Term applied by Bécclard to the *Manubrium sterni*.

**Clavulate.** (L. *clava*, a club.) Club-shaped.

**Clavule.** (L. *clava*.) Term applied to the elongated claviform portion of the receptacle of various Sphæriaceæ.

**Clavuliger.** (L. *clavulus*, a little nail; *gero*, to bear. F. *clavuligère*; G. *Nagelchentragend*.) Applied to a mushroom, from its form.

**Clavus.** (L. *clavus*, a nail; from *claudo*, to shut or close. F. *clavus*, *clou*, *cor*; G. *Huhnennaue*.) A corn, or horny round cutaneous formation, the effect of continued pressure from tight shoes, generally on the prominent parts of the toes; so called from its resemblance to the head of a nail. It has a hard, dry, central portion, being a collection of cells of the horny layer of the epidermis, which, on every renewal of pressure, acts on the acutely sensitive substance beneath, causing intense pain.

Also, a very acute pain confined to a small part of the head, as if a nail were being driven into it, usually connected with hysteria, and then called *Clavus hystericus*.

Also, applied to a condyloma of the uterus.

Also, to a tubercle on the white of the eye.

Also, to a certain degree of prolapse of the iris through an opening in the cornea, when it is pressed flat like the head of a nail.

Also, a name for the penis.

Also, the basal inner portion of the hemelytron of *Hemiptera*.

Also, the sclerotium stage of *Claviceps purpurea*.

**C. hystericus.** (L. *hystericus*, hysterical.) A pain felt in some single point of the head, as if a nail were being driven into the part; especially occurring in hysterical persons.

**C. oculi.** (L. *oculus*, the eye. F. *staphylôme*; G. *Staphyloma*, *Traubenauge*.) An old term for *Staphyloma*.

**C. secalinus.** The same as *C. secalis*.

**C. secalis.** (L. *secale*, rye. F. *le seigle ergoté*; G. *Mutterkorn*.) A name for the ergot of rye, *Ergota*.

**C. siliginis.** (L. *siligo*, a kind of wheat.) The same as *C. secalis*.

**Claw.** (Sax. *clawu*. L. *unguis*; F. *griffe*, *ongle*, *serre*; G. *Klauen*, *Kralle*, *Nagel*.) The unguis or lower narrow part of the petal of a polypetalous corolla.

Also, the nail or talon of birds and other animals.

**Clawfoot, hollow.** (F. *griffe-pied creux*.) A deformity of the foot, usually congenital, which results from continued and excessive action of the extensors of the first phalanges of the toes, with atrophy or paralysis of the interossei and of the adductor and short flexor of the great toe. The first phalanges are extended almost to the extent of being subluxated upon the head of the metacarpal bone, whilst the last phalanges are flexed upon the first, and thus form a claw. The curve of the plantar arch is much increased.

**Clawhand.** (F. *main en griffe*.) A condition in which the wrist is strongly extended whilst the fingers are flexed, especially at the joints of the first phalanges. It occurs in cervical pachymeningitis and in lateral symmetrical amyotrophic sclerosis. It is due to atrophy of certain groups of muscles.

**Clay.** (Sax. *clæg*. F. *argile*, or *argille*; G. *Thon*.) A tenacious, plastic kind of earth, consisting chiefly of aluminium silicate, resulting from the decomposition and disintegration of felspar by the action of air and water.

**C. eaters.** Tribes of men, among whom are the Agmaras, an Indian tribe living on a plateau of the Andes 11,000 feet above sea-level, and many African negroes, who use clay for mixing with food, especially grain; probably to make it more bulky.

**C., pure.** (F. *alumine*, *oxide d'aluminium*; G. *Aluminiumoxyd*.) A name for the substance alumina.

**C. soils.** See *Soils*, *clay*.

**C. waters.** See *Waters*, *clay*.

**Clayey.** (Same etymon.) Like clay.

**C. motions.** The pale, sticky, clay-like faeces which often occur when there is deficiency of bile.

**Claytonia.** (Clayton, an American botanist.) A Genus of the Nat. Order *Portulacacæ*.

**C. cubensis**, Bonpl. (*Cuba*) The *C. perfoliata*, Donn.

**C. perfoliata**, Donn. (L. *per*, through; *folium*, a leaf.) Bab. West Indies. Used as a salad and pot herb.

**C. tuberosa**. (L. *tuber*, a swelling.) A Siberian plant, the tubercous root of which is edible.

**Cleansings**. (Sax. *clensian*, to cleanse. L. *lucius*; G. *Kindheitsreinigung*.) A popular term for the lochia.

**Clear**. (F. *clair*; from L. *clarus*, bright.) Without muddiness, bright, distinct.

**C. sound**. A term applied to a percussion sound which possesses a tone which is more or less clear or pure, as distinguished from dullness.

**C. weed**. The *Pilea pumila*.

**Clearing out**. The fruit of the *Strychnos potatorum*. The ripe seeds are used in India with which to rub the inside of coarse earthenware vessels, with the effect of precipitating the impurities of pond or river water.

**Clea'vage**. (Sax. *cleofan*, to split.) A splitting. A term for the property which crystalline bodies possess of splitting, or of being split, in certain determinate directions more easily than in others; foliated fracture.

Also, applied to the separation into parts by a natural line or process of any structure, such as occurs in the multiplication of cells by fission.

**C., cell**. (F. *formation cellulaire par segmentation*.) Segmentation; the multiplication of cells by fission. Various modes have been described. In the Myxomycete, for example, when, owing to excessive dryness or moisture, the conditions are unfavorable for active life, the plasmodium breaks up into numerous fragments, which assume a spheroidal form and invest themselves with a cell membrane, in which state they remain quiescent till a change in the surrounding conditions occurs, when they become free. In *Achlya*, on the other hand, the whole mass of the granular protoplasm which fills the claviform sporangium divides into numerous polyhedral masses, which gradually become converted into spheroidal cells; this is sometimes termed endogenous cleavage. In other instances, again, as in *Spirogyra*, the cleavage of the cell protoplasm is accompanied by the formation of a septum composed of cellulose, which divides the mother-cell into two daughter-cells. The cell wall of *Spirogyra* consists of three layers, an external, thick, clear, gelatinous, frequently presenting lateral striae; a middle layer, thin, and of a rosy hue; and a third twice as thick as the preceding. The first change observed in the process of cleavage is that the fusiform nucleus increases to four times its previous size, and becomes rectangular and transparent. The nucleolus also increases in volume and density. Filaments of protoplasm connect the angles of the nucleus with the four corners of the cell. The nucleolus disappears. The contents of the nucleus almost suddenly become filamentous, the filaments forming a series of laminae parallel with the sides, whilst the mass of the nucleus forms a lamina at right angles to these, dividing the nucleus into two halves, and named by Strasburger the nucleolar plate or lamina. A circular projection now takes place from the inner wall of the cell, which pushes the protoplasm before it, and causes rapid absorption of starch grains, and gradually extends towards the nucleus. Meanwhile the

nucleolar plate becomes double, and the nucleus, by the rupture of its outer coat, splits into two, and the protoplasm of the cell, collecting at the two extremities, also undergoes division, the two parts becoming perfectly divided by the completion of the cellulose septum. The whole process is completed in three or four hours.

**C. forms**. Those forms, described by the more or less smooth and shining faces, or planes, obtained by splitting a mineral.

**C. plane**. (L. *planus*, flat.) The line through which division of a cell has commenced or is about to take place.

Also, the plane or direction in which a crystal may be split, leaving a more or less smooth face.

**Clea'vers**. (Sax. *cluser*; from *clifan*, or *cleofan*, to stick.) The *Galium aparine*.

**Cleave wort**. The *Galium verum*.

**Cleft**. (Eng. part. of *cleave*; from Sax. *cleofan*, to cleave or split. L. *fissus*; F. *fendu*; G. *gespalten*.) Split; cloven.

Also, a fissure, a crack.

In Botany, divided about half way down.

**C., branchial**. See *Branchial cleft*, and *Clefts*.

**C. fungl**. A name for the *Schizomyces*.

**C. iris**. (L. *iris*, a rainbow.) The same as *Coloboma iridis*.

**C. lip**. Same as *Harelip*.

**C. palate**. (L. *palatum*, the palate.) That condition in which, owing to faulty development of the palate processes of the superior maxillary and palate bones and of the soft parts covering these bones, the roof of the mouth is incomplete. The malformation causes much inconvenience by interfering with deglutition, and by rendering speech nasal and imperfect.

**C. palate, operation for**. See *Staphylo-rhaphy*.

**C., vis'ceral**. (L. *visens*, the inner parts.) Same as *Branchial cleft*.

**Clefts**. A series of openings appearing in all Vertebrate embryos and persisting in the Branchiata, through which, in the latter, water currents pass from the mouth and pharynx outwards for aëration of the blood, the gills being papillary productions of the region of the cleft. In the lamprey and its congeners there are seven pairs. In sharks and skates there are generally six clefts behind the mouth, the foremost being placed high up and called the blow-hole or spiracle. Most Ganoids have the spiracle, but this cleft does not open in Teleostei, which consequently have only five clefts. In the Urodela the first cleft does not open, and there are three or four behind. In most Anoura the first cleft, or tympano-Eustachian, opens largely within, but not externally, its opercular skin becoming the membrana tympani. In the Sauropsida (reptiles and birds) four clefts appear in the first instance; all but the first disappear. Four clefts may also be seen in the embryos of all mammals, the first becoming the tympano-Eustachian cavity, as in Sauropsida. See *Branchial cleft*, *Oral cleft*, *Visceral cleft*.

**Cleidag'ra**. The correct spelling for *Cleisagra*.

**Cleidarthrit'is**. (Κλαίς, the clavicle; ἀρθρίτις, gout. F. *clidarthritis*; G. *Schlüsselsbein-entzünd.*) Gout in the clavicle.

**Cleidarthroc'acē**. (Κλαίς, the clavicle; ἀρθρῶν, F. *clidarthrocacē*; G. *Kleidarthro-*

*κελε.*) A morbid condition of one or both articulations of the clavicle.

**Cleidion.** (Κλειδίον, dim. of κλείς, a key.) Old term for an astringent pastil, which was useful in dysentery and hæmorrhoids.

Also, for an astringent epithem, according to Aëtiûs.

Also, a name of the clavicle.

**Cleid'o-**. (Κλείς.) A prefix signifying relation to the clavicle.

**C.-cos'tal.** (L. *costa*, a rib.) The same as *Costo-clavicular*.

**C.-hy'oid mus'cle.** The *Sterno-hyoid muscle*.

**Cleidol'abis.** (Κλείς, a key; λαβίς, a forceps. F. *cleidolabis*; G. *eine Pinzette mit Schluss*.) Name for a small forceps with a closing apparatus.

**Cleido'ma.** (Κλειδώμα, a fastening.) A pastille or torch. (Turton.)

Also, the clavicle.

**Cleidomastoïdeus.** (Κλείς, the clavicle; mastoid process.) Of, or belonging to, the clavicle and mastoid process.

Applied to the posterior part of the sternocleidomastoideus muscle, which Albinus thus distinguishes as a distinct muscle.

**Cleidonar'thex.** (Κλείς; νόσος, a fever. G. *Schlüsselbeinschmerz*.) A fever or splint for a broken clavicle.

**Cleis.** (Κλείς.) A key; the clavicle.

**Cleis'agra.** (Κλείς, the clavicle; ἄγρᾱ, a seizure. F. *cleisagre*; G. *die Gicht im Schlüsselbein*.) A faulty term for *Cleidagra*; gout in the clavicle.

**Cleistocarp'æ.** (Κλειστός, that can be closed; καρπός, fruit.) An Order of the Class *Musci* in which the sporogonium remains closed and the spores become free only by the pressing of the walls of the capsule.

Also called *Phasceæ*.

**Cleistogamic.** (Κλείς, a key; γάμος, marriage.) Relating to *Cleistogamy*.

**C. flow'ers.** Term applied to small depauperated but fertile hermaphrodite flowers, found in some angiosperms, which never open, and are sometimes subterranean or submerged; and which may exist in addition to ordinary, perfect, but less fertile flowers. The flowers of *Lanum*, *Salvia*, *Polygala*, *Hottonia*, are cleistogamic, and also those of *Ranunculus aquatilis*, *Alisma natans*, and *Menyanthes*, which remain closely shut as long as they are submerged, and in this condition fertilise themselves. Their use is probably to preserve the species under variations of climate.

**Cleistog'amous.** Same as *Cleistogamic*.

**Cleistog'amy.** (Κλειστός, closed; γάμος, marriage.) Close fertilisation of plants in unopened blossoms. See *Cleistogamic flowers*.

**Cleistogen'ic.** (Κλειστός, closed; γένος, race.) The same as *Cleistogamic*.

**Cleistog'enous.** (Κλειστός; γένος) Same as *Cleistogamous*.

**Cleistog'eny.** (Same etymon.) The same as *Cleistogamy*.

**Cleistothe'ic.** (Κλειστός; θήκη, a case.) Term applied to fungi the spores of which remain enclosed in the mother-cell (theca), to which they become adherent. Hoffmann applies the term to fungi with so-called acrogenous spores.

**Cleithorion.** The clitoris.

**Cleith'oris.** The clitoris.

**Cleith'ron.** (Κλειθρον, from κλείω, to shut. F. *barrière*.) The entrance to the wind-pipe.

**Cleito'ron.** The clitoris.

**Cleit'oris.** (Κλειτορίς.) The clitoris.

**Clematid'eæ.** (*Clematis*.) A Tribe of the Nat. Order *Ranunculaceæ*, having the calyx valvate or induplicate, the sepals petaloid, and the fruit consisting of a number of achenia.

**Clemat'idin.** (L. *clematis*.)  $\text{C}_{12}\text{H}_{10}\text{O}_6$ , Walz. An amorphous yellow body, soluble in water and alcohol, insoluble in ether, obtained from the root of *Aristolochia clematitis*.

**Clematis.** (Κλημάτις, from κλημα, a tendril. F. *clematite*; G. *Waldrebe*.) A Genus of the Nat. Order *Ranunculaceæ*, so called on account of the climbing nature of some species.

**C. angustifolia.** Jacq. (L. *angustis*, narrow; folium, a leaf.) Used in Siberia as a kind of tea.

**C. arthrag'ene.** (Ἀρθραγιον.) The name given by Theophrastus to the *C. vitalba*.

**C. camphor.** Term applied to the white scales and flocculi which deposit from the fluid which distils over from the watery infusion of *C. flammula*, *vitalba*, and *viticella*.

**C. cirrho'sa.** Linn. (Κιρρός, yellow.) Has lately been recommended in the treatment of epilepsy; was formerly used as an evacuant, the seeds as a purgative, and the leaves against headache. According to Sibthorp, this is the κληματίτις of Dioscorides.

**C. corymbo'sa.** (L. *corymbus*, a cluster.) The *C. erecta*.

**C. cris'pa.** (L. *crispus*, having curled hair.) A synonym of *C. vitalba*.

**C. cylin'drica.** Sims. (Κυλινδρικός, cylindrical.) Used as *C. vitalba*.

**C. daphnoïdes.** (Δάφνη, the laurel; εἶδος, likeness. F. *perceveche*.) The periwinkle, *Vinca minor*. A famous vulnerary. Used formerly in dysentery, epistaxis, menorrhagia, and discharging wounds.

**C. daphnoïdes mi'nor.** (L. *minor*, less. F. *la violette des sorciers*; G. *das kleine Singrün*.) A name for the *Vinca minor*.

**C. dioi'ca.** Linn. (Δίς, twice; οἶκος, a house.) A decoction of this plant, in sea water, is used in Jamaica as a hydragogue purgative.

**C. erec'ta.** All. (L. *erectus*, upright.) Hab. Europe. Leaves extremely acid and epispastic; an unsafe vesicant. It has been used in syphilitic and cachectic diseases. The leaves of this plant are used by beggars to produce ulcers. Called also *Flammula joris*.

**C. flam'mula.** Linn. (L. *flammula*, a little flame. F. *clematite odorante*.) Sweet-scented virgin's bower. The leaves of this plant are used by beggars to make ulcers.

**C. hexapet'ala.** Pall. (Ἑξ, six; πέταλον, a leaf.) The *C. angustifolia*.

**C. mauritia'na.** Lamk. (*Mauritiana*, Morocco. F. *lune arabique de Bourbon*.) This plant is used as a substitute for cantharides to produce blisters.

**C. passifo'ra.** (L. *patio*, to suffer, from the cross formed by the stigma; flus, a flower. F. *grenadille*; G. *Passionsblume*.) The passion-flower, *Passiflora edulis*, and other species, the fruit of which is eaten under the name of *Grenadilla*.

**C. rec'ta.** Linn. (L. *rectus*, upright. F. *clematite droite*; G. *aufrechte Waldrebe*.) The *C. erecta*.

**C. sepium.** (L. *sepes*, a hedge.) A synonym of *C. vitalba*.

**C. sinensis.** Lour. (Mod. L. *sinensis*, Chinese.) Used as a diuretic and diaphoretic; it is also said to increase the secretion of milk.

**C. sylvestris.** (L. *sylvestris*, belonging to a wood.) The *C. vitalba*.

**C. triflora.** Vahl. The *C. mauritiana*, Lauk.

**C. vior'na.** Linn. Leather flower. Hab. Southern United States. Has similar properties to *C. vitalba*.

Also, a synonym of *C. vitalba*.

**C. virginia'na.** Linn. Common virgin's bower. Hab. North America. Has similar properties to *C. vitalba*.

**C. vitalba.** (L. *ritis*, a vine; *albus*, white. F. *ruorne*, *obis*, *trainau coulmon*, *herb aux guais*, *cheveux de la vierge*, *clematite blanche*; G. *gamine* or *steigende Waldrebe*.) The systematic name of the traveller's joy or lady's bower. Fruit and leaves acrid and vesicant. All the parts of this plant have an acrid taste. Beggars employ the bruised leaves to produce ulcers. They are drastic purgatives, and, in large doses, poisonous. The young shoots are said to be eaten in Italy like asparagus. It has been used internally to cure lues venerea, scrofula, and rheumatism, two or three drachms of the leaves being infused in a pound of boiling water, and taken in the course of twenty-four hours. The seeds are used as a diuretic.

**C. viticella.** Linn. (L. *viticella*, an unknown plant. F. *clematite bleue*.) Seeds purgative; leaves used as a poultice in leprosy.

**Clemat'itis.** The same as *Clematis*.

**Cleomé.** (Κλεῖα, to shut.) A Genus of the Nat. Order *Capparidacæ*.

**C. as'pera.** Kön. (L. *asper*, rough.) Used in Ceylon for epistaxis.

**C. dodecan'dra.** Linn. (Δώδεκα, twelve; ἀνὴρ, a man.) The root of this plant is used as a vermifuge in the United States.

**C. fell'na.** Linn. (L. *felinus*, belonging to a cat.) The seeds of this plant are used as a vermifuge.

**C. frutes'cens.** Aubl. (L. *frutex*, a shrub.) Hab. Guiana. An active vesicatory.

**C. gigante'a.** Linn. (L. *giganteus*, gigantic.) Used as a rubefacient and stimulant.

**C. icosan'dra.** Linn. (Εἴκοσι, twenty; ἀνὴρ, a man.) The seeds are used as a condiment, and the plant as a vermifuge.

**C. pentaphyll'a.** Linn. (Πέντε, five; φύλλον, a leaf.) Used in tropical countries as an antiscorbutic article of diet, like watercress.

**C. polyg'ama.** Linn. (Πολύς, many; γάμος, marriage.) Used as a balsamic and stomachic.

**C. pruri'ens.** (L. *prurio*, to itch.) Hairs irritant; used as a sternutatory.

**C. spino'sa.** Aubl. (L. *spinus*, thorny.) Used as a balsamic and stomachic.

**C. triphyll'a.** Linn. (Τρίς, three; φύλλον, a leaf.) Used in the same way as *C. pentaphyll'a*, and also as a diuretic.

**C. visco'sa.** Linn. (L. *viscosus*, sticky.) Seeds piquant. Used as a condiment like mustard; plant applied locally to relieve carache.

**Cleom'panos major.** (L. *major*, greater.) The *Sterculia foetida*, Linn.

**C. mi'nor.** (L. *minor*, less.) The *Sterculia balan'ghas*, Linn.

**Cleonis collyr'ium.** (Κολλῳριον.)

Old name for a certain collyrium, described by Celsus, and composed of Samian earth and myrrh mixed with white of egg.

**C. gluten.** (L. *gluten*, glue.) Myrrh and frankincense mixed with white of egg, and used as an astringent.

**Clepsy'dra.** (Κλέπτω, to get rid of imperceptibly; ὕδωρ, water. F. *clepsydre*; G. *Wasseruhr*.) Name of an ancient instrument for measuring time, by allowing water to drop through a small hole from one vessel to another.

Also, an instrument perforated at the extremity for conducting fumigators to the uterus in hysterical cases.

**Cléptoma'nia.** (Κλέπτω, to steal; μανία, madness.) The same as *Kleptomania*.

**Clergyman's sore throat.** The name given to granular pharyngitis when occurring in clergymen, and others, who use the voice much.

**Cler'mont Fer'rاند.** France; Département du Pay-de-Dôme. Mineral waters, temperature 24° C. to 26° C (75·2° F. to 78·8° F.); having very feeble mineralisation, a small quantity of iron, and much free carbonic acid. Used only in the neighbourhood in chronic diseases of mucous membranes and in scrofulous and chlorotic affections.

**Cleroden'dron.** (Κληρος, a lot, δένδρον, a tree.) A Genus of the Nat. Order *Verbenacæ*. The leaves of some of the species are employed to kill vermin on cattle in India.

**C. heterophyll'um.** R. Brown. (Ἑτερος, other; φύλλον, a leaf.) Hab. Réunion. Used as a cataplasm in diphtheria.

**C. infortuna'tum.** Linn. (L. *infortunatus*, unfortunate.) Hab. India. Used as a tonic and antiperiodic, and the fresh juice as a vermifuge.

**C. phlomo'i'des.** Linn. (Φλόμος, the mullein; ἵδος, likeness.) Hab. India. Juice bitter. Used for syphilitic pains.

**C. serra'tum.** Blume. (L. *serratus*, toothed like a saw.) Hab. India. Used in febrile and catarrhal affections.

**C. visco'sum.** Vent. (L. *viscosus*, sticky.) The *C. infortunatum*.

**Cle'stine.** (Κλειστός, for κλειστός, closed.) A cell containing raphides.

**Cle'thra.** (Κλήθρα, the alder.) A Genus of the Nat. Order *Ericacæ*. The Greek term denoted either the *Alnus glutinosa*, Linn., or *A. oblongata*, Willd.

**C. alni'folia.** (L. *alnus*, the alder; *folium*, a leaf.) White alder. Hab. North America. The leaves and flowers are diaphoretic and excitant.

**Clethropho'bia.** (Κλήθρον, a bolt; φόβος, fear.) Same as *Claustrophobia*.

**Cle'toris.** Same as *Clitoris*.

**Cleve.** A town in Rhenish Prussia; District of Düsseldorf. Here is a bathing establishment. The water is chalybeate, with a small quantity of free carbonic acid.

**Clib'anus.** (Κλίβανος, a vessel in which barley is boiled.) Old name for a portable furnace of iron, copper, or earthenware, in which bread or other eatables are made ready for food by putting hot embers round it.

Perhaps also a stove for heating a bath.

**Click'ing.** (E. *click*, a word imitative of the sound it denotes.) Making a sound like a quick sharp tick, but louder.

**C. murmur.** See *Murmur*, *clicking*.

**C. rhon'chus.** See *Rhynchus, clicking*.

**Clidders.** The *Galium aparine*.

**Clido-.** Same as *Cleido-*.

**Cliffortia.** (*Cliffort*, a Burgomaster of Amsterdam.) A Genus of the Nat. Order *Rosaceæ*.

**C. ilicifo'lia.** (*L. illex*, holly; *folium*, a leaf.) Hab. South Africa. Used to promote expectoration in chest affections.

**Clif'ton.** A town in Gloucestershire, about three miles from Bristol, in a beautiful country, on the slope of a hill, with a mild winter climate, a diminished rainfall, and protection from winds. Here is a thermal spring, the Bristol Hot Well, temp. 23° C. (73° F.). The water contains 6.28 parts of salts in 10,000. The salts are chiefly calcium carbonate and sulphate, sodium chloride, and magnesium nitrate. Used, externally and internally, in dyspepsia, and in chronic affections of the urinary and bronchial mucous membranes.

**Clima.** Same as *Climate*.

**Climacter.** (Κλιμακτήριον, from κλιμάζω, to proceed by degrees.) The step or round of a ladder. Term for the progression of human life, divided into periods of seven years.

**Climacteric.** (Κλιμακτήριον, the round of a ladder. *L. climactericus*; *F. climaterique*; *G. klimacterisch*.) The ordinary term of life, from three score to four score years, was observed to present particular epochs, at which the body is peculiarly affected and suffers considerable change. These were contemplated by the Greek physiologists as five, and termed climacterics, or climacteric periods. The first begins with the seventh year; the second with the twenty-first, or three times seven; the third with the forty-ninth, or seven times seven; the fourth with the sixty-third, or nine times seven; and the fifth with the eighty-first, or eleven times nine. The sixty-third year is often termed the grand climacteric.

**C. age.** A term applied to that period of human life in which decline begins. In men it is the period between 45 and 60 years. The climacteric age in women is coincident with the cessation of the catamenia, which varies somewhat in different races. In Austria and Germany the cessation occurs, in the majority of women, between the ages of 45 and 50 years, though in a large number it occurs between 40 and 45. It is a little later in women of more northern climes, *cæteris paribus*. It is later in those who begin to menstruate early, in those who have had children, whilst it occurs earlier in those who are stout, or who have suffered from certain acute diseases, as typhus, ague, and from chronic metritis. Sudden occurrence of the menopause is apt to be followed by disturbance of the economy evidenced by excitement of the nervous system, flushes, palpitation, indigestion, and the like.

**C. disease.** (*F. mal climactérique*; *G. Uebel klimacterisch*.) A term for that sudden change which occurs in many instances of advanced life, by which the patient falls off in flesh and strength before any loss of appetite or dyspeptic symptoms are complained of; it steals on so insensibly that he is scarcely aware of his altered condition until his appetite fails, sleep leaves him, or what there is does not refresh him, his face becomes emaciated or bloated, his tongue white, his pulse more frequent; he has pains in his head and chest, his legs swell, but there is no deficiency in the quantity of the

urine, nor any other sensible failure in the action of the abdominal viscera, except that the bowels are more sluggish than they used to be. That this is disease, and altogether distinct from a natural or constitutional decay, is proved by the fact that recovery often takes place; the change referred to generally occurs about the fourth, or in the interval between the fourth and fifth climacteric periods. (Littre and Robin.)

**C., grand.** See *Climacteric*, and *Annus climactericus*.

**C. insanity.** A form of insanity considered to depend upon the altered condition of the utero-ovarian apparatus in women, and selected by Dr. Skae to include the mental affections of males at the period of the grand climacteric. There is often a monomania of fear, despondency, remorse, hopelessness, passing occasionally into dementia; an intense craving for drink is sometimes the prominent or only symptom of the affection. The prognosis is unfavorable.

**C., men'strual.** (*L. menses*, the monthly periods of women.) The age at which menstruation ceases.

**C. tee'thing.** The eruption of new teeth in old age.

**C. year.** (*G. Stufenjahr*.) See *Annus climactericus*.

**Climacter'ium.** (Same etymon.) The time of cessation of the menses in women.

**Climatal.** Same as *Climatic*.

**Climate.** (Κλίμα, a region. *L. clima*; *F. climat*; *G. Klima, Erdstrich, Himmelsstrich*.) Originally a term for a portion of the earth comprehended between two circles parallel to the equator, so that from the beginning of one climate to that of another next to it, there is half an hour's difference in the longest summer's day; these are also divided into parallels, each of which is just half so much, but the former is small enough to distinguish the different constitution and temperaments of air which this term is generally used to express.

Now used for the constitution of the atmosphere of any region with respect to heat, cold, moisture, winds, impregnation with extraneous matter, and other like matters which have influence on the human body.

The climate of a region is essentially dependent on the duration of its exposure to the sun's rays, modified by the local conditions of the earth's surface. The distance from the equator determines the former, but the local conditions are very various. In considering the climate of a region the more important factors are the temperature, the elevation above the sea level, the moisture of the air and rainfall, the maritime or inland position, the prevalence of cloud or sunshine, the prevailing currents of wind, the nature of the soil, and the existence of forests, plains, elevated plateaus, and marshes.

**C., cold.** The region extending between the isothermic lines + 5° C. (41° F.) and — 5° C. (23° F.)

**C., hot.** The region extending between the Equator and the isothermic line of 25° C. (77° F.)

**C., polar.** The region extending between the isothermic lines — 5° C. (23° F.) and — 15° C. (5° F.)

**C., temperate.** The region extending between the isothermic lines, 15° C. (59° F.) and 5° C. (41° F.)

**C., warm.** The region extending between

the isothermic lines, 25° C. (77° F.) and 15° C. (59° F.)

**Climateric.** Same as *Climacteric*.

**Climatic.** (Κλίμα.) Relating to climate.

**C. diseases.** Diseases produced by climate.

**Clima'tion.** (Κλίμα, climate.) The same as *Acclimatisation*.

**Climatology.** (Κλίμα; λόγος, a discourse. F. and G. *climatologie*.) A history of climates. Sometimes used in the sense of *Meteorology*.

**Clim'ax.** (Κλίμαξ, a grade, or a ladder. F. *gradation*.) Applied formerly to certain medicines in which the quantity of each of the substances of which they were compounded was arranged in regular gradation—as of one, ζῆι; of another, ζῆι; of a third, ζῆι; and so on.

Also, the acme or height of a disease.

**C. præ'cox arti'fici'a'lis.** (L. *præcox*, premature; *artificialis*, belonging to art.) The artificial, permanent, arrest of menstruation by the removal of both ovaries.

**Climber.** (Sax. *climban*, to climb.) A term applied to plants which in growing cling to a support.

**C., wood'y.** The *Ampelopsis quinquefolia*.

**Climbers.** (Same etymon.) The *Clematis vitalba*.

**Climbing.** (Sax. *climban*, to climb. L. *scandens*; F. *grimpeur*; G. *kletternd*, *klimmend*.) Growing upwards by means of aerial roots, tendrils, twisting of the stem, or other means of support.

**C. buckwheat.** The *Polygonum convolvulus*, Linn.

**C. staff tree.** The *Celastrus scandens*.

**C. stems.** Shoots which bear strongly-developed foliage, leaves on long slender internodes, and which are capable of winding round supports. Examples are seen in *Phaseolus*, *Convolvulus*, and *Humulus*.

**Clinan'drium.** (Κλίνω, a bed; ἀντήρ, a man. F. *clinandre*; G. *Samenlager*.) Name for the excavation of the summit of the gynostemium of certain *Orchidaceæ*, above or below the stigma, in which the anther is fixed, which includes and protects the pollen masses. It is formed of the rudiments of the two anthers of the inner whorl, except in *Cypripedium*.

**Clinanthium.** Same as *Clinanthus*.

**Clinanthus.** (Κλίνω, a bed; ἄνθος, a flower. F. *clinanthe*; G. *der gemeinschaftliche Fruchtboden*, *Blüthenboden*.) A term for the enlarged and flattened top of a common peduncle which supports several sessile flowers; the receptacle of Composite.

Also, applied to the part which supports the perichæcium, vaginula, and pedicels of mosses.

**Clinia'ter.** (Κλίνω; ἱατρίη, a surgeon or physician.) One who teaches or practises clinical medicine; a physician.

**Clinia'tria.** (Κλίνω, a bed; ἱατρία, medical treatment. F. *clinatrie*; G. *die klinische Heilkunde*.) Clinical medicine.

**Clinia'trus.** (Κλίνω; ἱατρός, a surgeon or physician.) One who practises clinical medicine.

**Clinic.** (Κλινικός, relating to a bed.) One who is bedridden.

Also (F. *clinique*), the teaching of medicine or surgery at the bedside of a sick person, or the class accompanying the teacher.

**Clin'ica.** (Κλίνω.) The things relating to clinical medicine.

**Clin'ical.** (Κλίνω, a bed. F. *clinique*; G. *klinisch*.) Of, belonging to, or concerning, a bed.

**C. char'acters.** Those conditions, anatomical or symptomatic, which may be observed in a sick person during life.

**C. lec'ture.** (L. *lego*, to read.) A lecture given upon a certain case or set of cases at the bedside of the patients, or comments upon a case of disease, which is exhibited to the audience, or has just been seen by them.

**C. medicine.** Practical medicine. Medicine as learnt or taught at the bedside. Usually applied to hospital practice, in which the physician, in going round the wards, comments upon the cases under his care.

**C. physi'cian.** One who practises or teaches clinical medicine.

**Clin'icist.** (Κλίνω.) A clinical physician.

**Clin'idæ.** Same as *Clinosporæ*.

**Clin'ide.** (Κλίνω.) A sporiferous cell forming part of a clinode, and producing spores by successive generation, and not, like the basidium, by simultaneous generation.

**Clin'idæ.** (Κλίνω, a bed.) A Family of Fungi, the spores of which are produced upon a clinide.

**Clinigle'ba.** (Κλίνω, a bed; L. *gleba*, filled earth.) Term applied to the gleba or internal portion of the receptacle of *Gastromycetes*.

**Clin'ique.** (Fr.) Employed to designate the place occupied by the physician and the patients seen by him; the seeing of patients by a physician with a class of students.

**Clin'isporæ.** (Κλίνω; σπόρος, a sowing.) Spore developed on a clinide.

**Clin'ium.** (Κλίνω.) A term entering into various compound words, and signifying receptacle. It has sometimes been applied to small elongated cells, simple or branched, supporting a spore at their extremity.

**Clinocepha'lia.** (Κλίνω; κεφαλή, the head.) A malformed condition of fetal head in which the vertex is flattened, so that the cranium has the appearance of a couch or saddle.

**Clin'ode.** (Κλίνω, a bed.) Term applied, in Mycology, to a group of small elongated, simple, or branched cells growing directly from the cells which form the receptacle, and bearing a spore at their extremity; these cells are called clinides. Like the hymenium, it is the seminiferous part of the receptacle, except that the sporiferous cells are not specialised like the basidia or the thecae of basidiosporous or thecosporous hymenia. The clinode lines the conceptacles of *Uredinæ* and *Sphaeropsidæ*, and invests the receptacle of the *Ectoelminæ*.

**Clino'des.** Same as *Clinoid*.

**Clinohed'ric.** (Κλίνω, to incline; ἑδρα, a base. F. *clinohédrique*.) Applied to forms of crystals in which the co-ordinate planes are not perpendicular among themselves.

**Clin'oid.** (Κλίνω, a bed; εἶδος, likeness. F. *clinoid*; G. *bettformig*.) Resembling a bed.

**C. apoph'yses.** (Ἀποφύσεις, an outshoot.) Same as *C. processes*.

**C. plate.** The posterior boundary of the pituitary fossa of the sphenoid bone.

**C. pro'cess, ante rior.** (L. *anterior*, in front. F. *apophyse clinoidé antérieure*.) A smooth, round knob formed by the inner extremity of the lesser wing of the sphenoid bone; it

# CLINOIDEUS—CLITORIS

sometimes coalesces with the middle clinoid process.

**C. process, middle.** An eminence which bounds the sella turcica of the sphenoid bone on each side.

**C. process, posterior.** (L. *posterior*, hinder. F. *apophyse clinoid postérieure*.) The lateral angle, on each side, of the dorsal selæ of the sphenoid bone; they vary in size, but are more prominent in man than in other animals.

**C. ridge.** Same as *C. wall*.

**C. walls.** A term applied to two transverse vertical walls of cartilage rising up before and behind the pituitary body in the cartilaginous cranium of the embryo fowl. They are situated in front of the anterior termination of the notochord, and are called anterior and posterior.

**Clinoides.** Same as *Clinoid*.

**Clinology.** (Κλίσις, a bed; λόγος, discourse.) An account of the various kinds of bedding required for the sick.

**Clinometer.** (Κλίσις, to incline; μέτρον, a measure. F. *clinomètre*; G. *Klinometer*, *Neigungsmesser*.) Name given to several apparatus for measuring the inclination of a line in relation to a horizontal plane.

**Clinopale.** (Κλινπαλή, bed wrestling.) Coitus.

**Clinopodia.** (Κλίση; ποὺς, a foot.) The *Thymus mastichina*.

**Clinopodium.** (Κλίση, a bed; ποὺς, a foot. F. *basilie*; G. *Basilikum*.) The basil, *Oregum basilicum*, because its leaves are like the feet of a bed.

Also, a Genus of the Nat. Order *Labiata*.

**C. arvense.** (L. *arvensis*, belonging to the fields.) The *C. vulgare*.

**C. incañum.** The *Pycnanthemum incañum*.

**C. majus.** (L. *major*, greater.) The *C. vulgare*.

**C. mastichina gallořum.** (L. *Galli*, the Gauls.) A name for the *Thymus mastichina*.

**C. vulgare, Linn.** (L. *vulgaris*, common. F. *grande basilie sauvage*; G. *Weichborste*.) The wild basil, indigenous in this country, and formerly used against the bite of serpents, and to facilitate labour; also, recommended for strangury and as an astringent in diarrhœa. Now called *Calamintha clinopodium*.

**Clinorhomboid.** (Κλίση, a bed, or litter; ρομβοειδής, like the figure of a rhombus.) Applied to a particular system of crystallization.

**Clinoscope.** (Κλίσις, to incline; σκοπέω, to see. F. *clinoscope*; G. *Klinoskop*.) An instrument for indicating the inclination of one plane upon another though without furnishing the means of measuring it.

**Clinosporæ.** (Κλίση; σπόρος, seed.) A division of Fungi, according to Léveillé; they are coriaceous or fleshy, with a fleshy, horny, or mucilaginous receptacle, covered by a clinode, or enclosing it; it includes ergot and smut, and is divided into *Ectoelcinæ* and *Endoelcinæ*.

**Clinotechny.** (Κλίση, a bed; τέχνη, art.) The art of arranging bedding for the sick.

**Clinotrichæ.** (Κλίσις, to make to bend; τρίχς, a hair.) A Group of Fungi of the Division *Erosporæ*, Order *Nemates*. They are filamentous moulds, consisting of reclining branches, and bearing on branchlets spores attached to definite points. They are subdivided into: *Clinidæ*, with

spores isolated on spicules or clinides; *Cephalosporæ*, with spores united into a head on the summit of branchlets; and *Catellatæ*, with the spores in short chains.

**Clinotrochos.** A synonym of the *Acer campestre*.

**Clinyme'ne.** A synonym of *Clinode*.

**Cliseometer.** (Κλίσις, inclination; μέτρον, a measure. F. *cliseomètre*; G. *Beckenneigungsmesser*, *Klisionometer*.) An instrument, devised by Stein, for measuring the degree of inclination of the female pelvis, or the angle which the axis of the pelvis makes with that of the body.

**Clis'sus.** See *Clyssus*.

**Clisopepter.** (Κλειστός, closed; πίπτω, to cook. G. *in verschlossenes Kochgeschirr*.) A closed vessel for effecting digestion by boiling under pressure; a Papin's digester.

**Clit bur.** (F. *bardane*; G. *Klettendistel*, *Klettenkraut*.) A common name for the burdock, *Arctium lappa*. Also called clot-bur.

**Clite.** The *Galium aparine*.

**Clitellum.** (L. *clitella*, a pack-saddle. F. *clitellum*.) Applied to certain higher-coloured and prominent serrated rings which form a band towards the middle of the body of earth-worms, and enable the individual to fix itself to another during copulation. Also called *Cingulum*.

**Clithe.** The same as *Clite*.

**Clitoria.** A Genus of the Nat. Order *Leguminosæ*.

**C. spectabilis, Sal.** (L. *spectabilis*, notable.) The *C. ternatea*.

**C. ternatea, Linn.** The root of this plant is emetic. It, and the seeds, is employed in India as a purgative.

**Clitoricarcinoma.** (Κλειτορίς, the clitoris; καρκίνωμα, cancer. F. *clitoricarcinome*.) Carcinoma of the clitoris.

**Clitoridauxë.** (Κλειτορίς; αύξη, increase. G. *eine Vergrößerung des Klitzlers*.) Enlargement of the clitoris.

**Clitoridean.** (Clitoris.) Of, or belonging to, the clitoris.

**Clitoridec'tomy.** (Κλειτορίς; εκτέμνω, to cut out.) The operation of excising the clitoris. It was adopted by Baker Brown on the ground that epilepsy, melancholy, hysteria, and pruritus vulvæ were often occasioned by masturbation, which excision of the clitoris put a stop to, but its value in this respect is contested. It is sometimes necessary in elephantiasis and cancerous degeneration of the clitoris. The operation is easily performed. The clitoris is seized and brought forwards with forceps and the crura divided with a knife. Bleeding is slight.

**Clitoridis inferiores lati et plani musculi.** (L. *clitoris*; inferior, lower; latus, broad; planus, flat.) The two lateral halves of the sphincter vaginae.

**Clitoris.** (Κλειτορίς. F. *clitoris*; I. *clitoride*; G. *Klitoris*, *Klitzler*, *Schamzangelehen*.) The homologue, in the female, of the penis. An erectile organ situated between the anterior extremities of the labia minora. It consists of a body, about 1·5" long, which is in two halves, united by their flattened inner surface, so as to form an incomplete pectiniform septum, and composed of tissue resembling that of the corpora cavernosa of the penis. Posteriorly it is attached by two crura to the rami of the pnbæ and ischium, and covered by the erec'tores clitoridis; and anteriorly it terminates in the glans clitoridis, a

highly-sensitive imperforate organ, situated about one inch in front of the meatus urinarius externus. It is supported by a suspensory ligament, and partially covered by a prepuce.

**C., artery of, deep.** One of the two terminal branches of the internal pudic artery, being the same as the artery of the corpus cavernosum of the penis. It is distributed to the body and crura of the clitoris.

**C., artery of, dor'sal.** (F. *artère clitoridienne*.) One of the two terminal branches of the internal pudic artery, being the same as the dorsal artery of the penis; it is distributed to the upper surface and the prepuce of the clitoris.

**C., frænum of.** (L. *frænum*, a bridle. F. *frein du clitoris*; G. *Kitzlerbandchen*.) A structure attached to the lower surface of the clitoris, formed by the junction or the lower folds of the labia minora.

**C., nerve-corpuscles of.** Bodies resembling the Pacinian bodies found in the smaller papillæ of the mucous membrane of the clitoris; some are small and spherical, some apparently compound; they consist of a finely granular, homogeneous central bulb, enclosed in a laminated envelope containing nuclei, and placed upon one or more nerve fibres, the cylinder-axis only of which penetrates to the central bulb.

**C., nerve of.** (F. *nerf clitoridien*.) A branch of the pudic nerve, the same as the dorsal nerve of the penis; it is distributed to the whole organ. According to Krause, its ultimate terminations are in special corpuscles, the terminal genital corpuscles, or *C., nerve-corpuscles of*.

**C., papillæ of.** (L. *papilla*, a nipple.) The papillæ of the mucous membrane of the clitoris are of variable size and buried in the tessellated epithelium; the larger contain many blood-vessels, the smaller only one vascular loop and a nerve-corpuscle on its nerve.

**C., prepuce of.** See *Preputium clitoridis*.

**C., veins of.** These accompany the branches of the arteries.

**Clitorism.** Same as *Clitorismus*.

**Clitorismus.** (Κλειτορίς. F. *clitorisme*.) The condition in which there is a very large clitoris, when the woman was called *Androgyna*.

Also, the unnatural intercourse of a woman with a woman by reason of the enlarged clitoris.

**Clitoritis.** (Κλειτορίς. F. *clitorite*; G. *Entzündung der Clitoris*.) Inflammation of the clitoris.

**Clitoritis.** Same as *Clitoritis*.

**Clitrium.** The vulva.

**Clivers.** The *Galium aparine*. See *Clavers*.

**Clivus.** (L. *clivus*, a gently ascending height, a slope. G. *Hugel*.) A small elevation.

**C. Blumenbachii.** (*Blumenbach*, the naturalist. G. *die Abdeckung am Keilbein*.) The inclined plane of the upper surface of the sphenoid bone behind the clinoid processes, on which the medulla oblongata rests.

**C. os'sis sphenoidis.** (L. *os*, a bone; *sphenoid*.) Same as *C. Blumenbachii*.

**Cloaca.** (L. *cloaca*, a sewer; akin to Sansc. *klid*, to grow wet, and *κλύω*, to purge, wash, or make clean. F. *cloaque*; G. *Kloake*.) The cavity at the hinder end of the body into which the alimentary and the genito-urinary

canals open. This condition exists in the Monotremata, Birds, Reptiles, Amphibia, and Tunicata. It is found also in some Insecta and Rotifera.

The cloaca of Tunicata is also called *Atrium*.

The cloaca is a primitive structure in Vertebrata, being found in the fetal state of all, even of those which do not retain it in the adult form. It originates in a dilatation of the mesenteron, which constitutes its hypoblastic section, and uniting with an epiblastic invagination of the surface which forms the proctodæum, becomes perforated, and thus attains an external opening.

**Cloacæ.** (L. plural of *cloaca*.) A term applied to the openings in the bony case surrounding a piece of necrosed bone.

**C.os.** See *Os cloacæ*.

**Cloacal.** (Same etymon.) Relating to the cloaca.

**C. aperture.** The external opening of the foetal cloaca.

**Cloacinus.** (L. *cloaca*.) Belonging to a night-stool, privy, or water-closet.

**Cloacismus.** (L. *cloaca*. F. *cloacisme*; G. *der Harnabgang durch der After*.) The excretion of the urine through the anus.

**Clo'ax.** An old name of orpiment.

**Clod-bur.** An incorrect spelling of *Clot-bur*.

**Clog'-weed.** (A shortened form of *Key-logge*, from *lock*, A. S. *keck*, a hollow stalk; and of *leaf*, a plant.) The *Heracleum spondylium*, (Prior.)

**Clonarium.** The sporiferous conceptacle of Algae and Characeæ.

**Clonic.** (Κλόνος, commotion. F. *clonique*; G. *klonisch*.) Of, or belonging to, an agitated or irregular movement.

**C. convulsions.** See *Convulsions, clonic*.

**C. spasm.** (Σπασμός.) Applied to spasms of parts in which the contractions and relaxations are irregularly alternate and involuntary; such are the spasmodic contractions of epilepsy. See, also, *Convulsions, clonic*.

**Clonici universales.** (*Clonic*; L. *universalis*, belonging to the whole.) A synonym of *Spiculus*.

**Clonis.** (Κλόνος. G. *das Heiligenbein*.) The os sacrum.

**Clonismus.** (Κλόνος, violent confused motion.) The condition in which there is a succession of clonic spasms.

**Clonodes.** (Κλονόδης, tumultuous, from *κλόνος*, violent confused motion; *εἶδος*, likeness.) Old term (Gr. *κλονόδης*), applied by Galen, *de Diff. Puls.* i. 28, and elsewhere, to that kind of pulse now called vibratory; having, or full of, commotion.

**Clon'os.** (Κλόνος, violent confused motion.) A tumultuous movement or gesture. Applied formerly to the convulsive motions in epilepsy.

**Clonospas'mus.** (Κλόνος; σπασμός, spasm. F. *clonospasme*; G. *der klonische Krampf*.) Clonic spasm.

**Clonus.** (Κλόνος.) Irregular and forcible spasmodic action of a muscle or set of muscles.

**C. nictita'tio.** (L. *nicta*, to wink.) Twinkling of the eyelids, rapid and vibratory motion of the eyelids. (Mason Good.)

**C. palpi'tatio.** Palpitation.

**C. pandicula'tio.** (L. *pandicular*, to stretch oneself.) Stretching out of the limbs and body with deep inspiration and yawning.

**C. pandicula'tio maxilla'rum.** (L. *pandicular*; *maxille*, the jaws.) Yawning.

**C. singul'tus.** (L. *singultus*, a sobbing.) Hiccup.

**C. sternuta'tio.** (L. *sternuto*, to sneeze.) Sneezing.

**C. subsul'tus.** Same as *Subsultus tendinum*.

**Clopema'nia.** (Κλοπή, theft; from κλέπτω, to steal.) Same as *Κλεπτομανία*.

**Cloporte.** A name given in the olden French pharmacopœias to the wood-louse, which was used in medicine as an aperient diuretic in many diseases. Several species of Oniscus and Armadillo were included under this term.

**Cloquet, Hippolyte.** A French surgeon born in Paris in 1787; died there in 1840.

**C.'s gan'gion.** (L. *ganglion*, a swelling.) A small ganglion situated on the palatine nerve of the fifth pair in the intermaxillary fissure.

**Close.** (F. *clos*, closed; from L. *clausus*, shut.) Shut up, confined.

**C. fertiliza'tion.** (L. *fertilis*, fertile.) Term applied to the fecundation of ova fertilised by pollen of the same flower.

**C. sci'ences.** (A mis-nomer by Gerard of *Close sciney*.) The dame's violet, or *Hesperis matronalis*.

**C. sci'ney.** The double variety of *Hesperis matronalis*, the single variety being single sciney. Sciney, no doubt, has arisen from its specific name Damascena, understood as Dame's Scena. (Prior.)

**C. stool.** (Sax. *stol*.) An arrangement by which a chamber utensil is enclosed in a wooden or other box, so as to confine unpleasant odours when used for defecation in a room.

**Closed.** (E. part. of *close*; from F. *clos*, part. of *clorre*, to shut in; from L. *clausus*, shut in.) Shut up, united.

**C. bundles.** Fibro-vascular bundles in the tissue of plants which consist entirely of wood and bast cells, and so are incapable of further growth.

**Clostrum.** (Κλωστήρ, a spindle. F. *clostre*; G. *Safröhren*, *Basttröhren*, *Fasergefässe*.) Applied to cellules thinned at the two ends, thus resembling a spindle, that enter into the composition of wood and the cortical tissues; they are the small tubes of Mirbel; tubulated cellules of de Candolle; tubilli of Cassini.

**Clot.** (An English word, an earlier spelling of *clod*, the original sense of which was ball. F. *grumeau*; I. *grumo*; S. *grumo*; G. *Klump*.) The solid or semisolid mass into which a liquid changes on coagulation or curdling.

Also, to coagulate, or to cause to coagulate.

**C., blood.** (F. *caillot*; I. *grumo di sangue*; S. *coagulo*; G. *Blutkuchen*.) The solid part of the blood after coagulation. See under *Blood*, *Coagulation*, *Crassamentum*, and *Cardiac concretions*.

**C., blood, an'te-mor'tem.** (L. *ante*, before; *mors*, death.) A blood clot formed in the heart or large vessels before death. It may be formed in the act of dying, when it is more or less decolorised or fibrinous, much mixed up with the columnæ carneæ and the tendons, only slightly adherent to the heart-walls, and appears to be the result of churning of the blood by the irregular contractions of the heart during a prolonged death struggle, especially if there be a condition of blood which tends to rapid coagu-

lation; or it may be formed earlier, during the progress of the fatal disease, and is then called a *Thrombus*.

**C., blood, post mor'tem.** (L. *post*, after; *mors*.) A blood clot formed in the heart or large vessels after death. It is soft, not adherent to the heart-walls, sometimes entirely blood-coloured, sometimes divisible into a fibrinous and a bloody layer.

**C.-bur.** (Sax. *clatte*, a burr.) The *Aretium lappa*, because its heads cling to clothes.

**C.-bur, spi'ny.** The *Xanthium spinosum*, Linn.

**C., heart.** See *C., blood*, and *Cardiac concretions*.

**Cloth.** (Sax. *clath*. F. *drap*; I. *tela*; G. *Tuch*.) A material or fabric woven of wool or other substance.

**C. tree.** The *Morus papyrifera*, from the use of the bark in making clothing.

**Clothes' louse.** The *Pediculus vestimenti*.

**Clotho,** Gray. (L. *Clotho*, one of the Fates.) A Genus of the Suborder *Solenoglyphæ*, Order *Ophidia*.

**C. arietans,** Gray. (L. *arieto*, to butt like a ram, to strike violently.) The puff adder of the Cape. Hab. South Africa. A very poisonous snake.

**Clotted.** Changed into, or consisting of, a *Clot*.

**Clotty.** (*Clot*.) Consisting of, or containing, clots.

**Cloud.** (An English word probably originally signifying a mass of rock, and derived from Sax. *Clūd*.) A more or less dense mass of minute particles of condensed watery vapour. Clouds are divided into three principal kinds: *Cirrus*, *Cumulus*, and *Stratus*, with four subordinate modifications, *Cirro-cumulus*, *Cirro-stratus*, *Cumulo-stratus*, and *Cumulo-cirro-stratus*, or *Nimbus*.

The term is also applied to a more or less dense whitish opacity occurring in a clear tissue, as the cornea or the pia mater.

**Cloud'berry.** The *Rubus chamæmorus*, from its growing on the cloudy tops of mountains.

**Cloud'ed.** (*Cloud*.) Rather turbid, not quite clear.

**Cloud'iness.** (*Cloud*.) The condition of the atmosphere when obscured or overcast with clouds.

The cloud-like turbidity seen in liquids, or transparent solids, naturally clear.

**Cloud'y.** (*Cloud*. F. *nuageux*; I. *nuvoloso*; S. *nublado*; G. *wolkig*.) Belonging to, or like, a cloud.

**C. swelling.** A term applied by Rindfleisch to a condition of involution of tissue, which consists of an acute swelling and granular cloudiness of the protoplasmic mass in a cell, described by Virchow as a nutritive irritation, which appears to depend on the precipitation of some albuminous matter naturally held in solution; it is supposed by Rindfleisch to be somewhat analogous to rigor mortis, and may pass directly into fatty degeneration. It is seen in the renal epithelium in acute tubal nephritis.

**Cl'ove.** (S. *clava*, from L. *clavus*, a nail. F. *clou de girofle*; G. *Gewürznelke*, *Gewürznägelin*.) The calyx and unexpanded flower of the *Eugenia caryophyllata*. See *Caryophyllum*.

Also (Sax. *cluf*, bulb), a bulblet growing in the axil of the scales of bulbs.

# CLOVEN—CLUSIA.

**C. bark.** See *Cortex caryophyllata*.  
**C. cassia.** The bark of *Drypellium caryophyllatum*.

**C. gillidower.** (F. *giroflée musquée*; G. *die gefüllte Nelke*.) Common name for the plant *Thianthus caryophyllus*, from the smell of its flowers.

**C. hitch knot.** A double loop, so called, made by making two successive loops close to each other on the same piece of cord or bandage, a half twist being given to the joining of each loop at the time of making it. Used as a means of extension of a dislocated limb when applied to its extremity. It can only be tightened by pulling the two ends transversely.

**C. nutmegs of Madagas'car.** The Ravensara nuts, the produce of *Agathophyllum aromatiatum*.

**C. pepper.** A synonym of *Pimenta*.

**C. pink.** The same as *C. gillidower*.

**C. stalks.** See *Festuca caryophyllorum*.

**C. tree.** (F. *giroflée*; G. *Gewürznelkenbaum*.) The *Eugenia caryophyllata*.

**C. wild.** The *Myrcia acris*.

**Cloven.** (Sax. *cleofan*, to cleave. L. *fissus*; F.  *fendu*; G. *gespalten*.) Cleft; split.

**C. footed.** Having the foot divided in the middle, as the ox.

**C. spine.** Term for the disease *spina bifida*, a variety of hydrorachis or hydrorachitis, a congenital malformation, or deficiency of one or more, or even of the whole, spinous processes and arches of the vertebrae, by which the theca of the spinal cord being distended with serum, protrudes and forms a tumour under the skin.

**Clover.** (Sax. *cleofen*, perhaps derived from *cleofan*, to cleave, on account of its leaf being three-cleft.) The *Trifolium pratense*.

**C. winter.** The *Mitchella repens*.

**Cloves.** See *Clare and Caryophyllum*.

**C. mother.** The ripe fruit of *Eugenia caryophyllata*.

**C. oil of.** See *Oleum caryophylli*.

**Clove tongue.** The *Helleborus niger*.

**Clove worts.** The plants of the Nat. Order *Caryophyllaceae*.

**Crown.** (Tel. *khoni*, a boorish fellow.) A boor, a rustic, a buffoon.

**C's all heal.** The *Stachys palustris*.

**C's lungwort.** The *Lathræa squamaria*.

**C's wormwood.** See *Wormwood*, *clown's*.

**C's woundwort.** The *Stachys palustris*.

**Club.** (Scand. *clubbe*. F. *massue*; G. *Kente*.) A heavy stick or cudgel. Applied to structures and organs which have some part resembling a club.

Also, applied to several distortions of the foot.

**C. foot.** A general term applied to several varieties of distortion of the foot. See *Talipes*.

**C. hand.** A rare deformity, similar in nature to club-foot, in which the hand may be distorted by over-flexion or over-extension, with displacement of the carpus, or some of its bones.

**C. moss.** (F. *lycopode*; G. *Kolbenmoos*.) The name of the different species of the Genus *Lycopodium*.

**C. moss, common.** The *Lycopodium complanatum*.

**C. moss, fir.** The *Lycopodium selago*.

**C. moss, upright.** Common name for the *Lycopodium selago*.

**C. rush.** The *Typha latifolia*, from the form of its inflorescence.

**C. rushes.** The plants of the Genus *Scirpus*.

**C-sha'ped.** (F. *clavé*; G. *keulenförmig*.) Having the form of a club; clavate. Gradually thickened upwards from a slender base.

**C. top.** (F. *clavaire*.) A common name for the Genus *Clavaria*.

**Clubbed.** (Same etymon.) Like a club, thick at the end.

**C. fingers.** A term applied to the thin fingers with thickened ends, which are often seen in phthisical persons; they are also said to occur sometimes on the side affected in empyema.

**C. pe'nis.** A penis much enlarged about the glans.

**Clubion'a.** Latr. A Genus of the Suborder *Dipnemonia*, Order *Araneide*. Spiders with eight eyes disposed in two lines, approaching each other behind; they are of a clear yellow or brown colour, with a velvety abdomen, and construct cellules of very white silk to conceal themselves in pursuit of prey. Their bite is said to be poisonous, but it is doubtful whether this be so in the case of man.

**Clu'nes.** (L. plural of *clunis*, a buttock.) The nates.

**Clun'esia.** (L. *clunis*, a buttock. F. *clunésie*.) Old term for inflammation of the buttock; also of the anus, according to Quincy.

**Clunipede.** (L. *clunis*; *pes*, a foot. F. *clunipède*.) Having the feet placed almost at the end of the body, seeming to walk on the rump, as do some birds.

**Clu'nis.** (L. *clunis*, from *cluo*, to purge. F. *fesse*; G. *Hinterheil*, *Hinterbacken*.) A buttock or haunch, from its vicinity to the anus.

Also, a term for the os sacrum.

**Clupe'a.** (L. *clupea*.) A Genus of the Order *Malacopectera*, or of the Group *Abdominatus*, Order *Teleostei*, Class *Pisces*.

**C. alau'sa.** Linn. The shad; also called *Alu'sa vulgaris*.

**C. catulus.** Cuv. (L. *catulus*, the young of an animal.) The whitebait, the fry of the herring.

**C. encrasicho'lus.** Linn. The *Engraulis encrasicholus*.

**C. haren'gus.** Linn. (F. *hareng*; I. *avringa*; S. *arenquid*; G. *Häring*.) The herring.

**C. pilchard'us.** Linn. The pilchard; also called *Alu'sa pilchardus*, Bloch.

**C. sar'dina.** Cuv. The sardine.

**C. sprat'tus.** Linn. The sprat.

**C. thrys'sa.** Valenc. The yellow-billed sprat; a very poisonous fish of the West Indies.

**Clu'sia.** (*Clusius*, the botanist.) A Genus of the Nat. Order *Guttiferae*. Its several species, which are almost confined to South America, exude gum resins of various kinds, used for different purposes by the natives.

**C. fla'va.** (L. *flavus*, yellow.) The wild mango or balsam tree. The plant which, according to Endlicher, produces hog gum.

**C. insignis.** (L. *insignis*, remarkable.) A resin exudes from the flowers of this plant, which, when rubbed down with the butter of the chocolate nut, is employed by the women of Brazil to alleviate the pain of a sore breast.

**C. ro'sea.** Linn. (L. *roseus*, rose-coloured.) Hab. Antilles. Juice black, bitter. Used as a cathartic; resin used for plasters.

**Clusia'ceæ.** (*Clusius*, botanist.) A Family of *Guttiferae*. Leaves simple, opposite, exstipulate, flowers symmetrical, anthers adnate, stigma sessile, radiating, seeds one or few.

**Clu'sius.** (Otherwise Jules Charles L'Ecluse.) A botanist, born 1523 at Arras; died 1609 at Leyden.

**C's car'damoms.** The fruit of *Amomum Clusii*.

**Clus'ter.** (Sax. *cluster*, a bunch.) A number of things collected together.

A collection or bunch of dowers or fruit; see *Racemus* and *Thyrus*.

**C. cher'ry.** The *Prunus padus*.

**C. pine.** The *Pinus maritima*.

**Clus'tered.** (Same etymon.) Collected together, or into a bunch.

**C. root.** A root consisting of a number of tubercles attached to a common centre, as in the dahlia.

**Clu'tia.** Same as *Cluytia*.

**Cluy'tia.** (*Cluyt*, a Leyden apothecary.) A Genus of the Nat. Order *Euphorbiaceæ*.

**C. cascarilla,** Linn. The *Croton cascarilla*, Bennett.

**C. collina,** Roxb. The *Bridelia collina*, Hook and Arn.

**C. eluteria,** Linn. The *Croton eluteria*, Bennett.

**C. spino'sa.** The *Bridelia spinosa*.

**Cl'ydon.** (Κλύδων, a wave or dowing.) Old term for ductuation and flatulence; used by Galen.

**Cl'y'ma.** Old term for the faeces, refuse, or dross of gold and of silver.

**Cly'menum.** (Κλύμενον.) The plant so named by Dioscorides, having astringent properties, is supposed to be a species of *Lathyrus* by most authors, but some have believed it to be a *Scorpiurus*.

**C. italo'rum.** The *Hypericum androsaemum*.

**Clypea'lis.** (L. *clypeus*, a shield or buckler. F. *clépéolatre*.) Of, or belonging to, a shield. Same as *Thyroid*.

**C. cartila'go.** (F. *cartilage clépéolaire*.) Another term for the thyroid cartilage.

**Clypeas'tridæ.** (L. *clypeus*; aster, a star. F. *clépéastrides*.) Name of a Family of sea urchins, of an oblong or rounded form, with both mouth and anus below.

**Clypeas'triform.** Same as *Clypeiform*.

**Clypeate.** (L. *clypeus*.) Shield-shaped.

**Clypeiform.** (L. *clypeus*, a shield; *forma*, likeness. F. *clépéiforme*; G. *schildformig*.) Formed like a shield.

**Clypeola.** (L. *clypeolum*, dim. of *clypeus*.) A Genus of the Nat. Order *Cruceiferae*.

**C. jonthlasi,** Linn. Hab. Europe. Used as an antiscorbutic.

**Clypeolar.** (L. *clypeolus*, a little shield. F. *clépéolaire*; G. *schildchenformig*.) Formed like a little shield.

**Clypeole.** (L. *clypeolus*, dim. of *clypeus*, a shield.) Term applied to the lamina or receptacle on the inner surface of which the sporangia are attached in Equisetum.

**Clypeus.** (L. *clypeus*.) The broad shield-shaped part of the head of some insects to which the upper lip is attached; also called epistome.

**Clysantlion.** (Κλύσις, a washing out; *ἀντίον*, a bucket. F. *clysopompe*; G. *Klysterpumpe*.) Name for a clyster or enema syringe.

**Clysantlium.** The same as *Cysantlion*.

**Clys'is.** (Κλύσις.) The administration of an enema.

**Clys'ma.** (Κλύσμα, from κλύω, to wash away. F. *clystère*, *lavement*; G. *Klyster*.) Old term for a clyster or enema.

**C. tonicum.** (Τόνος, tone.) The *Enema assafoetideæ*.

**Clys'mata.** Plural of *Clysma*.

**Clysmatium.** (Dim. of *Clysma*.) A small enema.

**Clys'mian.** (Κλύω, to wash. F. *clysmien*.) Applied to a class of soils of transport and alluvium, or of inundation and attrition, because evidently the product of transport and mechanical deposit, of which water has been the agent.

**Clys'mic.** (Κλύω, to wash away. F. *clysmique*.) Washing off; carrying away by the rushing of waters.

**Clysmus.** (Κλυσμός.) A clyster, an enema.

**Cly'sus.** (F. *clyssus*.) An old term, of various application, meaning compound mineral spirits, according to Rolfenkus. Also, the quintessence of a thing; also, the reunion of different principles, as oil, salt, and spirit, by long digestion; and most generally the product of the detonation of nitre with another substance, as the clyssus sulphuris, or nitre degraded with sulphur.

**Clyster.** (Κλυστήρ, from κλύω, to wash away. F. *clystère*; G. *Klyster*.) Term for an injection thrown into the rectum; an enema; a glyster. See *Enema*.

**C. domestic.** The *Enema commune*.

**C. pipe.** The anal tube of an enema apparatus.

Also, the primitive apparatus itself; a bladder to which a pipe or tube was attached.

**C. syringe.** (Συρίγξ, a pipe.) The syringe by means of which an enema is administered.

**Clysterion.** (Κλυστήριον, dim. of κλυστήρ.) A small enema.

**Clystexion.** A clyster.

**Cnaph'os.** (Κνάφος. F. *chardon à carder*; G. *Kardendistel*.) Old name for the *Dipsacus fullonum*, or fuller's teal or thistle.

**Cnece'la'um.** (Κνήκος, the *Carthamus tinctorius*; *ἐλαιον*, oil. G. *Saffloröl*.) Name for a kind of oil from the seeds of the *Carthamus tinctorius*.

**Cne'cus.** (Κνήκος.) The safflower, *Carthamus tinctorius*.

**Cne'me.** (Κνήμη, the part of the leg between the knee and the ankle.) Old name for the tibia, or large bone of the leg.

**Cnemelephantiasis.** (Κνήμη, the leg between the knee and the ankle.) Elephantiasis of the leg.

**Cnemerysip'elas.** (Κνήμη.) Erysipelas of the leg.

**Cne'mial.** (Κνήμη.) Relating to the tibia.

**C. crest.** A bony prominence of the upper end of the tibia in many birds, especially Grallatores and Natatores.

**Cnemid'ium.** (Dim. of κνήμη, a greave. F. *cnemidon*.) Name for the inferior part of the leg in birds stripped of feathers.

**Cnemidos tachys.** (Κνήμη, a greave; *σάχος*, an ear of corn.) A Genus of the Nat. Order *Euphorbiaceæ*.

**C. chama'lea.** (Χαμαιλέον, the chamaeleon.) Used in India as an antisiphilitic.

**Cnemitis.** (Κνήμη, the tibia. F. *cuémite*;

G. *Schienbrenntzündung*.) Inflammation of the tibia.

**Cnemodactylæus.** (Κνήμις, the tibia; ἑκτακτος, a toe or finger.) Old term applied as a name for the extensor longus digitorum pedis muscle, which extends from the tibia to the phalanges of the toes.

**Cnemodactylus.** (Same etymon.) Same as *Cnemodactylæus*.

**Cnemolordosis.** (Κνήμη; λάρδωσις, a curvature forward.) An anterior curvature of the bones of the leg.

**Cnemosciosis.** (Κνήμη; σκολίωσις, obliquity.) Scoliosis or lateral bending of the leg.

**Cnecorum.** (Κνέπων.) A Genus of the Nat. Order *Rutaceæ*.

**C. album.** (L. *album*, white.) The *Convolvulus encorum*.

**C. niger.** (L. *niger*, black.) The *Daphne encorum*.

**C. pulverulentum.** Vert. (L. *pulverulentus*, dusty.) Hab. Canary Islands. Used as a substitute for quinine.

**C. tricoecum.** Linn. (Τρίκοκκος, with three berries.) Widow wail. Hab. South Europe. Acid, caustic, and drastic. Used as a purgative and diuretic; poisons in large doses.

**Cne'sis.** (Κνήσις, a scratching.) Old term for a pricking or itching.

**Cne'sma.** (Κνέω, to scrape. F. *cnesme*.) Old term for a scraping or abrading, as after itching and scratching.

Also, itching itself.

**Cne'smonē.** (Κνημονή, an itching.) An old name for scabies.

**Cnesmopompholyx.** (Κνημός, an itching; πομφόλυξ, a water bubble.) Pompholyx accompanied by great itching.

**Cnesmos.** (Κνησμός, an itching. F. *cnesme*.) Old term used, by Galen, for an itching and scratching, particularly the latter; caused by latent pustules, acrimonious state of the secretions, or the like.

**Cne'smus acariasis.** (*Acarus*.) A name by Fuchs of louse disease, in the olden acceptance of the word, when it was believed that the lice were developed spontaneously in the body; and as a substitute for phthiriasis, because he believed that the animal was not a pediculus, but a special *Acarus* or *Gamasus*.

**Cne'stis.** (Κνέω, to scratch.) A Genus of the Nat. Order *Conneraceæ*.

**C. glabra.** Lam. (L. *glaber*, smooth.) Fruit covered with hairs, which may penetrate the skin and produce violent itching, like those of *Mucuna pruriens*.

**C. polyphylla.** Lam. (Πολύς, many; φύλλον, a leaf.) Properties as *C. glabra*.

**Cnestrum.** (Κνήστρον.) The plant mentioned by Hippocrates under this name is said to be the *Cnecium tricoecum*.

**Cnicelæon.** See *Cnicelæum*.

**Cnicin.** C<sub>10</sub>H<sub>16</sub>O<sub>15</sub>. A bitter, inodorous, neutral, crystallisable principle, obtained from the leaves of *Cnicus benedictus* and the allied species. It has been used as a febrifuge and stomachic; in large doses it produces nausea and vomiting. It has been supposed to be the same as *Monyanthin*.

**Cnicus.** (Κνίκος. F. *carthame*; G. *Bursternglanze*.) Old name of the *Carthamus tinctorius*.

**C. benedictus.** Gärt. (L. *benedictus*,

blessed. F. *charbon benit*; G. *Gottesquadenkraut*.) Blessed thistle. Hab. South Europe. Used as a tonic and febrifuge, and formerly in almost all diseases. An infusion is said to be useful in atonic dyspepsia with hepatic disturbance.

**C. casabo'næ.** Willd. The *Chamaepence casabonæ*, De Cand.

**C. cer'nus.** (L. *cernuo*, to nod.) The nodding enicis, the tender stalks of which, boiled and peeled, are eaten by the Siberians.

**C. erioph'orus.** Hoffm. The *Cirsium eriophorum*, Scop.

**C. lana'tus.** Willd. (L. *lanatus*, woolly.) The distaff thistle, *Cirsium lanatum*.

**C. lanifo'rus.** Bieb. The *Cirsium laniflorum*.

**C. maria'nus.** The *Cirsium marianus*.

**C. olera'ceus.** (L. *oleraceus*, herb-like.) The round-leaved meadow thistle. Its leaves are boiled in the northern parts of Europe, and eaten like cabbage.

**C. sylves'tris.** (L. *sylvestris*, belonging to a wood.) The same as *C. benedictus*.

**C. tinctor'ius.** The *Carthamus tinctorius*.

**Cni'dæ.** (Κνίδη, a nettle. F. *cnides*.) Applied to the *Aculephæ*, from the sharp pain they cause by their urticating cells or *Nematocysts* when touched.

Also, a synonym of the *Nematocysts* themselves.

**Cni'dé.** (Κνίδη.) The plant of this name, mentioned by Hippocrates, is probably *Urtica dioica*.

**Cnidelæ'um.** (Κνιδέλαιον. G. *Kellerhalsol*.) Name for oil from the seeds of the *Daphne gnidium* or *mezereum*.

**Cnideph'era.** (Κνίδη, a nettle; ἐφήμερος, living but a day.) A feverish attack, with nettlerash, lasting only a day.

**Cnid'ian school.** (*Cnidus*, now Tekir, an ancient city of Caria, in Asia Minor, situated at the extremity of the peninsula which forms the southern side of the Gulf of Cos.) A school of medicine which, anterior to Hippocrates, continued to his time. He criticised the teaching of this school as tending to too great a subdivision of diseases, and their practice as too simple, for it consisted mainly in the use of milk and purgatives; on the other hand, it must be admitted that the Cnidians recognised the friction sound of plenry, they removed purulent collections in the thorax by tapping, and they opened the loins for suppurations in the kidney, or, it may be, for lumbar abscess. (Littre and Robin.) Also, spelled *Cnidian*.

**Cnidii grana.** Properly *Cnidii grana*.

**Cnidium.** A Genus of the Nat. Order *Umbellifereæ*.

**C. siläus.** The *Siläus pratensis*.

**C. tenuifolium.** (L. *tenuis*, slender; folium, a leaf.) The *Ptychotis feniculifolia*.

**Cnidoma.** (Κνίδη, a nettle. G. *Nessel-ausschlag*.) The same as *Urticaria*.

**Cnidomecephlogio'is.** (*Cnidoma*; cephalogios. F. *cnidomecephlogioides*.) Urticarious, modified variola.

**Cnidopsydra'cia.** (Κνίδη, a nettle; ψυδρακιον. F. *cnidopsydriac*.) Urticated psydriac.

**Cnidopy'ra.** (Κνίδη, a nettle; πυρ, a fever. G. *Nesselfieber*.) A name for *Urticaria* with feverishness.

**Cnidoscopus quinquelobus.** The *Jatropha urtica*.

**Cnidosecephlogiois.** See *Cnidomcephlogiois*.

**Cnidosis.** (Κνίδωσις, from κνίδη, the nettle. F. *cnidosis*.) Old term (Gr. κνίδωσις), used by Hippocrates, for a pungent itching or burning sensation, such as is excited by the sting of the nettle.

**Cnipotes.** (Κνιπότης, pruritus, or a dry itchiness of the eyes.) Old term, used by Hippocrates, supposed to be the same with xerophthalmia, or dry ophthalmia.

**Cnisin.** Same as *Cnicin*.

**Cnismoregia.** (Κνισμός, itching; ῥόγμυ, to break forth.) A term applied to pyrosis and heartburn; so called because a burning or itching heat seems to break forth with acidity.

**Cnismos.** Same as *Cnismos*.

**Cnissoregia.** (Κνίσσα, the odour of roasted fat; ὀρίγω, to stretch out. F. *cnissoregia*.) Eructation of gas having the odour of rancid fat or of a spoiled egg.

**Cnissorrhoeus.** (Κνίσσα; ῥόγμος, a snoring.) Term for a crackling rale, perhaps by extending the true meaning of κνίσσα, from the odour of burning fat, to the crackling noise made by its burning.

**Cnyma.** (Κνύμα, from κνύω.) Itching.

**Co.** (L. prefix, a modification of *cum*, with.) In compound words, together with.

**Coacervate.** (L. *co*, with; *acerro*, to heap up. F. *aggloméré*; G. *gehäuft, gedrängt*.) Associated together in clumps. Thus the pollinic masses of some Asclepiads are said to be composed of coacervate granules.

**Coacon.** A black plaster in use amongst the ancients, composed of litharge boiled in oil and re-in.

**Coadnate.** (L. *coadnatus*; from *co*, with; *adnasco*, to grow in addition.) Congenitally united to; as the calyx tube of the gooseberry to the ovary, or the anther when it is apparently borne on the outer or inner face of the filament. The same as *Athate*.

**C. leaves.** Leaves consisting of leaflets united at the base.

**Coadunate.** (L. *coaduno*, to join together. F. *coaduné*; G. *vereinigt, verwachsen*.) Clustered; joined together.

**Coagmentaio.** (L. *coagmento*, to join together.) The same as *Gomphosis*.

**Coagula.** Plural of *Coagulum*.

**C. cordis fibrinosa.** (L. *cor*, the heart; *fibra*, a filament.) Pale whitish or reddish masses of fibrin occasionally found in the large vessels near the heart, especially after death from chronic diseases. They are probably formed during the last hours of life, and are recognised by the irregular action of the heart, and by a soft blowing murmur. See *Cardiac concretions*.

**C. venarum fibrinosa.** (L. *vena*, a vein; *fibra*, a fibre.) Thrombi in the veins.

**Coagulability.** (G. *Coagulabilität*.) The capacity of undergoing *Coagulation*.

**Coagulable.** (L. *coagulo*, to curdle. F. *coagulable*; G. *gerinnbar*.) Having the property of coagulation.

**C. lymph.** (F. *lymphe coagulable*.) See *Lymph, coagulable*.

**Coagulant.** (L. *coagulo*, to curdle. F. *coagulant*; G. *gerinnennmachend*.) Having the power of curdling or coagulating. Formerly

applied to medicines, coagulants, supposed to effect a greater degree of coagulability of the blood, or of the consistence of the other fluids.

Also, that which produces *Coagulation*.

**C. lymph.** See *Lymph, coagulant*.

**Coagulated.** (L. *coagulo*.) Having undergone the process of coagulation.

**C. proteids.** A class of proteinous substances produced by heating to 70° C. (158° F.) solutions of ovalbumin or serumalbumin, globulins or fibrins suspended in water or dissolved in saline solutions, or precipitated acid albumin and alkali albumin suspended in water. By the action of the gastric juice in an acid medium, or of pancreatic juice in an alkaline medium, they are converted into peptones. They are insoluble in water, dilute acids and alkalis; soluble, with decomposition, in strong acids and alkalis. They give Millon's reaction.

**Coagulation.** See *Coagulation*.

**C. calida.** (L. *calidus*, hot.) Ancient term applied when heat occasioned coagulation.

**C. frigida.** (L. *frigidus*, cold.) Old term applied when a substance was dissolved by heat, but solidified by cold.

**C. per comprehensio nem.** (L. *per*, by means of; *comprehensio*, a seizing.) Term formerly applied when all the substances of a mixture, after being thoroughly mingled, undergo solidification.

**C. per segregatio nem.** (L. *per*; *segregatio*, a parting.) Term formerly applied to cases in which, on the escape of some vapour or fluid, the remainder solidifies.

**Coagulation.** (L. *coagulo*, to curdle. F. *coagulation*; G. *Gerinnung*.) Term applied to that setting, solidification, or conversion into a tremulous jelly-like substance, which occurs in various animal and vegetable fluids shortly after being shed, and exposed to ordinary temperature. It may be well seen in the fluid exuding from the cut surface of an actively growing cucumber, and in lymph or blood withdrawn from the body.

Also, applied to the solidification of a fluid by chemical or other agents, as the curdling or coagulation of milk by acids.

Also, applied to the solidification of the various forms of albumen which results from their exposure to a temperature at, or near, 150° C.

**C. mur'murs.** See *Murmurs, coagulation*.

**C. necrosis.** (Νεκρωσις, death. G. *Coagulations necrose*.) Death of any tissue or organ depending on coagulation of blood in the vessels of, or leading to, the part affected. The coagulation of blood and lymph may be looked upon as a kind of coagulation-necrosis, since it is the last act of their life. The term is usually applied to that form of death of tissue in which one or more of the constituents or the whole mass of any organ becomes converted into a substance resembling coagulated fibrin. It appears to occur in all tissues composed of protoplasm, and the dead tissue may preserve the form of the living tissue, as in the case of cells and vessels, but is changed into a fibrous or scaly granular mass, which may be either cloudy or bright. As a rule the tissue must be freely permeated with lymph, and no ferment must be present. The type of that form in which the whole organ or part of an organ undergoes coagulation-necrosis occurs in cases of infarctus of the chief or only blood-vessel, and may be seen in the lung, intestine, and spleen, or in the subcutaneous or submucous tissue, e.g. the tongue of the frog. Small

## COAGULUM—COALESCENCE.

portions of the tissue (*G. Fibrinkeit*) are often found thus necrosed in the kidney, spleen, and heart. Coagulation necrosis may be observed also in the walls of atheromatous arteries, in the cheesy masses presented by the mesenteric glands in typhus, in the spleen and marrow of bones in recurrent fever, and in various organs in scrofula and tuberculosis. They occur as the result of the local operation of mycotic growths in the liver and on the surface of mucous membranes in diphtheritis, and, lastly, in tumours where caseous degeneration is said to have taken place. Particular tissues may be affected as (1) the epithelia of glands, especially those of kidney and liver, which may result from the temporary arrest of blood supply, providing this is not so protracted as to kill the vessels themselves; from the action of chemical agents, as chromic acid and caustics; from mycotic processes; and from the unknown causes of various forms of nephritis; and (2) the investing epithelia, as in the efflorescence of variola, the artificial croup of the trachea of the rabbit, and that affection of the mucous membrane of the throat which accompanies scarlet fever, and is sometimes erroneously called diphtheritis; (3) muscular fibre, as in the waxy degeneration of muscle; and (4) inflammatory cells or migrating white corpuscles, or even the white corpuscles in the blood may, under pathological conditions, undergo coagulation necrosis, as may be seen in pseudo-diphtheritis, white thrombi, many inflammations of serous membranes and of the endocardium, and in cheesy exudations.

**C. of blood.** (*E. coagulation du sang*; *G. Blutgerinnung*.) The process commences on the surface of the fluid about three minutes after withdrawal, the whole mass becoming clotted in about eight or nine minutes; contraction of the clot then commences, and serum begins to exude from it, and continues to be squeezed out for three or four days. The coagulation of the blood is retarded by cold, by the addition of alkalis and solutions of neutral salts, of acetic acid or carbonic acid gas, by solution of ovalbumen, sugar, glycerin, or much water. It coagulates slowly under pressure. Hepatic, venous, and menstrual blood coagulate with difficulty, or not at all. It is accelerated by moderate warmth, by exposure to the air, and by contact with all foreign bodies, especially if rough. It is generally believed to be due to the solidification and contraction of fibrine, a substance formerly regarded as a natural constituent of living blood, but which is now usually believed to take origin at the time of coagulation, by the union of two albuminous substances, paraglobulin and fibrinogen, under the influence of a ferment.

**Coagulum.** (*L. coagulo*, to curdle.) A clot, the result of coagulation.

Also, that which causes coagulation.

Also, specially (*E. caillot*; *G. Blutkuchen*) a clot of blood.

Also (*G. Geronnene*), any clotted mass.

**C. aluminis.** (*L. alumen*, alum.) A name for a preparation made by beating the white of egg with alum till they form a coagulum. Used as astringent to the conjunctiva membrana of the eye.

**C. aluminosum.** (*L. alumen*, alum.) The same as *C. aluminis*.

**C. lactis.** (*L. lac*, milk.) Curds.

**C. lymphæ.** (*Lymphæ*.) The clot of lymph.

**C. sanguinis.** (*L. sanguis*, blood.) Blood clot.

**C. specifiæum.** (*L. species*, a peculiar kind; *facio*, to make.) In old writings, the solidification of what was regarded as the earthy material.

**C. vitrioli.** This was made of calcined tartar and vitriol. It was considered to act as a purgative.

**Coal.** (*Sax. col*, coal. *F. charbon*, *c. de terre*; *I. carbone*; *S. carbon de piedra*; *G. Kohle*, *Steinkohle*.) Originally applied to a piece of wood or other inflammable substance alight or charred. Now used to denote the well-known form of carbon, the product of submerged peat mosses or pine woods or forests of a long back time, which, by giving off water, carbonic acid, and marsh gas, leave a bituminised residue containing a large proportion of carbon mixed with mineral matter.

**C. creasote.** (*Krías*, flesh; *σάζω*, to preserve.) A synonym of *Carbolic acid*.

**C. fish.** The Norway Ley, *Gadus carbonarius*, so called from its dark colour. A fish which is abundant on the coasts of Norway, England, and Scotland. It resembles, but is darker in colour, than the cod; is edible, and is a source of cod-liver oil.

**C. gas.** This gas is a compound of hydrogen, olefiant gas (ethene), and other heavy hydrocarbons, light carburetted hydrogen (methane), ethine or acetylene, carbon mono- and dioxide, hydrogen sulphide, ammonia, oxygen, nitrogen, and vapour of carbon bisulphide. The illuminating power is chiefly due to the combustion of methane and ethene. It is highly poisonous when respired, the carbon monoxide being probably the most active agent. It produces headache, vomiting, unconsciousness, convulsions, followed by loss of muscular power and asphyxia. It is easily recognised by its peculiar odour, which is due to naphtha vapour.

**C. gas liquor.** Same as *Gas water*.

**C. lung.** A synonym of *Anthraxosis pulmonum*.

**C. mîners' phthisis.** (*Φθίσις*, consumption.) Same as *Anthraxosis pulmonum*.

**C. naphtha.** One of the products of the distillation of coal. It is lighter than water, and burns with a smoky flame. It acts as a narcotic poison, producing intoxication and delirium, followed by coma.

**C. oil.** A synonym of *Petroleum*.

**C. tar.** One of the products of the dry distillation of coal. It is of thick viscid consistence, dark colour, and of variable and complex constitution. It has been used as a disinfectant.

**C. tar creasote.** (*Krías*, flesh; *σάζω*, to preserve.) Carbolic acid.

**C. tar, emulsion of.** (*L. emulgeo*, to milk out.) The same as *C. tar, saponified*.

**C. tar, gypseous.** Coal tar mixed with 96 to 99 per cent. of powdered gypsum. Used for gangrenous wounds.

**C. tar, saponified.** (*L. sapo*, soap.) A mixture of coal tar, soap, and alcohol, employed for baths and washing. It is regarded as antiseptic and insecticide.

**Coalescence.** (*L. coalesco*; from *cum*, with; *aleceo*, to grow up. *Gr. ἀσφύσας*; *I. coalescenza*; *S. coalescenzia*; *G. Verwachsung*, *Zusammenwachsen*.) The union, junction, or fusion of parts previously separate.

In Botany, the union of similar parts.

**C. of cells.** The formation of tubes, or of

larger spaces, by the absorption of the partition walls of adjoining cells.

**Coalescent.** (L. *coalesco*, to grow together. F. *coalescent*; G. *zusammenfließend*, *verwachsend*.) Growing together; conerecting.

**Coalitio.** See *Coalition*.

**C. partium.** (L. *pars*, a part.) A union of parts.

**Coalition.** (L. *coalitus*, part. of *coalesco*. F. *coalition*; I. *coalizione*; S. *coalicion*; G. *Verwachsensein*.) A synonym of *Coalescence*.

**Coalitus.** (Same etymon.) A synonym of *Symphysis*.

**Coalterna febris.** (L. *co*, for *cum*, with; *alternus*, one after another; *febris*, fever.) A name for a supposed double intermittent fever, that is, two fevers affecting the same patient, and the paroxysm of one approaching as that of the other subsides.

**Coalternus.** (L. *co*, with; *alternus*, one after another, by turns.) Alternating with another.

**Coaptation.** (L. *con*, together; *apto*, to fit. F. *coaptation*; G. *Verenigung*.) Term for the fitting together or adjustment of the ends of a fractured bone.

Also, the replacement of a dislocated bone.

**Coarctatæ.** (L. *coarcto*, to press together.) A Section of the Suborder *Ovipara*, Order *Diptera*, in which the pupæ form within the hardened larval integument.

**Coarctate.** (L. *coarcto*, to press together. F. *resserré*; G. *eingeschränkt*, *Zusammengedrängt*.) Pressed close together; straightened; crowded.

A term applied to an insect enclosed in a case during transformation, so that the whole body is wrapped up with no trace of limbs, as in some *Diptera*.

**C. retina.** The retina is said to be coarctate when, owing to the accumulation of fluid between it and the choroid, it assumes the form of a funnel, extending from the entrance of the optic nerve to the margin, or to the remains of the lens.

**Coarctatio.** See *Coarctation*.

**C. pulsus.** (L. *pulsus*, a beating.) The sinking of the pulse before the paroxysm of fever.

**C. ventriculi.** (L. *ventriculus*, the stomach.) Narrowing or contraction of the stomach.

**Coarctation.** (L. *coarcto*, to straighten or press together. F. *coarctation*; G. *Einschränkung*, *Verengerung*.) A straightening or pressing together, or narrowing, as of the canals or orifices of the body. Applied to strictures of the intestine or urethra, and to the contraction of a cavity.

**Coarctotomy.** (L. *coarcto*, to press together; *τομή*, section.) A synonym of *Urethrotomy*.

**Coarcture.** (L. *coarcto*, to press together. F. *coarcture*; G. *Verengerung*.) Name by Grew for the neck of plants or the part intermediate between the plumule and radicle, because a shrinking is sometimes observed in that part.

**Coarse.** (Etymol. doubtful; perhaps a contracted form of *in coarse*, meaning common.) Rough, thick, wanting in fineness.

Applied to such things as râles or erepitation to denote largeness of size and roughness of sound.

**Coarticulation.** (L. *con*, together; *articulatio*, an articulation.) The same as *Abarticulation*.

**Coat.** (Old F. *cote*; F. *cotte*, a garment; from Low L. *cottus*, a tunic. G. *Haut*.) An upper garment, and so a covering or membrane.

**C. buffy.** (Etymon as *Buff*.) The tough yellowish layer which appears on the surface of the clot in blood which has coagulated slowly; it is due to the sedimentation of the red corpuscles and the formation of a clear layer of plasma which contains white corpuscles, especially at its lower part. It is well shown in the blood of a horse shed into a tall vessel, and in the blood of man when its coagulation is retarded from natural or artificial causes. See *Buffy coat*.

**Coated.** (Same etymon. F. *tuniqué*; G. *behäutet*, *belegt*.) Covered, loaded; applied to the condition of the tongue, as indicative of visceral disturbance.

**Coating.** (Same etymon.) A covering, something spread over.

**C. of pills.** The covering of pills with silver or gold leaf, or with some compound of gelatine, or sugar, or other substance, to render them tasteless, or, at least, free from disagreeable taste.

**Coatli.** The native name of a large tree which yields the *Bauis mprétique*. It is slightly astringent, and yields to water a yellow colouring matter. The infusion has been used in affections of the bladder. It has been variously attributed to a *Moringa*, a *Bignonia*, and a *Jacaranda*.

**Cob.** (Of Celtic origin.) A thick or round lump.

**C. nut.** A large hazel nut; the fruit of the *Corylus avellana*, var. *grandis*.

**C. nuts of Jamaica.** The seeds of *Omphalea*, one of the *Euphorbiaceæ*, which, when deprived of the embryo, are most delicious and wholesome.

**Cobalt.** (G. *Kobalt*, *Kobolt*, from *Kobold*, a name for certain mischievous demons who were believed to haunt the mines, and to manufacture those ores which looked rich to the eye, but were really of little value; among these were supposed to be the ores of this metal; or because it was troublesome and poisonous to the miners. F. *cobalt*.) Symbol Co. At weight 58.6; sp. gr. 8.5; sp. heat 0.10696. A white, brittle, tenacious, diatomic metal, often associated with nickel. It fuses between the melting points of iron and gold. It is magnetic. Its oxide colours glass blue. It forms two oxides,  $\text{CoO}$  and  $\text{Co}_2\text{O}_3$ , with two or three of intermediate composition.

**C. arsenide.**  $\text{CoAs}_2$ . Occurs native.

**C., flowers of.** Pulverulent arsenide of cobalt.

**C. glance.** (E. *glance*, from Sw. *glans*, lustre.)  $\text{CoS}_2 \cdot \text{CoAs}_2$ . A mineral containing cobalt sulphide and arsenite, from which arsenic is obtained.

**C. monoxide.**  $\text{CoO}$ . A greenish-brown powder, obtained by heating the higher oxide.

**C. protoxide.** Same as *Cobaltous hydroxide*.

**C., salts of.** Strong solutions are blue, weak ones pink. Ammonium sulphide gives a black precipitate insoluble in hydrochloric acid till a little nitric acid has been added; potash gives a blue precipitate insoluble in excess of the precipitant; in the blowpipe flame the borax bead burns with a deep blue colour. They have a poisonous action on the animal body, arresting the action of the heart by their paralyzing influence on the motor nerves; they do not appear to exercise any power over the sensitive nerves.

**C. sesquioxide.**  $\text{Co}_2\text{O}_3$ . A dark-brown powder, formed by heating cobalt nitrate.

**C. tin white.**  $\text{CoAs}_2$ . Smaelite; a native ore from which arsenic is obtained.

**Cobaltic.** (F. *cobaltique*; G. *Kobalt-sauer*.) Pertaining to, or containing, cobalt.

Applied to the higher oxides of cobalt.

**C. oxide.** The Cobalt sesquioxide.

**Cobaltic anides.** Term applied to compounds of cobalt resembling the ferrocyanides.

**Cobaltides.** (F. *cobaltides*.) Name for a family comprehending cobalt and its combinations.

**Cobaltif crous.** (Cobalt; L. *fero*, to bear. F. *cobaltifère*; G. *Kobalt tragend*.) Containing the oxide of cobalt.

**Cobaltous.** Applied to the lower oxides of cobalt.

**C. hydroxide.**  $\text{Co}(\text{OH})_2$ . Obtained by precipitating a cobaltous salt with caustic potash in the absence of air; a blue basic salt is formed, which on boiling becomes rose-red, and absorbing oxygen from the air changes to a brown powder. It has been used as a remedy for rheumatism, and is emetic in doses of 20 grains.

**C. oxide.** A synonym of Cobalt monoxide.

**Cobastoli.** (L. *cois*.) Ashes. (Ruland.)

**Cobatorium fumus.** (L. *fumus*, smoke.) A synonym of Cobalt. (Ruland.)

**Cobham.** A village in Surrey, with a strong chalybeate water, now neglected.

**Cobolt.** A name for metallic arsenic reduced to powder.

**Co'bra de capello.** (Port. *cobra*, a snake; *de*, of; *capello*, a hood.) The *Naja tripidans*, Merv.

**C. monil.** A name applied by some to the *Bungarus ceruleus*, and by others to the *Daboia Russelli*.

**C. poi'son.** The poison of the cobra de capello occasions depression, faintness, hurried breathing, lethargy, unconsciousness, nausea, vomiting, paralysis commencing in the lower limbs, hæmorrhage from mucous membranes, relaxation of sphincters, convulsions, and death.

**Cobweb.** (Welsh *cob*, a spider; *web*; or a shortened form of *attorcop* web; from Mid. E. *attorcop*, a spider, Sax. *attorecoppa*; from *ator*, poison; *coppa*, head. L. *telu aranea*; F. *toile d'araignée*; I. *tela di ragno*; G. *Spinnengewebe*.) The silky or felt-like secretion of the follicles at the extremity of the abdomen of the spider. The secretion from the follicles is viscid, and attains its filiform condition by being passed through the spinnerets into which the excretory ducts of the silk follicles open; at the apex of each spinneret are several minute tubes, through which the viscid secretion is thrust; in this way each fibre is formed by the agglutination of many finer fibres, which result from the instantaneous hardening of the fluid secretion on exposure to the air.

Cobweb was used to staunch wounds, which it effects by promoting coagulation.

The web of spiders which live in cellars and out-houses has been lauded as a febrifuge and antispasmodic; it has been used instead of quinine in ague, and also in asthma, hysteria, and nervous excitement. Dose, five or six grains.

**C. microm'eter.** See *Micrometer*, *cobweb*.

**Cob'webby.** (Same etymon. G. *Spinnwebartig*.) In Botany, bearing long and soft entangled hairs.

**Co'ca.** (Cymara *coca*, plant.) The name in Peru of the *Erythroxylon coca*, which is cultivated for its leaves, to which great virtues are attributed by the Indians. It owes its action to the resinous and azotised principles it contains and to *Cocain*. When the leaves are masticated with an alkaline powder called *lipta*, hypersecretion of saliva is produced, followed in about half an hour by dryness of the throat and marked anaesthesia of the interior of the mouth, a sensation of warmth is felt in the stomach, and in the course of an hour or less the pulse rises eight or ten beats; the temperature rises  $1^\circ$  or  $1.5^\circ$  F.; respiration is accelerated; the amount of urea eliminated is augmented. It is recommended as a tonic, as an invigorating agent in those exhausted by work, and to prevent dyspnoea in ascending heights.

**C. leaves.** (G. *Cocablätter*.) See *Coca*.

**Co'cain.**  $\text{C}_{17}\text{H}_{21}\text{NO}_4$ . An alkaloid found in the leaves of *Erythroxylon coca*, in which it exists in the proportion of 1-5th to 1-25th per cent. It crystallises in large colourless rhombic prisms, fuses at  $98^\circ$  C. ( $209^\circ$  F.), is soluble in alcohol and ether, slightly in water; taste at first bitter, then cool. It paralyses the peripheral ends of the sensory nerves, so that when painted on the tongue sapid substances can no longer be tasted, the effect lasting for from 25 to 100 minutes. In mammals, in moderate doses, it excites all the nerve centres, especially the psychic centres, and exalts reflex acts, but respiration and circulation are quickened; blood pressure is increased; the cardiac inhibitory nerves are paralysed; the striated muscles remain intact; the pupil is dilated; the intestinal movements are rendered active; the skin temperature is increased; the secretion of mucous membranes is lessened. In large doses the nerve centres are weakened, and death occurs by paralysis of the respiration. The dose should not exceed one grain.

**Cocaina.** Same as *Cocain*.

**Cocallera.** The native name in Brazil of the *Craton pardiceps*, a decoction of which is much esteemed as a cure for syphilis, and as a diuretic.

**Co'cash.** The *Erigeron philadelphicus*.

**Cocatanic acid.** A kind of tannic acid contained in the leaves of *Erythroxylon coca*. It is brown red, amorphous, hygroscopic; colours iron chloride brown green; precipitates antimony tartrate, but not gelatin.

**Coc'ca cnid'ia.** See *Cocci gnidii*.

**Coc'ca gnid'ii.** See *Cocci gnidii*.

**Coccarium.** (Dim. *kokkos*, a pill.) Old name for a very small pill.

**Cocchia.** A synonym of *Cochia*.

**Coc'ci.** Plural of *Coccus*. See also *Coccum*.

**C. gnid'ii.** (G. *Kellerhals Körner*, *Siedelbastamen*, *deutsche Pfeffer*, *Purgir Körner*.) The fruit of *Daphne gnidium*. The fresh berries are succulent, elongated, oval, 6 mm. long, contain one seed, are red or yellow externally, and have a reddish yellow flesh; the shell of the seed is roundish, glossy black, covered with a thin double membrane; the kernel is invested with a brown skin, and is exalbuminous; when dry the fruit becomes wrinkled. They contain of a volatile oil 31 per cent., resin and wax, soluble in alcohol, 3.58, and acrid resin 0.32, coccognin 0.38, albumins 19.5, cellulose 32.37, ashes 5.46. They were formerly used as a purgative.

# COCCIA—COCCULUS.

**C. gra'nium.** (L. *gratum*, a grain.) A synonym of *Kermes*.

**C. orienta'les.** (L. *orientalis*, eastern.) Same as *Cocculus indiens*.

**C. tinetu'ra**, B. Ph. (L. *tinetura*, a tincture.) Cochineal 1, proof spirit 8; macerate for seven days, strain, and wash the marc with spirit to make up 8. Proportion 1 to 8. Dose, 30—90 minims. Employed as a diuretic and anodyne. Also, as a colouring agent.

**Coc'cia.** (Κόκκος, a pill.) An old term for pills, especially purgative pills.

**Coccid'ium.** (Κόκκος, a kernel; εἶδος, likeness.) A spherical or hemispherical conceptacle without a pore, containing a tuft of spores on a central placenta.

**Coccif'erous.** (L. *coccum*, a berry; *fero*, to bear. F. *coccifère*; G. *beerentragend*.) Berry-bearing.

**Coc'cin.** A substance which, in combination with chitine and an oil, the colour of which varies with the species, forms the integument of insects.

**Coccinel'la.** (Dim. of L. *coccum*, the berry of the scarlet oak; from its resemblance. F. *coccinelle*; G. *Marienkäuf*, *Sonnenkäfer*.) A Genus of the *Coleoptera*. The lady-birds.

Also, a synonym of *Coccus cacti*.

**C. bipuncta'ta**, Linn. (L. *bis*, twice; *punctatus*, dotted.) A species formerly used as a remedy for toothache, by bruising the insect and applying it to the affected tooth, or by using the yellow fluid which exudes from an opening situated above the crura, near the femoro-tibial articulation.

**C. septempuncta'ta**, Linn. (L. *septem*, seven; *punctatus*, dotted. G. *Marienkäufchen*.) The common lady-bird. An insect used for the same purpose as *C. bipunctata*.

**Coccinel'læ tinctu'ra.** Tincture of lady-bird. Formerly used as a dentifrice.

**Coccinel'lin.** (F. *cochenille*; F. and G. *carmin*.) Term for the colouring principle of cochineal; carmine.

**Coccine'ous.** (L. *coccineus*, of a scarlet colour. F. *cramoisi*; G. *scharlachroth*.) Of a high crimson or bright scarlet colour, as the flower of the *Salvia coccinea*.

**Coc'cion.** (Κόκκιον, dim. of κόκκος, a pill.) A weight of about four grains.

**Coccionella.** Same as *Coccus cacti*.

**C. polon'ica.** (G. *Polnische Cochenille*, *Johannisblut*.) See *Coccus polonicus*.

**Coc'cius.** An ophthalmologist of the present century.

**C.'s ophthal'moscope.** See *Ophthalmoscope*, *Coccius's*.

**Coc'co.** The West Indian name of the *Colocasia esculenta*.

**Coccobacte'ria sept'ica.** (Κόκκος, a kernel; βακτήριον, a little rod; σηπτικός, putrefying.) Billroth's term for the spheroids and rods found in putrefying fluids, and which, in their various forms of micrococci, streptococci, ascococci, bacteria, and coccogloea, he believes to be forms of one plant, which he thus names.

**Coccobal'samum.** (Κόκκος; βάλαμον, the balsam tree.) Name of the fruit of the *Anagyris opobalsamum*.

**Coccobry'on.** (Κόκκος; βρύον, moss.) A Genus of the Nat. Order *Piperaceæ*.

**C. capen'se.** A plant indigenous to the Cape, and employed as a stomachic.

**Coccocyp'selum.** (Κόκκος; κυψέλη, a

hollow vessel.) A Genus of the Nat. Order *Rubiaceæ*.

**C. fonta'na.** A plant growing in French Guiana. It is used as a remedy in cases of congestion of the liver.

**Coc'code.** (Κόκκος, a kernel.) A spherical protuberance like a pill.

**Cocco'es.** The esculent root of *Colocasia esculenta*.

**Coccoglia.** (Κόκκος; γλία, glue.) Same as *Coccoglua*.

**Coccogloe'a.** (Κόκκος; γλοία, glue.) Same as *Zinglota*.

**Coccognidia.** See *Cocci gnidii*.

**Coccognidic acid.** (L. *coccum*, a berry; *Gnidius*, *Gnidium*.) An acid, crystallising in quadrangular colourless prisms, obtained from *Daphne gnidium*. It is not precipitated by lime water nor by the salts of barytic lead.

**Coccog'nin.** A crystallisable volatile body obtained from the seeds of *Daphne mezereum*.

**Coc'colith.** (Κόκκος, a berry; λίθος, a stone.) A calcospherite, either free or attached to a coccosphere, obtained by deep-sea dredging; it is probably algal.

**Coccoloba.** (Κόκκος; λόβος.) A Genus of the Nat. Order *Polygonaceæ*.

**C. nivea**, Jacquin. (L. *niveus*, snowy.) Berry esculent.

**C. pubes'cens**, Linn. (L. *pubescens*, downy.) Fruit esculent.

**C. uvif'era**, Linn. (L. *uva*, a grape; *fero*, to bear. G. *Seitraube*.) The sea-side grape. A plant indigenous in the West Indies. It is remarkable for the succulent violet calyx which envelopes the nuts, and which yields an extremely astringent extract; the wood dyes red; the currant-like berries are acid, pleasant, and wholesome.

**Coccomelas'ma.** (Κόκκος, a berry; *melasma*. F. *coccomelasma*; G. *das b.kornite Melasma*.) Granulated or berry-like *melasma*.

**Cocco'nes.** (Κόκκος, a kernel.) The seeds of the pomegranate.

**Coccosolen.** (Κόκκος, a berry; σωλήν, a pipe. L. *tubulus baccatus*.) Term applied by Berres to a tubule with varicose swellings, such as he believed sensory nerves to present.

**Coccosphere.** (Κόκκος, a berry; σφαῖρα, a globe.) Term applied by Wallich to a mass of sarcode, enclosed in a thin calcareous envelope, having coccoliths attached to it.

**Coccosteophyte.** (Κόκκος, a berry; *osteophyllum*. F. *osteophyte granuleux*, o. *verruqueux*; G. *Kokkosteophyt*.) A granulous or warty osteophyte.

**Coc'cule.** (Dim. of κόκκος, a kernel.) A small berry or *Coccus*.

**Coc'culi.** Plural of *Cocculus*.

**C. levant'ici.** (Levant.) The fruit of *Anamirta cocculus*.

**C. officina'rum.** (L. *officina*, a workshop.) The dried fruit of the *Menispermum cocculus*.

**C. orienta'les.** (L. *orientalis*, eastern.) The *Cocculus indiens*.

**C. piscato'rii.** (L. *piscatorius*, of, or belonging to, fishing.) The fruit of *Anamirta cocculus*, so called because used to stupefy fish; the *Cocculus indiens*.

**Cocculin.** A synonym of *Picrotoxin*.

**Coc'culus.** De Cand. (L. *cocculus*, a small berry-like fruit.) A Genus of the Nat. Order *Menispermaceæ*.

Also (*F. coqueule*; *G. Beerchen, Körnchen*), a little berry.

Also, the same as *Cocculus indicus*.

**C. acuminatus**, De Cand. (*L. acuminatus*, pointed.) Hab. Brazil. Used as an antidote to snake-bites.

**C. Bakis**, G. Benth. A plant growing in Senegal, the root of which is employed as a tonic and diuretic.

**C. Burman'ni**, De Cand. A tonic and diuretic.

**C. Ceba'tha**, De Cand. A plant growing in Arabia, the esculent, but acrid berries of which yield, on distillation, a spirit named Kumhrool-majnoon.

**C. chondroden'dron**, De Cand. (*Xón-ēpos*, a cartilage; *δένδρον*, a tree.) The same as *Chondodendron tomentosum*.

**C. cineres'cens**, St. Hil. (*L. part. of cineresco*, to turn to ashes.) Butua. A plant growing in Brazil. The roots are employed as a tonic and diuretic.

**C. cordifo'lius**, De Cand. (*L. cor*, heart; *folium*, a leaf.) A plant growing in India. The stalks are employed in the form of infusion, named in Bengal Páhana, as a tonic; an extract of the stem, named Pálo, is regarded as a diuretic. The young shoots are powerfully emetic.

Also, called *Tinospora cordifolia*.

**C. cris'pus**, De Cand. (*L. crispus*, curled.) The *Menispermum tuberculatum*.

**C. epiba'terium**, De Cand. (*Επιβατήριον*, fit for seafaring.) A tonic like calumba.

**C. fibra'ea**, De Cand. (*L. fibra*, a fibre;  *aureus*, golden.) A diuretic. Employed in intermittent fever and in affections of the liver.

**C. flaves'cens**. (*L. part. of flavescere*, to become yellow.) A plant indigenous to the Moluccas, the roots of which are used as a substitute for Calumba.

**C. glau'cus**, Rosenth. (*L. glaucus*, bluish grey.) Hab. India. Root bitter and tonic.

**C. in di aromaticus**. (*L. aromaticus*, fragrant.) A synonym of *Myrtus pimenta*.

**C. indicus**. (*L. indicus*, Indian. *F. coque du Levant*, endormic; *G. Kakkelskörner, Fischkörner*.) Cockles. The pharmaceutical name of the berries of *Anamirta cocculus*. The berries are ovoid or subreniform; length half an inch, with a blackish wrinkled surface, and an obscure ridge running round the back; stalk short, obliquely attached; pericarp wrinkled; endocarp intruding into the single reniform seed; seed albuminous, with a pair of large diverging lanceolate cotyledons, with a short cylindrical radicle. The seed is bitter and oily, the pericarp tasteless. The powdered seeds are extensively used to stupefy fish, enabling them to be caught with the hand. In man they have produced giddiness and loss of power of the lower limbs. Formerly, it was employed in skin eruptions, especially pityriasis, and as a parasiticide, and has been recommended as an antiparalytic.

Cases of poisoning have been reported in which there was giddiness, vomiting, purging, delirium, tetanic convulsions, stupor, and death; a lichenous or scarlatinal eruption has been noticed.

**C. in'dicus plant**. The *Anamirta cocculus*.

**C. lacuno'sus**. (*L. lacuna*, a cavern.) A variety of *Anamirta cocculus* supplying some *C. indicus*.

**C. Lea'ba**, De Cand. Hab. India. Root bitter and stomachic.

**C. levan'ticus**. (*Levant*.) The same as *Cocculus indicus*.

**C. palma'tus**, De Cand. (*L. part. of palmo*, to mark with the palm.) Hab. Mozambique. The source of Calumba. Now called *Jateorhiza palmata*.

**C. polta'tus**. (*L. pollatus*, armed with a small shield.) A plant indigenous in Malabar. It is used as a substitute for Calumba.

**C. platyphyl'us**, A. St. Hil. (*Πλατύς*, broad; *φύλλον*, a leaf.) A plant indigenous to Brazil, the roots of which are regarded as tonic and diuretic. The *Abuta rufescens*.

**C. Plukenet'ii**, D.C. The fruit of this plant closely resembles that of *Anamirta cocculus*. It is warty, with an exalbuminous seed. It contains a fatty oil and starch.

**C. rubes'cens**, Endl. The *Abuta rufescens*.

**C. subero'sus**, De Cand. (*L. suber*, cork.) A synonym of *Anamirta cocculus*.

**C. toxif'erus**, Wed. (*L. toxicum*, an arrow poison; *fero*, to bear.) The bark is one of the probable constituents of South American curare.

**C. verruco'sus**. (*L. verrucosus*, warty.) The bruised stem of this plant yields an extract named in India Goluncha, which is recommended as a febrifuge.

**C. villo'sus**, De Cand. (*L. villosus*, shaggy.) The *Tinospora crispa*, Miers.

**Coc'cum**. (*Kókkos*, a kernel. *F. coque*; *G. Kuopkapsel*.) A segment or fruit-carpel of a schizocarp or segna which bursts with elasticity, as in the Euphorbia.

The term has been applied to the indurated fruit-carpels also.

It has also been applied to the whole seed-vessels which burst in parts or segments.

**C. baph'icum**. (*Βαφικός*, fit for dyeing. *F. kermes*.) A name for the kermes berry, or grain.

**C. gnid'ium**. See *Cocci gnidii*.

**C. scarlat'inum**. (*Scarlet*.) A synonym of *Kermes berry*.

**C. tinctor'um**. (*L. tinctor*, a dyer.) A synonym of *Kermes berry*.

**Coc'cus**. (*Kókkos*, a kernel; also, an insect. *F.* as well as *G. cochenille*.) A cell or capsule.

Also, the pharmacopœial name, *B. Ph.*, for the dried female *Coccus cacti*, or cochineal insect.

Also, a pill.

Also, a Genus of the Suborder *Phytophthiria*, Order *Homiptera*, Class *Insecta*.

Also, in Botany, a name of each portion into which a schizocarp splits; also called *Cucum*.

**C. adipif'era**. (*L. adeps*, fat; *fero*, to bear.) This is the Nip of Yucatan, and yields a fat of yellow colour, unsuceptible of various industrial applications.

**C. america'nus**. (*America*.) A synonym of *C. cacti*.

**C. ax'ine**. Hab. Mexico. The insect which furnishes *Acarin*.

**C. baph'icum**. (*Βαφικός*, fit for dyeing.) A name for the *C. infectarius*.

**C. cact'i**, Linn. (*L. cactus*, the plant so called. *F. bite à bon Dieu*; *G. Scharlachwurm, Nopalschildlaus*.) The cochineal insect, inhabiting Mexico and Northern South America, and living on *Opuntia cochinillifera*, Mill. *O. decumana*, Haw., *O. tuna*, Mill. *O. Hernandezii*, D.C. Also cultivated in Java, Canary Islands, Malta, and Spain. The males are winged, females without wings. They each year produce four generations;

# COCCYALGIA—COCCYGO-MESENTERIC VEIN.

the eggs hatch in eight days, the larval state lasts fourteen days, the chrysalides eight days, and the fully-formed female fourteen days, after which impregnation occurs. They are collected three to five times a year and killed by heat, and then appear as dark or silver-grey hemispherical transversely wrinkled bodies 2—4 mm. long. They contain a dark red, granular, friable mass, tasting slightly bitter, and colouring the saliva. One pound contains about 50,000. The aqueous solution becomes crimson with alum, bright red with alum and ammonia, violet with lime water. The cochineal insect contains 50 per cent. of coceus red with water, 10 animal gelatine, 14 animal mucus, 10 wax-like fat, 14 of cuticular and membranous parts, and 1.5 of salts. See *Cochineal*.

**C. caricæ.** (L. *caricus*, from *caria*.) A term for the *C. lacca*, when living on fig-trees.

**C. cerif'erus**, Fabr. (L. *cera*, wax; *firo*, to bear.) Hab. Bengal. Furnishes a wax like China wax.

**C. cnid'ius.** (Possibly from *κνιδή*, a nettle, from their acid qualities.) Same as *Cocci quidi*.

**C. fat.** (G. *Coccusfett*.) A non-saponifiable resinous fat obtained by Unverdorben from *Resina lacca*.

**C. ficus**, Fabr. (L. *ficus*, the fig tree.) The *C. lacca*, Linn.

**C. ilicis**, Linn. (L. *ilix*, the holm oak. F. *kermes*.) A species of coceus living on the *Quercus coccifera*, a native of the Greek Archipelago, France, and Spain. The dried females are known in commerce as *Grana kermes*, or *Chermes*; they appear like little brown berries covered with a greyish powder; they were formerly esteemed as an aphrodisiac and analeptic, but are now seldom used, and that only as a red colouring matter for syrups.

**C. indicus.** Same as *Cocculus indicus*.

**C. indicus tinctorius.** (L. *tinctorius*, belonging to dyeing.) The *C. cacti*.

**C. infectorius.** (L. *infectorius*, that which serves for dyeing.) The *C. ilicis*.

**C. lac'ca**, Linn. (L. *lac*, milky juice. G. *Lacksechildeaus*.) An insect, the females of which are without wings, the size of an aphid, and of reddish colour. They collect on the tender shoots of the *Aleuritis laccifera*, several species of *Ficus*, and other trees, and, puncturing them, begin to swell and surround themselves with a resinous fluid, shell-lac.

**C. mannip'arus**, Ehrenb. (L. *manna*, manna; *paro*, to prepare.) The insect the puncture of which causes the *Tamarix mannifera* to exude a kind of manna.

**C. peh'lah.** The insect the puncture of which causes the *Fraxinus chinensis*, Roxb., to yield Chinese wax. The *C. sinensis*.

**C. polon'icus**, Linn. (F. *cochenille de Pologne*; G. *polnische cochenille*.) A species of cochineal insect living upon the roots of *Scleranthus perennis* and *Polygonum cocciferum*. The unimpregnated female yields a red dye.

Also, called *Porphyrophora polonica*, Brandt.

**C. quercus coccif'eræ.** (F. *kermes*.) Another name for the *C. ilicis*, because it lives on the *Quercus coccifera*.

**C. red.**  $C_{11}H_{14}O_8$ . (G. *Coccusroth*.) The same as *Carmin*.

**C. sinen'sis**, Westwood. (Mod. L. *sinensis*, Chinese.) The insect which produces the insect-

wax of China. It is said to feed on the *Ligustrum lucidum* and upon *Fraxinus chinensis*.

**Coccyal'gia.** (Κόκκυξ; ἄλγος, pain.) Same as *Coccygodynia*.

**Coccycephalus.** Same as *Coccygoccephalus*.

**Coccyge'al.** (Κόκκυξ, the coccyx. F. *coccygien*.) Of, or belonging to, the coccyx.

**C. artery.** A small branch of the sciatic artery which perforates and supplies the great sacrosciatic ligament and the gluteus maximus, and ramifies on the back of the sacrum and coccyx.

**C. gang'lion.** Same as *Ganglion impar*.

**C. gland.** (F. *glande coccygienne*; G. *Steissdrüse*.) A reddish-grey, lobulated, vascular body, the size of a pea, situated in a hollow, at the lower extremity of the os coccygis; it is the representative of the undeveloped spinal branches of the arteria sacralis media, from which artery it receives a branch. The nerves arise from the coccygeal ganglion, or ganglion impar. It consists of thick-walled cavities, which are dilata-tions of small arteries, having thick-walled coats; nerve-cells are found in the stroma.

**C. knob.** The remains, in the early stage of the human fetus, of the original tail-like appendage of the coccyx, which is seen in the first month of the embryo.

**C. ligaments.** (L. *ligamentum*. F. *ligaments coccygiens*.) See *Coccyx*, ligaments of.

**C. muscle.** Same as *Coccygens*.

**C. nerve.** (Νεύρον, a nerve.) The last, or thirty-first, spinal nerve, one on each side; it emerges from the spinal canal below the first vertebra of the coccyx. Occasionally there are two coccygeal nerves on each side. It divides in the spinal canal into an anterior and posterior branch.

Also, called the sixth sacral nerve.

**C. nerve, anterior branch of.** This branch escapes from the spinal canal by the terminal opening, pierces the sacro-sciatic ligament and the coccygeus muscle, joins a branch of the fifth anterior sacral nerve, and supplies the integument at the back part and side of the coccyx.

**C. nerve, poste'rior branch of.** The smaller of the branches; it is joined by a branch from the posterior division of the last sacral nerve, and ends in the fibrous investment of the posterior surface of the coccyx.

**C. plex'us.** See *Plexus, coccygeal*.

**C. vertebrae.** The terminal vertebrae of the spinal column; those which follow the sacral vertebrae, and form the tail, or its rudiment; they vary largely in number and in character in different animals. In man, they are four or five, fused at an early period of life into a coccyx; in some of the spider monkeys they number more than thirty, and are movable on each other; in some sharks they amount to 270; birds have six to ten; reptiles vary from the single bone of the frog's rudimentary tail to the many-jointed tail of a lizard. In structure, too, there are wide differences, from a rudimentary vertebra with few protuberances to one of high development with neural and hypapophysial arches and their processes, and sometimes true ribs.

**Coccygec tomy.** (Κόκκυξ; ἐκτόμῃ, excision.) Excision of the coccyx. It has been employed for the cure of coccygodynia.

**Coccygo-mesenteric vein.** (*Coccyx*; *mesentery*.) A vein of the embryo of

birds, into which the caudal vein and the posterior pelvic veins open, so that the blood from the hind limbs is brought into communication with the portal system.

**Coccygeus.** (*Coccyx*, F. *ischio-coccygeus*; G. *Steissbeinmuskul.*) A thin and triangular muscle arising from the spine of the ischium and small sacrosacral ligament, and inserted into the lateral border and anterior surface of the coccyx and into the side of the sacrum. Its inner surface supports the rectum. The two unite in retracting the coccyx after its extension. It derives its nerve supply, with the levator ani, from the fourth and fifth sacral and the coccygeal nerves.

**Coccygexarthrosis.** (Κόκκυξ; ἰξάρθρσις, dislocation. F. *coccygexarthrose*; G. *Ausrenkung des Steissbeins.*) Dislocation of the coccyx.

**Coccygio-analis.** (L. *coccyx*; *anus*.) A synonym of the *Sphincter ani*.

**C. pubic.** (L. *pubes*, *pubes*. F. *coccygipubis*.) Term applied to that diameter of the pelvis which extends from the tip of the coccyx to the symphysis pubis.

**Coccygis os.** (L. *os*, a bone.) The *Coccyx*.

**Coccygocephalus.** (Κόκκυξ; κεφαλή, the head.) A monstrosity without head or upper extremities, the rudimentary cervical and cranial bones being of exceeding smallness, so that the upper part of the body ends in a point like that of the coccyx.

**Coccygodynia.** (Κόκκυξ; ὀδόνυ, pain. F. *coccygodynîe*; G. *Steissbeinschmerz*.) Pain in the region of the coccyx. A chronic disease occurring in women, sometimes as a consequence of fracture, dislocation, or other lesion, as caries and osteomalacia, sometimes as the result of inflammation of the neighbouring muscles and periococcygeal fibrous structures, sometimes a sacro-coccygeal arthritis, and frequently a neuralgic disorder. The pain seems to affect the coccygeal plexus, and is experienced on walking and during, or after, evacuation of the bowels or bladder.

**Coccygomorphæ.** (Κόκκυξ, the cuckoo; *μορφή*, shape.) An Order of Desmognathous birds, according to Huxley, in which the vomer is small or absent; there are no basi-pterygoid processes, and the maxillo-palatines are spongy. It includes Trogons, Cuckoos, Kingfishers, and the like.

**Coccygotomy.** (Κόκκυξ, the coccyx; *τομή*, section.) Excision of the coccyx.

**Coccymlæa.** (Κοκκυμλία.) The plum tree, *Prunus domestica*.

**Coccymlon.** (Κοκκυμλον.) The damson plum, or cuckoo apple.

**Coccyodynia.** Same as *Coccygodynia*.

**Coccyx.** (Κόκκυξ, the cuckoo. F. *coccyx*; G. *Steissbein*, *Schwanzbein*, *Kuckuksbein*.) The small triangular bone appended to the point of the sacrum; frequently called the os coccygis, or bone of the cuckoo, because it is supposed to resemble the bill of the cuckoo. It is the termination of the spinal column in man, formed by the coalescence of four rudimentary coccygeal vertebrae. It articulates above with the sacrum by an oval suture. The apex is rounded, and gives attachment to the sphincter ani externus, the sides give insertion to the coccygeus, the posterior surface to the glutæus maximus and extensor coccygis, and the fore part to the levator ani.

The upper border presents a pair of cornua, which project upwards, and are rudimentary articular processes. It is developed from four centres, that of the first segment appearing at birth, of the second about the 7th year, of the third about the 12th year, and that of the fourth about the 17th year. See *Coccygeal vertebra*.

**C., dislocation of.** The coccyx may be partially or completely dislocated forwards or backwards by violence, as by a fall, or during labour.

**C., fracture of.** A rare occurrence. It may be produced by a violent blow. There is much pain, especially during defaecation.

**C., ligament of, anterior.** A ligament which is a continuation of the anterior common ligament of the vertebra, and which unites the coccyx to the lower end of the sacrum.

**C., ligament of, posterior.** Strong fibrous bands of ligament, which connect the margin of the sacral canal with the back of the coccyx.

**Cocheniline.** A synonym of *Carmine*.

**Cochlearia.** The same as *Cochia*.

**Cochia.** (Κόκκος, a berry.) An ancient name for various purgative pills.

See *Pilule cochia*.

**Co'chin China ulcer.** A disease endemic in Cochin China, the chief symptom of which is the occurrence of ulceration, especially of the lower extremities, not generally deep, but often severe and rapid; it is not contagious. It is probably of the same nature as Delhi boil.

**Co'chin leg.** Same as *Barbadoes leg*. A variety of *Elephantiasis arabum*.

**Cochineal.** (S. *cochinilla*, cochineal; from L. *coquens*, scarlet. F. and G. *cochenille*; L. *cocciniglia*; Dut. *cochenilje*; Arab. *Dudo*; Dan. *Cazinel*.) The dye stuff, being the dried females of the *Coccus cacti*, or cochineal insect, brought from South America in the form of a reddish-grey grain, and used as an antispasmodic in hooping cough. It has been recommended in dropsy, on account of its diuretic properties, and also in febrile diseases.

**C. red.** (G. *Cochenilleroth*.) The colouring matter of cochineal or carmine. It is soluble in water, alcohol, and ether, and in alkaline solutions, which distinguishes it from the anilin dyes. See also *Carmine acid*.

**C. wax.** (G. *Cochenillewachs*.) A reddish-yellow substance obtained by extraction, with ether, from the *Coccus caricea* living on fig trees, which contain 65 per cent. of it. It melts at 52° C. (125·6° F.), and contains cerolein, cerotinic acid, and myricin.

**Cochinella germanica.** (F. *cochenille de Pologne*.) Another name for the *Coccus polonicus*.

**Cochinellifera cochinilla.** The *Coccus cacti*.

**Cochinilla.** The *Coccus cacti*.

**Cochlea.** (L. *cochlea*, a snail shell; from *κοχλίας*, a winding staircase. F. *limacon*; G. *Schnecke*.) The anterior division of the labyrinth or internal ear, so named because of its likeness to a snail shell. It lies in the petrous portion of the temporal bone in front of the vestibule and the meatus auditorius internus and behind the Eustachian tube; it is divisible into two parts, the one essential, inasmuch as it contains the ultimate nerve-tissue of the organ, the membranous cochlea; the other accidental, being the supporting and protecting part, the osseous

## COCHLEAFORM—COCHLEARE.

cochlea and the perilymph, with its enclosing and secreting membrane. It will be convenient here to describe the cochlea as it exists in its natural condition, referring for further detail to the names of the different parts, as well as to *C. membranous*, and *C. osseous*.

The cochlea is conical in form, and consists of a gradually tapering tube, which winds spirally round a central axis, the modiolus, making two turns and a half. The base is directed upwards and inwards towards the floor of the meatus auditorius internus, and the rounded apex, the cupola, extends forwards and outwards towards the upper and front part of the inner wall of the tympanum, almost to the wall of the bony Eustachian tube. The spiral canal is divided throughout its whole length by the lamina spiralis, which extends from the modiolus to the outer wall of the cochlea. The upper canal is the scala vestibuli, the lower, the scala tympani. These two canals communicate at the apex of the cochlea by an opening named the helicotrema. The scala vestibuli is again subdivided by the membrane of Reissner into the scala vestibuli proper and the canalis cochlearis, or scala media, the true membranous cochlea. The modiolar half of the lamina spiralis is composed of a delicate bony plate, invested on both sides with periosteum, and terminating at the apex of the cochlea in the hamulus. The outer margin of the bony lamina is grooved; the upper border of the groove is named the limbus, and is toothed. The upper surface of the bony lamina presents a slight elevation for the attachment of the membrane of Reissner, and from near the same part a delicate membrane, the membrana tectoria or membrane of Corti, extends towards the outer wall of the cochlea, forming a kind of roof to the sulcus spiralis between the two lips of the groove and to the organ of Corti, which lies between it and the membrana basilaris. To the lower border of the groove of the bony lamina spiralis is attached the membrana basilaris, which reaches to the spiral ligament on the outer wall of the cochlea, and forms the floor of the organ of Corti. The length of the axis of the cochlea from the middle of the base to the cupola is 5.6 mm. The diameter of the base of the cochlea is 9 mm., that of the cupola is 1.8 mm. The diameter of the spiral canal at its commencement is about 2.5 mm.

The cochlea is developed from a downward prolongation of the auditory vesicle, which, after coming in contact with a gangliform enlargement of the cochlear nerve, the origin of the ganglion spirale, assumes with it a spiral direction, and becomes surrounded with cartilage, which subsequently ossifies.

The cochlea has been supposed to be the agent of the analysis of compound sounds.

**C. ferreum.** (*L. ferreus*, made of iron.) An iron spoon.

**C. membranous.** (*L. membrana*, a membrane.) The term has been applied to the whole inner fibrous lining of the bony cochlea, but it is more accurately restricted to the canalis cochlearis, which communicates with the sacculus by the canalis reuniens, and contains the organ of Corti and endolymph. The scala tympani and the scala vestibuli, containing perilymph, are, with the osseous cochlea, the protecting parts of the organ.

**C. osseous.** (*L. os*, a bone.) The bony capsule or substructure of the cochlea, consisting of the modiolus, around which the canal, par-

tially divided into two by the lamina spiralis ossea, is, as it were, wound.

**C. scalae of.** See *Scala tympani*, *S. vestibuli*, and *S. media*; the latter being the *Canalis cochlearis*.

**Cochleaform.** (*L. cochlea*; *forma*, shape.) Like the cochlea, or like a snail-shell.

**Cochlean.** Same as *Cochlear*.

**Cochlear.** (*L. cochlearis*, from *cochlea*, a snail shell. *F. cochleaire*, *cochlearien*; *G. schneckenförmig*.) Of the form of a snail shell; of, or belonging to, the cochlea.

Also (*L. cochlear*, a spoon), same as *Cochleare*.

Also, spoon-shaped.

**C. aestivation.** (*L. aestivus*, belonging to summer.) A form of imbricated aestivation, in which, one petal being larger, covers all the others. See *Aestivation cochlear*.

**C. aperture.** (*F. ouverture cochleaire*.) A synonym of the *Fenestra rotunda*.

**C. artery.** One of the two terminal branches of the internal auditory artery at the bottom of the internal meatus. It subdivides into twelve or fourteen twigs, which traverse the canals of the modiolus and the osseous lamina spiralis, in which latter they form a capillary plexus, and anastomose with the *vas spirale*; they afterwards form a fine network on the periosteum of the osseous lamina spiralis, which does not spread to the membrana basilaris.

**C. auriculare.** (*L. auricula*, the outer ear.) An ear-pick.

**C. nerve.** (*F. nerf du limaçon*; *G. Schneckennerve*.) One of the two terminal branches of the auditory nerve at the bottom of the meatus auditorius internus, where, in the tractus spiralis foraminulentus, it divides into numerous filaments, which enter the base of the modiolus; these radiate outwards between the plates of the osseous lamina spiralis, close to the surface of the scala tympani, except the filaments for the last half turn, which pass through the canalis centralis modiolii. In their passage outwards on the lamina spiralis, the nerve fibres have a dark outline, and impinge on the ganglion spirale, where each becomes connected with a ganglion cell; on the further side of the ganglion they interlace with each other, then more intimately intermingle, and are rearranged in conical bundles, which turn directly upwards, and are distributed among the hair-cells of the organ of Corti.

**C. veins.** Minute twigs which arise in the cochlea, pass down the grooves of the modiolus, join at its base the veins of the vestibule and the semicircular canals, and end in the superior petrosal sinus.

**Cochlea rê.** (*L. cochleare*, a spoon, with a bowl at one end for eating eggs, and a point at the other for picking snails out of their shells. *F. cuiller*; *G. Löffel*.) A spoon, or spoonful.

**C. amplum.** (*L. amplus*, great. *F. cuiller grande*; *G. Esslöffel*.) Term for a large or table-spoon, which is capable of containing half of a fluid ounce.

**C. cumulatium.** (*L. cumulatus*, heaped up.) A heaped-up tablespoonful, as of a powder.

**C. magnum.** (*L. magnus*, large.) The same as *C. amplum*.

**C. medium.** (*L. medius*, midway between. *F. cuiller moyenne*.) Term for a middle-sized or dessert spoon, containing two fluid drachms, or about two teaspoonfuls.

**C. minimum.** (*L. minimus*, least. *F. cuiller petite*; *G. Thüell.*) Term for a small-sized or tea spoon, which holds about one fluid drachm.

**Cochlearia.** (*L. cochlear*, a spoon. *F. cranson*; *G. Löffkraut*, *Löffelkrass*.) A Genus of the Nat. Order *Cruciferae*; so called from the resemblance of its leaves to a spoon.

**C. anglica.** Linn. (*Mod. L. anglicus*, English) English scurvy-grass. A pot-herb of milder taste than *C. officinalis*. It yields an ethereal oil on distillation.

**C. armoracia.** Linn. (*Ἀρουράσια*, horse-radish. *F. cran de Bretagne*, *cranson*, *mountarde des Allemands*, *raifort*; *L. rafano*; *S. rabano picante*; *G. Meerrettig*.) The horseradish. A plant growing on the sandy shores of Northern Europe. On being shredded the root, or underground stem, gives forth a penetrating odour, which makes the eyes water; the taste is hot and acrid, and, applied to the skin, it causes redness and vesication. The root yields, on distillation with water, an ethereal oil, containing sulphur, analogous to, or identical with, oil of mustard. The root also contains a bitter resin, albumen, starch, gum, sugar, extractives, and salts.

**C. armorica.** Tournef. The *C. armoracia*.

**C. batavia.** (Batavia.) The *C. officinalis*.

**C. britannica marina.** (*L. britannicus*, British; *marinus*, belonging to the sea.) The *C. anglica*.

**C. coronopus.** The *Senebiera coronopus*.

**C. danica.** Linn. (*Mod. L. danicus*, Danish.) Used like *C. officinalis*.

**C. horten'sis.** (*L. hortensis*, belonging to a garden.) The *C. officinalis*.

**C. macrocarpa.** Waldst. (*Μακρός*, large; *καρπός*, fruit.) The *C. armoracia*.

**C. officinalis.** Linn. (*L. officina*, a shop. *F. herbe aux cuillers*; *G. gemeines Löffelkraut*, *Scharbocksheil*, *Scorbutkraut*.) Hab. shores of Northern Europe. The common or lemon scurvy grass; the expressed juice has been much esteemed as an antiscorbutic.

**C. pyrenaica.** De Cand. (*L. pyrenaicus*, Pyrenean.) A variety of *C. officinalis*.

**C. rustica** Na, Lam. (*L. rusticus*, belonging to the country.) The *C. armoracia*.

**C. vulgaris.** (*L. vulgaris*, common.) The *C. officinalis*.

**Cochlearia herbæ florens.** Belg. Ph. (*L. herba*, vegetation; *flores*, to blossom.) The fresh leaves and petioles of the flowering plant, *Cochlearia officinalis*.

**Cochlearifoliate.** (*L. cochlear*, a spoon; *folium*, a leaf. *F. cochlearifolius*; *G. Löffelblättrig*.) Having leaves like a spoon.

**Cochleariform.** (*L. cochlear*, a spoon; *forma*, likeness. *F. cochleariform*; *G. Löffelförmig*.) Having the shape of a spoon.

**C. process.** See *Processus cochleariformis*.

**Cochlearis.** Same as *Cochlear*.

**C. muscle.** The *Ligamentum spirale*, which at one time was thought to be muscular in structure.

**Cochlearium.** Same as *Cochlear*.

**Cochlearthrosis.** (*Κοχλας*, a screw; *ἄρθρωσις*, a jointing. *G. Schraubengelenk*.) Screw joint. It is applied to the articulation

between the humerus and ulna, the atlanto-axoid articulation, and that between the tibia and astragalus.

**Cochleary.** Same as *Cochlear*.

**Cochleate.** (*L. cochlea*, a snail shell. *G. schneckenförmig*.) Twisted like a snail shell.

**Cochleated.** (*L. cochlea*, the shell of a snail. *F. cochleare*; *G. schneckenartig*, *schraubenförmig*.) Winding like the spiral portion of a snail's shell. spiral.

**Cochlea tim.** (*L. cochlear*, a spoon. *G. Löffelweise*.) By spoonfuls.

**Cochleiform.** (*L. cochlea*, a snail shell; *forma*, likeness. *F. cochleiforme*; *G. schneckenförmig*.) Rolled or turned like a snail's shell.

**Cochleous.** Same as *Cochleate*.

**Cochlias.** The *Cochlea*.

**Cochliocarpos.** (*Κοχλίας*, a shell; *καρπός*, fruit.) Term applied in Botany to fruits that are spirally twisted.

**Cochlitis.** Inflammation of the cochlea. Its symptoms are said to be great impairment of hearing, the inability to hear certain tones, and the production of false ones.

**Cochlospermum.** (*Κόκλος*, a shell fish with a spiral shell; *σπέρμα*, seed.) A Genus of the Nat. Order *Bixaceae*.

**C. gossypium.** De Cand. (*L. gossypium*, cotton.) A plant growing in the North-western Provinces of India. It yields gum kutteera, which is used as a substitute for tragacanth.

**C. insignis.** (*L. insignis*, remarkable.) A plant growing in Brazil, where it is named *Butua do Cervo*, which is employed in internal pains, especially arising from contusions; it is believed to cause the resolution of abscesses.

**C. tinctorium.** Rich. (*L. tinctorius*, belonging to dyeing.) This plant yields a yellow dye, and is used in cases of amenorrhœa.

**Cochone.** (*Κοχώνη*.) Old term, used by Hippocrates, *de Morb. Mul.* ii, xxii, 6, explained to be the commissure of the hip or haunch, with the seat or the thigh; also, the thigh itself.

**Cocilio.** Old term for a weight of eleven ounces.

**Cocin.** Glyceride of cocinic acid. A fat, solid at ordinary temperature, existing in cocoa-nut oil. It crystallises in white shining scales, it melts at about 24°C. (75-2°F.), dissolves easily in ether, with more difficulty in alcohol, and yields acrolein on dry distillation.

**Cocinic acid.** (*G. Cocinsäure*.)  $C_{13}H_{26}O_2$ . A fatty acid procured by saponifying cocoa butter with potash, and precipitating with a mineral acid. It forms stellate acicular crystals. It is soluble in alcohol and ether, melts at 34-7°C. (95°F.).

Also, said to be a mixture of lauric and myristic acids.

**Cocinine.** An easily fusible oleaginous substance, extracted from cocoa butter by Dumas.

**Cock.** (*Sax. coc*; from Old *F. coc*; from Low *L. cocum*, a cock; most probably a word of imitative origin. *F. coq*; *L. gallo*; *S. gallo*; *G. Hahn*.) The male of the domestic fowl, *Gallus Bankiva*, var. *domesticus*.

Also, a term for the male of birds generally.

**C's comb.** The flower of the *Rhinanthus crista galli*, from the shape of the calyx.

Also, the sainfoin, *Onobrychis sativa*, so called from the shape of the legumes.

Also, the *Celosia cristata*, from the red dilated mass of inflorescence.

morbid matter is displaced by aid of the vital dame either for expulsion from the body, or for removal into a more convenient and less important place; or is so overcome and subdued as to be brought back to the good quality of useful humours.

Old term for concoction, and for digestion, of food in the stomach.

**Cocum butter.** Same as *C. oil*.

**C. jalap.** The *Phytolacca decandra*.

**C. oil.** The concrete oil of the seeds of the mangosteen, *Garcinia purpurea*.

**Cocyl.** A synonym of *Cocostearyl*.

**Cocyta.** (*Κωκυτός*, a wailing.) The pain produced by the introduction of poison under the skin.

**Cod.** (Perhaps from Flem. *kodde*, a club, in allusion to its big head; or from Mid. Eng. *codde*, a bolster. *F. morue*; *I. merluzzo*; *S. abadjo*, *merluzza*; *G. Kabljau*.) The *Gadus morrhua*. Largely used as an article of diet.

Also (*Sax. cod*, a small bag), the serotum.

**C.-fish oil.** The same as *Cod-liver oil*.

**C.-liver oil.** (*F. huile de foie de morue*; *G. Lebertran*.) The oil obtained from the liver of the *Gadus morrhua*, or cod-fish. See *Oleum morrhue*.

**C. oil.** The *Oleum morrhue*.

**C. sounds.** The swimming bladders of the cod. They are used as a substitute for foreign isinglass, and also salted and prepared as an article of diet.

**Codaga-pala bark.** Name for the bark of the *Nerium antidysentericum*.

**Codagen.** The *Hydrocotyle asiatica*.

**Codamia.** Same as *Codamin*.

**Codamin.**  $C_{20}H_{25}NO_4$ . A substance isomeric with landanin, obtained by precipitating the watery extract of opium with sodium or potassium hydrate. It remains in solution in the proportion of 0.0003 per cent. of the opium, and can be extracted with ether. It forms large, colourless, six-sided prisms. Easily soluble in alcohol, ether, chloroform, and benzine, slightly in water. It melts at  $126^{\circ}C.$  ( $259^{\circ}F.$ ) It colours dark green with iron chloride and with strong nitric acid, greenish blue with sulphuric acid, at  $20^{\circ}C.$  ( $68^{\circ}F.$ ), dark violet at  $150^{\circ}C.$  ( $302^{\circ}F.$ )

**Codarium.** (Dim. *κώδιον*, a fleece. *F. codarion*.) Name for a collection of short and soft and of long and thick hairs intermingled in the coat of certain *Mammifera*.

Also, a synonym of *Dialium*.

**Cod'dam pulli.** Name applied by Rhede to *Carex pulli* of Lynschooten, which yields gamboge; the *Garcinia morella*, var. *pedicellata*.

**Cod dington lens.** See *Lens*, *Codding-ton*.

**Code.** (*L. codex*, from *caudex*, the trunk of a tree, and so, as the ancients wrote upon tablets of wood smeared with wax, a book. *F. code*; *I. codice*; *S. codex*.) A collection of the various tables of the law. A collection of receipts or prescriptions represented by the Pharmacopœia.

**Codeate.** A codeic acid salt.

**Codeia.** (*Κώδεια*, a poppyhead.) Same as *Codamin*.

**Codeic.** (*Codia*.) Of, or belonging to, codein; applied to an acid obtained from this substance.

**Codcin.** (*Κώδιον*, the head of the poppy.)  $C_{15}H_{21}NO_3$ . Methyl morphia. An al-

kaloid, of which from 1-10th to 8-10ths per cent. is contained in opium. Soluble in ether, from which it may be obtained in anhydrous octahedral brilliant crystals, which melt at  $150^{\circ}C.$  ( $302^{\circ}F.$ ) From its watery solution it crystallises in large white rhombic prisms. It dissolves easily in chloroform and alcohol, in seven parts of amyl alcohol, and slightly in petroleum ether. It dissolves in concentrated sulphuric acid without colour, and in concentrated nitric acid with explosion and the production of a red colour. It is not affected by iron chloride or iodic acid. It is a nitrite base, levogyrous, tasteless, or but slightly bitter. Its physiological action closely resembles that of morphia according to some; other observers find it an uncertain and feeble hypnotic; these conflicting statements seem to show that the same principle has not been used by all. Dose for an adult 0.1 gram (1.5 grs.) Its action is relatively more powerful on children.

Codcin has been recommended in gastralgia and all epigastric pains, and specially for the relief of cough. Locally it is said to be of great service in the photophobia of serofulous ophthalmia.

**Codeinum.** Same as *Codcin*.

**C. hydrochloricum.**  $C_{15}H_{21}NO_3 \cdot HCl + 4Aq$ . Prepared by saturating dilute hydrochloric acid with codein; it crystallises in four-sided prisms, with bevelled ends. It is said to be more active than codein.

**C. nitrate.**  $C_{15}H_{21}NO_3 \cdot HO \cdot NO_3$ . Obtained by acting on codein with nitric acid. It occurs in small prismatic crystals, easily soluble in boiling water.

**C. sulphuricum.**  $C_{15}H_{21}NO_3 \cdot SO_3 + 5Aq$ . Codein sulphate occurring in long needles or flattened prisms; a more active preparation, it is said, than the alkaloid itself.

**Codenicin.**  $C_{15}H_{21}NO_3$ . Amorphous codein, obtained by the protracted action of sulphuric acid on codein. It is not coloured by iron chloride.

**Codenin.**  $C_{15}H_{21}NO_3$ . Modified codein. It is obtained by heating codein with moderately strong sulphuric acid, and crystallises in acicular crystals that are easily soluble in ether.

**Codesella.** (Ital.) A name for the pestilential carbuncle.

**Codex.** (*L. codex*.) A code of laws.

In Medicine, a collection of receipts for the preparation of drugs.

**C. medicamentarius.** (*L. medicamentarius*, belonging to drugs.) A collection of medical receipts; a pharmacopœia.

The title of the French Pharmacopœia.

**Codia.** (*Κώδία*.) Name for a poppy head.

**Codiaum.** A Genus of the Nat. Order *Euphorbiaceæ*.

**C. variegatum.** (*L. variegatum*, to make of various colours.) The root and bark of this plant are acrid when chewed, but the leaves are sweet and cooling.

**Codiophyllous.** (*Κώδιον*, a fleece; *φύλλον*, a leaf. *F. codiophyllæ*; *G. eliesblüttrig*.) Having hairy leaves.

**Codling.** (Dim. of *cod*.) A young cod; also, a testicle; also, a kind of apple.

**Codocele.** (*Κώδία*, a head; *κύλη*, a tumour, or swelling.) Term for a bubo.

**Codonocephalus.** (*Κώδιον*, a bell; *κεφαλή*, the head.) A larval form of a Trematode worm.

**C. mutabilis.** (*L. mutabilis*, changeable.)

Found in the rectum, between the muscels, on the trunks of the nerves in the heart and liver, under the skin, and encapsuled in the kidneys of *Rana esculenta*.

**Codonostome.** (Κώδων, a bell; στόμα, a mouth.) The bell-shaped aperture of the disc of a medusa, being the orifice of its umbrella through which its cavity communicates with the external water; or the mouth of a medusiform gonophore.

**Codosceliæ.** Old term for buboes, or tumours, in the groin, according to Fallopius, *Tr. de Morb. Gall. c. xc, tom. i, p. 738*.

**Cœcal.** False orthography for *Cæcal*.

**Cœcitas.** Properly *Cæcitas*.

**Cœcum.** False orthography for *Cæcum*.

**Coefficient.** (L. *co*, with; *efficio*, to bring to pass. F. *coefficient*; G. *Mittelstrecke*.) A cipher placed before a term or formula in chemistry, as in algebra, showing how often the term or letters of the formula must be multiplied to obtain the real value of the substance.

**Cœlacanthous.** (Κοῖλος, hollow; ἀκανθία, a thorn.) Having hollow spines.

**Cœlanth'a.** (L. *cælum*, heaven; ἄνθος, a flower.) A Genus of the Nat. Order *Gentianaceæ*; so called from the sky-blue colour of the flower.

**C. punctata**, Don. The *Gentiana punctata*, Linn.

**C. purpurea**, Borkh. The *Gentiana purpurea*, Linn.

**Cœlechus.** (Κοῖλος, hollow; ἦχος, an echo. F. *cœlechu*.) A cavernous sound.

**Cœlelmith'a.** (Κοῖλος, ἔλμυς, a worm.) A synonym of *Nematoda*.

**Cœlenterata.** (Κοῖλος; ἔντερον, an intestine.) A Subkingdom of animals with differentiated cellular organs, generally in some sort radiated in form, with a central digestive cavity having a mouth and a system of canals running from it to the periphery, but with no intestinal canal. It includes the sponges, hydroids, and sea-anemones.

**Cœlenterate.** Belonging to, or like, the *Cœlenterata*.

**Cœlia.** (Κοιλία, from κοῖλος, hollow. F. *abdomen*, *bas-ventre*; G. *Bauch*, *Schweiberbauch*, *Unterbauch*, *Unterleib*.) The belly; also, the stomach, but especially the lower portion of the belly.

Also, a ventricle of the encephalon.

Also, any cavity of the body.

Also, an alvine evacuation.

**Cœliac.** (L. *cæliacus*, from κοιλία, the belly. F. *cæliaque*; G. *den Unterleib betreffend*.) Of, or belonging to, the belly, or cavity of the abdomen.

**C. artery.** The same as *C. axis*.

**C. axis.** (L. *axis*. F. *trépid cæliaque*; G. *Eingeweideschlagader*.) A thick branch, half an inch long, arising from the front of the abdominal aorta, between the pillars of the diaphragm. It appears above the upper border of the pancreas, and is surrounded by the solar plexus. It gives off, in a radial manner, the coronary, the hepatic, and the splenic arteries.

**C. canal.** The longest of three canals which run in the arm of a crinoid.

**C. flux.** (L. *fluxus*, a flow. G. *Bauchfluss*.) A discharge of white chyle-like fluid from the intestines, producing a kind of diarrhœa, the cause of which is not accurately known. See *Lientery*.

**C. ganglion.** The semilunar ganglion.

**C. passion.** (F. *passion cœliaque*; G. *Bauchfluss*.) A term for a chronic flux, in which the aliment is discharged half digested, according to some; the *Diarrhœa cœliaca* of Cullen, and *C. flux* of others. See *Lientery*.

**C. plexus.** (L. *plexus*, a twining. F. *plexus cœliaque*.) That process of the solar plexus which surrounds the cœliac axis. It subdivides into the gastric, hepatic, and splenic plexuses.

Also, a synonym of *Solar plexus*.

**Cœli'aca.** (L. *cæliacus*, pertaining to the belly.) The first class of Good's nosology, being diseases affecting the digestive function, and divided into *Enterica* and *Splanchnica*.

The term has been proposed as a substitute for hysteria, on the supposition that its cause is disturbance of function of the cœliac centre of the nervous plexuses.

**C. chylo'sa.** (Chyle.) The same as *Cæliac flux*.

**C. lac'tea.** (L. *lacteus*, milky.) The same as *Cæliac flux*.

**C. rena'lis.** (L. *ren*, the kidney.) Same as *Chyluria*.

**C. urina'lis.** A synonym of *Chyluria*.

**Cœliacus.** (L. *cæliacus*, belonging to the belly. F. *cæliaque*.) Of, or belonging to, the belly.

**C. morbus.** (L. *morbus*, disease. F. *flux cœliaque*, *passion cœliaque*; G. *Bauchfluss*.) The cœliac disease; the same as the *Cæliac flux*.

**Cœliadelphus.** (Κοιλία, the belly; ἀδελφός, a brother.) A double monster united at the abdomen.

**Cœliæmia.** (Κοιλία; αἷμα, blood. F. *cœliémie*.) Abdominal plethora.

**Cœliag'ra.** (Κοιλία; ἄγρυ, a seizure.) Gout in the abdomen.

**Cœlialgia.** (Κοιλία; ἄλγος, pain. F. *cœlalgie*; G. *Bauchschmerz*, *Leibschmerz*.) Abdominal pain, specially pain in the muscles.

**Cœliagiaprosopon.** (Κοιλία; πρόσωπον, the countenance. G. *Leibschmerzgeschicht*.) Having a countenance expressive of pain in the belly.

**Cœlianeurysma.** (Κοιλία; ἀνεύρυσμα, a widening.) Aneurysm in the abdominal cavity.

**Cœliitis.** (Κοιλία.) Inflammation of, or in, the abdomen.

**Cœliochchysis.** (Κοιλία; χύσις, from χέω, to pour out.) Ascites.

**Cœliocèle.** (Κοιλία; κύλη, a tumour. G. *Bauchbruch*.) Abdominal hernia.

**Cœliochal'asis.** (Κοιλία; χαλασίς, relaxation.) Relaxation of the abdominal walls.

**Cœliocye'sis.** (Κοιλία; κύσις, pregnancy. F. *cœliocyste*; G. *Bauchschwangerschaft*.) Abdominal or extra-uterine pregnancy.

**Cœliodel'phous.** (Κοιλία, belly; ἀδελφός, brother.) Term, in Teratology, applied to monsters which have a common abdominal cavity.

**Cœliodyn'ia.** (Κοιλία; ὀδύνη, pain. F. *cœliodynie*; G. *Leibschmerz*.) Abdominal pain.

**Cœliolys'ia.** (Κοιλία; λύσις, a loosing.) Abdominal looseness, diarrhœa.

**Cœliomyal'gia.** (Κοιλία, the belly; αἷς, a muscle; ἄλγος, pain. G. *Bauchmuskelschmerz*.) Pain in the abdominal muscles.

**Cœliomy'itis.** (Κοιλία; μῦς, G.

*Bauchmuskelerkrankung.*) Inflammation of the abdominal muscles.

**Celiomyodyn'ia.** (Κοιλία; πῶς; ὀδῶν, pain.) Same as *Celionydia*.

**Celion'cus.** (Κοιλία; ὄγκος, a tumour. G. *Bauchgeschwulst*.) A fixed, firm abdominal tumour.

**Celioparacensis.** (Κοιλία; παρακέντησις, perforation.) Tapping of the abdomen.

**Celioph'hoë.** (Κοιλία; φθῶν, a wasting. G. *Bauchwindsucht*.) Abdominal wasting.

**Celiophy'ma.** (Κοιλία; φῦμα, a growth. G. *eine flüchtigere Bauchgeschwulst*.) A soft, fugitive abdominal swelling.

**Celiophy'mata.** (Same etymon.) Tubercular deposits in the peritoneum.

**Celioplegia.** (Κοιλία; πλῆξις, a stroke. G. *Nervenschlag des Unterleibes*.) A term for malignant cholera, on the supposition that it was an abdominal nerve paralysis.

**Celiopso'phia.** (Κοιλία; ψόφος, any inarticulate sound.) Rumbling of the bowels.

**Celiopy'o'sis.** (Κοιλία; πύωσις, suppuration. G. *Bauchabscess*.) Suppuration in the abdomen.

**Celiorrheum'a.** (Κοιλία; ῥέυμα, a fluxion. G. *Unterleibs-rheumatismus*.) Rheumatism of some part of the abdomen.

**Celiorrhœ'a.** (Κοιλία; ῥοία, a flow.) Diarrhea; also, a synonym of *Celiae flux*.

**Celios'chisis.** (Κοιλία; σχίσις, a cleaving. G. *Spaltung des Unterleibes*.) Abdominal fissure from congenital defect.

**Celiopas'mus.** (Κοιλία; σπασμός, a drawing. G. *Unterleibskrampf*.) Cramp in the abdomen.

**Celiosphongio'ma.** (Κοιλία; σφόνγος, a sponge.) A fungoid growth in the abdomen.

**Celiostegno'sis.** (Κοιλία; στίγνωσις, a making cervice.) The hardening of faeces in the bowel.

**Celiotic.** (Κοιλία. G. *magenreinigend*.) Cleansing the stomach, purgative.

**Celis'cus.** (Κοιλίαιος. F. *celisque*; G. *Lenticular-Messer*.) A scoop-shaped scalpel.

**Celoblast'æ.** (Κοίλος, hollow; βλαστός, a sprout.) An Order of the Class *Oosporæ*, Group *Thallophyta*, and consisting of a single-celled, many-branched tube, which first becomes jointed, by a transverse septum, for the purpose of propagating the reproductive cells.

It includes some chlorophyll-containing forms, as *Vaucheria*, *Valonia*, *Caulerpa*, *Codiae*, and some that are free from chlorophyll, as *Saprolegnia* and *Peronospora*.

**Celocline.** (Κοίλος, hollow; κλίση, a couch.) A Genus of the Nat. Order *Anonaceæ*.

**C. polycarpa.** Benth. and Hooker. (Hollow, many; καρπός, fruit.) The berberine, yellow-dye tree. Hab. Western Equatorial Africa. Bark used as a yellow dye. It contains berberine, and is used in powder as an application to indolent ulcers and leprosy sores.

**Celocylindr'us.** (Κοίλος, hollow; κύλινδρος, a cylinder.) A hollow cylinder, a cylindrical tube.

**Celocyn'thlin.** That part of the alcoholic extract of celocynth which is soluble in ether, but not in water. When purified it forms a tasteless crystalline powder.

**Cel'odont.** (Κοίλος; ὀδόντις, a tooth.) A term applied to the teeth of some lizards, when

they contain a pulp cavity. Having hollow teeth.

**Celogas'tric.** (Κοιλία, the intestines; γαστήρ, the belly. F. *celogastrique*; G. *eingeweidenbauchig*.) Applied to the *Kotifera*, which have organs of mastication with a very short oesophagus and a simple intestine, as the *Hydrotina*.

**Celogna'thus,** Hersl. (Κοῖλος, hollow; γνάθος, a jaw.) A Genus of the Class *Arachnida*.

**C. morsitans,** Hersl. (L. *mordeo*, to bite.) A species of acarus found in the hair of those suffering from *Plica polonica*.

**Celo'ma.** (Κοίλωμα, from κοίλω, to hollow out.) A cavity.

Applied (F. *celoma*; G. *Hornhautgeschwür*) to a large, round, and not very deep ulcer in the cornea of the eye.

Also, in Biology, the general cavity of the body.

Also, in Embryology, the body-cavity which communicates with the contents of the vitelline membrane, the true intestinal cavity.

Also, in some invertebrate animals, as the Echinodermata, the general body or perivisceral cavity in which is placed or suspended the digestive canal.

**Celo'mata.** (Κοίλος, hollow.) Animals in which the blood-lymph space is distinct from the digestive canal.

**Celomel'ë.** (Κοῖλος, hollow; μέλη, a probe. F. *celomèle*; G. *Hohlsonde*.) A sulcated or grooved probe.

**Celopel'tis.** (Κοῖλος; πέλη, a shield.) A Genus of venomous snakes of the Group *Aglyphodonta*, Order *Ophidia*.

**C. insignitus.** (L. *insignitus*, marked. F. *couleuvre de Montpellier*.) A species inhabiting the parts around the Mediterranean Sea.

**C. produc'tus,** Gerv. (L. *productus*, long.) Found only in Algeria.

**Celophlebitis.** (Κοῖλος, hollow; φλέψ, a vein.) Inflammation of the inferior vena cava.

**Celophthal'mia.** (Κοῖλος, hollow; ὀφθαλμός, the eye. F. *celophthalmie*; G. *Hohltaugigkeit*.) Hollowness of the eyes.

**Celophthal'mus.** (Same etymon.) A hollow-eyed person.

**Celopne'ous.** (Κοῖλος, hollow; πνέω, to breathe.) Having a pulmonary cavity for a respiratory organ.

**Celorrh'izous.** (Κοῖλος; ῥίζα, a root. G. *hohlwurzelig*.) Having hollow roots.

**Celorrhyn'cus.** (Κοῖλος; ῥύγχος, a beak. G. *hohlschnabelig*.) Hollow-beaked.

**Celosperm'æ.** A Group of the Nat. Order *Umbellifere*, in which the endosperm is *Celospermous*.

**Celosperm'ous.** (Κοῖλος, a hollow; σπέρμα, a seed. G. *hohlsamig*.) Hollow-seeded. Applied to the fruits of some *Umbellifere*, which have the ventral face incurved at top and bottom, as in coriander.

**Celostom'ia.** (Κοῖλος; στόμα, the mouth.) Hollowness of voice.

**Celos'tomus.** (Same etymon.) One who has a hollow voice.

**Celostyl'æ.** Endlicher's term for *Laganiaceæ*.

**Celo'tes.** (Κοῖλος.) A cavity.

**Cœnadel'phus.** (Κοινός, common; ἀδελφός, brother.) In Teratology, applied to

two nearly equally developed bodies, united to a greater or less extent, and having some important organ, as the heart, common to both.

**Cœnæsthesis.** A better spelling of *Cœnæsthesi*.

**Cœnanthium.** (Κωνός, common; ἄνθος, flower. *G. Bluthenkuchen*.) The same as *Clinanthium*.

**Cœnenchyma.** (Κοῖνος; ἐγχεύω, from ἐγχείω, to pour out.) The common sclerodermic framework of some Actinozoa, by which the individual corallites are united into one common corallum.

**Cœnobium.** (Κοινώβιον, life in community. *F. cœnobium*; *G. Gemeinfrucht*.) See *Cœnobium*.

**Cœnoecium.** (Κοῖνος; οἶκος, a house.) The common skeletal support of a polyzoon.

**Cœnologia.** (Κοινός, common; λόγος, a discourse. *F. cœnologic*; *G. Bruthschlagung, Rathversammlung*.) Term, Gr. anal. κοινολογία, used by Hippocrates, in *Præcep.* vii, 4, for a consultation.

**Cœnopodium.** (Κοινός; πούς, foot. *G. Kegelboden, kegelförmige Bluthenboden*.) A conical receptacle.

**Cœnopodous.** (Κοινός, common; πούς, foot. *G. gleichfüssig*.) Equal limbed or footed.

**C. embryo.** (Εμβρυον, an embryo.) Applied to a monocotyledonous embryo when the terminal cotyledons embrace the bud on all sides.

**Cœnosarc.** (Κοῖνος; σάρξ, flesh.) The common stem on which the individuals of a compound zoophyte are implanted, and in which they are united for purposes of common nutrition by the insensilation in it of the tubular prolongation of the body cavity of each.

**Cœnosæon.** (Κοινόν, to communicate; ὀστέον, a bone.) A disused name of an uncertain bone of some fishes, probably a part of the clavicle or of the coracoid bone.

**Cœnotic.** (Κοῖνος, common.) Having a common attachment or origin.

**Cœntrillo.** The *Xanthoxylum hiemale*, a plant growing in Brazil, the powdered bark of which is used to relieve ear-ache.

**Cœnurus.** (Κοινός, common; οὐρά, a tail. *F. cœnure*.) A thin-walled vesicle, containing a watery reddish fluid, and having attached to its inner surface numerous scolices of a *Tænia*, of which it is a larval stage of development.

**C. cerebraлис.** Rudolphi. (*L. cerebrum*, the brain. *G. Hirnblasenwurm*.) The vesicular stage of development of the *Tænia cœnurus* in the brain of sheep and other animals.

**Cœrophagus.** See *Cepophagus*.

**Cœrcible.** (*L. coerco*, to compel. *I. coercibile*; *G. einschliessbar*.) Term applied to gases which are capable of being liquefied by strong pressure.

**Cœrcive.** (*L. co*, together; *arceo*, to press.) Having power to restrain or to constrain.

**C. force.** The hypothetical force which, in a magnetic substance, resists the separation of the two magnetisms, red and blue, and which also resists their reunion when they have been separated.

**Cœrulein.** See *Cerulein*.

**Cœruleus.** See *Ceruleus*.

**Cœsium.** See *Cesium*.

**Cœtus.** Same as *Cœtus*.

**Cœze.** Same as *Coise*.

**Coffea.** (*Coffee*. *F. cafier*; *G. Kaffebaum*.)

A Genus of the Nat. Order *Rubiaceæ*. The coffee tree.

Also, same as *Coffea*.

**C. arabica**, Linn. (*L. arabicus*, Arabian.) The coffee tree; it is cultivated in Arabia, Persia, the East Indies, the Isle of Bourbon, and several parts of America. The fresh seeds are used as a febrifuge, diuretic, and tonic; when roasted they form *Coffea*.

Also, called *Jasminum arabicum*.

**C. liberica**, Liern. (*Liberia*, a state on the western coast of Equatorial Africa.) A species grown in Liberia and introduced into India. It is said to be less subject to disease than the Arabian species.

**C. mauritanica**, Lamk. The native coffee of Réunion.

**Coffeæ.** A Tribe of the Nat. Order *Rubiaceæ*, in which the ovary has only one or two seeds in each cell.

**Coffee.** (*Turk. gahveh*; from Arab. *gahveh*. *F. café*; *G. Kaffer, Koffee*.) The roasted and ground seeds of the species of *Coffea*. Coffee contains 0.2 to 0.8 per cent. of caffeine, legumin 15 per cent., sugar, gum 55, a fat and fluid oil 13, salts (potassium, sodium, magnesium, iron, phosphoric acid, and chlorine) 7, and caffein and caffeic acids 5 per cent. A cup of coffee, made of 10 grams (150 grains) of coffee, contains about 1½ grains of caffeine, and over-roasting does not materially diminish the amount. The roasting partially destroys the legumin; sugar, aromatic, volatile, ethereal oils, and caramel being produced, which give to it its agreeable odour. The residue of coffee, from which caffeine has been extracted, contains a substance which, injected into the veins of a rabbit, inhibits the action of the heart, and causes rapid death with convulsions.

Coffee, in an infusion of moderate strength, is a nervine stimulant, and diuretic; when strong it produces headache, vertigo, tremors, and numbness of the hands and feet, and periodical flushes of heat over the body; very strong doses have produced precordial anxiety, and chorea-like convulsions of the muscles, and mental disturbance. The use of coffee can be continued through life without harm; it is nourishing, and spares the consumption of other food.

**C. bean.** The fruit of *Coffea arabica*. See *Coffea*.

**C.-bean tree, Kentucky.** The *Gymnocladus canadensis*.

**C. grounds.** The residue of coffee after infusion.

**C. ground vomiting.** The vomiting of a dark grumous fluid, resembling coffee grounds, almost invariably due to the presence of blood altered by the gastric secretions.

**C., Swedish.** The roasted seeds of the *Astragalus batiæus*.

**C.-tan'nic acid.** Same as *Caffeitanic acid*.

**C. tree.** The *Coffea arabica*.

Also, a name of the *Gymnocladus canadensis*.

**C., wild.** The *Triosteum perfoliatum*.

**Coffeic acid.** Same as *Caffeic acid*.

**Coffeidin.** Same as *Caffeidin*.

**Coffein.** The same as *Caffein*.

**Coffeinum.** Same as *Caffein*.

**C. citricum.** See *Caffein citrate*.

**C. valerianicum.** See *Caffein valerianate*.

**Coffin bone.** The distal phalanx of the only digit of the foot of Solipedæ.

**Coffinism.** A rather widely-spread mode of treatment of disease by certain irregular practitioners, named after its author, and consisting chiefly in the administration of cayenne pepper and lobelia inflata, by means of which some, it is said, have come to their death.

**Cogged.** (Part. of *E. cog*, the tooth on the rim of a wheel; perhaps from Gael. *cog*, or Welsh *cocos*, or Swed. *kugge*.) Toothed.

**C-wheel rhythm.** A term applied by Walshe to a rhythm of sound resembling a cogged wheel in rotation, heard commonly in connection with tubercle and most frequently in inspiration, and probably depending on a disturbance of glutinous mucus adherent to the bronchial walls.

**Cognac.** Brandy grown and distilled in the district of Cognac in France.

**Cognate.** (L. *con*, together; *nascor*, to be born.) Allied; related; of kin.

**Cognition.** (L. *cognitio*, a becoming acquainted with; G. *Erkenntnis*, *Begriff*.) Term applied by Herbert Spencer to those modes of mind in which we are occupied with the relations that subsist among our feelings. He divides them into: presentative, presentative-representative, representative, and re-representative cognitions.

**Cohabitation.** (L. *con*, together; *habito*, to dwell. F. *cohabitation*; G. *Zusammenwohnen*.) A term for the dwelling together of two persons of opposite sex, including the habit of venereal congress, without the sanction of marriage.

**Cohen's method.** A mode of inducing premature labour by injecting water between the fetal membranes and the uterine wall.

**Coherence.** The same as *Cohesion*.

**Coherent.** (L. *coherere*, to stick together. F. *coherent*; G. *zusammenhängend*.) Sticking to each other. Term applied to stamens which adhere to each other, either by hairs, or by some viscous substance. Also, the same as *Adherent*.

Also, consistent; in order, as applied to speech.

**Cohesion.** (L. *coherere*, to stick together. F. *cohesion*; G. *Zusammenhang*, *Verbindung*.) The force or power by which adjacent molecules adhere to each other; otherwise termed attraction of aggregation. It varies in different bodies and in different forms of the same body; being greatest in solids, less in liquids, and least in gases; it decreases with increase of temperature.

In Botany, the congenital union of one organ with another; if there is cohesion of similar parts it is called coalescence, if of dissimilar parts it is called adnation.

**C. figures.** The form which a drop of liquid assumes when placed on a solid or on other liquids; and also the form which a liquid assumes at the bottom of the receptacle when dropped into another liquid lighter than itself. These forms are definite for each liquid, and are modified in a definite fashion by external circumstances, such as the kind of surface, the passage of an electric current, breathing on them, and other physical conditions.

**C. magnetic.** See *Magnetic cohesion*.

**Cohibiting.** (L. *cohibeo*, to restrain.) Restraining.

**C. medium.** A substance which prevents the passage of electricity from one body to another when placed between them; the term has

the same meaning as isolating medium, with the addition of an idea of activity.

**Cohibition.** (L. *cohibeo*. G. *Beschränkung*, *Verzähmung*.) A hindering.

**Cohnheim.** A German pathologist now living.

**C., areas of.** (F. *champs de Cohnheim*; G. *Cohnheim'sche Felder*.) Polygonal figures arranged in the form of a mosaic, with an average diameter of  $3\mu$ , which are seen in the cross-section of a muscular fibre. The spaces are dark, and are outlined by a bright substance; the dark area consists of muscular fibrillæ or muscle columns of Kölliker; the intervening bright line is by some believed to be in intimate connection with the nerve supply of the muscle.

**C., fields of.** Same as *C., areas of*.

**Cohob.** A Paracelsian term, intended to mean repetition; thus medicines given according to *cohub*, signified that they were offered or administered with unchanging perseverance; also, called *Cohoph*.

**Cohobation.** (Cohob. F. *cohabitation*.) A term for the pouring of a fluid again and again or the matter from which it has been distilled, and as often distilling it again, to render it more efficacious.

**Cohol.** (Arab. F. *cohol*.) An old name for antimony, or antimony; also, for dry collyria, according to Avicenna.

**Coholydrolytic.** (The latter syllables of *alcohol*; *hydro*, water; *lytic*, to loosen.) Soluble in alcohol and in water.

**Coholytic.** (The latter syllables of *alcohol*; *lytic*, to loosen.) Soluble in alcohol.

**Cohoph.** The same as *Cohob*.

**Cohort.** (L. *cohors*, a company of Roman soldiers, the tenth part of a legion. I. *cohorte*.) In Biological classification, a Group next superior to Order, or one between Genus and Species.

The term has been employed in Botany, by Endlicher, to designate the four subdivisions of Dicotyledons, named by him respectively Gymnosperme, Monocotyledonee, Gamopetalae, and Dialypetalae.

**Cohosh.** The *Actæa racemosa*; and also the *Caulophyllum thalictroides*.

**C., black.** The *Actæa racemosa*.

**C., blue.** The *Caulophyllum thalictroides*.

**C., blueberry.** The *Caulophyllum thalictroides*.

**C., red.** The *Actæa rubra*.

**Cohush.** The *Caulophyllum thalictroides*.

**Coiff.** (F. *coiffe*, from Low L. *cofia*, a cap.) The *Caul*.

Also, applied to the *calyptra* of mosses.

**Coil.** (Old F. *coiller*; from L. *colligo*, to collect.) A ring or series of spiral rings into which a rope, or similar thing, is wound.

Term applied to a wire wound spirally, and serving for the passage of a current of electricity.

**C. machin'es.** Same as *Induction machines*.

**Coillima.** (Kod'ia, the belly.) Old term for a sudden swelling of the belly from flatulence. (Quincy.)

**Coincidence.** (L. *cum*, with; *incido*, to fall. F. *coincidence*; I. *coincidenza*; S. *coincidencia*; G. *Zusammentreffen*.) The falling together, or happening together, in place or time, or other circumstances.

**C., morbid.** (L. *morbus*, a disease.) The

supervention of a disease when another is already present.

**Coin'dicant.** (L. *con*, together; *indico*, to point out. F. *coindicant*; G. *mitanzeigend*.) Jointly pointing out, or indicating; applied to symptoms when accompanied by others which suggest or indicate the same thing.

**Coin'dicant'ia.** (L. *co*, for *cum*, with; *indico*, to point out.) Term applied to those signs which concur in suggesting the employment of a particular remedy.

**Coin'dication.** (L. *co*, for *cum*, with; *indico*, to point out. F. *coindication*; G. *Mitanzzeige*.) The concurrence of several indications, all of which suggest the adoption of a particular method of treatment.

**Coir.** A name for the separated fibre of the cocon-nut husk, used as a stuffing for any kind of padding.

**Coir'a.** A name of *Catechu*.

**Coir'as.** A misspelling of *Charas*.

**Coise.** France; Département de la Savoie. An athermal mineral water, containing .8138 parts of sodium bicarbonate, .0151 of ammonium carbonate, .0077 of magnesium iodide, .0015 of magnesium bromide, and a very little iron, in 1000 parts; it also contains free nitrogen and hydrogen. It is a stimulant to the nervous and circulating systems, and subsequently a resolvent. It is used in anaemia and chlorosis, in all forms of scrofula and glandular enlargements, in hypertrophies of the liver and spleen, and in eczema and psoriasis. It holds a high reputation as a preventive and curative of goitre.

**Coissi quas'sia.** The *Quassia amara*.

**Coital.** Relating to *Coitus*.

**C. disease.** Syphilis.

**Coition.** Same as *Coitus*.

**Coitus.** (L. *coitus*, from *cœo*, to come together. F. *accomplément, coit*; G. *Paarung, Begattung, Beischlaf*.) Applied to the union of substances with each other by incorporation or mixture.

Formerly applied to the forming of medicines into one mass, as in the boiling of different ingredients into a consistence for plasters.

Term for the coming together of male and female in the act of procreation.

**C. humoris.** (L. *humor*, a liquid.) Old term for a conflux of fluids, or gathering of humours.

**Coix.** (Κόix, a kind of palm.) A Genus of the Nat. Order *Gramineæ*.

**C. lacryma.** Linn. (L. *lacryma*, a tear. F. *larme de Job*; I. *lagrima di Giobbe*; G. *Christustränen, Thränengrass*.) Job's tears. A plant indigenous in India, and cultivated in the south of Europe. The hard, bluish, stony seeds are made into bread, and into amolyne necklaces for teething children. They are said to be diuretic.

**C. ova'ta.** (L. *ovatus*, egg-shaped.) The *C. lacryma*.

**Coke.** (Perhaps a variant of E. *cake*.) An impure form of carbon left after the manufacture of gas; it contains the mineral constituents of coal.

**Col.** An abbreviation of *Coliander*, a former name of coriander, *Coriandrum sativum*.

**Cola.** A Genus of the Nat. Order *Sterculiaceæ*.

**C. acumina'ta.** Daniell. (L. *acumino*, to point or sharpen.) A plant growing in the centre and west of Africa. The mastication of the pulp

acts as a corroborant and prevents sleep. Also called *Sterculia acuminata*.

**C. nuts.** (G. *Colanissen*.) The beans of *C. acuminata*, from which a kind of coffee is prepared; they contain *Caffein*.

**Colalgia.** (Κόλον; άλγος, pain.) Pain in the transverse colon occurring in chronic constipation, and occurring not so much in the early stage of digestion as some time after taking food.

**Cola'tio.** (L. *colatus*, part. of *colo*, to strain. G. *Durchsiehen*.) The straining of a liquid.

**Colato'ria.** Plural of *Colatorium*.

Also, used, in old medicine, to denote the channels by which excrementitious substances are removed from the body; as the intestinal canal and the urinary organs.

**C., accidental.** Same as *C., artificial*.

**C., artificial.** (L. *artificialis*, made by art.) A term applied of old to ulcers, fistulae, setons, and such like, in recognition of the idea that they strained off morbid humours from the body.

**C. lac'tea.** (L. *lac*, milk. F. *couloirs lactiques*.) An epithet applied by Astruc to certain vesicular bodies in the internal or third tunic of the uterus at its fundus, which he considered glands, preternatural discharge from which constituted leucorrhœa. They were doubtless mucous follicles.

**Colatorium.** (L. *colo*, to strain. F. *couloir*; G. *Sieb, Sieger*.) Term for a strainer of any kind; a sieve.

**Cola'tum.** (L. *colo*, to strain. G. *das Durchsiechte*.) A strained liquor.

**Colatura.** (L. *colo*, to strain. F. *colature*; G. *das Durchgesichte*.) Term for a strained or incompletely filtered liquor; one that is not quite clear.

**Colberg.** Germany, in Pomerania. A sea bathing place where there are soul baths; the water contains a large quantity of common salt, 43 per cent. of the solid residue, and some iron chloride.

**Colbertia.** A Genus of the Nat. Order *Dilleniaceæ*.

**C. obova'ta.** Bl. (L. *ob*, towards; *ovatus*, egg-shaped.) Hab. India. The juice of the fruit forms a mucilage with water, which is used as an emollient. The bark is astringent, and used as that of *C. scabrella*.

**C. scabrella.** Don. (L. dim. of *scaber*, rough.) Bark astringent. Used in aphthous and ulcerative affections of the mouth.

**Col'chester.** Essex. A purgative water containing magnesium sulphate.

**Colchica'ceæ.** (G. *Zeitlosengewächse*.) Same as *Melanthaceæ*.

**Colchic'ææ.** A synonym of *Melanthaceæ*.

**Colchic'ein.** C<sub>16</sub>H<sub>13</sub>NO<sub>3</sub>. A base isomeric with colchicin obtained by Oberlin from the seeds of *Colchicum autumnale*. It forms hemelle with mother-of-pearl lustre, or warty masses composed of needles. It is less bitter than colchicin. It dissolves with difficulty in cold water and in ether, but freely in boiling water, alcohol, and chloroform. It melts at 155° C. (311° F.) It is coloured yellow, then violet, and then again yellow by nitric acid, and green by perchloride of iron.

**Col'chici cor'mus.** B. Ph. (F. *bulbe de colchique, b. de safran bâtarde*; G. *Zeitlosenknoellen*.) The fresh corm of *Colchicum autumnale*. It is about the size of a chestnut, 1" to 1.5" long, convex on one side, flattened, and with a

## COLCHICIA—COLDENIA.

groove on the other; it has an outer brown, and an inner yellow, coat, and a milky, acrid, and bitter juice. For medical use it is stripped of its coats, sliced transversely, and dried at a temperature not exceeding 65-55° C. (150° F.) It contains colchicin, along with starch, gum, and other matters. It is used to make the extract and the wine of colchicum. Dose, in powder, 2 to 8 grains.

**C. ra'dix**, U. S. Ph. The corm or tuber of *Colchicum autumnale*. See *C. cormus*.

**C. sem'ina**, B. Ph. (*L. semen*, seed. F. *semences de colchique*; G. *Zeitlosensamen*.) The seeds of *Colchicum autumnale*. They are about the size of white mustard seed, nearly spherical, slightly pointed at the hilum by a crest-like appendage, of a reddish brown colour, no smell, and a bitter acrid taste. They contain colchicin, along with starch, gum, sugar, resinous, and other matters. They are used in the preparation of *Vinum colchici seminis*.

**Colchicia**. Same as *Colchicin*.

**Colchicin**.  $C_{17}H_{15}NO_5$ . A neutral organic substance found in all parts of *Colchicum autumnale*. It is doubtful whether it is crystallisable. It is light yellow in colour, brittle, without smell, and very bitter. It dissolves in two parts of water at 22° C. (72° F.), in eighteen parts of ether at 20° C. (68° F.), and more easily in alcohol and chloroform. It melts at 140° C. (284° F.). It is coloured violet by nitric acid, yellowish brown by sulphuric acid, green, when in solution, by chromic acid, and if ammonia be added to the mixture it becomes yellowish red. It is decomposed into a resin and colchicin by the action of dilute mineral acids. It exists in the proportion of 0.05 per cent. in the seeds. It is poisonous to all classes of animals, but acts slowly. It first excites, then paralyzes the central nervous system, producing loss of consciousness and of sensation, abolishing voluntary and reflex movements, and proving fatal by diminishing and finally paralyzing the respiratory acts. The circulation is but little affected, the heart continuing to beat with undiminished force for a long time. It violently irritates the gastric and intestinal mucous membrane. The kidneys are rendered hyperæmic, and the urine is diminished in quantity. In cases of poisoning vomiting may first be encouraged, and tannin used as an antidote; subsequently the vomiting and purging may be allayed with ice and opium.

**Colchicum**. (Χολχικόν, because it was common in Colchis. F. *colchique*; G. *Herbstzeitlose*, *Kolchicum*, *Zeitlose*.) A Genus of the Nat. Order *Mercuriales*.

**C. autumnale**, Linn. (F. *veillotte*, *tuechion*, *morchun*, *safran des prés*, *safran bâlard*; L. and P. *colchico*; S. *colquico*; G. *Herbstzeitlose*, *Handschoden*; Dan. *Noghe jonnefrue*; Dut. *Tydluizen*; Swed. *Tidlose*; Ar. *Uchad*; Turk. *Mahrouf*; Pol. *rozalia*; Rus. *Bizremennick*.) Meadow saffron, autumn crocus. A plant known to the ancients, but little used till Störck called attention to it in 1763. The corms, seeds, and flowers are used; all these are more active when recent than when dry. The active principles are yielded to water, alcohol, and especially to vinegar. Used in gout. See *Colchicin*.

**C. bulbocod'ides**, Bieb. (*Bulbocodium*, the plant of that name; *εἶδος*, likeness.) A form of *C. montanum*.

**C. byzanti'num**. See *Bhoji-dan*.

**C. illyricum**, Lob. A species which has

been named as the true *Hermodactyl*, but which probably does not exist as a distinct species, being really the *C. variegatum*.

**C. monta'num**, Linn. (*L. montanus*, belonging to the mountains.) Hab. South Europe, Arabia. A possible source of *Hermodactyl*.

**C. seeds**. (F. *semences de colchique*; G. *Zeitlosensamen*.) The seeds of the *Colchicum autumnale*. They are subspherical, about 1-10th of an inch in diameter, hard, rough, and dull pale brown, inodorous, with bitter and acrid taste. They contain 0.05 per cent. of colchicin, traces of gallic acid, sugar, and fatty oil.

**C. variega'tum**, Linn. (*L. variegatus*, of many colours.) Chequer flowers. Hab. Isles of Greece. The chief source of the *Hermodactyl* of the ancients.

**Colcothar**. (Low *L. colethar*, probably from Ar.) Ferric oxide or red oxide of iron, made by calcining sulphate of iron to redness; it is the substance forming the residue of the process of making Nordhausen oil of vitriol. Used locally as an astringent.

**C. vitrioli**. (*L. dim. of vitrum*, glass.) The same as *Colcothar*.

**Cold**. (Sax. *cald*. F. *froid*; G. *Kälte*.) The relative absence or privation of heat.

Also, a common term for catarrh.

**C. affu'sion**. The pouring of cold water on a person either to reduce temperature, as in fever; or to produce the subsequent reaction, as when used to a chronic sprain. See *Affusion*.

**C. bath**. See *Bath*, cold.

**C. blood'ed**. A term applied to those animals whose blood is little if at all above that of the surrounding medium in temperature; and varies with it in consequence of the feeble energy of the oxidation processes.

**C. chill**. A term for intermittent fever.

**C. cream**. This is composed of white wax 1 part, spermaceti 1, oil of almonds 6, rose water 9, otto of rose to perfume it. Used as an emollient application.

**C., death from**. The long exposure to cold has produced death independently of starvation or of drunkenness, both of which make a very low temperature more dangerous to life. There have been noted visceral congestions, but no destructive morbid appearances. It has been suggested that disorganisation of the blood corpuscles is the real cause of death.

**C. douche**. See *Douche*, cold.

**C. in chest**. A bronchial cold.

**C. in eye**. Catarrhal ophthalmia.

**C. in head**. Coryza.

**C. pack**. The packing a patient in sheets dipped in cold water, replacing them as often as they become warm. A mode of treatment used to reduce the temperature in fevers.

**C. plague**. A so-called congestive fever in which there is little or no reaction.

**C. seeds, greater**. An old term for a mixture of pumpkin, gourd, melon, and cucumber seeds, which, made into an emulsion with water, were used in catarrhal disorders and fevers.

**Cold bath Wells**. England; in Pentonville, London. A mild chalybeate water, discovered in 1637.

**Coldenia**. A Genus of the Nat. Order *Ehretaceæ*.

**C. procum'bens**, Linn. (*L. procumbo*, to lean forwards.) Hab. India, in rice fields. The dried plant, mixed with fenugreek seeds, and

## COLDNESS—COLIC.

rubbed to a fine powder, is used to promote the suppuration of boils.

**Coldness.** The sensation of cold. In Medicine, the sensation was formerly described as having three degrees of intensity: *algor*, when there was merely the feeling cold; *horror*, when there was the creeping feeling of chilliness; and *rigor*, when there was actual shivering.

**Cole.** (Sax. *cavel*, *caul*; from L. *colis*, *caulis*, a stalk.) A generic name for the cabbage and other brassicaceous plants.

**C.-rape.** The common turnip, *Brassica rapa*.

**C. seed.** The rape plant, *Brassica napus*.

**C. wort.** (Sax. *wyrt*, a plant.) A common name for the Genus *Brassica*, or cabbage.

**C. wort, sea.** The *Crambe maritima*, and also the *Calystegia sabbanaella*.

**Colectomy.** (Κόλον, the colon; ἐκτομή, a cutting out.) Excision of part of the colon.

**Col'eine.** (Κολέος, an envelope.) The same as *Chitin*.

**Col'eitis.** (Κολέος.) Inflammation of the vagina.

**Coleocele.** (Κολέος, a sheath; κήλη, hernia. G. *Mutterscheidenbruch*.) Vaginal hernia.

**Coleochaete.** (Κολέος; χλαίτη, long hair.) An Order of the Class *Carpophyceae*, or chlorophyll-containing algae. The members of it are small, slowly moving, or stationary algae, the cells of which form layers or discs upon submerged plants. Some of the cells support bristle-like processes. Asexual generation takes place by swarm-spores, which escape from an opening in the cell producing them, and each possesses two elia, a green and a colourless side. The carpgonium is formed either from the terminal cells or from the penultimate or still deeper-lying cells of the thallus branches, and in some forms is supported on a neck or trichogyne. The antheridia arise from similar cells in the form of small papillae, the colourless protoplasmatic contents of which become converted into a spermatozoon. Sexual multiplication has not been observed.

**Coleocricos.** (Κολέος; κρίκος, a ring. G. *Mutterscheideuring*.) A ring which, being introduced into the vagina, prevented prolapsus of the womb.

**Coleoedema.** (Κολέος, a sheath; οίδημα, swelling.) Edematous swelling of the vagina.

**Coleophyllous.** Having a *Coleophyllum*.

**Coleophyllum.** (Κολέος, a sheath; φύλλον, a leaf.) Mirbel's earlier term for the structure he afterwards called *Coleoptilis*.

**Coleoptera.** (Κολέος, a sheath; πτερόν, a wing. F. *coleoptères*; I. *colotteri*; G. *Colopteren Käfer*.) The beetle tribe. An Order of the Class *Insecta*, characterised by having chitinous anterior wings named elytra; the mouth provided with masticating apparatus; the first ring of the thorax freely movable; metamorphosis complete.

**Coleopterous.** (Κολέος, a sheath; πτερόν, a wing.) Of, or belonging to, the *Coleoptera*.

**Coleoptil.** Same as *Coleoptilis*.

**Coleoptilate.** Having a *Coleoptilis*.

**Coleoptilis.** (Κολέος, a sheath; πτίλον, a feather. F. *coléptile*; G. *Federchenscheide*.) Mirbel's name for a small membranous or fleshy sheath, proceeding from the cotyledons,

and enveloping the base of the plumule in the *Liliaceae* and the *Alismaceae*.

**Coleoptosis.** (Κολέος, a sheath; πτώσις, a fall.) Prolapse of the vagina.

**Coleorhiza.** (Κολέος, a sheath; ῥίζα, root. G. *Wurzelscheide*.) The rootsheath. A short, funnel shaped membrane which invests, and is ultimately perforated in the process of germination by, the radicle of monocotyledonous plants. It is well seen in the grasses and in allium.

**Coleorhizate.** Having a *Coleorhiza*.

**Coleorrhetic.** Relating to *Coleorrhesis*.

**C. birth.** Delivery accompanied by laceration of the vagina.

**C. hernia.** Hernia with a tear of the vagina.

**Coleorrhexis.** (Κολέος, a sheath; ῥήξις, a rending.) Rupture or laceration of the vagina.

**Coleos.** (Κολέος, a sheath.) The vagina.

**Coleositis.** (Κολέος, a sheath.) Leucorrhoea, as an inflammation of the vagina.

**Coleosolen.** (Κολέος; σωλήν, a channel.) A tube with a sheath, formerly applied to a form of nerve tube.

**Coleostegnosis.** (Κολέος, a sheath; στέγνωσις, a making close.) Constriction of the vagina.

**Colephium.** Same as *Coleps*.

**Colepium.** Same as *Coleps*.

**Coleps.** (Κώληψ.) The ham or hollow of the knee.

Also, the colon.

**Coles.** (Κώλη, the penis. F. *penis, verge*; G. *Ruthe, männliches Glied*.) Old name for the penis; also called *Colis*.

**C. feminarum.** (L. *femina*, a woman.) The clitoris.

**C. femininum.** (L. *femininus*, of, or belonging to, a woman.) The clitoris.

**C. pusillus.** (L. *pusillus*, very little.) A congenital deformity of penis consisting in its smallness, being like a clitoris.

**Colesule.** (Κώλη, the penis.) A cellular ring surrounding the pistillidium in *Jungermannia*.

Also, a synonym of *Perianth*.

**Col'eus.** (Κολέος, a sheath.) Term that has been applied indiscriminately to the vagina, to the scrotum, and to the testicles.

**Col'eus.** A Genus of the Nat. Order *Labiales*.

**C. aromaticus.** Benth. (L. *aromaticus*, aromatic.) Country borage. Hab. India. An aromatic carminative. Used in colic, asthma, coughs, and epilepsy.

**Colic.** (L. *colicus*; from Gr. κωλικός, suffering in the κώλον, colon. F. *colique*; I. *colico*; S. *colico*; G. *Kolik*, *Bauchgrimmen*.) A severe, paroxysmal, moving, griping pain in the belly, with costiveness, sometimes with diarrhoea, and frequently with vomiting. The pain of colic is often agonising and accompanied by a twisting sensation about the umbilicus, which causes the patient to curl himself up. The pulse is generally small, sometimes hard; and the breathing is irregularly quickened. It may come on suddenly or slowly, and the paroxysm, after lasting a short time, may not return, or the cessation of the pain may be by attacks of slowly decreasing severity. It usually arises from the ingestion of unwholesome or poisonous matters into the system,

either by the stomach or, as in the case of lead poisoning, by the skin or lungs; or it may be the result of disordered secretion and digestion, leading to the evolution of gases, as in flatulent colic; or it may depend upon mechanical obstruction to the passage of the contents of the bowels, either from stercoraceous or calculeous matters within, or from bands and bristles constricting the canal from without, or from intussusception, or from unnatural twists, loops, or knots of the bowels; or it may be of nervous origin, and be due to spasm of the muscular coats of the intestine; it may accompany the passage of gall-stones and of renal calculi; or be due to worms. Strictly the term should be confined to pain in the colon; but its use has been extended to other conditions, as the list of species shows.

Also (*F. colique*; *G. kolisch*), relating to, or connected with, the colon.

**C. arteries.** (*F. artires coliques*.) Term applied to the arteries supplying the colon. Three, the *ileo-colic*, *colica dextra*, and *colica media*, are given off from the superior mesenteric artery, and two, the *colica sinistra* and *colica sigmoidica*, arise from the inferior mesenteric artery; all run between the layers of the mesentery to the intestine, and form by dichotomous branching and anastomosis a series of arcades.

**C. artery, left.** See *Colica sinistra artery*.

**C. artery, middle.** See *Colica media artery*.

**C. artery, right.** See *Colica dextra artery*.

**C., biliary.** (*L. bilis*, bile.) Pain from the passage of a gall-stone or mass of clotted bile.

**C., bilious.** (*F. colique bilieuse*; *L. colica biliosa*.) See *Colica biliosa*.

**C., cider.** Colic arising from drinking cider that has become impropriated with lead, or that is very sour.

**C., convulsive.** (*L. convellio*, to draw violently hither and thither.) A synonym of *C., spasmodic*.

**C., copperworkers'.** (*L. colica di rame*.) A form of colic formerly, but, from the inquiries of Chevalier de Boys and Lorry, erroneously, supposed to arise from the entrance of copper into the system in those engaged in its manufacture.

**C., crapulent.** (*L. crapulentus*, very much intoxicated.) Colic arising from excessive eating and drinking, or from indigestible food.

**C., Devonshire.** (Because of its prevalence there.) A species of colic formerly very prevalent in the cider counties. It was formerly supposed to be at times an endemic, at others to be caused by sour cider. It is now known to have been lead colic produced by the custom of sometimes clamping the stones of the presses with lead, sometimes lining them with lead, and sometimes putting a mass of lead into the cider to decrease its sourness.

**C., dry.** (*F. colique sèche*.) This term has been long used to designate a form of colic which was supposed to depend on some epidemic or endemic condition. Several epidemics have been observed in the eighteenth and early part of the nineteenth centuries, and different names were given to it, according to the place where it was prevalent, as the colic of Poitou, Madrid, Devonshire. A similar disease was observed first by French naval medical officers, in the second

quarter of the nineteenth century, among the sailors in French steamships while they were in the tropics, and this was also attributed to an endemic or malarial influence. A similar disorder is named by Buel *Colic, fremm's*. The nature of the disease has been keenly disputed, but it has now come to be generally thought that lead poisoning is the cause of the disease, and thus that it is a form of lead colic, for in a large number of cases of dry colic the presence of lead has been distinctly attested.

**C. epiploon.** (*Ἐπιπloon*, the mesentery.) The portion of the mesentery to which the colon is attached.

**C., fireman's.** A term applied by Buel to a form of colic prevalent in 1850, and occurring solely among the engineers and stokers of the steam packets plying between California and Panama. It is believed to have been a form of lead colic.

**C., flatulent.** (*F. colique flatulente*, *c. flatuense*; *G. Windcolik*, *Blähcolik*.) Colic, accompanied by the accumulation of gas in the intestines, without inflammatory symptoms.

**C., gallstone.** The pain accompanying the passage of a gallstone through an hepatic duct.

**C., hæmorrhoidal.** (*Αἰμορροϊδής*, piles.) Colic said to be consequent upon arrest of the hæmorrhoidal flow, or the colicky pain accompanying piles.

**C., hepatic.** (*F. colique hépatique*.) Pain experienced in the region of the liver, often arising from the passage of a gall-stone or clotted bile through one of the bile-ducts.

**C., horn.** Priapism.

**C., hysterical.** (*F. colique hystérique*.) Pain, more or less intense, felt in the abdomen in hysterical patients during the intervals of the attacks of hysteria.

**C., idiopathic.** (*Ἰδιος*, peculiar; *πάθος*, affection.) In Cullen's classification, this form included colic arising either from spasm, constipation, acrid matters in the bowels, retention of the meconium, stricture of the bowels, obstruction from calculeous formations, and, lastly, the colic of Poitou.

**C., inflammatory.** (*F. colique inflammatoire*; *L. colica inflammatoria*.) The pain accompanying enteritis.

**C., lead.** (*F. colique de plomb*; *L. colica di plombo*, *colica saturnina*; *G. Bleikolik*.) Colic dependent on the introduction of lead into the system, and characterised by the same symptoms as ordinary colic, but appearing more gradually; the constipation is more pronounced and the pain not always diminished on pressure; it is accompanied by that very distinctive evidence of lead poisoning, the blue line on the dental edge of the gum. See *Lead poisoning*.

**C. lobe of liver.** The right lobe of the liver; from its nearness to the colon.

**C., menstrual.** (*L. menstrualis*, monthly. *F. colique menstruelle*.) The colicky pain frequently accompanying menstruation.

**C., metallic.** Colic resulting from lead or other metallic poisoning.

**C., nephritic.** (*Νεφρός*, the kidney. *F. colique néphrétique*.) Pain down the course of the ureter, and in the testicle, and inner part of thigh, due to the passage or the presence of a urinary calculus.

**C., nervous.** (*F. colique nerveuse*.) A synonym of *C., spasmodic*.

# COLICA.

**C. of Normandy.** The same as *C. cidei*.

**C. of Madrid.** A disease characterised by severe abdominal pain, attributed by some to the immoderate use of fruits, wines, and iced drinks; by others, to accidental metallic impurities in water or wine; and by others, to exposure to night air and chills. It is said to be relieved by opium and purgatives.

**C. of Poitou.** (F. *Poitou*, a province of western coast of France. I. *colica del Poitou*.) The same as *Colica Pictonum*.

**C. of prostitutes.** See *Colica scortorum*.

**C., painters'.** (I. *colica del pittori*.) The same as *C. lead*.

**C. passion.** A synonym of *Colic*.

**C., plumbers'.** The same as *C. lead*.

**C. renal.** (L. *ren*, the kidney.) Same as *C. nephritic*.

**C. root.** Term applied to the *Asteris farinosa*, to *Inoscora villosa*, and to *Liatris spicata*.

**C., saturnine.** (L. *Saturnus*, Saturn, the designation by the alchemists of lead.) The same as *C. lead*.

**C., spasmodic.** (Σπασμὸς, spasm.) *Colic* occurring without any inflammatory symptoms, and occasioned by irritation of the nerves, inducing violent contractions of the muscular coats of the intestine. See *Colic*.

**C., ster coral.** (L. *stercus*, dung.) *Colic* attributed to the retention of fecal matters in the intestine.

**C., Surinam.** The same as *C. lead*.

**C., u terine.** See *Colica uterina*.

**C., vegetable.** (Vegetable, F. *colique végétale*.) A term applied to the *colic* of Poitou, Devonshire, Normandy, and such like, in the belief that the pain was caused by new or bad wine or cider, and not lead.

**C. veins.** The *colic* veins pursue nearly the same course as the arteries, have the same names, and discharge their contents into the superior and inferior mesenteric veins, and through these into the portal system of blood-vessels.

**C., verminous.** (L. *verminous*, full of worms.) *Colic* from the presence of worms in the intestines.

**C. weed.** The *Dicentia canadensis*.

**C., worm.** *Colic* due to worms in the alimentary canal.

**Colica.** A Genus of the Order *Spasmi*. Class *Adynamia*, of Cullen's nosology. See *Colic*.

A Genus of Good's Order *Enterica*. Also, relating to the colon.

**C. accidentalis.** Willis and Cullen. (L. *accidens*, the accidental in anything.) *Colic* from improper quantity or quality of the ingesta.

**C. acuta.** (L. *acutus*, violent.) A synonym of *Enteritis*.

**C. arthritica.** (L. *arthriticus*, gouty. F. *colique arthritique*; I. *colica gotica*.) A form of *colic* particularised by Hoffmann, Reuz, and others, as associated with a gouty constitution or state.

**C. atrabiliaris.** Meyseney. (L. *atra*, black; *bilis*, bile.) *Colic* from a morbid state of the secretions poured into the bowels, and retention of the excretions.

**C. biliosa.** (L. *Biliosus*, full of bile. F. *colique bilieuse*.) Term applied by Hoffmann to *colic* proceeding from a morbid state of the secretions poured into the bowels and retention of the

excretions; and by Boerhaave and v. Swieten to hepatitis or to the passage of biliary calculi.

**C. calculosa.** (L. *calculus*, full of small stones.) *Colic* arising from the passage of intestinal or biliary calculi through the intestines.

**C. callosa.** (L. *callosus*, thick-skinned.) The same as ordinary *Colic*.

**C. cibaria.** (L. *cibarius*, pertaining to food.) *Colic* from surfeit; the pain being accompanied by nausea, headache, and sickness before vomiting, and afterwards terminating in a griping looseness. (Good.)

**C. comatosa.** (R. *coma*, drowsiness.) Good's term for a form of *C. cibaria*, in which the symptoms evince great cerebral irritation, with a rapid exhaustion of the sensibility.

**C. consensualis.** (L. *consensus* to harmonise with.) The abdominal neuralgia of dysenteria.

**C. constipata.** (L. *part*, *constipare*, to press closely together.) Term applied by Good to *colic* with severe griping pain, obstinate constipation, great tenderness with little tenderness, tenderness with some blood-terminations, where not fatal, in a few days of the infantile matter. He divided it into *C. mucosa*, *C. fibrinosa*, and *C. enterica*.

**C. constricta.** Good. (L. *part*, *constringere*, to bind together.) *Colic* from mechanical obstruction of the intestinal canal.

**C. convulsiva.** (L. *convellere*, to draw violently higher and thither.) *Spasmodic colic*, idiopathic *colic*.

**C. convulsiva spastica.** (Σπασμὸς, stretching.) Idiopathic or *spasmodic colic*.

**C. crapulosa.** (L. *crapula*, drunkenness. F. *colique d'indigestion*.) *Colic* from excess of food or drink, or from the ingestion of unwholesome food.

**C. damnonien'sis.** The same as *Colic*, Devonshire.

**C. damnoniorum.** The same as *Colic*, Devonshire.

**C. denteropathica.** (Δεντερὸς, small intestine, disease.) The same as *C. dysenterica*.

**C. dextra artery.** (L. *dexter*, right. F. *colique droit*, *colique dextro-gauche*.) The right *colic* artery, a branch from the middle of the convexity of the superior mesenteric artery. It passes beneath the peritoneum, supplies the ascending colon, and anastomoses below with the ileo-colic and above with the colica media artery.

**C. dextra inferior.** (L. *inferior*, lower. F. *artere caecale*, Caecus.) The ileo-colic artery.

**C. dextra media.** (L. *dexter*, right; *medius*, middle. F. *artere colique droit*, (Ch.) The *C. medius* artery.)

**C. dextra superior.** (L. *superior*, upper. F. *artere colique*.) The *C. dextra* artery.

**C. efflorescens.** (L. *efflorescere*, to bloom.) Good's term for a species of *C. cibaria*, in which the symptoms evince the action of some noxious deleterious principle and the skin is covered with an effluence.

**C. enterolithica.** (Εντερων, an intestine; λίθος, a stone.) *Colic* from biliary and other intestinal concretions. (Good.)

**C. faeco sa.** (L. *faex*, dregs.) *Colic* from indurated faeces.

**C. febricosa.** (L. *febris*, a fever.) The same as *Enteritis*.

**C. figulo'rum.** (L. *figulus*, a potter.) A form of colic occurring in potters.

**C. flatulen'ta.** (L. *flatus*, wind.) Colic from wind in the intestines; it is common in infants.

**C. hæmorrhoida'lis.** (L. *hæmorrhôis*, piles.) Colic caused by or preceding hæmorrhoids, or consequent on their suppression.

**C. helluo'num.** (L. *helluo*, a gormandiser.) The same as *C. crapulosa*.

**C. hepática.** (L. *hepaticus*, belonging to the liver. F. *colique hépatique*.) Biliary colic. Colic arising from the passage of gall-stones or clotted bile through the biliary ducts.

**C. hispanien'sis.** (L. *Hispania*, Spain.) Probably a form of *Colic, lead*.

**C. hypochondriaca.** (Υποχόνδριος, the hypochondrium.) Colic accompanying states of nervous depression.

**C. idiopath'ica.** (Ιδίας, peculiar; πάθος, affection.) Colic not attributable to metallic poisoning or any apparent cause.

**C. ileus,** Good. (Έιλεος, from ἵλεω, to twist.) A synonym of *Ileus*.

**C. inflammato'ria.** (L. *inflammo*, to kindle. 1. *colica inflammatoria*.) The pain in the belly accompanying enteritis.

**C. lappon'ica.** Colic common in Lapland, and due to the *Iluminthus Gerdi*.

**C. lochia'lis.** (Λοχία, the lochia.) Pain from suppression of the lochial discharge.

**C. madriden'sis.** Madrid colic. Probably the same as *Colic, lead*.

**C. magna sinis'tra ar'tery,** Chauss. (L. *magnus*, great; *sinister*, left.) The superior of the three left colic arteries.

**C. meconia'lis.** (L. *meconium*, the excrements of new-born children.) A form of colic distinguished by Sauvages and Good as occurring in new-born infants, and resulting from retention of viscid meconium.

**C. média ar'tery.** (F. *colique droit*, *c. droit moyenne*; G. *mittlere Grimmdarmschlagader*.) The middle colic artery, a branch of the upper part of the concavity of the superior mesenteric artery. It passes forwards between the layers of the mesocolon, supplies the transverse portion of the colon, and anastomoses on the right with the *colica dextra* and on the left with the *colica sinistra*, and a branch of the inferior mesenteric artery.

**C. menstrua'lis.** (L. *menstrualis*, monthly. F. *colique menstruelle*.) Colic accompanying the catamenia, or consequent on their suppression.

**C. mesenter'ica.** (Μέση, middle; έντερον, intestine.) The same as *Colic, idiopath'ic*.

**C. metal'lica.** (L. *metallicus*, belonging to metals.) Colic arising from impregnation of food or drink with a metal, chiefly lead.

**C. metastatica.** (Μεταστικτός, denoting change, from μεταστικμι, to give another instead.) A form of colic recognised by Haller, Sigaud le Fond, and others, and considered to occur in connection with the disappearance of chronic cutaneous affections.

**C. nephret'ica.** The same as *C. nephrit'ica*.

**C. nephrit'ica.** (L. *nephritis*, inflammation of the kidney. F. *colique nephretique*.) Colic resulting from nephritis, or consequent upon the passage of a stone through the ureter.

**C. nervo'sa.** (Νήρον, a cord.) A synonym of *Colic, idiopath'ic*, and *Colic, metallic*.

**C. par'va sinis'tra ar'tery,** Chauss. (L. *parvus*, small; *sinister*, left.) The lower of the three left colic arteries.

**C. pas'sio.** (L. *passio*, a suffering.) Ordinary colic.

**C. phlogis'tica.** (Φλογιστός, set on fire.) The same as *Enteritis*.

**C. pic'tonum.** (L. *Pictones*, a people of Aquitanian Gaul, the district afterwards called Poitou.) A form of colic, named by Citois, because of its prevalence in Poitou. It presented the symptoms described under the head *Colic*, and was supposed to be caused by the drinking of bad or acid wine; it may be that some cases were, but the great majority were cases of lead colic, produced by the addition of litharge to a sour wine, for the purpose of improving it, as it was thought.

**C. picto'rum.** (L. *pictor*, a painter. 1. *colica dñi pittori*.) Colic from the poison of lead, especially in painters.

**C. pituito'sa.** (L. *pituita*, phlegm, mucus.) The same as *C. idiopath'ica*.

Also, applied by Sennerts and Ferucls to *C. biliosa*.

**C. pletho'rica.** (Πληθωρό, fulness.) A species of colic distinguished by Hoffmann and Schmidtman as being associated with various states of the constitution, viz. pregnancy, difficult or suppressed menstruation, suppressed lochia, congestion or inflammation of the uterus, and hæmorrhoids.

Also, a synonym of *Enteritis*.

**C. plumbario'rum.** (L. *plumbarii*, workers in lead.) The same as *Colic, lead*.

**C. primiti'va.** (L. *primitivus*, the first of its kind.) Term applied by Frank (1842) to colic having its seat in the intestines.

**C. pulsati'lis.** (L. *pulso*, to heat.) The same as *Enteritis*.

**C. rec'ta.** (L. *rectus*, straight.) A synonym of *C. dextra*.

**C. reflex'a.** (L. part. *reflecto*, to bend back. 1. *colica reflexa*.) Colic excited by cold.

**C. rena'lis.** (L. *ren*, the kidney.) Same as *C. nephrit'ica*.

**C. rhachial'gia.** (Ραχιάλγια, spine-ache.) Term applied by Astruc and Good to colic from the poison of lead, because the pains strike through to the back.

**C. rheumat'ica.** (L. *rheumaticus*, one troubled with rheum.) A species of colic particularised by Haller, Thom, and others, as being associated with a rheumatic diathesis, and caused by the exposure of the feet or abdomen to cold.

**C. saburra'lis.** (L. *saburra*, sand, a term applied to foul condition of the stomach. G. *Schleimcreolik*.) Colic arising from excesses in eating and drinking.

**C. sanguin'ea.** (L. *sanguineus*, bloody. F. *colique rouge, entérrhagie*.) Colic attended with hæmorrhage, owing to active or passive congestion of the intestinal mucous membrane.

**C. saturni'na.** See *Colic, saturnine*.

**C. scirrho'sa.** Colic from mechanical obstruction of the canal of the bowel.

**C. scorto'rum.** (L. *scortum*, a prostitute.) A name given to the attacks of abdominal pain to which prostitutes are liable. It would seem probable that this form of colic is really an inflammation of the Fallopian tubes, or of the ovaries, involving the fibrilated extremities of the Fallopian tubes, resulting from gonorrhœa, or from sexual excess.

# COLICE—COLLAPSE.

**C. secunda'ria.** (L. *secundarius*, belonging to the second class.) The same as *C. symptomatica*.

**C. sic'ca.** (L. *siccus*, dry. F. *colique sèche*; I. *colica secca*.) See *Colic*, dry.

**C. sigmo'idea.** (Σίγμα, a letter of the Greek alphabet; σίος, form. F. *petite colique gauche*.) The branch of the inferior mesenteric artery which supplies the sigmoid flexure of the colon. It anastomoses above with the colica sinistra, and below with the superior hæmorrhoidal artery. Also called *Sigmoid artery*.

**C. sinis'tra.** (L. *sinister*, left. F. *grande colique gauche*, Chauss., *gauche supérieure*; G. *linke Grimmdarmschlagader*.) The left colic artery, a branch of the inferior mesenteric artery. It passes behind the peritonæum, supplies the descending colon, and anastomoses to the right and above with the colica media, and to the left and below with the sigmoid artery.

**C. spasmo'dica.** See *Colic*, *spasmodic*.

**C. stercora'cea.** The same as *C. stercorea*.

**C. stercor'ea.** (L. *stercoreus*, from *stercus*, dung. F. *colique stercorale*.) Term applied by Sauvages and Cullen to *C. biliosa*.

Also, colic arising from the presence of unwholesome substances and the excreta in the bowels.

**C. stipa'ta.** (L. part. *stipio*, to press together.) The same as *C. stercorea*.

**C. sympathet'ica.** (Συμπαθητικός, with fellow-feeling.) Colic arising by reflex action, induced by pain in some other organ, as the liver, kidney, or uterus.

**C. symptomat'ica.** (Συμπτωμα, a symptom.) Term used by Mounieret and Martineau when the symptoms of colic appear in the course of inflammation of the bowels, of ulceration, or of diarrhœa.

**C. uter'ina.** (L. *uterinus*, uterine. F. *colique uterine*.) Colic arising from inflammation or neuralgia of the uterus.

**C. vegeta'lis.** See *Colic*, *vegetable*.

**C. ventricu'li.** (L. *ventriculus*, the stomach.) The same as *Cardialgia*.

**C. vermino'sa.** (L. *vermes*, a worm. F. *colique vermineuse*.) Pain in the belly arising from the presence of worms in the intestines.

**C. zin'ci.** (The metal *zinc*.) Abdominal pain supposed to arise from the administration of an excess of zinc.

**Colicé.** (F. *colique*; G. *Kolic*.) The same as *Colica*, the colic.

**Colicky.** Like *Colic*; applied to abdominal pains of this nature.

**Colicoden'dron.** (Κωλικός, suffering with colic; δένδρον, a tree) A Genus of the Nat. Order *Capparidaceæ*.

**C. yeo.** Said by Martius to be dangerous to mules and horses.

**Colicodyn'ia.** (Κόλον, colon; δόνη, pain. G. *Kolikschmerz*.) A synonym of *Colic*.

**Colicoplegia.** (Κωλικός, pertaining to the colon; πλίσσω, to strike. G. *Bleikolik*.) The same as *Colic*, *leud*.

**Colicus.** (Κόλον, the large intestine. F. *colique*; G. *kolisch*, *zum Kolon gehörig*.) Of, or belonging to, the colon or large intestine. Applied to arteries and veins supplying the colon.

**C. do'lor.** (L. *dolor*, pain.) Term employed by Celsus and Pliny to signify colic.

**Coliform.** (L. *cola*, a strainer or sieve;

forma, shape.) Resembling a strainer or sieve; cribriform. Applied to the ethmoid bone (os coliforme); sieve-like.

**Coliphium.** Old name for a fine kind of wheaten bread used without any other food by the wrestlers.

**Colis.** (L. *colis*, for *caulis*, a stalk.) The same as *Coles*.

Also, the stalk or stem of a plant.

Also, the one-year's shoot of a vine.

**Colitis.** (Κόλον, the large intestine. F. *colite*; G. *Grimmdarmentzündung*.) A term which has been proposed to designate mucous inflammation of the whole of the large intestine, cæcum and rectum, as well as colon; and to include all forms, from the simplest diarrhœa to the severest dysentery.

The term has been applied, in contradistinction to dysentery, to the catarrhal inflammation of the large intestine, which occasionally occurs in the course of measles, accompanied by glairy, bloody stools, and great tenesmus.

**Colla.** (Κόλλα, glue.) The substance gluten; glue; or impure gelatin.

Also, a name of a gum extracted, in the Levant, from a composite plant, which is believed to be *Carlina acaulis*, Linn.

**C. anima'lis.** (L. *animal*, a living being.) A term for impure gelatin, obtained from the offal of slaughter-houses and tanneries.

**C. pis'cium.** (L. *piscis*, a fish. F. *ichthyocolle*; G. *Fischleim*, *Ichthyocolle*, *Hausenblase*.) The glue of fishes; fish glue or isinglass. See *Isinglass*.

**Colla'bent.** (L. *collabor*, to fall together. G. *zusammenfallend*.) In Botany, reclining on each other or towards each other.

**Collagen.** (Κόλλα; γεννώω, to generate. G. *glutengebendes Gewebe*.)  $C_{192}H_{146}N_{31}O_{38}$ . A term for the matter of which the white fibres of connective tissue are formed, because it is converted into gelatin or glue by boiling water. The formula given above is Hofmeister's, and is not yet settled. Collagen differs from gelatin only in very small degree, according to Hofmeister only in the absence of a molecule of water.

Also, a synonym of *Ostein*.

**Collagenous.** (Same etymon.) Containing or resembling *Collagen*.

**C. substances.** A class of animal bodies including ossein, gelatin, chondrin, keratin, and similar matters. They have an average composition of carbon 50, hydrogen 6.6, nitrogen 16.6, and oxygen 26.8 per cent. They soften in cold water, swell and dissolve in hot water; are precipitated by alcohol, bichloride of mercury, and tannin; and are decomposed by acids and alkalies into leucin, glycocoll, and other bodies.

**Collapse.** (L. *collapsus*, part. of *collabor*, to fall together. F. *collapsus*; I. *colapso*; S. *colapso*; G. *Zusammenfallen*.) A falling in.

In Medicine, a great and more or less sudden prostration of the powers, caused essentially by loss or defect of nervous force. It may occur towards the end of an exhausting disease, from internal hæmorrhage, and from shock produced by injury. The patient is prostrate, pale even to the lips; cold, with sweat drops on the face; expressionless, with a drooping eyelid; breathless, with dilated nostrils; powerless, with flaccid limbs and dilated sphincters; and pulseless, or nearly so; he seems to be dying, and often does die.

# COLLAPSED—COLLECTION.

**C., muscular.** The condition of a sick person in which, without paralysis, there is great loss of the power of moving the muscles, as occurs in continued fevers.

**C. of lung.** See *Pulmonary collapse*.

**C., pulmonary.** See *Pulmonary collapse*.

**Collapsed.** (*L. collabere*, to fall down. *F. ruine*; *l. collasso*; *G. zusammengefallen*.) Fallen down, discouraged, out of heart. Applied to a state of extreme depression, or complete prostration of the vital powers, as occurs in Asiatic cholera.

**Collaps'ion.** A *Collapse*.

**Collap'sus.** See *Collapse*.

This term was also formerly used as a synonym of *Marasmus*.

**C. cor'neæ.** (*G. Collabiren der cornea*.) The sudden flattening of the cornea which in some cases follows the extraction of the lens in the operation of cataract.

**C. pulmon'is.** See *Pulmonary collapse*.

**Collar.** (*Old F. colier*; from *L. collare*, a neck-band, from *collum*, the neck. *F. collier*; *G. Halsband*.) Something worn round the neck. Term for the prothorax, or anterior segment of the trunk of some insects.

The coloured ring of the feathers of the neck of a bird.

The thickened secreting margin of the mantle of testaceous gasteropodous Mollusca.

In Botany, the ring on the stipes of a fungus.

Also, the point of junction of the plumule and radicle of an embryo.

Also, the place of junction of root and stem.

**C.-bone.** (*L. clavícula*; *F. clavicle*; *l. clavcola*; *G. Schlüsselbein*.) Common name for the clavicle.

**C., Mo'rand's.** (*F. collier de Morand*, *sachet antistruemex*.) Equal parts of sal ammoniac, common salt, and burnt sponge, put into a bag in the form of a cravat, and worn round the neck as a cure for goitre; the powder should only be separated from the skin by a piece of muslin, and should be renewed every month.

**C., œsophage'al.** (*Οισοφάγος*, the gullet.) A term applied to the commissural nerve fibres which connect the two anterior ganglia of the nervous system of insects, and which encircle the anterior part of the alimentary tube as with a ring or collar.

**Collard.** Rape, *Brassica napus*.

Also, the *Dracontium fatidum*.

**C., cow.** The *Dracontium fatidum*.

**C., pole'cat.** The *Dracontium fatidum*.

**Colla'rë.** (*L. collare*, a neck-band; from *collaris*, belonging to the *collum*, or neck.) A collar.

**C. misericor'diæ.** (*L. misericordia*, companion.) Name of a bandage for securing the patient during the operation of lithotomy.

**Colla'riate.** (*L. collarium*, a collar. *G. Halsringig*.) With a ring round the neck, as some flowers.

**Colla'rium.** (*L. collarium*.) A neck-band, a collar, a ring, of colour or substance, round the neck.

**C. sal'num.** (*L. sal*, salt.) A bag of hot salt applied around the neck in sore throat.

**Collas.** The tempestuous south-west wind of the Philippine Isles, which occurs just before the winter, and is accompanied by torrents of rain, thick fog, and slight earthquake shocks.

**Collaten'na.** Old name for a certain vulnerary specific preparation. (Paracelsus.)

**Collat'eral.** (*L. cum*, with; *latus*, the side. *F. collateral*; *l. collaterale*; *S. colateral*; *G. seitlich*.) That which accompanies, or runs by the side of.

In Botany, standing side by side; especially applied to ovules, when two are placed side by side in the same follicle or loculus.

**C. ar'teries.** A term applied to branches of arteries which follow more or less the course of the parent vessel.

**C. ar'teries of arm.** See under *Collateralis*.

**C. ar'teries of fin'gers.** The digital arteries of the hand.

**C. ar'teries of toes.** The digital arteries of the foot.

**C. chor'isis.** See *Chorisis*, *collateral*.

**C. circula'tion.** See *Circulation*, *collateral*.

**C. fis'sure.** The *Sulcus occipito-temporalis inferior*.

**C. em'inence.** See *Eminentia collateralis*.

**C. innerva'tion.** A term suggested by S. ricker to indicate the means by which vessels separated from their nerve centres recover their tone; such recovery he attributes to the circumstance that each vascular region is supplied by many vaso-constrictor nerves, which leave the cord at different planes, and which, though not usually playing an important part in effecting the contraction of the vessels, acquire strength when the usual nerve supply is cut off.

**C. sul'cus.** (*G. Collateralfurche*.) The inferior occipito-temporal or inferior temporal sulcus; sometimes also named the inferior primary sulcus. See *Sulcus occipito-temporalis inferior*.

**Collatera'lis.** Same as *Collateral*.

**C. exter'nus.** (*L. externus*, external.) A synonym of the superior profunda artery of the arm.

**C., infe'rior.** (*L. inferior*, lower.) A synonym of the inferior profunda and of the anastomotica arteries of the arm.

**C. inter'nus.** (*L. internus*, internal.) A synonym of the inferior profunda artery of the arm.

**C. mus'cle.** The *Ischio-cavernosus* muscle.

**C. supe'rior.** (*L. superior*, upper.) A synonym of the superior profunda of the arm.

**Collatit'ious.** (*L. collaticius*, from *confero*, to bring or set together.) Contributed of many; collected; brought together.

**C. vis'cera.** (*L. viscus*, the inward parts.)

The stomach and bowels, are so called because they are the general receptacles of the different kinds of aliment.

**Collatit'ium.** (*L. collatitius*, collected here and there.) Old term applied to a kind of diet for the sick, made of chicken roasted and pounded, then introduced into mutton broth, and flavoured with verjuice or lemon juice.

**Collec'ting.** (*L. colligo*, to gather together.) Gathering together.

**C. hairs.** Those hairs which occur on the style or other part of a flower, and which serve to collect the pollen as it is discharged, and so to facilitate fertilisation.

**C. tubes of kid'ney.** The straight tubes of the kidney.

**Collection.** (*L. collectio*, from *colligo*, to gather together. *F. collection*; *l. collezione*; *S. collectio*; *G. Sammlung*, *Ansammlung*.) A

gathering together; that which is gathered together.

**C., purulent.** An abscess.

**Collective.** (L. *collego*.) Gathered into a mass; congregated.

**C. fruits.** In Botany, the aggregation of the fruits of several flowers into one mass, as in the honeysuckle, and the pineapple.

Collective fruits have been divided into the *Conc.* the *Galbalus*, the *Strobile*, the *Sorosis*, and the *Sycomus*.

**College.** (L. *collegium*, from *collega*, a fellow or copartner in office. F. *collège*; G. *Collegium*.) A society or certain assembly of learned and skilful men; a company of them that have a common pursuit; a fraternity or corporation; fellowship in offices.

**Collema'ceæ.** (Κόλλημα, that which is glued together.) A Tribe of Lichens having a very simple gelatinous or cartilaginous thallus, and a nucleus bearing asci; such as the *Nostoc*.

**Collenchyma.** (Κόλλα, glue; ἔγχυμα, an infusion. G. *Leimgewebe*.) A kind of cellular tissue occurring in plants, characterised by the remarkable thickness of the walls of the vesicles, as seen in the cells of the kernel of the date-stone, and very abundantly in the leaf stalks and succulent stems of Angiosperms. It consists of elongated cells without intercellular spaces, but having special masses of thickening matter developed on the walls where neighbouring cells meet.

In Phanerogams, especially Dicotyledons, the hypodermis is mostly developed as collenchyma, the cell walls of which are strongly thickened, and in a high degree capable of swelling at the longitudinal angles when three or four of them meet.

**Collenchymatous.** Consisting of, or resembling, *Collenchyma*.

**C. cells.** The cells of *Collenchyma*.

**C. tis'sue.** Plant tissue consisting of *Collenchyma*.

**Colletet'te.** (F. dim. of *collier*, a collar.) A synonym of the involucre of Umbelliferae.

**Colles, A'braham.** An Irish surgeon, born at Milmount, near Kilkenny, in 1773; died in Dublin in 1843.

**C.'s fas'cia.** The *Fascia*, perineal, superficial.

**C.'s frac'ture.** Fracture of the lower end of the radius, with displacement backwards. Usually the result of a fall on the palm of the hand.

**C.'s law.** A term used by Diday and Hutchinson to express the doctrine, first distinctly taught by Colles, that the mother of a syphilitic infant cannot contract a chancre on the nipple from her own child.

**Colle'sis.** (Κόλλησις, from κολλῶ, to join more firmly.) Old term for agglutination.

Also, a term for the application of the cupping-glasses.

**Collet.** The *Brassica oleracea*.

**Colleter.** (Κόλλα, glue.) Term applied by Haustein to the glandular hairs found on the leaf buds of many plants, which secrete a gummy substance, or one composed of gum, mucilage and drops of balsam, named *Blastocolla*, such as is seen on the enveloping scales of the horse-chestnut; on the stipules which precede the leaves in development, as in *Cunomia*, *Viola*, and *Prunus*; on the ocreæ, as in *Polygonum*; or on the young leaves themselves, as in *Ribes* and *Syringa*.

**Colleter'ial.** Belonging to the *Colleterium*.

**C. glands.** Two gland-like organs in the Genus *Blatta*, which are supposed to secrete the egg-cases.

**Colleterium.** (Κόλλα, glue.) A part of the oviduct of some insects in which the white glutinous matter which attaches the ova to each other is secreted.

**Colletia.** A Genus of the Nat. Order *Rhamnaceæ*.

**C. conzeril'lo**, Bert. Hab. Chili. Wood purgative.

**C. crucia'ta**, Gill and Hook. (L. *cruciatum*, crossed.) Hab. Chili. Wood purgative.

**C. eph'edra**, Vent. The *Retanilla ephedra*.

**C. fe'rox**, Rich. (L. *ferox*, savage.) Hab. Chili. Wood purgative.

**C. obcorda'ta**, Vent. The *Retanilla obcordata*.

**C. spino'sa.** (L. *spinosa*, thorny.) Hab. Brazil, Chili. The tincture of the wood is purgative, and is used in intermittent fevers.

**Colletic.** (Κόλλητικός, fitted for glueing. F. *collétique*; G. *verleimend*.) Of the nature of glue; gluey.

Applied to remedies used to unite the edges of wounds.

**Colletin.** (Κόλλα, glue.) A substance obtained from the *Colletia spinosa*.

**Collic.** (Κόλλα.) Relating to, or resembling, glue or gelatine.

**C. ac'id.**  $C_6H_4O_2$ . One of the products of the oxidation of albuminoid and gelatinous substances by means of bichromate of potash and dilute sulphuric acid. It occurs in radiated crystals, with a strongly acid taste, very slightly soluble in water, fusible at 97° C. (206.6° F.), and burning with a smoky flame.

**C. aldehyde.**  $C_6H_4O$ . An oily fluid, with an aromatic odour, obtained in the oxidation of albumin.

**Collicia'æ.** (L. *collicia*, channels for conducting water; from *col*, for *cum*, with; *liquor*, to flow.) Old term, used by Nic. Steno, *de Musc. et Gland*, 38, for the lachrymal ducts that convey the tears from the puncta lachrymalia to the cavity of the nose.

**Collic'uli.** Plural of *Colliculus*.

**C. anterio'res.** (L. *anterior*, that is before.) The *Nates*, or anterior pair of the *Corpora quadrigemina*.

**C. posterio'res.** (L. *posterior*, that is behind.) The *Testes*, or posterior pair of the *Corpora quadrigemina*.

**C. vaginæ.** (L. *vagina*.) The nymphæ.

**Colliculus.** (L. dim. of *collis*, a hill.) A little hill or eminence.

**C. bul'bi.** (L. *bulbus*, a bulb.) A portion of erectile tissue surrounding the urethra as it enters the bulb, a thin layer of which passes backwards around the membranous and the prostatic portion of the urethra to the neck of the bladder, lying closely beneath the mucous membrane.

**C. bul'bi ure'thræ.** Same as *C. bulbi*.

**C. ca'veæ posterio'ris ventriculo'rum latera'lium.** (L. *cavea*, a hollow place; *posterior*, hinder; *ventriculus*, a ventricle; *lateralis*, belonging to the side.) The *Hippocampus minor*.

**C. ner'vi æthmoida'lis.** A name for the corpus striatum.

**C. ner'vi opt'ici.** A name for the optic thalamus.

Also (*G. Schnervpapille*), the papilla of the optic nerve.

**C. semina'lis.** (*L. seminalis*, belonging to seed.) The *Caput gallinaginis*, or *Feru montanum*.

**Collidin.**  $C_8H_{11}N$ . An alkaloid found, mixed with aniline, when Dippel's animal oil is heated to  $171^{\circ}C.$  ( $339.8^{\circ}F.$ ) or a little above. It is colourless, of an agreeable and penetrating odour and very poisonous. It is also found in shale, and coal-tar, and in tobacco smoke.

Also, called *Xyloidin*.

**Collier.** A worker in *Coal*.

**C.'s lung.** The condition of lung called *Anthracosis pulmonum*.

**Collifer'ous.** (*L. collum*; *fero*, to bear.) Possessed of, or bearing, a neck.

**Colliform.** (*L. collum*; *forma*, shape. *G. keilsförmig*.) Shaped like a neck.

**Colligamen't.** (*L. colligo*, to bind together. *F. ligament*; *G. Band*.) A binding or knitting together. Applied as a term for a ligament.

**Colligamentum.** A synonym of *Colligamen't*.

**Colligatio.** (*L. colligatio*, a binding together.) Articulation by ligament. Same as *Syndesmosis*.

**Colligua'ya.** A Genus of the Nat. Order *Euphorbiaceæ*.

**C. odorif'era**, Molina. (*L. odor*, a sweet smell; *fero*, to bear.) Hab. Chili. Wood smells of roses; juice acrid, irritant, poisonous.

**Collig.** (*Kόλλα*.) A term applied to absolutely pure gelatin.

**Collin'ic acid.** Same as *Collie acid*.

**Collinsonia.** (*Collinson*, an American botanist.) A Genus of the Nat. Order *Labiatae*.

**C. anisa'ta**, Pursh. (*L. anisum*, anise.) Hab. North America. Properties as *C. canadensis*.

**C. canadensis**, Linn. (*Canada*. *F. guerit tout*, *baum de cheval*.) Canadian snake root, horse weed, horse balm. Hab. United States. Used as a diuretic in dropsy and bladder diseases, and as a diaphoretic in rheumatism, as a hot fomentation in colic and local pains, and in the skin eruption produced by the poisonous sumach, *Rhus venenata*; the bruised leaves are applied to wounds and contusions. It has been used as an adulterant of serpentine root.

**C. decussa'ta.** (*L. decurro*, to divide crosswise.) The *C. canadensis*.

**C. præ'cox.** (*L. præcox*, premature.) Probably the *C. canadensis*.

**C. sca'bra**, Pers. (*L. scaber*, rough.) The *C. scabriuscula*.

**C. scabrius'cula**, Ait. (*L. dim.* of *scaber*.) Properties as *C. canadensis*.

**Colliou're.** France; Département Pyrénées-Orientales. A bicarbonated chalybeate mineral water of  $17^{\circ}C.$  ( $63^{\circ}F.$ ) temp. Used in anemia and chlorosis.

**Colliquamen'tum.** (*L. colliquesco*, to become liquid.) A term, used by Harvey, for the earliest embryo, from its want of consistence.

The substance resulting from melting.

**Colliqua'tio.** (*L. colliquesco*, to become liquid. *F. colligation*; *G. Auflösung, Schmelzung*.) A melting or dissolving. Applied formerly to excessive excretions, by which a wasting is produced.

**Colliqua'tion.** (*L. colliquesco*, to become liquid. *Συντηξίς*; *F. colligation*; *I. colliqua-*

*zione*; *S. colienarion*; *G. Zusammenschmelzen*.) The melting down or solution of solid parts, as in an abscess; the excessive fluidification of the humours of the body, especially the blood.

**Colliquative.** (*L. colliquesco*, to become liquid. *F. colligatif*; *G. schmelzend, zerflüssend*.) Applied to any excessive discharge or evacuation, because there is a melting, as it were, or wasting away of the body in consequence of it.

**C. diarrhœ'a.** See *Diarrhœa*, *colliquative*.

**C. fe'ver.** See *Fever*, *colliquative*.

**C. perspiration.** See *Sweat*, *colliquative*.

**C. sweats.** See *Sweat*, *colliquative*.

**Colliquefaction.** (*L. colliquefactus*, made liquid.) The melting of substances together so as to produce incorporation.

**Colliquescent.** Same as *Colliquative*.

**Collisalla.** A synonym of *Calisaya*.

**Collisio.** (*L. collido*, to knock together. *F. collision*; *G. Zusammenstoss*.) Old term for a contusion; a collision.

**Collisus.** (*L. collido*, to knock together. *F. contondant*; *G. zerstossen*.) Beaten or bruised; confused. Applied to wounds that have no breach of the integuments.

**Collix.** (*Kόλλαξ*, a loaf of coarse bread. *F. losange, pastille*.) Old name for a pistil, troche, or lozenge; also, a kind of round loaf of bread.

**Collocalia.** A Genus of the Order *Falcones*, Class *Aves*.

**C. esculen'ta**, Gray. (*L. esculentus*, eatable. *F. calangane*.) The edible-nest swallow. The nest is made of algae and a gelatinous secretion from the sublingual glands; it is eaten as a great luxury in China.

**Collocys'tis.** (*Kόλλα*, glue; *κύστις*, a bladder.) A gelatinous capsule for the enclosure of a drug, to facilitate the swallowing of it or to avoid its taste.

**Colloides.** (*Κολλώδης*, from *κόλλα*, glue; *είδος*, likeness. *G. leimartig*.) Gluey, or full of glue; glutinous.

**Colloidion.** See *Collodium*.

**C. castor oil.** (*F. collodium ricinè*.) This is composed of 30 grms. of collodium, 1.50 grms. of Venice turpentine, and 50 centigrammes of castor oil.

**Collo'dium**, B. Ph. (*Κολλώδης*, like glue, viscous.) Collodion. Ether 36 fluid ounces are mixed with rectified spirit 12 fluid ounces, and pyroxilin 1 ounce, added; set aside for a few days, and decant the clear liquid.

The U.S. Ph. orders pyroxilin 200 grains, stronger ether 12.5 fluid ounces, and stronger alcohol 3.5 fluid ounces, to be treated in the same way.

In Germany, collodium is prepared by dissolving one part of gun cotton in 18 parts of ether and 3 parts of highly rectified spirit of wine.

It is a thick, syrupy fluid. Painted on the skin or exposed to the air, the ether evaporates, and a thin membrane, resembling goldbeater's skin, is left, which adheres firmly to the surface, and, by its contraction, exercises, as it becomes solid, considerable pressure. It has been used as an impermeable dressing to wounds, and has been applied in cases of erysipelas, burns, frost-bites, mastitis, inversion of the eyelids, as a protective, and as a contracting agent.

An old term of Paracelsus for some gluey substance, but what, is not ascertained.

**C. abortivum**, Dujardin-Beaumez. (L. *abortivus*, producing abortion. F. *collodion abortif des pustules varioliques*.) Collodion 15 grms., castor oil 30 grms., bichloride of mercury .30 grm. To be painted on each variolous pustule.

**C. anæstheticum**, Michaut. (Αν. neg.; ἀναισθητικός, belonging to sensation.) Hydride of amyl 30 grms., collodion 30 grms., aconitin .05 grm., veratrin .30 grms.

**C. cantharida le**. The same as *C. cum cantharide*.

**C. cantharida'tum**, G. Ph. It forms a convenient blistering agent.

**C. carbolicum**. A mixture of equal parts of carbolic acid and collodion. A gelatinous substance employed as a means of relieving toothache, a small quantity being introduced on cotton wool into the hollow of the tooth.

**C. causticum**. (L. *causticus*, burning.) Bichloride of mercury one part, dissolved in collodion nine parts; it is employed for the destruction of warts, superficial naevi, lupus-nodules, and obstinate eczema. It produces a scab, which falls off in the course of a week.

**C. corrosivum**. (L. *corrosivus*, corroding.) The same as *C. causticum*.

**C. crotona'tum**. This contains equal parts of collodion and of croton oil, and, when painted over the skin, produces vesicles and pustules.

**C. cum cantharide**, U.S. Ph. (L. *cum*, with; *cantharides*. F. *collodion cantharidè*; G. *bläsensichendes Collodium*.) Eight troy ounces of powdered cantharides are introduced and firmly packed into a cylindrical percolator, and 15 fluid ounces of stronger ether are passed through; this is removed, and the percolation is continued till half a pint of stronger alcohol is passed through; this percolate is set aside in a warm place until it has spontaneously evaporated to a fluid ounce, when it is mixed with the ether percolate, then pyroxylon 100 grs., Canada turpentine 320 grs., and castor oil 160 grs., are added and agitated till they are dissolved. Used as a blistering agent.

**C. elas'ticum**. The same as *C. flexibile*.

**C. epispas'ticum**. (Επισπαστικός, drawing to one's self.) Ethereal oil of mustard 4, strong acetic acid gtt. 20, collodion 25 parts. A rubefacient and vesicant.

**C. escharot'icum**. (Εσχάρα, a scab caused by burning.) The same as *C. causticum*.

**C. ferrugino'sum**. (L. *ferruginosus*, full of iron.) The same as *C. hæmostaticum*.

**C. flexib'ile**, B. Ph., U.S. Ph. (L. *flexibilis*, pliable. F. *collodion flexible*; G. *elastisches Collodium*.) A mixture of collodion with from one to two per cent. of castor oil.

Collodion 6 fluid oz., Canada balsam 120 grs., castor oil a fluid drachm; mix, and keep in a well-corked bottle. When painted on the skin it contracts very much less than ordinary collodion, as it is elastic and flexible.

**C. glycerina'tum**. (Glycerin.) The same as *C. lentescens*.

**C. hæmostat'icum**. (Αἷμα, blood; στατός, a placing.) This contains crystals of perchloride of iron 1 part, collodion 6.

**C. hæmostat'icum**, Favéi. This contains collodion 100 parts, carbolic acid 10, benzoic acid 7, tannic acid 5.

**C. ioda'tum elas'ticum**. (Iodine.) Io-

dine 2 parts, castor oil 1, Venetian turpentine 1, collodion 60.

**C. iodoformia'tum**. (Iodoform.) This contains collodion 25 parts, and iodoform 1 part.

**C. lentes'cens**. (L. *lentesco*, to become adhesive.) A mixture of collodion with 1.5 per cent. of glycerin.

**C. mercuria'le**. (L. *mercurialis*, belonging to mercury.) Corrosive sublimate 1 part, Venetian turpentine 3, collodion 60. Employed as an abortive in shingles, and for the removal of pigment spots.

**C. mercuria'le ioda'tum**. (Iodine.) Hydrargyri iodidum 3 parts, potassii iodidum 3, alcohol 64, ether 64, colloxylin in a sufficient quantity.

**C. morphina'tum**. (Morphia.) Morphia hydrochlorate 1 part, collodion 30. Applied to the painful part in neuralgia and rheumatism.

**C. phenyla'tum**. (Phenyl.) The same as *C. carbolicum*.

**C. plum'bicum**. (L. *plumbum*, lead.) The same as *C. saturninum*.

**C. ricina'tum**. (L. *ricinus*, the castor-oil plant.) The same as *C. flexibile*.

**C. saturni'num**. (L. *Saturnus*, Saturn; also, lead.) Emplastrum plumbi simplex, alcohol, ana 10 parts, ether 40; dissolve, strain, and add collodion 50. This requires shaking before use.

**C. sinapina'tum**. (L. *sinapis*, mustard.) The same as *C. epispasticum*.

**C. stypt'icum**. (L. *stypticus*, astringent.) Tannic acid 2 parts, alcohol 5, collodion, glycerin, of each 20, tincture of benzoin 2 parts.

**C. tannic'um**. (Tannic acid.) The same as *C. stypticum*.

**C. terebinthina'tum**. (L. *terebinthus*, the turpentine tree.) A mixture of collodion with a small percentage of turpentine.

**C. vesicans**. (L. *vesica*, a bladder.) A solution of gun-cotton, in ether cantharidatum or liquor vesicans, prepared by extraction of 8 parts of cantharides with 2 parts of glacial acetic acid and 28 parts of ether. If painted three or four times upon the skin, vesication follows in the course of from six to eight hours.

**Collagen**. Properly *Collagen*.

**Colloid**. (Κόλλα, glue; εἶδος, likeness.) Resembling glue. See also *Colloids*.

The homogeneous or slightly granular gelatinous substance formed in the colloid degeneration; it is soluble in water, insoluble in alcohol, ether, and caustic alkalies, is not changed by acetic or chromic acids, nor coloured blue by iodine and sulphuric acid. It differs from mucin in that the latter is precipitated by acetic acid.

A similar substance is found normally in the thyroid gland; and it has been formed artificially by the action of common salt on the serum of blood.

**C. can'cer**. See *Cancer, colloid*.

**C. cor'puscle**. Same as *C. sphere*.

**C. crack'le**. (G. *Colloidknarren*.) A term applied to a peculiar crackling sensation which may be felt by the fingers and heard through the stethoscope, in certain ovarian cysts having thick contents.

**C. cyst**. (Κύστις, a bag.) Term applied to colloid tissue surrounded by a connective-tissue investment.

**C. cysts**. See *Cysts, colloid*.

**C. degenera'tion**. (L. *degenero*, to depart from its race.) A form of degeneration, closely

allied to mucoid degeneration, involving especially the cells of the tissue affected, which are changed into a colourless or yellowish transparent, jelly-like material, called *Colloid*. This is seen first as a small mass in the cells, which, increasing in amount, pushes the nucleus on one side, and, growing, destroys the cell, coalesces with a neighbouring mass which has arisen in the same way, and thus forming larger and larger masses, destroys, or causes to atrophy, the intercellular substance, and assumes in consequence a crystal appearance. This change occurs in many tumours, as in cancer, in goitre, in the lymphatic glands of old people, in the choroid plexus, the skin, and other structures.

A condition, which has been thought to be very similar to colloid degeneration, is seen in the muscles in typhoid fever, and has been called vitreous degeneration.

It is also thought by some that many so-called fibrinous casts of the urinary tubules consist of colloid.

**C. metamorphosis.** (G. *Kolloidumwandlung*.) Same as *C. degeneration*.

**C. soft enings.** A term applied to a class of degenerative changes of tissue, which are characterised by a special form of softening; they have been divided into *C. degeneration* and *Macoid degeneration*.

**C. sphere.** (G. *Kolloidkugel*.) A cell which has undergone colloid degeneration, appearing as a colourless, transparent, sometimes concentrically-marked, globule, with an oily lustre. Some contend that these spheres are a modified protoplasm, but not yet true colloid.

It is said that some of the bodies called physalides by Virchow are colloid spheres.

**C. styp'tic.** See *Styp'tic colloid*.

**Colloid'al.** (Κόλλα, glue; εἶδος, form.) Term applied to substances which do not diffuse through animal or vegetable membrane. See *Colloids*.

Also, to growths presenting the characters of *Colloid*.

**Colloidal'ity.** The property exhibited by the bodies called *Colloids*.

**Colloid'in.**  $C_9H_{15}NO_6$ . A translucent gelatinous substance found in ovarian cysts. It is like a tremulous jelly, is precipitated by strong alcohol, not coagulable by heat, and not dialysable. It appears to be intermediate between albuminoid substances and tyrosin.

**Colloids.** (Κόλλα, glue; εἶδος, like.) Term applied by Graham to substances that have little or no tendency to diffuse through animal membranes, or vegetable parchment, in opposition to crystalloids, which readily diffuse. Colloids have little tendency to crystallise, are inert in their chemical relations, but are highly changeable. Gelatine may be taken as the type of the colloidal condition of matter, but other examples are albumin, starch, dextrin, gum, caramel, taurin, hydrated silicic acid, hydrated alumina. The plastic elements of the animal body are found in this class. They possess energy, or represent a dynamical state of matter.

**Collo'ma.** (Κόλλα, glue.) A term for the gelatinous substance contained in colloid cysts.

**Collone'ma.** (Κόλλα, glue; ῥῆμα, tissue.) Term originally employed by J. Müller to designate what is now termed myxoma, and still sometimes used in the case of soft, gelatinous, or succulent, semitransparent, connective-tissue tu-

mours, such, for example, as soft fibroma mol-luscum.

**Colloph'ora.** (Κόλλα; φορέω, to bear.) A Genus of the Nat. Order *Apocynaceae*.

**C. utilis.** (L. *utilis*, useful.) A plant growing in South America, which yields a kind of caoutchouc.

**Colostrum.** See *Colostrum*.

**Collour'ion.** (Κολούριον.) Same as *Collyrium*.

**Collox'ylin.** (Κόλλα; ξύλινος, of cotton.)  $C_{15}H_{23}(NO_2)_5O_{15}$ . One of three substances said to be produced in the manufacture of gun cotton, the one preferred for the manufacture of colloid-ion. It is 64 per cent. heavier than the cotton from which it is made; is soluble in ether and glacial acetic acid. See *Gun cotton*.

**Collox'ylon.** Same as *Colloxylin*.

**Collum.** (L. *collum*, the neck. F. *col*, or *cou*; G. *Hals*.) The neck, or, more particularly, the fore part of the neck.

Applied also to any part which, from its situation, form, or connection, may be supposed to resemble a neck.

In Botany, the point of union of radicle and plumule, or root and stem.

**C. astrag'ali.** The constricted portion behind the head of the astragalus.

**C. auriculæ sinis'træ.** (L. *auricula*; *sinister*, left.) A slight constriction observed at the point where the left auricle of the heart commences.

**C. cos'tæ.** (L. *costa*, a rib. G. *Rippen-hals*.) The constricted portion of a rib which intervenes between the capitulum and the tubercle. In the middle ribs it is about an inch in length, and rests upon the transverse process of the lower of the two vertebrae, with which the head articulates; anteriorly it is smooth, posteriorly rough, for the attachment of the middle costo-transverse ligament; the superior border presents a crest for the anterior costo-transverse ligament.

**C. den'tis.** (L. *dens*, a tooth. G. *Zahn-hals*.) That part of a tooth where the enamel ceases, and the cementum commences, and which is closely invested by the gum.

**C. fem'oris.** (L. *femur*, the thigh-bone. G. *Oberschenkelinhals*.) The constricted portion of the femur which intervenes between the head and the trochanters. It is directed obliquely from above downwards, and is somewhat flattened from before backwards. Its upper border is about 4 cm. its lower about 2 cm. long. The neck of the femur.

**C. fib'ulæ.** (L. *fibula*, a clasp.) The thin part of the fibula which is situated just below the upper extremity, or head.

**C. glan'dis.** (L. *glans*, a nut. G. *Hals der Eichel*.) The furrow which is situated behind the corona glandis of the penis or clitoris.

**C. hu'meri.** (L. *humerus*, the upper bone of the arm.) See *Collum humeri anatomicum*, *chirurgicum*, and *terum*.

**C. hu'meri anatomicum.** (L. *anatomicus*, anatomical; *humerus*, the upper bone of the arm.) The circular constriction just beyond the articular surface of the humerus, which forms a short neck for the head of that bone; the anatomical neck of the humerus.

**C. hu'meri chirur'gicum.** (L. *chirurgicus*, surgical; *humerus*, the upper bone of the arm.) This term is applied to the upper end of

the shaft of the humerus just below the tuberosities.

**C. humeri verum.** (L. *humerus*; *verus*, true.) Krause distinguishes this from the anatomical and from the surgical neck of the humerus, and describes it as appearing in persons of from 10 to 20 years of age as a rough prismatic projection of the diaphysis of the humerus, which is about 1 cm. in length, and is covered with a layer of cartilage 2 mm. in thickness. It projects somewhat backwards. Its sagittal diameter is about 28 mm., the transverse about 12 mm.

**C. mallei.** (L. *malleus*, a hammer.) The part of the malleus which supports the head, and is situated between it and the manubrium.

**C. mandibulæ.** (L. *mandibula*, a jaw.) The constricted portion of the ramus of the lower jaw, just below the condyloid process. It is flattened from before to behind, and strengthened by anterior and lateral buttresses from the condyloid process.

**C. maxillæ inferioris.** (L. *maxilla*, the jaw; *inferior*, lower.) Same as *C. mandibulæ*.

**C. obstipum.** (L. *obstipus*, bent.) A synonym of wry neck.

**C. ossis capitati.** (L. *os*; *capitatus*, having a head.) The *C. ossis magni*; *Os capitatum* being a synonym of *Os magnum*.

**C. ossis magni.** (L. *os*, a bone; *magnus*, great.) The constricted portion, below the head, of the *os magnum* of the wrist.

**C. pedis.** (L. *pes*, a foot.) The instep.

**C. processus condyloidei.** (L. *processus*, a projection; *κονδύλος*, a knuckle; *είδος*, likeness.) The constricted portion of the ramus of the lower jaw which supports the process which articulates with the temporal bone.

**C. radii.** (L. *radius*, a rod, the bone of that name.) The thin cylindrical portion of the upper end of the radius which supports the head, and intervenes between it and the tubercle. It gives attachment to part of the supinator brevis.

**C. scapula.** (L. *scapula*, the shoulder-blade.) The constricted portion of the scapula, which supports the surface articulating with the humerus.

**C. stapedis.** (Mod. L. *stapes*, a stirrup.) The short, flattened, and slightly narrower portion of the stapes, which supports the surface articulating with the incus, and is situated between this and the crura of the stapes.

**C. tali.** (L. *talus*, the ankle-bone.) The constricted part of the astragalus or talus, which is immediately behind the surface articulating with the scaphoid bone, and between it and the articular surface for the *os calcis*.

**C. uteri.** (L. *uterus*, the womb.) The same as *Cervix uteri*.

**C. vesicæ.** (L. *vesica*, a bladder.) The neck of the urinary bladder; the constricted portion continuous with the ureter. In the male, it is supported by the prostate gland, and is surrounded by much circular muscular tissue, the sphincter vesicæ.

**C. vesicæ felleæ.** (L. *vesica*, the bladder; *felleus*, of gall. G. *Gallenblasenhals*.) The constricted portion of the gall-bladder which is directed posteriorly, and to the right, and is continuous, on the one hand, with the fundus, and, on the other, with the duct of the gall-bladder.

**Collurium.** (Κολλύριον.) Same as *Collyrium*.

**Collutio.** (L. *collutio*, from *colluo*, to

wash.) A washing. Applied especially to gargling the mouth. Also, a lotion.

**Collutio.** Same as *Collutio*.

**Collutorium.** (L. *colluo*, to wash. F. *collutoire*; G. *Mundwässer*.) Term formerly used for a gargle or mouth wash.

**C. adstringens.** (L. *adstringo*, to draw together.) An old name of *Mel boracis*.

**Colluvies.** (L. *colluvies*, a collection of filth.) Excrement.

Also, the foul discharge from an ulcer.

**C. gastrica.** (Γαστήρ, the belly.) A disordered condition of the digestive organs with a foul tongue, nausea, and vomiting. The condition popularly called a bilious attack.

**Collyra.** (Κολλύρα, a small loaf or bun given to children.) Term for the bump, knob, or roundish prominent swelling which arises after a blow, from its resemblance.

**Collyria.** Plural of *Collyrium*.

**C. antiseptica.** (Ἀντί, against; σήπωμα, to putrefy.) A series of collyria proposed by Fieuzal for the treatment of the various forms of keratitis and conjunctivitis. They consist of carbolic acid 1 part to water 250 parts, as a frequent lotion in all cases of conjunctival hyperæmia, and catarrhal, granular, and purulent conjunctivitis, with the addition of neutral sulphate of eserine in pustular, vesicular, and ulcerous conjunctivitis, and in corneal abscess; and of atropine where there is concomitant iritis.

**C. liquida.** (L. *liquidus*, fluid.) Applications to the eye, consisting of solutions of metallic salts, distilled waters, infusions or decoctions of plants, to which various substances are added.

**C. mollia.** (L. *mollis*, soft. F. *collyres mous*.) Ointments or pomades applied to the eye.

**C. sicca.** (L. *siccus*, dry. F. *collyres secs*.) Powders which are blown into the eye by means of a quill, or dusted over the surface of the conjunctiva with a brush.

**Collyrium.** (Κολλύριον, an eye-salve; dim. of *κολλάω*, a small loaf given to children. F. *collyre*.) Term formerly applied, from the shape in which it was made up, to a dry medicine of a long, round form, composed of juices, liquors, seeds, fruits, and metals cohering together, and kept ready for use. They were introduced into the uterus, anus, ears, and the nose, and from their form were called glands, tents, and pellets, according to Rhodius, ad *Scribon. Largus*, n. 142.

Also, an eye-salve.

The ancients also used the term with the signification in which it is generally understood at this day as a fluid application, or wash, for the eyes.

**C. aluminis.** (L. *alumen*, alum.) Alum 1 part, water or rose water 60 parts.

**C. aluminis plumbic.** (F. *eau de la Duchesse de Lamballe*.) Rose water 125 parts, plantain water 125, alum 1, lead acetate 0.5.

**C. ammonis.** (F. *collyre d'Ammon*.) This is composed of zinc cyanide, gum arabic, melissa water, and laudanum.

**C. antisepticum.** See *Collyria antiseptica*.

**C. atropini.** A solution of sulphate of atropine in water, in proportion varying from one eighth of a grain to eight grains per ounce.

**C. cum chlorure to hydrargyroso.** Fr. Codex. (F. *collyre sec an calomel*.) Equal parts of calomel and sugar, very finely powdered.

**C. cum lapide divino.** Fr. Codex. (F.

# COLLYRIUM.

*collyre avec la pierre divine.*) Lapis divinus 4 parts, distilled water 1000; dissolve and filter.

**C., cum sulphate zincico.** (Fr. Codex.) (F. *collyre avec le sulfate de zinc.*) Sulphate of zinc 15 parts, rose water 10,000; dissolve and filter.

**C., opiatum.** (Fr. Codex.) (F. *collyre opiacé.*) Extract of opium 1 part, dissolved in rose water 500 parts, and filtered.

**Collyrium.** See *Collyrium*.

**C., Bates's.** Sulphate of copper 8 grs., Armenian bole 8 grs., camphor 2 grs., boiling water 8 oz.; mix and filter.

**C., Baudelocque's antiscrofulous.** Extract of suet 30 parts, vinegar 575, extract of red roses 1·2 parts.

**C., Beer's.** (F. *collyre de Beer.*) This is composed of lead acetate, rose water, and rosemary water.

**C., Ben'edict's.** (F. *collyre de Bénédict.*) This is a solution of extract of opium in wild pansy water.

**C., Børhaave's.** (F. *collyre de Boerhaave.*) This contains calomel, aloes, and sugar candy.

**C., Brun's.** (F. *collyre de Brun.*) Aloes 4 grs., white wine 48 grms., tincture of saffron 50 drops, and rose water 48 grms. Used as an application to ulcers of the eyelids.

**C., Erhard's.** (F. *collyre d'Erhard.*) This is a solution of borax in elder-flower water.

**C., Fernandez's.** (F. *collyre de Fernandez.*) A mixture of calomel, aloes, and camphor, with turpentine and yolk of egg.

**C., Fischer's.** (F. *collyre de Fischer.*) A solution of sulphate of zinc and sal ammoniac in a mixture of camphorated alcohol and saffron water.

**C., Gimbernats's.** (F. *collyre de Gimbernats.*) A solution of 5 centigrammes of caustic potash in 30 grammes of water.

**C., Gräfe's.** (F. *collyre de Gräfe.*) A solution of sulphate of zinc in rose water, to which a little vinum opii and mucilage have been added.

**C., Helvetius's.** Copper sulphate and alum sulphate in equal parts, fused together, with the addition of camphor to the melted mass, the whole dissolved in water.

**C., Himly's.** (F. *collyre d'Himly.*) A solution of from 1 to 3 parts of potassium carbonate in 300 of water.

**C., Hufeland's.** (F. *collyre de Hufeland.*) A mixture of 4 parts of tincture of stramonium in 90 parts of water.

**C., Jungken's.** (F. *collyre de Jungken.*) A mixture of calomel, sugar, and opium.

**C., Krimer's.** (F. *collyre de Krimer.*) Rose water containing a little hydrochloric acid and mucilage.

**C., Lanfranc's.** (F. *collyre de Lanfranc.*) This is prepared with 250 parts of white wine, 45 of plantain water and of rose water, 4 of yellow sulphide of arsenic, 2 of green oxide of copper, 0·75 of myrrh, and 0·75 parts of aloes. For use as a collyrium it requires to be largely diluted, but it was in use as an escharotic to apply to fungous and indolent ulcers.

**C., Mojon's barytic.** Barium chloride 0·6, distilled water 30, quince mucilage 8·0, laudanum of Rousseau 2 parts.

**C., Négrier's antiscrofulous.** Decoction of walnut 200 parts, laudanum of Rousseau 0·1, extract of belladonna 0·1 part.

**C., Newman's.** (F. *collyre de Newman.*) An acetic infusion of arnica saturated with ammonium carbonate.

**C., Odhe'lius's.** (*Othelius*, a Swedish physician.) A solution of sulphate of copper and of sulphate of zinc in a decoction of rue, with a little camphorated spirits of wine.

**C., Plenck's.** (F. *collyre de Plenck.*) A solution of borax and sugar in rose water.

**C., Richter's.** (F. *collyre de Richter.*) A mixture of white of egg and rose water beaten into a froth.

**C., Rust's.** (F. *collyre de Rust.*) A mixture of liquor plumbi, elder water, and tincture of opium.

**C., Scarpa's blue.** (F. *collyre azuré.*) Copper acetate 0·2, sal ammoniac 2·4, lime water 250 parts.

**C., Stark's.** (F. *collyre de Stark.*) A solution of lead acetate in rose water.

**C., Stjerncronen'se.** (F. *collyre de Stjerncronen.*) Same as the *C., Odhe'lius*.

**C., Tannermann's.** (F. *collyre de Tannermann.*) A solution of 4 grammes of lead acetate in 62 grammes of water, to which are added 2·68 grammes of liquor potassæ.

**C., Ten'que's.** (F. *collyre de Tenque.*) A solution of acetate of lead and sal ammoniac in rose water.

**Colmenier.** The sweet-william, *Dianthus barbatus*.

**Coloboma.** (Κολοβώμα, to mutilate. F. *colobome*; G. *Verstümmelung*.) A thing cut shorter, or mutilated; whatever is deficient of a member. Applied to a state of the iris, or of the eyelids, in which they are cleft, or have a fissure, congenital or traumatic.

**C. choroidæ.** (*Choroid*. F. *colobome de la choroïde*; G. *colobum der choroïdea*.) A congenital affection resulting from imperfect closure of the fissure which is naturally present in the inferior segment of the eye at an early period of development. Its extent varies, sometimes terminating in front of the optic disc, at others embracing the disc. The defect is usually bilateral, or if on one side only the left is most frequently affected; vision is impaired, especially in that part of the field which corresponds to the coloboma. Under the ophthalmoscope the sclerotic at this part presents a brilliant white, greenish, or bluish reflex; a few vessels meander over the surface. It is often associated with microphthalmus, pyramidal cataract, and hypermetropia.

**C. iridis.** (*Iris*. F. *colobome de l'iris*; G. *Spalte der Iris*.) Cleft of the iris. It may result from an accident, or be made by the hand of the surgeon; when congenital it is usually at the lower part, and ophthalmoscopic examination commonly shows that the choroid, as well as the iris, is deficient in the inferior segment of the eye. The malformation results from imperfect closure of the fissure present in the eye of the fetus at an early period of development. The vision is usually absent in the upper part of the field of vision, and defective elsewhere, showing that the retina is not properly developed.

**C. iridis acquisitum.** (L. *iris*, a rainbow; *acquisitus*, part. *acquirō*, to acquire.) Fissure of the iris consequent on lesion of the iris by accident or design.

**C. iridis congenitum.** (L. *iris*, a rainbow; *congenitus*, born together with. F. *colobome de l'iris congénitale*; G. *angeborenes Iris*.)

## COLOEOSIS—COLOCYNTHIS

*coloboma*.) Coloboma of the iris consequent on imperfect development of the eye, and perceptible at birth.

**C. len'tis.** (*L. lens*, a lentil. *G. Linsen-colobom*.) A depression or incurvation of the border of the lens, which has been observed as an independent condition, but which is usually coincident with coloboma of the choroid tunic.

**C. nervi optici.** (*L. nervus*, a nerve; *ὄψις*, the eye.) A fissure of the optic nerve consequent on imperfect development of the eye. One case has been recorded by Becker.

**C. oculi totale.** (*L. oculus*, eye; *totus*, the whole.) A condition of imperfect development of the eye in which the fissure at the lower part, originally present, does not close up, and the place of the retina, choroid, and sclerotic is taken by connective tissue.

**C. of retina.** Defective development of the retina in the part corresponding to the fatal fissure of the eye.

**C. palpebræ.** (*L. palpebra*, the eyelid. *G. Augenliderspalt*.) A vertical fissure of the upper or lower eyelid. It results sometimes from a defect of development and sometimes from injury.

**C. palpebræ traumaticum.** (*L. palpebra*, the eyelid; *τραῦμα*, a wound. *G. traumatisches Augenlidercolobom*.) A vertical fissure of the upper or lower lid consequent on a wound. When this occurs in the lower lid the overflow of the tears is apt to produce erythema and eczema of the cheek.

**Colobosis.** (*Κολόβωσις*.) Mutilation.

**Colocasia.** (*Κολοκασία*.) A genus of the Nat. Order *Araceæ*. The plants of this genus are natives of hot climates, and are cultivated for their roots, which are eaten under the names of cocca roots, eddoes, and yams.

Also, a name for the *Nymphæa nelumbo*, or Egyptian bean.

**C. antiquorum**, Schott. (*L. antiqui*, the ancients.) The *Arum colocasia*, Linn.

**C. esculenta**, Schott. The *Arum esculentum*.

**C. himalaensis.** (*Himalaya*.) A species inhabiting the Himalayas, the combs of which, roasted or boiled, form the principal portion of the food of the hill people.

**C. indicum.** The *Arum indicum*.

**C. macrorrhiza**, Schott. (*Μακρός*, large; *ρίζα*, a root.) A plant cultivated in the South Sea Islands. The combs, roasted or boiled, are eaten under the name of Tara, or Kopeh roots. The *Arum montanum*.

**C. mucronata.** (*L. mucronatus*, pointed.) Corn used as food when cooked.

**Colocente sis.** (*Κόλον*, the colon; *κέντησις*, a pricking.) The operation of puncturing the colon, as for distension with gas.

**Colocholosis.** (*Κόλον*; *χολος*, bile.) Bilious dysentery.

**Colocleisis.** (*Κόλον*; *κλείσις*, a closing.) Occlusion of the colon.

**Colocynth.** (*Κολοκυνθίς*, the colocynth and its fruit. *F. coloquinte*; *L. S.*, and *Port. coloquintida*; *Dan. colouquinder*; *Dutch colokwint*; *Swed. coloukwint*; *Ar. Pers. alhandhal, handal, hanzil*; *Beng. makrhal*; *Dek. indrawinkaphul*; *Turk. adji elma*.) The fruit of the *Citrullus colocynthis*. It is a gourd, the size and shape of an orange, having a smooth, marbled, green surface; when dried it is of a brown colour. As usually seen, it is peeled and dried, and then

forms light, pithy, nearly white balls, containing the dried internal pith, with from 200 to 300 dark-brown seeds embedded in it in vertical rows, attached to three thick parietal placentæ. The pith is inodorous, intensely bitter. The seeds are of a flattened ovoid, 3-10ths of an inch long, 2-10ths of an inch broad, not bordered. Testa hard, thick; surface granular, with two furrows at each side of its more pointed end. A hundred parts of the medulla contains 4.25 bitter fatty oil, 13.25 bitter hard resin, 14.41 bitter extractive, 10 non-bitter extractive, 9.5 gum, 3 mucus, 17 gummy extractive, separated by alkali. 19.25 fibre, 5 water, 5.3 phosphate of lime and magnesia. The resin is transparent, brown, bitter; insoluble in ether, easily soluble in 70 per cent. alcohol.

Colocynth is an efficient purgative, increasing the biliary and intestinal secretions and stimulating the muscular coat of the bowels; in large doses it produces vomiting, severe pain, and bloody stools. Death has been recorded as the result of taking a teaspoonful and a half of the powder. It has little action on horses, sheep, and pigs. It is used as a purgative, but seldom alone; at one time it was thought to be a diuretic. Dose, 2 to 5 grains.

**C., false.** The produce of *Jaffa purgans*, or *J. drastica*.

**C., hill.** The *Cucumis Hardwickii*, Royle.

**C. pulp.** See *Colocynthis pulpa*.

**C. seeds.** The seeds freed from the colocynth pulp are used in some places as food.

**Colocyntha.** (*Κολοκυνθα*, or *κολοκύνθη*.) The plant so named by the Greeks, and mentioned by Dioscorides, is supposed by some to be the calabash, *Lagenaria vulgaris*, by others to be the cucumber, *Cucumis sativus*; but it is probable that it was a round gourd, as distinguished from *σικύα*, a long one.

**Colocynthein**, Walz.  $C_{41}H_{64}O_{13}$ . A resin-like substance, insoluble in water, soluble in ether, which, together with sugar, is formed on boiling Walz's colocynthin with sulphuric acid.

**Colocynthis pulpa**, B. Ph. (*L. pulpa*, the fleshy part of fruit. *F. pulpe de coloquinte*; *G. Koloquintenmark*.) The dried decorated fruit, freed from seeds, of the *Citrullus colocynthis*, Schrad. Imported chiefly from Smyrna, Trieste, France, and Spain. See *Colocynth*.

**Colocynthin**, Walz. ( $C_{50}H_{84}O_{23}$ ?) The bitter principle of colocynth, but which has not been obtained pure, obtained by precipitating with tannic acid the alcoholic extract of colocynth, after the addition of acetate and subacetate of lead, and filtration. The tannate falls, and can be decomposed with oxide of lead, the colocynthin being dissolved out with ether. Walz describes it as a friable, light-yellow substance, completely soluble in 8 parts of water, and readily soluble in alcohol. Lebourdais describes it as crystallisable. It is a violent purgative.

**Colocynthis.** (*Κολοκυνθίς*, the colocynth. *F. coloquinte*; *G. Koloquinte*.) The pharmacopœial, U.S. Ph., name for the dried pulp of the bitter cucumber, *Citrullus colocynthis*. See *Colocynth*.

**C. Aegyptiaca.** (*L. Aegyptius*, Egyptian.) A large kind of colocynth, less white than the ordinary variety, with few seeds, and with large cavities in the interior, owing to desiccation. The rind is removed during their transit through Greece.

## COLOCYNTHITIN—COLON.

**C. Cyp'ria.** (*L. Cyprus*, the island.) These pepoes are about 4 cm. in diameter, and contain many seeds; interior white.

**C. Syriaca.** (*L. Syria*, a country in Asia.) The pepoes are the same size as the Cyprian. The rind is present, medulla spongy, seeds numerous.

**Colocynth'itin.** Walz. The alcoholic extract of colocynth is extracted with water, and the residue treated with ether; to the solution animal charcoal is added. The filtrate is evaporated to dryness, and extracted with alcohol; it is a crystalline, tasteless powder, insoluble in cold spirit of wine and cold water, but soluble in ether and boiling spirit of wine.

**Colognc water.** Eau de Cologne. See *Aqua colonensis*.

**Colom'ba.** Same as *Calumba*.

**Colom'bia bark.** A synonym of Pitaya or brown Carthagena bark.

**Colombic acid.** Same as *Calumbic acid*.

**Colom'bin.** Same as *Calumbin*.

**Colom'bo catechu.** (*Colombo*, the chief town of Ceylon.) Same as *Catechu, Ceylon*.

**Colon.** (Κόλον, food, the colon; often erroneously written κώλον, a limb, or member, the colon. *F. colon*; *G. Colon, Grimaldarm*.) Name for the greater portion of the large intestine, being that extending between the cecum and the rectum.

It is divided into four parts, the ascending, transverse, and descending colon, and the sigmoid flexure. Its length is from 106 to 136 cm., its average diameter about 4 cm., though it may be dilated to 6 cm. The sp. gr. of the walls is 1.042. The colon has a peritoneal coat, which only entirely invests the transverse portion, longitudinal and circular muscular coats, and a mucous membrane, which possesses Lieberkühnian follicles and Boerhaave's glands, but no villi. The longitudinal muscular fibres are chiefly collected into three bands: one, the anterior, runs along the front of the ascending colon, passes to the under surface of the transverse colon at the attachment of the great omentum, and then gains the front of the descending colon and the sigmoid flexure; the second lies on the inner side of the ascending colon, and runs along the lower border of the transverse colon to the inner side of the descending colon; and the third, the posterior, is placed along the attached border of the intestine. They all start from the border of the cecal attachment of the appendix vermiformis, and end by expanding into a thick uniform longitudinal layer of the rectum. These bands are shorter than the other coats, and gather them up, so that they form sacculi at tolerably regular intervals, in which the faeces lodge. The circular muscular fibres form a thin layer a little thicker over the sacculi.

The blood supply is described under the names of the sections of the colon. The lymphatics are situated on the vascular arches; those of the ascending and transverse colon open into a chain of small glands, running the whole length of the line of insertion of the mesocolon, and from thence to the mesenteric glands; those of the descending colon and the sigmoid flexure pass to the lumbar glands. The nerves are derived from the superior and inferior mesenteric plexuses; at the entry into the intestinal walls they are distributed partly on the outer surface of the longitudinal

layer, partly between the two layers of the muscular coat, and partly in the submucous tissue, in all of which situations they form plexuses, with very minute ganglia, prior to their ultimate distribution either in the muscle or in the mucous membrane.

The changes which take place in the intestinal contents in their passage through the colon are little known; it is probable that some further digestion takes place, especially of cellulose; and it is certain that much fluid matter is absorbed.

Also (κώλον, a limb), a member or limb.

**C. ad'scendens.** The same as *C., ascending*.

**C., arch of.** The *C., transverse*, inasmuch as it arches over from one side of the abdomen to the other, with its convexity in front.

**C., as'cending.** (*L. ascendo*, to mount up. *G. aufsteigende Grimaldarm*.) The ascending colon. This portion occupies the right iliac region, or posterior part of the abdominal cavity on the right side, lying in front of the quadratus lumborum and right kidney, and extending upwards to the right hypochondriac region and under surface of the right lobe of the liver, on the right of the gall-bladder, where it curves to the left, forming the hepatic flexure or flexura coli dextra, and becomes continuous with the transverse colon. It is of rather less diameter than the cecum. It is held in place by the peritoneum, which, however, only covers the front and sides, except in a few instances. It is supplied by the colica dextra artery chiefly, but in part by the colica media, and the ileo-colic arteries; its nerve supply is derived from the superior mesenteric plexus.

**C., de'scending.** (*L. descendo*, to go down. *G. absteigende Grimaldarm*.) This portion of the colon commences at the left or splenic flexure of the colon in the left hypochondriac region, and extends to the sigmoid flexure in the left iliac region, lying in the posterior part of the abdominal cavity, in front of the lateral border of the left kidney and the quadratus lumborum. It is only covered in front and at the sides with peritoneum, and is supplied chiefly by the colica sinistra artery, aided by the colica media and colica sigmoidea arteries; its nerve supply is derived from the inferior mesenteric plexus.

**C. dex'trum.** (*L. dexter*, on the right side.) The same as *C., ascending*.

**C., il'iac.** (*L. ilia*, the groin.) The *C., sigmoid flexure of*, from its position in the iliac region.

**C., inflamma'tion of.** See *Colitis* and *Dysentery*.

**C., lum'bar, left.** (*L. lumbus*, a loin. *F. colon lumbaire gauche*.) The *C., descending*, from its position.

**C., lum'bar, right.** (*F. colon lumbaire droit*.) The *C., ascending*, from its position.

**C., sig'moid flexure of.** (Σίγμα, the Greek letter of that name; εἶδος, likeness; *L. flecto*, to turn.) This part of the colon lies in the left iliac fossa, and extends from the termination of the descending colon to the commencement of the rectum, opposite the left sacro-iliac symphysis. It is covered in front by the small intestine, and behind rests on the psoas and iliacus muscles. It is kept in loose position by the sigmoid mesocolon, and is supplied by the sigmoid artery or branch of the colica sinistra, aided by the superior hæmorrhoidal artery; its nerve supply is from the inferior mesenteric plexus.

**C. sinistrum.** (*L. sinister*, on the left.) The same as *C. descend.*

**C., torpor of.** (*L. torpor*, sluggishness.) An inactive condition of the colon from deficient innervation or weakness of the muscular coat, or a scanty secretion from its mucous glands, causing constipation and distension of the bowel, with consequent troubles of neighbouring organs from pressure or sympathy.

**C., transverse.** (*L. transverso*, to direct across. *G. Quergrimm Darm*.) This portion commences at the hepatic, and terminates at the splenic flexure of the colon. It arches forwards, and passes across from the right into the left hypochondriac region, through the upper part of the umbilical region, below the concave surface of the liver, and the greater curvature of the stomach in front of the duodenum and pancreas, and immediately behind the anterior wall of the abdomen. It is almost completely invested by the peritoneum, which forms the transverse mesocolon behind it; it is supplied chiefly by the colica media artery, aided by the colica dextra and colica sinistra arteries; its nerve supply is on the right side from the superior, on the left from the inferior, mesenteric plexus.

**C., transverse arch of.** Same as *C., transverse*.

**C., ulceration of.** A condition occurring in *Dysentery*.

**Colonalgia.** (*Κόλον; άλγος*, pain. *F. Colonalgie*.) Pain in the colon.

**Colonial.** (*L. colonia*, a colony, a settlement.) Pertaining to a colony.

**C. nerve-system.** A term applied to the nervous system of some Bryozoa, in which there is a ganglion at the base of each of the chief branches, and connecting nerve-trunks with the ganglion belonging to each individual in the branchlets.

**Colonisation.** (*L. colonia*, a colony.) The act of colonising.

A term applied to the collecting together in a village of a number of insane persons under superintendence, but without restraint or precaution against escape, such as the colony at Gheel in Belgium. They are employed freely in agricultural and other pursuits, and the results have been satisfactory.

**Colonitis.** (*Κόλον. F. colonite; G. Grimmdarmentzündung*.) Inflammation of the colon. By many authors this term is applied as a synonym of dysentery, inasmuch as in this disease the morbid processes take place in the large intestine, although they are by no means restricted to it. There are some, however, who contend that there is a colonitis distinct from dysentery; an inflammation whose chief seat and place of origin is the submucous tissue, while dysentery originates in the solitary glands of the colon; and that, although in the course of the two diseases the end is the same, that the glands become disorganised and ulcerated, and the mucous membrane inflamed and gangrenous, yet they are distinct in cause and essence, even if alike in progress and result. See *Colitis*.

**Colony.** (*L. colonia*, a settlement; from *colo*, to inhabit, to cultivate.) A number of persons settled in a remote country and remaining subject to their mother-country.

Applied to collections of individuals or persons united by some common structure, as certain polyps.

Also, to animals or plants growing and living close together, as oysters.

**Colophany.** Properly *Colophony*.

**Colophen.** (*Colophony*.)  $C_{10}H_{12}$ . A hydrocarbon isomeric with oil of turpentine, obtained, together with terebin, on distilling oil of turpentine with 1-20th of its weight of concentrated sulphuric acid. Sp. gr. 0.940, boiling point  $310-315^{\circ} C.$  ( $590^{\circ}-599^{\circ} F.$ ) It does not rotate the plane of polarisation.

**Colophonia.** Same as *Colophony*.

**C. mauritia na.** Comm. The tree yielding *Mauritius elemi*.

Also, a Genus of the Nat. Order *Burseraceae*.

**C. succini.** (*L. succinum*, amber.) The resin left after the dry distillation of amber. It is soluble in alcohol and oils.

**Colophonic acid.** (*Colophony*.) It is obtained by the action of heat on resin or colophony, and by heating picnic acid, from which it differs in having a greater affinity for bases, and in being soluble with difficulty in alcohol of 67 per cent.

**Colophonium.** *G. Ph.* Same as *Colophony*.

**Colophony.** (*Κολοφονία*, from *Κολοφών*, a city of Ionia, in Asia Minor; whence it was first brought. *F. colophone; G. Geigenharz*.)  $C_{10}H_{12}O_4$ . Common resin or rosin. The brittle, brownish resin which is left after the distillation of crude turpentine with water. It is friable, breaking with bright conchoidal fractures. It softens at  $80^{\circ} C.$  ( $176^{\circ} F.$ ), and melts at  $100^{\circ} C.$  ( $212^{\circ} F.$ ) into a clear liquid; sp. gr. 1.07. At ordinary temperatures it dissolves in 8 parts of dilute alcohol, but more freely on addition of a caustic alkali; it dissolves readily in acetone or benzole; it coalesces with melting fat or wax. It has been used, without any special claim to value, in the form of powder as a hæmostatic; the fumes are used in bronchial catarrh; it is an ingredient of many plasters.

The name was also given to a soft kind of mastich, probably the Cilian turpentine.

Called *Resina* in the *B. Ph.* and *U.S. Ph.*

**C., powder of.** (*F. poudre hæmostatique*.) A hæmostatic remedy, composed of colophony 4 parts, gum arabic 1, and wood charcoal 2.

**Colopuncture.** (*L. colon; punctura*, a prick.) The operation of puncturing the colon with a fine trocar and cannula for the release of wind.

**Colopyra.** (*Κόλον; πύρ*, fire.) An old name signifying a form of dysentery, according to some; puerperal fever, according to others.

**Coloquin-tida.** (*F. coloquinte; G. Coloquinthe*.) The *Citrullus colocynthis*.

**Color.** (*L. color*, colour. *F. couleur; G. Farbe*.) Colour.

**C. virginæus pallidus.** (*L. virginæus*, of a maiden; *pallidus*, pale.) The same as *Chlorosis*.

**C. virginum fœdus.** (*L. virgo*, a virgin; *fœdus*, unseemly.) The same as *Chlorosis*.

**Colorado.** One of the United States of America, traversed by the Rocky Mountains from north to south.

**C. beetle.** The *Doryphora decemlineata*.

**Coloration.** (*L. coloro*, to colour. *Gr. χρωσις*; *l. colorazione; S. coloracion; G. Färbung*.) In Botany, applied to the tints of plants due to various colouring matters in their cells. In the *Algæ* the particles giving colour other than green are in granules; in phanerogamous plants,

in solution. The white part of many leaves results from the presence of air in the cells, the green from the presence of chlorophyll; the other colours are arranged in two series, the xanthic (or yellow) and the cyanic (or blue), with green and orange occupying as intermediate tints.

In animals the coloration is due to the presence of various organic substances, biliverdin, hæmatosin, pigment, or occasionally, as in the blue iris and tapetum of the choroid, to the particular arrangement of rods or lamellæ, or, as in the feathers of birds and butterflies, to the presence of striae, producing the effects of interference of light. See Littré and Robin.

**Coloratus.** (*L. coloro*, to colour. *F. coloré*; *G. gefärbt*.) Coloured. Applied to any other colour than green in plants.

**Colorectitis.** (*Κόλον*, the colon; *L. rectum*, the straight gut.) The same as *Dysentery*.

**Colorific.** (*L. color*, colour; *facio*, to make.) Having power to give colour to other bodies.

**Colorimeter.** (*L. color*, colour; *μέτρον*, a measure. *F. colorimètre*; *I. colorimetro*.) An instrument for estimating the quantity of colouring matter present in a fluid. It is founded on the principle that equal quantities of colouring matter dissolved in any fluid will give the same tint when seen through tubes of the same length.

**Colorimetric.** (Same etymon.) Relating to the action of the *Colorimeter*.

**Colorisation.** The same as *Coloration*.

**Colostrum.** The same as *Colostrum*.

**Colostration.** (*Colostrum*.) The disturbing effects of colostrum on new-born children.

Also, the sudden cessation of the secretion of the first milk and the evil effects thence resulting.

**Colostrie.** (*Colostrum*. *F. colostrique*.) Of, or belonging to, the colostrum.

**C. fluid.** Same as *Colostrum*.

**Colostrococca.** (*L. colostrum*; *coccum*, a berry.) The *Colostrum corpuscles*.

**Colostrous.** (*Colostrum*.) Having much colostrum; full of colostrum.

**Colostrum.** (*L. colostrum*. *F. colostrum*; *G. Kolostrum*.) Term for the first milk in the breasts after delivery. It presents a greenish or yellowish colour, thence popularly termed green milk, and changes gradually in about a week to the ordinary appearance of milk. It contains much more casein, butter, and sugar than ordinary milk. Its average composition is about as follows: water 84, casein and albumin 3.5, butter 5.5, sugar 6.5, salts 3. It presents under the microscope the ordinary milk globules, and some peculiar corpuscles named *Colostrum corpuscles*. It has a purgative property, and is hence well adapted to cause the expulsion of the meconium.

Also, an old name applied to an emulsion of turpentine and yolk of egg, according to Blancardus.

**C. corpuscles.** (*F. globules de colostrum*; *G. Kolostrumkörnchen*.) These are leucocytes or small masses of protoplasm, which appear to be the secreting cells of the gland, which, instead of maturing and expelling their oily contents, are themselves separated and discharged through the ducts.

**C. globules.** Same as *C. corpuscles*.

**C. gravidarum.** (*L. gravidus*, with young.) The milk which is secreted during pregnancy or before delivery.

**C. puerperarum.** (*L. puerpera*, a woman in childbed.) The same as *Colostrum*.

**Colotomy.** (*Κόλον*, the colon; *τομή*, section.) Term applied to an operation in which, after the abdominal parietes have been divided, the colon is opened and an artificial anus established.

It may be performed in three ways. In one, the opening is made in the inguinal region; in a second, in the lumbar region; and, in the third, midway between these regions, or with a lateral incision.

**C., Amussat's operation of.** The opening of the ascending colon, or *C., lumbar*.

**C., Callisen's operation of.** See *Callisen's operation*.

**C., inguinal.** (*L. inguen*, the groin.) In inguinal colotomy the patient is laid on his back, and the incision begins on the left side, just above the middle of Poupart's ligament, and is directed upwards towards the anterior superior spine of the ileum for the space of an inch or more. The several layers of the abdominal parietes are successively divided till the sigmoid flexure of the colon presents itself. The gut and the edges of the wound are attached to each other by several silver sutures, and an opening is then made into the intestine, and the contents allowed to escape.

**C., lateral.** (*L. lateralis*, belonging to the side.) In lateral colotomy the patient is placed on his back, inclining to the right side, a straight line is drawn from the apex of the eleventh rib to the crest of the ileum; a cut is now made through the skin about  $\frac{1}{2}$  inch behind this line and parallel to it for about the length of  $1\frac{1}{2}$  inch. The obliquus externus and internus and the fascia covering the transversalis, are now divided, when the twelfth intercostal nerve comes into view, which should not be injured. The ileohypogastric nerve, artery, and vein, also appear, and must be divided with the transversalis and fascia transversalis, and the intestine and the sides of the wound connected with sutures before opening it.

**C., Littré's operation of.** The opening of the sigmoid flexure of the colon; or *C., inguinal*.

**C., lumbar.** (*L. lumbaris*, belonging to the loins.) In lumbar colotomy the patient is placed with a pillow under his belly, and a transverse cut, about four inches in length, is made midway between the last rib and the crest of the ileum, the centre of the cut being opposite the outer border of the quadratus lumborum, the obliquus externus and internus are then divided with the fascia of the transversalis, and the intestine sought for in the subperitoneal fat; when found, it is attached to the edges of the wound by silver sutures, and opened freely.

**Colotyphus.** (*Colo*; *typhus*.) Continued fever, in which there is inflammation or ulceration of the mucous membrane of the colon.

Also, dysentery with typhoid symptoms.

Also, a synonym of typhoid or enteric fever.

**Colour.** (*L. color*, colour. *F. couleur*; *G. Farbe*.) The hue or tint of a body.

**C. blindness.** See *Achromatopsia*, and *Dyschromatopsia*.

**C. sensibility.** The power of apprehending the differences between colours. It varies much in individuals, and is modified or destroyed in disease, as in retinal atrophy, or by the administration of some drugs, as santonine.

**C. vision.** (*L. visus*, sight.) The recognition of colour by the eye.

**C.s, accidental.** (L. *accidens*, falling. F. *contours complémentaires*; G. *Nachbilder*.) Same as C., complementary.

**C.s, complementary.** (G. *Complementärfarben*.) A term applied to each of two spectral colours, which, when united, give white light; thus blue and yellow are complementary colours.

**C.s, fundamental.** (L. *fundamentum*, a foundation.) The spectral colours, red, green, and violet; because from their intermixture all possible colours can be constructed.

**C.s, harmon'ic.** (F. *harmonie*; from L. *harmonia*; from Gr. *ἁρμονία*, proportion.) A synonym of C.s, complementary; because the two fit together to make white light.

**C.s, mixed.** The colours observed when the rays of two or more colours impress themselves on the retina at the same time.

**C.s, op'posite.** Same as C.s, complementary.

**C.s, pig'ment.** (L. *pigmentum*, paint.) The colours of things as distinguished from the colours of the spectrum.

**C.s, primary.** (L. *primus*, first.) The principal colours into which a ray of white light is decomposed by a prism; the primary colours were formerly considered as seven: red, orange, yellow, green, blue, indigo, and violet; they are now usually considered to be three: red, green, and violet.

**C.s, prismat'ic.** (Pism.) Same as C.s, spectral.

**C.s, sim'ple.** The colours of the spectrum, because they cannot be further decomposed by the prism.

**C.s, spec'tral.** (Spectrum.) The colours of the solar spectrum produced by the decomposition of a ray of white light by means of a glass prism.

**Coloured.** (L. *coloratus*, coloured.) Having a hue or tint which is not white or black.

In Botany, having some colour not green.

**C. vision.** Same as *Chromatopsia*.

**Colouring.** (L. *coloro*, to colour or dye.) Term for a faculty having its organ, according to the phrenologists, in the middle of the eyebrow; giving the perception of colours, their shades, harmony, and discord.

**C. matter.** The principle in a compound which gives the colour.

**Colpalgia.** (Κόλπος, a sinus, or bag; and so it came to mean the vagina; ἄλγος, pain. G. *Mutterscheidentzschmerz*.) Pain in the vagina.

**Colpatres'ia.** (Κόλπος, vagina; ἀπρῆσις, closure.) Imperforation of the vagina.

**Colpenchyma.** (Κόλπος, the bosom; ἔγχυμα, an infusion.) In Botany, sinuous or wavy cells, so called from their resemblance to the folds of a kerchief over the bosom.

**Colpeurynter.** (Κόλπος, the vagina; εὐρύνω, to dilate.) An instrument consisting of a caoutchouc bag, into which hot water is forcibly injected and there retained. Used for dilating the vagina in order to produce abortion, and to facilitate labour.

It is also used with ice-cold water to restrain hæmorrhage.

Also, a speculum.

**Colpeurynter.** (Κόλπος, vagina; εὐρύνω, to dilate.) An operation which consists in distending the vagina by means of a colpeurynter or bag of caoutchouc, into which water is forcibly injected and there retained.

**Colpitis.** (Κόλπος.) Inflammation of the vagina.

**C., catarrh'al.** Simple inflammation of the mucous membrane of the vagina.

**C., puerper'al.** (L. *puerpera*, a woman recently confined.) The inflammation of the vagina which occurs sometimes in lying-in women.

**Colpoblennoze'mia.** (Κόλπος; βλέννος, mucus; ζημία, loss.) A mucous discharge from the vagina; leucorrhœa.

**Colpocacé.** (Κόλπος; κακός, bad.) A putrid or gangrenous condition of the vagina.

**C. infantilis.** (L. *infantilis*, belonging to a child.) Gangrene of the genital organs in young children.

**C. puerpera'rum.** (L. *puerperus*, bearing children.) Gangrene of the vagina in puerperal women.

**Colpocèle.** (Κόλπος, the vagina; κύλη, a tumour. F. *colpocèle*; G. *Mutterscheid-ruhr*.) Term for hernia vaginalis, or a tumour or hernia situated in the vagina.

**Colpocephalum.** (Κόλπος, the bosom; κεφαλή, the head.) A Genus of the Family *Liothele*, Suborder *Mallophaga*, Order *Hemiptera*; so called in consequence of the breast-like prominences on each side of the head. There are numerous species parasitic on many birds; crows, hawks, sparrows, pigeons, and others.

**C. longicaudum.** Nitzsch. (L. *longus*, long; cauda, a tail.) One of many species of pigeons, and, getting on to the skin of man produces much irritation.

**Colpocleisis.** (Κόλπος; κλείσις, a shutting up.) An operation for the closure of the vaginal canal below the entrance of a vesico-vaginal fistula when this latter cannot be closed by operative means. It consists in purging the vaginal walls and bringing them together by sutures; the bladder is kept empty by a catheter till union has taken place.

**Colpocystarchosyrinx.** (Κόλπος; κύστις, the bladder; ἀρξος, the fundament; σύριγξ, a pipe, or tube. G. *Mutterscheid-Blasenmastdarmfistel*.) A fistulous passage leading into the vagina, bladder, and rectum.

**Colpocystic.** (Κόλπος; κύστις, the bladder.) Implicating or affecting both the vagina and the bladder.

**Colpocystitic.** (Κόλπος; κύστις, the bladder.) Relating to, or depending upon, *Colpocystitis*.

**Colpocystitis.** (Κόλπος; κύστις, the bladder. G. *Mutterscheidenblasenentzündung*.) Inflammation of the vagina and of the bladder.

**Colpocystosyrinx.** (Κόλπος; κύστις, the bladder; σύριγξ, a pipe, or tube. G. *Mutterscheidenharnblasenfistel*.) Fistula affecting the vagina and urinary bladder.

**Colpocystotomy.** (Κόλπος; κύστις; τομή, section.) The cutting into the bladder through the vagina; it has been employed for the removal of a large urinary calculus.

**Colpoda.** (Κόλπος, the bosom.) A Genus of the Family *Paramecidae*, Suborder *Holotricha*, Order *Ciliata*, Class *Infusoria*; so called from their shape.

Also, a synonym of *Arcticea*.

**C. cucullus.** Ehrenb. (L. *cucullus*, a hood. G. *Nierenförmige Heuthierchen*.) Seen sometimes in the secretions of the large intestine of the horse.

**Colpodesmorrhaphia.** (Κόλπος,

the vagina; *ῥίσιμος*, a band; *ράφή*, a seam.) Suture of the divided edges of the vagina.

**Colpœdema.** (Κόλπος; οἰδημα, a swelling.) Infiltration of the vaginal walls with serous fluid.

**Colpohyperplasia.** (Κόλπος; ὑπέρ, in excess; πλασία, conformation.) Increase in bulk and in secretion-activity of the vaginal mucous membrane.

**C. cystica.** (Κύστις, a bag.) A condition of increased growth of vaginal mucous membrane in which many broad, flattened, close-lying cysts develop in it; they appear to be distended mucous follicles containing, as well as mucus, a gas, which is probably trimethylamin.

**Colpolecorrhœa.** (Κόλπος; λευκός, white; ροία, a flow. G. *Mutterscheiden-schleim-fluss*.) Leucorrhœa; white discharge from the vagina.

**Colpopathy.** (Κόλπος; πάθος, anything that befalls one.) Disease of the vagina.

**Colpopolypus.** (Κόλπος; πολυπόους, many-footed, a polypus. G. *Mutterscheiden-polyp*.) Polypus of the vagina.

**Colpoptosis.** (Κόλπος, the vagina; πτώσις, from πίπτω, to fall. F. *colpoptose*; G. *Mutterscheidenvorfall*.) Term for a falling down, or prolapsus of the vagina.

**Colpoptotic.** (Same etymon.) Caused by, or dependent upon, *Colpoptosis*.

**Colporrhœxis.** The same as *Colporrhæxis*.

**Colporrhagia.** (Κόλπος; ῥήγνυμι, to burst through. G. *Mutterscheidenblutfluss*.) Hamorrhage from the vagina.

**Colporrhagic.** (Same etymon.) Caused by, dependent upon, or connected with, *colporrhagia*.

**Colporrhaphy.** (Κόλπος; ράφή, a seam. G. *Mutterscheidennath*.) The artificial union of the lacerated or divided walls of the vagina.

**Colporrhæctic.** (Κόλπος; ῥήγνυμι, to break through.) Dependent upon, caused by, or associated with, *Colporrhæxis*.

**Colporrhæxis.** (Κόλπος; ῥήγνυμι, to break through. G. *Zerreiſſung der Mutterscheide*.) Laceration of the vagina.

**Colpos.** (Κόλπος, a bosom-like hollow. G. *die Hohlung*.) Applied by Galen to a sinuous ulcer, sinus, or fistula spreading beneath the skin.

**Colposis.** (Κόλπωσις, the forming into a fold.) The formation of a cavity or sinus.

**Colpospasmus.** (Κόλπος, the vagina; σπασμος, a convulsion. G. *Mutterscheidenkrampf*.) Spasm or cramp of the vagina.

**Colpospastic.** (Same etymon.) Relating to vaginal spasm.

**Colpostegnosia.** (Κόλπος; στέγνωσις, a making close or coëstive. G. *Verwachsung der Mutterscheide*.) Obliteration of the vagina.

**Colpostegnotic.** (Same etymon.) Having reference to occlusion of the vagina.

**Colpostenochoria.** (Κόλπος; στενοχωρία, a confined space.) Constriction of the vagina.

**Colpostenochoric.** (Same etymon.) Caused by, or resulting from *Colpostenochoria*.

**Colpostenosia.** The same as *Colpostegnosia*.

**Colposynize'sis.** (Κόλπος; συνίζησις, a fusing in.) Constriction of the vagina.

**Colposynizes'tic.** (Same etymon.)

Relating to, or dependent upon, constriction of the vagina.

**Colpothlip'sis.** (Κόλπος; θλίψις, pressure.) Pressure on the vagina.

**Colpothlip'tic.** (Same etymon.) Due to, or relating to, pressure upon the vagina.

**Colpotomy.** (Κόλπος; τομή, a cutting. G. *Bruchschneidung*.) Section of a contracted vagina to facilitate labour. Elytrotomy.

**Colpoxerosis.** (Κόλπος; ξηρός, dry.) Unnatural dryness of the vagina.

**Colpoxerotic.** (Same etymon.) Dependent upon, or relating to, dryness of the vagina.

**Colt's foot.** (F. *tussilage vulgaire*, or *pas d'âne*; G. *Brustlattich*, *Eselstlattich*, *Hufstlattich*.) The *Tussilago farfara*, from the shape of its leaf.

Also, the *Asarum canadense*.

**C's foot, alpine.** The *Homogyne alpina*.

**C's foot, strange.** Common name for the *Cacalia alpina*.

**Colt'za.** (Flem. *kool-zaad*.) Colseed. The *Brassica napus*.

**Coluber.** (L. *coluber*, a serpent; akin to *celer*, swift. F. *couluvre*.) A Genus of the Suborder *Aglyphodontia*, Order *Ophidia*. Innocuous snakes.

**C. Escula'pii.** Shaw. Hab. Middle Europe. Non-venomous. This is the snake represented by the ancients on the statues of the god of medicine, *Æsculapius*.

**C. be'rus.** The *Pelias berus*.

**C. gramin'eus.** The *Trimeresurus gramineus*.

**C. melanu'rus.** (Μέλας, black; ούρά, a tail.) The *Callophis trimaculatus*.

**C. na'ja.** The *Naja tripudians*.

**C. na'trix.** (G. *Ringelnatter*.) A synonym of *Tropidonotus natrix*.

**C. ne'pa.** A synonym of *Pygnale nepa*.

**C. Russe'lli.** A synonym of *Daboia Russelli*.

**C. viperi'nus.** Latr. The *Tropidonotus viperinus*.

**Colubriform'es.** (L. *coluber*; forma, shape.) A Suborder of the Order *Ophidia*, containing the *Aglyphodontia* and the *Opisthoglypha*. The majority are innocuous snakes; they have solid hooked teeth in both jaws, and some have fangs which are perforated and communicate with a very small poison gland.

**Colubrina.** (L. *coluber*.) The *Polygonum bistorta*, and also the *Ophiorrhiza mungos*.

Also, a Genus of the Nat. Order *Rhamnaceæ*. Also (L. *coluber*), a synonym of *Aglyphodontia*.

**C. dracon'tia.** A synonym of *Arum dracunculoides*.

**C. ferment'um.** (L. *fermentum*, a ferment.) The bitter bark of this plant is said to bring on violent fermentation in the liquors into which it is thrown.

**C. lusitan'ica.** (L. *Lusitania*, the western part of Spain and Portugal.) The *Euphorbia capitata*.

**C. reclina'ta.** Rich. (L. *reclino*, to lean backwards.) Porto Rico bark. Used in dysentery and in fever; also as a substitute for hops in the manufacture of some kinds of beer. It is found sometimes mixed with *eichona* bark.

**C. virginia'na.** (F. *serpentinaire de Virginie*.) The *Aristolochia serpentaria*, from its place of growth.

## COLUBRINE—COLUMELLIADS.

**Colubrine.** (L. *coluber*. G. *schlangentrig.*) Snake-like.

**Colubrinum lignum.** (L. *coluber*; *lignum*, wood.) A term applied to several different kinds of wood, believed, in the countries where they grow, to be specific against the bite of serpents; especially that of *Strychnos colubrina*.

**Col'um.** (L. *colo*, to strain or filter. F. *couloir*, *passoire*; G. *Seichtuch*.) A filter or strainer of liquid substances.

Applied to the secretory organs of the living body.

Also, the same as *Colic*.

Also, the same as *Colon*.

**C. ex plumbo.** (L. *ex*, out of; *plumbum*, lead.) Lead colic.

**Colum'ba.** (L. *columba*, a dove. F. *pigeon*; G. *Taube*.) The dove or pigeon. A Genus of the Order *Columbæ*. The species are all used as food.

**C. palumbus**, Linn. (L. *palumbus*, a wood-pigeon.) The wood-pigeon or ring-dove. The flesh was supposed to be specially useful in weakened states of system, especially in epilepsy and paralysis, and to be a preventive of plague. The brain and testicles were said to be aphrodisiac.

**C. wood of Ceylon.** Common name for the wood of the *Menispermum fenestratum*.

**Columbadæ.** A false spelling for *Columbidæ*.

**Colum'bæ.** (L. *columba*, a pigeon.) An Order of the Class *Aves*. The pigeons and their allies. The bill is swollen at the tip, and has a nostril-pierced membrane at the base; tarsus short, stout; hind toe on a level with the others; wings strong.

**Columbate.** (*Columbium*.) A synonym of *Tantulate*.

**Columbia.** This district in North America has many mineral springs.

**Columbian bark.** The bark of the *Cinchona lancifolia* (Mutis), and *C. pitayensis*, Wedd. See *Carthagena bark*.

**Columbic.** (*Columbium*. F. *columbique*, *tantatique*.) Of, or belonging to, columbium.

**C. acid.** (F. *oxide tantalique*; G. *Tantaltsaure*.) A synonym of *Tantalie acid*.

Also, the same as *Columbic acid*.

**Columbidæ.** (L. *columba*, a dove or pigeon. F. *columbides*.) Same as *Columbæ*.

**Columbin.** The same as *Catumbin*.

**Columbine.** (L. *columbina*; from *columba*, a pigeon; from the resemblance of its nectaries to the heads of pigeons in a ring.) The *Aquilegia vulgaris*.

**C. wild.** The *Aquilegia canadensis*.

**Columbium.** (*Columba*.) Name given to a metal by Hatchett which he found in a mineral brought from Massachusetts, North America. It is probable that both tantalum and niobium were originally included under this head.

**Colum'bo.** The same as *Calumba*.

**C. American.** The root of the *Frasera Walteri*. A native of America. Feebly tonic.

**C. bit'ter.** The same as *Catumbin*.

**Columella.** (L. dim. of *columna*, a column. F. *columelle*; G. *Säulehen*.) A small column, or a structure like a pillar. In Botany, the vertical axis of some fruits, around which the carpels are arranged to form a fruit, and which

is sometimes persistent when other parts have fallen away.

Also (G. *Mittelsäulehen*), the small thread-like axis in the centre of the urn of mosses to which the spores are attached.

Also, the column in the centre of the peridia in some Fungi.

Also, in the Myxomycetes, the pedicel which bears the sporangium, and is prolonged into it.

In Anatomy, the axis of the cochlea of the ear; otherwise called *modiolus*.

Also, a name of the uvula.

Also, an old name of the clitoris.

Also, the axis of a spiral shell.

Also, a rod-like structure forming the axis of the theca of a corallite.

Also, a bone found in the skull of lizards; it is a part of the pterygoid bone which ascends to join the parietal. See *Epipterygoid*.

**C. aur'is.** (L. *auris*, the ear.) A delicate stem or rod of bone and cartilage in the middle ear of all Sauropsida. In the Batrachia it is distinct from the stapedia plate, but not in Sauropsida. Its main part is the epihyal element, the hyo-mandibular of fishes. Its proximal bony portion fits against whatever closes the fenestra ovalis, and its distal cartilaginous part, when a *membrana tympani* exists, abuts against and stretches that membrane; otherwise it lies within the quadrate, as in fishes. The bony part is the homologue of the stapes of Mammals, and the cartilaginous part answers to the iacus; the parts of the columella have been named according to their relation to the stapes, although only the proximal plate belongs to the otic capsule. The main bar is called the medio-stapedial, the segment between it and the stapes the interstapedial, the main distal division on which the *membrana tympani* is stretched the extrastapedial; an ascending process attaching it to the projecting part of the opisthotic is called the suprastapedial, and when a descending process exists, tending to unite it with the lower hyoid bar, this is called the infrastapedial. Under this very metamorphosed form the epihyal or upper segment of the second visceral arch has received names indicating its association with the operculum of the auditory capsule, the stapes.

**C. coch'leæ.** (*Cochlea*.) The *modiolus* of the cochlea.

**C. of lizards.** See *Epipterygoid*.

**Columellar.** (L. *columella*, a little pillar. F. *columellaire*; G. *zur columella gehorig*.) Of, or belonging to, a little pillar or column.

**C. lobe.** The part of the last whorl of a spiral shell which overlaps the apex of the columella.

**Columella' res dentes.** See *Dentes columellares*.

**Columella'ris.** (L. *columella*.) A large mass of muscular fibre in Gasteropods which arises from the lower end of the columella, and is inserted into the operculum, the foot, and the edge of the mantle.

**Columellate.** (F. *columellé*.) Possessing a columella.

**Columellia'ceæ.** A Nat. Order of epigynous Exogens of the Alliance *Cinchonales*, having epipetalous stamens, which burst longitudinally, sinuous anthers and unsymmetrical flowers.

**Columelliads.** The plants of the Order *Columelliaceæ*.

# COLUMN—COLUMNIFERÆ.

**Columnn.** (L. *columnna*, a column.) A pillar. See also *Columnnæ*.

In Botany, a body formed by the coalescence of the filaments, as in Malva; or by the union of the filaments with the style or stigma, as in Orchids.

Also, the body or stem of a sea-anemone.

**C. mercurial.** (L. *mercurius*.) The mercury contained in a barometer or gauge, the height of which indicates the pressure to which the surface is exposed.

**C. of Goll.** The posterior column of the spinal cord is divided by a prolongation of pia mater into two; the larger anterior column is the column of Burdach, the smaller posterior one is the column of Goll.

**C. spinal.** See *Spinal columnn*.

**C. vertebral.** See *Vertebral columnn*.

**Columna.** (L. *columna*, the top or principal part of a thing; because a column sustains what is on the top. F. *colonne*; G. *Säule*.) A column or pillar.

**C. adstans inguinibus.** (L. *adsto*, to stand near; *inguen*, the groin.) The penis.

**C. anterior ligamen'ti coraco-humeral'is.** (L. *anterior*, in front; *ligamentum*, a band; *coracoïd*; *humerus*, the shoulder.) That portion of the coraco-humeral ligament which is attached below to the greater tuberosity of the humerus.

**C. dor'si.** (L. *dorsum*, the back.) The vertebral columnn.

**C. foraminis ova'lis.** (L. *foramen*, a hole; *ovatus*, egg-shaped.) The thick, strong front edge of the fossa ovalis.

**C. me'dia.** See *C. media glandula thyroïdeæ*.

**C. me'dia glandula thyroïdeæ.** (L. *medius*, that is in the middle; *glandula*, dim. of *glands*, a nut; *thyroïd*.) A conical portion of the thyroid gland which runs upwards from the isthmus in the median line, or rather to the left, and lies upon the thyroid cartilage.

**C. na'si.** (L. *nasus*, the nose. F. *colonne du nez*; G. *Nasenscheidewand*.) The column or pillar of the nose. The anterior part of the septum of the nose.

**C. or'is.** (L. *os*, the mouth. F. *colonne de la bouche*; G. *Zapfchen*.) The pillar of the mouth; a name for the uvula.

**C. sep'ti pala'ti.** (L. *septum*, a partition; *palatum*, the palate.) The uvula.

**C. spinal'is.** (L. *spinalis*, belonging to the spine. G. *das Rückgrat*.) The spinal columnn.

**C. vertebral'is.** (L. *vertebralis*, relating to the spine. F. *colonne vertébrale*; G. *Wirbelsäule*.) The vertebral columnn or spine; the spinal columnn.

**C. vesicula'ris.** (L. *vesicula*, a little bladder.) Same as *C. vesicularis posterior*.

**C. vesicularis posterior.** (L. *resicula*; *posterior*, hinder.) Same as *Clarke's columnn*; see also, *Respiratory nucleus*.

**C. vesiculo'sa.** (L. *vesiculosus*, having little bladders.) Same as *C. vesicularis posterior*.

**Columnnæ.** Plural of *Columnna*.

**C. Bertini.** (Bertin, an anatomist.) Those portions of the cortical substance of the kidney which intervene between the pyramids.

**C. car'neæ.** (L. *carnex*, fleshy. F. *les colonnes charnues du cœur*; G. *Herzhalben*.) The fleshy columns or pillars. A term applied to the muscular projections in the ventricles of the heart. They are of three kinds: one, attached to the heart-walls along their whole length; another,

attached only at their extremities; and a third attached to the heart only at one end, and bearing at their other end tendons, the *Chordæ tendineæ*, for attachment to the auriculo-ventricular valves; these latter are also called *Musculi papillares*.

**C. car'neæ rec'ti.** Same as *C. Morgagnii*.

**C. cor'dis.** (L. *cor*, the heart.) The *C. car'neæ*.

**C. forn'icis.** (L. *fornix*, an arch.) The anterior crura of the fornix.

**C. medull'æ spinallis.** (L. *medulla*, pith; *spinalls*, belonging to the spine. G. *Hauptstränge*.) The white columns of the spinal cord formerly divided into the anterior, lateral, and posterior, though some subdivisions of these are now admitted.

**C. Morgagnii.** (*Morgagni*, the naturalist and physician.) Longitudinal folds of the mucous membrane of the rectum which disappear on extension of the sphincter ani. The larger ones are from six to ten in number, and from 1 to 3 mm. high. They contain in their base longitudinal fasciculi of smooth muscular tissue, which belong to the muscular layer of the mucous membrane, which is here from 1 to 1.5 mm. thick, and is sometimes termed the musculus sustentator tumæe mucosæ recti, or dilatator ani internus. The muscular fasciculi end in delicate tendons, which are attached to the skin about the anus.

**C. papilla'res.** Same as *Musculi papillares*.

**C. rec'tæ Morgagnii.** (L. *rectus*, straight.) Same as *C. Morgagnii*.

**C. rect'i.** (L. *rectus* straight.) The same as *C. Morgagnii*.

**C. ruga'rum.** (L. *ruga*, a wrinkle. G. *Scheidewandste*.) The anterior and posterior longitudinal ridges, extending from the lower end to the upper part of the vagina in the middle line, and in connection laterally with the transverse folds of the mucous membrane or rugæ vaginae. Also, a term for the rugæ vaginae themselves.

**C. vagin'æ.** (L. *vagina*, a sheath.) The *Arbor vite* of the vagina.

**C. vagina'lis.** (L. *vagina*, a sheath.) The same as *C. rugarum*.

**C. val'vulæ Viësseni'i.** The thickened edges of the valve of Viëssens.

**Columnnar.** (L. *columnna*, a pillar or column. F. *colonnaire*; G. *säulenförmig*.) Of, or belonging to, a pillar or column; pillar-like.

**C. epithe'lum.** See *Epithelium columnnar*.

**C. epithelioma.** A synonym of *Cancer adenoid*.

**C. lay'er of ret'ina.** A synonym of *Jacob's membrane*.

**Columnnea.** A Genus of the Nat. Order *Gesneraceæ*.

**C. longifo'lia.** (L. *longus*, long; *folium*, a leaf.) Babel. Hab. Malabar. Leaves used as a poultice to promote suppuration.

**C. scan'dens.** (L. *scandens*, climbing. F. *siane à sirop*.) A plant the flowers of which secrete a large quantity of honey.

**Columnell'a.** (Dim. *columnna*, a pillar or column. F. *colonnette*; G. *Säulchen*.) A little column or pillar. Same as *Columnella*.

**Columniferæ.** (L. *columnna*, a column; *fero*, to bear.) An Order of the Section *Eleutheropetalæ*, of the Division *Tetracyclæ* of Dicotyledons in Sach's Classification. It includes Sterculiaceæ, Büttneriaceæ, Tiliaceæ, and Malvaceæ.

# COLUMNIFEROUS—COMAL.

**Columniferous.** (L. *columna*, a column; *fero*, to bear.) Bearing, or having, a column or columns. Applied to plants (*Columnifera*) that have the stamina and pistil like a column or pillar in the middle of the flower.

**Columns.** Plural of *Column*.

**C., Bertin's.** See *Bertin*, columns of.

**C., Burdach's.** See *Burdach*, columns of.

**C., carneous.** See *Columna carnea*.

**C., cuneiform.** (L. *cuneus*, a wedge; *forma*, shape.) A synonym of *C. of Burdach*, from their shape.

**C., Kölliker's.** Same as *Muscle columns*.

**C., muscular.** (L. *musculus*, a muscle.

*F. colonnes musculaires*; *G. Muskelsäule*.) See *Muscle columns*.

**C. of abdom'inal ring.** The pillars of the *Abdominal ring*, *external*.

**C. of Burdach.** See *Burdach*, columns of.

**C. of Clarke.** See *Clarke's columns*.

**C. of Goll.** The posterior median columns of the spinal cord.

**C. of medulla oblongata.** The sections into which each half of the medulla oblongata is divided by shallow grooves, named the anterior pyramid, the olivary body, the lateral tract, the restiform body, and the posterior pyramid.

**C. of Morgagni.** See *Columna Morgagni*.

**C. of spinal cord.** The segments of each half of the spinal cord, divided by fissures, and called the anterior, the lateral, the posterior, and the posterior median columns; to which may be added an internal one, *Clarke's column*.

**C. of vagina.** The *Columna rugarum*.

**C., posterior median.** The posterior pyramids of the medulla oblongata.

**C., posterior vesicular.** (L. *posterior*, hinder; *vesicula*, a little bladder or cell.) Same as *Clarke, columns of*.

**C., sap.** (*F. colonnes sèveuse*.) A term applied to reticulated or cribriform vessels in a plant.

**Columnula.** (L. dim. of *columna*, a pillar.) A little column or pillar. A name for the filament which passes through the middle of the capsule of frondose mosses, with which the seeds are connected; also called *Sphrongidium*.

**Colures.** (Κόλυρος, mutilated in the tail; because they are not seen entirely above the horizon for the space of twenty-four hours. *F. colures*.) Term for two imaginary meridian lines which pass through and intersect each other at right angles in the poles of the world; one passing through the points of Aries and Libra, and called the Equinoctial colure; the other through the Solstitial points, Cancer and Capricorn, therefore called the Solstitial colure. The points at which they intersect the ecliptic are the cardinal points.

**Colus jo'vis.** (L. *colus*, a distaff; *Jovis*, Jupiter.) The *Salvia sclarea*.

**Colustrum.** Same as *Colostrum*.

**Colutea.** (Κολούτια, a pod-bearing tree, *G. Blasenstrauch*.) A Genus of the Nat. Order *Leguminosæ*.

**C. arborescens.** Linn. (L. part. *arboresco*, to become a tree. *F. baguenaudier*; *G. Zierstrauch*, *falsche Senna*.) Bladder senna. A native of Central and Southern Europe, the leaves of which constitute one of the adulterations of senna leaves; they are obovate, thin, glabrous on the upper surface, greyish green below, and beset with bright adpressed hairs.

**C. cruen'ta.** Ait. (L. *cruentus*, bloody.) Hab. South Europe. Properties as *C. arborescens*.

**C. hirsu'ta.** Roth. (L. *hirsutus*, hairy.) The *C. arborescens*.

**C. orienta'lis.** Lamb. (L. *orientalis*, eastern.) The *C. cruenta*.

**Colymbades.** (Κολυβάς, an olive swimming in brine.) Old name for a kind of olive which was formerly bruised and applied to burns to prevent vesication. (Gorreaus.)

**Colymbifera minor.** (L. *minor*, lesser.) A synonym of *Mentha crispata*.

**Colytic.** (Κολυτικός, hindering.) A synonym of *Antiseptic*.

**Col'za.** (*F. colza*; from *D. koolzaad*, cabbage seed.) The *Brassica campestris*. The seeds are often used to adulterate mustard. If in powder the adulteration cannot be recognised, but the seeds themselves are dull on the surface and not shagreened, and taste like turnips. They yield colza oil.

**C. oil.** The oil of the seeds of *Brassica campestris*. It is largely used for illuminating and lubricating purposes; and also for liniments.

**Coma.** (Κῶμα, deep sleep. *F. coma*; *G. Schlafsucht*.) A state of unnatural, heavy, deep and prolonged sleep, with complete unconsciousness, and slow, stertorous, often irregular, breathing. It frequently ends in death, the breathing becoming more irregular and noisy from the accumulation of pharyngeal and other secretions in the air passages. It may be produced by pressure on the brain from disease, as effusion, blood-clot, or injury, by certain poisons developed within or introduced from without the body, by cold, and by severe hæmorrhages or exhausting discharges. A minor degree is known as partial coma.

Also (L. *coma*, a head of hair. *G. Haupthaar*), the hair of the head.

Also, the top or head of a tree.

In Botany (*F. coma*; *G. Schopf*), the hairs terminating certain seeds.

Also, applied to the bracts at the summit of a pine-apple.

Also, the crown of sterile flowers on the top of some forms of inflorescence.

**C. agrypnoïdes.** (Ἀγρυπνία, sleeplessness; εἶδος, likeness.) Same as *C. vigil*.

**C. apoplexia.** Same as *Apoplexy*.

**C. au'rea.** (L. *aureus*, golden.) The *Hydrisum stæchas*.

**C. cæsa'ra.** (L. *cæsaries*, the hair of the head.) A synonym of *Plica polonica*.

**C. comato'des.** (Κῶμα, deep sleep; εἶδος, likeness.) Same as *C. somnolentum*.

**C., diabet'ic.** See *Diabetic coma*.

**C. semina'lis.** (L. *semen*, seed. *G. Samenschopf*.) The tuft of hairs on the top of some seeds.

**C. somnolent'ium.** (L. *somnolentia*, drowsiness.) A term for a state of deep, morbid sleep, when roused from which the patient immediately relapses; lethargy.

**C., uræmic.** See *Uremia*.

**C. vig'il.** (L. *vigil*, awake.) A term for the lethargic condition of the patient, in bad cases of typhus, in which he lies with wide open eyes totally unconscious, but muttering in delirium; it is otherwise called *Agrypnocoma*.

**Comal.** (L. *coma*, a head of hair.) In Botany, applied to the uppermost and largest leaves of a stem of Bryum.

**Comandra.** (Κόμη, hair; ἀνὴρ, a male.) A Genus of the Nat. Order *Santalaceæ*.

**C. umbellata.** (Umbel.) Bastard toad flax. Hab. United States. Used in fevers.

**Comarum.** (Κόμαρος, the arbutus.) A Genus of the Nat. Order *Rosaceæ*.

**C. palustris.** Linn. (*C. palustris*, marshy. G. *Siebenfingerkraut*.) Marsh cinquefoil. A plant that possesses febrifuge qualities, and has been compared for efficacy to cinchona.

**Comarus.** (Κόμαρος.) A synonym of the *Arbutus undido*.

**Comata.** (Κόμα, deep sleep.) Soporose diseases. A term for an Order of the Class *Neuroses*, of Cullen's Nosology. The voluntary motions impaired, with sleep, or a suspension of sense.

**Comate.** (L. *coma*, a head of hair. G. *behaart, beschopft*.) Topped with hair; having a *Coma*.

**Comatodes.** (Κοματώδης, oppressed with sleep.) Same as *Comatose*.

**Comatose.** (Κόμα, deep sleep. F. *comateux*; G. *schlafsuchtig*.) Having a strong and constant propensity to sleep; full of sleep.

**C. fever.** (F. *fièvre comateuse*.) A pernicious fever, in which the attack is characterised by the sudden occurrence of profound coma.

**C. spasm.** A synonym of Good's *Syngspasia*.

**Comb.** (Sax. *camb*, a comb, a crest. F. *peigne*; I. *pettine*; S. *peine*; G. *Kamm*.) A toothed instrument for adjusting the hair and for like purposes.

Also, the crest of a cock.

**C.-like.** Having the form of a comb.

**C., Ve'nus's.** The *Scandix pecten veneris*.

**Combative'ness.** (F. *combattre*, to fight; from L. *cum*, with; *batuo*, to strike.) Term for a faculty common to man and the lower animals, producing active courage, the disposition to oppose, and, when energetic, the disposition to attack. Its organ, according to the phrenologists, is at the infero-posterior angle of the parietal bone, behind the mastoid.

**Combe-Girard.** Switzerland; Canton Neuchâtel. A cold chalybeate water in a moorland district.

**Combina'tion.** (L. *comino*, to set in couples together. F. *combination*; G. *Verbindung*.) A coming together in union, a uniting.

**C. by volume.** The theory of chemical combination, which is expressed in the statement that gaseous substances combine with each other in fixed volumes, which bear a simple ratio to their atomic weights.

**C. by weight.** The theory of chemical combination, which is expressed in the statement that substances combine with each other in fixed proportions or definite atomic weights.

**C., chem'ical.** See *Chemical combination*.

**Combined.** (L. *comino*. G. *verbunden, vereinigt*.) Joined together, connected.

**C. hybrid.** (L. *hybrida*, a mongrel.) The union of a hybrid, with a new parent form, or with a hybrid of another species.

**Combining.** (L. *comino*.) Uniting, joining with each other.

**C. volumes.** See *Volumes, combining*.

**Combretaceæ.** (L. *combretum*, a kind of rush.) Myrobalans. Epigynous Exogens of the Alliance *Myrtales*; ovary one-seeded; ovules pendulous; leaves dotless; seeds exalbuminous, and cotyledons convolute. They are in relation with, and constitute a higher development of, the Composite.

**Combretææ.** A Tribe of *Combretaceæ*, characterised by having a corolla and plaited cotyledons.

**Combretum.** A Genus of the Nat. Order *Combretaceæ*.

**C. alternifolium.** Pers. (L. *alternus*, alternate; *folium*, leaf.) A gum exuding from the bark, resembling gum arabic and burning away in a candle; is used as a demulcent.

**C. butyrosu'm.** (L. *butyrum*, butter.) *Chiquito-butter*.

**Combustibility.** (L. *comburo*, to burn wholly.) The capability of being burned.

**C. preternatural.** (L. *præter*, beyond; *natura*, nature.) Same as *Combustion, spontaneous*.

**Combustible.** (L. *comburo*, to wholly burn. F. *combustible*; G. *brennbar, verbrennlich*.) Capable of burning, or of being burned.

**Combustio.** A burn. See *Combustion*.

**Combustion.** (L. *comburo*, to wholly burn. F. *combustion*; G. *Verbrennung*.) Term for the evolution of heat and light during chemical action; the absorption of oxygen by all chemical combustible bodies from atmospheric air; burning; inflammation.

**C., internal.** (L. *internus*, within.) Term applied to those processes of oxidation which take place in the tissues, and, to a minor extent, in the blood, and which effect the maintenance of the animal heat.

**C., respiratory.** (L. *respiro*, to breathe.) Term applied to those processes of oxidation which were formerly believed to take place in the lungs alone, but which are now known to occur throughout the body.

**C., slow.** The combination of combustible substances with oxygen, in so gradual a manner, that only a small amount of light and heat are eliminated.

**C., sponta'neous.** (L. *spontaneus*, of one's free will.) The burning of a substance, or a mass of substance, from heat generated within itself.

The supposed burning of the human body from conditions arising within itself, either with or without the application of a light. The body is stated to burn with a bluish flame, which is not extinguished by water, and with a fetid odour, and to leave an oily carbonaceous residue. In most of the cases recorded, the subject is said to have been addicted to drinking; but either they have been near a fire, or some suspicious circumstances suggestive of murder have been present.

**Combustura.** (L. *combustura*, a burning.) A burn.

**Comedo.** (L. *comedo*, a glutton. G. *Mitesser*.) The small, worm-like, yellowish, black-tipped, pasty masses which can in some persons be made, by pressure, to exude from hair follicles, the sacs of which have been enlarged by the secretion of the often hypertrophied sebaceous glands, mingled with epithelial scales, and small hairs, the accumulation of which is by some believed to be the cause of the condition; they are found on the cheeks, forehead, and nose. They were believed by Küchenmeister to be the result of the irritation of the *Demodex folliculorum*, but this parasite is only occasionally found in them; when the sacs become inflamed the disease named *Acne punctata*, the *Varus comedo*, or *Varus vermiformis*, of Alibert, is produced.

**Comedones.** Plural of *Comedo*.

**Comenic acid.**  $C_6H_4O_3$ . An acid ob-

tained from the decomposition of meconic acid. When meconic acid is dissolved in water it gives off  $\text{CO}_2$ , and the remaining solution, especially after boiling with hydrochloric acid, on evaporation yields hard granular crystals of meconic acid. Also called paramconic and metameconic acid.

**Comes.** (*L. comes*, a companion.) A companion.

**C. archiatio'rum.** (*L. archiatus*; from *ἀρχή*, chief; *ιατρός*, physician.) An old term for the chief physician of an emperor or king.

**C. ner'vi ischiad'ici.** (*ἰσχίον*, the hip.) A branch of the sciatic artery which accompanies the sciatic nerve for some distance.

**C. ner'vi phren'ici.** (*Νῆρον*, a nerve; *φρήν*, the diaphragm. *F. diaphragmatique supérieure*; *G. obere Zwerchfellarterie*.) A small artery arising from the internal mammary artery near its origin. It accompanies the phrenic nerve, and supplies it with blood as far as the diaphragm.

**Comes'tible.** (*F. comestible*, from *Low. L. comestibilis*. *G. essbar*.) Eatable.

**Cometocoria.** (*Κομήτις*, a comet; *κόρη*, pupil.) Term applied to a pupil which, in consequence of division of the iris, has assumed the form of a comet.

**Cometz.** Half a drop.

**Comez.** The same as *Cometz*.

**Com'fit.** (*F. confit*; part. of *confire*, to preserve; from *L. conficio*, to finish.) A small sweetmeat.

**Com'frey.** (*L. confirma*, to strengthen; or *conferre*, to heal. *F. consoude*.) The *Symphytum officinale*; from its supposed strengthening qualities. Comfrey root is astringent and mucilaginous. It has long been used to form a stiff support for fracture, whether simple or compound. The root is scraped to a pulp, spread upon muslin, wrapped round the limb, and surrounded by a bandage; it speedily stiffens.

**C., spotted.** The *Pulmonaria officinalis*.

**C., wild.** The *Cynoglossum virginicum*.

**Comif'erous.** (*L. coma*, the hair; *fero*, to bear.) Bearing a tuft, as if of hair.

**Comitia'lis.** (*L. comitium*, a coming together.) Belonging to the Roman comitia or assemblies for electing magistrates.

**C. mor'bus.** (*L. morbus*, a disease.) A synonym of epilepsy; because on the occurrence of a case of this disorder during the sittings of the comitia they were prorogued, the disease being looked upon as a direct chastening of the gods.

**Comizophyte.** (*Κομίζω*, to carry; *φυτόν*, a plant.) A plant which has the stamens inserted into the corolla.

**Commander's bal'sam.** The *Tinctura benzoini composita*.

**Commanduca'tion.** (*L. com*, with; *manduco*, to masticate.) A synonym of *Mastication*.

**Commeli'na.** See *Commelyna*.

**Commely'na.** (*Commelyn*, a Dutch botanist.) A Genus of the Nat. Order *Commelynacæ*.

**C. angustifo'lia.** (*L. angustus*, narrow; *folium*, leaf.) The fleshy rhizomes contain much starch, and, when cooked, are fit for food.

**C. coeles'tis.** (*L. celestis*, heavenly.) Employed as *C. angustifolia*.

**C. commu'nis.** *Linn. (L. communis*, common.) Hab. India. Used as a demulcent, and as an application to inflamed eyes.

**C. med'ica.** Loureiro. (*L. medicus*, medical.) Hab. China. Employed as a remedy by the Chinese in cough, asthma, pleurisy, strangury, and dysury.

**C. Rumph'ii.** (After the botanist *Rumphius*.) Hab. India. This plant is held in India to be emmenagogue.

**C. scapifo'ra.** Roxb. The *Ancilema tuberosum*.

**C. stria'ta.** (*L. striatus*, striped.) The fleshy rhizomes contain starch, and, when cooked, are edible.

**C. tubero'sa.** H. B. K. (*L. tuber*, a knob.) The fleshy rhizomes contain starch, and, when cooked, are edible. Plant used as an hæmostatic.

**Commelyna'cæ.** Spiderworts. Hypogynous Endogens of the Alliance *Xyridales*, or of the cohort *Commelynales*. Sepals 3, opposite the carpels; petals 3; stamens 6 or 3; placentæ axile; embryo trochlear, half immersed in fleshy albumen. Herbaceous plants, constituting a transition from sedges to lilies. Hab. of the Order, East and West Indies, New Holland, and Africa.

**Commelyna'les.** A Cohort of petaloid monocotyledons in which the gynoecium is syncarpous, and the seeds have an endosperm.

**Commemo'rative.** (*L. commemoro*, to make to remember. *Gr. ἀναμνηστικός*; *F. commémoratif*; *I. commemorativo*; *G. commemorativ*.) That which recalls to the mind or brings back to the memory.

**C. circum'stances.** (*F. circonstances commémoratives*.) Passed events having a direct bearing on the diagnosis and nature of disease.

**C. signs.** (*F. signes commémoratifs*.) The points of evidence which are legibly written on the patient, and often in spite of his denial, and which enable the nature of a previous disease to be recognised, and which constitute the means of establishing a diagnosis and of treating the present disease.

**Commens'al.** (*L. con*, with; *mensa*, a table.) A mess-mate, or one that lives by or with another animal, in opposition to a parasite, which lives upon its host. As v. Beneden has shown, the messmate may be either free or fixed. Amongst the former may be enumerated the fishes *Fierasfer* and *Enchelyophis*; certain Pelmones and Pinnotheres that swim about in the digestive tube of the Holothurea; the fish *Premnas biaculeatus* which resides in the body of the *Actinia crassicornis*; the fish *Oxybelus lumbricoides*, which lives inside the *Asterias discoida*; the crustacean *Cymothoe*, which makes its home in the buccal cavity of the fish *Stromatea*. These all take advantage of the food captured by their host. Amongst fixed messmates may be mentioned the cirripedes *Tubicinella* or *Coronula*, which attach themselves to the skins of whales, and the *Peltogaster* which adheres to the under surface of the abdomen of Paguri. The word is also used adjectively.

**Commens'alism.** (*L. con*, with; *mensa*, a table.) The act of living by, or with, another animal. See *Commensal*.

**Commensum.** (*L. commensus*, part. of *commensio*, to measure.) A term for symmetry.

**Commer'cium.** (*L. commercium*, connection.) A term for sympathy.

**Com'mi.** (*Κόμμι*.) Gum.

**Com'mia.** (*Κόμμι*, gum.) A Genus of the Nat. Order *Euphorbiacæ*.

# COMMUNUTED—COMMISSURA.

**C. Co'chin-chinen'sis**, Lour. (*Cochin China*.) The sap of this plant is white and viscid, and has emetic, purgative, and deobstruent properties. Probably the *Excoecaria agallocha*, Linn.

**Comm'inated**. (L. *comminutus*, part. of *comminuo*, to crumble to pieces. F. *comminutif*.) Broken into small pieces.

**C. fracture**. See *Fracture*, comminuted.

**Comminution**. (L. *comminuo*.) Reduction to fragments.

**Comminutive**. Same as *Comminuted*.

**Comminutores ciborum**. (L. *comminuo*, to crush; *cibus*, food.) Five pairs of muscles in the *Echinoidea* arising from the interambulacral margin, and attached to the five jaws of the dental apparatus.

**Commiphora**. (Κόμμη, gum; φάω, to bear.) A Genus of the Nat. Order *Amyridaceae*.

**C. madagascariensis**, Jacq. One of the plants from which the resin named Bdellium is obtained. Also called *Amyris commiphora*.

**Commissura**. (L. *commissura*, from *committo*, to join together. F. *commissure*; I. *commissura*; S. *comisura*; G. *Verbindung*, *Verbindungspunkt*, *Fuge*, *Naht*.) A joining; a means of connection.

**C. alba anterior**. (L. *albus*, white; *anterior*, in front of.) The same as *C. medullæ anterior*.

**C. ansa'ta**. (L. *ansatus*, having a handle or loop. G. *Schlingencommissur*.) A layer of fibres passing from the lamina terminalis over the front of the chiasma to the tuber cinereum.

**C. anterior**. Same as *C. cerebri anterior*.

Also, same as *C. medullæ anterior*.

**C. anterior accessoria**. (L. *accessus*, a going near.) The *C. grisea anterior*.

**C. anterior alba**. (L. *anterior*, that which is in front; *albus*, white. G. *vordere Commissur des Rückenmarks*.) Same as *C. medullæ anterior*.

**C. anterior grisea**. The *C. grisea anterior*.

**C. arcuata anterior**. (L. *arcuatus*, bowed; *anterior*, in front.) The anterior fibres of the chiasma of the optic nerve, which were supposed to pass from one eye to the other. This is now disbelieved.

**C. arcuata posterior**. (L. *arcuatus*, bowed; *posterior*, hinder. G. *Bogencommissur*.) Hannover's term for the fibres of the posterior part of the chiasma of the optic nerve which run from one optic tract to the other. See *C. basalis* of Meynert.

**C. basalis** of Meynert. A commissure situated in man and the higher Vertebrates above the chiasma, and connecting the grey substance lining the opposite sides of the third ventricle. According to Gudden, it has nothing to do with the chiasma, and he describes it as being covered laterally by the optic tracts, from which it is separated by a band of grey matter. The fibres run backwards, dip into the ventral surface of the cerebral peduncle, and, rising to its dorsal surface, proceed to an unknown region of cells. In the lower Vertebrata it is identical with the *C. arcuata posterior*.

**C. basæos alba**. (*Bæsis*, a pedestal; *albus*, white.) A thin medullary layer which proceeds from the genu of the corpus callosum, and passes backwards over the optic commissure.

It forms the floor of the fifth ventricle, and extends laterally on each side into the substantia perforata lateralis and to the under surface of the frontal lobe. It is sometimes called the *Lamina genu*.

**C. basis sep'ti pelli'cidi**. The same as *C. basæos alba*.

**C. bre'vis**. (L. *brevis*, short. I. *eminenza valrolare*; G. *Klappenwulst*, *kurze Commissur*.) The *Vermis inferior posterior*.

**C. bre'vis lobo'rum interior'um**. (L. *brevis*, short; *lobus*, a lobe; *inferior*, below. G. *untere Querblatte*, *Klappenwulst*.) The posterior fibres of the inferior vermiform process of the cerebellum connecting together the two posterior inferior lobes of that organ.

**C. bre'vis lobo'rum posterior'um inferior'um cerebell'i**. (L. *brevis*, short; *lobus*, the lobe of the ear; *posterior*, behind; *inferior*, below; *cerebellum*, the lesser brain.) The same as *Vermis inferior posterior*.

**C. cerebell'i**. (L. *cerebellum*, a small brain.) A synonym of the *Pons Varolii*.

**C. cerebell'i ad cerebrum**. (L. *cerebellum*; *ad*, to; *cerebrum*, the brain.) A synonym of the *Processus cerebelli ad cerebrum*.

**C. cerebell'i bre'vis**. (L. *brevis*, short.) The same as *C. brevis loborum inferiorum*.

**C. cerebell'i simplex**. The *C. simplex*.

**C. cerebri anterior**. (L. *anterior*, that is before; *cerebrum*, the brain. G. *die vordere Markbündchen*.) A rounded fasciculus of medullary fibres, 5 mm. high and 2 mm. thick from before backwards, and 11 cm. long, situated in the fore part of the third ventricle in front of the pillars of the fornix. It runs transversely, forming a slight arch downwards and forwards. Its central portion only is free, and about 3 mm. in length; the lateral portions run in front of the thalamus opticus above the substantia perforata lateralis, below and behind the head of the corpus striatum, and the anterior extremity of the lenticular nucleus, penetrating on each side behind the fasciculus uncinatus into the island of Reil, and terminating in a brush-like manner in the medullary lamina of the temporal lobe above the descending cornu of the lateral ventricle.

**C. cerebri mag'na**. (L. *magnus*, great; *cerebrum*, the brain. I. *commissura grandis*.) A synonym of the *Corpus callosum*.

**C. cerebri max'ima**. (L. *maximus*, sup. of *magnus*, great; *cerebrum*, brain.) A synonym of the *Corpus callosum*.

**C. cerebri me'dia**. (L. *medius*, middle; *cerebrum*, brain.) A synonym of the *C. media*.

**C. cerebri mollis**. (L. *mollis*, soft; *cerebrum*, brain. G. *weiches Markbündchen*.) The soft or grey commissure of the brain. It passes across the third ventricle, connecting the opposed surfaces of the optic thalami. It is 4 mm. in vertical measurement, and 7 mm. in the antero-posterior direction. It is composed chiefly of grey substance, with a few transverse nerve fibres. It easily breaks down.

**C. cerebri poste'rior**. (L. *posterior*, that is behind; *cerebrum*, brain. G. *hintere Markbündchen*.) The posterior commissure of the third ventricle. It consists of a strongly-arched fasciculus of medullary fibres, situated at the posterior part of the third ventricle above the aqueduct of Sylvius and below the peduncles of the pineal gland. It connects the opposite surfaces of the optic thalami, the eminentiæ quadri-

geminæ, and the pineal gland together. Its edges are so involute as to form an upper and a lower triangular portion.

**C. cinereæ.** (*L. cinereus*, ashen grey.) The same as *C. grisea posterior*.

**C. cruciata.** (*L. cruciatus*, from *cruz*, a cross.) Hannover's term for those fibres of the chiasma which cross from the right optic tract to the left optic nerve, and *vice versa*.

**C. fornicis.** (*L. fornix*, an arch.) A distinct band found in some Carnivora, crossing the caudal aspect of the fornix ventrad of the crista, and apparently uniting the two columns more closely.

**C. grisæa.** (*Mod. L. griseus*, grey. *F. commissure grise*; *G. graue Commissur*.) The same as *C. grisea posterior*.

**C. grisæa anterior.** (*Mod. L. griseus. G. vordere graue commissur*.) The grey substance extending from one lateral half of the spinal cord to the other behind the *C. medullæ anterior*, and in front of the central canal. It consists of a thin layer of fine transverse nerve-fibres, which in front are continuous with the posterior fibres of the *C. medullæ anterior*.

**C. grisæa posterior.** (*L. griseus; posterior*, hinder. *G. hintere graue Commissur*.) The grey substance extending from one lateral half of the spinal cord to the opposite half behind the central canal, at the bottom of the posterior median fissure.

**C. habena rum.** (*L. habena*, reins.) A white band connecting the caudal ends of the habena, and forming the dorsal border of the foramen conarii.

**C. inferior of Gudden.** The inner and upper fibres of the tractus opticus, which pass from one anterior corpus geniculatum to the posterior part of the chiasma of the optic nerve, and thence return to that of the other side by the other tractus opticus.

**C. labio rum oris.** (*L. labium*, a lip; *os*, the mouth.) The angle of the mouth on each side.

**C. labio rum pudendi.** (*L. labium*, a lip; *pudendus*, part. of *pudeo*, to be ashamed.) The line of junction of the labia majora; that in front of the aperture of the vagina being termed anterior, that behind posterior.

**C. labio rum vulvæ.** (*L. vulva*, womb.) Same as *C. labio rum pudendi*.

**C. lemnis ci.** (*Λιμνίσκος*, a band. *G. Commissur der Schleifen*.) The anterior fibres of the deep layer of the lemniscus. The commissure lies behind and beneath the posterior pair of the corpora quadrigemina above and in front of the processus a cerebello ad testes, and just above the grey substance surrounding the aqueduct of Sylvius.

**C. me dia.** (*L. medius*, in the middle.) A fasciculus of fibres joining the opposite surfaces of the optic thalamus. It is sometimes called the soft commissure, or *C. cerebri mollis*.

**C. medullæ alba.** (*L. albus*, white. *G. weisse Verbindungsbrücke*.) The same as *C. medullæ anterior*.

**C. medullæ ante rior.** (*L. anterior*, foremost. *G. vordere Verbindungsbrücke*.) A band of white fibres situated at the bottom of the anterior fissure of the spinal cord, and connecting together the two anterior columns.

**C. mollis.** The same as *C. cerebri mollis*.

**C. ner vea.** (*L. nervus*, a sinew.) A synonym of *Syndesmosis*.

**C. oliva rum.** (*L. oliva*, an olive.) Trans-

verse nerve-fibres crossing the middle line between one olivary body and the other.

**C. os sium car nea.** (*L. os*, a bone; *carneus*, fleshy.) A synonym of *Syngarcosis*.

**C. palpebra rum exter na.** (*L. palpebra*, an eyelid; *exterius*, outer.) The *C. palpebrarum lateralis*.

**C. palpebra rum inter na.** (*L. internus*, inner.) The *C. palpebrarum medialis*.

**C. palpebra rum later alis.** (*L. palpebra*; *lateralis*, belonging to the side.) The line of junction of the eyelids on the outer or temporal side of the palpebral fissure.

**C. palpebra rum media lis.** (*L. palpebra*, an eyelid; *medialis*, middle.) The line of junction of the upper and lower eyelids on the inner or nasal side of the palpebral fissure.

**C. pedunculo rum conarii.** (*L. pedunculus*, dim. of *pes*, a foot; *conarium*, *G. oberes Markblatt der Zirbeldrüse*.) A thin layer of medullary nervous substance investing the anterior surface of the apex of the pineal body, and connecting the pedunculi conarii together.

**C. pedunculo rum sep ti pel lu ci di.** (*L. pedunculus*, dim. of *pes*, a foot; *septum*, an enclosure; *pellucidus*, transparent.) A layer of medullary substance, connecting the peduncles of the septum pellucidum, situated in the middle line just above the anterior white commissure.

**C. poste rior.** (*L. posterior*, hinder.) Same as *C. cerebri posterior*.

Also, the same as *C. basalis* of Meynert.

**C. pros ta tæ poste rior.** (*L. prostata*, the prostate; *posterior*, that is behind.) The middle lobe of the prostate.

**C. simplex.** (*L. simplex*, simple.) The *Vermis superior posterior*.

**C. ten uis.** (*L. tenuis*, thin.) A synonym of the *C. vermis tenuis*.

**C. ver mis ten uis.** (*L. vermis*, a worm; *tenuis*, thin. *G. obere Querblatt, Wipfelblatt*.) The posterior fibres of the superior vermiform process of the cerebellum. It connects the posterior superior lobes of that organ.

**Commissuræ.** Plural of *Commissura*.

**C. hemisphærio rum.** (*L. hemisphærium*, a half-globe. *G. Verbindungsbrücken*.) Term applied to the various structures in the middle line of the brain, composed of transverse fibres, connecting the two hemispheres together, as the corpus callosum, and the anterior, middle, and posterior commissures.

**C. medullæ spina lis.** (*L. medulla*, marrow; *spinalis*, belonging to the spine.) The layers of white and grey substance situated in front of and behind the central canal of the spinal cord, connecting the two halves of the cord together throughout their whole length.

**Commissu ral.** (*L. commissura*.) That which relates to the commissures.

**Com missure.** See *Commissura*.

In Botany, especially applied to the face by which two carpels cohere, as in *Umbelliferae*.

**C., ante rior white.** The same as *Commissura medullæ anterior*.

**C., grey.** The same as *Commissura cerebri mollis*.

**C., Gudden's.** See *Commissura inferior* of Gudden.

**C., horse-shoe.** (*G. hufeisenförmige Commissur*.) Same as *C. Wernicke's*.

**C., inter cerebri, oblique.** (*L. inter*, between; *cerebrum*, the brain.) Same as *C. of brain, oblique*.

**C., Meynert's.** See *Commissura basalis* of Meynert.

**C. of brain, anterior.** The *Commissura cerebri anterior*.

**C. of brain, great.** The *Corpus Callosum*.

**C. of brain, middle.** The *Commissura cerebri media*.

**C. of brain, oblique.** The thickened edge of the valve of Vieussens.

**C. of brain, posterior.** The *Commissura cerebri posterior*.

**C. of brain, soft.** The *Commissura cerebri mollis*, from its soft consistence.

**C. of flocculus.** (*Flocculus*.) The posterior medullary velum of the cerebellum, from its attachment to the flocculus.

**C. of spinal cord, anterior grey.** See *Commissura grisea anterior*.

**C. of spinal cord, anterior white.** (*G. vordere weisse Commissur*.) The transverse white nerve fibres at the bottom of the anterior median fissure of the spinal cord. The *Commissura medullæ anterior*.

**C. of spinal cord, posterior grey.** The *Commissura grisea posterior*.

**C. of the third ventricle, anterior.** The same as *Commissura cerebri anterior*.

**C. of the third ventricle, middle.** The same as *Commissura cerebri mollis*.

**C. of the third ventricle, posterior.** The same as *Commissura cerebri posterior*.

**C. of uvea.** (*Uvea*.) The *Ciliary ligament*.

**C., optic.** (*Ὀπτικός*, relating to sight. *F. chiasma des nerfs optiques*; *G. Schnervenzkreuzung*.) The junction of the optic tracts at the base of the brain from which the optic nerves spring; it is situated in the middle line just in front of the tuber cinereum. The greater number of the fibres of each optic tract cross in the optic commissure to the opposite optic nerve, some of them go to the optic nerve of the same side without crossing, and some cross its posterior surface to the opposite optic tract and return to the brain, the *Commissura inferior* of Gudden; by some it is said that fibres from one optic nerve run on its anterior border to join the opposite optic nerve and return to the eye, but this is now doubted. Also, called *Chiasma*.

**C., posterior white.** The same as *Commissura posterior alba*.

**C., soft.** (*G. weiche Commissur des Gehirns*.) The same as *Commissura cerebri mollis*.

**C., Wernicke's.** (*L. decussatio tegmentorum*. *G. Hanbrenkreuzung, hufisenförmige Commissur*.) The decussation that takes place in the middle line between the fibres of the tegmentum of the cerebral peduncles as they lie in close juxtaposition in the pons.

**Common.** (*L. communis*, common; from *com*, with; *munis*, serving. *Gr. κοινός*; *F. commun*; *I. comune*; *S. común*; *G. gemeinsam*.) In Anatomy, generally applied to the trunk from which two or more arteries are given off, as the common carotid and common iliac arteries.

In Botany, applied to a petiole which supports several secondary petioles; and to a calyx composed of bracts surrounding a number of small flowers.

**Commo'sis.** (*Κόμωσις*, a dressing up.) The art of concealing natural deformities.

**Commo'tio.** (*L. commotio*, from *com-*

*moreo*, to put in violent motion. *G. Erschütterung*.) Severe disturbance.

**C. cerebri.** (*L. cerebrum*, the brain. *G. Hirnerschütterung*.) Concussion of the brain.

**C. medullæ spinalis.** (*L. medulla*, marrow; *spinalis*, spinal.) Concussion of the spinal cord.

**C. retinae.** (*L. rete*, a net.) Concussion of the retina.

**Communicable.** (*L. communicabilis*, from *communico*, to share together.) Capable of being imparted or communicated from one to another.

**Communicans.** (*L. part. of communico*.) Communicating, connecting.

**C. fibularis.** (*Fibula*.) The *C. peronei*.

**C. noni.** (*L. nonus*, nine.) Two filaments of the deep anterior branches of the cervical plexus, one from the second and the other from the third cervical nerve, which descend on the outer side of or upon the internal jugular vein to form with the descendens noni the *Ansa nervi hypoglossi*.

**C. peronei.** (*Ἠσώνη*, a brooch, the fibula.) A branch of the external popliteal nerve, arising near the head of the fibula; it crosses the outer head of the gastrocnemius and joins the short saphenous nerve below the middle of the leg.

**C. poplitei.** (*L. poples*, the ham.) The part of the short saphenous nerve between its origin from the internal popliteal nerve and its junction with the communicans peronei.

**C. tibialis.** (*Tibia*.) The external or short saphenous nerve.

**C. Willisii.** (*Willis*.) The posterior communicating artery of the brain.

**Communicating.** (*L. communico*. *F. communicant*; *I. and S. communicante*; *G. verbindend*.) Connecting, imparting to, one another.

**C. artery, anterior.** (*F. artère communicante antérieure*.) A small vessel, .25" long, connecting one anterior cerebral artery with its fellow of the opposite side; it lies in front of the optic commissure, beneath the lamina cinerea.

**C. artery of dorsalis pedis.** (*L. dorsum*, the back; *pes*, the foot. *G. tiefe Sohlenarterie*.) One of the two terminal branches of the dorsal artery of the foot; it dips between the two heads of the first dorsal interosseous muscle, and joins the external plantar artery to form the plantar arch, and gives off two branches; one runs on the plantar surface of the inner side of the great toe; the other passes forwards along the first metatarsal space, and divides for the supply of the contiguous surfaces of the first and second toes; it anastomoses with the external plantar.

**C. artery of palm.** A branch, arising from the ulnar artery at the springing of the superficial palmar arch, which runs between the flexor brevis and the abductor of the little finger, to join the terminal part of the medial artery and to assist in forming the deep palmar arch.

**C. artery of ulnar.** A branch of the ulnar artery at the commencement of the superficial palmar arch, a little beyond the pisiform bone; it passes inwards between flexor brevis minimi digiti and the abductor minimi digiti near their origins, and anastomoses with the termination of the radial artery to form the deep palmar arch.

**C. artery, posterior.** (*F. artère communicante postérieure*; *G. hintere Verbindungs-*

*arterie.*) Arises from the back part of the internal carotid, and runs backwards and a little inwards to join the posterior cerebral artery. It varies much in size.

**C. processes.** Term applied to the outgrowths of adjoining cells when they are continuous with each other.

**Communication.** (L. *communico*, F. *communication*.) The act or means of imparting or connecting.

In Anatomy, the union or connection between two organs or cavities.

**C., mimetic.** (F. *communication mimique*.) The gaining or giving information by signs or gestures, or the play of the features.

**C., oral.** (F. *communication orale*.) Communication by speech, by word of mouth.

**C., written.** (F. *communication écrite*.) Communication by writing with pen, pencil, or style.

**Commutator.** (L. *commuto*, to exchange. G. *Stromwender*.) An instrument for breaking or making contact, or changing the current in a galvanic circuit.

**Comocladia.** (Κόμη, hair; κλάδος, a shoot.) A Genus of the Nat. Order *Terebinthaceae*. The plants of this genus grow in Tropical America, and are rich in glutinous, often acrid, sap, which blackens in the air.

**C. braziliastrum.** Porro. False Brazil wood. Properties as *C. dentata*.

**C. dentata.** Jacq. (L. *dentatus*, toothed. F. *guao*.) Hab. Tropical America. Juice milky, irritant, and very poisonous. It is used to destroy warts. The bruised leaves have an odour of sulphur. It is believed by the natives that anyone sleeping under its shade dies.

**C. ilicifolia.** Sw. (L. *ilex*, the holly; *folium*, a leaf.) Juice blackens the skin.

**C. integrifolia.** Linn. (L. *integer*, entire; *folium*.) Juice caustic and corrosive, destroys and stains the skin black. Used as a depilatory.

**Comoid.** (Κόμη, the hair; εἶδος, likeness.) Having the appearance of a lock of hair.

**Comon.** The name of a palm of Guiana; probably a *Bactris*, the fruit of which is eaten cooked, or raw with salt.

**Comophorous.** (Κόμη, hair; φορέω, to bear. G. *haartragend*.) Having or bearing hair.

**Como'sæ.** (L. *coma*, hair.) A Linnæan Nat. Order, of which *Spiræa* is the type.

**Comose.** (L. *coma*, a head of hair. G. *beshopft, haarig*.) Full of, or covered with, hairs. Having a *Coma*.

**Comotica.** (L. *coma*, the hair.) Remedies for the diseases of the hair.

**Compact.** (L. *compactus*, part. of *compingo*, to join together. G. *dicht, fest, gedrungen*.) United, close in texture, dense.

Plants are called compact when they consist of solid substance.

**C. tissue of bone.** The dense ivory-like outer layer of a bone.

**Compages.** (L. *compages*, a joining together.) Same as *Articulation*, and as *Commissura*.

**C. osium per lin'eam simplicem.** (L. *os*, a bone; *per*, by means of; *lin'ea*, a line.) A term for the form of union of bones called *Harmony*.

**C. vertebra'rum.** (L. *vertebra*, a spine bone.) The spinal column as a whole.

**Compaginate.** (L. *compagino*, to join together. G. *zusammengeflacht*.) Flattened together.

**Compaginatio.** (L. *compagino*, to join together.) Same as *Commissura*.

**Compans.** France; Département de Seine-et-Marne. A cold weak sulphur water.

**Comparison.** (L. *comparo*, to put together.) The phrenological term for the faculty which investigates likenesses and differences; its organ is said to be situated in the middle of the upper part of the forehead, between those of Causality, above that of Eventuality, and below that of Benevolence.

**Compass.** (F. *compas*, from Low. L. *compassus*, a circle; from L. *com*, for *cum*, together; *passus*, a step.) A circuit, a boundary.

Also, the instrument, essentially consisting of a magnetic needle, balanced in such manner that it can freely move on a horizontal plane, by which the magnetic meridian is indicated.

**C. plant.** The *Sulphur lucinatum*; so called because its leaves point always north and south.

**Compasses.** (Same etymon.) An instrument consisting of two limbs united at one end by a joint, and adapted to measure the size of parts and their distance from each other.

**Compas'sio.** (L. *compassio*, fellow-suffering.) A term for sympathy.

**Compeba.** A synonym of *Cubebs*.

**Compelled movements.** (G. *Zwangsbevegungen*.) Movements arising from irritation or lesion of some part of the central nervous system. Examples occur in the deviation of the eyes and rotation of the head towards the non-paralysed side, seen in some cases of lesion of corpus striatum; in the deviation of one eye upward and outward, and of the other downward and inward; in the circus movements in one direction that occur in some cases of cerebellar hæmorrhage, and after lesion of the central peduncle; in the forward movements resulting from lesion of Nothnagel's nodus cursorius in the corpus striatum, and in the backward movements observed in some cases of lesion of the cerebellum.

**C. position.** (G. *Zwangslager*.) A position to which a patient constantly returns when placed in any other position. It has been observed in disease of the cerebellar peduncles.

**Compensation.** (L. *compensatio*, from *compenso*, to counterbalance.) The act of counterbalancing. Term applied to those conditions by which the effects of congenital or acquired disease are warded off. It may be observed in cases of cardiac and hepatic disease, when the symptoms that would otherwise present themselves are prevented or relieved by the establishment of collateral circulation.

**Compensatory.** (Same etymon.) Counterbalancing; supplying a deficiency in another.

**C. hypertrophy.** See *Hypertrophy, compensatory*.

**Comp'peper.** Old name for *Cubebs*.

**Compernis.** (L. *compernis*, from *com*, for *cum*, together; *perna*, a ham.) One whose knees are bent inwards. Same as *Genu valgum*.

**Compl'ate.** (L. *complatus*, part. of *complano*, to make flat.) Flattened.

**Complemental.** (L. *compleo*, to fill up.) Completing; supplying a deficiency.

**C. air.** See *Air, complementary*.

**C. males.** (L. *compleo*, to fill up.) Term

## COMPLEMENTARY—COMPOUND.

applied by C. Darwin to certain parasitic males which he observed to exist in Cirripedes. These do not pair, as in all hitherto known cases, with females, but with hermaphrodites or bisexual animals, to which, with the exception of some species of *Ibla* and *Scalpellum*, all the Cirripedes belong.

**C. nutrition.** Paget's term for the idea first expressed by Treviranus that each single part of the body, in respect of its nutrition, stands to the whole body in the relation of an excreted substance.

**C. space of pleura.** (*Pleura*.) The part of the pleura unoccupied by the lung in ordinary breathing; being the part immediately above the costal insertion of the diaphragm, where for some distance the costal and diaphragmatic pleurae are in contact.

**Complementary.** Same etymon and meaning as *Complemental*.

**C. air.** Same as *Air, complemental*.

**C. bone.** (*L. complo*, to fill up.) An accessory bone of the lower jaw of reptiles and birds corresponding to the coracary process. The os coronoidium.

**C. colours.** See *Colours, complementary*.

**C. tissue.** The part of the fundamental tissue of plants which is not distinguished by a special term; it consists of thin-walled, succulent parenchyma, with intercellular spaces.

**Complete.** (*L. completus*, part. of *compleo*, to fill up. *F. complet*; *G. vollständig*.) In Botany, having all the parts belonging to it, or to the type.

**Completo.** (*L. completio*, a filling up.) A synonym of *Plethora*.

**Complex.** (*L. complexus*, part. of *complexor*, to clasp around. *G. verflochten*.) Consisting of several parts.

**Complexio.** (*L. complexio*, a combination.) A synonym of *Coition*.

Also, the same as *Temperament* and *Complexion*.

**Complexion.** (*L. complexio*. *G. Gesichtsfarbe*.) The colour and tone of the skin, especially of the face.

By French writers it is regarded as the combination of all the external and physical conditions of the body which constitute the natural state of a man, and is thus not identical with temperament, which refers rather to the state or disposition of his organs in health.

**Complexity.** (*L. complexus*.) Term applied to organs or bodies composed of many parts. Thus, in Chemistry, the albumens are examples of great complexity of constitution.

**Complexus.** (*L. complexus*, part. of *complexor*, to embrace; complex, consisting of several parts. *F. grand complexus*.) A muscle situated in the fourth layer of the muscles of the back. It arises from the transverse processes of the upper six dorsal vertebrae, from the articular processes of the cervical vertebrae as high as the third, and from the spine of the last cervical vertebra. It is inserted between the two curved lines of the occipital bone. It presents a tendinous intersection at the junction of the upper third with the two lower thirds. The inner part of the muscle often presents two fleshy bellies, with an intervening tendon, and is named the biventer cervicis. It is supplied by the internal branches of the posterior primary divisions of the neighbouring spinal nerves, and by branches of the suboccipital and occipitalis magnus nerves.

It derives its blood supply from the ascending and profunda cervicis arteries. It bends the head back.

**C. magnus.** (*L. magnus*, great. *F. grande complexus*, *trachelo-occipital*, Chaussier.) The *C. muscle*.

**C. major.** (*L. major*, greater.) The *C. muscle*.

**C. minor.** (*L. minor*, less. *F. petit complexus*, *trachelo-mastoidien*, Chaussier.) The *Trachelo-mastoid muscle*.

**Complicate.** (*L. complico*, to fold together. *G. zusammengefallt*.) Folded upon itself, as of a leaf.

**Complication.** (*L. complicatio*, from *complico*, to fold together. *G. Verwicklung*.) The being entangled; the condition in which several things are intermixed.

Used in Medicine to signify a series of one or more morbid processes succeeding the original disease, and depending on it or on the same cause.

**Component.** (*L. compono*, to put together.) Having a part in the constitution of a compound.

**C. forces.** A term applied to each of the several forces producing a resultant force.

**Compositæ.** (*L. compositus*, put together; part. of *compono*, to join together.) An Order of epigynous Exogens of the Alliance *Campanales*, or of the cohort *Asterales*, with a one-celled ovary, valvate corolla, syngenesious anthers, and erect ovule, without albumen.

**Composites.** See *Compositæ*.

**Composition.** (*L. compositio*, a putting together. *G. Vermischung*.) The act of compounding or composing; such as the composition of medicines.

Also, the thing compounded or made up.

Also (*G. Zusammensetzung*), the arrangement and character of the parts composing a whole; such as the composition of a chemical compound.

**Compositor.** (*L. compono*, to put together.) One who sets up type for a printing press.

**C's cramp.** A disorder affecting the thumb and fingers of compositors, of the same nature as *Writers' cramp*.

**C's thumb.** Same as *C's cramp*.

**Compositum.** (*L. compono*.) A Compound.

**Compound.** (*L. compono*, to compose.) A substance made up of two or more parts or elements.

Also, to mix together, as in the preparing of medicines.

In Botany (*F. composé*; *G. zusammengesetzt*), applied to similar parts, as the flower or pistil, aggregated into a common whole.

**C. atom.** See *Atom, compound*.

**C. ethers.** Term applied to those ethers or ethereal salts in which the hydrogen in an alcohol is replaced by acid radicles.

**C. eyes.** Eyes which are like those of Insecta.

**C. fracture.** See *Fracture, compound*.

**C. inflorescence.** See *Inflorescence, compound*.

**C. leaves.** Leaves which are composed of two or more parts articulated together, and capable of being separated without destruction at the close of life.

**C. radicle.** See *Radicle, compound*.

**C. spore.** See *Spore, compound*.

**C. stom'ach.** A stomach which, like that of the ruminants, consists of several compartments communicating with each other.

**Comprehen'sio.** (L. *comprehensio*, a catching; from *comprehendo*, to lay hold of.) A term for catalepsy.

**Comprens'io.** Same as *Comprehensio*.

**Compress.** (L. *compressus*, part. of *comprimo*, to press together. F. *compresser*; G. *Bausch*, *Bauschen*.) A substance by which pressure may be made on a definite part by the aid of an encircling bandage or strap.

Also, a folded piece of rag or lint wetted with water, which is applied under a dry wrapper to a part for the relief of inflammation or irritation; it may be used with or without oil-silk.

**C. en croix de Mal'ta.** (F. *en. in; croix*, cross; *de*, of.) A square compress in which a deep cut is made at each angle, and carried nearly to the centre; so as to be like a Maltese cross.

**C., fenest'rated.** (L. *fenestra*, a window. F. *compress fenestrée*.) A compress having a hole in it for the discharge of matter, or for the inspection of the part beneath.

**C., gradu'ated.** (L. *gradus*, a step. F. *compress graduée*.) A compress consisting of a series of strips of lint or other material, each strip being somewhat larger than the one below; the narrowest strip is applied to the part requiring the compress.

**C., prisma'tic.** (Prism.) A compress presenting a triangular surface in transverse section. Used to keep parts separate which have a tendency to fall together, as in the case of the bones of the forearm after fracture.

**C., regul'ar.** (F. *compress graduée régulière*.) A piece of linen or lint folded alternately from right to left and from left to right, each fold exactly covering the one beneath.

Also, a synonym of *C., gradu'ated*.

**Compressed.** (L. *compressus*. G. *zusammengedrückt*.) In Botany, flattened lengthwise.

**C. air bath.** See *Bath, air, compressed*.

**Compressibility.** (L. *compressus*. F. *compressibilité*; I. *compressibilità*; S. *compressibilidad*; G. *Pressbarkeit*, *Zusammendrückbarkeit*.) The capability of being reduced to a smaller volume by some mechanical power.

**Compressible.** (L. *comprimus*, to press together. F. *compressible*.) Capable of being compressed.

**Compres'sio.** See *Compression*.

**C. cereb'ri.** (L. *cerebrum*, the brain.) See *Compression of brain*.

**Compression.** (L. *compressio*, from *comprimus*, to press together. G. *Zusammendrückung*, *Zusammenpressung*.) The act or condition of being pressed together.

Compression of an organ, so as to interfere with its functions, occurs in the course of disease or injury, as of the lung by effusion into the pleura; of the bowel from an abdominal tumour; or of the brain by a blow causing depression of the skull.

Compression is a means frequently employed in Surgery to reduce the bulk of parts, to aid in the removal of air or extravasated fluids, to prevent the effusion of fluids, and to keep parts in apposition. It is applied by a bandage or by some form of compress.

**C. à or en deux temps.** (F. *à deux temps*, at two periods.) Digital compression applied to a vessel affected with aneurysm. As

employed by Broca, the current of blood is first partially, and then, after an interval, completely, arrested.

**C., cereb'ral.** (L. *cerebrum*, the brain.) See *C. of brain*.

**C., circular.** The constriction of a vessel and arrest of the flow of blood through it by a ligature.

**C., dig'ital.** (L. *digitalis*, from *digitus*, a finger.) A method of treating aneurysms suggested by Vanzetti. It consists in retarding or altogether arresting the flow of blood through the vessel until coagulation of the contents of the aneurysm occurs; when the flow of blood is entirely arrested the compression is said to be complete, when partially arrested incomplete. The compression may also be applied to the vessel through the integuments, or mediately or after its exposure, when it is immediate. It may also be applied continuously or intermittently, the last method being introduced to relieve the patient from the pain caused by constant pressure.

**C., imme'diate.** Compression applied to a nerve or vessel when exposed or isolated from the adjoining tissues.

**C., imme'diate lateral.** Compression exerted along one side of a vessel, as in aneurysm, or in the application of a compress, as opposed to circular compression.

**C., me'diate.** Compression applied to a vessel or nerve through the integuments and tissues.

**C. of brain.** (F. *compression du cerveau*; G. *Hirndruck*.) The state in which the brain structure is pressed upon to its damage by an intracranial growth or effusion, or by an extracranial injury which alters the shape of some part of the skull bones. The term is mainly confined to the result of mechanical injury, whether the pressure be the direct effect of the injury through depression of bone, or the indirect through the effusion of blood or the formation of pus. The symptoms vary in intensity according to the amount of pressure, and in rapidity of development according to the suddenness or slowness of action of the cause. They consist in a deeper or a lighter form of coma, a greater or smaller degree of paralysis, a more or less complete abolition of sensation, with sometimes delirium, sometimes convulsion. The breathing is slow, stertorous, or puffing; the pulse is full and slow; the temperature is high; the pupils are dilated, one or both; and there is often incontinence of feces and retention of urine.

**Compressive.** (L. *compressus*, part. of *comprimus*, to press together.) That which is capable of exercising compression.

**C. ban'dage.** (L. *comprimus*, to squeeze together; A. S. *band*, from verb to bind. G. *Compressiv-Verband*.) A bandage by means of which firm pressure can be applied to any part of the body for a considerable length of time. Such bandages are used to control hæmorrhage, to promote union of cut surfaces, the healing of torpid ulcers, the absorption of extravasated blood, lymph, or serum, to keep inflamed parts at rest, and to relieve pain, and to prevent the escape of natural fluids, as when applied to the eye or to an aneurysm, or in hæmophilia.

**Compres'sor.** (L. *compressus*. F. *compresseur*; I. *compressore*; S. *compressor*; G. *Druckwerkzeug*, *Zusammendrucker*.) That which compresses.

## COMPRESSORIUM—CONCATENATE.

An instrument intended to compress a nerve, or artery, or duct, of which there are many forms. It is also employed synonymously with *Tourniquet*, which see.

Applied to muscles which have this action.

Also, an instrument formerly used to assist the extraction of the lens in cataract operations.

**C. bul'bi.** (*Bulb.*) Same as *C. hemisphaerium bulbi*.

**C. bul'bi proprius.** (*L. proprius*, special.) Same as *C. hemisphaerium bulbi*.

**C. hemisphaerium bul'bi.** (*L. hemisphaerium*, a half sphere; *bulbus*, a bulb.) Kobelt's name for those fasciculi of the accelerator urinae muscle which invest the bulb of the urethra.

**C. la'bil proprius.** (*L. labium*, the lip; *proprius*, special. *G. Saugmuskel.*) Independent radiating muscular fibres extending from the skin to the mucous membrane at the free border of the lips.

**C. laryng'is.** (*Λάρυγξ*, the larynx.) The *Sphincter laryng'is*.

**C. len'tis.** (*Lens*.) The circular fibres of the *Ciliary muscle*.

**C. len'tis accommodato'rius.** (*L. accommodatio*, an adapting.) Term applied to the circular fibres of the ciliary muscle.

**C. na'ris.** (*L. naris*, a nostril. *F. transverse du nez*; *G. Nasendrucker.*) A thin triangular muscle arising, narrow and fleshy, from the canine fossa of the superior maxillary bone, and passing inwards and broadening into a thin aponeurosis, which is partly blended with that of its fellow and of the pyramidalis nasi, and is partly attached to the fibro-cartilage of the nose. It depresses the nasal cartilage, narrows the nostrils, especially at the upper part, and aids in producing a nasal tone of voice.

**C. na'rium major.** (*L. naris*; *major*, greater.) The *C. naris*.

**C. na'si.** (*L. nasus*, the nose.) Same as *C. naris*.

**C. of Nuck.** An iron girdle round the pelvis carrying a pad, which presses on the urethra in the perinaeum. Used to restrain incontinence of urine.

**C. pros'tatae.** (*Prostate.*) A term applied to those fibres of the levator ani muscle which are in connection with the prostate gland.

**C. sac'culi laryng'is.** (*L. sacculus*, a small bag; *larynx*.) The part of the *Arytaenoideum muscle* which is attached to the epiglottis; it is separated by an areolar interval from the other part of the same muscle, which is called the *arytaeno-epiglottideus superior*.

Also, called the *arytaeno-epiglottideus inferior*.

**C. ure'thrae.** The *Constrictor urethrae*.

**C. ve'næ dorsa'lis pe'nis.** (*L. vena*, a vein; *dorsalis*, belonging to the back.) A small slip of muscular fibre arising from the crus penis and the pubic arch above the origin of the ischio-cavernosus, and passing upwards and forwards to unite with its fellow of the opposite side above the dorsal vein of the penis. They are not always found in man, but are well developed in some lower animals. They assist in producing erection of the penis by compressing the vein.

**Compressorium.** (*L. compressus.*) A synonym of *Compressor*.

Also, an instrument, with screw or lever action, used in microscopical research, by means of which graduated pressure may be brought to bear on the object under examination. There are many varieties.

**Compto'nia.** (*Compton*, a Bishop of London.) A Genus of the Nat. Order *Myriaceae*.

**C. asplenifo'lia.** Ait. (*L. asplenium*, spleenwort; *folium*, a leaf.) Sweet fern, ferngale. A plant possessing astringent and tonic properties, much used in the domestic medicine of the United States, for diarrhoea and colic and as a fomentation in rheumatism.

**Compulsory movements.** (*L. compello*, to drive. *G. Zwangsbewegungen.*) The same as *Compelled movements*.

**C. position.** (*G. Zwangslager.*) The same as *Compelled position*.

**Compunctio.** (*L. compunctio*, from *compungo*, to prick.) The act of puncturing.

Also, a synonym of *Paraesthesia*.

**Conaesthesia.** Same as *Cynaesthesia*.

**Conama'rin.** (*L. conium*; *amarus*, bitter.) A bitter principle said to exist in *Corium maculatum*.

**Conanthera.** (*L. conus*, a cone; *anther.*) A Genus of the Nat. Order *Liliaceae*, so named because the long connivent anthers assume the shape of a cone.

**C. bisfo'lia.** Ruiz and Pav. (*L. bis*, twice; *folium*, a leaf.) Hab. Chili. Bulb esculent.

**Conario-hypophys'ial canal.** (*L. conarium*; *hypophysis*.) A passage connecting the infundibulum with the interior of the pineal gland in Vertebrata, through the third ventricle, and believed by Owen to represent a deuterostome. See *Infundibulum* and *Pineal gland*.

**Conarium.** (*Κονάριον*, dim. of *κωνος*, a cone. *G. Zirkel.*) The pineal gland, or, by some, only the posterior part of it. It was named conarium by Galen, and was regarded by him as an *admir*, or material for filling a space, and was supposed, on the one hand, to obstruct the canal connecting the third and fourth ventricles, and on the other, to constitute a necessary provision to retain the vena magna Galeni in its place.

**Cona'tion.** (*L. conor*, to try.) A term used by Sir W. Hamilton for the faculty exhibited in the exertive powers of the mind, as distinct from the cognitive faculties and the feelings.

**Con'ative.** Relating to *Conation*.

**Conatus.** (*L. conatus*, an attempt; from *conor*, to try.) An effort. Applied sometimes to those actions of animals and plants which have the appearance of an effort; as the attempt of a plant to reach the light when planted in a dark place.

**Concameration.** (*L. concameratio*, a vault; from *cum*, with; *camera*, vaulted chamber. *G. Schallwellenlinie.*) The curve of each wave of sound which, as it widens, completely invests the succeeding ones.

Also, a term for the division of fruits into segments.

Also, a synonym of *Camarosis*.

**Concarnatio.** (*L. con*, together; *car-natio*, fleshiness.) The connection of a bone with another bone by means of muscles; as of the hyoid bone with the lower jaw.

**Concassation.** (*F. concasser*, to crush; from *L. conquasso*, to shatter.) The reduction into small fragments of roots or woods in order that their active principles may be more easily obtained by pharmaceutical processes.

**Concatenate.** (*L. con*, together; *catena*,

a chain.) Linked together. United in a series or chain.

**Concater'vate.** (L. *con*; *caterva*, a heap. G. *zusammengehäuft*.) Heaped up together.

**Concaules'cence.** (L. *con*; *caulis*, a stem.) The coalescence of axes in a plant.

**Concausa.** (L. *con*, together; *causa*, a cause.) A cause which combines with another to produce disease.

**Con'cave.** (L. *concaus*, hollow. F. *concave*; I. *concavo*; S. *concavo*; G. *hohl*, *vertieft*, *concav*.) Scooped out. Curved so that the centre is more depressed than the circumference.

**C. lens.** See *Lens*, *concave*.

**C. mirror.** See *Mirror*, *concave*.

**Concavifo'liate.** (L. *concaus*; *folium*, a leaf.) Having hollowed leaves.

**Concavitas.** (L. *concaus*, a hollow. G. *Aushöhlung*.) A hollow space or cavity.

**C. conchula'ris cer'ebrī.** (L. *conchula*, a small shell; *cerebrum*, the brain.) The infundibulum of the brain.

**Concavity.** Same as *Concavitas*.

**Conca'vo-concave.** (L. *concaus*, hollow.) Doubly concave, hollow on both surfaces. Applied to lenses.

**Conca'vo-con'vex.** (L. *concaus*; *convexus*, rounded.) Convex on one side, concave on the other, as some lenses.

**Conca'vo-cucullate.** (L. *concaus*; *cucullus*, a hood.) Having a hollow like a hood.

**Conca'vum.** (L. *concaus*, completely hollow.) A hollow or vaulted place.

**C. pe'dis.** (L. *pes*, the foot.) The hollow of the sole of the foot.

**Concealment.** (L. *concelo*, to conceal carefully.) The act of hiding, the state of being hid.

**C. of birth.** According to English law, if any woman shall be delivered of a child, every person who shall by any secret disposition of the dead body of the said child, whether such child died before, at, or after birth, endeavour to conceal the birth thereof, shall be guilty of a misdemeanour.

**Concentran'tia.** (L. *con*; *centrum*, a centre.) Concentrating things. An old term for absorbent and antacid substances. (Quincy.)

**Con'centrate.** (Same etymon.) To bring to a common centre; to bring near to each other. See *Concentration*.

**Con'centrated.** (Same etymon. G. *verstärkt*, *concentriert*.) Reduced to a smaller bulk by evaporation of some one, or part, of its constituents, usually the watery part.

**C. pulse.** Term applied to a small pulse.

**Concentration.** (F. *concentrer*, from L. *con*; *centrum*, a centre. F. *concentration*; I. *concentrazione*; S. *concentration*; G. *Zusammen-drängung*, *Verstärkung*.) The act of bringing together into a common centre.

Used as a chemical and pharmaceutical term (G. *concentration*) to indicate the approximation of the molecules of a substance dissolved in a liquid, or of those of a liquid itself, by removing the fluid in which they are dissolved or suspended, or by driving off the more volatile parts of a liquid. Concentration may be accomplished by heat, which drives off liquid in vapour; by freezing, by which the water may be removed; or by the addition of a substance having a great affinity for the liquid to be removed, as calcium chloride to remove water.

Also, an old term for the determination of blood or humours or vital force to an organ.

Also, a term for the characters of a pulse which is small and thready.

**C. law.** (G. *Concentrationgesetz*.) One of Bronn's six laws of progressive development; it consists in the collection of organs and functions in some definite part of the body, as in the concentration of the sense organs in the head.

**Concen'trativeness.** (Same etymon.) A term for a phrenological faculty having its organ located in the brain, immediately above that of Philoprogenitiveness and below that of Self-esteem, which gives continuity to impressions, whether they be feelings or ideas, and enables the intellectual or moral faculties to be combined on a single object.

**Concen'tric.** (L. *con*; *centrum*, a centre. F. *concentrique*; I. *concentrico*; G. *concentrisch*.) Having, or arranged around, a common centre.

**C. cells.** See *Cells*, *concentric*.

**C. contrac'tion.** (L. *contraho*, to draw together.) A muscular contraction which results in the approximation of the two ends, and the consequent shortening of the muscle.

**C. differentia'tion.** (L. *differentia*, a difference. G. *concentrische Differenzierung*.) That process by which, when any organic or inorganic substance exerts a play of forces with the surrounding medium, the superficial differ from the deeper parts. The only cases in which it does not occur are when the media are not capable of acting on the substance, when the substance is constantly undergoing change of relative position, as in the *Amœba*, and lastly, when the body is so small or so good a conductor that the change effected on the surface is immediately propagated to the centre.

**C. globes.** A term applied to those masses in certain cases of epithelial cancer where squamous epithelium is undergoing rapid growth, which are composed of cells arranged concentrically in groups. The central cells retain their more or less spherical shape, while the outer layers get by degrees flatter and firmer, until the outermost are scaly, brownish and like surface epidermic cells.

**C. hyper'trophy of heart.** See *Heart*, *hypertrophy of*, *concentric*.

**Concept.** (L. *conceptio*, a receiving.) The subject of a mental conception.

**Conceptacle.** (L. *conceptaculum*, a place of conception. I. *conceptacolo*; G. *Behälter*.) That in which a thing is contained.

A cavity of rounded form, in which either antheridia, or oögonia, or both, are formed in Algae. Such cavities appear in large numbers, and densely crowded at the ends of the longer forked branches, or of lateral shoots of peculiar form. They commence as depressions of the surface, which become enclosed by the surrounding tissues, so that at length they communicate with the exterior only by a narrow neck and pore. Their lining membrane consequently is composed of epidermic cells. Similar cavities of globular, flask-shaped, or sinuous form, and filled with sterigmata, are found in Fungi.

The term was originally applied by Linnæus to what is now called follicle; and subsequently applied to the pair of follicles of Asclepiadaceæ and Apocynaceæ.

**Conceptac'ula.** Pl. of *Conceptaculum*.  
**C. semina'ria.** (L. *semen*, seed.) The *Vesicula seminales*.

**Conceptac'ulum.** (L. *conceptaculum*, a place of conception.) The uterus.

Also (L. *conceptaculum*, a receptacle; from *con-*

# CONCEPTIO—CONCHININ.

*cipio*, to lay hold of), a term for a vessel, as a blood-vessel or lymphatic.

**C. suc'ci.** (L. *succus*, juice.) Irregular spaces in the parenchyma of plants, generally containing resin or gum.

**Conceptio.** (L. *conceptio*, from *concepio*, to conceive.) Conception, pregnancy.

**C. in u'tero.** (L. *in*, within; *uterus*, the womb. G. *Schwangerschaft*.) Pregnancy.

**C. vitio'sa.** (L. *vitiosus*, faulty.) Extra-uterine pregnancy.

**Conception.** (L. *conceptio*, from *concepio*, to conceive, to become pregnant. F. *conception*; I. *concezione*; S. *conception*; G. *Empfängnis*.) The reception of the semen of the male by, and the consequent fecundation of, an ovum in the female. It was formerly believed that conception took place in the ovary, but it is now generally admitted that it usually takes place in the Fallopian tube. See *Impregnation*.

Also (L. *conceptio*, from *concepio*, to comprehend intellectually. F. *conception*; I. *concezione*; S. *conception*; G. *Begriff*), the abstract idea or image of a thing in the mind; also, the power of conceiving in the mind.

**C., false.** (F. *conception fausse*, c. *délirante*.) Term applied to a false idea which cannot be expelled either voluntarily or by reasoning. False conceptions are common in hypochondria.

Also, a synonym of *Mole*.

**C., men'tal.** (L. *mens*, the mind.) A term applied to a rare operation of memory, by which objects are depicted on the retina by the mere effort of thought. (Hoblyn.)

Also, see under *Conception*.

**Conceptus.** (L. *conceptus*, from *concepio*, to conceive.) Old term for that mass from which the fetus in utero is formed. The first rudiments of the fetus after conception.

Also, the ovum.

Also, used for *Conception*.

**C. fal'sus.** Same as *Conception, false*.

**Conceve'iba.** A Genus of the Nat. Order *Euphorbaceæ*.

**C. guianen'sis.** This plant yields agreeably tasting seeds.

**Con'cha.** (Κόχχα, a shell. F. *conque*.) A conch, or shell.

Applied, in Biology, to different objects, from their shape.

Applied to the hollow portion of the external ear.

Also, a term for the patella.

Also, the middle turbinated bone.

Also, a term for the vulva.

Also, an old Greek measure of liquids, about equal to half a fluid ounce; so called because a mussel or cockle shell was used for the purpose.

**C. auriculæ.** (L. *auricula*, the outer ear.) A synonym of the *C. auris*.

**C. au'ris.** (F. *conque de l'oreille externe*; G. *Ohrmuschel*.) Term for the cavity of the external ear, or auricle, which surrounds the meatus auditorius externus.

**C. au'ris inter'na.** (L. *auris*, the ear; *internus*, internal.) A synonym of the *Cochlea*; *Morgagni, Epist.* xii, No. 10.

**C. cere'brī.** (L. *cerebrum*, the brain.) A synonym of the infundibulum of the brain.

**C. cra'nii.** (Κρανιον, the whole bony skull.) A synonym of the orbit.

**C. ge'nu.** (L. *genu*, the knee.) A synonym of the interarticular fibro-cartilage of the knee.

**C. infe'rior.** (L. *inferior*, lower.) The inferior turbinated bone.

**C. labyrinth'i.** (*Labyrinth*.) The cochlea of the ear.

**C. Morgagnia'na.** (*Morgagni*. G. *obere Muschel*.) A synonym of the superior turbinated bone.

**C. mulle'bris.** (L. *muliebris*, belonging to a woman.) A synonym of the vagina.

**C. na'rium infe'rior.** (L. *naris*, the nostril; *inferior*, that is below.) The inferior turbinated bone.

**C. na'rium me'dia.** (L. *naris*; *medius*, in the middle.) The middle turbinated bone.

**C. na'rium supe'rior.** (L. *naris*; *superior*, that is above. G. *obere Muschel*.) The superior turbinated bone.

**C. oculi.** (L. *oculus*, the eye.) A synonym of the orbit.

**C. Santorinia'na.** (*Santorinus*, the anatomist.) A small plate of bone, occasionally present, which projects from the lateral portion of the ethmoid bone above the superior turbinal bone.

**C. stri'a'ta.** (L. *striatus*, striped.) The cockle, *Cardium edule*.

**Con'chæ.** (L. plural of *concha*.) A synonym of *Testa*, U.S. Ph.

**C. na'rium.** (L. *naris*, a nostril. F. *conques des narines*; G. *Muscheln*.) The shells of the nostrils. The turbinated bones, which are termed respectively *concha narium superior*, *media*, and *inferior*.

**C. præpara'tæ.** (L. *præparatus*, prepared. G. *präparirte Austerschalen*.) Burnt oyster shells.

**C. sphe'noïda'les.** (*Sphenoid bone*. G. *Keilbeinhörner*.) A synonym of the *Cornui sphenoidalia*.

**C. Ven'eris.** (L. *Venus*, the goddess of love.) A term for the turbinated bones.

**Concha'cea.** (L. *concha*, a shell.) Same as *Conchifera*.

**Conchanthelie'ius.** (*Concha*; *antihelix*. G. *Ohrschneckenwindungsmuskel*.) The transverse muscle of the pinna of the ear, *Transversus auricular*.

**Conchanthelix.** (*Concha*; *helix*.) The transversus auricular muscle.

**Concha'rum antifibri'le.** (L. *concha*; *antifibrilis*, against febrile action.) An old remedy, consisting of mussel shells macerated in vinegar, dried, and powdered. Used as a febrifuge and diuretic.

**Conchif'era.** (L. *concha*, a shell; *fero*, to bear.) A term by Lamarck for the shell-bearing molluscs now included in the Classes *Brachiopoda* and *Lamellibranchiata*.

**Conchif'erosus.** (Same etymon. F. *conchifère*; G. *schalftragend, muscheltragend*.) Bearing, or possessing, a shell; belonging to the *Conchifera*.

**Conchiform.** (L. *concha*, a shell; *forma*, likeness. F. *conchiforme*; G. *schalfförmig, muschelähnlich*.) Shell-like; especially like a valve of a bivalve shell.

**Conchin'amin.** C<sub>15</sub>H<sub>21</sub>N<sub>3</sub>O<sub>2</sub>. A substance obtained from the cinchona barks, having the same composition as quinamin.

**Conchinia.** Same as *Conchinin*.

**Conchinin.** A synonym of *Quinidin*.

The substance so called by Hesse is identical with *Quinidin*.

The conchinin of Henry and Belondre is probably chiefly cinchonidin.

**C. sulph'ate.** (G. *schwefelsaures Conchinin*.) Same as *Quinidin sulphate*.

# CONCHININUM—CONCRETION.

**Conchininum.** Same as *Conchinin*.  
**C. sulphuricum.** Same as *Conchinin sulphate*.

**Conchiolin.** (L. dim. of *concha*, a shell.) The organic matter of the shells of mussels and snails. It is insoluble in dilute and in alkaline leys; it is soluble in hot concentrated sulphuric acid. When boiled with dilute sulphuric acid it furnishes leucine, but no sugar-like body. It is analogous to *Keratin*.

**Conchohelix.** (*Concha*; *helix*.) Same as *Helix*, small muscle of.

**Conchoid.** (Κόγχη, a shell; εἶδος, likeness. F. *conchoïde*; G. *muschelig*.) Resembling a shell or conch.

**Conchoidal.** (Κόγχη, a shell; εἶδος, likeness. G. *muschelförmig*.) Resembling a shell.

**C. fracture.** (L. *frango*, to break.) A term applied to broken surfaces which have the same appearance as the surface of a shell when broken.

**Conchology.** (Κόγχη, a shell; λόγος, a discourse. F. *conchologie*; G. *Muschelchhre*.) The description of the form, structure, and peculiarities of shells.

**Conchoscope.** (Κόγχη; σκοπέω, to observe.) A tube containing at one end a metallic mirror, which is introduced into the nasal passages to facilitate the inspection of the turbinated bones and the other parts.

**Conch'us.** (Κόγχη, a shell.) Applied both to the cranium and to the cavity of the orbit, from their shape.

**C. oculi.** (L. *oculus*, the eye.) The orbit.  
**Conchylia.** (Κογχύλια, a mussel or cockle.) The turbinated bones.

Also (G. *Muschelschalen*, *Schneckenhäuser*), oyster, mussel, or snail shells.

**Conchyliology.** (Κογχύλιον, a shell; λόγος, an account. F. *conchyliologie*; L. *conchyliologia*; G. *Conchylienkunde*.) An account or description of shells.

**Concidentia.** (L. *concido*, to fall down.) Old term (*συμπτωσις*), mentioned by Hippocrates, *Aph.* i, 3, for a wasting or falling away.

Also, a synonym of *Collapse*.

**Concilia corporalia.** (L. *concilium*, a close conjunction; *corporalis*, belonging to the body.) Coition.

**Concilium.** (L. *concilium*, from *con*, together; *calo*, to call.) An old name for an aphrodisiac, the flower of a plant supposed to be either a *Jasione* or a *Campanula*.

**Concineration.** (L. *con*; cinis, ash. G. *Einuscherung*.) The thorough reduction of a substance to ashes.

**Concinnate.** (L. *concinns*, fitly put together. G. *kunstgerecht*, *zuerlich*, *gefällig*.) Neat, elegant.

**Conci'sus.** (L. *concisus*, part. of *concido*, to cut to pieces. G. *zerschneiden*.) Cut into pieces.

**Concoagulation.** (L. *con*, together; *coagulo*, to thicken or curdle.) Old term for the mixed concretion of different salts dissolved at the same time, and shooting into crystals having a mixed figure.

Also, the coagulating together of different substances into one mass.

**Concocted.** (L. *concoquo*, to boil together; from *con*, with; *coquo*, to boil. G. *verdaunt*.) Matured, digested. See *Concoction*.

**Concoctio.** See *Concoction*.

**C. tar'da.** (L. *tardus*, slow.) A term for indigestion.

**Concoction.** (L. *concoquo*, to boil together, to digest. F. *concoction*; G. *Zusammekochen*, *Kochung*, *Verdaunung*.) The act of boiling one substance with another. Formerly applied to the maturation of the humours.

Old term for the changing process which the food undergoes in the stomach and bowels, and so used synonymously with *Digestion*. See *Coction*.

**Concoctive.** (Same etymon.) Having the power of digesting.

**Concolourate.** Same as *Concolourous*.

**Concolourous.** (L. *con*, together with; *color*, colour. G. *gleichfarbig*.) Alike in colour. Applied to two surfaces of a leaf, and such like.

**Concomitant.** (L. *cum*, with; *comitor*, to accompany. G. *begleitend*.) That which accompanies or is associated with.

**C. signs.** (F. *signes concomitants*.) The same as *C. symptoms*.

**C. symp'toms.** (Συμπτωματα, anything that has befallen one.) Phenomena that occur in the course of a disease in association with the essential symptoms, but which are themselves only accessory.

**Con'cours.** (F. *concours*, a meeting, a competition; from L. *concursum*, a meeting together.) A meeting or agreeing together. A term for the mode of election to official appointments in public hospitals, in France, viz.: by a public competition of candidates before a competent professional jury.

**Concremation.** (L. *con*, together; *cremo*, to burn.) Old term for calcination, or a burning together.

**Concrement.** (Low L. *concrementum*; from L. *concreresco*, to grow together.) A concretion.

**C. zoöhylicum.** (Ζῷον, an animal; ὑλη, matter.) A concretion of animal matter.

**Concrementum.** See *Concrement*.

**Concrescible.** (L. *concreresco*, to grow together, to stiffen.) Term applied to certain fluids of the body which thicken without coagulating.

**Con'crete.** (L. *concreresco*, to grow together, to curdle. F. *concrète*; G. *concret*, *verdickt*.) Condensed or made solid. Applied to substances that are converted from a fluid to a more solid consistence.

Also, used in opposition to abstract, as relating to an object having existence.

In Botany, growing together.

**C. pus.** See *Pus*, *concrete*.

**C. science.** See *Science*, *concrete*.

**Concretion.** (L. *concreresco*. F. *concrétion*; G. *Zusammenwachsen*, *Verdickung*.) The condensation of a substance into a more solid consistence.

Old term for the growing together of parts naturally separate, as the fingers or toes.

**C., al'vine.** (L. *alvus*, the belly.) A calculus or concretion formed in the stomach or intestines.

**C., arthrit'ic.** (Ἀρθριτικός, belonging to the joints.) A chalk-stone.

**C., bili'ary.** (L. *bilis*, bile.) A gall-stone.

**C., calca'reous.** (L. *calx*, lime. F. *concretions calcaires*.) A deposit of chalk or of lime phosphate which is sometimes found lining the interior of organs, as the bladder.

**C., car'diac.** See *Cardiac concretions*.

**C., creta'ceous.** (L. *creta*, chalk. F. *concretions cretacees*.) The same as *C. calca'reous*.

**C., fibrinous.** See *Cardiac concretions*, *fibrinous*. Also *Thrombosis*.

**C., gouty.** A chalk-stone.

**C., membranous.** (L. *membrana*, a skin.) A deposit or pathological product, in the form of a membrane, such as occurs in diphtheria.

**C., polypiform.** (L. *polypus*; *forma*, shape.) A term for *Cardiac concretions*.

**C., polypous.** (*Polypus*.) A term for *Cardiac concretions*.

**C., tophaceous.** (Γάφος, a crumbling gravel stone. F. *concretions tophacées*.) The mass of lime carbonate and urate which, in gouty subjects, forms around joints. Same as *Chalk-stones*.

**Concre'tional.** (Same etymon.) Formed by, or relating to, *Concretion*.

**Concre'tive.** (Same etymon.) Causing, or having power to produce, *Concretion*.

**Concu'bitus.** (L. *conubo*, to lie together. F. *congrès*; G. *Zusammenliegen*, *Beischlaf*.) A term for copulation, congress, or coitus.

**C. vener'eus.** (L. *Venus*, the goddess of love.) Coition.

**Concus'sion.** (L. *concutio*, to shake violently. F. *commotion*; G. *Erschütterung*.) The act of shaking; the state of being shaken.

The shock to an organ or to the whole body from a fall, producing loss or impairment of function, without sensible alteration of structure.

**C. of brain.** (F. *commotion du cerveau*; G. *Gehirnerschütterung*.) A term applied to certain symptoms, varying in intensity and severity, consequent on a severe fall or direct blow on the head, or a shock transmitted to the brain from some other part of the body than the head. The symptoms vary from a mere passing giddiness and feeling of stunning to complete insensibility, which occasionally ends fatally. In the severe cases there is loss of consciousness and of power of motion, a cold pale surface, a feeble pulse, contracted or dilated, and sometimes immovable, pupils, vomiting, and relaxation of sphincters. Between this and the slight stun there are numerous gradations. At one time it was believed that in concussion of the brain, even in fatal cases, there was no lesion of structure, only disturbance of circulation; but latterly it has come to be thought that, in most cases, if it could be sought for, some contusion of the brain structure or some minute extravasation of blood would be found to account for the symptoms. The cases related to prove the occurrence of death from concussion without brain lesion are so incomplete as not to carry conviction.

**C. of eye.** See *Eye, concussion of*.

**C. of spine.** See *Spinal cord, concussion of*.

**Condamin'ea**, De Cand. (*Condaminia*, the botanist.) A Genus of the Nat. Order *Cinchonaceæ*.

**C. corymbo'sa**, De Cand. (L. *corymbus*, a cluster.) Hab. Peru. The bark is viscid, and possesses febrifuge qualities, and is a tonic and stomachic. It has been substituted for cinchona bark.

**C. macrophylla**, Lindl. (Μακρός, large; φύλλον, a leaf.) Hab. Central America. Used as a febrifuge.

**C. tinctor'ea**, De Cand. (L. *tinctorius*, belonging to dyeing.) Hab. Peru. Bark con-

tains a red colouring matter, and is sometimes mixed with cinchona bark.

**C. utilis**, Gaudichaut. The *Eleagra utilis*, Weddell.

**C. vera.** (L. *verus*, true.) The *Cinchona Condaminia*, which supplies Huamalies bark.

**Condensability.** (L. *condenso*, to thicken. F. *condensabilité*; I. *condensabilità*; S. *condensabilidad*; G. *Verdichtbarkeit*.) The capability or property of being condensed.

**Condens'able.** (L. *condenso*. F. *condensable*; I. *condensabile*; G. *verdichtbar*.) Term employed to indicate bodies the molecules of which are capable of being approximated to each other, thus reducing the mass to smaller compass.

**Condens'ant.** (L. *condensans*, part. of *condenso*, to thicken. F. *condensant*; G. *verdichtend*.) Rendering firm and hard. The French authors speak of condensant hypertrophy of bone, meaning augmentation of the volume of a bone with production of compact tissue.

**Condensan'tia.** (L. *condenso*, to make thick.) Old term applied to medicines supposed to have power to thicken the humours of the body.

**Condensa'tion.** (L. *condenso*, to make thick. F. *condensation*; G. *Verdickung*.) Term for the act, or process, or state, of bringing the molecules of a substance nearer to each other by pressure, or cold, or other means.

Applied to a thickened or more dense condition of a texture, or of parts, as of the parenchyma of an organ.

An old term for the contraction of the cutaneous pores by cooling or astringent medicines.

**C. of lung.** See *Lung, condensation of*.

**C. of va'pours.** The reduction of a vapour or gas to a liquid state.

**Condensa'tor.** (F. *condensateur*; I. *condensatore*; S. *condensator*.) An instrument, invented by Volta, by means of which small charges of electricity may be accumulated, and their pressure manifested.

**Condense'.** (L. *condenso*. F. *condenser*; I. *condensare*; S. *condensar*; G. *verdichten*.) To cause the molecules of a body to approximate; so that a gas becomes liquid, or a liquid solid.

**Condens'ed.** (Same etymon.) Made dense or closer in texture.

**C. wave.** See *Sound-wave, condensed*.

**Condens'er.** (L. *condenso*.) The vessel in a distilling apparatus in which the vapour from the substance undergoing distillation is condensed.

Also, an apparatus in a Ruhmkorff's coil, consisting of sheets of tinfoil placed over each other and insulated by larger sheets of stout paper soaked in paraffin or resin. The sheets of tinfoil project alternately beyond the opposite ends of the paper, so that when joined by a binding screw the odd numbers form one coating of a condenser, and the even numbers the other coating.

Also, a lens for collecting and bringing to a focus the rays of light for the illumination of an object under a microscope.

**C., achromatic.** (A, neg.; χρωματικός, relating to colour.) An arrangement of achromatic lenses furnished with a diaphragm plate, with various-sized perforations, for bringing to a focus on the object the rays of light reflected from the mirror of a microscope.

**C., bull's-eye.** A plano-convex lens 2"

to 3' in diameter and of short focus, used for illuminating opaque objects under the microscope.

**C., elec'trical.** (Ελέκτρον, amber.) An arrangement by which the capacity of a conductor for electricity is increased by bringing near it another conductor connected with the earth. The two conductors are usually, as in the case of the Leyden jar, thin plates or sheets of metal placed parallel to one another, with a larger plate of non-conducting material between them.

**C., Liebig's.** A tapering glass tube fixed by means of corks in the centre of a metal pipe, which is provided with a tube at each end, one connected with a reservoir and the other an exit, so that a current of cold water from the reservoir may circulate through it and around the central glass tube through which the distillate passes. The apparatus is attached to a retort for the purpose of condensing the distilled vapour.

**C., Webster's.** A form of condenser placed between the under surface of the stage of a microscope and the mirror, consisting below of a double convex lens, and above of a smaller achromatic combination of a double-convex lens of crown glass and a plano-convex lens of flint glass, the plane surface uppermost; it is provided with a diaphragm with holes and stops.

**Condensing.** (L. *condens.*) Making firm, making or becoming closer in texture.

**C. instruments.** Steel, conical, probe-like instruments, with a bent extremity and a flattened end, for pressing tight or condensing the gold stopping of a tooth-cavity.

**C. lens.** A lens used to condense the rays of light from the sky or a lamp on an opaque object under the microscope.

**Condillac.** France; Département de la Drôme. Athermal mineral waters rising in a pretty valley of the Rhone, about 500 feet above sea level. There are two sources, containing small quantities of calcium carbonate, a minute proportion of iron, a trace of arsenic, and much carbonic acid. Used in acid dyspepsia, chronic diarrhoea, and lymphatic diseases.

**Condiment.** (L. *condimentum*, spice; from *condio*, to season food. F. *condiment*; G. *Würze*.) Term for any sauce, pickle, or spice taken with food.

**Conditum.** (L. *conditus*, part. of *condio*.) Old name for a wine impregnated with honey and aromatic substances.

Also, for any kind of aliment or medicament rendered agreeable by the addition of sugar, or syrups and spices.

**C. aurantii.** Candied orange peel.

**C. meloë.** The *Meloë proscarabeus* preserved in honey.

**C. zingiberis.** The fresh root of ginger, *Zingiber officinale*, preserved in syrup.

**Conditura.** (L. *condio*.) Old term, the same as *Condiment*.

**C. cadaverum.** (L. *cadaver*, a dead body.) The process of embalming the dead.

**Condom.** (A corruption of *Condon*, the name of a physician who first suggested the use of it; he lived in London in the middle of the eighteenth century.) Term applied to a sheath, or indusium, or cover, made to fit the penis, and employed to prevent impregnation, or infection with gonorrhoea or syphilis, during coition. It was originally made of the intestine of the lamb, but now usually of thin caoutchouc.

**Conductibility.** (L. *conducere*, to draw together.) Term applied to the property which is possessed by certain bodies of conducting heat, light, or electricity, or other force, and of communicating them to other bodies.

**Conducting.** (Same etymon.) Able to conduct.

**C. cells.** The individual cells of *C. tissue*.

Also, see *Cells, conducting*.

**C. tissue.** Term applied in plants with differentiated system of tissue to parenchyma, and to the thin-walled cells of the phloem of the fibro-vascular bundles. Such tissue serves for the transport of formation materials.

Also applied to the loose tissue in the centre of the style, down which the pollen tubes grow, till they reach the cavity of the ovary.

**Conductio.** (L. *conductio*, from *conducere*, to contract.) Spasm of a muscle, convulsions.

**Conduction.** (Same etymon.) The action of *Conductibility*.

**Conductivity.** (L. *conducere*.) The capacity for the conducting of a force, such as heat or nerve force.

The capacity of a nerve fibre for transmitting the active condition produced by a stimulus to one or other of its terminations, according to the quality of the nerve.

**Conductor.** (L. *conducere*. F. *conducteur*; G. *Conductor*.) A leader, a transmitter of force, be it heat, electricity, or nerve force. Bodies are called good conductors if they transmit the force easily and with little loss; bad conductors if they offer some considerable resistance.

Also, a term applied to two instruments formerly employed in the major operation of cutting for stone. They were straight sounds made of steel, with a longitudinal ridge serving to guide the knife or gorget. They were named male and female, because one terminated in a little tongue, the other with a notch.

**C., prime.** (L. *primus*, first.) A metallic cylinder, supported on glass columns, which is placed in front of the electric machine, and on which the electricity accumulates.

**Conduit.** (F. *conduit*; from L. *conductus*, part. of *conducere*, to collect.) A channel for the conveyance of a fluid; a term synonymous with *Canal*.

**Condu'plicate.** (L. *con*, together; *duplicatus*, doubled. F. *condupliqué*; G. *doppelt-liegend, zusammengelegt*.) Doubled or folded together. Applied to leaves or petals folded lengthwise.

**Condurango.** A name given to the barks of several plants. According to Ruschenberger, the kind first used from Peru, *Condurango blanco*, is derived from the *Pseudea guianensis equatoriensis*. The bark is separated from the stem by pounding with a mallet, and is then dried in the sun. In smell it resembles cascarrilla and pepper, its taste is aromatic and slightly bitter. It contains a yellow resin soluble in spirit of wine, tannin, fat, yellow and brown colouring matters, starch and cellulose, but no crystallisable alkaloid nor volatile oil. The physiological action of the condurango barks is slight, but they appear to excite the nervous system, and to act as bitters. Therapeutically, they have been extensively used since 1871, in America, England, and Italy, for cancerous degeneration of various organs, especially of the stomach, and in epithelial cancer of the eyelids and nose. They are em-

# CONDURNUM—CONDYLOMA.

ployed in the form of infusion and of extract, but are of no value.

Ten or twelve barks are known under this name, the produce of *Echites acuminata*, *E. hispidula*, *Gonolobus tetragonus*, and other shrubby vines of undetermined species.

**C. madeperro.** A species of condurango, the bark of which is in short rolled pieces; it appears to be one of the most active species.

**Condurnum.** A name employed by Pliny for a plant which was used as a charm against scrofula. It has been variously determined as the *Saponaria vaccaria*, Linn., the *Faleriana rubra*, Linn., and the *Centaurea solstitialis*, Linn.

**Condylar.** Relating to a *Condyle*.

**C. canal.** The canal for the hypoglossal nerve through the condylar part of the occipital bone; its openings are the anterior condylar foramina.

**C. foramen, poste'rior.** (L. *foramen*, an opening; *posterior*, hinder. F. *trou condylien poste'rieur*.) An aperture in the condylar fossa giving passage to a vein; it is occasionally absent.

**C. foramina, ante'rior.** (L. *foramen*, an opening; *anterior*, in front. F. *trou condylien ante'rieur*.) The apertures of the *C. canal*. The external opening lies in front of and to the inner side of each occipital condyle, and the inner opening is on the side of the foramen magnum, and a little nearer its anterior than its posterior part.

**C. fos'sa.** (L. *fossa*, a pit.) A depression behind each occipital condyle in which the posterior condylar foramen is placed.

**C. ridg'es of hu'merus.** Two ridges, an external and an internal, one on each side of the lower end of the humerus, running upwards from each condylar eminence. The external ridge is somewhat curved from behind forwards, and gives attachment to the external intermuscular septum, having the origin of the internal head of the biceps behind, and the origins of the supinator longus and the extensor carpi radialis longior, above and below, in front. The internal ridge is prominent at its lower part and gives attachment to the internal intermuscular septum, having behind it the origin of the inner head of the triceps and in front the origin of the brachialis anticus.

**C. surfaces of tib'ia.** Two oval depressions on the upper surface of the head of the tibia for the reception of the condyles of the femur; the outer is widest from side to side, the inner from front to back.

**C. vein, poste'rior.** (L. *posterior*, hinder.) A vein of the pericranium which enters the posterior condylar foramen of the occipital bone, and terminates in the vertebral vein or in the lateral sinus.

**Condylarthrosis.** (Κόνδυλος, a tubercle; ἄρθρον, a joint. G. *Ellipsoidalgelenk*, *Wälzen-gelenk*.) A biaxial joint represented by the atlanto-occipital and superior carpal articulations, in which the heads of the bones, which are only small segments of rotation bodies, glide in an approximately congruent hollow. One axis, the chief axis, is usually much longer than the other two at right angles to it, and the motion is properly only possible around the longer axis, whence the ellipsoid axis is theoretically uniaxial. There is no motion in the direction of the long axis of the bones.

**Condyle.** (Κόνδυλος, a hard knob. F. *condyle*; G. *Beinknorpel*.) Term for the rounded eminence of a bone in a joint; also a joint.

As Hyrtl points out, the term is employed to designate both articular surfaces covered with cartilage, as those of the tibia and femur, and also irregular processes of bone, as in the case of the humerus.

**Condyl.** Plural of *Condylus*.

**C. digito'rum ma'nus.** (L. *digitus*, a finger; *manus*, the hand.) The phalanges of the fingers.

**Condylus.** (Κόνδυλος.) Same as *Condylod.*

**Condylodes.** (Κονδύλωδης, like a knuckle.) Same as *Condylod.*

**Condylod.** (Κόνδυλος, a tubercle; εἶδος, likeness. F. *condyloide*; G. *knopfförmig*.) Resembling a tubercle or condyle. Applied to processes of bone having a flattened top or head.

**C. fora'men, poste'rior.** Same as *Condylar foramen, posterior*.

**C. fora'mina, ante'rior.** Same as *Condylar foramina, anterior*.

**C. fos'sa.** See *Condylar fossa*.

**C. pro'cess.** The articulating process of the lower jaw, consisting of the condyle and its neck.

**C. ridg'es of hu'merus.** See *Condylar ridges of humerus*.

**C. vein, poste'rior.** See *Condylar vein, posterior*.

**Condyloma.** (Κονδύλωμα, a knob. F. *condylome*, *broches*, *verrues*, *fics verruciformes*, *poireaux*, *choux fleurs*, *crêtes de coques*, *vegetations dermiques*, *sypilis végétante framboisée*; G. *Feigwarze*, *Feuchtwarze*, *Bräusche*, *Schwammwarze*, *Papillar condylom*, *Tripperwarzen*.) A small hard tumour, or wart-like excrescence, about the anus and pndendum of both sexes. It is composed of connective tissue, with numerous capillary vessels, cytoblasts, fibroplastic elements, and an amorphous material covered with soft thickened skin, which sometimes presents pus corpuscles. See *C. acuminatum* and *C. latum*.

The term formerly signified a hard knob about a joint, such as a chalk-stone.

**C. acumina'tum.** (L. *acuminatus*, pointed. F. *condylome acumine*; G. *spitze Feigwarze*.) The form which exhibits itself as a warty dendritic excrescence, generally of soft and reddish appearance, composed of an elongated and hypertrophied papilla, covered with a rete mucosum of great thickness, which is again invested by several layers of epidermic scales, and the result of venereal, but not syphilitic, infection. By the French these condylomata are called *Vegetations*; and they have received other names from their appearance, as crests, cauliflower, and such like. According to some, the growth is a hyperplasia of the papille, in which proliferation of the epithelium occupies the chief position; according to others, the starting-point of the disease is in the connective tissue of the papilla.

**C. eleva'tum.** (L. *elevo*, to lift up.) Same as *C. acuminatum*.

**C. endocys'ticum.** (Ενδον, within; κύστις, a bladder.) A synonym of *Molluscum sebaceum*.

**C. iridis.** (L. *iris*, a rainbow.) Term applied to a bead of lymph forming on the iris in cases of iritis. It usually presents a yellowish

or rusty brown colour; it sometimes disappears under treatment without leaving any trace, at others it causes more or less atrophy, and in other instances, again, it undergoes degeneration and forms an abscess.

**C. la'tum.** (*L. latus*, broad. *F. condylome plat*, *plaque muqueuse*; *G. breite Feigwarze*, *platte Feigwarze*.) The form which appears as a broad, more or less projecting, exfoliating, flat or slightly convex-surfaced projection, from which a yellowish liquid is frequently oozing. It is always syphilitic.

**C. porcela'neum.** (*Porcelain*.) A synonym of *Molluscum sebaceum*.

**C. subcuta'neum.** (*L. sub*, under; *cutis*, the skin.) A synonym of *Molluscum sebaceum*.

**C., syphilitic.** A synonym of *C. lata*, from its cause.

**Condylo'poda.** (*Κόνδυλος*; *ποός*, a foot.) A synonym of *Insecta*, having reference to their jointed feet. With Latreille it included also *Arachnida*.

**Condylo'sis.** Same as *Condylo'ma*.

More properly the growth or development of a *Condylo'ma*.

**Condylus.** (*Κόνδυλος*, a knuckle; from *κόνδος*, rounded.) Old term applied to the projections of the phalanges of the fingers when bent. Hence, in Aristotle, the thumb, which he regards as having two phalanges, has only one condyle, whilst the other fingers having three phalanges have two condyles.

Also, the same as *Condyle*.

**C. fem'oris latera'lis.** (*L. femur*; *lateralis*, belonging to the side.) The external condyle of the femur.

**C. fem'oris media'lis.** (*L. femur*, the thigh; *medialis*, middle.) The internal condyle of the femur.

**C. hu'meri extenso'rius.** (*L. extenso*, to stretch out; *humerus*, the upper bone of the arm.) A synonym of the external condyle of the humerus; having reference to the muscles attached to it.

**C. hu'meri exter'nus.** (*L. externus*, outward.) The external condyle of the humerus.

**C. hu'meri flexo'rius.** (*L. flecto*, to bend; *humerus*, the bone of the upper arm.) A synonym of the internal condyle of the humerus; having reference to the muscles attached to it.

**C. hu'meri inter'nus.** (*L. internus*, inward; *humerus*.) The internal condyle of the humerus.

**C. hu'meri latera'lis.** (*L. lateralis*, belonging to the side.) The external condyle of the humerus.

**C. hu'meri radia'lis.** (*L. radius*, the bone of that name.) The external condyle of the humerus.

**C. maxil'lae inferio'ris.** (*L. maxilla*, the jaw; *inferior*, lower. *G. Gelenkfortsatz des Unterkiefers*.) The transversely elongated convex process of the lower jaw for articulation with the glenoid cavity of the temporal bone.

**C. occipita'lis.** (*L. occipitalis*, belonging to the back part of the head. *G. Hinterhauptscndyl*.) The condyles of the occipital bone for articulation with the atlas.

**C. scapulae.** (*L. scapula*, the shoulder-blade.) The anterior angle of the scapula. That part of the scapula which supports the surface articulating with the humerus.

**C. tib'lae latera'lis.** (*L. tibia*; *lateralis*, belonging to the side.) The part of the tibia

which supports the surface articulating with the external condyle of the femur.

**C. tib'lae media'lis.** (*L. tibia*; *medialis*, middle.) The part of the tibia supporting the surface which articulates with the internal condyle of the femur.

**Cone.** (*F. cone*; from *L. conus*; from Gr. *κῶνος*, a pine-cone.) A solid formed by the rotation of a right-angled triangle about its perpendicular, called the axis of the cone. A pyramid, the base of which is circular.

In Botany, a kind of spike composed of pistillated flowers, having a persistent woody scale or bract at the base of each. As a fruit, it retains the name when at the base of each scale there are one or more naked seeds, as in the firs. Also called *Strobile*.

**C., fib'rous.** The *Corona radiata*.

**C.s flour.** A flour obtained from Revel wheat, and used by bakers for dusting their troughs.

**C. flower.** The *Rudbeckia laciniata*.

**C. flower, purple.** The *Echinacea purpurea*.

**C.s of kidney.** The pyramids of Malpighi.

**Cone'in.** Same as *Conia*.

**C. of retina.** (*F. cônes du retine*; *G. Zapfen der Netzhaut*.) One of the forms of the elements composing the bacillar layer of the retina. See *Retina*, *bacillary layer of*.

**Conei'on.** Same as *Conium*.

**Conench'yma.** (*Κῶνος*; *ἐγχευμα*, an infusion.) The tissue of the hairs of plants consisting of conical cells.

**Conessi cortex.** (*L. cortex*, bark.) The bark of the *Wrightia antidysenterica*. It is an astringent and febrifuge, and is used in dysentery.

**Cones'sin.**  $C_{20}H_{12}N_2O$ , or  $C_{22}H_{14}N_2O$ . A base contained in the seeds and bark of *Wrightia antidysenterica*. It is a white amorphous powder, of bitter, acrid, and rancid taste, destroyed by heat; soluble in alcohol, ether, and chloroform. Conessin is said to have a paralyzing action on the brain, the vaso-motor, and the respiratory centres, causing death by asphyxia.

**Confect'io.** (*L. confectio*, a making; from *conficio*, to prepare. *F. confectio*; *l. confectio*; *S. confectio*; *G. Confect*, *Latwerg*.) A confection; a pharmaceutical preparation of the consistence and character of jam, composed of drugs, chiefly vegetable, mixed with sugar or syrup.

**C. alker'mes.** Same as *Alkermes*.

**C. amygd'alae.** Same as *Pulvis amygdalae compositus*, B. Ph.

**C. archig'enis.** The *Aristarchi antidotus Paulina*.

**C. aromatica.** (*F. electuaire aromatique*; *G. Gewürzlatwerg*.) The *Pulvis cretae aromaticus*, B. Ph.

Also, U.S. Ph., aromatic powder 4 troy ounces; clarified honey 4 troy ounces; mix. Used in flatulent colic and dyspepsia. Dose, 1 to 60 grains ('06 to '4 grammes).

**C. aurantii corticis,** U.S. Ph. (*L. cortex*, bark. *F. conserve d'ecore d'orange*; *G. Apfelsinschalencouserve*.) Confection of orange peel. Fresh sweet-orange peel 12 troy ounces, sugar 36 troy ounces; beat together till mixed. An aromatic.

**C. aurantio'rum.** The *C. aurantii corticis*, U.S. Ph.

# CONFECTION—CONFEROID.

**C. card'aca.** (*Cardiac.*) The *C. aromatica*.

**C. cas'siæ.** Cassia pulp half a pound, manna 2 oz., tamarind pulp 1 oz., syrup of roses 8 oz. Laxative. Dose, half an ounce.

**C. catechu compos'ita.** (*L. compositus*, compound.) The compound powder of catechu mixed with an equal quantity of syrup. Astringent. Dose, half to one drachm.

**C. cynos'bat.** (*Κυνόβατος*, the dog rose.) The *C. rose canina*.

**C. Damocratis.** The same as *Mithridate*.

**C. de Ha'mech.** So called after an Arabian physician. It contained black and yellow myrobalans, violets, colocynth pulp, common polypody, wormwood leaves, thyme, senna, rhubarb, prunes, red rose leaves, aniseed, and other aromatics, mixed with sugar and honey. Used as a purgative in enemata.

**C. de san'talis.** Sandalwood, red coral, Armenian bole, terra sagittata, kermes berries, tormentil root, dittany, saffron, myrtle berries, red rose, cloves, and calcined hartshorn, made into a confection with sugar. An astringent.

**C. de thu're.** (*L. de*, from; *thus*, frankincense.) Frankincense made into a conserve, with cubebs, coriander, and other aromatics.

**C. ex capit'ibus papaver'is.** (*L. ex*, from; *caput*, a head; *papaver*, the poppy.) An old name for a thick syrup of poppies.

**C. Fracasto'rii.** The confection of Fracastorius. Same as *Diascordium*.

**C. hyacinth'i.** The *Electuarium croci compositum*.

**C. japon'ica.** An old preparation containing catechu and kino, of each 4 oz., cinnamon and nutmeg, of each 1 oz., opium 1-5 oz., and syrup of red rose 1-5 pint. Catechu was called terra japonica.

**C. o'pii.** B. Ph., U.S. Ph. (*F. thér'iaque*; *G. Opimulat'verge*.) Compound powder of opium 192 grains, syrup a fluid ounce; mix. In diarrhœa. Dose, 5 to 20 grains.

**C. Paul'ina.** The *Aristarchi antidotus Paulina*.

**C. piperis.** B. Ph. (*L. piper*, pepper. *F. electuaire de poivre*; *G. Pfefferlat'verge*.) Black pepper 2 oz., caraway fruit 3 oz., clarified honey 15 oz. Used in piles. Dose, 60 to 120 grains.

**C. Raleigh'na.** An old preparation like the *C. aromatica*.

**C. ro'sæ.** U.S. Ph. (*F. conserve de rose rouge*; *G. Rosenconserve*.) Red rose, in powder, 4 troy oz., sugar 30 troy oz., clarified honey 6 troy oz., rose water 8 fluid oz.; mix. An excipient.

**C. ro'sæ cani'næ.** B. Ph. (*F. conserve de cynorrhodon*; *G. Hainbüttenconserve*.) Confection of hips. Hips, deprived of their seeds, 1 lb., refined sugar 2 lbs.; mix. An excipient.

**C. ro'sæ gal'licæ.** B. Ph. (*F. conserve de rose rouge*; *G. Rosenconserve*.) Fresh red rose petals 1 lb.; refined sugar 3 lbs.; mix. An excipient.

**C. ru'tæ.** Rue leaves, caraway fruit, bay berries, of each 1-5 oz., sagapenum 4 drachms, black pepper 2 drachms, honey 2 oz.; mix. An antispasmodic and carminative in enemata.

**C. scammon'il.** B. Ph. (*F. electuaire de scammonie*; *G. Scammoniumlat'verge*.) Scammony 3 oz., ginger 1-5 oz., oil of caraway a fluid

drachm, oil of cloves half a fluid drachm, syrup 3 fluid oz., clarified honey 1-5 oz.; mix. A purgative. Dose, 10 to 30 grains.

**C. sen'næ.** B. Ph. (*F. electuaire lenitif*; *G. Sennulat'verge*.) Boil figs 12 oz., and prunes 6 oz., with water 24 fluid oz., for four hours, fill up to original volume, mix with it tamarind 9 oz. and cassia pulp 9 oz., digest for two hours, rub through a sieve, then add refined sugar 30 oz., extract of liquorice 7-5 oz., and dissolve with a gentle heat; mix with it senna in fine powder 7 oz., and coriander fruit in fine powder 3 oz., make up by water or reduce by evaporation the total weight to 75 ounces.

The confection of U.S. Ph. contains no liquorice.

Aperient, laxative. Dose, 60 to 120 grains.

**C. sul'phuris.** B. Ph. (*F. electuaire de soufre*; *G. Schwefellat'verge*.) Sublimed sulphur 4 oz., acid tartrate of potash 1 oz., syrup of orange peel 4 fluid oz. A laxative in piles. Dose, 60 to 120 grains.

**C. terebinth'inæ.** B. Ph. (*F. electuaire térébenthiné*; *G. Terpentinnulat'verge*.) Oil of turpentine 1 fluid oz., liquorice powder 1 oz., clarified honey 2 oz. Used in hæmorrhage, flatulence, rheumatism, intestinal worms. Dose, 1 to 2 drachms.

**Confection.** See *Confectio*.

**Confectiona'rius.** (*L. conficio*, to prepare.) An apothecary.

**Confectum.** Same as *Confectio*.

**Conferruminate.** (*L. conferrumino*, to solder together.) In Botany, closely united by adjacent faces.

**Confertus.** (*L. confervio*, to press close together. *F. serré*; *G. dickstehend*.) Crowded together; clustered. Applied to leaves; and also to the spots of an eruption.

**Confer'va.** (*L. confervio*, to knit together. *F. conferva*; *G. Wasserfaden*.) Old name for a plant growing in Alpine rivers, which was applied to heal the wounds made in pruning trees, and was believed also to favour the union of broken bones; probably *C. rivularis*, Linn.

**C. dichot'oma.** (*Δίχα*, doubly; *τίμνω*, to divide.) The *Alsidium helminthocorton*.

**C. helminthocortos.** The *Alsidium helminthocorton*.

**C. rival'is.** (*L. rivalis*, belonging to a river.) The *C. rivularis*, Linn.

**C., river.** The *C. rivularis*.

**C. rivula'ris.** Linn. (*L. rivulus*, a small brook.) The indigenous plant crow-silk, or hairy river-weed. Used as vermicifuge by the country people, and it has been recommended in spasmodic asthma and phthisis. Supposed to be the *Conferva* of the ancients.

**C. rupe'stris.** (*L. rupe*, a rock.) The *Alsidium helminthocorton*.

**Conferva'ceæ.** (*Conferva*. *F. conferves*; *S. confervas*; *G. Sussicasseralge*.) A Family of the Order *Confervoidæ*, or of the Order *Edogoniceæ*, Class *Oosporeæ*, Group *Thallophyta*. Marine or fresh water, rarely aerial, Algae, composed of simple or branched jointed filaments, and propagated by zoospores.

In many hot mineral waters various plants of this order grow freely. They are used as poultices to the painful parts in rheumatic affections, and are also rubbed into the skin.

**Confervoid.** (*Conferva*; *είδος*, likeness. *G. confervenartig*.) Any low vegetable growth in stagnant water.

Resembling the confervæ, and composed of articulated filaments.

Also, applied to disease caused by parasitic vegetations.

**Confervoi'dæ.** (*Conferva*; εἶδος, likeness.) A Suborder of the Order *Algæ*. Unicellular or multicellular plants, green or red in colour, growing in water or moist places, and propagated by spores or zoospores. The arrangement is very artificial and uncertain.

**Configura'tion.** (*L. configuro*, to form. *F. configuration*; *I. configurazione*; *G. Bildung, Gestaltung*.) The general outline or form of a body.

Also, in Phrenology, the faculty which investigates the form and figure of things; its organ is said to be near the inner angle of the orbit.

**Confine'ment.** (*L. confine*, from *F. confiner*, from *L. confinis*, bordering upon.) The being placed under restraint, loss of liberty. Hence applied to women during childbirth.

**Confirman'tia.** (*L. confirmo*, to strengthen.) Roborant, strengthening.

**Confirmation.** (*Eng. confirm*, from *F. confirmer*, from *L. confirmo*, to strengthen. *G. Stärkung*.) Restoration; union of a fractured bone.

**Confirmed.** (Same etymon.) Strengthened, fixed, settled, permanent.

**Confluence.** (*L. con*, together; *fluo*, to flow.) A meeting, as of two rivulets, to form a river.

**C. of the sin'uses.** (*L. sinus*, a gulf.) The *Torcular Herophili*.

**Confluens sin'uum.** (*L. confluo*, to flow together; *sinus*, a gulf.) A synonym of the *Torcular Herophili*.

**Confluent.** (*L. confluo*. *F. confluent*; *I. and S. conflente*; *G. zusammenfließend*.) Running together; blended into one; passing gradually into one another.

Applied to leaves connected or running together at their base.

Applied to the eruption in smallpox, and in some other exanthematous diseases, when the vesicles or papules run together.

**C. bone.** A bone which consists of two parts which were originally separate.

**Confluentia.** (*L. confluo*, to run together.) Old term, used by Paracelsus, *de Podagr. Morb.* ii, for the conoord, conjunction, or confederation of the microcosm with the stars.

Also, formerly used for the same union of a disease with remedies.

**Confluxibility.** (*L. confluo*, part. of *conflo*, to run together.) The tendency of liquids to run together.

**Confluxion.** (*L. confluo*, to flow together.) An old term (*Gr. συρροια*), used by Hippocrates, *de Aliment.* iv, 24, for the coesent, conoord, and mutual operation, not only of the solid parts, but also of the humours and vital and animal spirits of the human body.

**Confo'cal.** (*L. con*, with; *focus*.) Having the same focus.

**Confœdera'tio.** (*L. confœdero*, to unite by a league.) Consent or agreement.

Applied, by Paracelsus, *tr. de Tube*, § *contraria*, in the same sense as *Confluentia*.

**Conformation.** (*L. conformo*, to shape. *F. conformation*; *I. conformazione*; *S. conformation*; *G. Bildung, Gestalt*.) The natural form or shape of a part or of a body.

**C., vice of.** (*F. anomalie*; *G. Missbil-*

*dung*.) Term applied to some defect of form or structure. See *Teratology*.

**Conform'ed.** (*L. conformis*, similar to in form.) In Botany, resembling in form, or closely applied to, as the testa of a seed to the kernel.

**Confortan'tia.** (*L. conforto*, to strengthen much. *F. confortant*; *G. herztstärkend*.) Refreshing, reviving, or comforting remedies.

Applied to cordial preparations.

**Confortative.** Same as *Confortantia*.

**Confrica'tion.** (*L. confricatio*, from *confrico*, to rub strongly. *F. confrication*; *I. confricazione*; *G. Zusammenreibung*.) The reduction to powder of a body by the act of rubbing together two pieces, or rubbing between the hands.

Also, the act of squeezing the juice out of fruit, or of fluid through a filter.

Also, applied to the act of masturbation.

Also, the friction of two opposed surfaces of skin.

**Confrica'trix.** (*L. confrico*.) A female who masturbates.

**Confusæ fe'bres.** (*L. confusus*, thrown into disorder; *febris*, a fever.) Old term, applied by Laur. Bellinus, in *Opuscul. Medic. de Febr.* p. 252, to fevers or agues irregular in their course.

**Confusa'neus pa'nis.** (*L. confusus*, mingled; *panis*, bread.) Brown bread; bread made of meal with which the bran is mingled.

**Confusio.** (*L. confusio*, a mingling; from *confundo*, to mix together.) Old name for a disorder of the eyes, when by the rupture of the tunics, containing the humours, these are confounded together.

**Confusio'nes.** Plural of *Confusio*.

**C. an'imi.** (*L. animus*, the mind.) The strong exhibition of the mental passions or affections.

**Con'gea.** A Genus of the Nat. Order *Verbenaceæ*.

**C. villo'sa,** Roxb. (*L. vill osus*, hairy.) The leaves of this plant, which have a strong, heavy, disagreeable smell, are used by the natives of India in fomentations.

**Con'gee wa'ter.** An Indian name for rice water.

**Congelan'tia.** (*L. congelo*, to freeze, to make hard.) A term applied to remedies which were supposed to procure the union or consolidation of wounds.

**Congelatio.** See *Congelation*.

**C. bullo'sa.** (*L. bulla*, a bleb.) Frost-bite when the result is a blister; the second stage of frost-bite.

**C. erythemato'sa.** (Ἐρύθημα, redness of the skin.) Frost-bite when the result is that the skin becomes bluish red, itching, and swollen from effusion of serum, such as occurs in an ordinary chilblain; the first stage of frost-bite.

**C. escharotica.** (Ἐσχάρα, the scab produced by burning.) Same as *C. gangrænosa*.

**C. gangræno'sa.** (Γάγγραινα, gangrene.) Frost-bite when the result is gangrene; the third stage of frost-bite.

**Congelation.** (*L. congelo*, to freeze; from *con*, for *cum*, with; *gelu*, frost. *Gr. σήμεσις*; *F. congelation*; *I. congelazione*; *S. congelacion*; *G. Ausfrieren, Erfrierung, Gefrierung*.) Term for the change of a liquid body to a solid state. See *Solidification*.

# CONGELATIVA—CONGESTION.

Also, a synonym of *Freezing*.

Formerly applied to the state of stupor and numbness attendant on certain diseases, as catalepsy, paralysis.

Also, the same as *Congulation*.

Also, the death of any part from cold, being the same as *Frost-bite*.

**Congelativa.** The same as *Congelantia*. (Quincy.)

**Congelatus.** (L. *congelō*, F. *conglé*; G. *gefroren*.) Frozen; stiffened by cold; congealed. Formerly applied to a person affected with catalepsy or ecstasy. (Quincy.)

**Congener.** (L. *con*, together; *genus*, a kind, or race. F. *congénère*.) Of the same kind. Applied to muscles which perform, or assist in performing, the same action.

Applied to genera that are nearly allied to each other, or to the species of the same genus.

**Congeneric.** (Same etymon.) Of the same genus, race, or nature.

**Congenerous.** (L. *congener*, of like species. F. *congénère*; I. and S. *congenero*; G. *gleichartig, verwandt*.) That which is of the same kind or species, or which resembles another in structure or function.

**C. muscles.** Those which combine to produce the same effect.

**Congenialis.** (L. *congenis*, produced together.) Same as *Congenital*.

**Congenital.** (L. *con*, together; *genitus*, part, of *gigno*, to beget. F. *congénital*, *congénité*; G. *mitgeboren, zusammengebracht*.) Born with a person; from birth; connate.

**C. cataract.** See *Cataract*, *congenital*.

**C. diseases.** Diseases which have existed from birth.

**C. hernia.** See *Hernia*, *congenital*.

**Conger.** (L. *conger*, from *γόγγρος*, a conger eel.) A Genus of the Suborder *Apoda*, Order *Telostei*, Class *Pisces*.

Also, the same as *Conger eel*.

**C. eel.** (F. *congre*; I. *grangro*; G. *Meeraal*.) The *Conger vulgaris*. The fish is eaten, but is somewhat coarse. A soup made from it is supposed to increase the secretion of milk in nursing women.

**C. vulgaris**, Cuv. The conger eel.

**Congeries.** (L. *congero*, to heap up. F. *amas*; G. *Gemengsel*.) A collection, number, or heap.

**Congested.** Exhibiting the characters, or condition, of *Congestion*.

In Botany, crowded together.

**C. papilla.** (L. *papilla*, a small pimple.) A term for the engorgement of the optic disc or papilla, in optic neuritis.

**Congestio.** See *Congestion*.

**C. abdominalis.** (L. *abdomen*, the belly.) A term variously applied to signify a congestion of blood in the abdominal organs, and also a retention of their secretions and contents.

**C. pectoris.** (L. *pectus*, the breast.) Congestion of the lung.

**C. pulmonum.** (L. *pulmo*, a lung.) See *Lung congestion*.

**C. sanguinis.** (L. *sanguis*, blood.) Excess of blood in an organ. See *Congestion*.

**Congestion.** (L. *congestio*, from *congero*, to heap up. F. *congestion*; I. *congestione*; S. *congestion*; G. *Andrang, Verstopfung, Haufung*.) The accumulation of blood in the blood-vessels of an organ. It may be active or passive. See *Hyperæmia*.

The term has also been used to signify the accumulation of any liquid in an organ, as of a secretion in the ducts.

**C., active.** A term which expresses the condition of overfulness of blood-vessels arising from an active dilatation of their lumen consequent on nervous interference. It occurs in the surface redness of active exercise, and in the early stage of inflammation.

**C., apopleciform.** (L. *apoplexia*, apoplexy; *forma*, shape.) Congestion of the brain when accompanied by coma more or less profound; specially applied to the comatose form of the epileptic paroxysm.

**C., atonic.** (G. *atonische congestion*.) Congestion resulting from muscular relaxation, such as results from the action of heat, atropin, chloroform, and amyl nitrite.

**C., cerebral.** Same as *Cerebral hyperæmia*.

**C., collateral.** (L. *collatero*, to admit on both sides. G. *collaterale Congestion*.) The increased flow of blood that occurs through the lateral branches of an artery, or through collateral arteries when the main artery is occluded.

**C., fluxionary.** (L. *fluo*, to flow. G. *fluxionäre Congestion*.) The congestion of brain or chest organs which occurs in hypertrophy of the left ventricle of the heart, whereby a freer and larger flow of blood is transmitted.

**C., functional.** (G. *functionelle Congestion*.) The increased flow of blood that takes place to each organ when it is fully discharging its function; it is well seen in the stomach during digestion and in muscles during contraction.

**C., hypostatic.** (Υπό, under; στάσις, a standing.) The congestion which occurs in the lowest part of an organ or of the body when the heart's action is very weak, or after death.

**C., inflammatory.** (G. *entzündliche Congestion*.) Term applied to the redness and turgidity of vessels in any part consequent on the inflammatory process. It is a complex phenomenon, partly due to increased blood pressure, partly to vascular relaxation consequent on paralysis of the vaso-motor system, and partly perhaps to stimulation of the vaso-dilator centres, and partly also to altered relations between the blood and the tissues.

**C., mechanical.** The form of passive congestion which is caused by mechanical interference with the passage of blood through the veins, such as in mitral disease, or from pressure of a tumour.

**C., neutral.** See *Neural congestion*.

**C. of brain.** Same as *Cerebral hyperæmia*.

**C. of growth.** (G. *Wachsthumcongestion*.) The increased flow of blood that takes place through growing parts, as may be seen in growing bone; or in one testis or one kidney after extirpation of the other.

**C. papilla.** (L. *papilla*, a small pimple.) A synonym of *Choked disc*. See *Congested papilla*.

**C., passive.** (F. *passif*; from L. *passivus*, suffering.) Overfulness of blood in the capillary vessels of a part, associated with impairment of the vital relations between the blood and the minute elements of the texture, as the cause of the sluggish flow of blood in the capillaries. (Aitken.)

**C., plethoric.** (Πληθών. G. *plethorische Congestion*.) The fulness of the vessels that results from increase in the general mass of

# CONGESTIPAROUS—CONIA.

the blood in the system. The skin and mucous membranes are deeply coloured, the heart beats strongly, the pulse is full, respiration is embarrassed, and there is disposition to hyperæmia of the brain and to hæmorrhages. If a state of artificial plethora be induced by the injection of 150 per cent. of the average quantity of blood in an animal, the abdominal vessels become greatly distended, whilst little increase occurs in the vessels of the skin and central nervous system.

**C., relax'ative.** (L. *relaxo*, to loosen. G. *relaxative Congestion*.) Congestion resulting from the active dilatation of vessels owing to nervous influence.

**C., spinal.** See *Spinal congestion*.

**C., vé'ous.** (L. *vena*, a vein.) Same as *C., passive*.

**Congestip'arous.** (L. *congestio*; *pario*, to produce.) A term applied to remedies which produce congestion or the different forms of *Contrafluxion*.

**Congestive.** (L. *congestio*. F. *congestif*.) Capable of heaping up; producing, or affected with, congestion.

**C. abs'cess.** (F. *abcès par congestion*.) See *Abscess, congestive*.

**C. ap'oplexy.** See *Apoplexy, congestive*.

**C. disea'ses.** Diseases arising from the accumulation of blood or other fluid in its natural channels.

**C. dysmenorrhœ'a.** See *Dysmenorrhœa, congestive*.

**C. fe'ver.** See *Fever, congestive*.

**C. inflammation.** See *Inflammation, congestive*.

**C. insan'ity.** See *Insanity, congestive*.

**C. retini'tis.** See *Retinitis, congestive*.

**C. stric'ture.** See *Urethra, stricture of, congestive*.

**Congia'rius.** Of, or belonging to, the measure *congius*.

**Con'gius.** (L. *congius*, a Roman liquid measure containing the eighth part of an amphora, about six English pints.) A fluid measure containing eight pints, or a gallon.

**Conglacia'tio.** (L. *conglacio*, to turn entirely to ice.) Freezing, frost-bite.

**Conglo'bate.** (L. *conглоbo*, to gather into a ball. F. *conglobé*; G. *zusammengelbalt*.) Rolled or collected together into a mass of globular or rounded form.

**C. flower's.** (F. *fleurs conglobées*.) Flowers the heads of which present a globular form.

**C. glands.** (F. *glandes conglobées*.) Term applied to glands that were thought to be formed of contorted lymphatic vessels, having neither cavity nor excretory duct, or to glands which are isolated by a capsule; now used as a synonym of lymphatic glands.

Also, Henle's term for the solitary and agminated glands of the intestines.

**C. leaves.** (F. *feuilles conglobées*.) Leaves which are collected into the form of a spheroid.

**Conglomerate.** (L. *conglomer*, to roll together. F. *conglomère*; G. *zusammengewickelt*.) United or joined together in the form of a ball.

In Botany, densely or irregularly crowded together.

**C. glands.** (F. *glandes conglomerées*, *glandes en grappes*.) A synonym of *Acinous glands*; or glands which are composed of many smaller glands.

**Conglomera'tio.** (L. *conglomer*.) A crowding together.

**C. intestino'rum.** (L. *intestina*, the intestines.) Entanglement of the intestines.

**Conglu'tin.** A synonym by Rithansen of *Emulsin*.

**Conglutinant'ia.** (L. *conglutino*, to glue together.) The same as *Agglutinant*.

**Conglutina'tio.** See *Conglutination*.

**C. organica.** (Organic.) Schmitt's term for imperforation of the cervix uteri in consequence of an extension of mucous membrane across the canal.

**C. orific'ii.** (L. *orificium*, an opening.) Nägele's term for the closure of the cervix uteri by a thin fibrous membrane.

**Conglutina'tion.** (L. *conglutino*. G. *Verklebung*.) Adhesion of contiguous, but naturally separate, parts, by means of inflammatory exudation, as when the prepuce and claus penis become adherent in consequence of balanitis.

**Congo root.** The root of *Psoralea eglandulosa*.

**Congon'ha.** Term applied in commerce to the leaves of a species of *Laccomburchia*.

**Congrega'tæ glandulæ.** (L. *congrego*, to collect into a flock; *glandula*, a gland.) A synonym of *Peyer's glands*, inasmuch as they are gathered together in a patch.

**Congress.** (L. *congressus*, a meeting together; from *congregior*, to step together. F. *congrès*; I. *congresso*; S. *congreso*; G. *Versammlung*.) It was formerly an ordeal in which, by law, in the presence of a jury of surgeons and matrons, a man demanding a divorce demonstrated his physical capacity or impotence. This ordeal was suppressed in 1667.

A meeting or assembling together.

Applied as a term for the meeting of male and female in the procreative act.

**C. spring.** United States. One of the mineral waters of Saratoga. Ten thousand parts contain sodium chloride 55.00, sodium iodide .57, sodium carbonate .8, magnesium carbonate 8.11, calcium carbonate 16.57, oxide of iron .09, and a trace of bromine. Used in rheumatic affections.

**Congres'sus.** Same as *Congress*.

**Conhy'drin.** C<sub>8</sub>H<sub>17</sub>NO. A poisonous crystallisable alkaloid obtained from the *Conium maculatum*. It forms colourless, iridescent, laminar crystals, and is soluble in water, alcohol, and ether. It may be converted into conia by the abstraction of the elements of water, than which it is less poisonous.

**Con'i.** Plural of *Conus*.

**C. cypres'si.** See *Cypressi fructus*.

**C. lupuli.** (G. *Hopfenblüthen*.) The strobiles of the hop plant.

**C. tubulo'si.** (L. *tubulus*, a small pipe.) The *C. vasculosi*.

**C. vasculo'si.** (L. *vasculum*, a small vessel. F. *cônes vasculaires*.) Term for the small conical bundles formed by the convolutions of the vasa efferentia of the testicle. The cones reach to 8" in length, and each contains, when unrolled, one duct of 6" to 8" long.

**Coni'a.** (Κόνιον, hemlock.) C<sub>8</sub>H<sub>15</sub>N. The most important constituent of the fruit of the hemlock, *Conium maculatum*. It forms a limpid, colourless, oily fluid, sp. gr. 0.88, strongly alkaline, and boils without decomposition at 163.5° C. (326° F). It amounts to about .8 per cent. at most of the fruit. It smells disagreeably, and has a burning taste. Like curare, it paralyses

the terminations of the motor nerves, leaving the muscle irritable; subsequently the motor centres in the brain and spinal cord are paralysed. In consequence of the motor paralysis which affects the respiratory muscles, death results from asphyxia, accompanied, in mammals, by convulsions. The terminals of the vagus are paralysed, and the heart continues to beat for a long time. Locally applied, conia paralyses the sensory nerves. Its action appears to be intermediate between nicotin and curare. It, and the preparations of conium, have been used internally in cancer, chronic glandular swellings, strumous ophthalmia, in neuralgia, chorea, and in whooping-cough, in dysuria, and as an antigalactic; and externally in neuralgia, and in painful and cancerous tumors. One drop is a poisonous dose. See *Conium*, poisoning by.

Also (*Koria*), an old term for a lixivium, for lime, ashes.

Also, for a wine prepared by fermenting must on liquid pitch previously washed with sea water.

**Conia'sis.** (*Koriakis*, a plastering.) Incrustation, the formation of a crust.

**Conic acid.** (*Kōveior*, hemlock.) A doubtful constituent of the hemlock, *Conium maculatum*.

**Conical.** (*L. conus*, a cone. *F. conique*; *G. konisch*, kegelförmig, kegelig.) Of, or belonging to, a cone; tapering; cone-shaped.

**C. cautery.** See *Cautery*, actual.

**C. cor'nea.** See *Cornea*, conical.

**C. papillæ.** See *Papilla*, conical.

**C. stump.** See *Stump*, conical.

**Conicin.** Same as *Conia*.

**Conicity.** (*L. conus*, a cone. *F. conicité*.) The disposition of a structure or organ to take on the form of a cone.

**C. of a stump.** See *Stump*, conical.

**C. of cornea.** See *Cornea*, conical.

**Conicocylindrical.** (*Cone*; *cylinder*.) In Botany, having a conical-ended cylindrical form.

**Conicosubulate.** (*L. conus*, a cone; *subula*, an awl.) In Botany, awl-shaped and conical.

**Conidia'ceæ.** (*Conidium*.) A term which includes the minute fungoid growths which, under the microscope, appear as a mass of agglomerated or disseminated spores, either alone or mixed with mycelial filaments.

**Conidiif'eros.** (*Conidium*; *L. fero*, to bear.) Carrying conidia.

**Conidiophore.** (*Conidia*; *φορέω*, to carry.) That which supports conidia. Term applied to Fungi arrived at that stage of evolution in which they produce conidia.

**Conidium.** (*Kōvis*, dust.) A form of spore found in some Fungi, as in the Peronosporæ and the Pyrenomyces. In some instances they are simple spores, in others they are not immediately capable of germination, but after contact with water develop several zoospores.

**Conif'eræ.** (*L. conus*, a cone; *fero*, to bear.) An Order of gymnospermous dicotyledonous Monochlamydeæ. Trees or shrubs of exogenous structure, usually with evergreen, linear, acicular, or lanceolate leaves, sometimes tufted, sometimes imbricated; monoecious or dioecious. Female flowers in cones, consisting of imbricated scales or open carpels, arising from the axils of the bracts, and bearing two or more ovules on the upper face; fruit a woody cone or a succulent

berry, formed by coherence of a few fleshy scales. It includes pines, firs, larches, eypresses, and araucarias.

**Conif'er'in.**  $C_{16}H_{22}O_3 + 2H_2O$  or  $C_3H_{22}O_{16}$ . A crystallisable glycoside contained in the sapwood of pines, which, by the action of reagents, can be resolved into sugar and vanillin.

**Conif'erous.** (*L. conus*, a cone; *fero*, to bear. *F. confire*; *G. zapfentragend*.) Having or bearing cones.

**Conifers.** The plants of the Order *Conifereæ*.

**Coniform.** (*L. conus*, a cone; *forma*, likeness. *F. coniforme*; *G. kegelförmig*.) Shaped or like a cone in appearance.

**Coni'folia.** *B. Ph.*, *U.S. Ph.* (*L. conium*, hemlock; *folium*, a leaf. *F. feuilles de ciguë*; *G. Schierlingsblätter*.) The lower leaves of a full-grown plant are often a foot in length, dark green, glabrous, triangular in outline, twice or thrice pinnate, the ultimate segments being ovate-oblong, acute, and deeply incised, and have a hollow stalk, as long as the lamina, clasping the stem at its base with a membranous sheath. The upper leaves are shorter, and are opposite or in cohorts of from 3–5, less divided than the lower and with shorter stalks. They contain in smaller quantities the alkaloids found in *C. fructus*. Dose, in powder, 2–8 grains. See *Conia*.

**C. fructus.** *B. Ph.*, *U.S. Ph.* (*F. fruits de ciguë*; *G. Schierlingsfrucht*.) Hemlock fruit. The fruits are dull greenish grey, with but little taste or smell. They are broadly ovoid, compressed laterally, attenuated towards the apex, crowned with a depressed stylopodium. The separated mericarps are about 1–8th inch long. The dorsal surface presents five prominent longitudinal ridges, the crests of which are jagged; the furrows are glabrous, slightly wrinkled longitudinally, without vittæ. The fruit constitutes the chief source of the alkaloid conia. They contain also conhydrin, and a third alkaloid, having the composition  $C_7H_{13}N$ . See *Conia*.

**C. semen.** (*L. semen*, seed.) Same as *C. fructus*.

**Coni'ic acid.** An acid which is supposed to exist in the *Conium maculatum* in union with *Conin*.

**Conin.** A synonym of *Conia*.

**C. hydrobromate.** (*G. Bromwasser-stoffsaures Conin*.) A crystalline, colourless, tasteless salt; slightly soluble in water and alcohol; said to be more stable than the alkaloid itself. Dose, a twentieth to a sixth of a grain.

**Conine.** A synonym of *Conia*.

**Coniocyst.** (*Kōvos*, dusty; *κύστις*, a bladder.) A sporotheca of ferns without an aperture, looking like a tubercle.

**Coniodæ.** (*Kōvos*.) A synonym of *Coniomycetes*.

**Coniodes.** (*Kōvia*, a lixivium or lime; *είδος*, likeness.) Having lime, or full of lime; of the nature of a lixivium. Applied to the condition of the urine in which there is a white cloudiness or a white deposit.

**Coniomycetes.** (*Kōvos*, dusty; *μύκης*, fungus.) One of the old divisions of Fungi comprising those that are naked or pulverulent, such as the Uredo. It was a very mixed and ill-determined group.

**Coniop'sidæ.** (*Kōvis*, dust; *ὄψις*, appearance.) A Tribe of Leveillé's *Clitosporeæ*, having a fleshy, coriaceous, cushion-shaped re-

ceptacle, and caducous, pulverulent spores, simple or chambered, sessile or stalked. It includes the Genus *Puccinia*.

**Coniops'idal.** (Κώνες, a cone; ὄψις, eyesight. F. *coniopside*; G. *coniopsidisch*.) Term applied to thick, slightly concave lenses, having for their object the abolition of spherical aberration.

**Coniosel'num.** (Κόνιον, hemlock; σέλινον, parsley.) A Genus of the Nat. Order *Umbelliferae*.

**C. canadense.** (*Canada*.) Hemlock parsley. Hab. North America. Used in dysentery.

**Coniosto'sis.** (Κόνιος, dusty.) Making like dust; pulverisation.

**Coniothal'ami.** (Κόνιος, dusty; θάλαμος, a bed.) An order of the *Lichenes* having naked reproductive corpuscles, without a particular organ or reservoir to contain them. Also called pulverulent lichens.

**Coniothe'ca.** (Κόνιος, dusty; θήκη, a compartment. F. *coniothèque*.) A synonym of the authoridia of *Lycopodiaceae*. They are small, ovoid, or reniform capsules, filled with a very large number of very small cells or microspores.

**Coniothe'cium.** (Κόνιος; θήκη.) A Genus of ascomycetous *Fungi*.

**C. Stilesianum.** (After Dr. Stiles, an American physician.) A supposed species developed by culture from micrococci found in the blood of animals suffering from cattle plague.

**C. syphiliticum.** A fungoid growth supposed by Hallier to be found in syphilitic sores.

**Coniost'rate.** (L. *conus*, a cone; *rostrum*, a beak.) Conical-beaked, or cone-beaked.

**Coniost'res.** (Same etymon.) A Sub-order of the Order *Passeres*, having a strong beak more or less conical. It contains the finches and larks.

**Conis.** (Κόνις, dust.) Term for dust, fine powder, or ashes, scurf on the head, a nit in the hair, or a louse.

**Conisterium.** (Κονίζω, to sprinkle with dust.) Name of an apartment in the ancient gymnasia, where the athlete were sprinkled with dust after being anointed with oil.

Also, the lowest part of a furnace. The same as *Cinerarium*.

**Conium.** (Κόνιον, hemlock.) A Genus of the Nat. Order *Umbelliferae*.

**C. arracacha.** Hook. The *Arracacha esculenta*, De Cand.

**C. maculatum.** Linn. (L. *maculatus*, spotted. F. *ciguë officinale*, *grand ciguë*; I. *cicuta*; S. *cicuta*; G. *geflecktes Schierling*.) Common hemlock. Hab. Asia Minor and the Mediterranean islands. An erect biennial herbaceous plant, flourishing by the sides of fields and streams; stem cylindrical and hollow, of a glaucous green, generally marked on its lower part with reddish-brown spots. For medical properties see *Conia*.

The hemlock is liable to be confounded with the *Ethusa cynapium* and *Charophyllum anthriscus*. It is distinguished by its glabrous leaves, its smooth spotted stem, its involucrel bracts, and its broadly ovoid, deeply ridged fruit. The *Ethusa cynapium* has no spots on the stem, no involucrel on the primary umbels, the involucrel of the secondary umbels consists only of two or three linear bracts, and its fruit does not present

the lines and crests of that of the hemlock. The *Charophyllum anthriscus*, like the allied species, has pubescent and ciliated leaves; and its fruit is linear-oblong.

**C. moschatum.** (Μόσχος, musk.) Hab. Peru. Tuberos root esculent.

**C., poisoning by.** The symptoms are headache, disturbance of sight, dilated pupils, dysphagia, drowsiness, loss of muscular power in limbs and in respiratory muscles, delirium, convulsions or coma, and death; which usually takes place in from one to three hours. The lungs are found congested, the brain more or less hyperæmic, the stomach sometimes red in patches, and the blood very fluid. The root is the least active part of the plant, and is sometimes found almost free from the poisonous principle, conia.

**Conjee water.** The Indian name for rice water.

**Conjoin'.** (F. *conjoindre*; from L. *conjungo*, to join together.) To join together, to unite.

**Conjoined.** (*Conjoin*.) United; joined together in substance or in purpose.

**C. manipulation.** See *Manipulation*, *conjoined*.

**Conjugat'æ.** (L. *conjugo*, to join together.) A division of the filamentous or unicellular Algae, reproduced by the process of conjugation. It comprises the *Zygnemaceæ*, the *Desmidiaceæ*, and the *Diatomeæ*.

**Conjugate.** (L. *conjugo*, to yoke. F. *conjugué*; G. *gepaart*.) Yoked; paired; coupled.

**C. acids.** A term applied to acids which were supposed to be formed by a combination of a primary acid with a definite organic compound, acid, or neutral, or with ammonia, as taurocholic acid, which is thus looked on as a combination of cholic acid and the compound taurine.

**C. branches.** An arrangement of wires by which four points can be connected, two and two, in every possible way, in order to test equality of potential in two points of a divided circuit. See *Wheatstone's bridge*.

**C. focus.** (*Focus*. G. *conjugirte Vereinigungspunkte*.) The focus at which divergent rays, proceeding from a luminous point, meet after being reflected by a concave spherical mirror or refracted by a doubly convex lens. This focus is conjugate with the luminous point, or connected with it, in such manner that if the luminous point be transferred to the position of the focus the latter will then become situated in the original place of the source of light.

By some, it is customary to speak of the luminous point and the focus together as conjugate foci.

**C. leaf.** A pinnate leaf having only one pair of leaflets.

**C. mirrors.** Parabolic mirrors so arranged face to face that rays of heat or light emanating from the focus of one are reflected in a parallel direction to the opposite mirror, and thence to its focus. Gunpowder placed in the focus of one mirror can thus be exploded by a powerful source of heat situated in the focus of another mirror.

**C. pin'nate.** (L. *pinna*, a feather.) In Botany, the same as digitipinnate, with primary divisions, a single pair at the apex of the petiole, and the leaflets pinnately arranged on them.

**C. planes.** Planes which intersect conjugate foci at right angles to the axis.

**C. spirals.** The spirals produced by whorled leaves when two or more run along the stem parallel to each other.

**Conjugating.** (*L. conjugo.*) Uniting, connecting.

Undergoing the process of *Conjugation*.

**C. cell.** The large cell which results from the union of the two primary cells in the process of *Conjugation*.

**Conjugation.** (*L. conjugation*, from *conjugo*; from *cum*, together; *jugum*, a yoke. *Σύνγωγα*; *F. conjugaison*; *I. conjugazione*; *S. conjugacion*; *G. Conjugation*, *Concrescenz*.) Junction, union, combination, copulation. The term conjugation is applied to the mode of reproduction which occurs in some Algae. In this form cells, in apposition to each other, each give off a process. The processes meet, and the walls undergo absorption, the contents of the cells intermingling. A new body, termed the spore, or perhaps a sporangium, then forms in one of the two cells. Diatoms, as in the case of Gomphonema, also multiply by conjugation. Two small elevations arise from the opposite surfaces of two frustules, and, as in the case of the Algae, after coming into contact with each other, the double membrane is absorbed and the endochrome of the two frustules intermingles. A new body forms in each tube of junction, which then acquires a covering and becomes a sporangium, and, continuing to grow, gradually acquires the characters of the adult frustule.

**Conjugationis foramina.** (*L. conjugatio*, a combining; *foramen*, an opening.) The intervertebral foramina; so called because they are formed by the apposition of the notches of contiguous vertebrae.

**Conjugium.** (*L. conjugo*, to join together.) Coition.

Also, a term for the act of *Conjugation*.

**Conjugo-pin-nate.** (*L. conjugo.*) Same as *Digitipinnate*.

**C.-pal-mate.** (*L. palma*, a palm.) Same as *Digitipinnate*.

**Conjuncta causa.** (*L. conjunctus*, part. of *conjugo*, to join together; *causa*, a cause.) The proximate cause.

**C. sig-na.** (*L. signum*, a sign.) Pathognomonic symptoms; symptoms that are constant or inseparable from the disease.

**Conjuncti mor-bi.** (*L. conjunctus*; *morbus*, a disease.) Diseases which either coexist with, or are consecutive to, some other disease.

**Conjunctiva.** (*L. conjunctivus*, connecting; from *conjugo*, to join together. *F. conjunctive*; *I. congiuntiva*; *S. conjunctiva*; *G. Bindehaut*.) The mucous membrane which, commencing at the free border of the upper and lower lids, where it is continuous with the skin, lines the inner surface of the lids, and is then reflected forwards upon the globe of the eye, the anterior part of which it covers. It has been divided into the *C. palpebrae*, the *C. fornicis*, and the *C. ocular*. At the inner angle of the eye it presents a fold, the *Plica semilunaris*, which is the rudiment of the third eyelid of animals. It is closely applied to the inner surface of the tarsal cartilages and more loosely to the muscular fibres of the orbicularis palpebrarum, and in the upper lid to the tendon of the levator palpebrae. It presents rows of papillae, which are most prominent near the fornix, and many glands.

The distance of the fornix conjunctivae from the margin of the lid, that is, the depth of the

upper lid, is 22 to 25 mm. (1 inch), the depth of the lower lid is 11 to 13 mm. ( $\frac{1}{2}$  inch). The fornix of the lower lid is 10 mm. behind the margin of the orbit, that of the upper lid is 8 mm.

**C., amylo'id degenera'tion of.** (*F. dégénérescence amyloïde de la conjonctive*.) A rare disease, characterised by slowly increasing hypertrophy of the conjunctiva, the surface of which resembles the condition of the membrane in chronic granular conjunctivitis. The tissue becomes grey and soft, and is infiltrated with a clear liquid holding variously shaped and sized amyloid corpuscles in suspension, the smaller having one nucleus, the larger ones two or three. The conjunctival epithelium is hypertrophied.

**C., an-nu-lus of.** (*L. annulus*, dim. of *annus*, a ring. *F. limbe or anneau conjonctival*.) A narrow zone of the conjunctiva immediately surrounding and slightly advancing over the cornea; the subconjunctival tissue is here very dense, and closely adherent to the sclerotic and cornea. It presents numerous vascular papillae, and the anastomoses between the ciliary and conjunctival vessels occur at this point. There are here also many lymphatics.

Also, a swelling or hypertrophy of the tissue of the conjunctiva surrounding the cornea, described by v. Ammon. It may exist without inflammatory symptoms, but the vessels are numerous and injected.

**C. ar'ida.** (*L. aridus*, dry.) See *Xerophthalmia*.

**C., ar'ter-ies of.** (*G. Blutschlagader der Bindehaut*.) The palpebral conjunctiva and the conjunctival fold are supplied by branches from the superior and inferior palpebral arteries, from the palpebral branches of the lachrymal arteries, and from those of the muscular branches. The conjunctiva bulbi is supplied by the posterior conjunctival branches of the superior and inferior palpebral arteries, by the palpebral branches of the lachrymal arteries, both of which move with the conjunctiva, and by the anterior conjunctival arteries, which are twigs of the episcleral branches of the anterior ciliary arteries. These latter are more deeply seated, appear near the margin of the cornea, and, bending backwards, anastomose with the posterior conjunctival arteries.

**C., au'toplasty of.** (*Ἀυτός*; *πλάσσω*, to form. *F. autoplastie conjonctivale*.) A mode of remedying symblepharon suggested by Teale, in which, the bridle or band being divided, the raw surface is covered with a portion of conjunctiva dissected away from another part of the globe, and retained in its new position by one or two sutures.

**C. bul'bi.** (*L. bulbus*, a bulb. *F. conjunctive bulbaire*.) That portion of the conjunctiva which extends from the margin of the cornea to the insertion of the recti muscles, or a little beyond this line. It is loosely connected with the sclerotic coat, which it covers. The attachment becomes closer near the cornea; the blood-vessels are tortuous and movable on the subjacent tissue. Some consider that the epithelial cells covering the cornea are part of the conjunctival tunic; they are certainly exuviated in snakes.

**C., cal'culi of.** (*L. calculus*, a small stone. *F. calculs or lithiase de la conjonctive*.) Small concretions of calcareous salts, usually situated in one of the Meibomian glands. They project inwardly, producing much irritation of the opposed surfaces of the conjunctiva.

## CONJUNCTIVA.

**C., can'cer of.** (*G. Krebs der Bindehaut.*) Malignant growths of the conjunctiva. For special characters, see *Sarcoma*, *Epithelioma*, *Medullary carcinoma*, and *Melanosis*. Sarcoma of the conjunctiva usually occupies the sclero-corneal margin. Epithelioma is usually secondary, extending to the conjunctiva from the lids. Medullary carcinoma is very rare.

**C., can'eroid of.** (*Canceroid.*) A rare disease, usually situated near the corneal margin, and appearing in the form of one or more injected patches, with sharply defined steep borders and finely papillated surface, without fatty degeneration or supuration, which distinguishes them from phlyctenulae. They are apt to recur after removal.

**C., chemo'sis of.** (*F. œdème sousconjunctival, chémosis severe.*) A semitransparent swelling of the conjunctiva, due to the infiltration of its tissue with lymph or blood plasma, and forming a projection which may separate the lids and prevent their closure, the cornea appearing deeply buried in its centre, and more or less overlapped by it. It may be passive, as when it is due to pressure of orbital tumours on the ophthalmic vein, or active, when it is one of the symptoms of acute inflammation of the eye.

**C., chondróma of.** (*Χόνδρος, cartilage. G. Warzen der Bindehaut.*) A term applied by Himly to a peculiar growth of dense tissue usually situated near the margin of the cornea. It is congenital, and is sometimes hairy.

**C., concre'tions of.** (*L. coneresco, to grow together.*) See *C., calculi of.*

**C., cutic'ular.** (*L. cutis, the skin. G. Überhautung der conjunctiva.*) Same as *Xerophthalmia*.

**C., cysts of.** Serous cysts have been occasionally observed. They may be either simple, and of the size of a pea, or multiple, small, and closely aggregated.

**C., der'moid cyst of.** (*Δέρμα, skin. G. Dermoidgeschwulst der Conjunctiva.*) A tumour usually situated on the conjunctiva near the margin of the cornea, varying in size from a millet seed to a bean. The surface is smooth, sometimes granular or fissured, of yellow colour, and beset with fine or stiff hairs. It consists of connective tissue, with numerous hair follicles and a few blood-vessels; near the base elastic tissue prevails. Another form is occasionally observed situated subconjunctivally between the superior and external rectus.

**C., dry'ness of.** See *Xerophthalmia*.

**C., ecchymo'sis of.** (*Εγχύμωσις. F. hémorrhagie de la conjonctive, chémosis hémattique, ecchymose sousconjunctivale.*) Effusion or extravasation of blood into the areolar tissue of the conjunctiva. It is usually the result of injury, or of some circumstance causing congestion of the head, as violent coughing, stooping, and straining. It appears as a vivid or dark scarlet blotch, with tolerably well-defined edges, occurring suddenly and without pain. It usually disappears without treatment in the course of a month.

**C., emphyse'ma of.** (*Εμφύσημα. F. emphyseme sousconjunctival.*) The presence of air in the tissue of the conjunctiva. It usually results from accidents in which there has been fracture of the nasal bones with laceration of the mucous membrane of the nose. It may also result from blowing the nose with violence. Both lids, but especially the upper lid, of one or both

sides are swollen, and on slight pressure crepitate. The affection is painless. It disappears without treatment in the course of a few days.

**C., ento'zo'a of.** (*Εντός, within; ζώον, an animal.*) The parasites which have been observed beneath the conjunctiva are the *Cysticercus cellulose* and the *Filaria medinensis*.

**C. forni'cis.** (*L. fornic, an arch. F. repli rétro-tarsien.*) The portion of conjunctiva joining the ocular with the palpebral layer of the membrane. It is an exceedingly delicate membrane composed of connective tissue, covered with stratified epithelium.

**C., fun'gus of the.** An irregular, soft, deep red or livid swelling usually occurring on the sclerotic or on the internal surface of the lids, between which it may protrude. It is painless. The margin sometimes ulcerates. It grows slowly. Another form is of almost gelatinous consistence and of a clear brown colour, attaining sometimes a large size. The eye is often destroyed by the enlargement and pressure of these growths.

**C., glands of.** (*F. glandes de conjonctive; G. Conjunctivaldrüsen.*) More or less ramified tubular glands lined by two layers of cells, the presence of which has been called in question by some authors, are stated by Henle and Reich to occur in the posterior part of the palpebral region, and to open into the deep fissures found on this part of the membrane. A series of acinous glands, numbering about forty in the upper lid and eight in the lower, open, according to Krause, in the ent-de-sac or sinus of the conjunctiva. There are also a few scattered lymphatic glands. In addition to these are the *Meibomian glands*, and, in many mammals, the *Gland of Harder*.

**C., grafting of.** See *C., transplan'tation of.*

**C., gran'ular.** (*L. granum, a grain.*) The same as *Trachoma*.

**C., lim'bus of.** (*L. limbus, a border.*) The same as *C., annulus of.*

**C., lip'o'ma of.** (*Λίπος, fat.*) Fatty tumour of the conjunctiva.

**C., lithi'asis of.** (*Λίθος, a stone.*) Calcareous deposit in a Meibomian or other conjunctival gland. See *C., calculi of.*

**C., lymphatics of.** (*F. vaisseaux lymphatiques de la conjonctive.*) The lymphatic vessels of the conjunctiva are especially numerous in the annulus conjunctivalis, where they are narrow and unite with the lymph spaces of the cornea (*F. canaux interstitiels; G. Saft-cäulehen*), forming the lymphatic circle of Teichmann. A few lymphatic glands are distributed through the conjunctiva, especially in its palpebral region.

**C., medullary can'cer of.** (*L. medulla, pith; cancer, crab.*) A tumour appearing in the first instance like a polypus of the mucous membrane, painless, and movable, but soon growing rapidly, with inflammatory symptoms, and infiltrating the adjoining tissues.

**C., næ'vus of.** This condition usually results from the extension of nævus from the lids.

**C., nerves of.** (*F. nerfs de la conjonctive.*) The nerves of the conjunctiva proceed from the palpebral twigs of the infra-trochlear, frontal and lachrymal nerves, all branches of the ophthalmic division of the first division of the fifth, and there are a few branches from the external nasal nerve. These form deep and superficial plexuses, and give off branches destitute of any medullary

## CONJUNCTIVAL--CONJUNCTIVITIS.

sheath, which ascend between the epithelial cells, and probably terminate in free extremities. At some points the end bulbs of Krause and tactile corpuscles are found.

**C., ocular.** (*L. oculus*, belonging to the eyes. *F. conjonctive oculaire, portion bulbaire*.) That segment of the conjunctiva which is attached to the globe of the eye; the portion covering the anterior half of the sclerotic is composed of several layers of epithelial cells and loose connective tissue, with vessels, nerves, and a few glands; the portion, if regarded as part of the conjunctiva and not of the cornea, covering the cornea is reduced to several layers of epithelial cells alone.

**C., œdema of.** The same as *C., chemosis of*.

**C., palpebræ.** (*L. palpebra*, the eyelid. *F. conjonctive palpebrale, c. tarsienne*.) That portion of the conjunctiva which lines the inner or ocular surface of the upper and lower eyelids. It is a delicate vascular mucous membrane, covered with a thin stratified epithelium, which is a modified continuation of the stratum Malpighii. In most parts it consists of one or two layers of small polyhedral cells, covered with a layer of columnar or conical cells. Some of them are mucus-secreting goblet cells. The part near the free edge of the lid is smooth, and the papillæ are small; but near the fornix the membrane forms regularly arranged folds, with deep intervening furrows. In this region are some branched and convoluted tubular structures; by some regarded as grooves in the membrane; by others, as glands.

**C., palpebral.** (*L. palpebra*, the eyelid.) See *C. palpebræ*.

**C., papillo'ma of.** A warty growth resembling a small raspberry, often developing at the inner canthus.

**C., pigmentation of.** (*L. pigmentum*, paint.) The presence of spots of pigment in the conjunctiva or subconjunctival tissue is not uncommon. They may become the starting points of sarcomatous and melanotic tumours.

**C., pinguecula of.** (*L. pinguis*, fat.) A small tumour often appearing at the inner margin of the cornea, but occasionally elsewhere, and composed of connective tissue.

**C., polypus of.** The same as *C., papilloma of*.

**C., relaxa'tion of.** (*F. relachement de la conjonctive*.) A condition termed prolagatio conjunctivæ by Rosa, observed not unfrequently in old people, and after chronic inflammation of the conjunctiva. It is near akin to xerosis.

**C. scleræ.** (*Σκληρός*, hard.) That part of the conjunctiva which covers the anterior portion of the sclerotic coat of the eye.

**C., sinus of.** (*L. sinus*, a gulf. *F. ent-de-sac conjonctival*.) The space between the ocular and the palpebral conjunctiva, especially its deeper part, where foreign bodies often lodge for a considerable period without producing much inconvenience.

**C., syphillit'ic dise'ase of.** This may present itself either in the form of hard or soft chancre, and usually affects the lower lid, a chancre occasionally appearing on the conjunctiva of the lids or globe.

**C., teleanglec'tasis of.** The same as *C., nevus of*.

**C., transplanta'tion of.** (*L. transplantatus*, transplanted. *F. griffe conjonctival*.) A method of remedying the deformity resulting

from the adhesion of the palpebral and ocular portions of the conjunctiva occurring after burns and other lesions of the eye, suggested by Wolfe. It consists in dividing the bands or bridges between the surfaces, and implanting a portion of conjunctiva freshly taken from an animal, usually a rabbit, upon the raw surface.

**C., tumours of.** (*L. tumor*, a swelling. *G. die Geschwulste der Conjunctiva*.) Amongst the tumours of the conjunctiva that have been observed are cysts with watery contents, dermoid cysts, cysticercus vesicles, polypi, subconjunctival osteoma, fibroma papillare, verrucae, sarcoma, epithelioma, carcinoma, fungous growth, angioma, osteoma, extravasation of blood, syphilitic growths, lupus, lepra, pemphigus.

**C. tunica.** (*L. tunica*, a mantle.) The conjunctiva.

**C., var'icose.** (*L. varix*, a dilated vein. *F. varices de la conjonctive*.) A rare disease, consisting of a tumour composed of enlarged and tortuous vessels, situated usually near the fold of the conjunctiva, and having a tendency to grow.

**C., veins of.** (*F. veines de la conjonctive*.) The veins collect the blood from the capillaries, and, increasing in size, return the blood in part to the superior and inferior palpebral veins, and through these to the anterior facial and middle temporal veins, and in part form the radicles of the superior and inferior ophthalmic veins, the former of which runs back to the cavernous sinus, whilst the latter anastomoses with the deep branch of the facial vein.

**C., verru'cæ of.** (*L. verruca*, a wart. *G. Warzen der Bindehaut*.) By Arlt, this term is considered to be synonymous with dermoid tumour, but it is more commonly applied to the disease now termed papilloma of the conjunctiva.

**C., xero'sis of.** See *Xerophthalmia*.

**Conjunctival.** (*L. conjunctivus*.) Belonging to, or connected with, the *Conjunctiva*.

**C. fold.** (*F. repli conjonctival*; *G. Ubergangconjunctiva*.) That part of the conjunctiva which lies between and connects the palpebral and the ocular conjunctiva.

Also, called *Conjunctiva fornicis*.

**C. mem'brane.** The *Conjunctiva*.  
**Conjunctive.** (*L. conjungo*, to join. *F. conjunctif*; *G. verbindend*.) Knitting or fastening together.

**C. tis'sue.** Same as *Connective tissue*.

According to Cornil and Ranvier, conjunctive tissue is divisible into mucous, loose connective, fibrous connective, adipose, reticulated, and elastic tissues.

**Conjunctivi'tis.** (*L. conjunctiva*, *F. conjunctivitis*; *l. conjunctivitis*; *G. Bindehautentzündung*.) Inflammation of the conjunctiva, indicated by hyperæmia of the membrane, with increased or altered secretion. The membrane is redder than natural, swollen, and the discharge is at first watery, and then purulent. The attack often commences suddenly, with smarting pain, and a feeling as of a foreign body under the lids, at other times its onset is gradual. The causes may be internal, as from disorder of the system generally, or from the local action of cold, or from injury, or it may arise from extension of inflammation from other parts. It may undergo resolution, or pass into one or other of the more severe forms. Some weakness of the eye, hypertrophy of the papillæ, and liability to

## CONJUNCTIVITIS.

recurrence, are usually experienced. See *Conjunctivitis purulenta*, *C. trachomatosa*, and *C. diphtheritica*.

**C. ægyptiaca.** (Αἴγυπτος, Egypt.) A form of purulent ophthalmia prevalent in Egypt. It appears to be in part attributable to the irritation produced by fine sand and dust entering the eye, aggravated by exposure to glaring sun, and by want of cleanliness, and in part to the contagion of trachoma. The characters of the disease resemble those of acute trachoma, or of purulent ophthalmia. It is the cause of many cases of blindness.

**C. apthosa.** (Αφθα, an erysipelatous eruption about the mouth.) The same as *C. phlyctenulosa*.

**C., apthous.** (Αφθα, an eruption about the mouth.) The same as *C. phlyctenulosa*.

**C. bellica.** (L. *bellicus*, belonging to wars.) The same as *C. granulosa acuta*.

**C., blennorrhagic.** (Βλίννος, mucus; ῥήγναι, to burst forth.) A disease which presents the characters of conjunctivitis simplex in an intensified degree; the conjunctival vessels are strongly injected, the membrane itself chemosed, and the papillæ swollen, with a free discharge of pus. It may lead to ulceration, or even sloughing, of the cornea. It presents an acute and chronic form.

**C. blennorrhœica.** (Βλίννος, mucus; ῥέω, to flow.) The same as *C. blennorrhagic*.

**C. blennorrhœica gonorrhœica.** Same as *C. blennorrhœica*.

**C. blennorrhœica neonatorum.** (Βλίννος, mucus; ῥέω, from ῥέω, to flow; νῆος, new; L. *natus*, part. of *nascor*, to be born.) Purulent ophthalmia occurring in the new-born child. It usually appears on the third day after birth. The cause is not certainly known, but it is attributed to leucorrhœal or gonorrhœal matter entering the eyes of the child in the act of delivery, or to exposure to cold and damp, or to the entrance of some foreign body after birth.

**C., catarrhal.** (Καταρροῦς; from κατα, down; ῥέω, to flow. F. *conjonctivite franche*, or *phlegmonense*.) The same as *C. simplex*. That form which recurs in the spring is named Frühjahrskatarrh by the Germans.

**C. chronica.** (L. *chronicus*, pertaining to time.) Chronic inflammation of the conjunctiva, a condition which very frequently follows acute attacks of conjunctivitis. The lids are swollen, the papillæ may be enlarged and hypertrophied, or may be atrophied, the mucous membrane being converted into cicatricial tissue, the roughness of which acts as a constant irritant to the conjunctiva. Chronic conjunctivitis is also observed when the eye is irritated by the presence of inverted cilia, when there is obstruction of the lachrymal passages, and where, owing to eversion, there is a failure of the protective influence of the eyelids. It is observed also in certain cases of error of refraction.

**C. contagiosa.** (L. *contagium*, a contact.) The same as *C. granulosa*.

**C. crouposa.** (Croupous.) This form of conjunctivitis is characterised by the circumstance that the inflamed mucous membrane is coated, to a greater or less extent, with a membranous exudation. This is sometimes thin, semitransparent, and gelatinous; and at others, thick, yellowish white, and leathery, but there is no loss of substance, and hence no subsequent formation of cicatricial tissue. The usual symptoms of conjunctivitis are

strongly marked. The affection may be limited to one eye. Severe cases pass into the diphtheritic form. It is highly contagious.

**C. diphtheritica.** (Διφθεῖρα, anything made of leather.) In diphtheritic conjunctivitis, in addition to the usual symptoms of a severe attack of conjunctivitis, the subepithelial and deeper layers of the mucous membrane are infiltrated with highly coagulable inflammatory products, giving to them a brawny character, and interfering with their nutrition, so that they die, and are thrown off, cicatricial tissue taking its place. The affection runs a rapid course. The chemosis and infiltration of the conjunctiva of the globe may lead to sloughing of the cornea, by interfering with its blood supply.

**C. ægyptiaca.** (Αἴγυπτος, Egypt.) See *C. ægyptiaca*.

**C. erysipelato'sa.** (Ερυσίπτελος, erysipelas.) Inflammation of the conjunctiva, attended with much chemosis, and usually occurring as an extension of erysipelas from some part of the face.

**C. erysipelato'sa idiopathica.** (ἰδίος, one's self; πάθος, disease.) Conjunctivitis of an erysipelatous character, occurring without any similar affection of the face. It resembles acute catarrhal conjunctivitis.

**C. exanthematica.** (Ἐξάνθημα, an eruption upon the skin.) A term applied by Arit to a disease the symptoms of which are essentially similar to those of *C. phlyctenulosa*. It is frequently associated with acne rosacea.

**C. follicularis.** (L. *folliculus*, a small bag.) In this form the ordinary symptoms of catarrhal ophthalmia are accompanied by the development, in the inferior sinus, and on the palpebral conjunctiva of the upper lid, of pale red hemispherical outgrowths, each composed of an aggregation of lymph-cells or corpuscles. These prominences are regarded as hypertrophied lymph-follicles, and may pass away without leaving any cicatrix, differing in this respect from the conjunctivitis granulosa. The disease is sometimes acute. It is a contagious affection, and appears to arise from overcrowding and bad air.

**C. gonorrhœica.** (Gonorrhœa.) Conjunctivitis arising from the introduction of the pus of gonorrhœa into the sac of the conjunctiva. The symptoms are those of conjunctivitis purulenta, and the results are very fatal to vision, unless promptly attended to; ulceration and sloughing of the cornea being of common occurrence.

**C., granular.** See *C. granulosa acuta*, and *chronica*.

**C. granulosa acuta.** (L. *granum*, a grain; *acutus*, sharp. F. *conjonctivite granuleuse*.) Trachoma. In this form of disease the ordinary symptoms of conjunctivitis, as hyperæmia, serous infiltration, enlargement of the papillæ, augmented and altered secretion, and purulent discharge, occur in various degrees of intensity in both eyes, either simultaneously or after a short interval, and are accompanied with the development of spheroidal, greyish-red outgrowths or granulations, situated on the palpebral conjunctiva, chiefly near the fold of the conjunctiva, which undergo definite changes, and often lead to secondary disease of the deeper structures of the lid and of the cornea. The disease is most common in subjects between the ages of ten and thirty, and runs a long course; occasionally complete recovery occurs, but more frequently fatty degeneration of the tarsus,

## CONJUNCTIVITIS.

atrophy of the Meibomian follicles, formation of cicatricial tissue, accompanied by more or less deformity of the lid, occurs, and the cornea becomes vascular on its surface, and remains permanently nebulous, or even subject to xerosis; the prognosis is therefore unfavourable. It is contagious, and spreads with rapidity under unfavourable hygienic conditions, such as overcrowding, bad food, dusty or sandy atmosphere, and in circumstances leading to mental depression.

**C. granulo'sa chron'ica.** (L. *granum*; *chronicus*, pertaining to time.) The inflammation of the conjunctiva, which is maintained by the cicatricial tissue, and other alterations of the lids, caused by trachoma, as well as by continued exposure to the conditions which originally caused the trachoma. The lids are swollen, the tarsal cartilages misshapen, the mucous membrane red and infiltrated, with hypertrophied papilla, or converted into cicatricial tissue. Eversion or inversion of the lids is often observed, and the ocular conjunctiva and cornea become secondarily affected; vessels shooting over the latter, its tissue becoming opaque, and its surface dry.

**C. leucorrh'o'ica** (Λευκός, white; *rho'ica*, a flow.) The same as *C. blennorrh'o'ica neonatorum*, when the inflammation is supposed to arise from inoculation of the conjunctiva of the child during birth with leucorrhoeal discharge of the mother.

**C. lymphat'ica.** (L. *lymphæ*, water.) The same as *Phlyctenular conjunctivitis*.

**C. membrana'cea.** (L. *membranaceus*, of skin or membrane.) The same as *C. crouposa*.

**C. milita'ris.** (L. *militaris*, belonging to soldiers.) The same as *C. granulosa acuta*.

**C. morbill'o'sa.** (L. *morbilli*, measles; from *morbus*, a disease.) An inflammation of the conjunctiva occurring in the course of an attack of measles, and closely resembling phlyctenular conjunctivitis.

**C., mu'co-pu'rulent.** The same as *C., granular*.

**C. phlyctænu'lo'sa.** (Φλύκταινα, a blister or pimple.) An inflammation characterised by an injected and infiltrated condition of a segment of the ocular conjunctiva, which may extend from the border of the cornea to the palpebral sinus, and which forms a vesicular elevation or phlyctenula near the corneal margin. In the earlier stages the phlyctenula consists of an aggregation of lymphoid elements beneath the conjunctival epithelium. After a few days the phlyctenula may undergo absorption, or become a pustule, which, bursting, leaves an ulcer with yellowish base. The attack is characterised by acute inflammatory symptoms, and frequently with great photophobia. There is little or no disposition on the part of the conjunctiva generally to secrete pus. It is essentially a disease of childhood, and is often associated with improper diet. In the treatment ointments containing the yellow oxide of mercury are useful.

**C. phlyctænu'lo'sa malig'na.** (L. *mal'ignus*, of an evil nature.) The same as *C. phlyctenulosa pustulosa*.

**C. phlyctænu'lo'sa milia'ris.** (L. *milius*, the millet grass.) That form of *Conjunctivitis phlyctenulosa* in which there are several phlyctenules on or around the margin of the cornea. The vesicles are usually small, and the inflammatory reaction considerable; smarting pain, intolerance of light, copious lachrymation,

and spasm of the orbicularis, being present, though occasionally, without apparent reason, these symptoms of nerve irritation are not observed.

**C. phlyctænu'lo'sa pustulo'sa.** (Φλύκταινα; L. *pustulosus*, full of vesicles.) This form must not be confounded with the pustules of variola. The phlyctenulae are large, one, two, or three in number, often situated on the cornea, cause severe inflammatory symptoms, with the discharge of muco-purulent secretion, and sometimes lead to partial or total loss of the cornea.

**C. phlyctænu'lo'sa simplex.** (Φλύκταινα; L. *simplex*, simple.) The milder form of phlyctenular conjunctivitis, in which there is only a single phlyctenula.

**C. phlycten'ular.** Same as *C. phlyctenulosa*.

**C. pu'ro-muco'sa Ægypti'aca.** The same as *C., granular*; from its prevalence in Egypt.

**C. pu'ro-muco'sa catarrha'lis.** (L. *pus*, white matter of a sore; *mucosus*, slimy; *catarrhus*, a catarrh.) That form of conjunctivitis in which, arising usually from exposure to cold, there is free discharge of a fluid presenting the characters of pus and mucus.

**C. pu'ro-muco'sa contagio'sa.** The same as *C., granular*; from its contagious character.

**C. purulent'a.** (L. *purulentus*, from *pus*, matter.) Inflammation of the conjunctiva, usually resulting from cold, intense irritation of the conjunctiva, the application of leucorrhoeal discharge, or of unhealthy or gonorrhoeal pus to the conjunctiva. In the course of a few hours, or, at most, of one or two days, violent inflammation of the conjunctiva sets in, with discharge at first of serous, then of purulent fluid, often mingled with a little blood, or of a greenish colour. The lids swell and assume a deep red colour, the conjunctiva becomes chemosed, the epithelium separates from some part or the whole of the cornea, which may ulcerate and slough, either as a whole, or in some part. In the former case, the aqueous humour and lens escape, the eye collapses and atrophies. In the latter case, the iris may protrude through the cornea and form a partial staphyloma, or the ulcerated portion of the cornea may be replaced by connective tissue, to which the iris and capsule of the lens may adhere, and, yielding to the internal pressure of the lids, form a more or less complete staphyloma. Leucœma and cataract, with loss of all useful vision, are often observed. Acute cases last from a few days to several weeks. Relapses are of common occurrence, and the disease often becomes chronic. See *C. chronica*.

**C. pustulo'sa.** (*Pustule*.) This term is often employed as a synonym of *C. phlyctenulosa*.

**C. scarlatino'sa.** An inflammation of the conjunctiva occurring in the course of an attack of scarlet fever, and closely resembling, if not identical with *C. phlyctenulosa*.

**C. serophulo'sa.** (L. *serofula*, serofula.) The same as *C. phlyctenulosa*.

**C. simplex.** (L. *simplex*, simple.) Conjunctivitis unaccompanied by other disease. It usually arises from exposure to cold, attacks both eyes, is attended with only a moderate amount of puriform secretion, and, though it may linger for some time, shows no tendency to pass into the more serious forms of inflammation of the membrane.

# CONNARACEÆ—CONNECTIVE.

**C. trachomato'sa.** (Τραχίς, rough.) Same as *C. granulosa acuta* and *chronica*.

**C. variolo'sa.** (Variola.) Conjunctivitis of a serious character occurring in smallpox.

**Connara'ceæ.** A Nat. Order of perigynous calycifloral Exogens, or a Subfamily of the Family Rutaceæ, Order Rutinor., having apocarpous fruit and collateral ascending orthotropical sessile ovules. Tropical trees and shrubs allied to the Xanthoxyls.

**Connarads.** The plants of the Order Connaraceæ.

**Connarus.** (Κόνναρος.) A Genus of the Nat. Order Connaraceæ. Several of the species bear an esculent arillus.

**C. africa'nus.** Cav. Hab. Africa. Infusion of bark used as an application to burns and wounds.

**C. pinna'tus.** (L. *pinnatus*, feathered.) Hab. India. Bark astringent.

**Connate.** (L. *con*; *natus*, part. of *connascor*, to be born at the same time with. F. *conné*; G. *verwachsen*, *zusammengewachsen*, *mitgeboren*.) Grown together; born with a person; congenital; united at birth.

**C. bone.** A naturally single bone, although the centres of ossification have been several.

**C. disea'se.** A disease which has been present from birth. By some, distinguished from congenital disease, which is supposed to depend on a primary defect, in that a connate disease has originated during gestation or delivery.

**C. leaves.** Leaves which are naturally united at their base.

**Connate-perfoliate.** (L. *connatus*; *per*, through; *folium*, a leaf.) Applied to opposite leaves continuous at the base and appearing as if the stem ran through them.

**Connat'ion.** (L. *connatus*.) A theoretical term employed in Morphology, intended to imply that an apparent single part results from the fusion of two or more, as in the case of the large cranial bone in tortoises, which represents both nasal and prefrontal.

**Connatisqua'mous.** (L. *connatus*; *squama*, a scale. F. *connatisquame*.) Applied to the perichnium of the *Compositæ* when the scales are grafted together.

**Connecticle.** Same as *Connecticulum*.

**Connectic'ulum.** (L. *connecto*, to fasten together. F. *connecticule*.) The elastic ring of the spore case of ferns.

**Connecticut.** One of the United States of America. There is a mineral spring at Stafford in this State, twenty-four miles from Hartford; the principal ingredients are iron and carbonic acid. (Dunglison.)

**Connective.** (L. *cum*, together; *necto*, to bind.) Uniting, joining, combining.

Also (F. *connectif*; I. *connectivo*; S. *connectivo*; G. *Mittelband*, *Mittelnerv*), the upper part of the filament which connects the two lobes of the anther.

**C. tis'sue.** (F. *tissu*, part. of *tisser*, to weave; from L. *texo*, to weave. F. *tissu connectif*; G. *Bindegewebe*.) A term applied generically to certain tissues of the body which are essentially composed of fibres and corpuscles, enclosed in a more or less solid and amorphous substance. According to some, only areolar, fibrous, and elastic tissues are included under this head; many authorities admit osseous and cartilaginous tissues also.

The connective tissues are developed from the mesoblast of the ovum, and consist at first of close-lying embryonic cells, some of which develop into blood-vessels, and others become separated from one another by a clear fluid, but not entirely, for they retain attachment to each other by gradually lengthening processes, and become the connective-tissue corpuscles, the interstitial fluid becoming thicker and containing mucin as well as albumin.

The term connective tissue has been by some restricted to that form of it called generally areolar tissue.

**C.-tis'sue can'cer.** See *Cancer*, *connective tissue*.

**C.-tis'sue cells.** The same as *C.-tissue corpuscles*.

**C.-tis'sue cor'puscles.** (F. *cellules fibroplastiques*; G. *Bindegewebszellen*.) The cellular elements of connective tissue; they are flattened masses of protoplasm, having branches which frequently ramify and anastomose with those of neighbouring corpuscles; each possesses a clear round or oval nucleus, or some times two, with one or more nucleoli; the protoplasm is finely or coarsely granular, or consists mainly of a pellucid substance, with a few large granules; or it may be indistinctly fibrillated. The corpuscles are enclosed in *Cell-spaces*.

**C. tis'sue, fibrous.** (F. *tissu connectif fibreux*.) The tissue of ligaments, aponeuroses, and tendons.

**C. tis'sue, homog'neous.** (Ομογενής, of the same race.) A variety of connective tissue consisting of fine membranes, composed of flattened cells in close contact; such are the hyaloid membrane of the eye, the basement membrane of mucous membranes, and the like.

**C. tis'sue, inflamm'ation of.** A condition marked by the presence of large numbers of leucocytes, which have wandered from the blood-vessels and fill the tissue to the obscuration of its normal structure. Connective tissue inflammation ends in resolution, when the leucocytes become fatty, and are removed by the lymphatics; in the organisation of the effused product, by the fibrillation of its substance and its vascularisation, from which granulation tissue, cicatricial tissue, and the condition called cirrhosis result; and in suppuration.

**C. tis'sue, jelly-like.** A term applied to the early period of the development of connective tissue; and also to a persistence of this rudimentary structure, more or less modified, in the adult; such as the vitreous humour and the intervascular substance of the umbilical cord. Also, called *Mucous tissue*.

**C. tis'sue, loose.** (F. *tissu connectif lâche*.) Same as *C. tissue, jelly-like*.

**C. tis'sue, re'tiform.** (L. *rete*, a net; *forma*, likeness.) A variety of connective tissue occurring in the lymphatic glands, when it is called *Adenoid tissue*; in the thymus, the spleen, the intestinal mucous membrane, the nervous centres, when it is called the *Retinaeulum*; and in other structures. It is composed of a fine network of fibres, supposed to be formed by a development of the original nucleated and ramified connective-tissue corpuscles accompanied by an absorption of the matrix.

**C.-tis'sue tumour.** A term for a *Fibroma*.

Also, in the plural, a class of tumours, derived from or developed from some one of the connective-

tissu structures; such are fibroma, lipoma, myxoma, and glioma; in some classifications enchondroma and osteoma are also included.

**Connectivum.** (L. *connecto*, to bind together.) Term applied by Hæckel to firm connective tissue, which he divides into filled tissue (G. *Füllgewebe*), represented by fat and fibrous tissue; and supporting tissue (G. *Stützgewebe*), represented by cartilage and bone.

**Connector.** (L. *connecto*, to bind together.) Term applied in Chemistry to a small tube of india-rubber for connecting together and forming a movable joint between the ends of glass tubes in pneumatic and other experiments.

**Connervation.** (L. *con*, together with; *nervus*, a sinew.) A synonym of *Syndesmosis*.

**Connexio.** See *Connexion*.

**C. os'sium carno'sa.** (L. *os*, a bone; *carnosus*, fleshy.) Same as *Synsarcosis*.

**C. os'sium cartilaginosa.** (L. *cartilago*, cartilage.) Same as *Synchondrosis*.

**C. os'sium ligamento'sa.** (L. *ligamentum*, a ligament.) Same as *Syndesmosis*.

**Connexion.** (L. *connexus*, part of *connecto*, to bind together. Gr. *συνπλοκή*; F. *connexion*; I. *connessione*; G. *Zusammenhang*, *Verbindung*.) The state of being fastened together; the means whereby the fastening takes place.

In Anatomy, the direct or indirect union of two parts with each other, as of the muscles with bones, or of two bones by means of ligaments.

**Connexivum.** (L. *connexus*, part of *connecto*, to bind together.) The expanded border of the sides of the abdominal segments in some *Heteroptera*.

**Connictation.** (L. *con*, together; *niecto*, to wink.) The act of winking.

**Conni'ent.** (L. *conniveo*, to wink at, or dissemble. F. *connivent*; G. *gegenwärtigebogen*, *gegenwärtigeneigt*, *zusammenneigend*, *zusammenstossend*.) Converging, as the eyelids in winking.

In Biology, converging or inclining inwards.

In Botany, approaching or inclining together so as to hide what is within, as in the case of the petals of Rumex; arching over.

**C. valves.** See *Valvule conniventes*.

**Connutritus.** (L. *con*, together; *nutriri*, to be nourished.) Old term applied to a disease, either congenital or originating in something connected with the nutrition of the individual in early life, as having been suckled by an unhealthy nurse. Hippocrates, *Epid.* vi, 5, t. 6.

**Conocarp.** See *Conocarpium*.

**Conocarpium.** (Κώνος, a fir-cone; καρπός, a seed.) Term formerly employed to denote an aggregate fruit, which, like a strawberry, consists of many carpels on a conical receptacle.

**Conocarpeus.** (Κώνος; καρπός, fruit. F. *conocarpe*; G. *kegelfruchtig*.) Having conical fruit.

**Conocephalus.** (Κώνος; κεφαλή, the head.) A Genus of the Suborder *Hypophalli*, Order *Nematoda*.

**C. typicus.** Dics. (Τυπικός, conformable.) A species found in the stomach of the dolphin.

**Conoceras.** (Κώνος; κέρα, a horn. F. *conocer*; G. *eine kegelförmige Hornhaut*.) A conical cornea.

**Conohoria.** A Genus of the Nat. Order *Violaceæ*.

**C. lo'bo lo'bo.** A plant indigenous in Brazil, the leaves of which are used as spinach.

**Conoid.** (Κώνος, a cone; εἶδος, likeness. F. *conoïde*; G. *kegelförmig*, *konisch*.) Resembling a cone.

**C. body.** The pineal gland, from its shape.

**C. ligament.** (F. *ligament conoïde*.) The posterior or internal fasciculus of the coracoclavicular ligament. It is broad above, where it is attached to the conoid tubercle of the clavicle, and to a line, .5" long, extending inwards from it; and narrow below, where it is attached to the inner part of the root of the coracoid process.

**C. substance of kidney.** The medullary substance of the kidney, so called because of the shape of the pyramids of Malpighi, which constitute it.

**C. teeth.** The canine teeth, from their shape.

**C. tubercle.** A slight rough elevation at the scapular end of the inferior surface of the clavicle for the attachment of the conoid ligament.

**Conoid-al.** Same as *Conoid*.

**Conoides corpus.** (Κώνος; εἶδος, likeness; L. *corpus*, a body.) The pineal gland.

**Conopeum.** (Κωνωπίον, a couch with mosquito curtains.) A gauze veil.

**Conopholis.** (Κώνος, a pine-cone; φολίς, a horny scale, a spot.) A Genus of the Nat. Order *Orobanchaceæ*.

**C. americana.** Wallroth. Cancer root, squaw root. An astringent in diarrhoea. Used as a local application to foul ulcers.

**Conophthalmus.** (Κώνος; ὀφθαλμός, an eye. F. *conophthalm*; G. *Kegetauge*.) A conical eye; staphyloma.

**Conopodium.** (Κώνος; πούς, a foot.) A Genus of the Nat. Order *Umbelliferae*.

**C. denudatum.** Koch. (L. *denudo*, to lay bare.) Rootstock esculent.

**Conorrhinus.** (Κώνος; ρίς, the nose.) A Genus of the Suborder *Heteroptera*.

**C. nigroviridis.** (L. *niger*, black; *viridis*, varied.) Hab. South America. A human-blood-sucking insect.

**Conostyleæ.** (Κώνος; στῦλος, a pillar, a style.) A Tribe of the Order *Hamadoraceæ* having a long woolly perianth.

**Conquassant.** (L. *conquasso*, to shake severely. F. *conquassant*; G. *erschütternd*.) Severely shaking or beating.

**C. pains.** (F. *douleurs conquassantes*.) The pains of labour, at the time of their greatest intensity, when the head is in the pelvis.

**Conquassation.** (L. *conquasso*, to dash or break in pieces. F. *conquassation*; G. *Zerquetschung*.) Old term for the bruising of recent vegetables, fruits, and the soft parts of animals, in a mortar till by their succulent qualities, or by an effused liquor, they form a pulp.

**Conquassationes animi.** (L. *conquassatio*, a severe shaking; *animus*, the mind.) Mental disturbances, affections of the mind.

**Conques.** France. A chalybeate spring, of little importance, near St. Sauveur.

**Conquinine.** C<sub>20</sub>H<sub>24</sub>N<sub>2</sub>O<sub>2</sub>. A synonym by Hesse of *Quinine*.

**Consanescent.** (L. *consanesco*, to become whole.) Hoblyn's term for the healing of wounds; analogous to convalescent, as applied to the body generally.

**Consanguineous.** (L. *consanguineus*, related by blood.) Related or allied by blood or in origin.

**Consanguinity.** (L. *consanguinitas*;

from *cum*, together; *sanguis*, blood. *F. consanguinité*; *I. consanguinita*; *S. consanguinidad*; *G. Verwandtschaft*.) Allied in blood or origin; proceeding from the same parents.

**Conscience.** (*L. conscientia*; from *cum*, with; *scio*, to know. *Gr. συνιδῶναι*; *F. conscience*; *I. coscienza*; *S. conciencia*; *G. Gewissen*.) The knowledge of one's own actions or thoughts; the inner faculty which judges of the right or wrong of an action.

**Conscientiousness.** (*L. conscientia*, a knowing in one's self. *G. Gewissenhaftigkeit*.) Justness; uprightness.

Term for a phrenological faculty peculiar to man, having its organ on the posterior and lateral parts of the brain, upwards from *Cautiousness*, and backwards from *Hope*, and producing the sentiment of obligation, duty, incumbency, justice, and injustice.

**Conscious.** (*L. conscius*, aware of; from *con*, for *cum*, with; *scio*, to know.) Aware of, having mental perception of.

**Consciousness.** (*L. conscius*. *G. Bewusstsein*.) The internal acknowledgment of having performed any particular action or operation. The conditions of sensation, emotion, volition, and thought, are recognised by it.

The knowledge, in Phrenology, which the mind has of its own existence and operations; it gives no intimation of the existence of the organs, only the operations of our own minds, leaving us entirely in the dark respecting the mental affections of others where they differ from our own.

**C., double.** A condition which has been described as a double personality, showing in some measure two separate and independent trains of thought and two independent mental capabilities in the same individual, each train of thought and each capability being wholly disengaged from the other, and the two states in which they respectively predominate subject to frequent interchanges and alterations.

**C., muscular.** The sensation or knowledge of muscular activity.

**Consecutive.** (*L. cum*, with; *sequor*, to follow. *F. consécutif*; *I. and S. consecutivo*; *G. Nachfolgend*.) Following after; succeeding in order.

**C. combination.** A term applied to the chemical process by which a series of salts is formed by a regularly increasing addition of one of the constituents.

**C. phenomena.** The sequelae of a disease. Also, events occurring after a disease, but unconnected with it.

**C. poles.** The occurrence, as happens sometimes in a magnetised bar, of poles intermediate to those at the extreme end.

**Consenes'cence.** (*L. consenesco*, to grow old together.) The gradual approach of old age, the different organs failing in the same proportion.

**Consensual.** (*L. consensus*, agreement.) Having consent.

In Biology, used to express connection in action by means of nerves not under the influence of the will.

**C. actions.** A term applied to those reflex actions which appear to depend on a reception of an impression on some part of the sensory ganglia and its conversion into action, through a muscular nerve, without the intervention of the cerebrum proper. Many apparently instinctive actions are supposed to be of this character, as

the ability of a chicken to make the movements required for picking up food immediately after being hatched; and the power of walking and avoiding obstacles, whilst the brain is occupied on an altogether different subject, which a man possesses.

**C. motions.** Same as *C. actions*.

**Consensus.** (*L. cum*, with; *sentio*, to feel. *I. consenso*.) General agreement or concord of different parts, or organs, in effecting a given purpose; sympathy.

**C. oculorum.** (*L. oculus*, the eye.) The harmony and association of movement of the eyes for any given object.

**Consent.** (*L. consentio*, to agree.) Agreement, acquiescence. Same as *Consensus*.

**Consequent.** (*L. consequor*, to follow.) Following upon as an effect on a cause.

**C. points.** A term employed in Physics to indicate the intermediate poles that are occasionally found in a bar magnet. In such case the magnet not only has a pole at each end, but a succession of poles in its length, which occasion a reversal of the direction of magnetisation at these points. Also, called *Consecutive poles*.

**Conser'va.** (*L. conseruo*, to keep. *F. and G. conserve*.) A pharmaceutical composition of some fresh vegetable and sugar, of the consistence of honey.

**C. absinthii.** (*L. absinthium*, wormwood.) Wormwood leaves one pound, sugar three pounds. Tonic, stomachic, and febrifuge.

**C. acetosellæ.** (*F. conserve d'althéa*.) One part of leaves of wood-sorrel, *Oxalis acetosella*, pulped in a mortar with three parts of sugar. Refrigerant and antiscorbutic.

**C. amygdalarum.** The *Pulvis amygdalæ compositus* made soft with water.

**C. angelicæ.** Angelica root is boiled in water, and then pulped, to each part of this pulp four parts of sugar, evaporated to the consistence of an electuary after solution in the water in which the root has been boiled, are added. Tonic, aromatic, and stomachic.

**C. apii.** (*F. conserve d'ache*.) The root of *Apium graveolens* treated as *C. angelicæ*, and used in the same manner.

**C. aurantii.** The *Confectio aurantii corticis*.

**C. cas'siæ.** The *Confectio cassiæ*.

Also, *Fr. Codex*, cassia pulp 100 parts, syrup of violets 75 parts, white sugar 20 parts, oil of orange flower 05 parts. Heat in a water-bath, all but the oil, which add at the end of the operation.

**C. citri aurantii.** The *Confectio aurantii corticis*.

**C. cochleariæ.** *Fr. Codex*. Fresh leaves of scurvy grass, *Cochlearia officinalis*, one part, sugar three parts, bruised and mixed well in a mortar. An antiscorbutic.

**C. cynorrhodi.** *Fr. Codex*. (Κυνόροdon, the dog rose.) The *Confectio rosæ canina*.

**C. cynos'batii.** (Κυνόβατος, a kind of wild rose.) The *Confectio rosæ canina*.

**C. flo'rum rosarum rubrarum.** (*L. flos*, a flower; *rosa*, a rose; *ruber*, red.) The *Confectio rosæ gallicæ*.

**C. lu'julæ.** (*Lujula*.) The *C. acetosellæ*.

**C. menthæ.** One part of leaves of mint, *Mentha sativa*, pulped in a mortar with three parts of sugar. Stomachic in nausea and vomiting. (*Dunghison*.)

**C. nastur'ii.** Fresh water-cross, *Nastur-*

*tium officinale*, one part, pulped in a mortar with sugar three parts. Antiscorbutic.

**C. pruni spinosæ.** One part of the fruit of the sloe, *Prunus spinosus*, pulped with three parts of sugar. Astringent.

**C. rosæ.** The *Confectio rosæ gallicæ*.

**C. rosæ fructus.** (*L. fructus*, fruit.) The *Confectio rosæ canina*.

**C. scillæ.** Fresh squills 1 oz., sugar 10 oz. Expectorant and diuretic.

**C. tamarindorum.** Fr. Codex. Tamarind pulp 50 grammes, softened in a water-bath with an equal quantity of water; to them sugar 125 grammes is added, and the whole evaporated to a weight of 200 grammes. Laxative, refrigerant.

**Conservation.** (*L. conservatio*, from *conservo*; from *cum*, together; *servo*, to keep. Gr. *σώζω*; F. *conservation*; I. *conservazione*; G. *conservation*; G. *Conservierung*.) In Pharmacy, the art of preserving remedies from decomposition or decay.

In Surgery, the preservation of any part of the body.

See *Preparation*, *Preservative fluids*, *Mounting*, *Dissection*, *Freezing process*, *Antisepsis*.

**C. of energy.** See *Energy*, *conservation of*.

**C. of force.** See *Force*, *conservation of*.

**C. physiology of.** (*G. Conservationsphysiologie*.) A term applied by Hæckel in opposition to the term physiology of relation. It includes the physiology of nutrition, or animal metabolism, that is, of self-preservation, and the physiology of generation, that is, of preservation of the race.

**Conservative.** (*L. conservo*, to preserve.) That which preserves from destruction, removal, decay, or decomposition.

**C. evolution.** (*L. evolvo*, to unroll, to develop.) Same as *C. heredity*.

**C. heredity.** (*L. hereditas*, heirship. *G. Conservative Vererbung*.) Term applied by Hæckel to indicate the propagation of the aggregate of characters which an animal has inherited from its ancestors, in opposition to those which it has newly acquired of itself, which last he terms progressive heredity evolution.

**C. surgery.** The employment of those remedial means which, whether internal or external, local or general, operative or non-operative, preserve and render serviceable any part of the body, instead of removing it by the knife.

**Conserve.** See *Conserva*.

**Considentia.** (*L. consido*, to still completely.) Synonymous with *Apocastasis* and with *Synthesis*. (Dunglison.)

**Consiligo.** (*L. con*, together with; *siligo*, a kind of wheat.) Old name for a certain plant, supposed by some to be the green hellebore, *Helleborus viridis*, Linn., by others, a species of aceton; so called from its place of growth.

**Consistence.** (*F. consister*, to consist; from *L. consisto*, to stand still.) The degree of density or hardness of a body, or of the cohesion of its particles.

**Consistentia.** (*L. consisto*, to stand still.) An old term (Gr. *ἀκμή*), used by Galen, *de Diff. Fib.* ii, 11, for *Acme*, or the height of a disease.

Applied to the humours and other matters, useful, as well as useless; it denoted their constitution, that is, their thinness or thickness, their solidity or consistence.

Also, applied to the arrival of a living body at its fullness and perfection.

Also, the same as *Consistence*.

**Consolida.** (*L. consolido*, to make very firm. *F. consolide*; *G. Beiwell*.) The herb consound, or comfrey, *Symphytum officinale*, because of its supposed power of agglutinating what is broken.

**C. aurea.** (*L. aureus*, golden.) The *Solidago virgaurea*, or golden rod.

**C. major.** (*L. major*, greater. *F. grande consolidé*.) The *Symphytum officinale*, or comfrey.

**C. média.** (*L. medius*, in the middle.) The *Ajuga pyramidalis*, upright bugloss, or middle consound.

Also, the *Chrysanthemum leucanthemum*.

**C. minima.** (*L. minimus*, least.) The *Bellis perennis*.

**C. minor.** (*L. minor*, less.) The *Prunella vulgaris*, self-heal, or bugle.

**C. regalis.** (*L. regalis*, royal.) The *Delphinium consolida*.

**C. rubra.** (*L. ruber*, red.) The *Potentilla tormentilla*.

**C. saracenica.** (*L. Saraceni*, the Saracens.) The *Solidago virgaurea*, or golden rod.

**Consolidantia.** (*L. consolido*, to make solid. *F. consolidantes*; *G. verheilend, zusammenheilende Mittel*.) Making sound. A term formerly applied to medicines supposed to give firmness to parts recently healed.

**Consolidated.** (*L. consolido*.) Made more solid than natural; united.

In Botany, applied to the coherence of dissimilar parts.

**Consolidation.** (*L. consolido*. *F. consolidation*; I. *consolidazione*; *G. Verdichtung, Vereinigung*.) The act or process of becoming solid; the becoming united.

**C. of lung.** See *Lung*, *consolidation of*.

**Consolidativa.** Same as *Consolidantia*.

**Consummé.** (*F. consommé*, from *L. consummo*, to perfect. *G. Kraftbrühe*.) A strong broth made with any kind of gelatinous meat, becoming solid on cooling.

**Consonance.** (*L. consono*, to sound together.) The production of sound in a body, such as a tuning-fork, by the vibration of another body of similar tone near to it.

**Consonant.** (*L. con*, with; *sono*, to sound. *G. Laute*.) A vocal sound, interrupted or modified by the special position of the accessory organs of the voice, as the lips, tongue, and uvula. Consonants are usually considered under the several categories of explosive consonants, aspirates, trilling consonants, and nasal or resonant consonants; they are also classified according to the place where the sound-modification occurs, as labial, dental, and guttural; and by some are described as liquid, mute, or sibilant.

**Cs. aspirate.** (*L. aspiro*, to breathe to. *G. Reibungslaute*.) A sound arising from the column of air issuing from the glottis having to pass through a somewhat contracted part of the canal above with a sighing sound, the posterior nasal aperture being closed. The aspirates are: *h, f, v, sh, s, l, ch, th*. Latham observes that this word should be spelt *asperate*.

**Cs. dental.** (*L. dens*, a tooth.) Consonants formed by the action of the tongue on the teeth or hard palate; they are *t, th, d, and dh*.

**Cs. explosive.** (*L. explodo*, to drive out. *G. Verschlusslaute*.) A sound produced by the

column of air under pressure in the trachea and larynx suddenly overcoming an obstruction to its exit. The obstruction may be made by the tongue pressed against the palate, by the closure of the lips, or by the passage to the nasal cavity being closed; they are *b, p, t, dt, th, k, and g.*

**C.s, guttural.** (L. *guttur*, the throat.) Consonants formed by the action of the root of the tongue in relation to the throat; they are *k, g,* and the guttural *ch* and *gh.*

**C.s, labial.** (L. *labium*, a lip.) Consonants formed by the action of the lips; they are *p, f, b, v.*

**C.s, liquid.** Consonants whose sound flows on, as *r, l, m, n,* and *ng.*

**C.s, mute.** Consonants the sound of which is more or less abruptly cut off; they are divided into *C.s, dental, C.s, guttural, and C.s, labial.*

**C.s, resonant.** (L. *resono*, to resound.) A sound produced by the column of air issuing from the glottis having to pass through the nose, the passage through the mouth being occluded by the lips or tongue. The resonant consonants are *m* and *n.*

**C.s, sib'lant.** (L. *sibilo*, to hiss.) Consonants having a hissing sound; such are *s, sh, z,* and *zh.*

**C., trilling.** (G. *Zitterlaute*.) A sound produced by the passage of the column of air issuing from the glottis through a chink, the edges of which are set in vibration, as in the case of the letter *r.*

**C., vibratory.** (L. *vibro*, to set in tremulous motion.) Same as *C., trilling.*

**Consonating.** (L. *consuno*. G. *consonirend*.) Possessing the properties of consonance.

**Consortium.** (L. *consortium*, fellowship; from *con*, with; *sors*, a lot.) Sympathy.

**Con'sound.** The same as *Consonant.*

**Con'sound.** (*Consolida*.) A name given to the following plants, because, when boiled with flesh, they were said to agglutinate it: the *Symphytum officinale*, the comfrey; the *Bellis perennis*, the daisy; the *Ajuga reptans*, the huckle; and the *Delphinium consolida*, the wild larkspur.

**C., mid'dle.** The *Ajuga pyramidalis.*

**Conspers'io.** (L. *conspergo*, to sprinkle.) A sprinkling about. A term formerly used as *Catapasma.*

**Conspicilla.** (L. *conspicio*, to look at.) Spectacles.

**Conspira'tion.** (L. *conspiro*, to agree; from *con*, with; *spiro*, to breathe.) Sympathy.

**Constant.** (L. *constans*, part. of *consto*, to stand together, to be unchanging.) That which remains unaltered and unchangeable.

**C. battery.** See *Battery, constant.*

**C. current.** See *Current, constant.*

**C. species.** (L. *species*, kind. G. *constante Arten*.) A relative term employed to indicate that certain species of animals are much less disposed to vary with alterations of surrounding conditions than others. Thus, whilst the species of dogs, horses, pigeons, and fowls can easily be artificially made to present many varieties, others are remarkably destitute of this plasticity. The former consequently readily adapt themselves to changes of climate and locality, and live long in the world's history; the latter last but a short time, geologically speaking.

**Constellatum unguentum.** (L.

*constellatus*, studded with stars; *unguentum*, an ointment.) Old name for an ointment for banishing toothache and healing wounds; made of the powder of dried earthworms, with the fat of the bear or wild boar, described by Kesslerus Redivivus, *Process*, 170.

**Consternatio.** (L. *consterno*, to disquiet.) A synonym of stupor.

**Constipated.** (F. *constipé*; G. *Hartleibig*.) Affected with *Constipation.*

**Constipating.** Having the power to produce *Constipation.*

**Constipatio.** See *Constipation.*

**Constipation.** (L. *constipo*, to cram close. F. *constipation*; I. *costipazione*; S. *constipacion*; G. *Hartleibigkeit, Verstopfung*.) Costiveness; tardiness in evacuating the bowels, and so distinct from obstipation, which properly means the total want of evacuation. In constipation the feces are hard, and may be retained from that cause, from weakness of the muscular coat of the large intestines, or from diseases of the anus, making defecation difficult or painful.

**Constituens.** (L. *constituo*, to arrange or dispose. F. *constituant*; G. *anmachend*.) Setting in order; arranging; disposing. Applied formerly to certain substances introduced into medicinal combinations, and supposed to exert the power of giving form and consistence.

**Constituent.** (L. *constituo*, to place together.) An essential part of a thing. One of the substances of which a compound body is made up.

Also, used in Pharmacy in the sense of *Constituents.*

**C., element'ary.** One of the elements, as carbon, hydrogen, or phosphorus, entering into the composition of the body.

**C., proximate.** A compound substance, as albumin or fat, forming part of the body.

**Constitutio.** Same as *Constitution.*

**C. a'eris.** (L. *aër*, air.) Same as *Constitution, atmospheric.*

**C. nervo'sa.** (Νεύρον, a nerve.) The nervous temperament.

**Constitution.** (L. *constitutio*, nature, disposition; from *constituo*, to dispose. F. *constitution*; G. *Leibesbeschaffenheit*.) The composition of a thing. The general habit or temperament of the body, as evinced in the peculiar quality of the performance of its functions.

The bodily constitution is said to be good or bad, strong or weak, robust or delicate, according to the general way in which the functions of the body are carried on and the actions performed.

**C., apoplec'tic.** See *Apoplectic constitution.*

**C., arte'rial.** (Αρτηρία, an artery.) The condition in which arterial blood is supposed to be in excess; rich in blood-corpuscles and in fibrin.

**C., atmospher'ic.** The constitution and conditions of the atmosphere in their relation to the health of individuals or of the community.

**C., bil'ious.** (L. *bilis*, bile.) A term applied to the condition of the body prone to disturbance of the function of the liver.

**C., epidem'ic, of atmosphere.** A term employed by Sydenham to denote a peculiar condition of the atmosphere caused by unknown telluric influences, which, varying from year to year, determines the occurrence of epidemic

# CONSTITUTIONAL—CONSTRUCTOR.

diseases, and the special varieties of character which they assume.

**C., humours of.** An old term for the blood, chyle, and lymph.

**C., in dolent.** The condition of body in which the morbid tendency is to passive congestions and chronic abscesses rather than to acute inflammations.

**C., irritable.** The condition of body in which any local disease tends to produce disturbed conditions of nervous system.

**C., medical.** The relationship which pertains between climatic conditions and the diseases accompanying them.

**C., robust.** A condition of body in which there is great power of resistance to morbid influences.

**C., strong.** Same as *C., robust.*

**Constitutional.** (*F. constitutionnel*; *I. constitutionale*; *S. constitucional*.) That which refers to, or depends upon, the state of the constitution of the individual. In such terms as constitutional syphilis, struma, and the like, is understood a subtle change in the process of nutrition, by which the composition of the tissues is modified or depraved. But a more material view is that in some constitutional diseases particles of the disease float in the blood, and are deposited in the tissues, which take up the nourishment intended for them, and exert a prejudicial influence on the adjoining parts.

**C. diseases.** (*G. Constitutionsanomalien*.) A term applied to diseases which are supposed to arise from some inherent, perhaps hereditary, fault of the structure of the body. This term has been used to denote the diseases which affect the whole system. It has also been restricted to those diseases which are supposed to be developed from some faulty exercise of the natural functions of the body, such as gout.

**C. formulæ.** See *Formulæ, constitutional*.

**C. infection.** A term applied to the condition of a person in the later stages of such a disease as cancer, when secondary growths have occurred; the supposition in this case being that cancer is primarily a local disease.

**C. syphilis.** See *Syphilis, constitutional*.

**C. water.** See *Water, constitutional*.

**Constricted.** (*L. constringo*, to draw together.) Suddenly narrowed.

**Constriction.** (*L. constrictio*, a binding together; from *constringo*, to draw together; from *cum*, together; *stringo*, to draw tight. *F. constriction*, *reserrement*; *I. costrizione*; *S. constriction*; *G. Zusammenschnürung*.) The act of narrowing or tightening in a circular manner.

Also, the narrowing itself.

**C. band sensation.** A feeling as of a cord tied round the waist; a symptom of some diseases of the spinal cord.

**C., tetanoid falciform.** (*L. tetanus*; *falx*, a sickle; *forma*, shape.) A term applied to a firm, hard constriction at or near the internal os uteri, which is said to have seriously interfered with, and in some cases altogether prevented, the completion of labour.

**Constrictive.** (*L. constringo*, to bind together. *F. astringent*, *contractif*; *G. adstringend*, *zusammenziehend*.) Capable of binding together; styptic; astringent.

**Constrictor.** (*L. constringo*. *F. constricteur*; *I. costruttore*; *G. Zusammenziehender*, *Zusammenschnürer*.) That which narrows;

usually applied to muscles which straighten or contract a part.

**C. alæ nasi.** The *Depressor alæ nasi*.

**C. ani.** (*F. constricteur de l'anus*.) The sphincter ani.

**C. cunil.** (*L. cunus*, the female pudendum.) The *Sphincter vaginae*.

**C. faucium inferior.** (*L. fauces*, the entrance of the throat; *inferior*, lower.) The *C. pharyngis superior*.

**C. isthmi faucium.** (*L. isthmus*, a strait; *fauces*, the entrance of the throat.) The *Palatoglossus* muscle.

**C. isthmi faucium inferior.** (*L. inferior*, lower.) The *C. isthmi faucium*.

**C. isthmi faucium superior.** (*L. superior*, upper.) The *Palatopharyngeus* muscle.

**C. laryngis.** (*E. larynx*.) A term applied by Lieutaud to the conjoined muscles, crico-arytenoidales lateralis and thyro-arytenoides.

**C. nasi.** (*L. nasus*, the nose.) The *Compressor naris* muscle.

**C. of Herbiniaux.** (*F. serrenoud d'Herbiniaux*.) An instrument composed of a cannula, to which the box of a tourniquet is adapted in order to tighten the ligature placed around the neck of a tumour.

**C. of Nuck.** See *Compressor of Nuck*.

**C. of œsophagus.** Some thick circular muscular fibres at the upper end of the œsophagus.

**C. orbicularis urethræ.** (*L. orbicularis*, circular.) The *C. urethræ*.

**C. oris.** (*F. constricteur de la bouche*.) The *Orbicularis oris* muscle.

**C. palpebrarum.** The *Orbicularis palpebrarum* muscle.

**C. pharyngis inferior.** (*L. pharynx*; *inferior*, lower. *F. constricteur inférieur*; *G. unterer Schlundschneider*.) A large trapezoidal muscle forming the lower part of the pharynx. It arises from the side of the cricoid cartilage, from the oblique line of the ala of the thyroid cartilage and the quadrilateral surface behind it, and from the upper border of the same cartilage for about one third of an inch. The lower fibres run horizontally, the upper obliquely upwards and backwards to meet in the median raphe behind the pharynx, some fibres decussating with those of the opposite side. The lower border forms the line of demarcation between the pharynx and œsophagus. The muscle is in relation externally and behind with the prevertebral muscles, laterally with the thyroid body and the trunk of the carotid artery. It receives its nerve supply from the pharyngeal plexus.

**C. pharyngis medius.** (*L. medius*, in the middle. *F. constricteur moyen*; *G. mittlerer Schlundschneider*.) A fan-shaped muscle arising from the upper surface of the greater and lesser cornua of the hyoid bone and from the stylohyoid ligament, and being inserted, by joining with its fellow, into the posterior median fibrous raphe of the pharynx, the lower fibres passing downwards beneath the inferior constrictor, the middle running transversely, and the upper ascending and overlapping the superior constrictor. It receives its nerve supply from the pharyngeal plexus.

**C. pharyngis superior.** (*L. superior*, upper. *F. constricteur supérieur*; *G. oberer Schlundschneider*.) A quadrilateral muscle arising from the lower third of the posterior border of the internal pterygoid plate and the hamular process

## CONSTRICTING—CONTAGIO-MIASMATIC.

of the sphenoid bone, from the contiguous portion of the palate bone, and the reflected portion of the tensor palati, from the pterygo-maxillary ligament, from the alveolar process above the posterior extremity of the mylo-hyoid ridge, and by a few fibres from the side of the tongue in connection with the genio-hyo-glossus. From these points the fibres curve backwards to be inserted into the median raphe, being also prolonged by means of a fibrous aponeurosis to the pharyngeal spine on the basilar process of the occipital bone. It receives its nerve supply from the pharyngeal plexus. (Gray's 'Anatomy.')

**C. ure'thræ.** (Ουρήθρα. *F. constrictor de l'urèthre.*) A muscle which lies between the two layers of the deep perineal fascia. It arises from the upper part of the ramus of the pubis on each side in two strata, which embrace the membranous urethra and join with their fellows of the opposite side above and below, generally by means of a tendinous raphe.

**C. vaginæ.** (Vagina. *F. constrictor du vagin.*) The *Sphincter vaginae*.

**C. vesicæ urinariæ.** (L. *vesica*, a bladder; *urina*, urine. *F. constructeur de la vessie.*) A name for the detrusor urinae, or longitudinal fibres of the muscular coat of the bladder.

**C. vulvæ.** (Vulva.) The *Sphincter vaginae*.

**Constrict'gent.** (L. *constringo*, to bind together. *F. constringent*; *G. zusammenziehend.*) Binding together; styptic. Same as *Astringent*.

**Constructiveness.** (L. *construo*, to build or frame.) Term for a phrenological faculty common to man and the lower animals, having its organ at that part of the temporal bone immediately above the sphenotemporal suture, and producing the tendency to construct or fashion in general.

**Constupration.** (L. *constupro*, to ravish.) Rape.

**Consuetudo.** (L. *consuetudo*, from *consueo*, to accustom.) Habit.

**C. men'strua.** (L. *menstruus*, monthly.) The menses of women.

**Consultation.** (L. *consulto*, to give or ask counsel. *F. consultation*; *G. Zurathziehen, Consultation.*) This familiar term was anciently explained as signifying that office of the physician by which the unlearned are instructed by the learned, than which duty none among the duties of medical men is more important. But the term consultation is now applied to a consideration of, and deliberation on, by one or more medical practitioners, the condition of a sick person, and the means to be adopted for his treatment. Consultations were called by Scribonius Largus *Deliberationes contentionesque*.

In France, the term is also extended to the advice given by the physician, and to the written statement containing the opinion of the consultants.

**Consummatum.** An old barbarous term for a dish made by cutting a hen into small pieces, removing the head, feet, and fat, and digesting it without any addition in a well-covered vessel by the heat of a water bath to extract the juice.

Subsequently, the term was applied in the same manner as *Consummé*, or to any gelatinous broth. (Schenkinius and Morellus.)

**Consumption.** (L. *consumo*, to wear

out.) A wasting or falling away. The popular term for *Phthisis, pulmonary*.

**C., bronchial.** Same as *Phthisis, bronchial*.

**C., dyspep'tic.** Same as *Phthisis, dyspeptic*.

**C., fe'brile.** See *Phthisis, febrile*.

**C., gal'loping.** (*F. galoper*, from Old Flem. *icalop*, a gallop; or from Goth. *gallaupjan*, to leap; or *klaupjan*, to run.) A term for pulmonary phthisis which runs a very rapid course.

**C., larynge'al.** Same as *Phthisis, laryngeal*.

**C., m'ner's.** See *Phthisis, miner's*.

**C. of spinal cord.** A synonym of *Atary, locomotor*.

**C. of the bow'els.** Same as *Phthisis, abdominal*.

**C., pot'ter's.** Same as *Phthisis, potter's*.

**C., pul'monary.** (L. *pulmo*, a lung.) Same as *Phthisis, pulmonary*.

**C., se'nile.** Same as *Phthisis, senile*.

**C., tuber'cular.** See *Phthisis, tubercular*.

**Consumpt'iva.** (L. *consumo*, to destroy.) An old name for caustics.

**Consump'tive.** (L. *consumo*.) Threatened with, or suffering from, *Consumption*.

**C's weed.** The *Eriodictyon californicum*.

**Consum'tio.** (L. *consumo*. *G. Anszehrung*.) Consumption, pulmonary consumption.

**Contabescence.** Same as *Contabescencia*.

Also, in Botany, a wasting away, or arrested growth of the stamens.

**Contabescen'tia.** (L. *contabesco*, to wither or pine away.) An old term for atrophy, consumption, marasmus, or any wasting of the body.

**Contact.** (L. *contactus*; from *cum*, together; *tango*, to touch. *Gr. φάωμαι*; *F. contact*; *I. contatto*; *S. contacto*; *G. Berührung.*) The touching or apposition of surfaces of two bodies. It may be mediate through the agency of some third body, or immediate and direct.

**C. action.** A change or decomposition produced in a substance by contact with another substance, which remains unaltered. The term was introduced by Berzelius to denote such effects as the decomposition of hydrogen peroxide in contact with finely divided platinum or gold.

**C. breaker.** A part of an induction machine which serves to open and close the current; also called *Rheotome*.

**C., break'ing.** The act of interrupting the circuit of an electric current.

**C., mak'ing.** The act of completing the circuit for the passage of an electric current.

**Contactile.** (L. *contactus*.) Relating to contact and the sensation of contact.

**C. discrimina'tion.** (L. *discrimino*, to distinguish.) The capacity to distinguish as two the simultaneous impressions of two somewhat separated points on the surface of the skin. This faculty varies in different parts of the body, and is diminished or destroyed by some diseases.

**Contact'ual.** (L. *contactus*.) Relating to contact.

**Contag'io-miasmatic.** (L. *contagium*, contact, contagion; *miasma*.) Applied to such diseases as enteric fever, cholera, influenza, which are by some believed to be propagated both by contact with the sick and by development of contagium in the surroundings of a person.

**Contagion.** (L. *contactus*, a touching; from *contingo*, to touch. F. *contagion*; G. *Ansteckung*.) The process by which a determinate disease is communicated from person to person by means of a particulate or sensible material, which, originating in the body of the sick person, is transmitted by direct contact, or by an intermediate carrier, to one not sick of the disease, in whom it produces the same disease with like power of propagation.

This word and the term infection have been used very loosely; sometimes interchangeably, sometimes in contradistinction; the one implying direct contact with the body of the sick person, the other indirect contact through the medium of effluvia; but some authors use infection to describe direct contact, others contagion.

Also, the communicable material causing an infectious disease; otherwise called *Contagium*.

**C., common.** That form in which a disease is supposed occasionally to arise from other causes than from propagation by a similar disease. In contradistinction to *C., specific*.

**C., dead.** Transmission of disease by means of the effluvia or the evacuations of the sick person.

**C., immediate.** (L. *immediatus*, with nothing standing in the middle between two objects.) The transmission of disease by direct contact of body with body.

**C., living.** The transmission of disease by contact of living individual with living individual.

Also, the same as *Contagium vivum*.

**C., mediate.** (L. *medius*, that which is in the middle.) Transmission of disease through the intermediation of a carrying substance for the contagium, as the clothes of the sick, water, or air.

**C., nervous.** A term for the propagation of disease by imitation, which has been observed in some hysterical disorders.

**C., specific.** That form in which a disease propagates another of like kind, and can only so arise.

**Contagionist.** (L. *contagium*. F. *contagioniste*; I. and S. *contagionista*.) One who maintains that such diseases as yellow fever, plague, and cholera, are communicable by contagion.

**Contagiosity.** (L. *contagio*, a touching.) The quality or amount of contagion in different diseases.

**Contagious.** (L. *contagiosus*. F. *contagieux*; I. and S. *contagioso*; G. *ansteckend*.) That which is capable of being communicated by contact or contagion, as in the case of syphilis and of parasitic affections. See also *Contagion*.

**C. bioplast.** See *Bioplast*, contagious.

**Contagiousness.** (L. *contagiosus*.) The faculty of being propagated by contagion.

**Contagium.** (L. *contagium*, a touching. F. *contage*; G. *Ansteckungsstoff*.) Term applied to the supposed solid or gaseous, organised or unorganised, substance, by which infectious or contagious diseases are communicated.

**C., nervous.** A term applied to a contagium which is imagined by some in order to account for the spread of such nervous diseases as hysteria, chorea, and such like.

**C. vivum.** (L. *virus*, living.) An organised and living cause of contagion, as the *Bacillus anthracis*.

**Contemplabiles d'ies.** (L. *contem-*

*plabilis*, viewing attentively; *dies*, a day.) Critical days.

**Contempla'tio.** (L. *contemplatio*, an attentive considering.) A synonym of *Catalepsy*.

**Contentio.** (L. *contentio*, a contest; from *contendo*, to dispute.) A synonym of *Consultation*.

**Contention.** Same as *Retention*.

**Contentive.** (L. *continens*, part. of *continco*, to retain. F. *contentif*; I. and S. *contentivo*.) The same as *Retentive*. Applied to bandages which retain the lips of a wound, or the ends of fractured bones, in apposition.

**Contexture.** Same as *Texture*.

**Contiguity.** (L. *contiguus*, that may be touched. F. *contiguité*; G. *Anandervinstossen*.) Immediate vicinity; close neighbourhood.

**C., law of.** The principle that the occurrence of one of two or more states of consciousness, which generally exist together, revives the others.

**Contig'uous.** (L. *contiguus*.) Close by, very near.

**Continence.** (L. *continentia*, from *continco*, to contain. F. *continence*; I. *continenza*; G. *Keuschheit*.) Restraint; especially abstinence from sexual congress.

**Continent.** (L. *contineo*, to keep together, or continue. F. *continuer*; G. *enthalt-sam*, *einhaltend*.) Keeping together; continual. Also, practising *Continence*.

**C. cause.** See *Causa continens*.

**C. fevers.** Same as *Fever*, continued.

**Continued.** (L. *continuo*, to hold on. F. *continuer*; G. *beständig*, *fortlaufend*, *ununterbrochen*.) Having no interruption.

**C. fever.** See *Fever*, continued.

**Continuity.** (L. *continuo*, to connect, to last. F. *continuité*; I. *continuita*; G. *Dauer*, *Fortdauer*.) Uninterrupted connection; union without a break; the being uninjured.

**C., lesion of.** (L. *læsiō*, a damaging.) Destruction of continuity, produced by disease.

**C. of life.** (G. *Continuität des Lebens*.) That view according to which the male and female germs, and especially the ova, are not entirely new creations, as held by those who maintain the discontinuity of life, but are composed of reserve germ protoplasm, that is to say, of reserved embryonal cells, which, owing to their central position, are withdrawn from the stimuli, which induce development, but retain the capacity for life in a latent condition.

**C., solution of.** Term applied to wounds of the skin, bones, or other organs.

**C., sympathy of.** See *Sympathy of continuity*.

**C-the'ory.** (G. *Continuitäts-theorie*.) The theory advanced by Lyell, that the fauna and flora discovered in the successive strata of the earth constitute a successive series of forms, descended from those of older date, and differing only in consequence of the climatic conditions to which they were exposed. This theory supplanted Cuvier's cataclysmal theory or theory of catastrophes, in which it was maintained that successive new creations were produced with each great change of the earth's surface; and it prepared the way for Darwin's theory of Evolution.

**Continuous.** (L. *continuo*.) Persistent; uninterrupted in course or structure, having no joint or break.

**C. current.** See *Current*, continuous.

**C. spectrum.** See *Spectrum*, continuous.

## CONTORTÆ—CONTRACTION.

**C. su'ture.** See *Suture, continuous.*  
**Contor'tæ.** (L. *contortus*, twisted.) An Order of *Gamopetalæ* in the tetracyclous Division of *Dicotyledons* in Saeh's classification. It includes *Gentianaceæ*, *Loganiaceæ*, *Strychnaceæ*, *Apocynaceæ*, and *Asclepiadaceæ*.

Also, a Linnean synonym of *Apocynaceæ*.  
**Contorted.** (L. *contortus*, part. of *contorquere*, to twist. F. *contourner*; G. *gedreht*, *gewunden*, *verworren*.) Twisted.

**C. æstivation.** See *Æstivation, contorted*.

**Contort'io.** See *Contortion*.

**C. colum'næ vertebra'lis.** (L. *columna*, a column, *vertebra*, a spine bone.) Curvature of the spine.

**Contortion.** (L. *contorquere*, to twist. F. *contorsion*; G. *Krümmung*, *Verdrückung*, *Verrenkung*.) A twisting.

**Contortificate.** (L. *contortus*, part. of *contorquere*; *placo*, to fold.) Plaited or folded in a twisted manner.

**Contortive.** (L. *contortus*.) Applied to the parts of a single whorl placed in a circle, each exhibiting a torsion of its axis. (Stomach.)

**Contour.** (F. *contour*, from *contourner*, to distort, to pass round.) The outline of a body.

**C., double, tube of.** Term applied to certain nerve fibres, because they present a second line at their margin, which follows all the windings and irregularities of the surface.

**C. filling.** A term in Dentistry for the restoration in gold of the original form of the crown of a tooth when a part of it has been lost.

**C. lines, Owen's.** See *Owen's contour lines*.

**Con'tra.** (L. *contra*, against; over against. F. *contre*; G. *gegen*.) Used as a particle of opposition, and signifying counter, or opposing.

**Con'tra-apertu'ra.** (L. *contra*, opposing, or counter; *apertura*, an aperture; from *aperire*, to open. F. *contre-ouverture*; G. *Gegenöffnung*.) A term for an opening or aperture made in an abscess, opposite to one already existing in it, to facilitate the discharge of matter and promote the healing process.

**Contracted.** (L. *contractus*, part. of *contrahere*, to draw together.) Shortened, narrowed.

**C. kidney.** See *Kidney, contracted*.

**Contractile.** (L. *contrahere*, to contract. F. *contractile*; G. *Zusammenziehbar*.) Capable of contracting. Applied to bodies which move themselves and are capable of moving other bodies by the approximation of their molecules in certain directions.

**C. cellule.** A synonym of *Muscular fibre-cell*.

**C. tis'sues.** A term which has been used to include the structures by which the movements of a leucocyte and of a ciliated cell are performed, as well as the various forms of muscular tissue.

**C. ves'icle.** See *Vesicle, contractile*.

**Contractility.** (L. *contrahere*, to draw together. F. *contractilité*; G. *Zusammenziehbarkeit*, *Contractilität*.) An elementary property of living substance consisting of two acts: first, and essentially, a shortening on the application of a stimulus, and subsequently a lengthening. The cause is unknown, but it is associated with electrical disturbance and with chemical changes in the composition of the tissue, chiefly of the nature of oxidation, rendered evi-

dent by the formation of carbonic anhydride, lactic acid, acid salts, odorous substances, and by the development of heat. Contractility disappears at death. It is most marked in compounds containing much albumin, and comparatively little water and fat, but a remarkable exception exists in the case of nerves, which do not appear to possess contractility.

The term is specially applied to the capacity for shortening itself belonging to muscular fibre; it is employed by many as synonymous with irritability. By some, a distinction is made, contractility being the capacity of a muscle for contraction, irritability being its readiness to contract on the application of a stimulus.

Also, formerly applied to the property by which the particles of bodies resume their original position when the power applied to separate them is withdrawn; thus being synonymous with *Elasticity*.

**C., amœ'boid.** The capacity for contraction possessed by the amœba, leucocytes, and similar masses of sarcode.

**C., an'imal.** Bichat's term for the contractility of those muscles which are under the direct influence of the will.

**C., elec'tric.** See *Electric contractility*.

**C., farada'ic.** See *Faradaic contractility*.

**C., mus'cular.** See *Muscular contractility*.

**C., organ'ic, insen'sible.** Bichat's term for the contractility of the fibre-cells of such parts as the corium of the skin and the capillaries.

**C., organ'ic, sen'sible.** Bichat's term for the contractility of the cardiac muscular fibres and of the involuntary muscles.

**C., pri'mary.** (G. *primäre Contractilität*.) The contractility presented by incoördinated protoplasm, that is, protoplasm in which the granules are irregularly distributed through its substance. Such protoplasm is found in the lowest organisms and in embryonal cells and gland cells.

**C., sec'ondary.** (L. *secundus*, second. G. *secundäre Contractilität*.) That contractility which is observed in cilia.

**C., ter'tiary.** (L. *tertius*, third. G. *tertiäre Contractilität*.) The property of coördinated protoplasm, or of that protoplasm in which the granules are arranged in a linear manner, as in true muscular tissue.

**C., vi'tal.** (L. *vita*, life.) The power possessed by living muscle of shortening itself.

**Contract'io.** See *Contraction*.

**C. cor'dis.** (L. *cor*, the heart.) The systole of the heart.

**Contraction.** (L. *contrahere*, to draw together. F. *contraction*; G. *Zusammenziehung*.) A term for the shortening of a muscle from some morbid cause.

Also, for the action arising from excited contractility, or the shortening of living muscular fibre on the application of stimulus.

Also, a morbid shortening of any structure whether accompanied or not by alteration of tissue.

**C., amœ'bic.** See *Amœboid movements*.

**C., cen'tric.** (L. *centrum*, a centre.) A term applied to the contraction of a muscle, produced by gymnastic exercises, when the two ends of the muscles are allowed to approximate to each other by the movement of the limb.

**C., cil'ary.** See *Ciliary motion*.

**C., excen'tric.** (L. *ex*, out of; *centrum*,

# CONTRACTOR UTERI—CONTRAST.

a centre.) A term applied to contraction of a muscle, produced by gymnastic exercises or other stimulation, when the limb is kept from movement.

**C., fibrillary.** (L. *fibrilla*, a small fibre.) Irregular trembling contractions of the fibrille of the muscles in cases of progressive muscular atrophy. They may occur spontaneously, or may be excited by an outer stimulus, as a blow or an electric current.

**C., idiomuscular.** See *Idiomuscular contraction*.

**C., idiopathic, and paralysis.** Same as *Tetany*.

**C., muscular.** See *Muscular contraction*.

**C., of extremities.** Same as *Tetany*.

**C., rheumatic, of nurses.** Same as *Tetany*; so called because at one time this disease was thought to be peculiar to nursing women.

**C.-ring.** A distinct ring bounding the lower thinner segment of the wall of the pregnant uterus, which, in the early part of labour or the end of pregnancy, is found a short distance above the internal os of the cervix of the uterus.

**C., sarco-dic.** (*Sarcode*.) Same as *Amabic movements*.

**C., vermicular.** (L. *vermiculus*, a little worm.) Same as *C., fibrillary*.

**Contractor uteri.** (L. *contractor*, from *contraho*, to draw together; *uterus*, the womb.) A medicine which will produce contraction of the womb and abortion.

**Contractura.** (L. *contractura*, a drawing together. F. *contracture*; G. *Contractur*.) A Genus of the Order *Dyscinesia*, Class *Locales*, of Cullen's Nosology: the continued and rigid contraction of one or more of the joints.

**C. articularis.** (L. *articulum*, a joint.) The form caused by rigidity of the joint itself.

**C. palmaris.** (L. *palm*, the palm.) Flexure of a finger in the palm.

**C. primaria.** (L. *primarius*, of the first rank.) The form caused by the muscles being contracted and rigid.

**Contracture.** (L. *contractura*, from *contraho*, to draw together.) Term applied to a condition of persistent shortening, and rigidity, which is usually slowly developed in muscles, as a consequence of rheumatism, neuralgia, convulsions, in paralysis, or even from overuse or simple disuse. The causes may be direct or indirect. The former including congestions and inflammation of the brain and its membranes, or of the nerves supplying the part, and impaired nutrition of the brain and nerves, owing to changes in the composition of the blood, as in fevers and lead-poisoning; the latter including the reflex action of teething, of uterine disturbance, and of disease of other organs. It also arises from pathological changes in tendons and connective tissue resulting in shortening, and from ankylosis.

Also, a term employed by Richet to denote the second or slower of the two periods of the process of relaxation that occur after a muscle has been made to contract by a galvanic shock.

Also, the same as *Contractura*.

**C., hysterical.** Contraction of a muscle or a limb depending on hysteria.

**C., myopathic.** (M $\ddot{u}$ s, a muscle;  $\pi\acute{\alpha}\theta\omicron$ s, disease.) Contracture arising from anatomical changes in the muscular tissue itself.

**C., neuropathic.** (N $\acute{\epsilon}\upsilon\rho\omicron\nu$ , nerve;  $\pi\acute{\alpha}\theta\omicron$ s, disease.) Contractures resulting from abnormal innervation, or abnormal irritation of the motor nerves.

**C., paralytic.** Contraction of a muscle or a limb following paralysis.

**Contraextensio.** (L. *contra*, opposing, or counter; *extensio*, a stretching out; from *extendo*, to lengthen. F. *contre-extension*; G. *Gegenauschwing*.) Term for the pulling or holding the upper part of a broken limb, or of a dislocated joint towards the trunk, while extension is being employed with the lower part.

**Contrafissura.** (L. *contra*, against; *fissio*, to cleave. F. *contre-fissure*, *contrefente*; G. *Gegenbruch*.) A counter-fissure or fracture in a part distant from that in which the blow is received.

**Contrafluxion.** (L. *contra*; *fluxio*, to flow.) A congestion of a part, produced by artificial means, for the therapeutic purposes. Such as increased flow of blood to the muscles, caused by gymnastic exercises; that caused by cupping, wet or dry; that caused by irritation of the skin; and that caused by an increased secretion.

**C., painful.** Congestion of a part produced by blisters, acupuncture, faradisation, and such like.

**C., sanguineous.** (L. *sanguis*, blood.) The production of local congestions by means of sinapisms, dry cupping, and such like.

**Contrahentia.** (L. *contrahens*, part. of *contraho*, to draw together. F. *contractif*; G. *zusammenziehend*.) Drawing together. Applied to medicines which tend to produce contraction, including such as are astringent and styptic.

**Contraincisio.** (L. *contra*, opposite; *incisio*, from *incido*, to cut into.) A counter-opening.

**Contraindicatio.** (L. *contra*, against; *indico*, to show. F. *contre-indication*; G. *Gegenanzeige*.) That which, in a disease, forbids the use of a particular remedy which otherwise it would be proper to exhibit.

**Contrairritatio.** Same as *Counter-irritation*.

**Contrajer'va.** Same as *Contrajerva*.

**Contralateral.** (L. *contra*, opposite; *latus*, the side.) That which is on the opposite side to a lesion. Hemiplegia is usually contralateral to the affected hemisphere of the brain.

**Contralunaris.** (L. *contra*, against; *luna*, the moon.) Old term applied to a woman who conceived during menstruation.

**Contranitiency.** (L. *contra*; *nitor*, to strive.) Reaction; resistance to force.

**Contraria contrariis.** (L. *contrarius*, opposite.) A doctrine or mode of treatment in which the conditions of disease are met by remedies that are supposed to be opposed to it, as when cold is applied in inflammation and fevers, or purgatives in constipation.

**Contrary.** (L. *contrarius*. F. *contraire*; G. *widrig*, *gegen*, *widersprechend*, *entgegengesetzt*.) Opposite in direction.

**Contrast.** (F. *contraster*, from L. *contra*, opposite; *sto*, to stand. I. *contrast*; G. *Contrast*, *Gegensatz*.) Comparison; opposition.

**C., binocular.** (L. *bis*; *oculus*, the eye. G. *binocularen Contrast*.) Term applied by Wundt to the alternate supplanting of each other that occurs when two images of different degrees of illumination are presented to the eyes.

**C. of colours.** (G. *Contrast der Farben*.)

## CONTRASTIMULANTS—CONTUSION.

A term signifying that the impression made by any colour on a part of the retina is modified by the presence of other colours. The action exerted on each other by two colours lying close together, by which each is suffused with the tint of the complementary colour of the other. Chevreul distinguishes between successive and simultaneous contrasts. In successive colour-contrasts it is found that after fixing the eye for some time on a coloured surface, and then turning the eye upon a surface of another colour, the after image of the first mingles with and modifies the second. Simultaneous colour-contrasts result from the fact that the point of fixation of the eye is never at perfect rest, but deviates hither and thither, hence if two coloured surfaces are close together, each appears mingled with the complementary colour of its neighbour, and any colour appears brighter when in immediate proximity to its own complementary colour.

**C. phenomena.** (G. *Contrasterscheinungen*.) A term applied to a group of phenomena occurring in certain retinal elements, not by the direct action of light upon them, but in consequence of the excitation of, or modification of excitability in, adjoining elements. Thus, if a row of four candles be placed before a white screen, and a diaphragm be so placed as to allow the light from all of them to fall on one part, from three of them on a second part, from two on a third, and from one on a fourth part, the shaded bands will be found not to present a uniform aspect, though it is uniformly illuminated, but it will appear somewhat darker when it is in relation with the lighter band, and somewhat lighter when it is in relation with the darker band, the intermediate part being softly shaded.

**Contrastimulants.** (L. *contra*; *stimulo*, to rouse up. I. *contrastimulanti*.) Term applied by Rasori to those substances which he considered to weaken the vital actions, or to reduce the force of stimulus, thus acting in opposition to stimulants, and remedying the effects of their excess. See *Contrastimulus*.

Mongiardini includes under this term the remedies *atonici generali positivi*, or those which weaken without producing any evacuation.

Giacomini regards the term contrastimulant as synonymous with *Hypothenisant*.

**Contrastimulism.** (Same etymen.) The doctrine of *Contrastimulus*.

**Contrastimulus.** (Same etymen.) One of two forces, the other being stimulus, according to the doctrine of Rasori, equally potent, but opposite in action, on the perfect equilibrium of which health depends. In all diseases one or other of these forces is in excess, and so all really useful remedies are comprised in the classes stimulants and contrastimulants.

**Contrayerva.** (S. *contra*, against; *yerba*, or *yerva*, poison-herb. F. *contrayerve*; G. *Bezoarwurzel*, *Giftwurzel*.) The root of *Dorstenia contrayerva* and *D. brasiliensis*, so called because it was used as an antidote against poisons. The root of *D. contrayerva* is fusiform, 2" to 3" long, with one or two short annular heads, and terminating in fine fibres; that of *D. brasiliensis* is less rounded, and covered with fibres. It has an unpleasant odour, and bitter acid taste. A stimulant and tonic in fevers; used externally and internally in snake-bites. Dose, 30 grains.

**C. alba.** (L. *albus*, white.) The *Asclepias vincetoxium*.

**C., Beju'co.** The *Aristolochia fragrantissima*.

**C., Brazil'.** The *Dorstenia brasiliensis*.

**C. germanorum.** The *Asclepias vincetoxium*, or swallow wort.

**C., Jama'ca.** The *Aristolochia odorata*.

**C., Lis'bon.** The *Dorstenia contrayerva*.

**C., Mexican.** The *Psoralea pentaphylla*, and the *Dorstenia contrayerva*.

**C. no'va.** (L. *novus*, new.) The *Psoralea pentaphylla*.

**C., Span'ish.** The *Psoralea pentaphylla*.

**C., Virgin'ian.** The *Aristolochia serpentaria*.

**Contrecoup.** (F. *contre*, over against; *coup*, a blow.) A counter-blow; a rebound. A term for the effect produced on parts at some distance from or exactly opposite that actually struck; it is often very severe in the skull, for instance, the bone may be fractured on the opposite side to the seat of injury.

**Contrectatio.** (L. *contrectatio*, from *contrecto*, to touch.) Examination by the finger; manipulation, as in shampooing.

**Contrexeville.** France; Département des Vosges. Athermal mineral waters springing from the chalk, at 1100 feet above sea-level; in a somewhat changeable and cold, damp climate. The water contains calcium sulphate 8·8 grains, calcium carbonate 5, iron carbonate ·069, and magnesium and sodium carbonate 3 grains, in 16 ounces. Used in bladder affections, urinary calculus, and gout.

**Contrition.** (L. *contritio*, a crushing; from *contero*, to grind.) The reduction of a substance to powder.

Also, the breaking or crushing of a bone, by violence, into many small pieces.

**Contrit'urate.** (L. *con*, intens.; *trituro*, to thrash.) To powder, to break up into fine particles.

**Contund'ing.** (L. *contundo*, to bruise.) Bruising.

**Contus.** (Κοντός, a pole.) The penis.

**Contus'ed.** (L. *contundo*, to bruise. F. *contus*; G. *gequetscht*.) That which is bruised or injured by a blow; applied to injuries of the soft parts so produced, in which there is no solution of continuity.

**C. wounds.** See *Wounds*, *contused*.

**Contusion.** (L. *contusio*, from *contundo*, to bruise. F. *contusion*; G. *Quetschung*, *Zerstoßung*.) A bruise. A mechanical injury of the living tissues, without any breach of the integuments, from a blow by a blunt weapon, or from their violent collision against a hard body or surface, or from direct pressure. There is always more or less laceration of the subcutaneous tissue, and some extravasation of blood; the injury may vary from the slightest bruise to the completest disorganisation of the soft parts.

In Pharmacy, the breaking up, into as fine a powder as possible, of vegetable substances by striking them with a heavy pestle in a mortar.

**C. cer'ebral.** (L. *cerebrum*, the brain.) An injury of the brain, resulting from a blow or fall, with more or less extravasation of blood. Death may be instantaneous. In other cases there is immediate, but often only temporary, loss of consciousness, and some paralysis, and the subsequent course of the affection may be insidious, the patient apparently perfectly recovering, and only after a variable period, most commonly

# CONUS—CONVOLUTE.

three or four days, presenting inflammatory symptoms, accompanied by spasms of the limbs or convulsions, arching of the body to the opposite side, embarrassed articulation, and coma. The damage may be at the place of direct violence, or the opposite side of the brain to that struck may be the seat of injury as the result of contrecoup. Occasionally an abscess forms, which may become encysted.

**C., wind.** See *Wind-convulsion*.

**Conus.** (Κόνος, a cone. F. *cône*; G. *Kegel*.) A cone. A congenital and stationary, in opposition to progressive, crescent-shaped or semilunar posterior staphyloma, partially surrounding the optic papilla; a condition usually present in myopia. See also *Cone*.

**C. arterio'sus.** (L. *arteria*, an artery. G. *rechter Arterienkegel*.) A conical prolongation of the upper part of the right ventricle of the heart, from which the pulmonary artery takes origin. Also, called the infundibulum.

**C. arterio'sus aortæ.** A conical prolongation of the left ventricle at the origin of the aorta.

**C., arterio'sus, steno'sis of.** (Στενός, narrow.) A narrowing below the origin of the pulmonary artery. The chief point of narrowing or of the closure is at the orifice of the pulmonary artery, and the pulmonary trunk is contracted into a solid cord, the branches receiving their blood through the ductus arteriosus.

**C. cochleæ.** A synonym of the *Modiolus*.

**C. fuso'rius.** (L. *fusorius*, molten.) Old epithet for a crucible used formerly for separating metals from their scoræ or dross; also called *Pyramis*. Morley, *Proleg. Coll. Chym. Leid. c. ii, fin.*

**C. medulla'ris.** (L. *medulla*, marrow.) The conical tapering end of the spinal cord from which the filum terminale springs.

**Conval lily.** The *Convallaria majalis*.

**Convalescence.** (L. *convalesco*, to regain health. F. *convalescence*; G. *Genesung*.) A state lasting from the time a disease is cured till recovery of the strength lost by it.

**Convalescent.** (L. *convalesco*, to grow well. F. *convalescent*; G. *genesend*.) Returning to health after a disease is cured; recovering.

**Convallama'retin.** A product, along with sugar, of the action of dilute acids on *Convallamarin*.

**Convallamarin.** (L. *convallaria*; *amaris*, bitter.)  $C_{23}H_{41}O_{12}$ . A bitter glucoside obtained from the lily of the valley, *Convallaria majalis*. It is a white, semicrystalline powder, with a bitter-sweet taste, soluble in water and alcohol, and insoluble in ether. Emetic; when injected hypodermically it produces slowing of the heart, and death in systole, with convulsions.

**Convalla'retin.** A substance obtained, along with sugar, from the action of dilute acids on *Convallarin*.

**Convallaria.** (L. *convallis*, a valley; Gr. *Λιρίον*, a lily.) A Genus of the Nat. Order *Liliaceæ*, so called because it is found abundant in valleys.

**C. angulo'sa.** (L. *angulus*, a corner.) The *C. polygonata*.

**C. biflo'ra.** Walt. The *Polygonatum biflorum*.

**C. canalicula'ta.** Willd. (L. *canaliculatus*, channelled.) The *Polygonatum giganteum*.

**C. majalis.** Linn. (L. *majalis*, belonging to the month of May. F. *muguet*; I. *mughetto*;

G. *Maiglöchen*, *Maiblumen*, *Maililie*.) The lily of the valley, or May lily. Hab. Enrope. The flowers have a bitter taste, and a water distilled from them is much used in Germany, and the North of Europe, as a nervine; dried and powdered they are purgative and emetic.

**C. mappi.** The *C. majalis*.

**C. multiflo'ra.** Linn. The *Polygonatum multiflorum*.

**C. polygona'ta.** Linn. The *Polygonatum multiflorum*, Solomon's seal.

**C. pubes'cens.** (L. *pubesco*, to be downy.) Smaller Solomon's seal. Hab. United States. Roots cathartic, diuretic, and diaphoretic.

**Convalla'rin.**  $C_{23}H_{41}O_{12}$ . An acrid substance obtained from the *Convallaria majalis*; it occurs in rectangular prisms, soluble in alcohol, and frothing with water. It is an active purgative.

**Convallium maja'lis.** Same as *Convallaria majalis*.

**Convection.** (L. *convectio*, from *conveho*, to convey.) The act of carrying.

In Physics, the mode in which heat is propagated in liquids and gases by means of ascending currents rising upwards from the source of heat; which, causing the part heated to become less dense by a separation of its molecules, produces the rise.

**Conven'tus.** (L. *conventus*, from *convenio*, to come together.) Cotton.

**Convergent.** (Low L. *convergo*; from *cum*, together; *vergo*, to turn towards. F. *convergent*; G. *zusammenlaufend*.) Directed, bending, or inclining, towards a central point; usually applied to rays of light about to meet in a focus.

**C. breed'ing.** (G. *convergente Züchtung*.) Similarity in external characters concealing fundamental differences of structure in different animals. See *Mimicry*.

**C. nerv'ed.** In Botany, having the nerves of the leaves curved and meeting at the apex.

**C. rays.** See *Rays, convergent*.

**C. squint.** See *Strabismus, convergent*.

**Converging.** Same etymon and meaning as *Convergent*.

**C. fibres.** Fibres which connect different centres of the brain with each other, as the cortical substance with the centres at the base of the brain.

**Conversion.** (L. *conversio*, a turning round.) The change from one state or condition into another.

**C. of disea'ses.** A supposed change of one disease into another.

**C. of relief.** Pseudoscopic effects. The transposition by the mind of convex surfaces presented to the eye into concave, or *vice versa*, a bust being regarded as a hollow mask, an intaglio as a relief.

**Convex.** (L. *convexus*, rounded. F. *convexe*; G. *convex*.) A term applied to the outside of a surface which is evenly arched all over, the middle being higher than the circumference.

**Convoluta ossa.** See *Ossa convoluta*.

**Convolute.** (L. *convolutus*, part. of *convolvere*, to roll together. F. *convoluté*; G. *übergerollt*.) Applied in Botany to leaves that are rolled longitudinally upon themselves or round another body in a spiral manner, so as to partially embrace one another, or to form a horn.

**C. aestiva'tion.** See *Aestivation, convolute*.

## CONVOLUTION

**C. verna'tion.** See *Vernation*, *convolute*.  
**Convolution.** (L. *convolvere*, to wrap together. F. *convolution*; *Zusammenwicklung*.) A rolling of a thing on itself. Applied to the tortuous eminences of the cerebrum, and to the irregular foldings of the intestines.

A stage in the development of epithelial cells which follows the formation of the dyaster, and precedes the conversion of the daughter-star into a nucleus, resembling in all essential particulars the nucleus of the cells in the middle layer of the stratum Malpighii. See *C., phase of*.

**C., an'gular.** The *Gyrus angularis*.

**C., annect'ant, first.** (L. *annecto*, to connect.) The *Gyrus occipitalis primus*.

**C., annect'ant, sec'ond.** The *Gyrus occipitalis secundus*.

**C., annect'ant, third.** The *Gyrus occipitalis tertius*.

**C., an'tero-temp'oral.** The *Gyrus antero-temporalis*, Huxley.

**C., bridg'ing.** Same as *C., annectant*.

**C., Broca's.** See *Broca's convolution*.

**C., callo'sal.** The *Gyrus fornicatus*, Arnold; from its relation to the corpus callosum.

**C., cen'tral, ante'rior.** The *Gyrus centralis anterior*, Heschke.

**C., cen'tral, poste'rior.** The *Gyrus centralis posterior*.

**C.s, cer'ebral.** (L. *cerebrum*, the brain. F. *circonvolutions cérébrales*; G. *Hirnwindungen*.) The smooth meandering eminences on the surface of the brain; they are closely covered by the pia mater, which dips into the furrows between them, and are coated by the arachnoid, which stretches only from summit to summit. Broadly speaking, the outer surface of the convolutions consists of grey matter, and the inner of white matter; but, minutely examined, they are seen to consist of several layers, seven, six, five, four, or three, according to different observers, and in some measure to the part examined.

Meynert distinguishes in the cortex of the cerebral hemisphere in man a superficial layer, containing a few small multipolar cells, and chiefly composed of neuroglia; a layer of densely packed, small, pyramidal ganglion cells; a layer of large pyramidal ganglion cells, the apex being directed towards the surface; a layer of small irregular ganglion cells, the "granular formation" of Meynert; and lastly, a layer of fusiform and branched ganglion cells arranged horizontally.

**C., connec'ting.** Same as *C., annectant*.

**C., den'tate.** The *Gyrus dentatus*.

**C., fron'tal, ascend'ing.** The *Gyrus centralis anterior*.

**C., fron'tal, first.** The *Gyrus frontalis superior*.

**C., fron'tal, fourth.** The *Gyrus centralis anterior*.

**C., fron'tal, infe'rior.** The *Gyrus frontalis inferior*.

**C., fron'tal, inter'nal, first.** The middle portion of the *Gyrus frontalis superior*.

**C., fron'tal, inter'nal, sec'ond.** The *Gyrus fornicatus*, Ecker.

**C., fron'tal, mid'dle.** The *Gyrus frontalis medius*.

**C., fron'tal, sec'ond.** The *Gyrus frontalis medius*.

**C., fron'tal, supe'rior.** The *Gyrus frontalis superior*.

**C., fron'tal, third.** The *Gyrus frontalis inferior*.

**C., fron'tal, trans'verse.** The *Gyrus centralis anterior*.

**C., hippo'cam'pal.** The *Gyrus hippocampi*, Burdach.

**C., in'framarg'inal.** (L. *infra*, below; *margo*, an edge.) The *Gyrus temporalis superior*, Heschke.

**C., inter'nal.** The *Gyrus fornicatus*.

**C.s, intesti'nal.** The coils of the intestines.

**C., marg'inal.** (L. *margo*, an edge.) A convolution which includes the *Gyrus frontalis superior*, the *Gyrus centralis posterior*, the *Precuneus*, and the *Cuneus*.

**C., me'dio-pari'etal, trans'verse.** The *Gyrus centralis posterior*.

**C., me'dio-temp'oral.** The *Gyrus temporalis medius*.

**C., occip'ital, infe'rior.** The *Gyrus occipitalis tertius*.

**C., occip'ital, inter'nal.** The *Cuneus*.

**C., occip'ital, mid'dle.** The *Gyrus occipitalis secundus*.

**C., occip'ital, supe'rior.** The *Gyrus occipitalis primus*.

**C.s of brain.** See *C.s, cerebral*.

**C. of cor'pus callo'sum.** The *Gyrus fornicatus*.

**C. of is'land of Reil.** The *Gyri breves*, Gall.

**C. of longitu'dinal fis'sure.** A convolution commencing at the anterior perforated space, passing forwards along the inner margin of the anterior lobe, then curving along the anterior and upper surface of the hemisphere, skirting the upper margin of the longitudinal fissure to its posterior extremity, where it curves forwards, along the under surface of the hemisphere, as far as the temporo-sphenoidal lobe. It is subdivided into the *gyrus frontalis superior*, the *gyrus centralis posterior*, the *preuncus*, the *cuneus*, the *gyrus hippocampi*, and the *gyrus occipito-temporalis medialis* and *lateralis*.

**C., or'bial, ante'rior.** A small secondary convolution lying on the front of the orbital sulcus.

**C., or'bial, in'ner.** A small secondary convolution lying on the inner side of the orbital sulcus.

**C., or'bial, out'er.** A small secondary convolution lying on the outer side of the orbital sulcus.

**C., or'bial, poste'rior.** The *C., orbital, outer*.

**C., pari'etal, ascend'ing.** The *Gyrus centralis posterior*.

**C., pari'etal, infe'rior.** Pausch. The *Lobulus parietalis inferior*.

**C., pari'etal, infe'rior.** Wagner. The *Lobulus supramarginalis*.

**C., pari'etal, mid'dle.** Wagner. The *Gyrus angularis*.

**C., pari'etal, sec'ond.** Wagner. The *Gyrus angularis*.

**C., pari'etal, supe'rior.** The *Lobulus parietalis superior*.

**C., pari'etal, third.** Wagner. The *Lobulus supramarginalis*.

**C., phase of.** The first step towards the karyokinesis of the cell. In this stage the membrane of the nucleus and the nucleoli disappear,

# CONVOLVULACEÆ—CONVOLVULUS.

the intranuclear fibres become more distinct and thicker, and they stain more readily with dyes, and hence the convoluted nature of the intranuclear fibres becomes evident.

**C., postero-parietal.** The *Gyrus centralis posterior*.

**C., straight.** The *Gyrus rectus*.

**C., superofrontal.** The *Gyrus frontalis superior* and the *G. rectus* combined.

**C., supramarginal.** The *Lobulus supramarginalis*.

**C., supraorbital.** (*L. supra*, above; *orbita*, the orbit.) The anterior, inner and outer orbital convolutions.

**C., temporal, first.** Wagner. The *Gyrus temporalis superior*, Heschke.

**C., temporal, inferior.** The *Gyrus temporalis inferior*.

**C., temporal, middle.** Wagner. The *Gyrus temporalis medius*, Ecker.

**C., temporal, second.** Pozzi. The *Gyrus temporalis medius*, Ecker, and the *G. temporalis inferior*, Ecker, combined.

**C., temporal, superior.** The *Gyrus temporalis superior*, Heschke.

**C., temporal, third.** The *Gyrus temporalis inferior*, Ecker.

**C., temporo-occipital, first.** The *Gyrus occipito-temporalis lateralis*, Pansch.

**C., temporo-occipital, second.** The *Gyrus occipito-temporalis medius*, Pansch.

**C., temporo-sphenoidal, inferior.** The *Gyrus temporalis inferior*.

**C., temporo-sphenoidal, middle.** The *Gyrus temporalis medius*.

**C., temporo-sphenoidal, superior.** The *Gyrus temporalis superior*.

**C., temporo-sphenoidal, upper.** The *Gyrus temporalis superior*.

**C., uncinate.** (*L. uncus*, a hook.) The crooked end of the *Gyrus hippocampi*, Burdach.

**Convolvulaceæ.** (*Convolvulus*.) The bindweeds. A Nat. Order of epipetalous corollifloral *Eragrostis*; or a Family of the Order *Tubifloræ*, Division *Gamopetalæ*; or an Order of the Alliance *Solanales*. They have five free stamens, basal placenta, and leafy, doubled-up cotyledons.

**Convolvulæceous.** (*F. convolvulacæ*.) Having an arrangement of parts, as in the genus *Convolvulus*.

**Convolvulææ.** A Suborder of the Order *Convolvulaceæ* having the carpels consolidated.

**Convolvulic acid.** The same as *Convolvulinic acid*.

**Convolvulin.**  $C_{31}H_{55}O_{16}$ . An alkaloid obtained from jalap resin and from the root of the *Convolvulus scammonia*. It is colourless, tasteless, gummy. It melts at  $150^{\circ}C.$  ( $302^{\circ}F.$ ), is insoluble in turpentine and ammonia, dissolves in nitric acid. It is the anhydride of convolvulinic acid, into which it is converted when treated with alkalis. It is an active purgative.

**Convolvulinic acid.**  $C_{31}H_{53}O_{18}$ . A product of the action of the fixed alkalis upon convovulin. It is amorphous, bitter, readily soluble in water, and converted, on heating with dilute acids or emulsin, into crystallisable convovulinol and sugar.

**Convolvulinol.**  $C_{26}H_{50}O_7$ . A crystallisable substance obtained, together with sugar, by moderately heating convovulinic acid with dilute acids or with emulsin. It is not purgative.

**Convolvulinolic acid.**  $C_{26}H_{48}O_8$ . A crystallisable acid obtained by acting on con-

vovulinol with alkaline solutions. It is slightly soluble in water.

**Convolvuloides.** (*Convolvulus*;  $\epsilon\iota\delta\omicron\varsigma$ , likeness.) A Genus of the Nat. Order *Convolvulaceæ*.

**C. trilobæa**, Mönch. (*Τρείς*, three;  $\lambda\omicron\beta\acute{o}\varsigma$ , a lobe.) The *Pharbitis nil*.

**Convolvulus.** (*L. convolvere*, to wind about, or entwine. *F. liseron*; *G. Bindel*.) The bindweed. A Genus of the Nat. Order *Convolvulaceæ*, so called because the species twine round other plants and objects.

Also, the same as *Volvulus*.

**C. althæoides**, Linn. (*Ἀλθαία*, the wild mallow;  $\epsilon\iota\delta\omicron\varsigma$ , likeness. *F. liseron à feuilles de gypsocræ*.) Hab. South Europe. Roots and leaves purgative.

**C. americanaus.** The jalap plant, *Eco-gonium purga*.

**C. arvensis**, Linn. (*L. arvensis*, belonging to the fields. *F. liseron des champs*.) Small bindweed. Hab. Europe. Roots and leaves purgative.

**C. batatas**, Willd. The *Batatas edulis*.

**C. bilobatus**, Roxb. (*L. bis*, twice; *lobus*, a lobe.) The *Ipomæa pes-capræ*.

**C. brazilien-sis**, Linn. The *Ipomæa brazilensis*, or the *I. pes-capræ*.

**C. cantabrica**, Linn. (*L. Cantabria*, a province of Hispania or Spain in the neighbourhood of Biscay.) The lavender-leaved bindweed. It is anthelmintic, and actively cathartic.

**C. cneorum**, Linn. (*Κνέρον*, the *Daphne gnidium*.) Hab. Levant. Root purgative.

**C. colubrinus**, Linn. (*L. colubrinus*, relating to a serpent.) The *Cissampelos pareira*.

**C. dissectus**, Cavanilles. (*L. dissectus*, cut in pieces.) Noyau vine. This plant abounds in hydrocyanic acid, and is one of those used in the manufacture of the liqueur noyau.

**C. edulis**. The *Batatas edulis*.

**C. flexuosus**, Buch. (*L. flexuosus*, full of turns.) The *C. althæoides*.

**C. floridus**, Linn. (*L. floridus*, flowery.) Hab. Canary Islands. Root sternutatory.

**C. foetidus**. The *Pederia foetida*.

**C. frutescens**, Mill. (*L. frutex*, a shrub.) The *Ipomœa operculata*.

**C. hederæceus**, Linn. (*L. hederæ*, the ivy.) The *Pharbitis nil*.

**C. hirsutus**, Stev. (*L. hirsutus*, hairy.) Probably supplies some of the scammony of commerce.

**C. indicus**. (*L. indicus*, Indian.) A name for the *Solanum tuberosum*, or potato plant, and also for the sweet potato, *Batatas edulis*.

**C. jalapa**, Linn. The jalap plant, *Eco-gonium purga*.

**C. macrocarpus**, Willd. (*Μακρός*, large; *καρπός*, fruit.) Hab. South America. Root purgative.

**C. macrocarpus**, Linn. The *Ipomœa operculata*.

**C. major albus**. (*L. major*, greater; *albus*, white.) The *Calystegia sepium*.

**C. malabaricus**, Linn. The *Argyria malabarica*.

**C. maritimus**, Lam. (*L. maritimus*, on the sea coast.) A name for the *Calystegia soldanella*; the sea convolvulus.

**C. mechoacan-na**, Röm. and Schult. Hab. Mexico, the root of which, called mechoacan, possesses aperient powers, and was used in this country as a purgative, but is now superseded by jalap.

# CONVULSED—CONVULSIONS.

**C. megalorrhizus.** (Μεγαλόριζος, with large roots.) The *C. panduratus*.

**C. minimus.** (L. minimus, least.) The *C. cantabrica*.

**C. minor.** (L. minor, less.) The *C. arvensis*, the small biudweed.

**C. nil.** Linn. (Hindustani nil, blue.) A synonym of *Pharbitis nil*.

**C. officinalis.** Pelletan. (L. officina, a shop.) The *Erogonium purga*.

**C. operculatus.** Gomez. (L. operculum, a cover.) Hab. Brazil. Furnishes part of the *Mechoacan* of commerce. The *Ipomoea operculata*.

**C. orizabensis.** Pelletan. A species having the properties of jalap.

**C. panduratus.** Linn. (L. pandurus, from πανούρρα, a three-stringed musical instrument.) The root of this plant has been employed in the United States as jalap, and as a good diuretic in calculous complaints.

**C. paniculatus.** Blane. (L. panicula, a tuft.) The *Ipomoea quamoclit*.

**C. paniculatus.** Linn. The *Batatas paniculata*.

**C. perennis.** (L. perennis, perpetual.) The *Humulus lupulus*.

**C. pes-caprae.** Linn. The *Ipomoea pes-caprae*.

**C. prostratus.** Schm. (L. prostratus, spread out.) The *C. arvensis*.

**C. purga.** Wenderoth. The *Erogonium purga*, Bentham.

**C. purpureus.** Linn. (L. purpureus, purple.) The *Pharbitis hispida*, Chois.

**C. repens.** (L. repo, to creep.) The *Calystegia sepium*.

**C. sagittæfolius.** Sal. (L. sagitta, an arrow; folium, a leaf.) The *C. arvensis*.

**C. sagittæfolius.** Sibth. The *C. hirsutus*.

**C. scammonia.** Linn. (Σκαμμόνια. F. *liseron scammonie*.) The scammony plant. A twining plant, with a stout tap root in mature specimens, 1 inch wide and 2 or 3 feet long, which gives off a few lateral branches. Hab. waste bushy places in Syria, Asia Minor, Greece, and Southern Russia. The dried milky juice is scammony.

**C. scoparius.** Linn. The *Breweria scoparia*.

**C. sea.** The *Calystegia soldanella*.

**C. sepium.** Linn. The *Calystegia sepium*.

**C. soldanella.** Linn. The sea convolvulus, *Calystegia soldanella*.

**C. speciosus.** Linn. The *Argyria speciosa*.

**C. syriacus.** Moris. The *C. scammonia*.

**C. terminalis.** Sal. (L. terminalis, final.) The *C. cantabrica*.

**C. terrestris.** Linn. (L. terrestris, belonging to the earth. Same as *C. cantabrica*.)

**C. tuberosus.** Spreng. The *Ipomoea tuberosa*.

**C. tuguriorum.** Forst. (L. tugurium, a cottage.) The *Calystegia sepium*.

**C. turpethum.** Linn. The *Ipomoea turpethum*.

**Convulsed.** (L. convulsio, convulsion. F. *convulsé*.) Affected with a *Convulsion*.

**Convulsibility.** (L. convulsio. G. *Krampfsucht, gesteigerte Motilität*.) The ten-

dency towards convulsions; it may depend on disturbance of the central nervous system itself, or on disorders of the blood, or on high temperatures.

**Convulsio.** See *Convulsion*.

**C. canina.** (L. caninus, belonging to a dog.) The canine convulsion, the *Risus sardonicus*.

**C. cerealis.** (L. cerealis, belonging to grain.) A synonym of *Raphania*, in allusion to the cause of the disease.

**C. habitualis.** (Low L. *habitualis*, habitual.) Another term for *Chorea*.

**C. indica.** (L. indicus, Indian.) A synonym of tetanus, from its frequency in that country.

**C. raphania.** See *Raphania*.

**C. Soloniensis.** A similar disease to *Raphania*, from its prevalence in Sologne in France.

**C. tonica.** Same as *Spasm, tonic*.

**C. uteri.** (L. uterus, the womb.) A synonym of *Abortion*.

**Convulsion.** (L. convulsio, from convellere, to tear. F. *convulsion*; G. *Fürzuckung, Zuckung*.) Term for violent agitation of all the limbs, or of a part of the body, marked by spasm and relaxation of the muscles, taking place independently of the will.

**C., salaam.** A synonym of *Eclampsia nutans*.

**Convulsionaire.** (L. convulsio.) A term applied to those affected by the dancing, and other like, epidemics of the middle ages.

**Convulsions.** See *Convulsion*.

**C., avocation.** (F. *convulsions localisée*; G. *Beschäftigungs Krämpfe*.) Cramps or convulsions occurring in particular muscles, owing to over-work of the muscle or of the nerve supplying it. Examples occur in scribes' palsy, pianoforte and violin players' cramp, tailors', milkmen's, and telegraphists' cramp, and in some forms of myopia and strabismus.

**C., cataleptic.** (G. *Kataleptischkrämpfe*.) The convulsive movements of *Catalepsy*.

**C., central.** (F. *convulsions centrales*.) Convulsions caused by disturbance of some part of the central nervous system.

**C. centre.** (G. *Krampfcentrum*.) A centre believed by some to exist in the pons Varolii, the excitation of which, as by venous blood or some other lesion, causes general convulsions.

**C., cerebro spinal.** (L. *cerebrum*, the brain; *spina*, the spine.) Convulsions depending on mischief in the central cerebro-spinal system.

**C., choreic.** (G. *choreatische Krämpfe*.) Convulsions having the character of chorea, being abrupt, irregular, and increased by voluntary efforts.

**C., clonic.** (Κλονος, a violent confused motion. F. *convulsions cloniques*; G. *Wechselkrämpfe*.) Intermittent contractions of any muscle or set of muscles; sudden contractions alternating with relaxation.

**C., direct.** (F. *convulsions directes*; G. *örtliche Krämpfe*.) Convulsions depending upon disturbance of a muscular or centrifugal nerve somewhere in its course between its origin and its distribution. See *C., avocation*.

**C., epileptic.** (G. *epileptische Krämpfe*.) The convulsions occurring in epilepsy. See *Epilepsy*.

**C. from teething.** (G. *Zahnkrämpfe*.) See *C., infantile*.

# CONVULSIVA—CONYZA.

**C., gen'eral.** (G. *allgemeine Krämpfe*.) Convulsions affecting the whole of the body.

**C., hyster'ical.** (G. *hysterische Krämpfe*.) The convulsions occurring in hysteria. See *Hysteria*.

**C., idiopath'ic.** (Ἰδιος, peculiar; πάθος, affection. F. *convulsions idiopathiques, c. essentielles*; G. *spontane Krämpfe*.) Convulsions which have not a distinct cause in recognisable disease of the nervous system.

**C., infantile.** (L. *epilepsia puerilis, insultus epilepticus infantilis*; F. *clampsie des enfants, convulsions de l'enfance*; I. *convulsioni dei bambini*; G. *Kinderkrämpfe*.) Convulsive seizures commencing with a more or less prolonged tonic contraction, succeeded by tonic spasms of particular muscles or groups of muscles of the face, arms, legs, or of one side of the body, occurring once or twice only or frequently, and occasionally leaving some impairment of motor power or complete paralysis. There are generally some premonitory symptoms, such as starting, disturbed sleep, headache, or contraction of the thumbs. The attack supervenes with momentary loss of consciousness, irregular respiration, lividity of the face, and fixed eyes. The attack may last a few minutes or some hours; it may never recur, or it may be repeated frequently. In a large number of instances recovery takes place. If the attacks recur frequently, they are often fatal, either by inducing cerebral congestion or asphyxia. They may be induced by fear, anger, improper diet, excessive variations of temperature, tubercular deposits or inflammation of the brain, dentition or entozoa, and they not infrequently herald an infectious fever.

**C., inter'nal.** A condition in children in which, after some excitement and screaming, the breath is held for a short time, as if by spasm of the respiratory muscles.

Also, a synonym of *Laryngismus stridulus*.

**C., lo'cal.** Same as C., *direct*.

**C., partial.** Convulsions affecting a limb or part of the body only, such as the face.

**C., puer'peral.** See *Puerperal convulsions*.

**C., reflex.** (L. *reflecto*, to turn back. F. *convulsions réflexes*; G. *Reflexkrämpfe*.) Convulsions depending on irritation of a sentient or centripetal nerve, which, reaching the nervous centre, is reflected down a muscular or centrifugal nerve.

**C., rotatory.** (L. *roto*, to turn. G. *Drehbewegung*.) Convulsions accompanied by a tendency to rotate the body.

**C., static.** (G. *statische Krämpfe*.) Term applied to conditions which, strictly speaking, can scarcely be considered as true convulsions, such as the backward or forward or rotatory movements, or the circular movements sometimes occurring before an epileptic attack.

**C., stretch'ing.** (G. *Streckkrämpfe*.) General or tetanic convulsions, which, owing to the generally greater power of the extensors, straighten the limbs and body.

**C., symptomatic.** (Συμπτωμα, a symptom. F. *convulsions sympathiques, or symptomatiques*.) Convulsions depending upon distinct organic lesion of the nervous system.

**C., tetan'ic.** (G. *Wundstarrkrämpfe*.) The muscular contractions of tetanus, or spasms resembling them.

**C., ton'ic.** (Τόνος, tone. F. *convulsions*

*toniques*; G. *Starrkrämpfe*.) Persistent contractions of any muscle or set of muscles.

**C., toxic.** (G. *toxische Krämpfe*.) Convulsions produced by various poisons, as strychnia, picrotoxin, and others.

**C., unilat'eral.** (L. *unus*, one; *lateralis*, belonging to the side.) Convulsions affecting one side of the body only.

**C., uræ'mic.** (G. *urämische Krämpfe*.) See *Uremic convulsions*.

**Convulsiva.** (L. *convulsio*.) Medicines which cause convulsive contraction of muscles, as strychnia.

**Convulsive.** (F. *convulsif*.) Accompanied by, or of the character of, or analogous to, convulsions.

**C. centre.** See *Centre, convulsion, general*.

**C. tic.** See *Tic, convulsive*.

**C. trem'or.** (L. *tremor*, a trembling. G. *Zitterkrämpfe, das Zittern*.) A term applied by Hammond to an affection characterised by paroxysms of clonic convulsions affecting the voluntary muscles, and unaccompanied by loss of consciousness, or by mental aberration; sometimes attended by emotional disturbance, vertigo, and pain in the head. He considers the affection to be due to irritation of motor nerve-centres in the cortex of the brain, with hyperæsthesia of the medulla oblongata and the upper part of the spinal cord.

The term is also used to denote the severer forms of *Metallic tremor*.

**Conydrin.** Same as *Conhydrin*.

**Conylene.** C<sub>5</sub>H<sub>14</sub>. A liquid, non-poisonous hydrocarbon, separated by Wertheim from conia and conhydrin. It boils at 126° C. (259° F.)

**Cony'lia.** Same as *Conylene*.

**Conyza.** (Κόνυζα, a strong smelling plant of the endive tribe.) A Genus of the Nat. Order *Compositæ*.

Also, the *Inula dysenterica*.

**C. anthelmint'ica.** Linn. The *Fernonia anthelmintica*.

**C. balsamif'era.** Linn. The *Blumea balsamifera*, De Cand.

**C. bifolia'ta.** (L. *bis*, twice; *folium*, a leaf.) The *Sericocarpus tortifolius*.

**C. cærule'a.** (L. *cæruleus*, sky blue.) The *Erigeron acer*.

**C. co'ma-au'rea.** (L. *coma*, the hair; *aureus*, golden.) The *Solidago virgaurea*.

**C. genistelloi'des.** The *Baccharis genistelloides*.

**C. ma'jor.** (L. *major*, greater.) Name for a plant supposed to be the *Inula viscosa* of Linn.

**C. me'dia.** (L. *medius*, in the middle.) The *Inula dysenterica*.

**C. mi'nor.** (L. *minor*, less.) The *Inula pulicaria*.

**C. odora'ta.** Rumph. (L. *odoratus*, sweet smelling.) The *Blumea balsamifera*, De Cand.

**C. pulica'ria.** The *Inula pulicaria*, Linn.

**C. pycnostach'ya.** (Πυκνός, compact; σταχys, an ear of corn.) The blackroot. Uab. United States. Root alterative and aperient.

**C. squarro'sa.** Linn. (L. *squarrosus*, scurfy. F. *herbe aux monches*; I. *coniza*; G. *Dürrreuekraut, Ruhrreuekraut*.) Great fleabane; formerly regarded as an emmenagogue and a vulnerary. The leaves have been found mixed with digitalis leaves.

# COOKIA—COPAIFERA.

**Cookia.** A Genus of the Nat. Order *Aurantiaceae*.

**C. falcata**, Sonn. (*L. falcatus*, scythe-shaped.) Hab. Tropical Asia. Used in amenorrhœa.

**C. punctata**, Sonnerat. (*L. punctatus*, dotted.) This plant produces the fruit named Wampee, which is highly esteemed in China and the Indian Archipelago.

**Cooling-coil.** (Sax. *côl*, cool; Old F. *coiller*, to collect; from *L. colligo*, to collect.) A long india-rubber tube which is wound in serpentine turns round an inflamed part. One end is placed in a vessel filled with cold or iced water, at some distance from the ground; the other hangs over a vessel placed on the ground. When a current has once been produced by suction the tube acts as a syphon, and a continuous current is produced, which may be regulated by clips.

**Coolweed.** The *Pilea pumila*.

**Coolwort.** The *Tiarella cordifolia*.

**Coonti.** A name in the Southern United States for arrowroot. (Dunghison.)

**Cooper, Sir Astley Paston.** An English surgeon, born at Brooke, in Norfolk, in 1768, died in London in 1841.

**C's irritable breast.** A term for *Mastodynia*, which was well described by Sir Astley Cooper.

**C's irritable testicle.** Neuralgia of the testicle, well described by Sir Astley Cooper.

**Cooper's well.** See *Mississippi*, mineral waters of.

**Coöper'culum.** (*L. coöperculum*, a cover. G. *Deckel*.) A lid or cover.

**C. oculi.** (*L. oculis*, the eye.) An eyelid.

**Coopertoria cartilago.** (*L. cartilago*, cartilage.) Same as *Coopertorium*.

**Coopertorium.** (*L. coöperio*, to cover, or hide.) The thyroid cartilage.

**Coordinate.** (*L. co*, for *cum*, with; *ordinò*, to arrange. G. *zuordnen*.) To harmonise, to arrange, or set in connected order.

**C. forms.** Same as *C. types*.

**C. types.** (*Týpos*, a blow. G. *koordinirt* *Typen*.) The doctrine of descent recognises, first, radical or primary and derived forms, and explains these as subordinate or superordinate; and secondly, forms which are not related genealogically, but only stand in lateral relation, though they originate in a common radical form. These last are called co-ordinate types.

**Co-ordination.** (*L. cum*, with; *ordo*, order. F. and G. *Co-ordination*; I. *co-ordinazione*.) Harmony; regulated and purposive combination. Term applied chiefly in reference to certain actions which, to be properly performed, involve the simultaneous or consecutive and orderly contraction of many muscles, as, for example, the movements of suction, of deglutition, of locomotion. The co-ordination of these movements is effected through certain centres in the brain, and disease or lesion of either the nervous or muscular system impairs the harmony, uniformity, and purposive nature of the movements.

**C. centres.** Term applied to groups of ganglionic cells which are believed to be situated chiefly, if not exclusively, in the brain, and the function of which is to harmonise various movements, or to associate the impressions derived from different senses with definite muscular acts. Such centres are believed to exist for written and

spoken words, for certain gestures, and for other purposes.

**C. of movement.** The innervation of a large number of muscles simultaneously, each with a different but appropriate degree of force, for the purpose of attaining a given object of motion.

**Co-ossification.** (*L. con*, for *cum*; *os*, bone.) Union by bone.

**Coos'trum.** Old name for the centre of the diaphragm. (Ruland.)

**Coot.** (A Celtic word from the same root of *W. cutan*, to shorten; in reference to its short tail; *W. cwtiar*, a coot, from *cwta*, bob-tailed; *iar*, a hen.) The *Fulica atra*; the heart was used in epilepsy, and the flesh against bites of spiders.

**Cop.** (Of Celtic origin; *W. cop*, the top of a thing.) The head of a thing; a tuft on a bird's head.

**C. rose.** The *Papaver rheas*, from its capsule heads.

**Copahene.** (Fr.)  $C_{20}H_{32}Cl$ . The base of the artificial camphor of essence of copaiba, obtained by passing a current of hydrochloric acid gas through rectified essence of copaiba. It is crystallisable, and fuses at 67° C. (151° F.).

**Copa'hu.** A synonym of *Copaiba*.

**C. of St. Domingo.** The *Croton origanifolium*, Lam.

**Copahu'vene.** Same as *Copahene*.

**Copahu'vic acid.** A synonym of *Copairic acid*.

**Copa'iba**, B. Ph., U.S. Pb. (As if *copaliba*, from *copalli*, the Mexican name for an odoriferous gum; *iba*, or *iva*, a tree. F. *baume de copahu*; G. *Copahubalsam*, *Copairabalsam*.) Copaiva, the Spanish name of a resinous juice, or oleo-resin, obtained by exudation from incisions made in the trunk of the *Copaifera multijuga*, and other species. It is a clear, viscid, yellowish fluid, with aromatic, terebinthinate, odour and acrid taste; insoluble in water, soluble in alcohol and ether. Sp. gr. 0.935—0.998. In doses of five to fifteen grains, produces frequent eructations and sometimes even nausea, vomiting, and purging. The renal secretion is augmented, and the smell of the balsam can be recognised in the urine. In large doses, as from one drachm to half a fluid ounce, it produces gastritis and enteritis, vomiting, increase of temperature, and headache. Albumen and blood may appear in the urine, and strangury is experienced. The skin is affected with a kind of urticaria. It has been largely used for the cure of gonorrhœa, being most serviceable, in the opinion of many, just after the acute inflammatory symptoms have subsided. Its action is probably topical, as it is of little use in women, whilst in hypospadias it is said to arrest the discharge of the posterior and not of the anterior part of the urethra. It has been used also in vesical catarrh, leucorrhœa, and dysentery; in chronic bronchitis; in iritis, scleritis, and purulent conjunctivitis; in membranous croup; and as a diuretic in dropsy, especially in ascites. Dose, one or two drachms three times a day in mucilage.

**C. balsam.** See *Copaiba*.

**Copaif'era.** (*Copaiba*; *L. fero*, to hear. F. *copayer*; G. *Copairabaum*.) A Genus of the Nat. Order *Leguminosae*.

**C. bijuga**, Hayne. (*L. bijugus*, yoked two together.) The *C. guianensis*, Desf.

**C. Blanche'ti**, Benth. A source of copaiba.

**C. bracteata**, Benth. (*Bract.*) A species supplying amarant wood.

**C. berythia**, Hayne. A source of copaiba.

**C. cordifolia**, Hayne. (*L. cor*, heart; *folium*, leaf.) The *C. coriacea*.

**C. coriacea**, Mart. (*L. coriaceus*, leathery.) A large tree, yielding copaiba balsam, growing in the dry forests of the Brazilian provinces of Bahia and Piahy.

**C. glabra**, Vogel. (*L. glaber*, smooth.) A variety of *C. Langsdorffii*.

**C. grandifolia**, Benth. (*L. grandis*, large; *folium*, a leaf.) A variety of *C. Langsdorffii*.

**C. guianensis**, Desf. (*Guiana*.) A tree, forty feet high, growing in Surinam, Cayenne, and the Rio Negro. It yields part of the copaiba balsam of commerce.

**C. Jacquini**, Desf. (*Jacquini*, a Viennese botanist.) The *C. officinalis*, Linn.

**C. Jussieu**, Hayne. (*Jussieu*, the French botanist.) A synonym of *C. Langsdorffii*.

**C. Langsdorffii**, Desfont. (*Langsdorff*, a botanist.) A polymorphous species growing in Brazil, in the Provinces of San Paulo, Guyaz, Bahia, and others. A source of copaiba. Its varieties have received many names—*glabra*, *grandifolia*, *laxa*, *nitida*, and others.

**C. laxa**, Hayne. A variety of *C. Langsdorffii*.

**C. Martii**, Hayne. One of the sources of copaiba.

**C. multijuga**, Hayne. (*L. multus*, many; *jugum*, a yoke.) A tree, believed to be a special source of the copaiba exported from Para. It is remarkable for the number of leaflets (6–10 pairs) on each leaf, but it is not known whether it is really a *Copaiba*.

**C. nitida**, Hayne. (*L. nitidus*, shining.) A synonym of *C. Langsdorffii*.

**C. oblongifolia**, Mart. (*L. oblongus*, oblong; *folium*, a leaf.) Hab. Brazil. A source of copaiba.

**C. officinalis**, Linn. (*L. officina*, a shop.) A large tree of New Granada, Venezuela, and the Island of Trinidad. It yields balsam of copaiba.

**C. pubiflora**, Benth. (*L. pubes*, the hair of puberty; *flor*, a flower.) Hab. Guiana. A source of copaiba.

**C. rigida**, Benth. (*L. rigidus*, stiff.) A source of copaiba.

**C. Sellowii**, Hayne. The *C. Langsdorffii*.

**Copaiba**. See *Copaiba*.

**C. oil**. (*G. Copairad.*)  $C_{10}H_{16}$  or  $C_{15}H_{24}$ . A terpene obtained by the distillation of copaiba balsam. It is said to be less irritating than the balsam.

**C. resin**. The residue of the distillation of copaiba oil; it consists chiefly of *Coparvic acid*.

**Coparvic acid**.  $C_{26}H_{42}O_2$ . An acid resin obtained by exposing a mixture of 9 parts of copaiba and 2 parts of liquor ammoniac, sp. gr. 0.95, to a temperature of  $-10^{\circ}C.$  ( $14^{\circ}F.$ ) It is readily soluble in alcohol and in warmed copaiba balsam, much less so in ether.

**Copal**. (*Mex. copalli*, any odoriferous gum. *F. copal*.) A yellowish, hard, shining, odoriferous, transparent, resinous, concrete juice, which exudes spontaneously from the *Vateria indica*, *Hymenaea courbaril*, *Trachylobium Gartnerianum*, *Cynometra spruceana*, *Vouapea phascocarpa*, the South American trees *leica* and *Elaphrium*, and *Bursera copal*. A solution of it by digestion in linseed oil, and diluted with oil of

turpentine, is formed into a fine transparent varnish.

**C., Brazilian**. The produce of several species of *Hymenaea* and of *Trachylobium martinianum*.

**C., Indian**. A variety of *Anime gum* derived from the *Vateria indica*.

Also, the resin of *Vateria malabarica*, white dammar tree.

**C., Madagasc.** The produce of *Hymenaea verrucosa*.

**C., Mexican**. The produce of a plant identical with, or allied to, *Hymenaea courbaril*.

**C., West Indian**. Said to be obtained from the *Rhus copalina*, as well as from *Hymenaea courbaril* and *H. verrucosa*.

**Copalchi bark**. A kind of cascarilla bark, obtained from the *Croton nireus*, Jacquin, *C.* or *Cascarilla pseudo-China*, Schlecht, in Mexico, where it is called *Quina blanca*, West India Islands, New Granada, and Venezuela. The bark is in long straight quills, having a thin, greyish, papery, suberous layer, which, when removed, shows a transversely pitted surface. It contains a bitter alkaloid, soluble in ether, resembling quinine in yielding a deep-green colour when treated with chlorine and ammonia, though it does not afford any characteristic compound with ammonia; an essential oil, and an uncrystallizable bitter principle. It is bitter and austere, with a flavour of turpentine, and has been employed as a febrifuge, as a substitute for quinine. It is imported into France under the name of *Cascarilla de la Trinité de Cuba*. It has been erroneously ascribed to *Strychnos pseudo-china*.

**Copalchin**. The bitter alkaloid of *Copalchi bark*.

**Copaline**. A hard, colourless, friable substance found in copal, insoluble in water and alcohol, and forming a gelatinous mass with ether.

Also, a liquid obtained by the incision of the *Liquidambar styraciflua*.

**Copalm balsam**. See *Balsam, copalm*.

**Copayba**. The name by which copaiba balsam was first described by a Portuguese friar, circa 1600.

**Copella**. A name for the cupel.

Old term for a chemical medicine or paste, described by Hartmannus, *Misc. Chym. Med. in fol. vol. vi, p. 6*.

**Copepoda**. (*Κόπη*, the handle of an oar; or *κόπρω*, to cut off; *πούς*, a foot. *G. Krebsfloh, Spaltfüssler*.) An Order of the Subclass *Eutomostraca*; or a Family of the Order *Lophyropoda*, having the body enclosed in a single carapace, four pairs of swimming legs, a rudimentary pair of abdominal legs, no branchiae, and a setiferous tail.

**Copernicia**. A Genus of the Nat. Order *Palmeae*.

**C. cerifera**, Mart. The *Corypha cerifera*.

**Copher**. (*Arab.*) An old name for camphor.

**Cophinus**. (*Κόφινος*, a basket. *G. Korb*.) A basket.

**Cophoma**. (*Κωφός*, deaf. *F. cophome*; *G. Taubheit*.) Deafness.

**Cophonia**. A contraction of *Acouphonia*.

**Cophosis**. (*Κόφωσις*, deafness.) Old term for a difficulty of hearing; deafness, especially that arising from relaxation of the tympanum, according to Willis, *Anim. Brut.* i, 14.

## COPHOTES—COPPER

**Cophotes.** (Κοφότης.) Deafness.

**Copipia.** Same as *Copopsia*.

**Copiscus.** Old name for an inferior kind of incense, according to Dioscorides, i, 81.

**Coponau'tæ.** (Κώπη, the handle of an oar; *κῶς*, a ship.) A synonym of *Pteropoda*, in allusion to their oar-like swimming apparatus.

**Copop'sia.** (Κόπος, weariness; ὀφθαλμ., eyesight.) Weariness or fatigue of sight.

**Copos.** (Κόπος, toil and trouble. *G. Abgeschlagenheit.*) Old term for weariness or lassitude.

**Copper.** (*L. cuprum æs*, Cyprian brass; from *κύπρος*, Cyprus, whence the Romans obtained it. *F. cuivre*; *G. Kupfer.*) Symb. Cu. Atomic weight 63.5. A metal occurring most frequently as a red oxide, or as a sulphide with iron, forming copper pyrites; occasionally it is found native in octahedral or dodecahedral crystals. It has a peculiar red colour, a bright lustre, is very malleable and ductile, has a sp. gr. of 8.95, or thereabouts, and is a good conductor of heat and electricity.

**C. acetate.** See *Cupri acetos*.

**C. acetoarsenite.**  $3\text{CuAs}_2\text{O}_4 + \text{Cu}(\text{C}_2\text{H}_3\text{O}_2)_2$ . A compound obtained by boiling together verdigris, arsenic trioxide, and water; it is said to be the chief constituent of emerald green.

**C. aluminated.** See *Cuprum aluminatum*.

**C. amal'gam.** See *Amalgam for filling teeth*.

**C. ammoniated.** See *Cuprum ammoniatum*.

**C. ammo'nio-sul'phate of.** The *Cuprum ammoniatum*.

**C. arsenite.** See *Cupri arsenis*.

**C. burnt.** An old term for oxide of copper.

**C. carbonate.** (*G. kohlen-saures Kupfer.*)  $\text{CuCO}_3$ . The salt is not known in a pure state; the bluish green precipitate, obtained by adding a solution of an alkaline carbonate to a salt of copper, always contains the hydrated oxide in addition. In this form it has been recommended as an antidote in phosphorus poisoning.

**C. chloride.** (*G. Kupferchlorid, salz-saures Kupferoxyd.*)  $\text{CuCl}_2$ . Cupric chloride obtained by dissolving cupric oxide in hydrochloric acid. It crystallises in green needles, soluble in water, ether, and alcohol. It is contained in *Aqua antimiasmatica Kœchlini*, an old application to cancerous and syphilitic sores, and in a similar tincture used internally.

**C. col'ic.** See *Colic, copperworkers'*.

**C. col'our.** A reddish brown, slightly yellowish colour. A term specially applied to distinctive colour of syphilitic eruptions.

**C. dioxide.** (Δίς, twice.) The *Cupric peroxide*.

**C. foil.** B. Ph. Pure metallic copper, thin and bright.

**C. group of met'als.** A group of metals having much chemical analogy; it contains copper, silver, and mercury. These metals do not decompose water at a red heat, they form several oxides, are easily oxidised by nitric acid and hot strong sulphuric acid, and are precipitated in the metallic state from their solutions in presence of the metals of the lead group.

**C. hemioxide.** (Ημι, half.) The *Cuprous oxide*.

**C. monoxide.** The *Cupric oxide*.

**C. ni'trate.** See *Cupri nitras*.

**C. ox'ide.** See *Cuprum oxidatum*.

**C. ox'ide, black.** The *Cupric oxide*.

**C. oxide, red.** The *Cuprous oxide*.

**C. oxides.** Four oxides of copper are known, the tetrantoxide, hemioxide, monoxide, and dioxide.

**C. oxychlo'ride.** See *Cupric chloride, basic*.

**C., poi'soning by.** See *C., salts of*.

**C. pyri'tes.**  $\text{Cu}_2\text{S} + \text{Fe}_2\text{S}_3$ . One of the more common ores of copper, containing also iron and sulphur.

**C. rose.** The *Papaver rhœas*.

**C., salts of.** The copper salts form chemical combinations with the albumins. They have no action on the skin when intact, but applied to an excoriated surface, or to a mucous membrane, they combine with the albuminous constituents, and contract the cells and vascular walls, thus limiting secretion and acting antiphlogistically. Ulcerated surfaces become drier, and healing is promoted. Taken internally in small doses, 0.03 gramme, they have a metallic taste, and diminish appetite and cause constipation. Larger doses, 0.2 gram. (gr. iij), produce nausea, vomiting, and purging, probably by acting on the gastric branches of the vagus, since these symptoms are not produced when the same quantity is injected into the veins. Large doses, 1 gram. (15-432 grs.), cause violent inflammation of the gastric mucous membrane and all the symptoms of enteritis. Copper, when absorbed, acts chiefly on the striated muscles, and on the heart, inducing paralysis, feeble cardiac and respiratory movements, and dilatation of the pupil. The occurrence of chronic copper poisoning is doubtful; such symptoms as the green discoloration of the hair and sweat, and necks of the teeth, being referable to the mechanical admixture of copper; and others, as impairment of appetite and digestion, purging, and emaciation, to the habits of the workmen. It has been shown that large doses may be taken for a long time, enclosed in bread crumb, without injury. It is chiefly eliminated by the bile, but partly by the urine. Its value as a disinfectant is not great, the development of bacteria not being checked by solutions of less strength than 1 in 150.

**C. salts, tests of.** Ammonia in solution gives a bluish-white precipitate, soluble in excess; potassium ferrocyanide, a light red colour when the quantity of copper is small, a deep red precipitate when in larger quantities; hydrogen or ammonium sulphide, a light brown colour or a chocolate-brown precipitate, according to the amount of copper; bright iron immersed in a solution of a copper salt becomes coated with metallic copper. A slightly acidulated copper solution, placed on platinum foil, deposits its copper on the platinum wherever a piece of zinc touches both. Mixed with sodium carbonate, and heated on charcoal in the reducing blow-pipe flame, salts of copper yield the metal; heated in the inner blow-pipe flame they give a green colour to the outer flame.

**C. subac'etate.** See *Cupri subacetos*.

**C. sul'phate.** See *Cupri sulphas*.

**C. sul'phate, ammo'n'acal.** The *Cuprum ammoniatum*.

**C. sul'phate, anhy'drous.** B. Ph. (Αν, ὑδρω, water.) Sulphate of copper deprived of its water by a heat of 400° F.; it is a yellowish-white

powder, which becomes blue when moistened with water.

**C. sulphide.** *CuS*. A black precipitate obtained by passing hydrogen sulphide through an acid solution of a copper salt.

**C. tetrantoxide.** (Τέτρα, four.)  $Cu_4O$ . An olive-green powder, obtained by adding a solution of copper sulphate to a dilute solution of dichloride of tin and caustic potash.

**C. verditer.** (F. *verd*, green; *de*, of; *terre*, earth.) A synonym of *Cupri acetate*.

**C. wire.** The form in which the metal is ordered in the B. Ph. and U. S. Ph.

**Copperas.** (F. *couperose*; probably from *L. cupri rosa*, rose of copper.) An old name for sulphate of copper, or, according to some, sulphate of iron.

**C., blue.** Sulphate of copper.

**C., green.** Sulphate of iron.

**C., white.** Sulphate of zinc.

**Copernose.** (G. *Kupfernase*.) A synonym of *Acne rosacea*.

**Copracra'sia.** Same as *Copracratia*.

**Copracratia.** (Κόπρος, excrement; ἀσπας, powerless.) Old term for involuntary discharge of the feces. (Hooper.)

**Copraemia.** (Κόπρος; αἷμα, blood.) A term by Barnes for a form of blood-poisoning produced by detention of the feces in the large intestine, whence the products of their decomposition are absorbed into the blood, and produce, by their injurious action on the different organs, many serious symptoms.

**Copragogue.** (Κόπρος, excrement; ἄγω, to bring away. F. *copraque*; I. *copragogo*; G. *Kothenlerend*.) Carrying away the feces or excrements; applied to purging medicines.

**Coprago'gum.** (Same etymon.) Old name for a certain gentle laxative electuary. (Ruland.)

**Copranon.** (Κόπρανα, excrements.) Feces.

**Coprecriticus.** Same as *Coprocriticus*.

**Copremesis.** (Κόπρος, excrement; ἔμεα, to vomit.) Old term for stercoraceous vomiting.

**Copremetus.** (Same etymon.) Applied anciently to one who had stercoraceous vomiting.

**Coprepis'chesis.** (Κόπρος; ἐπίσχεσις, a stoppage.) Retention of the feces; constipation.

**Coprinus.** (Κόπρος, dung. G. *Mistpilz*.) A Genus of Fungi of the Family *Agaricini*.

**C. atramenta'rius**, Fr. (L. *atramentum*, ink.) Inky mushroom. Hab. base of old stumps and palings. Pileus ovate, then expanded, spotted at the top with innate squamules; gills free, ventricose, white, then purplish black. Esulent.

**C. coma'tus**, Fr. (L. *comatus*, part. of *como*, to deck with hair.) Shaggy or maned mushroom. In its early state, when the flesh is quite white and the gills rosy, it is good to eat.

**C. pica'ceus**, Fr. (L. *pica*, a magpie.) Pileus membranaceous, variegated with white, stem hollow, bulbous. Said to be poisonous.

**Copriv'orous.** (Κόπρος; voro, to devour. F. *coprivore*; G. *kothfressend*.) Living on, or eating, dung.

**Coprobious.** (Κόπρος; βίος, life. F. *coprobie*.) Living on excrements.

**Coprocriticus.** (Κόπρος, excrement;

κρίνω, to separate.) Causing discharge of the feces by stool.

**Coprocitic.** (Κόπρος. F. *coprocitique*.) Pertaining to the feces.

**Coprodoscheum.** (Κόπρος; δέχομαι, to receive. F. *coprodoscheum*; G. *Nachtrimer*.) An apartment or vessel in which to deposit the feces; a night pail.

**Copros'metus.** Same as *Copremetus*.

**Coprolite.** (Κόπρος, excrement; λίθος, a stone.) The petrified excrement of some Saurian.

**Coprolith.** (Κόπρος; λίθος, a stone. F. *coprolithe*; I. *coprolito*; G. *Kothstein*.) Name for a ball formed of hardened feces, or other mass, in the bowels.

**Coprophagous.** (Κόπρος, excrement; φαγείν, to eat.) Term applied to animals which live in, and feed on, the excrements of others.

**Coprophagy.** (Κόπρος, excrement; φαγείν, to eat.) The act of feeding on excrement; an occasional symptom in hysteria and insanity.

**Coprophilous.** (Κόπρος; φιλέω, to love. F. *coprophile*.) Growing or feeding upon dung.

**Coprophore'sis.** Same as *Coprophoria*.

**Coprophoria.** (Κόπρος, excrement; φορέω, to carry away. I. *coproforia*.) Old term for a purging of feces or excrement.

**Coproplane'sis.** (Κόπρος; πλάνησις, a making to wander. F. *coproplanèse*.) Aberration of the feces to another part; as into the pelvis through a fistula.

**Copropole'sis.** (Κόπρος; ποίω, to make. F. *copropoleuse*; G. *Kothbereitung*.) The preparation of the feces.

**Coprorrhœ'a.** (Κόπρος; ῥέω, to flow.) Diarrhoea.

**Copros.** (Κόπρος. G. *Mist, Koth*.) Old name for the feces or excrements from the intestines.

**Coprosclero'ma.** (Κόπρος; σκλήρωμα, an induration. F. *coprosclérome*; G. *Kothverhärtung*.) A hardened state of the feces.

**Coprosclerosis.** The progress of *Coproscleroma*.

**Coprose.** The *Papaver rhæas*.

**Copro'sis.** Same as *Copropoiesis*.

**Coprosoma.** (Κόπρος, excrement; σῶμα, body.) A Genus of *Cinchonaceæ*.

**C. microphylla.** (Μίκρος, small; φύλλον, a leaf.) A species growing in Australia, the fruit of which is eaten under the name of native currants.

**Coprosta'sia.** Same as *Coprostasis*.

**Coprostasis.** (Κόπρος, excrement; ἵστημι, to stand or remain. G. *Kothstauung*.) Old term for costiveness producing complete obstruction of the intestinal canal.

According to Good, it signifies costiveness; an obstinate retention of the feces in the intestines, and is divided into the two following forms.

**C. constipa'ta.** Good's term for *Constipation*; the feces when discharged congestive and voluminous; temperament firm, and rigid.

**C. obstipa'ta.** Good's term for *Obstipation*; the feces when discharged hard, slender, and often scybalous; the temperament weakly, or the habit sedentary.

**Coprus.** (Κόπρος.) Excrement.

**Coptarion.** Same as *Coptarium*.

**Coptarium.** (Κοπτή, a cake, or biscuit.) Old name for a lozenge.

**Cop'te.** (Κοπτή, a cake.) Old name for a medicinal application in form of a cake, made of vegetable substances, and placed externally over the stomach or liver.

**Cop'tin.** (Coptis.) A colorless alkaloid found in *Coptis trifolia*.

**Coptina.** Same as *Coptin*.

**Coptis.** A Genus of the Nat. Order *Ranunculaceæ*.

**C. tee'ta**, Wallich. (A native name.) Hab. China. Upper Assam and Scinde. The roots, called Honglane by the Chinese, Mishmee-bitter or Mahmira in India, are knobby, elongated, slightly curved, and contained in small baskets, to the number of twenty. They contain berberin. When chewed it tinges the saliva yellow. It is used as a tonic; dose, 5–10 grains.

**C. trifolia**, Salisb. (L. *tres*, three; *folium*, a leaf. F. *coptide*; G. *gelbe Nesswurz*.) The goldthread; used as a simple tonic bitter, without astringency, in stomach disorders, and as a local application to aphthous sore mouth.

**Copton.** Same as *Copte*.

**Copula.** (L. *copula*, a band. G. *Band*.) Old name for a ligament.

Also (L. *accopiamiento*; G. *Begattung*), formerly used for copulation, or sexual intercourse between husband and wife, according to P. Zacchias, in *Quæst. Med. Leg.*

**C. carnalis.** (L. *carnalis*, fleshy. G. *fleischliche Vermischung*.) Old term for coition or sexual intercourse of husband and wife.

**C. cartilaginea.** (L. *cartilago*, cartilage.) Same as *Synchondrosis*.

**C. magna cerebri.** (L. *magnus*, great; *cerebrum*, the brain.) A synonym of the *Corpus callosum*.

**Copulated.** (L. *copula*.) Joined together.

**C. ac'ids.** The same as *Conjugate acids*.

**C. bod'ies.** Same as *C. compounds*.

**C. compounds.** A term used by Gerhardt to describe chemical compounds which are formed by the coupling of one compound with another in such fashion as not to change its capacity of saturation. In this manner an oxygen acid, he affirmed, may become connected or copulated with an indifferent organic substance without losing its capacity to form a salt. The phrase is not now used, and such compounds are spoken of as products of substitution.

**C. radicals.** A term applied to certain radicals which are supposed to be made up of two or more simpler radicals.

**Copulation.** (L. *copulo*, to couple together. F. *copulation*; G. *Beischlaf*.) The coupling or meeting together of male and female animals in the act of procreation.

In Botany, the term is applied to the fecundation of those fungi in which two structures, a male and a female, combine to form a third structure, be it spore, sporangium, or receptacle, from the development of which the new plant springs.

**C. organs of.** (G. *Begattungsorgane*.) The external sexual organs. These are absent in fishes, except in *Selachia*, which has a small papillary penis and a pair of cartilaginous processes termed pterygopodia. In Amphibia the margin of the cloaca is beset with papillæ and rows of glands. In Reptilia there are certain protrusible portions of either the anterior or posterior cloacal wall, and this is seen also in birds. For those of the Mammalia, see *Penis* and *Clitoris*.

**Copyp'ia.** Same as *Copopsia*.

**Coq.** An abbreviation of *Coque*, boil.

**Coquen'tia.** (L. *coquo*, to cook.) An old term for medicines which were supposed to facilitate the coction or digestion of food.

**Coquet'ta bark.** See *Bark, coquetta*.

**Coquill'a nuts.** The fruit of *Atalaea funifera*, vegetable ivory.

**Cor.** (Akin to Gr. *καρδία* and *ἥρo*, the heart. F. *cœur*; G. *Herz*.) The heart.

A term for the pith of a plant, as being the heart, or in the centre of the trunk or stem.

Formerly used as a name for anrum, or gold; also for an intense fire.

**C. adipo'sum.** (L. *adeps*, suet. G. *Fett-herz*, *Herzverfettung*.) A term which includes both fatty degeneration of the muscular structure of the heart, and also an accumulation of fat under the pericardium, or around the heart.

**C. aor'ticum.** (*Aorta*.) The left side of the heart, including the auricle and ventricle.

**C. arterio'sum.** (*Arteria*.) The left auricle and ventricle, inasmuch as from the latter the arteries arise.

**C. bovi'nium.** (L. *bovinus*, belonging to neat cattle.) A synonym of hypertrophy of the heart when extreme.

**C. dex'trum.** (L. *dexter*, on the right side.) The right side of the heart, including the auricle and ventricle.

**C. hirsu'tum.** (L. *hirsutus*, hairy.) Same as *C. villosum*.

**C. hispidum.** (L. *hispidus*, shaggy.) Same as *C. villosum*.

**C. pulmona'le.** (L. *pulmonalis*, belonging to the lungs.) The right auricle and ventricle, from the connection of the latter with the pulmonary artery.

**C. sem'inis.** (L. *semen*, seed.) In Botany, a synonym of the embryo.

**C. sinis'trum.** (L. *sinister*, on the left side.) The left side of the heart, including the left auricle and ventricle.

**C. tauri'nium.** (L. *taurinus*, belonging to oxen.) Extreme hypertrophy of the heart, from its size.

**C. tomento'sum.** (L. *tonentum*, a cushion-stuffing.) Same as *C. villosum*.

**C. veno'sum.** (L. *venosus*, belonging to a vein.) The right side of the heart, because it contains venous blood.

**C. villo'sum.** (L. *villosus*, shaggy. G. *Zothenherz*.) A term applied to the heart in those cases of pericarditis in which the surface is covered with a fibrinous deposit, which has obtained a villous, or coarsely hairy, or papillated, surface.

**Corac'ine sphrag'is.** (Κοράκινος, like a crow; σφραγίς, a seal.) Old name for a certain pastil, from its colour, which Galen mentions, *de C. M. per Gen.* v, 11.

**Cor'aco.** In compound names of museles this word denotes that they are attached to the *Coracoid* process of the scapula.

**Coracoacro'mial.** Relating to the coracoid and the acromial processes of the scapula.

**C. lig'ament.** (L. *legamento coraco-acromiale*.) A firm, broad, thin, triangular band, attached by its broader end to the outer extremity of the coracoid process, and by its narrower end to the tip of the acromion.

**Coracobot'ane.** (Κόραξ, a crow; βοτάνη, grass.) Name for the Alexandrian laurel; probably the *Ruscus aculeatus*.

**Coracobrachia'cus.** Same as *Coraco-brachialis*.

**Coracobrachia'us.** Same as *Coraco-brachialis*.

**Coracobra'chial.** Same as *Coraco-brachialis*.

**C. ligament.** Same as *Coraco-humeral ligament*.

**C. mus'cle.** See *Coraco-brachialis*.

**Coracobrachia'lis.** (*Coracoid*; L. *brachialis*, belonging to the arm. F. *coracobrachial*; I. *coracobrachiale*; G. *Flaehenarm-muskel*, *Rabenschuabeloberarmmuskel*.) A muscle of the upper arm arising from apex of the coracoid process and from the intermuscular septum between it and the short head of the biceps; it is inserted into a rough ridge at the middle of the inner side of the shaft of the humerus. It draws the humerus forwards and inwards. It is supplied by the musculocutaneous nerve.

In some animals this muscle has an attachment to the capsular ligament of the shoulder-joint and to the tendon of the *teres major*, and in others it extends to the internal condyloid ridge of the humerus.

**Coracoclavic'ular.** (*Coraco*; L. *clavicula*, the clavicle.) Relating to the coracoid process of the scapula and to the clavicle.

**C. ligament.** (F. *ligament coraco-claviculaire*, I. *legamento coraco-claviculare*.) The ligament attaching the clavicle to the coracoid process of the scapula; it is composed of two parts, the *Trapezoid ligament* and the *Conoid ligament*.

**Coracocu'ital mus'cle.** (*Coracoid*; L. *cubitus*, the arm.) A synonym of the *Flexor brachii longus* of Solipedes.

**Coraco'des.** Same as *Coracoides*.

**Coraco-gleno-radialis mus'cle.** (*Coracoid*; *glenoid*; *radius*.) A synonym of the *Biceps flexor cubiti*, from its attachments.

**Coracogna'thæ.** (*Kopaξ*, a raven; *γνάθος*, the jaw.) A Section of the Suborder *Oscines*, Order *Coracomorphæ*, having the palate bones broad and flattened, with elongated outer angles, not developed into a vertical plate.

**Coracohu'meral.** Same as *Coraco-humeralis*.

**C. ligament.** (F. *ligament coracohumérale*, I. *suspensor de l'humerus*; I. *legamento coraco-omale*.) The necessary ligament of the shoulder-joint. A broad band of fibres arising from the outer border of the coracoid process and passing obliquely downwards and outwards, closely connected with the capsule of the shoulder-joint, to the front of the great tuberosity of the humerus, where it is blended with the tendon of the *supraspinatus* muscle.

**Coracohumera'lis.** (*Coraco*; L. *humerus*, the bone of that name.) Relating to the coracoid process of the scapula and the humerus.

Also, a synonym of *Coracobrachialis*.

**Coracohy'oid.** Relating to the coracoid process of the scapula and the hyoid bone.

**C. muscle.** (G. *Rabenschuabelfortsatz-zungenbeinmuskelt*.) The omohyoid muscle.

**Coracohyoi'deus.** (*Coracoid* process; *hyoid* bone.) The omohyoid muscle, from its attachments.

**Cor'acoid.** Same as *Coracoides*.

**C. bone.** An element of the shoulder-girdle or pectoral arch of Vertebrata, represented in man by the coracoid process of the scapula; in the Menostrumata it is a distinct flat bone

stretching between the scapula and the sternum; in birds also it is a large bone; in some reptiles the coracoid is in the form of a large cartilaginous plate; and in fishes it is often very large, and has been called the radius.

**C. ligament.** (F. *ligament coracodien*.) A thin, flat band, narrower in the middle than at the extremities, attached to the opposite extremities of the scapular notch, which it converts into a foramen for the suprascapular nerve, and occasionally for the suprascapular vessels. Sometimes it becomes ossified.

**C. notch.** The *Suprascapular notch*.

**C. pro'cess.** (F. *apophyse coracoïde*; G. *Rabenschuabelfortsatz*, *Schulterhaken*.) A thick, strong, hook-like process, so called from its supposed resemblance to a raven's beak, rising by a broad base almost vertically from the upper part of the neck of the scapula above the glenoid cavity; it bends upwards and inwards, and then curves forwards and outwards. See *C. bone*.

**C. pro'cess, frae'ture of.** A rare accident produced only by direct violence.

**Coracoï'des.** (*Kópaξ*, a raven; *είδος*, likeness. F. *coracoïde*; G. *rabenähnlich*, *rabenartig*, *rabenschuabelförmig*.) Resembling, or shaped like, a crow's beak; applied to a process of the scapula.

**Coracoï'deus.** (Same etymon.) A synonym of the *coracobrachialis* muscle.

**Coracomorphæ.** (*Kópaξ*; *μορφή*, form, likeness.) A group of birds in Huxley's Classification corresponding to the *Passerines* of other authors.

**Coracoradial'is.** (*Coracoid*; *radius*.) A synonym of the *Biceps flexor cubiti*.

**Coracoscapu'lar.** Relating to the *Coracoid* process and to the *Scapula*.

**C. fora'men.** (L. *foramen*, an aperture.) An opening at the base of the coracoid process of some sloths.

**Coracosteon.** A term applied to an additional symmetrical osseous centre formed in the sternum of the Hemipods (*Turnicidae*).

**Co'rae.** Old name for the temples.

**Cor'al.** (Old F. *coral*; from L. *corallum* or *corallum*; from Gr. *κοράλλιον*, red coral. I. *corallo*; S. *coral*; G. *Koralle*.) A term for the hard calcareous substance which forms the branched framework of many of the compound animals of the sclerodermatous Order of the Subclass *Zoantharia*. Coral contains a large quantity of calcium carbonate and a little iron oxide. It was formerly used as an absorbent, tonic, and astringent, and now as an ingredient of dentifrices. See *Corallum album* and *C. rubrum*.

**C., black.** The *Antipathes spiralis*, Lam. Formerly used as an astringent and in epilepsy.

**C. clava'ria.** The *Clavaria coralloides*.

**C., gar'den.** (F. *corail des jardins*.) The *Capsicum annuum*.

**C. hyd'num.** The *Hydnum coralloides*.

**C. plant.** The *Ceradia furcata*, and the *Jatropha multifida*.

**C., red.** The *Corallium rubrum*.

**C. root.** The *Corallorhiza odontorrhiza*.

**C., sea.** The *Salicornia fruticosa*.

**Corallium.** Same as *Coral*.

**Corallat'um.** Old name, by Paracelsus, for the red precipitate of mercury; also for a certain diaphoretic medicine described by him, *de Morb. Gall.* iii, 25, and explained by Libavius, *Apoc. Hermet. part. pr. c. 5*.

# CORALLET—CORDATE.

**Corallet.** (L. *corallum*.) The coral belonging to one persona of a compound polyp.

**Coralliferous.** (L. *corallum*, coral; *fero*, to bear.) Coral bearing.

**Coralliform.** (L. *corallum*; *forma*, likeness. F. *coralliforme*.) Formed like coral.

**Coralligena.** (Κοράλλιον; γεννῶν, to produce.) The group of Actinozoa which produce coral.

**Coralligenous.** (Γεννῶν, to produce.) Producing a corallum.

**Corallin.** (L. *corallum*.) A red anilin dye. See *C.*, red and *C.*, yellow.

**C.**, red. A deep red colouring matter obtained by heating yellow corallin with ammonia; it is insoluble in water, but soluble in alcohol. It is used as a dye, and was supposed to be poisonous; but it is probable that it is innocuous when pure, and only produces eczematous affections of the skin of parts touched by articles of dress containing it where some poisonous or irritant impurity is present. It is also called *Tæonin*.

**C.**, yellow.  $C_{10}H_8O_2$ . A yellowish-red dye obtained by heating carbonic acid with oxalic and sulphuric acids. It is an irritant to the skin under the same conditions as *C.*, red. Also called *Rosolic acid*.

**Corallina.** (L. dim. of *corallum*, coral.) A Genus of the Family *Corallinæ*, Order *Floridæ*, Class *Corposporæ*, Group *Thallophyta*. It consists of a calcareous articulated stem proceeding from a kind of root, that adheres to rocks or shells, and is divided into articulated branches.

**C. alba.** (L. *albus*, white.) White coralline. The *Corallina officinalis*.

**C. corsicana.** (*Corsica*.) The *Asidium helminthochorton*.

**C. meæcorthon.** The *Asidium helminthochorton*. See also *Corsican moss*.

**C. officinalis.** Linn. (L. *officina*, a shop. F. *coralline blanche*; I. *corallina bianca*; G. *Korallenmoos*.) White worm seed, sea moss, or coralline; formerly given to children, as anthelmintic.

**C. rubra.** (L. *ruber*, red.) Red coralline. The *Asidium helminthochorton*.

**Coralline.** The *Corallina officinalis*. Also (G. *korallenartig*, *korallenroth*), like, or of the colour of, coral.

**Corallite.** (*Coral*.) A term applied to the hard skeleton of each persona or individual of a corallum. Same as *Corallet*.

**Corallium.** (Κοράλλιον, supposed to be a dim. of κόρη, a maiden, a daughter.) Same as *Coral*.

Also, a Genus of the Order *Gorgoniaceæ*, Subclass *Acyonaria*, Class *Actinozoa*.

**C. album.** (L. *albus*, white.) White coral; produced by the several species of *Oculina*; the powder of which has been used as an absorbent.

**C. nigrum.** (L. *niger*, black.) See *Coral*, black.

**C. rubrum.** Lam. (L. *ruber*, red.) Red coral. Formerly used as a tonic, absorbent, and astringent.

**Coralloid.** (Κοράλλιον, coral; εἶδος, likeness. F. *coralloïde*; G. *Korallenartig*.) Resembling coral; formed, shaped, or having an appearance, like coral.

**C. mushroom.** The *Hydnum coralloides*.

**Coralloïdes.** Same as *Coralloid*.

**C. fungus.** (L. *fungus*, a mushroom.) The *Hydnum coralloides*.

**Corallorrhiza.** (Κοράλλιον, coral; ρίζα, a root.) A Genus of the Nat. Order *Orchidaceæ*.

**C. multiflora.** Nutt. (L. *multus*, many; *flor*, a flower.) Said to form part of the coral root of commerce.

**C. odontorrhiza.** Nutt. (ὀδούς, a tooth; ρίζα, G. *Korallenwurzel*.) Coral root. Hab. United States of America. Root used as a diaphoretic in febrile conditions.

**Corallum.** (L. *corallum*, coral.) The continuously calcified hard skeleton of the Actinozoa; being an aggregation of several corallites.

**Corallus.** Same as *Coral*.

**Coralwort.** The *Hydnum coralloides*.

**Corbatum.** Old name for cuprum, or copper.

**Corbula.** (L. *corbula*, dim. of *corbis*, a basket. G. *Korbchen*.) The common receptacle in some Hydrozoa, which encloses groups of gonangia or gonophore capsules.

**Corchorus.** (Κόρχος.) A Genus of the Nat. Order *Tiliaceæ*. The species are all mucilaginous, and many are used as emollients and pectorals, and as food.

**C. fascicularis.** (L. *fasciculus*, a small bundle.) An astringent.

**C. mompoxensis.** Infusion of the leaves used instead of tea.

**C. olitorius.** Linn. (L. *olitorius*, belonging to vegetables. F. *corète potagère*, *michouche*.) Jew's mallow. Hab. India, Egypt. Infusion used as a refrigerant. Also cultivated in Asia and America for its leaves, which are alimentary. Seeds bitter and purgative.

**C. trilocularis.** (L. *tris*, three; *loculus*, a small place.) Seeds very bitter; plant emollient.

**Corcle.** Same as *Corenium*.

**Corcule.** Same as *Corenium*.

**Corculum.** (L. dim. of *cor*, the heart. G. *Herzchen*.) A little heart.

The heart and essence of the seed; the embryo, or germ.

**C. germinis.** (L. *germen*, a bud.) The germinal spot.

**Cord.** (L. *rhorda*, from Gr. χορδή, intestine. F. *chorde*; I. *corda*; S. *cuerda*; G. *Saite*, *Schnur*.) A string.

In Botany, the process which attaches the seed or embryo to the placenta.

**C. dorsal.** (L. *dorsum*, the back.) The *Notochord*.

**C. genital.** See *Genital cord*.

**C. ligamentous, of Weibrecht.** The round radio-ulnar ligament.

**C. pistillary.** (*Pistil*. F. *cordon pistillaire*.) A filament, sometimes more than one, in the pistil, extending from the style along the placenta to the ovules.

**Cs. sonorous.** A term applied to the membranous semicircular canals.

**C. spermatie.** See *Spermatie cord*.

**C. spinal.** See *Spinal cord*.

**C. tympanic.** See *Chorda tympani*.

**C. umbilical.** See *Umbilical cord*.

**Cs. vocal.** See *Vocal cords*.

**Corda.** See *Chorda*.

**C. spinalis.** The *Spinal cord*.

**Cordate.** (L. *cor*, the heart. F. *cordi*; G. *herzformig*.) Formed like a heart; heart-shaped.

**C.-has'tate.** (*L. hasta*, a spear.) In Botany, applied to leaves or other parts intermediate in form between a heart and a spear.

**C.-o'vate.** (*L. ovum*, an egg.) Applied to organs intermediate in form between a heart and an egg.

**C.-sagit'tate.** (*L. sagitta*, an arrow.) Applied to leaves intermediate in form between a heart and an arrow-head.

**Cor'deac.** France; Département de l'Isère. An athermal, feebly saline, mineral water containing a small quantity of hydrogen sulphide. Used in skin diseases and bronchial affections.

**Cor'dec.** Same as *Chordee*.

**Cor'dia.** (In honour of *Enricus* and *Valerius Cordius*, father and son, German botanists.) A Genus of the Nat. Order *Cordia-cee*.

**C. abyssyn'nica**, Vauz. (*Abysinnia*.) A species the fruit of which is esteemed by the Abyssinians.

**C. angustifo'lia**, Roxb. (*L. angustus*, narrow; *folium*, a leaf.) Hab. India. Bark used for astringent gargles.

**C. Boissie'ri**, A. De Cand. A species supposed to furnish *Anacahuite* wood.

**C. domestica.** (*L. domesticus*, belonging to the house.) The *C. myxa*.

**C. latifo'lia**, Roxb. (*L. latus*, broad; *folium*, a leaf.) Hab. India. Fruit, called large Sebesten plums, mucilaginous and astringent. Used in chest affections. The fruit is larger and more mucilaginous than that of *C. myxa*.

**C. myxa**, Linn. (*Μύξα*, a kind of plum; from *μῦξα*, mucus.) The black fruit, small Sebesten plums, is mucilaginous and gently laxative; given in decoction in diseases of the chest, hoarseness, and cough. The fruit is less than that of *C. latifolia*.

**C. obli'qua.** (*L. obliquus*, slanting.) The *C. myxa*.

**C. officina'lis.** (*L. officina*, a shop.) The *C. myxa*.

**C. sebeste'na**, Willd. Hab. India. Fruit mucilaginous, laxative, and pectoral. Used in chest affections, gonorrhœa, and irritable bladder.

**Cor'dia'cee.** (*Cordia*.) A Nat. Order of epipetalous, corolliferous Exogens of the Alliance *Solanales*, having axile placentæ, and leafy cotyledons folded lengthwise.

**Cor'dial.** (*L. cor*, the heart. *F. cordial*; *G. herztärkend* and *magenstärkend*.) Belonging to the heart; stimulating the heart; hearty.

Applied to any stimulating medicines which raise the spirits, because they seem to invigorate the heart.

**Cor'diceps.** (*L. cor*, the heart; *caput*, the head.) A Genus of the Order *Sphæriacei*.

**C. purpurea**, Fries. (*L. purpureus*, purple.) The spore-bearing stage of the ergot, *Claviceps purpurea*; formerly believed to be a distinct fungus.

**Cordifoliate.** (*L. cor*; *folium*, a leaf. *F. cordifolius*; *G. herzblättrig*.) Having heart-shaped leaves.

**Cor'diform.** (*L. cor*, heart; *forma*, shape. *F. cordiformis*; *G. herzförmig*.) Having the form of a heart.

**C. fora'men.** (*L. foramen*, an opening.) A term applied to what is usually called the obturator foramen in reptiles, on the supposition that it is not really the analogue of the obturator foramen of the higher Vertebrates, but represents the space between the brim of the pelvis and a

line drawn from the ilio-pectineal eminence to the symphysis pubis.

**C. ten'don of diaphragm.** The central tendon of the *Diaphragm*.

**Cordine'ma.** (*Κορδίνυμα*.) Old term for heaviness in the head with giddiness.

**Cor'dis ba'sis.** (*L. cor*, the heart; *basis*, a base. *G. Herzgrund*.) The base of the heart.

**C. co'nus.** (*L. conus*, a cone. *G. Herzspitze*.) The apical part of the heart, from its shape.

**C. emuncto'rium.** (*L. emunctorium*, from *emungo*, to blow the nose, and so to cleanse.) An old term for the axilla, which was believed to be the emunctory of the heart.

**Cor'dleafs.** A synonym of *Restiæceæ*.

**Cor'dolium.** (*L. cor*, the heart; *dolor*, pain.) A term for *Cardialgia*.

**Cor'dyceps.** Properly *Cordiceps*.

**Cordy'lea.** Old term for the dung of a species of lizard common in Egypt and the Levant, the *Lacerta stellio* of Linn., prized in the East as a remedy for cutaneous diseases, and as cosmetic.

**Cordyliceps.** (*Κορδύλη*, a club; *L. caput*, the head.) A synonym of *Cordiceps purpurea*.

**Cordylin'ë.** (*Κορδύλη*, a club.) A Genus of the Nat. Order *Liliaceæ*.

**C. austra'lis**, Endl. (*L. australis*, southern.) The Ti plant, which forms an important part of the food of a Sandwich Islander. Its large woody roots are baked, when they become sweet and nutritious. Bruised, mixed with water, and fermented, they form an intoxicating beverage; distilled, an ardent spirit is readily obtained; boiled before fermentation, a rich syrup, capable of being a substitute for sugar, is the result. Cattle, sheep, and goats are fond of the leaves, which furnish thatch for houses, and are woven into a kind of cloth. Also, called *Dracæna terminalis*.

**C. reflex'a.** (*L. reflexus*, bent back.) The flowers are said to be emmenagogue.

**Core.** (*L. cor*, the heart; as being in the centre of the body. *F. trogon*; *G. Kern*.) Term for the portion of sloughy cellular substance found in boils.

**Cor'ë.** (*Κόρη*.) The pupil.

**Coreclisis.** (*Κόρη*, pupil; *κλείω*, to close. *I. coreclisi*.) Occlusion of the pupil.

**Corectasis.** (*Κόρη*, the pupil; *εκτασις*, extension. *F. corectase*; *I. corectasia*; *G. Ausdehnung der Pupille*.) Dilatation of the pupil.

**Corectoëctomia.** Same as *Corectomy*.

**Corectomedialysis.** (*Κόρη*, the pupil; *εκτίμνω*, to cut out; *διαλύω*, to liberate.) A term for the operation of forming an artificial pupil by detaching the iris from the ciliary ligament.

**Corec'tomy.** (*Κόρη*; *εκτίμνω*, to cut out.) Term for an operation for forming an artificial pupil, consisting of an incision through and removal of a part of the iris; iridectomy.

**Corectop'ia.** (*Κόρη*; *εκτοπος*, away from a place.) Misplacement or eccentricity of the pupil. A deformity in which the pupil does not occupy its proper place.

**Coredialysis.** (*Κόρη*; *διαλύω*, to liberate.) Term for an operation for forming an artificial pupil, consisting in the separation of a part of the external margin of the iris from the *Corpus ciliare*, or ciliary body.

**Coredias'tasis.** (Κόρη, pupil; διάσ-  
τασις, separation.) Dilatation of the pupil.

**Coredias tole.** (Κόρη, pupil; ἐλαστέ-  
λω, to stretch.) Dilatation of the pupil.

**Corelysis.** (Κόρη; λύσις, a loosing.)  
The operation for detaching adhesions of  
the margin of the pupil from the capsule of the lens.

**Core'ma.** (Κορέω, to cleanse.) Old name  
applied by Paulus Ægineta to a medicine for  
cleansing the skin.

Also, a purging medicine according to Gor-  
reus.

**Coremegine.** (Κόρη, pupil; μέγας,  
great.) Term applied by Runge to atropine, on  
account of its power of dilating the pupil.

**Coremetamorphosis.** (Κόρη; μετα-  
μόρφωσις, a transformation.) Irregularity of  
the shape of the pupil.

**Coremorphoma.** (Κόρη; μορφή, form.)  
Malformation of the pupil.

**Coremorphosis.** (Κόρη; μορφοποι-  
σις, formation.) The operation of making an artificial  
pupil.

**Córenc.** France; Département de l'Isère.  
A feeble mineral water, containing a small  
amount of sodium chloride and a little carbonic  
acid and hydrogen sulphide. Used in skin affec-  
tions, and in catarrhal affections of the respiratory  
and gastric mucous membranes.

**Corencleisis.** (Κόρη; ἐγκλείω, to in-  
clude.) A term for the operation for artificial  
pupil, in which a portion of the iris is drawn  
through an incision in the cornea, and cut off.

**Corcometer.** (Κόρη, pupil; μέτρον,  
measure.) An instrument for measuring the  
size of the pupil, suggested by Z. Laurence. It  
consists of two vertical indices attached to a  
graduated horizontal bar; one of the indices is  
movable, and can be approximated to the other  
by means of a screw.

**Coreon'cion.** Same as *Corconciun*.

**Coreon'cium.** (Κόρη; ὄγκος, a hook.)  
Name given to a kind of hook formerly used in  
the operation for artificial pupil by separation.

**Coreop'sis.** (Κόρις, a bug; ὄψις, ap-  
pearance.) A Genus of the Nat. Order *Compo-  
site*; so called from the appearance of the seeds.

**C. bidens.** Walt. The *Bidens chrysan-  
themoides*. The *C. bidens*, Linn, is a variety of  
*C. cernua*.

**C. trichosperma.** (Θρίξ, hair; σπέρμα,  
seed.) Hab. United States. Used as an altera-  
tive.

**Coreparel'cysis.** (Κόρη, pupil; πα-  
ρέλκω, to draw aside.) A mode of making an  
artificial pupil in leucoma, in which the pupil is  
elongated towards the clear part of the cornea,  
and in order to keep it there the margin of the  
iris is engaged in the wound of the cornea.

**Coreph'thisis.** (Κόρη, pupil; φθίσις,  
wasting.) Persistent contraction of the pupil.

**Coreplastica.** The art of, and things  
relating to, *Coreplasty*.

**Coreplasty.** (Κόρη; πλαστική, the art  
of making images.) The operation for artificial  
pupil in general.

**Coretodialysis.** (Κόρη; διάλυσις, a  
loosing.) Same as *Coredialysis*.

**Coretomedialysis.** The same as *Iri-  
dotomedialysis*.

**Core'tomy.** (Κόρη, the pupil; τóμη,  
section.) The operation for artificial pupil, con-  
sisting in a simple cut through, without the re-  
moval of any part of the iris.

**Coretonce'tomy.** Same as *Corectomy*.

**Coretotom'ia.** Same as *Corectomy*.

**Coria'ceous.** (L. *corium*, leather. F.  
*coriace*; G. *ledern*, leathery.) Belonging to, or  
like, leather; leathery.

**Coriamyr'tin.** C<sub>30</sub>H<sub>36</sub>O<sub>10</sub>. A glycoside  
extracted from *Coriaria myrtifolia*. It is neu-  
tral, crystallisable, and is decomposed by acids.  
It is soluble in alcohol, ether, chloroform, and  
benzene; it rotates light to the right; it is only  
slightly soluble in water; it is very bitter and  
poisonous, producing vertigo, tetanic convul-  
sions, and vomiting; cadaveric rigidity appears  
speedily.

**Corian'der.** (F. *coriandre*; G. *Korian-  
der*.) The *Coriandrum sativum*.

**C. fruit.** See *Coriandri fructus*.

**C. oil.** See *Oleum coriandri*.

**Corian'dri fructus.** B. Ph. (L. *fruc-  
tus*, fruit. F. *coriandre*; G. *Koriander*.) The  
dried ripe fruit of *Coriandrum sativum*, Linn.  
It consists of a globular, smooth, finely ribbed,  
yellowish-brown cremocarp, crowned with the  
unequal calyx teeth and the stylopodium; there  
are two oil tubes on the face of each mericarp.  
It has a pleasant aromatic taste and smell, and  
contains a volatile oil. Used as a carminative  
and stimulant.

**Corian'drum.** (Κορίαννον, from κόρις,  
a bug. F. *coriandre*; G. *Koriander*.) A Genus  
of the Nat. Order *Umbellifere*, so called from the  
supposed similarity of smell of this herb and  
its seeds, when fresh, to that of a bug.

Also, the pharmacopoeial name (U.S.A.) for the  
fruit of the *Coriandrum sativum*.

**C. cicu'ta.** The *Cicuta virosa*.

**C. cynapi'um.** The *Ethusa cynapium*.

**C. macula'tum.** The *Conium maculatum*.

**C. sati'um.** Linn. (L. *sativus*, that which  
is sown. F. *coriandre cultivée*; I. *coriandolo*;  
G. *Koriander*, *Wanzenkraut*.) The coriander  
plant. An old legend ascribes fatuity to the  
eating of the plant as a salad. See *Coriandri  
fructus*.

**Corian'non.** Same as *Coriander*.

**Coria'non.** The same as *Coriander*.

**Coria'ria.** (L. *corium*, skin. G. *Gerber-  
strauch*.) A Genus of the Nat. Order *Coriaria-  
ceæ*.

**C. myrtifo'lia.** Linn. (L. *myrtus*, the  
myrtle; *folium*, a leaf. F. *redout*, *corrayère*.)  
Fruit and leaves poisonous, from the *Coriamyr-  
tin* which they contain. The leaves have been  
used to adulterate senna, and have produced  
dangerous results. They may be distinguished  
by the two sides being equal and symmetrical at  
the base, those of senna leaves being unequal.

**C. nepalen'sis.** (Nepaul.) A plant  
growing in the North of India, the fruit of which  
is frequently eaten, but the seeds are said to be  
poisonous.

**C. ruscifo'lia.** (L. *ruscum*, butcher's  
broom; or a corruption of *russus*, red; *folium*, a  
leaf.) Hab. New Zealand. Tutu plant. Fruit  
poisonous. The young shoots are poisonous to  
cattle and sheep.

**C. sarmento'sa.** Forst. (L. *sarmentosus*,  
full of twigs.) A New Zealand plant, the berries  
of which are greedily sucked by the natives,  
though the seeds are held to be poisonous.

**Coria'riaceæ.** (*Coriaria*.) A Nat. Order  
of thalamifloral Exogens of the Alliance *Ru-  
tales*. It is a small Order of plants inha-  
biting the South of Europe, Chili, Peru, New

## CORIARIEÆ—CORMOGENS.

Zealand, and Nepal. Shrubs with opposite branches; opposite, simple, ribbed, entire leaves; racemes terminal and axillary; flowers pentamerous; fruits covered by membranous sepals and fleshy petals, indehiscent, one-seeded; seed pendulous, exalbuminous; embryo straight; cotyledons two, fleshy. It is probably allied to *Ochnacea*.

**Coria'riæ.** A synonym of *Coriaria-ced.*

**Coria'rin.** Same as *Coriamyrtin*.

The term has also been given to a crystalline non-poisonous substance found in the *Coriaria myrtifolia*.

**Cor'idine.**  $C_{10}H_{15}N$ . A product, it is said, of tobacco smoke.

**Cor'igeen.** Same as *Carrageen*.

**Cori'itis.** (L. *corium*, the skin.) Inflammation of the skin.

**Corinthiæ.** (*Corinth*.) Currants, from the place where they grow.

**Corinth'ian.** Belonging to Corinth.

**C. raisins.** (F. *raisin*, a grape.) Currants, from the place whence they come.

**Cor'ion.** The same as *Corium*.

**Cor'is.** (*Kópis*.) A bug.

Also (*kópis*, a kind of St. John's wort), a St. John's wort, the *Hypericum coris*.

Also, a Genus of the Nat. Order *Primulacæ*.

**C. cre'tica.** (*Crete*.) The *Hypericum saxatile*.

**C. lu'tea.** (L. *lutens*, yellow.) The *Hypericum coris*, or bastard St. John's wort.

**C. monspeliensis.** (L. *monspeliensis*, Montpellier.) A plant formerly employed in the medicine of the Spanish monastic orders as a most efficacious vulnerary, when dried and reduced to a powder. Also called *Symphytum putrum*.

**Corisanthe'ria.** (F. *corisanthérie*.) A Jussieuian name for a class of dicotyledonous monopetalous plants with epigynous corolla, which have the anthers distinct. Properly *Chorisantherous*.

**Cor'ium.** (L. *corium*, skin. Gr. *χόριον*; F. *chorion*; G. *Lederhaut*.) The subepidermic layer of the skin; the true skin.

Also, the subepithelial layer of mucous membrane.

**C. of mu'cous membrane.** The analogue of the corium of the skin. It consists essentially of the same structures, but is separated from the epithelium by a distinct basement membrane.

**C. of skin.** A vascular, sentient, tough tissue, varying from .2" to 1.5" in thickness, covered by the epidermis and connected by areolar tissue to the subjacent parts. It consists of interlacing bundles of white connective-tissue fibres, with a varying proportion of yellow elastic fibres, and anastomosing connective-tissue corpuscles; with these, bundles of plain muscular fibres are found at the roots of the hairs, in the areola of the nipple, the scrotum, penis, and perineum. In the interstices are groups of fat cells, and blood-vessels traverse it to the sweat glands, hair follicles, fat cells, and papillæ, and to form a dense network of capillaries just below the surface. Lymphatics form a network underneath that of the capillaries, and nerves are freely supplied to it; these form a plexus near the surface; some go to the hair follicles, others terminate in free bulbous extremities, or a fine plexus, in the Malpighian layer of the epidermis,

and the rest form what are called end-bulbs, tactile corpuscles, and Pacinian bodies.

**C. phlogis'ticum.** (*Φλογιστός*, set on fire.) A term for the buffy coat of the blood; in consequence of its frequent occurrence in inflammations.

**Cork.** (S. *corcho*, cork; from L. *cortex*, bark. F. *liège*; I. *sughero*; G. *Kork*.) The second layer of the bark of trees; the epiphloëum or periderm much developed in some trees. It consists of tubular cells, containing air, and arranged in the long axis of the trunk or twig; they are formed by tangential division of the cells of the phellogen and lie above it.

The term is specially applied to the epiphloëum of the cork tree, *Quercus suber*.

It is used for tents and small splints, bottle-stoppers, and other purposes.

Also (Nor. *korkje*), the orchil, *Rocella tinctoria*, and other species.

**C., burnat.** Used as a local styptic in bleeding piles.

**C. camb'ium.** The layer of phellogen which, by the division of a layer of cells parallel to the surface, forms a new layer of cork.

**C., moun'tain.** A synonym of *Asbestos*, elastic.

**C. tree.** The *Quercus suber*.

**Cork'y.** (Same etymon.) Having the structure, or appearance, or elasticity, of cork.

**C. en'velope.** A synonym of *Epiphloëum*.

**Corm.** (*Kopós*, the trunk of a tree with the boughs cut off. F. *bulbe solide*; G. *Knollenzwibel*.) A solid bulbous enlargement of the lower part of the underground stem of some monocotyledons, as the crocus; it is of round or oval shape, and covered with thin membranous scales. It gives off buds which form new corms at the expense of the parent.

**Corm'eille.** (Gael. *caermeal*.) The heath pea, *Orobus tuberosus*.

**Corm'i.** Plural of *Cormus*, in the sense in which Häckel uses the word.

**C. articula'ti.** (L. *articulus*, a joint. G. *Gliederstücke*.) Cormi which, like most Plamcrogams and Cölenterata, proceed from person chains (L. *prosopa calculata*; G. *Kettenpersonen*), which themselves arise from terminal budding of the metameres.

**C. compositi.** (L. *compositus*, compound. G. *zusammengesetzte Stücke*.) Cormi in which the chief bud and a part of the secondary buds are differentiated asexually, whilst a part of the secondary bud is sexually differentiated, as in most Plamcrogams; of these some are annual stocks (L. *canes*; G. *Stengel*), others are perennial (L. *trunci*; G. *Stämme*).

**C. frutice'ol.** (L. *fruticosus*, shrubby. G. *Buschstücke*.) Stocks which consist of "brush or pencil persons" (L. *prosopa fruticosa*; G. *Buschpersonen*), and which are represented by Botryllida, and many Bryozoa.

**C. simplices.** (L. *simplex*, simple. G. *einfache Stücke*.) Stocks in which all the buds are sexual, or in which only the chief bud is asexually, whilst all secondary buds are sexually, developed.

**Cormog'enous.** (*Kopós*; *γεννώω*.) Belonging to, or resembling, a *Cormogen*.

Also, bearing a *Corm*.

**Cormog'ens.** (*Kopós*, the trunk of a tree; *γεννώω*, to produce.) A division of *Acrogens*, in which there is a distinct axis, as in Ferns and Mosses.

**Cormog'eny.** (Κορμός; γεννάω.) A term employed by Hæckel to denote the developmental history or embryology of groups or social unities composed of individuals; such as families, communities, states.

**Cormoid.** (F. *cormoïde*; G. *wurzelstock-ähnlich*.) Resembling a *Corm*.

**Cormology.** (Κορμός; λόγος, an account.) The anatomy of the *Cormus*.

**Cormophylog'eny.** (Κορμός; φύλον, a race; γεννάω, to produce.) The phylogeny of groups or social unities composed of individuals; such as families, communities, states.

**Cormophyta.** (Κορμός, the trunk of a tree; φυτόν, a plant.) One of the two great divisions of plants; that in which there is a distinct axis; the other being *Thallophyta*.

**Cormophytes.** (Same etymon.) All plants in which a stem or axis can be morphologically distinguished.

**Cormop'oda.** (Κορμός; πούς, a foot.) A section of *Acerphala*, having the foot straight.

**Cormorant.** (F. *cormoran*; probably from L. *corvus marinus*, a sea crow.) The *Phalacrocorax carbo*. The flesh was used in elephantiasis and splenic enlargements, the heart in quartan ague, and the blood as an alexipharmic; the liver, mixed with hydromel, was drunk to promote expulsion of the placenta.

**Cormotridymus.** (Κορμός; τρίδνμος, threefold. G. *Rumpfdrilling*.) A monstrosity with three bodies.

**Cormozo'a.** (Κορμός; ζῷον, an animal.) A term suggested to replace the hybrid word *Corporosa*.

**Cormus.** (Κορμός.) A term employed by Hæckel, as a synonym of *Stock*, to indicate that biological individual (G. *Formeinheit*) which is composed of a multiplicity of persons or individuals (G. *Formindividuum*) of his Fifth Order, originating by lateral budding processes, the buds remaining adherent to the stem; and he states that it reaches its highest development in plants when it is represented by the majority of Phanerogams and the higher Cryptogams. In animals, examples are found in the Botryllidae, and, perhaps, in Echinodermata.

Also, the same as *Corm*.

**C. col'chicki.** See *Colchici cormus*.

**Corn.** (Sax. *corn*. F. *grain*; I. *grano*; G. *Korn*. Perhaps all from Sans. root *kurna*, earth.) The general term for the grain of wheat, barley, rice, oats, and the like.

In the United States of America the word is used exclusively for the grain of *Zea mays*, the maize.

Also (L. *cornu*, a horn. F. *cor*; I. *callo*; S. *callo*; G. *Hühnerauge*), a horny, roundish hardness of the skin, with a hard centre, and a root sometimes extending deep into the subjacent cellular substance. See *Clavus*.

**C.-bind.** The *Convolvulus arvensis* and *C. sepium*.

**C. blue-bot'tle.** The *Centaurea cyanus*.

**C. bot'tle.** The *Centaurea cyanus*.

**C. cham'omile.** The *Anthemis arvensis*.

**C. chrysanth'emum.** The *Chrysanthemum segetum*.

**C. cock'le.** The *Githago segetum*.

**C. crow'foot.** The *Ranunculus arvensis*.

**C. f'ibrous.** The ordinary corn or *Clavus*, on account of its fibrous structure, as shown in vertical section.

**C. flag.** The *Gladiolus vulgaris*.

**C. flour.** The prepared meal of maize, *Zea mays*.

**C. flower.** The *Centaurea cyanus*.

**C. grom'well.** The *Lithospermum arvense*.

**C., guin'ea.** The *Sorghum bicolor*.

**C., guin'ea, ne'gro.** The *Sorghum vulgare*.

**C. hone'wort.** The *Petroselinum* or *Carum segetum*. Formerly employed as a remedy in curing the hone or boil on the cheek.

**C. horse-tail.** The *Equisetum arvense*.

**C., In'dian.** The *Zea mays*.

**C., lam'inated.** (L. *laminated*.) A synonym of *Callosity*.

**C. mar'igold.** The *Chrysanthemum segetum*.

**C. mint.** The *Mentha arvensis*.

**C. mouse-ear.** The *Crastium arvense*.

**C., par'rot's.** The seeds of *Carthamus tinctorius*.

**C. pars'ley.** The *Petroselinum* or *Carum segetum*.

**C. pink.** The *Agrostemma githago*.

**C. poppy.** The *Papaver rhæas*.

**C. rose.** The *Papaver rhæas*.

**C. sal'ad.** The *Valeriana locusta*, or *Valerianella olitoria*.

**C. sna'keroot.** The *Eryngium yuccæ-folium*.

**C., soft.** A soft, globular thickening of the epidermis between the toes, with enlarged papillæ.

**C. starch.** A term for the starch obtained from maize, *Zea mays*.

**C. sow-this'tle.** The *Sonchus arvensis*.

**C. spurry.** The *Spergula arvensis*.

**C., squirrel.** The *Dicentra canadensis*.

**C., Tur'key.** The *Dicentra canadensis*.

**C., wild.** The *Matricaria chamomilla*.

**C. wound-wort.** The *Stachys arvensis*.

**Corna'cææ.** (G. *Hartriegelgewächse*.) A Nat. Order of epigynous, calycifloral Exogens, of the Alliance *Umbellates*; or a Family of the Order *Umbellifloræ*, with a two- or more-celled fruit without a double epigynous disc, tetramerous flowers, a valvate corolla, and opposite leaves without stipules. Trees or shrubs, seldom herbs, allied to Caprifoliaceæ, and to Loranthaceæ. Europe, Asia, and America.

**Cornachi'nus pul'vis.** (*Cornachini*, a physician of Pisa; L. *pulvis*, a powder.) A preparation made of scammony, diaphoretic antimony, and cream of tartar.

**Cornea.** (L. *cornu*, a horn. F. *cornée*; I. and S. *cornea*; G. *Hornhaut*.) A colourless, transparent, convexo-concave and nearly circular substance, forming the anterior sixth of the eyeball, so called from its horny consistence. It is flexible, but firm and resistant to pressure or traction, and very elastic when rendered tense by compressing the globe, and when made flaccid by opening the globe its transparency is impaired. It passes insensibly into the sclerotic at its margin, where blood-vessels cease and form delicate loops. It is covered anteriorly and posteriorly by epithelium, and between these two layers of epithelium there may be seen in succession from before backwards an anterior elastic lamina or membrane of Bowman, the corneal tissue itself, and the posterior elastic lamina. The anterior elastic lamina is more distinct in some animals than in man. The structure of the proper corneal

## CORNEA.

tissue is, after the action of reagents, divisible into laminae and separated by cells, and the laminae may again be split up into fibrils. The posterior elastic lamina, sometimes called the membrane of Descemet or of Demours, is transparent, and, as its name implies, highly elastic, rolling up, when detached, in the opposite direction to that in which it is applied to the corneal substance.

The horizontal diameter of the cornea is 10.5 to 11.8 mm., the vertical 9.5 to 10.8 mm. Its index of refraction 1.377. Examined from behind, the cornea is circular in outline and has a diameter from 11.3 to 11.7 mm. Its thickness at the centre is 1.1 mm., at the periphery 0.9. The anterior surface is approximately the segment of a sphere, the radius of which varies from 8.3 to 9.8 mm., and the arc of this segment is about 83° to 84°; but the cornea always presents a certain degree of astigmatism resulting from the difference in the radius of curvature of the vertical from the horizontal meridian, the former, according to Donders, being 7.7 mm., the latter 7.8 mm. Hence the surface of the cornea is not spheroidal, but is an ellipsoid of revolution. The principal axis of the corneal ellipse deviates 5° 41' from the visual line.

**C., abscess of.** See *Keratitis, suppurative*.

**C., cacumina'ta.** (*L. cacumino*, to make pointed.) Staphyloma of the cornea.

**C., cloud'iness of.** (*G. Hornhauttrübung*.) A condition seen in the early stages of inflammation of the cornea, especially in interstitial keratitis. It appears to be due to the presence of leucocytes and fluid between the laminae of the cornea.

Also, a synonym of *Nebula*.

**C., con'ical.** (*L. conus*, a cone.) A projection of the cornea in the form of a cone, usually commencing in youth, and slowly progressing. At the apex of the cone the cornea is very thin, and often cloudy.

**C., cor'puscles of.** See *Corneal corpusculi*.

**C., enlarg'ement of.** See *Hyperkeratosis*.

**C., epithe'lum of.** (*Epithelium*, *G. Corneal epithel.*) The anterior surface of the cornea is covered by about ten layers of epithelial cells, of which the deepest set is columnar, the next two or three spheroidal, or polygonal, and the more superficial layers progressively more and more flattened; nerves have been traced up for some distance from the corneal periphery between the cells.

The posterior surface of the cornea is lined by a single layer of cells, which rests on the posterior elastic lamina of the cornea, and forms with it the membrane of Descemet.

**C., fac'ets of.** (*F. facette*, dim. of *face*, from *L. facies*, a face.) Term applied to the separate cornea forming the surface of the compound eye in Arthropods.

Also, minute flattened surfaces or depressions left after the occurrence of ulcers or injuries of the cornea.

**C., fis'tula of.** (*L. fistula*, a pipe.) A minute opening sometimes following a perforating ulcer of the cornea, and allowing the aqueous humour to drain away. It is often recognisable as a minute dark-coloured spot in the centre of a leucomatous scar, which, if a quill of blotting-paper be presented to it, readily yields aqueous fluid.

**C. glob'o'sa.** (*L. globus*, a globe.) Pro-

jection and enlargement of the cornea, in some instances congenital. See *Keratoglobus*.

**C., hern'ia of.** See *Ceratocoele*.

**C., interstitial inflammation of.** See *Keratitis, interstitial*.

**C., lam'ellated.** (*L. lamella*, a small plate.) The true cornea, from its structure in layers.

**C. lu'cida.** (*L. lucidus*, shining.) The cornea proper; so called from its transparency.

**C., nerves of.** (*F. nerfs de la cornee*; *G. Hornhautnerven*.) The nerves of the cornea, composed of from 20 to 40 trunks, are undulated, and are derived from the ciliary nerves. After a short course they lose their double contour, and form a plexus near the posterior elastic lamina, from which branches pass to a subepithelial plexus, situated near the anterior surface of the cornea, and from this minute filaments have been followed into the epithelium covering the cornea.

**C. opa'ca.** (*L. opacus*, shady.) The sclerotic coat of the eye, so called from its opacity in contradistinction to the *C. lucida*, or true cornea.

Also, a synonym of *Leucoma*.

**C., opac'ities of.** See *Leucoma* and *Nebula*.

**C., pan'nus of.** See *Pannus*.

**C. pellu'cida.** (*L. pellucidus*, transparent.) The true cornea, from its transparency, in contradistinction to *C. opaca*.

**C., staphylo'ma of.** See *Staphyloma*.

**C., sug'ar-loaf.** A synonym of *Staphyloma*, in allusion to its shape.

**C., tattoo'ing of.** A surgical proceeding practised in cases of leucoma. The white cicatrix is pricked repeatedly with a needle or with a bundle of needles, and lampblack or sepia is gently rubbed into the punctures with the finger after the bleeding, if there be any, has ceased. The object is to lessen deformity by making the white spot darker.

**C. transpa'rens.** (*L. trans*, through; *parvo*, to be visible.) The true cornea, because of its transparency.

**C., treph'ining of.** A proceeding adopted by some in cases of conical cornea, with a view of effecting a flattening of the prominence. The trephine is usually about 1 mm. in diameter, and is applied to the apex of the cone. It is either made to cut out a disc from the whole thickness of the cornea, or the anterior layers are alone removed, and the exposed surface is then sometimes touched with a fine point of silver nitrate.

**C., tubes of.** See *Corneal tubes*.

**C., ulcers of.** Loss of substance of the cornea. There are various forms of corneal ulcers, as the indolent, asthenic ulcer, presenting a shallow excavation near the centre of the cornea, with clear or but slightly cloudy base, and occurring in debilitated patients. The rheumatic ulcer, which is usually marginal, irregular in outline, and attended with pain at night. The phlyctenular ulcer, which is usually small and marginal and tends to recovery, but if neglected may pass into the perforating ulcer, which invades the layers of the cornea successively, and ultimately opens the anterior chamber. Sämisch's or the creeping ulcer, which has a tendency to extend around the margin of the cornea, and, by interfering with its nutrition, causes it to slough. This form is often associated

# CORNEE—CORNICULUM.

with iritis and hypopyon. The paralytic ulcer, observed in cases of paralysis of the fifth and of the portio dura, the ulcer in the former case being supposed by some to be the result of lesion of trophic nerves; by others, to be due to the action of foreign bodies, the presence of which is not recognised, and hence are not removed by the natural movements of winking.

**Corneæ.** Same as *Cornacea*.

Also, plural and genitive singular of *Cornea*.

**C. substantia propria.** (L. *substantia*, substance; *proprius*, peculiar. G. *Hornhautsubstanz*.) The transparent substance forming the chief mass of the cornea after being acted on by chromic acid and other reagents. It appears in section to be made up of lamellæ, separated by cells, which are of two varieties, one set stellate, and named the fixed corpuscles of the cornea; and the other named wandering cells, or migrating cells, which appear to be white corpuscles of the blood. Some regard the apparently homogeneous lamellæ to be made up of fibrils crossing each other in different planes, and connected by cement substances, and appeal, in confirmation of their view, to the appearances presented after the action of certain reagents, as baryta water, and to the general analogy of the cornea to the connective tissues. See *Corneal corpuscles*.

**Corneal.** (L. *cornu*, horn.) Relating to the *Cornea*.

**C. corpuscles.** (L. *corpusculum*, dim. of *corpus*, a body. G. *Hornhautzellen*, *Hornhautkörperchen*.) There are two kinds of corneal corpuscles: one fixed, and forming stellate, extremely delicate, nucleated flattened cells; the other movable, and composed of leucocytes, which have escaped from the blood-vessels. The most recent writer, Stricker, denies the presence of the fixed cells, regarding them as the result of the action of reagents on the corneal protoplasm.

**C. fibres.** (L. *fibra*, a fibre.) The fine fibres into which, according to some histologists, the proper substance of the cornea can be split up.

**C. lamellæ.** (L. *lamella*, a small plate.) The layers or laminae of transparent substance, which, according to some histologists, form by their superposition and imbrication the substance of the cornea. See *Corneæ substantia propria*.

**C. lens.** (L. *lens*. G. *Corneallinse*.) The biconvex cuticular covering of the eye in many Arthropoda, which serves the purpose of the cornea and the crystalline lens of higher animals.

**C. tissue.** The tissue of the cornea, or tissue resembling that of the cornea.

**C. tubes.** (L. *tubus*, a tube.) Small varicose tubes, described by Mr. Bowman, and probably artificially produced when mercury is forced into the cornea by the puncture method of injection.

**Corneilla-de-la-riviere.** France; Département des Pyrénées-Orientales. A weak bicarbonated chalybeate water.

**Corneitis.** (L. *cornus*, horny.) Same as *Cornelian*.

Also (*cornea*), inflammation of the cornea; see *Keratitis*.

**C. suppurative.** See *Keratitis suppurative*.

**Cornel.** The *Cornus mas*, and the *C. sanguinea*.

**C. alter'nate-lea'ved.** The *Cornus alternifolia*.

**C., American red-rod.** The *Cornus sericea*.

**C., dwarf.** The *C. suecica*.

**C., large-flow'ered.** The *Cornus florida*.

**C., male.** The *Cornus mas*.

**C., pan'icled.** The *Cornus paniculata*.

**C., round-lea'ved.** The *Cornus circinata*.

**C. tree.** The *Cornus mas*.

**C., white.** The *Cornus paniculata*.

**C., wild.** The *Cornus sanguinea*.

**Cornelian.** (F. *corneline*; from L. *cornu*, a horn.) The *Cornelian*, from its horny appearance.

**C. cher'ry.** The *Cornus mas*.

**Cornels.** Plants of the Nat. Order *Cornaceæ*.

**Cornelus.** The *cornelian*.

**Corneole.** (*Cornea*.) The anterior transparent part of each of the segments of the compound eye of insects.

**Corne'olus.** The *cornelian*.

**Corneous.** (L. *cornu*, a horn. F. *corné*; G. *hornartig*.) Of, or belonging to, horn.

**C. mem'brane.** The *Cornea*.

**C. tis'sue.** The tissue of horn.

**Cornes'ta.** Old name for a retort. (Morley.)

**Cor'net.** (L. dim. of *cornu*, a horn.) Term for the individual scaly pieces of the rattle which terminates the tail of the rattle-snake; they are loosely fitted into each other, and when shaken produce the peculiar noise from which the animal receives its name.

**Cor'nic acid.** Same as *Cornin*.

**Cornicula.** Plural of *Corniculum*.

**C. laryn'gis.** (Ἀάρυξ, the larynx.) The cartilages of Santorini.

**C. Santorini.** See *Santorini*, *cartilages of*.

**Cornic'ular.** (L. *corniculum*, a small horn.) Like a small horn.

**C. pro'cess.** The *Coracoid process*, from its shape.

**Cornicula'tæ.** (L. *corniculum*. G. *Hornfruchtige*.) An Order of the Subclass *Eleuthero-petalæ*, containing *Grossulariaceæ*, *Crassulacæ*, and *Saxifragacæ*.

**Corniculate.** (L. *corniculum*, a little horn. F. *corniculé*; G. *gehörnt*.) Having horns. Applied to flowers in which the petals have a horn-like appendage, as in the columbine.

Also, applied to those plants which bear horn-like siliques.

**Corniculiferous.** (L. *corniculum*, a little horn; *fero*, to bear. F. *corniculifère*.) Applied to the entrance of the tube of a monopetalous corolla when it presents cuculli hollow and open inferiorly.

**Corniculum.** (L. *corniculum*, dim. of *cornu*, a horn. F. *cornicule*; G. *Schropfkopf*.) Name given to a kind of cupping instrument, having an aperture at the top, through which the air is exhausted by sucking with the mouth; so called from its shape.

Also, the small cornu of the hyoid bone.

Also, the proboscis or sucking-tube of the Aphidia.

Also, the name of a special cell in *Vaucheria*, from which antherozooids are developed.

**C. laryn'gis.** (Ἀάρυξ, the larynx.) The cartilage of Santorini.

**C. Santorini.** See *Santorini*, *cartilages of*.

**Cornific.** (L. *cornu*; *facio*, to make.) Producing horns or horn.

**Cornification.** (L. *cornu*, a horn; *fieri*, to become. F. *racornissement*.) The becoming horn-like; a physico-chemical condition which is effected in many animal tissues by expulsion of one or more of their natural constituents by heat or desiccation.

**Corniform.** (L. *cornu*, a horn; *forma*, resemblance. F. *corniforme*; G. *hornförmig*.) Horn-shaped, or resembling a horn. Applied to nectaries of that shape in the *Orchis* family.

**Cornigerous.** (L. *cornu*, horn; *gero*, to bear. F. *cornigère*; G. *horntragend*.) Having horns, or tubercles like horns.

**Cornin.** A bitter crystallisable substance discovered in the *Cornus florida*, somewhat resembling quinine in its properties; it reddens litmus paper.

**Cornish.** Belonging to Cornwall.

**C. lovage.** The *Physospermum cornubiense*, from its place of growth.

**Cornix.** A synonym of Fornix.

**Cornova.** See Coroa.

**Cornu.** (L. *cornu*, a horn. F. *corne*; G. *Horn*.) The animal substance horn; or a horn; or a thing resembling a horn.

The old London pharmacopœial name for the horn of the stag, *Cervus elaphus*, used in the making of *C. ustum*.

**C. acetabuli majus.** (L. *major*, greater.) The posterior horn of the horse-shoe shaped cartilaginous lining of the acetabulum.

**C. acetabuli minus.** (L. *minor*, less.) The anterior horn of the cartilage lining the acetabulum.

**C. acusticum.** (Ἀκουστικός, belonging to the sense of hearing.) An ear-trumpet.

**C. ammo'nis.** (L. *Ammon*, a name of Jupiter when worshipped under the form of a ram.) The *Hippocampus major*, from its likeness to a ram's horn.

**C. antérieur.** (L. *anterior*, in front. G. *das vordere Horn*.) The anterior cornu of the lateral ventricle of the brain.

**C. ar'ietis.** (L. *aries*, a ram.) The *Hippocampus major*, from its shape on section.

**C. cartilag'inis thyreo'deæ bre've.** (L. *brevis*, short. G. *untere Schilddorn*.) The inferior cornu of the thyroid cartilage.

**C. cer'e'br'i inf'e'rius.** (L. *cerebrum*, the brain; *inferior*, that which is below.) The same as *C. ventriculi lateralis descendens*.

**C. cer'e'br'i latera'le.** (L. *lateralis*, relating to the side.) The same as *C. ventriculi lateralis descendens*.

**C. cer'vi.** (L. *cervus*, a stag.) A term formerly used for the beak of a retort, from its shape. Also (F. *corne de cerf*; G. *Hirschhorn*), the horn of the stag, *Cervus elaphus*; hartshorn. It consists chiefly of calcium phosphate and a gelatinous substance.

**C. cer'vi raspa'tum.** (Mod. L. *raspatus*, from E. *rasp*.) Same as *C. cer'vi rasum*.

**C. cer'vi ra'sum.** (L. *rasus*, part. of *rado*, to scrape.) Used in decoction, one part to eight of water, and boiled down to four parts, as a nutrient in anæmia and rickets.

**C. cer'vi us'tum album.** (L. *albus*, white.) Same as *C. ustum*.

**C. cer'vi us'tum ni'grum.** (L. *niger*, black.) Animal charcoal made from the horn of the stag by exposure to a red heat without the access of air.

**C. cervi'num.** Same as *C. cervi*.

Also, a name of the *Plantago coronopus*, from the fancied resemblance of its leaf to a stag's horn.

**C. cuta'neum.** (L. *cutaneus*, belonging to the skin. G. *Hauthorn*.) See *Horn, cutaneous*.

**C., ethmoid'al.** The middle spongy bone, or inferior turbinated process of the ethmoid bone.

**C. fos'silis.** (L. *fossilis*, dug up.) Same as *Unicornu*.

**C. glan'dulae thyreo'deæ.** (Thyroid. G. *Seitenlappen, Seitenhorn*.) The lateral lobes of the thyroid body.

**C. glan'dulae thyreo'deæ me'dium.** (L. *medius*, in the middle.) A rounded lobe running upwards, either in the middle line or somewhat to the left side, from the isthmus of the thyroid gland.

**C. huma'num.** (L. *humanus*, human.) A synonym of *Horn, cutaneous*, as seen in man.

**C., mid'dle.** The middle spongy bone.

**C. monocer'otis.** (Μονοκίπος, the unicorn) A name for the unicorn's horn. See *Unicornu*.

**C. posticus.** (L. *posticus*, hinder.) Same as *C. ventriculi lateralis posterius*.

**C. rupica'pri.** The horn of the chamois, *Rupicapra tragus*, formerly used in medicine as *C. cervi*.

**C. unicorn'u.** Same as *Unicornu*.

**C. us'tum.** (L. *ustus*, burnt.) The substance burnt hartshorn. The old pharmacopœial name of phosphate of lime, prepared from stag's, or other, horn by fire.

**C. ventriculi latera'lis anti'cum.** (L. *ventricle*; *lateralis*, belonging to the side; *anticus*, in front.) The anterior cornu of the lateral ventricle of the brain.

**C. ventriculi latera'lis descen'dens.** (L. *descendo*, to go down. G. *das absteigende Horn*.) The middle cornu of the lateral ventricle, from its course.

**C. ventriculi latera'lis latera'le.** (L. *lateralis*, lateral.) The same as *C. ventriculi lateralis descendens*.

**C. ventriculi latera'lis poste'rius.** (L. *posterior*, hinder. G. *das hintere Horn*.) The posterior cornu of the lateral ventricle of the brain.

**Cor'na.** Plural of *Cornu*.

Also, the turbinated or spongy bones.

**C. acetabuli.** (L. *acetabulum*, a measure.) The ends of the horse-shoe-shaped cartilage, which partially surrounds the fossa acetabuli. See *Cornu acetabuli majus* and *minus*.

**C. cartilag'inis thyreo'deæ.** (F. *cornes du cartilage thyroïde*.) Four processes, one at each corner of the free hinder border of the ala of the thyroid cartilage; the two upper pass upwards and slightly backwards to a variable height, and are rather curved and blunt at the end, to which is attached the lateral thyro-hyoid ligament; the two lower, short and directed forwards, have on the inner aspect of their apex a convex facet, which articulates with a corresponding surface on the side of the cricoid cartilage.

**C. cartilag'inis thyreo'deæ long'a.** (L. *longus*, long.) The superior cornua of the thyroid cartilage.

**C. cartilag'inis thyreo'deæ majo'ra.** (L. *major*, greater.) The superior cornua of the thyroid cartilage.

**C. cartilag'inis thyreoideæ mino'ra.** (L. *minor*, less.) The inferior cornua of the thyroid cartilage.

**C. coccygis.** (*Coccyx*. F. *cornes du coccyx*. G. *Steissbeinhörner*.) Two small processes, being the analogues of the articular processes of the vertebrae, which project upwards, one on each side of the central articulating surface of the coccyx, and are connected by ligaments with the sacral cornua.

**C. frontales.** (L. *frons*, the front.) The peduncles of the corpus callosum, from their position at its anterior extremity.

**C., greater.** The upper cornua of the thyroid cartilage. See *C. cartilaginis thyroideæ*.

Also, see *C. of hyoid bone, greater*.

**C. hyoidei os'sis.** (L. *os*, a bone.) The *C. of hyoid bone, greater and smaller*.

**C. lachrymalia.** The lachrymal ducts.

**C. lima'cum.** (L. *limax*, a snail. G. *Schneckenhörner*.) The lachrymal ducts, from their likeness to the horns of a snail.

**C. majora.** (L. *major*, greater.) See *C. of hyoid bone, greater*, and *C. cartilaginis thyroideæ*.

**C. minora.** (L. *minor*, less.) See *C. of hyoid bone, smaller*, and *C. cartilaginis thyroideæ*.

**C. of coc'cyx.** See *C. coccygis*.

**C. of hyoid bone, greater.** (F. *grandes cornes de l'os hyoïde*; G. *Seitenhörner des Zungenbeins*.) Two small bones, one on each side, articulating with the lateral surfaces of the hyoid bone, projecting backward, and ending in a rounded tubercle, to which is attached the thyrohyoid ligament. At first distinct bones, the thyrohyals, they ultimately become one with the body of the hyoid bone, or basihyal.

**C. of hyoid bone, smaller.** (F. *petites cornes de l'os hyoïde*; G. *obere Hörner des Zungenbeins*.) Two small bones, one on each side, articulating with the body of the hyoid bone at the place of its junction with the greater cornua, projecting upwards and backwards, and giving attachment by their apices to the stylohyoid ligaments. They continue for some time distinct bones, the ceratohyals, or their hypohyal segments, and become ossified to the body of the hyoid bone, the basihyal, at a late period of life. Also called *Cornicula*.

**C. of thymus gland.** The thymus gland presents two lateral masses, which give off ascending and descending cornua, the former of which are the longer of the two.

**C. of ven'tricles.** See *Ventriole, lateral*.

**C. os'sis hyoidei lateralia.** (L. *lateralis*.) The *C. of hyoid bone, greater*.

**C. os'sis hyoidei majora.** (L. *major*, greater.) See *C. of hyoid bone, greater*.

**C. os'sis hyoidei minora.** (L. *minor*, less.) See *C. of hyoid bone, smaller*.

**C. os'sis hyoidei superius.** (L. *superior*, upper.) The upper or smaller cornu of the hyoid bone.

**C. processus falciformis fasciæ latæ.** (L. *fala*, a sickle; *forma*, shape; *latus*, broad. G. *sichelförmige Fortsätze*.) The upper and lower borders of the saphenous opening in the thigh.

**C. sacralia.** Same as *C. sacri*.

**C. sacri.** (*Sacrum*. F. *cornes du sacrum*; G. *Kreuzbeinhörner*.) Two tubercles, vertebral articular processes, situated on each side of the sacral canal; they project downwards, and articulate with the cornua of the coccyx.

**C., smaller.** The lower cornua of the thyroid cartilage. See *C. cartilaginis thyroideæ*.

Also, see *C. of hyoid bone, smaller*.

**C. sphenoidalia.** (*Sphenoid bone*. G. *Keilbeinhörner*.) The sphenoidal spongy bones.

**C., styloid.** (Στῆλος, a pencil; ἰέος, likeness.) The smaller cornua of the hyoid bone; so called because of their attachment to the stylohyoid ligament.

**C. trabeculæ.** (L. *trabecula*, a little beam.) A lateral pair of curved bifoliate lobes projecting from the trabecule, and curving round the antero-internal face of the nasal sacs of the embryo of many vertebrates; they are probably the preoral representatives of visceral arches.

**C. uteri.** (L. *uterus*, the womb. F. *cornes de la matrice*; G. *Muttertrompeten*.) A term for the angles of the triangular cavity of the uterus, to which are attached the openings of the Fallopian tubes. In some mammals the resemblance to a horn is much greater than in the human female, and may have originated the epithet.

**Cornuate.** (L. *cornu*. G. *gehörnt*.) Having horns, horn-shaped.

**Cornumusa.** Old name for a retort. (Moxley.)

**Cornupedes.** (L. *cornu*, a horn; *pes*, a foot. F. *cornupède*; G. *Hornfüßig*.) Applied formerly to Mammalia having hoofs.

**Cornus.** (L. *cornu*, a horn. F. *cornouiller*; G. *Horntriegel*.) A Genus of the Nat. Order *Cornaceæ*; so called because its branches are like horns from their hardness and rigidity.

**C. alba**, Linn. (L. *albus*, white.) Bark astringent; fruit milk-white, semitransparent.

**C. alternifolia.** (L. *alternus*, by turns; *folium*, a leaf.) Hab. United States. Bark diaphoretic and astringent.

**C. amo'rus.** The *C. sericea*.

**C., blue-ber'ried.** The *C. sericea*.

**C. cærulea**, Lamb. (L. *cæruleus*, sky blue.) The *C. sericea*.

**C. circina'ta**, L'Herit., U.S. Ph. (L. *circino*, to make round. G. *rundblättrige Cornel*.) The round-leaved dogwood. A plant indigenous to North America. It is employed as a substitute for cinchona in the treatment of intermittent fevers.

**C. femina**, Lob. (L. *femina*, a female.) The *C. sericea*.

**C. florida**, Linn., U.S. Ph. (L. *floridus*, flowery. F. *cornouiller à fleurs*; G. *grossblättrige Cornel*.) Dogwood. The bark of this plant is used as a substitute for cinchona in intermittent fevers in North America. The young branches, stripped of their bark and rubbed with their ends against the teeth, are an excellent dentifrice.

**C. herba'cea**, Linn. (L. *herba*, springing grass.) Same as *C. sericea*.

**C. lanuginosa**, Michaux. (L. *lanugo*, down.) The *C. sericea*.

**C. mas**, Linn. (L. *mas*, a male. F. *cornouiller mâle*; G. *Kornelkirsche*.) Cornelian cherry. The fruit is like a small plum with austere flesh; but after bletting it becomes subacid, and was once held in some such estimation as sorbs and services. The Turks still use it in the manufacture of sherbet. The fruit, flowers, and leaves were formerly used in medicine as astringent and febrifuge.

**C. mas odora'ta.** (L. *odoratus*, sweet smelling.) The *Sassafras officinale*.

**C. mascula**, L'Herit. (L. *masculus*, male.) The *C. mos*.

**C. officinalis.** (*L. officina*, a shop.) A large Japanese shrub. The fruits are a constant ingredient in the fever drinks of the country.

**C. paniculata.** (*L. paniculus*, a tuft.) Hab. United States. Has been used as a substitute for *C. florida*.

**C. rubiginosa.** (*L. rubiginosus*, rusty.) The *C. sericea*.

**C. rugosa.** Lamb. (*L. rugosus*, wrinkled.) The *C. circinata*.

**C. sanguinea.** Linn. (*L. sanguineus*, bloody. *F. cornouiller sanguin, savignon.*) Dogwood. Hab. Europe. Seeds furnish a useful oil. Also, a synonym of *C. sericea*.

**C. sericea.** L. Herit., U.S. Ph. (*L. sericeus*, silken. *F. cornouiller soyeux*; *G. Stumpf-cornel.*) The swamp dogwood. The bark is used in North America as a tonic, and as a substitute for cinchona.

**C. suecica.** Linn. (*Mod. L. succicus*, Swedish.) This plant is reputed to have tonic berries, which increase the appetite, whence its Highland name of *Lus-a-chrasis*, or plant of gluttony.

**C. tomentosula.** Michx. (*Mod. L. dim. of tomentosus*, hairy.) The *C. circinata*.

**Cornu ta.** (*L. cornu*.) Old name for a retort. (Quincy.)

**Cornute.** (*L. cornu*, a horn. *F. cornu*; *G. gehornt, hornförmig.*) Having, or resembling, horns; horn-shaped; horned. Applied to various parts of plants from their appearance.

**Coroa.** Name of a kind of bark introduced from the East Indies, said to be a powerful bitter and febrifuge; called *Coruoa* and *Cornoea*.

**Corcleisis.** Same as *Corecleisis*.

**Corocrum.** Old name for yeast.

**Corodialysis.** Same as *Corediatylis*.

**Corodiasole.** Same as *Corediastole*.

**Corol.** Same as *Corolla*.

**Corolla.** (*L. corolla*, dim. of *corona*, a crown. *F. corolle*; *G. Blumenkrone.*) The inner whorl or whorls of floral envelopes generally of delicate structure, and often coloured other than green; the separate parts are called petals; it lies between the calyx and the androecium.

**C. infundibuliformis.** (*L. infundibulum*, a funnel; *forma*, shape.) The funnel-shaped cavity formed by the fimbriated extremity of the Fallopian tube when it embraces the ovary at the time of the discharge of the ovule.

**Corolla'ceous.** Having, or being like, a *Corolla*; synonymous with *Petaloid*.

**Corollar.** (*F. corollaire.*) Of the appearance or character of a corolla.

**Corollary.** (*L. corollarium*, from *corolla*, a little crown or garland which was given to an actor who excelled over and above his due. *F. corollaire*; *G. Korollarium, Krönchen.*) That which is added above measure; an additional inference. Term for a consequent truth gained from some preceding truth or demonstration.

**C. tendril.** In Botany, applied to a tendril formed by a petal or segment of a corolla.

**Corollate.** (*Corolla*. *F. corollé*; *G. mit Blumenkrone versehen.*) Having a corolla.

**Corollet.** (*Dim. of corolla.*) A small corolla on a floret.

**Corollic.** (*F. corollique*; *G. blumenkronig.*) Relating to a *Corolla*.

**C. stamens.** Applied by Lestiboudois to the insertion of stamens when united to the corolla.

**Corolliferous.** (*Corolla*; *L. fero*, to bear. *F. corollifere.*) Bearing, or producing, a corolla.

**Corollifloræ.** (*Corolla*; *L. flos*, a flower. *F. corolliflore*; *G. Blumenkronblüthler.*) Applied by De Candolle to a Subclass of the Dicotyledones having a monopetalous corolla inserted on the receptacle. They are hypogynous gamopetalous Dicotyledons.

**Corollifloral.** (*L. corolla*; *flos*. *G. blumenkronblüthig.*) Having the petals and stamens inserted on the tube of the corolla.

**Corolliferous.** Same as *Corollifloral*.

**Corolliform.** (*Corolla*; *L. forma*, resemblance. *F. corolliforme.*) Having the form or appearance of a corolla.

**Corolline.** (*Corolla*. *F. corollin*; *G. blumenkronartig.*) Of the nature of a corolla, or situated on the petals.

**Corollula.** Same as *Corollule*.

**Corollule.** (*L. dim. of corolla*, a little crown. *F. corollule*; *G. Blumenkronchen.*) The partial floret of a compound flower.

**Coromandel ipeacacuan.** The *Asclepias asthmatica*.

**Coromegina.** Same as *Coremegine*.

**Coromeiosis.** (*Kópn*, the pupil; *μωσις*, a lessening. *F. coromiosis.*) Diminution of the pupil.

**Corominum vulgare.** (*L. vulgaris*, common.) A synonym of *Penicillium glaucum*.

**Coromorphoma.** (*Kópn*, the pupil; *μορφομα*, form. *F. coromorphome*; *G. Koromorphom.*) The condition accomplished by *Coromorphosis*.

**Coromorphosis.** (*F. coromorphose*; *G. Pupillenbildung.*) The formation of an artificial pupil.

**Coromydriasis.** (*Kópn*, the pupil; *μυδρίασις*, dilatation of the pupil. *F. coromydriase.*) Dilatation of the pupil.

**Corona.** (*L. corona*, a garland; akin to *κόρυνη*, a crown. *F. couronne*; *G. Kranz, Krone.*) A crown. Applied to acute eminences of bone, or to any objects or parts, which may be supposed to bear resemblance to a crown, and also to the upper portion of an object, as the crown of a tooth; also specially, a name for the coronoid process of the lower jaw-bone.

In Botany, a ligulate structure formed on the inner or upper side of the petals, as in *Lychnis* and *Saponaria*, where the corolla itself is gamopetalous; the parts of the corona may coalesce, as in *Narcissus*.

Also, any crown-like appendage to an organ.

**C. ciliaris.** (*G. Strahlenkranz.*) The Ciliary zone.

**C. ciliaris Zinnii.** The Ciliary zone.

**C. dentis.** (*L. dens*, a tooth. *G. Zahnkrone.*) The crown of a tooth.

**C. glandis.** (*F. couronne du gland*; *G. Eichelkrone.*) The rim or rounded projecting hind border of the glans penis.

**C. imperialis.** (*F. couronne impériale.*) The *Fritularia imperialis*, or crown imperial plant.

**C. radians.** (*L. radio*, to radiate.) The *C. radiata*.

**C. radiata.** (*L. radiatus*, furnished with rays. *F. couronne radiante*; *G. Strahlenkranz.*) A name given by Reil to the peduncular fibres of the cerebrum, as they radiate in hollow fan-like form from the anterior and the posterior pyramids,

## CORONAD—CORONARY.

and the fasciculi teretes of the medulla oblongata to the cerebral hemispheres.

**C. regia.** (L. *regius*, royal. F. *couronne royale*.) The *Melilotus officinalis*.

**C. seminis.** (L. *semen*, seed.) The pappus of a thistle seed and like structures.

**C. solis.** (L. *sol*, the sun. F. *couronne de soleil*.) The sunflower, *Helianthus annuus*, the crown of the sun.

**C. terræ.** (L. *terra*, the earth. F. *couronne de terre*.) The *Glechoma hederacea*, or ground ivy; the crown of the earth.

**C. terres tris.** Same as *C. terræ*.

**C. trepani.** (G. *Trepankrone*, *Kronbohrer*.) The crown of a trepan or trephine.

**C. tubulorum.** (L. *tubulus*, a small pipe.) A term applied to the openings of the circle of crypts of Lieberkühn which surrounds a Peyer's patch.

**C. ulnæ.** (*Ulna*.) The olecranon.

**C. ulnæ poste'rior.** (L. *ulna*, the bone of that name; *posterior*, hinder.) The olecranon.

**C. ven'eris.** (L. *Venus*, F. *couronne de Venus*; G. *Venusblüthen*.) Term for syphilitic blotches on the forehead, which often extend around it like a crown.

**Coronad.** (L. *corona*.) A term applied by Barclay, the same as *Coronal*, used adverbially.

**Coronal.** (L. *corona*. F. *coronal*.) Of, or belonging to, a crown.

Applied by Barclay in reference to the aspects of the head; towards the crown of the head.

**C. bone.** The frontal bone; either because (L. *corona*, a crown, a garland. G. *Kranzbein*) garlands or crowns press upon it; or because (Gr. *κορωνίς*, curved as the outline of the prow and stern of a ship) of its curved shape.

**C. suture.** (L. *sutura*, a seam. F. *suture coronale*; G. *Kronnaht*, *Kranznath*.) The suture formed by the union of the frontal with the two parietal bones, being that part over which the ancient corona or garland was worn.

**Coronalē.** (L. *coronale*, coronal.) A mineral spring; so called because it was believed to cure disease of the frontal bone. It is one of the waters of *Lucca*.

**Coronalis os.** The *Coronal bone*.

**Coronamen.** (L. *coronamen*, that which crowns. G. *Bekrönzung*.) Same as *Coronet*.

**Coronaria.** Feminine of *Coronarius*.

**C. stomachica.** The *Coronary artery of stomach*.

**C. ventriculi.** (L. *ventriculus*, the stomach.) The *Coronary artery of the stomach*.

**Coronariæ.** (L. *corona*, a crown.) An Order of plants, in Linnaeus's 'Fragments of a Natural Method,' comprising such as have beautiful flowers, as if forming a floral crown.

Also, Agardh's term for *Liliacæ*.

**Coronarius.** (L. *corona*.) Relating to a crown, coronary.

**C. stomachicus.** (Στρώχος, the stomach.) The ramifications of the pneumogastric nerve on the upper curvature of the stomach.

**Coronary.** (L. *corona*. F. *coronaire*; G. *kranzförmig*, *kronartig*.) Applied to vessels, ligaments, and nerves which encircle parts like a crown.

**C. artery of heart, ante'rior.** The *C. artery of heart, right*, if the site of origin, but left if the distribution be considered.

**C. artery of heart, exter'nal.** The *C. artery of heart, left*.

**C. artery of heart, inter'nal.** The *C. artery of heart, right*.

**C. artery of heart, left.** (F. *artère coronaire gauche* or *antérieure*; L. *arteria coronaria sinistra*; G. *linke Kranzschlagader*.) The smaller of the two coronary arteries; it arises from the aorta in the left anterior sinus of Valsalva, above the free edge of the left semilunar valve, passes forwards between the pulmonary artery and the left appendix auriculae, descends obliquely towards the anterior interventricular groove, and there divides into two branches; one runs outwards in the left auriculo-ventricular groove to the back of the heart; the other, and larger branch, descends in the anterior interventricular groove to the apex of the heart. The left coronary artery gives some branches to the pulmonary artery and the commencement of the aorta, and it supplies the left auricle, the left appendix, both the ventricles, and, by a slender and constant branch, the interventricular septum.

**C. artery of heart, poste'rior.** The *C. artery of heart, left*, if the site of origin be considered, but the *right* if the distribution be considered.

**C. artery of heart, right.** (F. *artère coronaire droite*, or *postérieure*; L. *arteria coronaria recta*; G. *rechte Kranzschlagader*.) An artery, the size of a crow-quill, arising from the aorta in the right anterior sinus of Valsalva, between the pulmonary artery and the right appendix auriculae, above the free edge of the right semilunar valve. It runs forwards in the right auriculo-ventricular groove, curves round the right side of the heart to the posterior interventricular groove, where it divides into two branches; one runs in the left auriculo-ventricular groove; the other branch descends the posterior interventricular groove. The right coronary artery supplies the right auricle and ventricle, the septum, and the first part of the pulmonary artery.

**C. artery of lip, infe'rior.** (F. *coronaire labiale inférieure*; G. *Kranzarterie der Unterlippe*.) Arises from the facial artery near the angle of the mouth, often in conjunction with the superior coronary, penetrates the orbicularis oris muscle, runs between this muscle and the buccal mucous membrane near the margin of the lower lip, and inosculates with its fellow of the opposite side, with the submental, and with the inferior dental arteries. It supplies the skin, muscles, and mucous membrane of the lower lip and the labial glands.

**C. artery of lip, supe'rior.** (F. *coronaire labiale supérieure*; G. *Kranzarterie der Oberlippe*.) Larger and more tortuous than the inferior coronary artery, it arises from it, or from the facial, runs along the margin of the upper lip, between the muscles and the mucous membrane, and inosculates with its fellow of the opposite side, and gives off branches to the septum, and to the ala of the nose. It supplies the structures of the upper lip, and the tip and the lower part of the septum of the nose.

**C. artery of stom'ach.** (F. *coronaire stomachique*; G. *linke Kranzschlagader des Magens*.) The smallest of the three visceral branches of the coeliac axis. It passes upwards and leftwards to the cardiac orifice of the stomach, runs rightwards along the lesser curvature to the pylorus, between the layers of the lesser omentum, and inosculates with the pyloric branch

of the hepatic artery. It supplies the lower end of the œsophagus, where it joins the œsophageal branch of the aorta; the curdlike end of the stomach, where it joins the splenic artery; and the stomach along its whole course, where it anastomoses with the corresponding gastro-epiploic branches.

**C. artery of stom'ach, left.** The *C. artery of stomach*.

**C. artery of stom'ach, right.** (*G. rechte Kranzschlagader des Magens*.) The pyloric branch of the hepatic artery.

**C. bone.** A bone found in reptiles in the region of the coronoid process of the mammalian mandible.

Also (*F. os coronaire*), the altered second phalanx of the foot of the horse and like animals.

**C. cushion.** The matrix of the wall of the hoof in Solipeds; below it are the laminae, above it is the perioplic ring. The surface is papillated or villous. In structure it resembles the corium. It is highly vascular.

**C. ligament of knee.** The fibrous structure which connects the outer border of the semilunar cartilages of the knee with the margin of the articulating surface of the tibia and with the capsular ligament.

**C. ligament of liver.** (*F. ligament coronaire*; *G. Kranzband der Leber*.) A name applied to the reflection of the peritoneum from the diaphragm to the upper and lower margins of the posterior border of the liver. Its lateral borders are the lateral or triangular ligaments. It consists of two layers, which separate from each other to enclose an oval interspace of the organ uncovered by peritoneum.

**C. ligament of radius.** (*G. Kronband, Kronenband*.) The ligament surrounding the neck of the radius; likewise called *Orbicular ligament*.

**C. ligament of the foot.** A synonym of the coronary cushion of Solipeds.

**C. plexus of heart, anterior.** (*L. plexus*, a weaving; *anterior*, in front.) A sympathetic plexus studded with microscopical ganglia and formed by filaments from the superficial cardiac plexus and a few from the deep plexus. It passes forwards between the aorta and the pulmonary artery, and follows the course of the left coronary artery of the heart. By Schwalbe the terms anterior and posterior plexuses applied to this and the posterior plexus are reversed.

**C. plexus of heart, left.** The *C. plexus of heart, anterior*.

**C. plexus of heart, posterior.** (*L. posterior*, hinder.) A sympathetic plexus derived chiefly from the left part of the deep cardiac plexus with a few fibres from the right side. It accompanies the branches of the right coronary artery at the back of the heart.

**C. plexus of heart, right.** The *C. plexus of heart, posterior*.

**C. plexus of stom'ach.** (*F. plexus coronaire*.) The Gastric plexus.

**C. sinus.** See *Sinus, coronary, of heart*.

**C. sinus of Ridley.** The *Circular sinus of Ridley*.

**C. ten'dons.** A synonym of the fibrous rings surrounding the arterial orifices of the heart.

**C. valve.** A valve, consisting of two unequal segments, at the junction of the great cardiac or coronary vein with the coronary sinus.

**C. vein of heart.** (*F. grande veine coronaire*.) A large vein commencing at the apex of the heart, and running along the ante-

rior interventricular groove to the base of the ventricles; it then inclines backwards to the left side in the left auriculo-ventricular groove, and ends in the coronary sinus, where there is a valve of two unequal segments. It receives branches in its course chiefly from the left ventricle; these are furnished with valves.

**C. vein of stom'ach.** A vein accompanying the artery of the same name; it opens into the trunk of the vena portæ.

**Corona'tæ.** (*L. corona*, a crown.) A class of plants, in Linnæus's natural method, comprising those which have the seed-bud crowned by the flower-cup.

**Coronate.** (*L. corona*. *G. gekrönt*.) Having a crown, or corona.

In Botany, applied to a corolla having projections at the origin of the limb of the petal resembling a crown; having a *Corona*.

In Biology, having a crest or an apical appendage like a crown.

**Coronation.** The *Dianthus caryophyllus*, or *Carnation*, which see.

**Coroncion.** Same as *Corcancion*.

**Coronë.** (*Kopani*, a crooked thing like a crow's bill.) The coronoid process of the inferior maxilla.

**Coroner.** (*Low. L. coronator*, from *L. corona*, a crown.) Title of an officer, because he inquires under authority of the Crown, who has power to cause inquest to be made, before a jury of twelve, as to the true cause of death, in every case of sudden decease; he was formerly empowered to inquire into matters relating to the private rights of property of the crown.

A similar officer, deriving his authority from the country, exists in the United States.

**Coronet.** (*L. corona*.) The junction of the hoof and the hairy skin in a horse.

**Coroniform.** (*L. corona*; *forma*, likeness. *F. coroniforme*; *G. kronenförmig*.) Having the form of a crown, or corona.

**Coronilla.** (*L. dim. of corona*. *G. Kronwicke*.) A Genus of the Nat. Order *Leguminosæ*.

**C. emerus.** Linn. (*Hæpos*, reclaimed. *F. sené bâtard*, *coronille*, *faux sené*, *faux bagenaudier*.) Leaves said to be purgative.

**C. grandiflora.** Willd. The *Agati grandiflora*, Desv.

**C. jun'cea.** Linn. (*L. junceus*, like a rush, slender.) Hab. France. Used as a galactagogue.

**C. securida'ea.** Willd. Seeds bitter, purgative.

**C. ses'ban.** Willd. The *Sesbania ægyptiaca*, Pers.

**C. varia.** Linn. (*L. varius*, changeable.) Juice emetic, said to be poisonous; leaves cathartic and diuretic.

**Coronilla.** (*L. corona*, a crown.) A sexually mature Nematode. *C. minuta* is found in *Raja rubus*; *C. robusta* in *Raja clavata*; and *C. scitellica* in *Scyllium canicula*.

**Coronoid.** (*Kopani*, a curved thing like a crow's beak; *σῆος*, likeness. *F. coronoidæ*.) Applied to processes of bones that are curved, or in any way like a crow's beak.

Also (*L. corona*, a crown. *G. Kranzförmig*, *Kronenförmig*), like to, or in the position of, a crown or corona.

**C. depression.** Same as *C. fossa*.

**C. fossa.** (*L. fossa*, a pit.) A depression above the inner segment of the trochlear surface of the lower end of the humerus for the reception

## CORONOPodium—CORPORA.

of the coronoid process of the ulna in flexion of the forearm.

**C. pro'cess of lower jaw.** (F. *apophyse coronoide*; G. *Krähenschnabelfortsatz*.) A thin, pointed, sharp-edged process, being the anterior termination of the perpendicular ramus of the inferior maxillary bone, which gives attachment by its inner surface, its extremity, and the upper part of its outer surface to the temporalis muscle; and by the lower part of its outer surface to the masseter muscle.

**C. pro'cess of ul'na.** (F. *apophyse coronoide*; G. *Kronenfortsatz*.) The lower prominent lip of the greater sigmoid cavity of the ulna. It has a pointed slightly curved apex, a smooth concave upper surface, and a rough lower surface, for the insertion of the brachialis anticus muscle.

**Coronopodium.** (Κόρον, a crow; πούς, a foot.) The *Plantago coronopus*, from the resemblance of its leaf to a crow's foot.

**Coronopus.** (Same etymon. G. *Krähenfuss*.) A Genus of the Nat. Order *Cruciferae*.

**C. depressus.** (L. *depressus*, pressed down.) The *Senebiera coronopus*.

**C. Ruellii.** Gärtner. The *Senebiera coronopus*.

**C. vulgaris.** (L. *vulgaris*, common.) The *Senebiera coronopus*.

**Coronula.** (L. dim. of *corona*, a crown. G. *Kränzchen, Krönchen*.) The border surrounding the seeds of certain flowers like a crown.

Also, small calyx-like bodies in Chara.

**Coroparelcysis.** (Κόρη, the pupil; *παρέλκυσις*, from *παρέλκυω*, to draw aside. F. *coroparelyse*.) A distortion or displacement of the pupil by operation, in partial opacity of the cornea, in order to bring it opposite a transparent part.

**Corophthisis.** (Κόρη, the pupil; *phthisis*. F. *corophthisis*.) A lesion of the eye in which the pupil becomes smaller; diminution of the size of pupil.

**Corosys'tolē.** (Κόρη, the pupil; *συστολή*, contraction. F. *corosystole*; G. *Verengung der Pupille*.) A contraction of the pupil. Same as *Mydriasis*.

**Corotomia.** Same as *Coretomy*.

**Corotomodialis.** Same as *Coretomodialis*.

**Corpora.** (L. plural of *corpus*, a body, or substance. F. *corps*; G. *Körper*.) Bodies or substances. Applied to several objects, as under.

**C. albican'tia.** (L. *albicans*, somewhat white. F. *tubercules mamillaires*; G. *Markhügelchen*.) Two white eminences of the size and shape of a pea, placed side by side immediately behind the tuber cinereum in front of the posterior perforated space; they are the knuckles formed by the bending back of the anterior crura of the fornix. They contain grey nerve substance in their interior, surrounded by white matter; the grey matter of the two is connected in the middle line by a commissure of the same substance. At their first appearance they, like the crura of the fornix, are one mass, but they become separated about the seventh month of fetal life. They remain single in some animals, as the rabbit; they are absent in *Sauropsida*.

**C. amyla'cea.** (L. *amylum*, starch.) See *Amyloid bodies*.

**C. Aran'tii.** See *Arantii corpora*.

**C. bigem'ina.** (L. *bis*, twice; *geminus*,

twinned.) The optic lobes of birds and fishes, the analogues of the *C. quadrigemina* of mammals.

**C. bul'bi forni'cis.** (L. *bulbus*, a bulb; *fornix*.) A synonym of *C. albican'tia*, from their formation.

**C. candican'tia.** (L. *candico*, to be whitish.) The *C. albican'tia*.

**C. caverno'sa clitor'idis.** (G. *Schwellkörper des Kitzlers*.) Two bodies forming part of the *Clitoris*, and having similar relations and structure to those of the *corpora cavernosa penis*.

**C. caverno'sa pen'is.** (L. *cavernosus*, full of hollows. G. *Schwellkörper der Ruthe*.) Two elongated, rounded, or elliptical bodies, which are attached by two crura posteriorly and inferiorly to the upper part of the pubic arch on each side, and unite below the middle of the symphysis pubis. They are composed of fibrous tissue, which forms a case or investment, the interior of which is divided by trabeculae into compartments containing numerous vessels and nerves. They are separated in the middle line by a dense fibrous septum, named the *septum pectiniforme*, and terminate in front by two rounded extremities behind the glans penis. The *corpus spongiosum penis* lies in the groove formed by their apposition and on their under surface. The veins are large and thin-walled, present irregular enlargements, and are capable of great distension; they communicate with those of the opposite side through the *septum pectiniforme*, and discharge their contents in part into the *vena dorsalis penis*, and in part into the *vena profunda penis*. The arteries of the *corpora cavernosa*, *arteriae profundae penis*, run near the septum, and in part divide and subdivide to form capillaries, which open into small veins, and in part form helicine arteries, which are short and curly, and either form small retia or plexuses, or open in a funnel-like manner into the cavernous veins. They are accompanied by branches of the dorsal nerves of the penis and by branches of the sympathetic system, which effect dilatation of these vessels, and produce erection, thus rendering the penis an efficient intromittent organ in the act of sexual intercourse.

**C. caverno'sa, veins of.** See *Corpora cavernosa penis*.

**C. caverno'sa vestib'uli.** Same as *Bulb of vestibule*.

**C. chalcon'ica.** (Χαλκηδών, chalcadony.) The calcareous granules found in psammoma of the brain; so called from their hardness.

**C. cilia'ria oliva'rum.** A synonym of *C. olivaria*.

**C. fibro'sa.** (L. *fibra*, a fibre.) Fibroid tumours, especially of the uterus, and when they are of a rounded shape.

**C. fibrospungio'sa.** (L. *fibra*, a fibre; *spongiosus*, spongy.) The *C. cavernosa penis*.

**C. genicula'ta.** See *Corpus geniculatum externum* and *C. geniculatum internum*.

**C. globo'sa cervi'cis u'teri.** (L. *globosus*, round; *cervix*, neck; *uterus*, the womb.) The *Orula Nabothi*.

**C. latera'lia.** (L. *lateralis*, belonging to the side.) The cavernous bodies of the penis, because they lie side by side and at the sides.

**C. lobo'sa.** (L. *lobus*, a lobe.) An old name for the Malpighian bodies of the kidney.

**C. lu'tea.** See *Corpus luteum*.

# CORPORATION—CORPUS.

**C. lu'tea spu'ria.** (L. *luteus*, yellowish; *spurius*, false.) See *Corpus luteum, false*.

**C. lu'tea vera.** (L. *luteus*, yellowish; *verus*, true.) See *Corpus luteum, true*.

**C. Malpighia'na.** See *Malpighian body*.

**C. mamma'ria.** (L. *mammilla*, a teat.) The *C. albucantia*, so called from their shape and appearance.

**C. margina'lia.** Same as *Corpuscles, marginal*.

**C. menstua'lia.** (L. *menstrualis*, belonging to the monthly courses of women.) A synonym of *C. lutea*.

**C. Morgagni.** Same as *Morgagni, hydatids of*.

**C. ner'veo spongio'sa pe'nis.** (L. *nervus*, a sinew; *spongia*, a sponge.) The corpora cavernosa of the penis.

**C. nervo'sa.** (L. *neruosus*, sinewy, vigorous.) The corpora cavernosa of the penis.

**C. oliva'ria.** See *Olivary body*.

**C. op.to stria'ta.** The conjoined *Thalamus opticus* and *Corpus striatum* on both sides.

**C. oryzo'i'dea.** (Oρυζα, rice; ἴδιος, likeness. G. *Reiskörperchen*.) Small rice grain-like bodies found in bursæ and in joints, fixed or free, and occasionally in great numbers. See *Joints, loose bodies in*.

**C. ova'ta.** (L. *ovatus*, egg-shaped.) Same as *Olivary body*.

**C. period'ica.** (Περιοδικός, that which returns at stated times.) The corpora lutea, because they are developed at definite periods.

**C. ping'ua.** (L. *pinguis*, fat.) Term anciently employed to designate the frogs'-eggs- or sago-like clumps of tough hyalin mucus with mucous cells, free nuclei, and epithelial cells, which are sometimes discharged in dysentery. They are believed to be mucous moulds of the cavities left by the separation of the follicles of the intestine. They sometimes result from starchy food.

**C. pisifor'mia.** (L. *pisum*, a pea; *forma*, shape.) The *C. albucantia*, from their shape.

**C. pyramida'lia.** The anterior and posterior pyramids of the medulla oblongata. See *Pyramids, anterior*, and *P., posterior*.

**C. pyramida'lia anterio'ra.** See *Pyramids, anterior*.

**C. pyramida'lia posterio'ra.** See *Pyramids, posterior*.

The term has also been applied to the *Restiform bodies*.

**C. pyramida'lia tes'tis.** (L. *testis*, a testicle.) The *Coni vasculosi* of the testicle.

**C. quadrigem'ina.** (L. *quadrigeminus*, fourfold. F. *corps liguemines, corps quadrigeminez, corps tuberculeux*; G. *Vierhügel*.) Four rounded eminences, in double pairs, separated from each other by a cruciform depression, and situated immediately behind the posterior commissure of the third ventricle, beneath the posterior border of the corpus callosum, and above the iter a tertio ad quartum ventriculorum. The two anterior or upper bodies are called *nates*; the two posterior or lower, *testes*; the former are larger and darker in colour; both pairs are solid, and consist of white nerve substance without, and of grey within.

The nates are connected with the optic thalamus on each side by two bands of white matter, the *brachium conjunctivum anterius*; the testes are also joined to the thalamus by two lateral, but smaller, bands, the *brachium conjunctivum posterius*. They are connected with the olivary fasciculus, or fillet, by bands of white fibres; with the cerebellum by the processus a cerebello ad cerebrum, the superior peduncles of the cerebellum, on their way to the optic thalamus. In all mammals there are four corpora quadrigemina, but they are much larger than in man; in Saurropsida and in fishes they are two only, large and hollow, and are called the optic lobes.

**C. restifor'mia.** See *Restiform bodies*.

**C. sesamo'i'dea.** (Σάμνη, an Indian bean; ἴδιος, likeness.) Same as *Arantia corpora*, from their shape.

**C. spongio'sa penis.** (L. *spongia*, a sponge.) The corpora cavernosa of the penis, from their consistence.

**C. stria'ta.** See *Corpus striatum*.

**C. stria'ta super'na superio'ra.** (L. *striatus*, streaked; *superius*, on high; *superior*, upper.) The optic thalami, from their position.

**C. tendin'ea.** (Mod. L. *tendineus*, tendinous.) The corpora cavernosa of the penis.

**C. trapezo'i'dea.** (Trapezoid.) An irregularly four-sided mass of nervous substance separating, on each side, the upper ends of the anterior pyramids from the pons Varolii; they are found in some American apes.

**C. tritic'ea.** (L. *triticeus*, of wheat.) The lesser cornua of the hyoid bone.

**C. Wolffia'na.** See *Wolffian body*.

**Corporation.** (L. *corpora*, to fashion into a body. F. *corporation*.) Old term for the incorporation or blending together of substances.

**Corporo'a.** (L. *corpus*, the body; ζῷον, an animal. F. *corporeaire*.) Applied to animals that have a sanguineous system and a simple nervous system, and possess essentially the organs of nutrition of the human body.

**Corpse.** (Old F. *corps*; from L. *corpus*, a body.) A dead body.

**C. poi'son.** The septic poison of a recently dead body. See *Ptomaines* and *Wound-fevers*.

**Corpulence.** (L. *corpulentus*, with a large corpus or body. F. *corpulence*; G. *Körpulentz, Buhibtheit*.) Unwieldiness of body; excessive fatness, obesity.

**C., anæ'mic.** (Ἄν, neg.; αἷμα, blood.) Deposition of fat arising from a form of physiological anemia. It is associated with pallor of the face, and diminution in the absolute and relative number of red blood-corpuscles.

**C., pletho'ric.** (Πληθώρα.) A condition of general fatness, arising from excess of food and drink and insufficient exercise.

**Corpulency.** Same as *Corpulence*.

**Corpulent.** (Same etymon. G. *wohlbeliebt*.) Having a fat or large body.

**Corpulentia.** Same as *Corpulence*.

**C. carno'sa.** (L. *carnosus*, fleshy.) Fleshi-ness or great muscularity of the body.

**Corpus.** (L. *corpus*, a body; from Sansc. root *krp*, to make. F. *corps*; G. *Körper*.) A body or substance. An arrangement of parts forming a whole, as the human body.

Applied to a part of a special kind or character, or that is adapted to a particular function.

Formerly applied to the basis or chief ingredient in a formula.

**C. adeniform'e.** (Ἀδέν, a gland; L. *forma*, shape.) The prostate gland.

**C. adenoid'es.** (Ἀδέν, ἴδιος, likeness.) The prostate gland.

## CORPUS.

**C. adipo'sum.** (L. *adiposus*, fatty.) Fat. A fat body; the subject of corpulence.

Also, a substance composed of fat.

**C. adventitium.** (L. *adventitius*, foreign.) A foreign or extraneous body.

**C. albicans.** (L. *albicans*, part. of *albico*, to make white.) A name given to a shrivelling *C. luteum* when it has assumed a white colour.

**C. album subrotundum Vieussen'ii.** (L. *album*, white; *sub*, under; *rotundus*, round; *Vieussens*, French anatomist.) The anterior tubercle of the *optic thalamus*.

**C. alienum.** (L. *alienus*, not one's own.) A foreign or extraneous body.

**C. annularē.** (L. *annularis*, ring-shaped. F. *protuberance annulaire*.) The *Pons Varolii*, from its shape.

**C. callo'sum.** (L. *callosus*, thick-skinned.) F. *corps calleux*; G. *Balken*, *Hirnschwele*.) A transverse mass of white nerve substance seen on separating the two sides of the great longitudinal fissure and connecting the two hemispheres of the brain. It is about 4" long, reaching to 1·5" from the front and to 2" from the back of the brain; it is 1" wide behind, rather less in front; and it is ·5" thick behind, rather less in front, and thinnest in the middle. It is arched from before to behind, and its anterior and posterior borders are rounded. Its upper surface is marked by transverse ridges and furrows showing the course of most of its fibres; along the middle is a longitudinal depression, the *raphe*, having on each side two white, somewhat wavy, bands, the *striae longitudinales*, and outside these other bands, smaller and less marked, the *striae longitudinales laterales*. The anterior border curves downwards and backwards between the anterior lobes with a sharp bend, the *genu*; and getting narrower, the *rostrum*, passes to each anterior cerebral lobe, and by means of the lamina cinerea is connected with the optic commissure; and from near the termination of this reflected portion the *peduncles* arise, which, diverging from one another, cross the anterior perforated space to the fissure of Sylvius, where they form part of the *capsule* or external capsule of the corpus striatum. The corpus callosum is present only in mammals. The posterior border, larger than the anterior, curves downwards and forwards, and combines with the hinder extremity of the fornx to form between its posterior crura the *lyra*. The under surface of the corpus callosum is connected behind with the fornx, and in front of that forms the roof of the lateral ventricles, having attached to its middle line longitudinally the upper border of the septum lucidum. The great bulk of the corpus callosum consists of transverse nerve fibres, which radiate from it into the lateral hemispheres of the cerebrum, and form its great transverse commissure.

**C. callo'sum, convolu'tion of.** The *Gyrus fornicatus*.

**C. callo'sum, ven'tricle of.** The space between the gyrus fornicatus and the upper surface of the corpus callosum.

**C. caverno'sum.** See *Corpora cavernosa penis*, and *Corpora cavernosa clitoridis*.

**C. caverno'sum, ar'tery of.** (F. *artère cavernuse*; G. *tiefe Ruthenarterie*.) One of the two terminal branches of the internal pudic artery, when it is between the ramus of the pubes and the crus penis, it pierces the latter obliquely, and runs forwards along the septum

pectiniforme of the corpus cavernosum. See also *Corpora cavernosa penis*.

A similar, but smaller, artery is distributed to the analogous parts of the clitoris of the female.

**C. caverno'sum infe'rius.** (L. *cavernosus*, full of holes; *inferior*, lower.) The corpus spongiosum of the penis.

**C. caverno'sum pe'nis.** See *Corpora cavernosa penis*.

**C. caverno'sum ure'thræ.** The *C. spongiosum penis*.

**C. caverno'sum vagi'næ.** (*Vagina*.) The *Bulb of the vestibule*.

**C. caverno'sum vestib'uli.** Same as *Bulb of vestibule*.

**C. cilia're cerebell'i.** A synonym of the *C. dentatum cerebelli*.

**C. cilia're choroide'æ.** The *Ciliary muscle*.

Also, a synonym of *C. epitheliale*.

**C. cilia're medullæ oblonga'tæ.** A synonym of *C. dentatum of olivary body*.

**C. ciner'eum.** (L. *cinereus*, ash-grey. F. *corps cendré*.) The *C. dentatum* of the cerebellum, from its colour.

**C. clitor'idis.** (G. *Schaft des Kitzlers*.) The body of the *Clitoris*.

**C. colliculi stri'ati.** (L. *colliculus*, a little hill; *striatus*, part. of *stria*, to groove.) The anterior thicker intra-ventricular extremity of the corpus striatum.

**C. con'icum Rosenmül'leri.** (Mod. L. *conicus*, cone-shaped.) The *Parovarium*, from its shape, and in honour of its first describer.

**C. cono'ides.** (Κωνος, a pine cone; *eidōs*, likeness.) The pincal body, from its shape.

**C. coro'næ radia'tæ.** (L. *corona*, a crown; *radatus*, from *radio*, to emit beams. G. *Körper der Stabkranz*.) The middle portion or body of the corona radiata.

**C. cor'poris callo'si.** (L. *corpus*, the body; *callus*, a hard skin.) The middle part of the *C. callosum*.

**C. cribro'sum.** (L. *cribrum*, a sieve.) A synonym of the *Stratum Malpighii* of the epidermis.

**C. crystal'linum.** (L. *crystallinus*, made of crystal.) The crystalline lens.

**C. crystallo'ides.** (Κρυσταλλος, ice; *eidōs*, likeness.) The crystalline lens of the eye, from its clearness.

**C. denta'tum.** (L. *dentatus*, toothed. F. *corps denté*, *c. dentelé*; G. *Zahnkörper*.) A mass of grey nerve-substance with a wavy or toothed outline, containing in the middle some white nerve-substance, and lying a little to the inner side of the centre of the stem of white matter of each hemisphere of the cerebellum. The wall of grey matter is deficient in front where the central white fibres escape to pass to the superior peduncles of the cerebellum and the valve of Vieussens. It contains stellate cells 1·1500" to 1·2000" in diameter, arranged in several layers, among a plexus of fine nerve fibres.

**C. denta'tum cerebell'i.** The *C. dentatum*.

**C. denta'tum of olivary bod'y.** A thick-walled capsule of grey nerve-substance, with wavy outline and whitish centre, situated in the middle of the olivary body; the grey matter is deficient at the upper and inner part to allow the central white fibres to pass to the olivary process. It has a structure like the *C. dentatum*.

# CORPUS.

**C. denta tum oli'væ.** (L. *olea*, the olive.) See *C. dentatum* of olivary body.

**C. denticula tum.** (L. *denticulatus*, finely toothed; dim. of *dentatus*.) The *C. dentatum*.

Also, the same as *Fascia dentata*.

**C. denticula tum cerebelli.** The *C. dentatum*.

**C. discoi'des.** (Δίσκος, a round plate; εἶδος, likeness.) The crystalline lens, from its shape.

**C. epididym'idis.** (Ἐπιδιδυμῖς, the epididymis.) The central portion of the epididymis between the thickened caput above and cauda epididymidis below.

**C. epithelia'le.** (Epithelium.) The thickened anterior edge of the choroid of the eye of Cephalopods, which surrounds, and is continuous with, the lens.

**C. exter'num.** (L. *externus*, outward.) A foreign or extraneous body.

**C. extra'neum.** (L. *extraneus*, strange.) A foreign body in a wound or elsewhere.

**C. fi'bro-spongio'sum penis.** (L. *fibra*, a fibre; *spongiosus*, spongy.) A synonym of the *C. cavernosum penis*.

**C. fimbria'tum.** (L. *fimbriatus*, fringed. F. *corps frangé*, c. *bordé*; G. *Saum*.) A narrow white band attached along the inner edge of the hippocampus major as it descends into the middle cornu of the lateral ventricle, as far as the pes hippocampi, and on the outer side of a part of the choroid plexus. It is the edge of the posterior pillar of the fornix as it terminates on the surface and at the side of the hippocampus major. Also, a synonym of the *Corpus olivare*.

**C. fimbria'tum cerebelli.** (L. *fimbria*, a fringe.) A synonym of *C. dentatum*.

**C. fimbria'tum cor'nu Ammonis.** (L. *fimbria*, a fringe; *cornu*, a horn; *Ammon*, the deity.) A synonym of *Tenia cornu Ammonis*.

**C. fimbria'tum oli'væ.** (L. *fimbria*, a fringe; *oliva*, the olive.) A synonym of the *C. dentatum olivæ*.

**C. for'nicis.** The middle part of the *Formæ*.

**C. genicula'tum exter'num.** (L. *geniculatus*, like a knee; *externus*, outer. F. *corps genouillé externe*; G. *äusserer Knöchel*.) A mass of grey matter, about the size of a coffee bean, lying on the outer side of the genu of the tractus opticus; it is larger than, and a little anterior to, the *C. geniculatum internum*, and is connected by white matter with the optic tract and with the nates.

**C. genicula'tum infe'rius.** (L. *inferius*, that is below.) The *C. geniculatum externum*.

**C. genicula'tum inter'num.** (L. *internus*, inner. F. *corps genouillé interne*; G. *innerer Knöchel*.) Smaller and somewhat behind the *C. geniculatum externum*; it lies on the inner side of the genu of the tractus opticus, with which, and with the testis, it is in connection by a band of white fibres.

**C. genicula'tum latera'le.** (L. *lateralis*, belonging to the side.) The *C. geniculatum externum*.

**C. genicula'tum media'le.** (L. *medialis*, middle.) The *C. geniculatum internum*.

**C. genicula'tum supe'rius.** (L. *superius*, that is above.) The *C. geniculatum internum*.

**C. glandifor'më.** (L. *glandiformis*, gland-like.) The prostate gland.

**C. glan'dis clitor'idis.** The *C. cavernosum clitoridis*.

**C. glando'sum.** (L. *glands*, a gland.) The prostate gland.

**C. glandulo'sum mulle'rum.** (L. *mulier*, a woman.) A spongy eminence surrounding the orifice of the urethra in the female, and projecting at its lower part; also called *Glandula prostata muliebris*.

**C. granulo'sa.** (L. *granum*, a grain. F. *corps granuleux*; G. *Colostrumkörperchen*.) A synonym of *Colostrum corpuscles*.

**C. Highmo'ri.** (Highmore. F. *corps d'Highmore*; G. *Highmorescher Körper*.) The imperfect vertical septum formed in the testicle by a reflection of the fibrous tissue of the tunica albuginea into the gland. It extends from the upper nearly to the lower part of the gland, is a few lines wide, greater above than below; it gives off from its front and sides fine trabeculae, which are attached to the inner surface of the tunica albuginea; and it is traversed by a network of seminal ducts and the larger blood-vessels.

**C. Highmor'ia'num.** Same as *C. Highmori*.

**C. hyali'num.** (L. *hyalinus*, of glass.) The vitreous humour of the eye.

**C. hyalo'ideum.** (Υαλός, glass; εἶδος, likeness.) The vitreous humour of the eye.

**C. incomprehensib'ile.** (L. *incomprehensibilis*, that cannot be grasped.) The thymus gland, in allusion to the ignorance of its use.

**C. incu'dis.** (L. *incus*, an anvil.) The saddle-shaped articular portion of the incus.

**C. innomina'tum testis.** (L. *innominatus*, unnamed.) The organ of Giraldès or *Parepididymis*.

**C. latera'le pe'nis.** (L. *lateralis*, that is on the side.) The *C. cavernosum penis*.

**C. luteum.** (L. *luteus*, yellowish. F. *corps jaune*; G. *gelber Körper*.) A development of the Graafian follicle of the ovary and its contents after its rupture and the consequent escape of the ovum. When impregnation has occurred, the resulting corpus luteum differs in appearance from that which is found when no impregnation has taken place. The former is the true, or corpus luteum of pregnancy, the latter is the false, or corpus luteum of menstruation. One or more Graafian follicles are ruptured at each menstrual period, and it may be at other times also.

**C. luteum, false.** The form which occurs when impregnation has not followed. After the discharge of its contents, the edges of the rent in the follicle become adherent and itself contracts, so that the membrana propria becomes yellow or reddish in colour and plaited or folded like the cerebral convolutions, and the remainder of the cavity is filled with an albuminous fluid, which generally contains a small blood-clot; the membrana propria and its folds and the cells proliferate, and become elongated and granular until they fill the follicle, the fluid having been by degrees absorbed. At about the end of three weeks it is a rounded solid mass projecting from the surface of the ovary, and showing a cicatrix at the point of rupture; on section, it is seen to consist of a solid greyish substance, surrounded by the thick, folded, yellow membrane, which can easily be separated from the stroma of the ovary. At this time it begins to diminish in size, to lose the yellow colour, and to contract until only a star-shaped white cicatrix is left,

which itself disappears in five or six weeks. The surrounding ovarian tissue also shrinks and produces a permanent depression of the surface.

**C. luteum, true.** The form which occurs when impregnation follows ovulation. The first stage is the same as that of the false corpus luteum, but at the end of the three weeks, when this begins to contract, the true corpus luteum undergoes further development, the convoluted folds enlarging, and becoming vascular; this continues until the third month, when the body is 1" to 1.5" in diameter; at the fourth or fifth month it begins to decrease in size, and to lose its capillaries; after delivery the retrogressive changes proceed rapidly, and by the ninth or tenth following month nothing is left but a cicatricial depression. The importance of a distinction between the true and false corpus luteum as a proof of pregnancy is now not so much insisted on.

**C. mam'mæ.** (L. *mamma*, a breast.) The body of the mammary gland.

**C. medullarë hemisphæ'rii cerebelli.** (L. *medullaris*, situated in the marrow; *hemisphærium*, a half globe.) The medullary substance as seen on vertical transverse section of the hemisphere of the cerebellum.

**C. medullarë hemisphæ'rii cerebri.** (L. *hemisphærium*, from *ἡμισφαίριον*, a half globe.) The *Centrum ovale* of *Vey d'Azgr.*

**C. medullarë vermis.** (L. *medullaris*, that is in the marrow; *vermis*, a worm. G. *Markkörper des Wurmcs.*) The medullary substance of the vermis of the cerebellum, as seen on sagittal section.

**C. mucosum.** (F. *corps muqueux*, *c. réticulaire*; G. *Schleimschichte*.) Same as *Rete mucosum*.

**C. nervosum cutis.** (L. *nervosus*, full of sinews; *cutis*, the skin. G. *der Papillarkörper*.) The external or papillary layer of the corium.

**C. nigrum.** (L. *niger*, black.) A name given to a shrivelling *C. luteum*, when there has been a long-lasting blood clot.

**C. Okense.** (*Okens*, the physiologist.) The same as *Wolfian body*.

**C. olivarë.** See *Olivary body*.

**C. op'to-striatum.** The conjoined *Thalamus opticus* and *Corpus striatum*.

**C. os'sis ilii.** (L. *os*, a bone; *ilium*, the bone of that name.) The inferior thicker part of the ilium which forms the upper part of the acetabulum.

**C. os'sis is'chii.** (L. *os*, a bone; *ischium*, the bone of that name.) The upper thicker triangular part of the ischium, the outer surface of which forms the posterior inferior part of the acetabulum.

**C. os'sis occip'itis.** (L. *os*, a bone; *occiput*, the back part of the head.) The basilar portion of the occipital bone.

**C. os'sis pubis.** (L. *os*, a bone; *pubis*, the bone of that name.) In English works on anatomy the same as horizontal ramus in German. The lateral posterior thicker part of the os pubis which forms the anterior inferior part of the acetabulum.

**C. os'sis sphenoi'dei.** (L. *os*, a bone; *sphenoid* bone.) The median portion of the sphenoid bone, to which the alæ and pterygoid processes are attached.

**C. os'sium.** (L. *os*, a bone.) A synonym of *Diaphysis*.

**C. pampinifor'me.** (F. *corps pampiniforme*.) Same as *Plexus pampiniformis*.

**C. pancre'atis.** (*Pancreas*.) The middle portion of the pancreas.

**C. papilla'rë.** (F. *corps papillaire*.) Same as *Skin, papillary layer of*.

**C. papilla'rë Malpighii.** (L. *papilla*, a nipple; *Malpighi*, the anatomist.) The external or papillary layer of the corium.

**C. pe'nis.** (G. *Ruthenkörper*.) The body of the *Penis*.

**C. phaco'i'des.** (Φακός, a lentil; *είδος*, likeness.) The crystalline lens.

**C. pituita'rë.** The *Pituitary body*.

**C. pro bal'samo.** (L. *pro*, for; *balsamum*, a balsam.) An example of the word *corpus* being employed in the sense of the basis of a formula, here referring to the chief ingredient in the making of fictitious balsams.

**C. psalloi'des.** (Ψάλλω, to play a stringed instrument with the fingers; from whence a word ψάλλος, a stringed instrument, has been manufactured; *είδος*, likeness. G. *psalter-für-mige Körper*.) The under and posterior part of the fornix called *Lyra*.

**C. psalo'i'des.** (Ψάλς, a vault; *είδος*, likeness. F. *corps psaloide*.) The *Fornix*.

**C. pyramidalë.** (L. *pyramidalis*, shaped like a pyramid.) See *Pyramids*, anterior, and *P. posterior*.

Also, but perhaps doubtfully, a synonym of the pampiniform plexus.

**C. pyramidalë tes'tis.** (L. *testis*, a testicle.) A synonym of the *Coni vasculosi*.

**C. reticula'rë.** (L. *reticulum*, a little net. F. *corps réticulaire*.) The *Rete mucosum* of the skin.

Also, the papillary layer of the skin.

**C. reticula'rë Malpighii.** (G. *Malpighisches Netz*.) The *Rete mucosum*.

**C. retifor'me.** (L. *rete*, a net; *forma*, shape.) The *Bulb* of the vestibule.

**C. rhomboi'dalë.** (Ρόμβος, a rhomb.) The *C. dentatum*.

**C. rhomboi'deum.** (Ρόμβος, a rhombus; *είδος*, likeness. F. *corps rhomboide*.) The *C. dentatum*.

**C. rhomboi'deum cerebelli.** (L. *rhomboides*, a four-sided figure.) The *C. dentatum*.

**C. rhomboi'deum oli'væ.** (L. *rhomboides*, a four-sided figure.) The *C. dentatum* of *olivary body*.

**C. serra'tum.** (L. *serratus*, saw-shaped.) A synonym of *C. dentatum*.

**C. spongiosum.** See *C. spongiosum penis*.

**C. spongiosum inf'eri'us pe'nis.** The *C. spongiosum*.

**C. spongiosum pe'nis.** (L. *spongiosus*, spongy. F. *corps spongieux du verge*; G. *Schwammkörper der Harnröhre*.) A cylindrical body lying in the groove between the corpora cavernosa penis and on their under surface. Its posterior extremity terminates in an enlargement named the bulb of the urethra, which presents a median septum; the middle portion or shaft is perforated longitudinally by the urethra; and its distal extremity is enlarged to form the glans penis. The structure of the corpus spongiosum is very similar to that of the corpora cavernosa.

**C. spongiosum ure'thræ.** The *C. spongiosum penis*.

## CORPUSCLE

**C. spongiosum urethrae muliebris.** (*L. muliebris*, belonging to a woman.) A thick muscular and vascular structure forming the wall of the urethra in the female, and extending between the bulbs of the vestibule and the glans clitoridis.

**C. spongiosum urethrae virilis.** (*L. virilis*, belonging to a man.) The *C. spongiosum penis*.

**C. spongio-vasculare.** (*L. spongia*, a sponge; *vasculum*, a little vessel.) The corpus spongiosum of the penis.

**C. striatum.** (*L. stria*, to furnish with furrows. *F. corpus strie*; *G. Streifenhügel*.) A nervous mass situated in front and a little on the outside of the optic thalamus; part of it is seen in the body and anterior cornu of the lateral ventricle, the intraventricular portion; and part is embedded in the white matter of the hemisphere, the extraventricular portion; and of this the front part projects into the frontal lobe, and the lower part is in connection with the convolutions of the island of Reil; the hinder end of the inner face is in contact with the thalamus opticus, and the anterior part is separated from its fellow of the opposite side by the septum lucidum. It consists of two nuclei of grey matter, the intraventricular or *nucleus caudatus*, and the extraventricular or *nucleus lenticularis*, separated, except in front and below where they are joined together, by a layer of white matter, the *internal capsule*, consisting of fibres which pass from the crus cerebri towards the convolutions of the brain.

The *nucleus caudatus* (*G. Schwanzkern*), is a pear-shaped body with a long tail, the rounded end, in front, lying in the body and anterior cornu of the lateral ventricle, the tapering end diverging outwards, encircling the optic thalamus, and, according to some, then curving into the inferior horn of the lateral ventricle, and running as far as its anterior extremity. It consists chiefly of grey matter, but on cutting into it streaks of white nerve fibres are seen, which give the name, corpus striatum; these are derived, along with those of the internal capsule, from the crus cerebri of the same side. The nucleus caudatus possesses large, branching, multipolar, nucleated, and pigmented cells, 1-1200th" in diameter, cells of the same kind but of half the size, and small nucleus-like bodies.

The *nucleus lenticularis* (*G. Linsenkern*), lies outside the lateral ventricle; it is of ovoid or biconvex form; horizontal and triangular, with the apex inwards, on transverse vertical section. On this aspect it is divided by two clear lines, parallel to the outer side, into three segments, of which the outer is striated and the inner slightly reddish in colour; the inner and middle segments contain branched cells. The lower and outer surface of the nucleus is enclosed in white matter, the *capsule*, or external capsule, derived from the corpus callosum and fibres passing from the optic thalamus to the cerebral convolutions; and outside that is a layer of grey matter, the *claustrum*. It is continuous in front and below with the nucleus caudatus, and with the grey matter of the anterior perforated space.

The whole of the structures here described; caudate and lenticular nucleus, external and internal capsule, and claustrum, are generally included in the term corpus striatum, but latterly

it has been proposed to restrict the name to the nucleus caudatus.

The arteries of the corpus striatum are derived principally from the middle cerebral artery, but partly also from the anterior cerebral artery and from the arteries of the choroid plexus. The arterial branches are said not to anastomose with each other in the corpus striatum, nor to communicate with the vessels of neighbouring parts. The veins are in two series; one lying in the grey layer of the nucleus caudatus, and the other collecting blood from the nucleus lenticularis and the capsule.

**C. subthalamicum.** The *Nucleus pedunculi cerebri*, or red nucleus.

**C. suprarenale.** (*L. supra*, above; *renalis*, belonging to the kidney.) See *Adrenals*.

**C. thymicum.** The *Thymus gland*.

**C. thymicum.** The *Thymus gland*.

**C. thyroideum.** The *Thyroid body*.

**C. trigonum.** The *Trigone*.

**C. triticeum.** (*L. triticeus*, wheaten.) The cornu minus of the hyoid bone.

**C. turbinatum.** (*L. turbinatus*, cone-shaped.) The pincal body, from its form.

**C. uteri.** (*L. uterus*, the womb.) The body of the uterus; the part between the cervix and the fundus.

**C. variciforme testis.** (*L. varix*, a dilated vein; *forma*, shape; *testis*, the testicle.) The epididymis.

**C. varicosum.** (*L. varicosus*, full of dilated veins.) Same as *Plexus, pampiniform*.

**C. varicosum testis.** (*L. testis*, a testicle.) The epididymis.

**C. ventriculi.** (*L. ventriculus*, the belly.) The middle and most dependent part of the stomach.

**C. vesicae.** (*L. vesica*, the bladder.) The middle part of the urinary bladder.

**C. vitreum.** The *Vitreous body*.

**C. Wolffianum.** See *Wolffian body*.

**Corpuscle.** (*L. corpusculum*, dim. of *corpus*, a body or substance. *F. corpuscule*; *G. Körperchen*.) A small body or substance; an atom.

Applied synonymously with the word *Cell* to certain bodies occurring in natural structures or morbid growths.

**C.s. antheridial.** Same as *Antherozooids*.

**C.s. Bizzozzer's.** Lymphoid cells found in the medulla of bones and in the spleen, and believed by him to become red blood corpuscles.

**C.s. black.** The lacunae of bone, because under the microscope they are black in consequence of being filled up with detritus from grinding down the section.

**C.s. blood.** See under *Blood*.

**C., blood, of Hayem.** See *Hematoblasts of Hayem*.

**C.s. bone.** The *Lacunae* of bone.

**C.s. calcareous.** (*L. calx*, lime.) The lacunae of bone.

**C.s. cartilage.** Same as *Cartilage cells*.

**C.s. caudate.** (*L. cauda*, a tail.) Cells which have a tail-like appendage, as in those of some cancers.

**C.s. chyle.** See *Chyle corpuscles*.

**C., colloid.** (*Κόλλα*, glue; *ειδος*, likeness.) A term sometimes applied to *Amphoid bodies*.

Also, the same as *Colloid sphere*.

**C., colostrum.** See *Colostrum corpuscles*.

**C.s. cone tric.** See *C.s. of Hassall*.

# CORPUSCLE.

**C.s, cor'neal.** (*Cornea*.) The corpuscles of the proper substance of the cornea, which present two forms: one, named the fixed corpuscles, are flattened and stellate, and, the processes of adjoining cells anastomosing, by some are said to form a system of channels for conducting lymph to the extravascular tissue of the cornea; the other, named wandering or migrating cells, appear to be only white corpuscles of the blood which have escaped from the blood. Stricker maintains that the fixed corpuscles are only forms assumed by protoplasm under the influence of reagents.

**C.s, cy toid.** (*Kύτος*, a cell; *εἶδος*, likeness.) Henle's term for what are now called leucocytes.

**C.s, em'bryonal.** (*Εμβρυον*, the embryo.) A synonym of *Antipodal cells*.

**C.s, exuda'tion.** (*L. exudatio*, a sweating out.) A term formerly applied to certain granular masses or wall-less cells found in some inflammatory deposits, in chronic cerebral softening, and other similar conditions. These are now known to be leucocytes, which have undergone fatty degeneration in a granular form, just after the cell wall has melted away and before they have lost their coherence.

**C.s, fal'ciform.** (*L. falx*, a sickle; *forma*, shape.) Sickle-shaped bodies in the interior of a psorosperm formed by a division of the protoplasm; on their escape from the parent they develop, according to some, into Gregarinae, according to others, into amœbiform corpuscles.

**C.s, fe'cundating.** (*L. fecundo*, to fertilise.) A term applied to pollen grains and spermatozoa.

**C.s, gan'gion.** Same as *Ganglion cells*.

**C.s, gland'i'form.** (*L. gland*, a gland; *forma*, shape.) The small lobules of conglomerate glands.

Also, the Malpighian corpuscles of the spleen.

**C.s, gran'ular.** (*L. granulum*, a small grain.) A term for leucocytes.

**C.s, hy'aline.** (*Υάλος*, glass.) A term for the highly reflecting globules seen in the earliest segmentation stage of the fecundated ovum, and called also polar segmentation globules.

**C.s, inflam'matory.** Same as *C.s, exudation*.

**C.s, invis'ible, of the blood.** See *C.s, transparent, of the blood*.

**C.s, Losterf'er's.** See *Losterfer's corpuscles*.

**C.s, lymph.** See *Lymph corpuscles*.

**C.s, Malp'ighian.** A term applied to the splenic corpuscles, and also to the Malpighian bodies of the kidney.

**C.s, marginal.** (*L. margo*, a border.) Coloured corpuscles occurring in the tentacles of the disc of *Discophora*; they are connected with nerve-filaments, and have been supposed to be visual organs.

**C.s, mo'bile, of algæ.** (*L. mobilis*, movable.) A synonym of *Anthozoids*.

**C.s, molec'ular.** Same as *Granulations, molecular*.

**C.s, mu'cous.** See *Mucus, corpuscles of*.

**C.s, nerve.** Same as *Nerve cells*.

**C.s, Nor'ris's.** The same as *C.s, transparent, of the blood*.

**C.s, oi Corna'lia.** The *C.s, vibratile*, from one of their first observers.

**C.s of Glu'gè.** Same as *C., exudation*.

**C.s of Has'sall.** Bodies scattered here and there among the masses of nucleated epithelium of the thymus gland, of the size of a red blood-corpuscle to three times its size, formed of concentric layers of substance surrounding one or two central cells which are generally undergoing fatty degeneration, or sometimes a small highly-refracting, angular, homogeneous mass. The concentric layers are formed of flat nucleated scales resembling those of tessellated epithelium.

**C.s of Krau'sè.** (*Krause*, a German anatomist of the present century.) Ovoid, or more frequently spherical, bodies, varying from 25 $\mu$  to 100 $\mu$  in diameter, carried on the extremity of nerve tubules, which arise perpendicularly from a subjacent nerve-plexus, and found in the conjunctiva, the red edges of the lips, the sublingual mucous folds, the velum palati, the filiform and fungiform papillæ, and the integument of the glans of the penis and the clitoris. They consist of a central granular bulb, into which the cylinder axis of the nerve fibre penetrates either perpendicularly or in a spiral fashion with a swollen end; and are enclosed in a thin envelope, which is probably a continuation of the primitive sheath of the nerve, and which contains, at some distance from each other, small ovoid nuclei.

**C.s of Laennec.** Small lumps occasionally seen on patches of pericardial thickening.

**C.s of Malpighi.** See *Malpighi, corpuscles of*.

**C.s of Meiss'ner.** (*Meissner*, a German anatomist of the present century.) Same as *C.s, tactile*.

**C. of Miesch'er.** Same as *Reiniger's bodies*.

**C.s of Pacchioni.** See *Pacchioni, glands of*.

**C.s of Pac'ini.** See *Pacinian bodies*.

**C.s of Purkin'je.** The lacunæ of bone.

**C.s of Rai'ney.** See *Raney's bodies*.

**C.s of Reiss'ner.** The epithelial cells covering the membrane of Reissner.

**C.s of thy'mus.** Same as *C.s of Hassall*.

**C.s of Toyn'bee.** The fixed *C.s, corneal*.

**C.s of Va'ter.** Same as *C.s of Pacini*.

**C.s of Vir'chow.** The fixed *C.s, corneal*.

**C.s of Wag'ner.** (*Wagner*, a German anatomist of the present century.) Same as *Tactile corpuscles*.

**C. of We'ber.** The *Sinus pocularis*.

**C.s, os'seous.** The lacunæ of bone.

**C.s, Pacin'ian.** See *Pacinian bodies*.

**C.s, palpa'tion.** (*L. palpo*, to touch softly) Same as *Tactile corpuscles*.

**C.s, perivis'ceral.** (*Μερί*, around; *L. viscus*, the internals.) Large nucleated amœboid cells of purple, blue, green, or other colour, found in the perivisceral fluid of some Echinoderms.

**C.s, plas'tic.** Same as *C.s, exudation*.

**C.s, pus.** See *Pus corpuscles*.

**C.s, py'oid.** (*Πύον*, pus; *εἶδος*, likeness.) A variety of pus corpuscles, described by Lebert, containing no nuclei.

**C.s, ram'ified.** (*L. ramus*, a branch.) The lacunæ of bone, from their branched appearance.

**C.s, salivary.** See *Salivary corpuscles*.

**C.s, sple'nic.** (*Σπλήν*, the spleen.) The Malpighian corpuscles of the spleen.

**C.s, starch.** See *Amyloid bodies and Starch granules*.

**C.s, tac'tile.** See *Tactile corpuscles*.

**C.s, taste.** See *Taste buds*.

**C.s, touch.** Same as *Tactile corpuscles*.

**C.s, transpa'rent, of the blood.** Cor-

## CORPUSCULA—CORRELATION.

puseles believed by Norris to form the larger part of the plasma of the blood, and to be imperceptible under the microscope without special treatment. By others, these corpuscles are believed to be only red corpuscles, from which the hæmoglobin has been discharged.

**C.s. tu'bercle.** See *Tubercle corpuscles*.

**C.s. ty'phic.** (*Typhoid*.) The nucleated epithelial cells of the glands of Peyer which, in typhoid or enteric fever, have undergone degeneration, have assumed a polyhedral shape with rounded angles, and have become finely granular.

**C.s. vi'bratile.** (*L. vibra*, to quiver.) Bodies found in the blood and tissues of the silkworm, the larva of *Bombyx mori*, when suffering from the disease called pebrine, of which they are the cause. Their apparent vibratile motion is probably Brownian movement, and themselves are in all probability psorosperms.

**C.s. white gran'ulated.** The small spheroidal granules, insoluble in ether, contained in chyle.

**C.s. white, of blood.** See under *Blood*.

**Corpus'cula.** Plural of *Corpusculum*.

Also, a term applied by R. Brown to certain structures, analogous to Arehegonia, which are developed at the anterior end of the endosperm of the embryo-sac of an ovule of a gymnosperm before fertilisation. Each corpusculum consists of a large sac, in which the oosphere is developed, communicating with the micropyle by a long narrow neck, through which the pollen tubes reach the oosphere during fertilisation.

**C. amyl'acea.** See *Amplid bodies*.

**C. Arantii.** See *Arantii corpora*.

**C. glandula'rum similia.** (*L. glandulae*, glands; *similis*, like.) A synonym of *Peyer's glands*.

**C. globo'sa cervi'cis u'teri.** (*L. globosus*, ball-shaped; *cervix*, a neck; *uterus*, the womb.) The *Ovule Nabothi*.

**C. lie'nis.** (*L. lien*, the spleen.) The Malpighian corpuscles of the spleen.

**C. Malpighiana.** See *Malpighi, corpuscles of*.

**C. Malpig'hii.** The Malpighian corpuscles of the spleen.

**C. oryzo'i'dea.** Same as *Corpora oryzoides*.

**C. os'sium.** (*L. os*, a bone.) The lacuna of bone.

**C. sanguinis.** (*L. sanguis*, blood.) The red and white corpuscles of blood.

**C. seminis.** (*L. semen*, seed.) The spermatozoa.

**C. sesamo'i'dea.** (*Σαάμην*, an Indian bean; *αἶος*, likeness.) Same as *Arantii corpora*; so called from their shape.

**C. sple'nis.** (*L. splen*, the spleen.) The Malpighian corpuscles of the spleen.

**C. tact'us.** (*L. tactus*, touch.) See *Tactile corpuscles*.

**C. tritic'ea.** (*L. triticeus*, wheat-like.) The lesser cornua of the hyoid bone.

**C. Wrisberg'ii.** (*Wrisberg*.) The cuneiform cartilages of the larynx.

**Corpus'cular.** (*L. corpusculum*, a little body. *F. corpusculaire*; *G. atomisch, atomistisch, körperlich*.) Of, or belonging to, a corpuscle; or to the doctrine of atoms.

**C. ac'tion.** The action of *Cohesion*, as exerted between molecules or corpuscles.

**C. capacity.** (*F. capacité globulaire*.)

Term applied by Malassez to the number of red blood corpuscles corresponding to a unit weight, one gramme of the body. In the case of man the corpuscular capacity amounts to 341 millions, whilst the total number of corpuscles amounts to about 22,500 milliards, a milliard being 1000 millions.

**C. force.** The same as the force of *Cohesion*.

**C. lymph.** See *Lymph, corpuscular*.

**C. the'ory.** Same as *Emission theory*.

**Corpus'culated.** (Same etymon.) Containing corpuscles.

Also, specially, containing *Tactile corpuscles*.

**Corpus'cule.** Same as *Corpuscle*.

**Corpus'culum.** See *Corpuscle* and *Corpuscula*.

**C. con'icum Rosemüll'eri.** (*L. conus*, a cone; *Rosenmüller*, its describer.) The *Purpurarium*.

**C. Santori'ni.** (*Santorini*.) The *Corniculum laryngis*.

**C. Weberia'nium.** (*Weber*, the physiologist.) The *Stomus peculiaris*.

**Corr.** The same as *Cornicille*.

**Corra'dial.** (*L. cor*, for *cum*, together, with; *radius*, a beam, a ray.) Radiating from the same centre, or collected into the same focus.

**Corra'diate.** (Same etymon.) To pass to the same focus, or to emanate from the same source.

**Corradiation.** (Same etymon.) The collection of rays into a focus, or their dispersion from one point.

**Corrageen moss.** Same as *Carrageen moss*.

**Corra'go.** See *Corago*.

**Cor'rë.** (*Köppn*.) The temple; also the hair on the temples.

**Cor'rea.** A Genus of the Nat. Order *Rutaceæ*.

**C. al'ba.** Andr. (*L. albus*, white.) The settlers in New Holland employ the leaves of this plant for tea, which is held to be stomachic and diaphoretic.

**C. specio'sa.** Aitk. (*L. speciosus*, handsome.) Used as *C. alba*.

**C. virens.** Sm. (*L. virens*, part. of *virco*, to be green.) A variety of *C. speciosa*.

**Correction.** (*L. corrigo*, to amend or correct. *F. correction*; *G. Milderung*.) Formerly used to denote the action of a corrigent medicine. See *Corrigent*.

**Corrective.** (*L. corrigo*. *F. correctif*; *L. correctiv*; *S. correctivo*; *G. Korrektivmittel*.) Same as *Corrigent*.

**Corrector.** Same etymon and meaning as *Corrigent*.

**Correlate.** To place or to exist in *Correlation*.

**Correla'tion.** (*L. cor*, for *cum*, with; *relatus*, part. of *refero*, to carry back.) Mutual or reciprocal relationship between objects, things, or qualities.

**C. of forces.** See *Forces, correlation of*.

**C. of growth.** The association of several metamorphic changes in the same type taking place coincidentally. Any marked change occurring to the advantage of a creature in the ascent to higher types is usually correlated with several others of equal advantage. An example may be given in the Ichthyopsida, which breathe both by lungs and gills; the proper Dipnoi, as the *Lepidosiren* and *Ceratodus*, have taken on no

higher metamorphosis than fishes generally, but in the closely related lower Amphibia, as the Axolotl and Proteus, correlated or associated with the pattern of the fore limb of all higher forms, a stapes appears in the auditory capsule and the rudiments of a larynx in the opening of the air-passage.

**Correlative.** (Same etymon.) Having reciprocal relation.

**Corridor.** (I. *corridore*, a gallery; from L. *curro*, to run.) A gallery or pas-age.

**C. system of hospital construction.** The principle of construction is here similar to that of the pavilion system, the wards being in a long building; but the different wards are connected by means of a corridor or hall which runs along the outside.

**Corrigan, Sir Dominic John, Bart.** An Irish physician, born in Dublin in 1802, died there in 1880.

**C.'s button.** Same as *C.'s cautery*.

**C.'s cautery.** (Καυτήριον, a branding iron.) A button of steel on a light stem fixed into a wooden handle, and used, when heated to 100° C. (212° F.), to produce slight counter-irritation of the skin in cases of sciatica and other painful affections, in hysterical pains, over the heart as an excitant, and in other ways. It may be heated in a spirit lamp till the finger on the steel stem becomes uncomfortable; or, better, by plunging it for a short time into boiling water, drying, and then pressing it firmly on the skin, for a moment only, for such a number of times on different places, six or twelve, as may be necessary; the result should not be a blister, but the exfoliation of a dry wafer-like piece of epidermis.

**C.'s disease.** A term sometimes given to aortic regurgitation from insufficiency of the sigmoid valves, because Corrigan was the first who laid stress on the character of the pulse in this condition.

**C.'s pulse.** The pulse which is specially characteristic of regurgitation from inadequacy of the aortic valves, first distinctly described by Corrigan; it beats with a large impulse, which suddenly subsides; it may be seen to add to the tortuosities of the superficial arteries, and it is longer in reaching the wrist after the ventricular systole than is natural.

**Corrigent.** (L. *corrigo*, to amend or correct. F. *correctif*; G. *verbesserend*.) Amending; modifying, rendering milder; correcting. Applied formerly to certain of the substances introduced into medicinal combinations, and supposed to exert this quality.

**Corrigentia.** (Same etymon.) Medicines which are *Corrigent*.

**Corrigia.** (L. *corrigia*, a thong; from *corrigo*, to make straight.) A thong of leather. An old name for the tendon of a muscle.

**Corrigiola.** (Dim. of L. *corrigia*, a thong of leather. F. *renoué vulgaire*; G. *Fogelknöterich*, *Fogelbegetritt*, *Wegtritt*.) Old name for the *Polygonum arvense*, or knot-grass. Also, a Genus of the Nat. Order *Eurynychiaceæ*.

**C. littoralis**, Linn. (L. *littoralis*, belonging to the shore.) Sand strapwort. Antiscorbutic.

**Corroborant.** (L. *corroboro*, to strengthen very much. F. *corroborant*; G. *stärkend*.) Giving strength; strengthening; cordal; tonic.

**Corroborantia.** (L. *corroborantia*.) Corroborant medicines; tonics, such as cinchona.

**Corroborative.** Same as *Corroborant*.

**Corro'dent.** (L. *corro'lo*, to gnaw. G. *zernagend*.) Gnawing; eating away. Same as *Corrosive*.

**Corroden'tia.** (Same etymon.) Medicines which are *Corro'dent*.

Also, a Group of the Order *Orthoptera*, having homonymous unfolding wings.

**Corro'ding.** (L. *corro'do*.) Eating away.

**C. ulcer of uterus.** A deep ulcer, with hard edges and villous gangrenous base, uncontrollable in its course, and generally, if not always, fatal.

**Corro'sion.** (L. *corrodo*. F. *corrosion*; G. *Corrosion*, *Zernagung*.) The action of the substances called *Corrosive*.

**Corrosiva.** Medicines which are *Corrosive*.

**Corrosive.** (L. *corrodo*, to gnaw to pieces. F. *corrosif*; G. *zernagend*, *atzennd*, *zernessend*.) Having the power of disorganising the particles of a body; eating or wasting away.

A corrosive substance is one that alters and disorganises the living structures by slow degrees; it is of the same nature, but not so active, as a caustic.

**C. chloride of mercury.** The *Hydrargyri perchloridum*.

**C. poisons.** See *Poisons*, *corrosive*.

**C. sublimat.** (F. *sublimé corrosif*; G. *Ätzeublimat*.) The *Hydrargyri perchloridum*.

**C. sublimate bath.** For an adult, two and a half drachms of sublimate should be dissolved in each bath, in which the patient should pass an hour or an hour and a half; for a child's bath, of half an hour's duration, from 30 to 60 grains should be used according to the age.

**C. sublimate injection.** This is sometimes used in cases of gleet, in the proportion of half a grain to three or six ounces of water.

**Corrosives.** (Same etymon.) Medicines or substances having the action of a *Corrosive*; especially applied to a class of poisons, such as mineral acids, caustic alkalies, certain metallic chlorides, and such like.

**Corroval.** The name of a variety of *Woorari*.

**Corrovalia.** An alkaloid said to have been found in *Corroval*.

**Corrowal.** Same as *Corroval*.

**Corru'da.** A sixteenth century name of the *Asparagus acutifolius*, and also the *A. aphyllus*.

**Corrugate.** Same as *Corrugated*.

**Corrugated.** (L. *corrugo*, to wrinkle. F. *ridé*, *ruqueux*; G. *runzelig*.) Shrivelled; wrinkled in an irregular fashion.

**Corrugatio.** See *Corrugation*.

**C. cutis.** (L. *cutis*, the skin.) A wrinkle.

**Corrugation.** (L. *corrugo*, to make full of wrinkles. F. *corrugation*, *froncement*; I. *corrugazione*; S. *corrugacion*; G. *Runzeln*, *Runzelung*, *Zusammenschrumpfung*; Gr. *πίκνωσις*.) Wrinkling of the skin, whether from age, action of muscles, or the application of styptics.

Also, wrinkling or puckering of any structure.

**Corrugator.** (L. *corrugo*. F. *corrugateur*; I. *corrugatore*; G. *Runzler*, *Zusammenrunzler*.) A wrinkler, or that which wrinkles.

**C. Coite rii.** (Cater, an anatomist who first described the muscle.) The *C. supracili*.

# CORRUGENT—CORTEX.

**C. supercilli.** (*L. supercilium*, an eyebrow. *F. musch. corrugator*, *m. sourcilier*; *G. Augenbrauenmuskler*.) A small, narrow, deep-coloured muscle arising from the inner extremity of the superciliary ridge of the frontal bone; the fibres pass upwards and outwards, and terminate partly by being attached to the skin of the eyebrow, and partly by becoming blended with the fibres of the orbicularis and orbito-frontalis muscles. It draws inwards and downwards the inner end of the eyebrow and the skin of the forehead, and produces frowning.

**Corrugent.** (*L. corrugo*.) A wrinkler; wrinkling, contracting.

**C. muscle.** A synonym of the *Corrugator supercili*, from its action.

**Cor'sō.** (*Kόρση*.) Same as *Corrē*.

**Corselet.** (*F. corselet*; from old *F. cors*, a body; from *L. corpus*, a body. *G. Brustschild, Bruststück, Vorderleib*.) A term applied to the prothorax, collar, or anterior segment of the trunk of insects, when it is much larger than the other two, and when these latter are joined to the abdomen and seem to form an integral part of it.

Also, the whole thorax of an insect.

**C., fore.** The part of the body of an insect bearing the anterior pair of legs.

**C., hind.** The part bearing the posterior pair of legs and the hind wings.

**C., mid.** The part bearing the middle pair of legs and the fore wings.

**Cor'set.** (Old *F. cors*, a body; from *L. corpus*, a body.) A pair of stays.

**C. of Bras'dor.** See *Bras'dor, corset de*.

**Cor'sican moss.** (*Corsica*.) The *Alsidium helminthochorton*.

**C. worm moss.** The *Alsidium helminthochorton*.

**Corsoi'des.** (*Kόρση*, the hair on the temples; *εἶδος*, likeness.) A synonym of asbestos, from its hair-like appearance.

**Corstor'phine.** Scotland; near Edinburgh. A cold sulphuretted mineral water containing sodium sulphate.

**Cortalon.** The *Senecio vulgaris*.

**Corte de pala.** A name of *Conessi bark*.

**Cortex.** (From Sans. root *krit*, to split. *F. écorce*; *G. Rinde, Schale*.) Bark; the outer rind or covering of a structure or thing.

**C. adstringens brazilien'sis.** (*L. adstringo*, to draw together.) Probably the same as *Barbatimao bark*.

**C. alcorno'co.** See *Alcornoque bark*.

**C. al'ni ni'græ.** (*L. albus*, the alder; *niger*, black.) Same as *Frangula*.

**C. alsto'næ.** See *Alstonia cortex*.

**C. angelinæ.** The bark of the *Andira inermis*, or *Geofræa inermis*, formerly called *Angelina*.

**C. ang'ico.** See *Angica* and *Barbatimao*.

**C. angusturæ ferrugin'cæ.** A synonym of *C. Angustura spuria*.

**C. angusturæ spuria.** (*L. spurtus*, false.) See *Angustura bark, false*.

**C. angusturæ ve'ræ.** (*L. verus*, true.) See *Angustura bark, true*.

**C. anisi stellati.** (*L. anisus*, anise; *stellatus*, star-like.) The bark of *Illicium anisatum*.

**C. antiscorbuticus.** The *Canella alba cortex*, and also the bark of *Drimys Winteri*.

**C. arbu'ti.** The bark of *Arbutus uedo*.

**C. aromat'icus.** The bark of *Drimys Winteri*.

Also, *Canella alba cortex*.

**C. auranti conditus.** (*L. conditus*, part, *condo*, to preserve.) The rind of oranges preserved in sugar. Stomachic.

**C. auranti curassavien'sis.** (*F. écorce de Curaçao*.) The rind of Curassoa oranges, *Aurantia curassorentum*.

**C. auranti dul'cis.** U.S. Ph. See *Aurantii dulcis cortex*.

**C. auranti fructus.** G. Ph. (*L. fructus*, fruit. *G. Fruchtsschale des Pomeranzendbaums*.) The rind of the orange, *Aurantii cortex*.

**C. auranti'ram.** Same as *Aurantii cortex*.

**C. ba'obab.** Same as *Adansonia bark*.

**C. barbatima'o.** See *Barbatimao bark*.

**C. bebeeru.** (*G. Bebeeru* or *Lieberu-rinde*.) The bark of *Nectandra rodai*. It contains tannic acid and bebeerin or nectandrin, and is used in the form of decoction in the treatment of malaria, and as an astringent. See *Nectandra cortex*.

**C. be'la-aye.** See *Bela-aye*.

**C. bibi'ru.** Same as *C. bebeeru*.

**C. buxi.** (*F. écorce de buis*; *G. Buchsbaumrinde*.) Box bark. The bark of the *Buxus sempervirens*.

**C. cabbag'il.** See *Cabbagium*.

**C. ca'il-ce'dræ.** The bark of *Sweetenia senegalensis*.

**C. calotrop'idis.** See *Calotropis cortex*.

**C. canellæ albæ.** See *Canella alba cortex*.

**C. Cardina'lis de Lu'go.** See *Cardinalis de Lugo cortex*.

**C. caryophylla'ta.** (*Καρπόφλλον*, the clove tree. *G. Nelkenzimmt*.) Clove bark; the produce of *Dicoryphium caryophyllatum*. It has a clove-like smell and a cinnamon-like taste. It is used as an aromatic and substitute for cinnamon.

**C. caryophylloid'es.** See *Caryophylloides cortex*.

**C. cascarill'æ.** See *Cascarilla cortex*.

**C. cas'siæ caryophylloid'es.** See *Caryophylloides cortex*.

**C. cas'siæ cinnamo'mi.** Chinese cinnamon.

**C. cas'siæ lign'æ.** See *Cassia lignea*.

**C. castan'eæ equin'æ.** See *Hippocastanum*, U.S. Ph.

**C. cedre'læ.** The bark of *Cedrela febrifuga*. It is bitter and astringent.

**C. cer'e'ri.** (*L. cerebrum*, the brain. *F. substance corticale du cerveau*.) The outer grey substance of the brain. See *Convulsions* and *Gyri*.

**C. chabar'ro.** The same as *Alcornoque bark*.

**C. chacarill'æ.** The *Cascarilla cortex*.

**C. chi'næ.** (*China*, a corruption of *Braz. quina*, bark.) A name given to cinchona bark, as the bark *par excellence*.

**C. chi'næ calisay'æ.** G. Ph. The *Cinchona flava cortex*.

**C. chi'næ convolutus.** (*L. convolutus*, part, of *convolvere*, to roll together.) The same as *C. china regina*.

**C. chi'næ fla'vus.** The *Cinchona flava cortex*.

**C. chi'næ fus'cus.** G. Ph. See *China fusca*.

# CORTEX.

**C. chinæ huanu'co.** Same as *Bark*, *Huanaco*.

**C. chinæ lox'a.** See *Bark*, *Loxa*.

**C. chinæ luteus.** (*L. luteus*, yellowish.) The *Cinchona flavæ* cortex.

**C. chinæ officinalis.** (*L. officinalis*, belonging to a shop. *F. quinquina gris*, or *de Huanuco*; *G. braune* or *grau* *Chinarinde*, *Peruvianische Rinde*.) Grey bark. The same as *C. chinæ fuscus*.

**C. chinæ planus.** (*L. planus*, flat.) The same as the *C. chinæ regius*.

**C. chinæ regius.** (*L. regius*, royal.) The *Cinchona flavæ* cortex.

**C. chinæ ruber.** *G. Ph.* (*L. ruber*, red. *F. quinquina rouge*; *G. rotte* *Chinarinde*.) Red Peruvian bark; the *Cinchona rubræ* cortex.

**C. chinchinæ.** *Cinchona* bark.

**C. cincho'næ flavæ.** See *Cinchona flavæ* cortex.

**C. cincho'næ pallidæ.** See *Cinchona pallidæ* cortex.

**C. cincho'næ rubræ.** See *Cinchona rubræ* cortex.

**C. cinnamo'mi.** (*G. Zimmtinde*.) See *Cinnamomi* cortex.

**C. cinnamo'mi acu'ti.** (*L. acutus*, pointed.) The same as *C. cinnamomi zeylanici*.

**C. cinnamo'mi cas'siæ.** *G. Ph.* The *Cinnamomi chinensis* cortex.

**C. cinnamo'mi chinensis.** (*China*, the country of that name. *F. canelle de la chine*; *G. Zimmt-cassienrinde*, *Chinesischer Zimmt*.) The bark of the *Cinnamomum aromaticum*.

**C. cinnamo'mi zeylan'ici.** *G. Ph.* (*G. Zimmtinde*.) See *Cinnamomi* cortex.

**C. cit'ri fructus.** (*L. fructus*, fruit. *F. epicarpe de citron*; *G. Citronschalen*, *Fruchtschale des Citronenbaumes*.) The rind of the lemon. See *Limonis* cortex.

**C. coccognid'ii.** (*L. coccum*, a berry; *gnidius*, *Gnidium*.) The *Mezerei* cortex.

**C. condurango.** (*G. Kondorebenrinde*.) The bark of an unknown tree belonging to the *Asclepiadaceæ*. See *Condurango*.

**C. cones'si.** The bark of the *Nerium antidysentericum*.

**C. corticis.** (*L. cortex*, bark.) Term applied by Hyrtl to the thin superficial layer of the cortical substance of the kidney, which contains neither capsules nor glomeruli.

**C. cortico'sus.** (*L. corticosus*, full of bark.) A synonym of *Canella* bark.

**C. co'to.** (*G. coto*rinde.) The bark of the Coto tree, an unknown tree growing in Bolivia. See *Coto* bark.

**C. co'to para'.** A species of *Coto* bark imported from Bolivia. It contains *Paracotoin*.

**C. co'to ve'rus.** (*L. verus*, true.) A bark similar to cinchona obtained from Bolivia. It contains *Cotoin*. See *Coto* bark.

**C. cras'sior.** (*L. crassus*, thick.) Same as *Cassia* bark.

**C. Culilawan'i.** (*F. canelle girofle des Moluques*; *G. bittere Zimmtinde*.) See *Culilawan*.

**C. cuspa'riæ.** See *Cuspariæ* cortex.

**C. dentium.** (*L. dens*, a tooth.) The enamel of the teeth.

**C. diospyri.** (*G. virginische Dattelpflaume*.) Persimmon bark. The bark of the *Diospyros virginiana*.

**C. echitis.** The bark of *Alstonia scho-*

*laris*; also called *Echites scholaris*. Same as *Alstonia* cortex.

**C. eleute'riæ.** Same as *Cascarilla* cortex.

**C. eleutheriæ.** Same as *C. leuteriæ*.

**C. eucalyp'ti glob'uli.** (*G. Veilchenbaumrinde*.) The bark of the *Eucalyptus globulus*.

**C. euon'ymi.** See *Euonymus*, U.S. Ph.

**C. fa'bae caca'o.** (*G. Cacaoschalen*.) The test of the cacao bean.

**C. fa'bae caca'o tos'tus.** (*L. tostus*, part. of *torreo*, to roast. *G. geröstete Cacaoschalen*.) Roasted cacao bean tests.

**C. fla'vus.** Same as *Cinchona flavæ* cortex.

**C. frang'ula.** *G. Ph.* See *Frangula*.

**C. frax'ini.** (*F. écorce de frêne*; *G. Eschenrinde*.) The bark of the ash, *Fraxinus excelsior*.

**C. fruc'tus aurant'ii.** *G. Ph.* Same as *Aurantii* cortex, *B. Ph.*

**C. fruc'tus cit'ri.** *G. Ph.* Same as *Limonis* cortex, *B. Ph.*

**C. fruc'tus juglan'dis.** *G. Ph.* (*L. fructus*, fruit. *F. broux de noix*; *G. grüne Walnusschalen*.) The green rind of the fruit of the walnut. Used in the same doses and for the same purposes as the *Folia juglandis*. It contains a form of tannic acid, which colours the salts of iron green; also, a substance resembling pyrogallol.

**C. geoffroy'æ surinamen'sis.** (*Surinam*, a district on the north-east coast of South America. *G. Surinamische Warurinde*.) The bark of the *Geoffroya retusa*.

**C. gnid'ii.** The bark of the *Daphne gnidium*, *Mezereon* bark.

**C. grana'ti fruc'tus.** (*L. fructus*, fruit. *F. écorce de la granade*; *G. Granatapfelschalen*.) The rind of the fruit of the pomegranate. See *Granati fructus* cortex.

**C. grana'ti rad'icis.** (*L. radix*, a root. *F. écorce de la racine du grenadier*; *G. Granatwurzelrinde*.) The bark of the root of the pomegranate tree. See *Granati radicis* cortex.

**C. granato rum.** (*F. écorce de la granade*; *G. Granatapfelschalen*.) The rind of the fruit of the pomegranate. See *Granati fructus* cortex.

**C. hed'eræ ar'boris.** (*L. hederæ*, ivy; *arbor*, a tree. *F. écorce de lierre*; *G. Ephëurinde*.) The bark of the common ivy.

**C. hippocas'tani.** (*F. écorce de marronnier*; *G. Rosskastanienrinde*.) The bark of the horse-chestnut, *Esculus hippocastanum*. See *Hippocastanum*.

**C. hu'ræ brasiliën'sis.** (*G. Brasilianischer Sandbüchsenbaum*.) The bark of the *Hura brasiliensis*. Administered internally, in decoction, for psoriasis, lepra, elephantiasis.

**C. ingæ.** One of the kinds of *Barbatimao* cortex. It is obtained from the *Inga avarementeno*.

**C. jaboran'di.** See *Pilocarpus*.

**C. jamaicën'sis.** The bark of *Achras sapota*.

**C. juglan'dis nu'eum inte'rior.** (*L. nux*, a nut; *interior*, inner.) The putamen or shell of the walnut. It forms one of the constituents of the old *Decoctum pollini*.

**C. juglan'dis nu'eum viridis exte'rior.** (*L. nux*, a nut; *viridis*, green; *exterior*, outer. *F. broux de noix*; *G. grüne Walnusschalen*.) The green shell of the walnut. Same as *C. fructus juglandis*.

**C. la'ricis.** See *Laricis* cortex.

**C. laevis interior.** (*L. larix*, the larch; *interior*, internal. *G. innere Lärchenrinde*.) The bark of *Pinus larix*, or the larch. It contains, in addition to tannic and resinic acids, ethereal oil and larchin, which is identical with abietin and coniferin. It is employed in the form of decoction in bronchial catarrh, cough, and hemorrhage of the urethra. See *Laricis cortex*.

**C. la'vola.** A bark supposed to be that of the *Platanus amarus*.

**C. limonis.** See *Limonis cortex*, B. Ph.

**C. linguae a'vis.** (*L. lingua*, a tongue; *avis*, a bird.) The bark of the ash, *Fraxinus excelsior*.

**C. liriodend'ri.** The bark of *Liriodendron tulipifera*. It contains piperin, ethereal oil, and tannic acid, and is administered internally in the form of pills or powder, in doses of 50 to 60 grains, for ague.

**C. lotauræ.** The bark of *Symplocos racemosa*.

**C. magellan'icus.** The bark of *Drimys Winteri*.

**C. malabath'ri.** The bark of *Cinnamomum samala*, not to be confounded with the *Cortex cassiæ cinnamomæ*, which it far exceeds in activity.

**C. mallico'ril.** (*L. malicorium*, pomegranate rind.) See *Granati fructus cortex*.

**C. margo'sæ.** *Margosa bark*; the bark of *Azadirachta indica*.

**C. massoy.** The bark of *Cinnamomum kiamis*. Hab. New Guinea. It has a smell and flavour like cinnamon; it is beaten into a pulaceous mass with water, and is rubbed on the abdomen to allay pain of the bowels.

**C. mesen'næ.** The same as *C. musen'ne*.

**C. meze'rci.** G. Ph. (*F. écorce de garon* or *sainbois*; *G. Scidelbastrinde*.) Spurge olive bark. The bark of *Daphne mezereum* or *D. gaudii*. See *Meze'rci cortex*.

**C. mone'siæ.** (*F. écorce de monésie* or *écorce de burunhem* or *quarenhem de brésil*; *G. Monstardinde*.) The bark of *Chrysophyllum leucophyllum*. Used externally and internally as an astringent.

**C. monni'niæ polystach'izæ.** The bark of *Monnina polystachia*, a Peruvian plant. It contains saponin and tannin. Used internally as an astringent.

**C. musen'næ.** (*G. Musenna rinde*.) The bark of *Albizia anthelmintica*. It is used as an anthelmintic, in doses of one ounce or more.

**C. nectan'dræ.** See *Nectandra cortex*.

**C. nucis juglan'dis.** Same as *C. juglandis fructus*.

**C. os'seus.** (*L. osseus*, bony.) The Cement of the teeth.

**C. o'vi.** (*L. ovum*, an egg.) The *Decidua reflexa*, from its position in regard to the embryo.

**C. pallidus.** (*L. pallidus*, pale.) See *Cinchonæ pallidæ cortex*.

**C. pa'trum.** (*L. pater*, a father.) Cinchona bark, in reference to the Jesuit priests who introduced it.

**C. perua'nus.** Same as *C. peruvianus*.

**C. peruvia'nus.** (*Peru*.) Cinchona bark, from its place of growth.

**C. pi'cæ vulgaris interior.** (*G. innere Lärchenrinde*; *L. alburnum pini*.) The inner bark of the larch, *Pinus larix*, which is

used in the form of decoction in bronchitis, and when an astringent is required.

**C. poggere'bæ.** Name for the bark of an unknown tree in America; said to be useful in diarrhoea.

**C. pomo'rum auran'tii.** (*L. pomum*, fruit.) The *Aurantii cortex*, B. Ph.

**C. pri'mary.** (*L. prunus*, first.) The first bark formed on a young shoot. It is composed of fundamental tissue.

**C. profu'vil.** (*L. profluvium*, diarrhoea.) The bark of *Wrightia antidysenterica*, from its astringent properties.

**C. pru'ni pa'di.** (*G. Ahlkirschenrinde*.) The bark of *Prunus padus*. It contains a small quantity of tannic acid and amygdalin, hence when macerated with water it yields oil of bitter almonds, containing hydrocyanic acid.

**C. pru'ni sero'tinæ.** The bark of *Cerasus serotina* or *Prunus virginiana*.

**C. pru'ni virginia'næ.** The bark of the *Prunus virginiana*. Used as a remedy in ague and dysentery.

**C. quas'siæ.** (*F. l'écorce de bois amer* de Surinam; *écorce de quassia*; *G. Surinamische Quassierinde*, or *Bitterholzrinde*.) The bark of the *Quassia amara*, or bitter quassia tree, formerly used in infusions, but for which the root is generally substituted as less intensely bitter.

**C. quebra'cho.** The bark of the *Aspidosperma Quebracho*, Fraude, or *Loxopterygium Lorentii*, Grisebach. A tree growing in the Province of Santiago. The bark is used in the same way and for the same purposes as cinchona. It has also recently been recommended by Penzoldt in asthma proceeding from emphysema, and for phthical patients with imperfect respiratory activity, and in dyspnoea. Ten grammes should be macerated for a week in 100 grammes of rectified spirit; then filter and inspissate; dissolve the residue in 20 grammes of water. One or two teaspoonfuls of this solution may be given three daily.

**C. quer'cus.** G. Ph. (*G. Eichenrinde*; *F. écorce de chêne*.) Oak bark. See *Quercus cortex*.

**C. quillay'æ.** The bark of *Quillaya saponaria*.

**C. radi'cis berber'idis.** Same as *Berberis*, U.S. Ph.

**C. radi'cis gossyp'ii.** See *Gossypii radiceis cortex*, U.S. Ph.

**C. radi'cis grana'ti.** G. Ph. See *Granati radiceis cortex*.

**C. re'nis.** (*L. ren*, the kidney.) The cortical substance of the kidney.

**C. rham'ni franguli.** (*G. Faulbaumrinde*.) This is used as a purgative in the form of infusion, and combined with neutral salts and aromatic syrup. See *Frangula*.

**C. rha'tanhæ radi'cis.** (*L. radix*, a root.) Same as *Krameria radix*.

**C. ru'ber.** (*L. ruber*, red.) The *Cinchona rubra cortex*.

**C. sambu'ci.** (*L. sambucus*, the elder. *G. Holbunderinde*.) The bark of the *Sambucus nigra*, the elder tree. It contains an emetic and cathartic principle. A decoction has been used in dropsy.

**C. sambu'ci canadensis.** (*Canada*, the country of that name. *G. canadische Holbunderinde*.) This contains an emetic and cathartic principle. It has been used in albuminuria.

**C. sas'safras.** (G. *Fenchelholz*.) The bark of the root of *Sassafras officinalis*. See *Sassafras radix*.

**C., sec'ondary.** All the tissue formed from the cambium ring on the outside.

**C. simarubæ radi'cis.** (L. *radix*, a root.) The bark of the root of *Simaruba officinalis*.

**C. sin'toc ve'rus.** (L. *verus*, true.) The bark of *Cinnamomum javanicum*, Bl.

**C. soy'midæ.** (Telugu, *soymida*, the name of the tree.) The bark of the *Soymida* or *Swietenia febrifuga*.

**C. striatus dent'ium.** (L. *striatus*, striped; *dens*, a tooth.) The enamel of the teeth.

**C. surre'næ.** A synonym of *C. cedrelæ*.

**C. swiete'niæ senegalen'sis.** (S. *negal*, the country of that name.) The bark of *Khaya senegalensis*, Guill., a tree growing in Gambia and Senegal, from which bebeerin is obtained. It is used as a febrifuge in powder or tincture.

**C. tabernæmontanæ u'tilis.** (L. *utilis*, useful.) A synonym of *A. distantiæ cortex*.

**C. theve'tiæ neriifoliae.** (L. *nerium*, the oleander; *folium*, leaf.) The bark of *Thevetia nerifolia*; it contains a bitter crystalline glycoside, thevetin, which has been employed as a substitute for quinine in the treatment of fevers.

**C. thu'ris.** (L. *thus*, frankincense.) Cas-carilla bark, from its aromatic smell when burnt.

**C. thymelæ'æ.** (Θυμέλαια, the *Daphne gnidium*.) Same as *Mezerei cortex*.

**C. thymia'matis.** (L. *thymiana*, a composition for fumigating, incense.) The portions of the bark of *Styrax calumita* which remain after the expression of storax.

**C. ulmi.** See *Ulm cortex*.

**C. ulmi interior.** (L. *ulmus*, the elm; *interior*, inner. F. *écorce d'orme champêtre*; G. *Ulmrinnde* or *Risterrinde*.) Elm bark, slippery elm bark. See *Ulm cortex*.

**C. unguenta'rius.** (L. *unguentum*, an ointment.) The bark of the slippery elm, *Ulmus fulva*, from its mucilaginous property.

**C. Wintera'nus.** The bark of *Drumys Winteri*. See *Wintera*.

**C. Wintera'nus spu'rius.** (L. *spurius*, false.) A synonym of *Canellæ alba cortex*; because it was often confounded with the true Winter's bark.

**C. Wintera'nus ve'rus.** (L. *verus* true.) Winter's bark, the bark of *Drumys Winteri*. See *Wintera*.

**C. Winte'ri.** See *Wintera*.

**Corti.** An Italian anatomist of the nineteenth century.

**C., ar'ches of.** (G. *Corti'sche Bogen*.) A series of elastic arches, more than 3000 in number, mainly forming the organ of Corti, and placed on the zona arcuata, or second zone, of the membrana basilaris of the cochlea of the ear through its whole length. They are formed by the external and internal rods of Corti, the upper ends of which, being enlarged, touch each other and form an arch.

**C., cells of.** The external hair-cells of the organ of Corti. See *Cells, hair, external*.

**C., fibres of.** (G. *Corti'sche Fasern*.) Same as *C., rods of*.

**C., gan'gion of.** The *Ganglion spirale* of the cochlear nerve.

**C., mem'brane of.** A delicate, trans-

parent membrane, which arises from the whole length of the limbus of the lamina spiralis of the cochlea a little to the outer side of the attachment of the membrane of Reissner; it extends over the organ of Corti, and terminates by a free edge above the external hair-cells. As it crosses the sulcus spiralis and covers the rods of Corti it is somewhat thickened, but is thin at its attachment and its free border; in the latter place it has a reticulated appearance.

**C., or'gan of.** (F. *organe de Corti*; G. *Corti'sches Organ*.) A papillary-looking structure, stretching along the whole length of the canalis cochlearis; it is placed on the zona arcuata of the membrana basilaris, and is covered by the membrane of Corti and the membrana reticulata. It is a sort of tunnel, composed of closely lying arches, the arches of Corti; the two pillars of the arch, external and internal, or rods of Corti, are somewhat apart at the base, and articulate with each other above to form the crown of the arch; the internal pillars or rods outnumber the external ones in the proportion of eight to five. Between the layer of internal rods and the sulcus spiralis lie the internal hair-cells, and on the outer side of the external rods are the external hair-cells, or cells of Corti, with the cells of Deiters arranged among them, and the supporting cells of Hensen on the outer side; and beyond these, stretching as far as the ligamentum spirale are the cells of Claudius, in a single layer. These latter do not strictly form part of the organ of Corti. This complicated arrangement is supposed to be the essential part of the organ of hearing, but its exact use is by no means determined. The organ of Corti is developed from the epiblast cells lining the canalis cochlearis.

**C., pillars of.** (G. *Corti'sche Pfeiler*.) Same as *C., rods of*.

**C., rods of, external.** The outer pillars of the arch of the organ of Corti. They are shorter and stiffer than the inner rods, and are fewer in number, the expanded base is in connection with the extremities of the fasciculi of the zona pectinata of the basilar membrane, and has on its inner surface within the arch a nucleated mass of protoplasm like the inner rod; the body is somewhat smaller than the head and base so that it does not touch its neighbors, it is cylindrical and striated; the head has the shape of a swan's head, the rounded back part fitting into a concavity on the head of one or more of the inner rods; the process analogous to the bill of the bird passes, along with the projecting upper lip of the articulating concavity of the inner rod, to the phalanges of the membrana reticulata; the head is free from striae, and appears to represent the nucleus of the cell from which the rod originated.

**C., rods of, internal.** The inner pillars of the arch of the organ of Corti. They consist of a striated prismatic body, a somewhat expanded base, a granular, sometimes nucleated, head with a concave articulating surface, which, in conjunction with a similar hollow on one or two of its neighbors, receives the head of the external rod, and a neck; they have been likened to the human ulna in form. They lie close to each other, and are more numerous than the external rods, two or more articulating with the latter. The base rests on the inner part of the zona arcuata of the basilar membrane, and on its external surface, within the arch, lying on the membrane, is a nucleated mass of protoplasm.

The articulating surface has a lip, which covers over the head of the external pillar, and joins with its process to assist in forming the membrana reticulata. Both external and internal rods are present only in mammals.

**C., tunnel of.** The canal of the organ of Corti formed by the apposition of the arches of Corti.

**Cortical.** (L. *cortex*, bark. F. *cortical*; G. *rindig*, *rindenartig*.) Applied to that which covers or invests a part, like the bark of a tree; bark-like.

**C. arch.** That part of the cortical substance of the kidney which arches over the base of the pyramids of Malpighi and connects one column of Bertin with another.

**C. cat'aract.** See *Cataract*, *cortical*.

**C. cen'tres.** See *Centre*, *cortical*.

**C. columns.** Same as *Bertin*, *columns of*.

**C. dysarthria.** (Δύς, difficult; ἀρθρον, a joint, an articulation.) Disturbance of the power of articulating words, owing to lesion of the cortex of the brain.

**C. epilepsy.** See *Epilepsy*, *cortical*.

**C. integument.** (L. *integumentum*, a covering.) The inner layer of the false bark of an Endogen.

**C. layer.** The layer of consistent sarcode which surrounds the softer and central mass of sarcode forming the body of the *Infusoria*.

**C. mem'brane.** The *Decidua reflexa*.

**C. paralysis.** See *Paralysis*, *cortical*.

**C. portion of adrenals.** The outer, lighter coloured portion of the suprarenal capsules or adrenals.

**C. sheath.** The whole of the primary bast bundles at the point of junction of the primary and secondary cortex.

**C. substance of brain.** See *Cortex cerebri*.

**C. substance of kidney.** The outer portion of the kidney. It is soft, granular, and of a reddish-brown colour, and contains the Malpighian bodies and the tubuli uriniferi.

**C. substance of teeth.** The cement of the teeth.

**C. system.** A term, in Botany, applied to the several layers of the bark.

**Corticatæ.** (L. *cortex*.) An Order of the Class *Porifera*, Subkingdom *Polystomata*, having an outer cortex containing spiculiferous corpuscles and an inner layer of spongiolin threads and siliceous needles.

**Corticate.** (L. *cortex*.) Having bark; covered with, or like, bark.

**Corticiferous.** (L. *cortex*; *fero*, to bear. F. *corticifère*; G. *rindentragend*.) Bearing, or having, bark.

**Corticiform.** (L. *cortex*; *forma*, likeness. F. *corticiforme*; G. *rindenformig*.) Appearing like bark.

**Corticin.** (L. *cortex*.) A yellow, amorphous, tasteless, inodorous substance found by Braconnot in the bark of the *Populus tremula*. It is slightly soluble in water, easily in alcohol and acetic acid.

**Corticina.** Same as *Corticin*.

**Corticogenous.** (L. *cortex*; *geno*, to beget.) Producing bark.

**C. zone.** The second zone, immediately underneath the first or dermatogenous zone, seen in the section of a very young plant, from which the true bark proceeds. It consists of several

concentric layers of irregularly polygonal cells. Also called *Periblem*.

**Corticulous.** (L. *cortex*; *colo*, to inhabit.) Living or growing on bark.

**Corticoso.** (L. *cortex*. F. *corticueux*; G. *rindig*.) Having much bark, or of the quality of bark or rind.

**Corticous.** Same as *Corticose*.

**Corticula.** (L. dim. of *cortex*. F. *zeste*.) The epidermis of the citron.

Also, applied to the dry, membranous and coriaceous partition of the interior of a nut.

**Cortina.** (L. *cortina*, a curtain. F. *cortine*; G. *Muschette*, *Kessel*.) A kind of filamentous fringe bordering the pileus of many mushrooms, consisting of the *debris* of the torn volva.

**Cortina'rius.** Same as *Cortinate*.

**Cortina'rius.** (L. *cortina*.) A Genus of the Family *Agaricini*, Suborder *Hymenogymetes*, Order *Basidiomycetes*. Veil like a cobweb, spores rust-coloured.

**C. castaneus**, Fr. (Κάστανου, a chestnut.) The chestnut cortinari. Pileus fleshy, corvex, then expanded, of a shining chestnut colour, stem cartilaginous, violaceous; gills ventricose, violet. In woods and gardens. Esculent.

**C. cinnamo'meus**, Fr. Pileus rather flat, cinnamon brown; stem hollow, yellowish. In woods. Eaten in Bohemia.

**C. cinereo-viola'ceus**, Fr. (L. *cinereus*, ash-coloured.) Pileus brown, violet, then amber brown; stem knotty, club-shaped. In autumn, amongst deciduous trees. Esculent.

**C. sanguineus**, Fr. (L. *sanguineus*, bloody.) Pileus blood-red, with red flesh. In fir woods in autumn. Said to be poisonous.

**C. viola'ceus**, Fr. Violet cobweb-mushroom. Dark violet; pileus fleshy; stem bulbous, spongy, villous; a cobweb-like structure of a reddish colour stretches from the edge of the pileus to the stem. Excellent eating.

**Cortinate.** (L. *cortina*, a curtain.) In Botany, cobweb-like in texture.

**Cortusa.** (*Cortusi*, a botanist of Padua.) A Genus of the Nat. Order *Primulaceae*.

Also, an old name for the *Sanicula europea*.

**C. america'na.** The *Heuchera cortusa*.

**C. Mathi'oli**, Linn. Bear's ear sanicle. An anodyne astringent and expectorant. Used in rheumatism and headache, and as a vulnerary.

**Cortusales.** (*Cortusa*.) An alliance of perigenous Exogens with dichlamydeous, or occasionally, monochlamydeous flowers, a free central placenta, and an embryo lying among a large quantity of albumen. It includes *Hydrophyllaceae*, *Plumbaginaceae*, *Plantaginaceae*, *Primulaceae*, and *Myrsinaceae*.

**Co'ru.** Name of a tree growing in China, Japan, Malacca, and Bengal. The bark of its root affords a milky juice used against diarrhoea and dysentery; the bark of the stem is employed with the same intention. Supposed to be the *Tournefortia ciliata*, or the *Verum antidysentericum*.

**C. cana'rica.** (Canary islands.) Same as *Coru*.

**Coruo'va.** See *Coroa*.

**Coruscation.** (L. *corusco*, to glitter. F. *coruscation*; G. *Glanz*, *Schein*, *Schimmern*, *Blinken*.) A flash of lightning, or apparent sparkling fire; a glittering.

# CORVISARTIA—CORYMBOUS.

Also, the flashes of light seen in certain eye diseases.

**Corvisart'ia.** (*Corvisart*, a French physician.) A Genus of the Nat. Order *Compositæ*.

**C. helen'ium**, Merat and Cass. Same as *Indula helenium*.

**Corvus.** (*L. corvus*, a crow.) A Genus of the Family *Corvidæ*, Group *Dentirostres*, Order *Passeres*. The crows.

**C. coro'nē**, S. (*Κορώνη*, a crow. *F. cor-beau*.) The common crow. The brain was used in epilepsy, the dung in toothache, and the eggs to cause abortion.

**C. frugil'egus**, Linn. (*L. frux*, fruit; *lego*, to gather. *F. freux*; *G. Saatkrahe*.) The rook. Used as food.

**Corybantism.** (*Κορυβαντισμός*, purification by the rites of the Corybantes, or priests of Cybele, accompanied by wild music and frantic dancing.) An old name for a form of insanity accompanied by fantastic visions and sleeplessness.

**Corycomachia.** (*Κόρυκος*, a leathern sack; *μαχη*, a contest.) The use of the *Coryceus*.

**Corycus.** (*Κόρυκος*, a leathern sack.) A term belonging to the ancient gymnasium; the corycus was a leathern sack filled with fig seeds, flour, or sand, according to the strength of the person using it. It was suspended by a cord at the height of the navel, was pushed away by a blow of the hands, and was caught by the hands in the backward swing, or allowed to strike against the body.

**Corydales.** (*Κόρυς*, a helmet. *G. Korymbolomen*.) A Linn. Order comprising plants which have flowers somewhat resembling a helmet.

**Corydalin.**  $C_{18}H_{19}NO_4$ . A whitish crystalline substance discovered in the *Corydalis bulbosa* and *C. fabacea*. It is soluble in alcohol, slightly in water; coloured dark red by sulphuric acid. It is bitter, and has been used as an antiperiodic.

**Coryd'aline.** Resembling the flower of the *Corydalis*.

**Corydalis.** (*Κορυδαλīs*, the crested lark. *G. Lerchensporn*.) A Genus of the Nat. Order *Fumariaceæ*; so called because the spur of the flower resembles that of the lark.

Also, turkey corn, turkey pea, squirrel corn, the tubers of *Dicentra canadensis*. It contains corydalin and fumaric acid, with a yellow bitter extractive and an acrid resin. It has been used as a tonic, diuretic, and alterative in syphilitic, scrofulous, and cutaneous affections, and as an antiperiodic in intermittent fever.

**C. bulbo'sa**, De Cand. (*L. bulbosus*, bulbous. *F. corydale à racine solide*.) This plant has a tuber, which is somewhat aromatic, extremely bitter, slightly astringent, and acrid, and was formerly in use as an anthelminthic.

**C. canadensis.** The *Dicentra canadensis*.

**C. capno'id'es**, Pers. (*Καπνοειδής*, smoke-coloured.) A plant with similar properties to *C. bulbosa*.

**C. ca'va.** (*L. cavus*, hollow.) The *C. tuberosa*.

**C. faba'cea**, Pers. (*L. faba*, a bean.) Hab. North Europe. Tubers not hollow. Used as *C. tuberosa*.

**C. formo'sa**, Pursh. (*L. formosus*, beautiful.) The *Dicentra eximia*, De Cand.

**C. govania'na**, Wall. Hab. Northern India. Contains *Corydalin*.

**C., solid-root'ed.** The *C. bulbosa*.

**C. tubero'sa**, De Cand. (*L. tuber*, a swelling. *F. fumeterre bulbosa*, *corydale à racine creusé*; *G. Hohlcarzel*, *Hohncarzel*.) Hab. South Europe. Tubers hollow when old, bitter, acrid. Applied to indolent tumours. Used as *Corydalis*.

**C., yellow.** The *C. capnoides*.

**Coryla'ceæ.** (*Corylus*.) A Nat. Order of monochlamydeous angiosperms of the Alliance *Quernales*, or a Family of the Order *Amnataceæ*; having a two- or more celled ovary, and pendulous or peltate ovules.

**Corylus.** (*L. corylus*, a filbert tree. *F. coudrier*, *noisetier*; *G. Haselstrauch*, *Haselstaude*.) A Genus of the Nat. Order *Coryla'ceæ*.

**C. america'na**, Walt. Hab. North America. Used as *C. avellana*.

**C. avella'na**, Linn. (*L. avellanus*, belonging to Avella. *F. noisetier*; *G. Nussbaum*.) The hazel-nut tree. The nuts, which are excellent, contain a nutritious oil, the wood also yields an oil. Used against toothache, and as an anthelminthic.

**C. gran'dis.** (*L. grandis*, great.) The cob-nut, a variety of *C. avellana*.

**C. rostra'ta**, Ait. (*L. rostratus*, beaked.) Beaked hazel. Hab. North America. The short thick bristles covering the involucre have been given as an anthelminthic, like mucuna.

**C. tubulo'sa.** (*L. tubulus*, a small pipe.) The filbert, a variety of *C. avellana*.

**Corymb.** (*Κόρυμβος*, a cluster of flowers. *F. corymbe*; *G. Elenstrauss*, *Schirmtraube*, *Poldentraube*, *Blumenbüschel*.) A kind of raceme, the partial flower stalks or pedicels of which are gradually longer on the common stalk or rachis, so that all the flowers are on a level at the top. It is a form of botryose inflorescence.

**C., compound.** A corymb the secondary peduncles of which are ramified, as in the tansy, *Tanacetum vulgare*.

**Corymbethra.** (*Κορυμβήθρα*.) The ivy, *Hedera helix*, from its clustered flowers.

**Corymb'iate.** (Same etymon. *G. doldentraubig*.) Possessed of a *Corymb*.

**Corymbif'eræ.** (*L. corymbus*; *fero*, to bear.) A Tribe, according to Jussieu, of the Nat. Order *Compositæ*, having tubular and perfect florets, or tubular and perfect florets in the disc, and tubular and pistilliferous or ligulate florets in the ray.

**Corymbif'erous.** (*L. corymbus*, from *κόρυμβος*, a cluster of fruit, a corymb; *fero*, to bear. *F. corymbifère*; *G. Doldentraubentragend*.) Bearing or having corymbs.

**Corymbifloral.** (*L. corymbus*; *flos*, a flower. *F. corymbiflore*; *G. doldentraubenblüthig*.) Having flowers in corymbs.

**Corymb'iform.** (*L. corymbus*; *forma*, likeness. *F. corymbiforme*; *G. doldentraubenförmig*.) Having the appearance of corymbs.

**Corymbiph'orous.** (*Κόρυμβος*, a cluster; *φορέω*, to bear.) Same as *Corymbif'erous*.

**Corymboid.** (*Κόρυμβος*, a cluster; *είδος*, likeness. *F. corymboides*; *G. doldentraubenähnlich*.) Resembling a corymb.

**Corymb'ose.** Same as *Corymbous*.

**C. small'pox.** See *Variola corymbosa*.

**Corymb'ous.** (*L. corymbus*. *F. corym-*

*boux*; *G. d'Alentraubig.*) Having, or like, a corymb.

**Corymbulose.** (Mod. *L. corymbulus*, dim. of *corymbus*. *F. corymbuleux.*) Having flowers disposed in little corymbes.

**Corymbulous.** Same as *Corymbulose*.

**Corymbus.** See *Corymb*.

**Corynē.** (Κορύν, a club.) The penis.

**Corynidia.** (Κορύν, a club.) Term applied to the processes containing spiral threads in ferns.

**Corypha.** (Κορυφή, the head. *G. Schirm-palmē.*) A genus of the Nat. Order *Palmae*.

**C. cerifera.** Linn. (*L. cera*, wax; *fero*, to bear.) Caruaiba palm. Yields Caruaiba wax.

**C. rotundifolia.** Lam. (*L. rotundus*, round; *folium*, a leaf.) A species which yields a kind of sago.

**C. umbraculifera.** Linn. (*L. umbraculum*, an umbrella; *fero*, to bear.) The talipot or fan palm, native of Ceylon and Malabar, celebrated for the immense size of its leaves; the pith of the young plant is made into cakes and used as bread.

**Coryphē.** (Κορυφή.) Old term, used by Galen, *Introd. c. 10*, for the vertex of the head; also for the extremities of the fingers, and the apex of the heart.

Also, the acme of a disease.

**C. cordis.** (*L. cor*, the heart.) The apex of the heart.

**Coryphophyte.** (Κορυφή, the summit; *φυτόν*, a plant. *F. coryphophyte*; *G. Höchstpflanze.*) Name by Necker for a plant the stamens of which, few in number, are inserted at the summit of the calyx.

**Corys.** (Κόρυς, a helmet.) The vertex of the head.

**Corytophyte.** (Κόρυς, a helmet; *φυτόν*, a plant. *F. corytophyte*; *G. Helmtpflanze.*) Name by Necker for a plant the upper part of the corolla of which is like a helmet.

**Coryza.** (Κόρυζα, from *κόρυς*, the head. *F. coryza*; *G. Schnupfen.*) A cold in the head, or catarrh of the mucous membrane lining the nose, and the maxillary and frontal sinuses, accompanied by a limpid,ropy, mucous defluxion from the nostrils, with sense of fullness of the nose and over the frontal sinuses, and sneezing.

**C. blennorrhœica.** (Βλεννώδης, mucus; *ρῶα*, a flow. *G. eiteriger Nasencatarrh.*) Suppurative nasal catarrh, such as is seen in the nasal catarrh of new-born children, and in that which is symptomatic of scarlet fever, variola, measles, and syphilis.

**C. caseosa.** (*L. caseosus*, cheesy.) A name given by Duplay to a form of coryza, characterised by the formation and accumulation in the nasal cavities of a substance resembling the caseous contents of cysts, sometimes to such an extent as to produce loss of smell and deformity of the face.

**C., catarrhal.** (Κατάρρεος, a running down.) An ordinary coryza or cold in the head.

**C. chronica.** (Χρονικός, relating to time.) A term for the milder cases of ozæna.

**C. diphtheritica.** Same as *Diphtheria*, nasal.

**C. entonica.** (Έντονος, vehement.) A synonym of *Ozæna*.

Also, a term for the acute inflammatory forms of coryza.

**C. farcimino'sa.** (*L. farciminum*, farey.) The coryza and ulceration of nasal mucous membrane occurring in the course of glanders; in the variety called farey, there is no nasal complication.

**C., infantile.** Same as *C. neonatorum*.

**C. maligna.** (*L. malignus*, of an evil nature.) A synonym of *Ozæna*; and also of nasal diphtheria.

**C. neonatorum.** (Mod. *L. neonatus*, new born.) Coryza occurring during the first few days after birth, and believed to arise, like conjunctivitis neonatorum, from infection of the nasal mucous membrane with the impure secretions of the mother.

**C. nervosa.** (*L. nervosus*, nervous.) The form which appears to depend on disturbance of the nerves rather than inflammation of the mucous membrane; such is that which sometimes occurs as a substitute for, or a precedent of, asthma.

**C. of iodism.** A condition consequent on the ingestion of iodine or potassium iodide, characterised by copious secretion of watery mucus, moderate redness, and slight swelling of the nasal mucous membrane. There is usually also some frontal headache.

**C. ozæno'sa.** Same as *Ozæna*.

**C. pseudomembrano'sa.** (Ψευδής, false; *L. membrana*, a membrane.) Coryza accompanied by the formation of false membranes, which are said to differ from the diphtheritic in that they are less fibrinous, and contain a greater amount of leucocytes and of amorphous granular matter.

**C. purulen'ta.** (*L. purulentus*, mattery.) A synonym of *Ozæna*.

**C. scarlatino'sa.** The inflammation of Schneiderian membrane, and the purulent discharge from the nose that accompany severe cases of scarlet fever.

**C. superac'ta.** (*L. super*, above; *actus*, part, of *ago*, to lead, to excite.) Coryza produced by snuff or other nasal irritants.

**C. symptomat'ica.** (Συμπτωματικός, casual.) The coryza which accompanies other diseases, such as measles and scarlet fever.

**C. syphilit'ica.** The inflammation of the nasal mucous membrane in infants suffering from congenital syphilis; also called *Snuffles*.

**C. ulcero'sa.** (*L. ulcus*, an ulcer.) A synonym of *Ozæna*.

**C. virulen'ta.** (*L. virulentus*, poisonous.) A synonym of *Ozæna*.

**Coryza'rium.** (Κόρυζα, a cold in the head.) A remedy, such as carbolic acid, which is smelt or inhaled at the commencement of a cold or catarrh for its cure.

**Cos.** The Island of Cos, formerly called Merope, and now Stanclio, at the mouth of the Gulf of Halicarnassus, near the south-west corner of Asia Minor; renowned for its excellent wine, and as the birthplace of Hippocrates. Here are four thermal springs. One issues from the foot of a small hill, a few paces from the sea, and is ferruginous. It is called *Burina* by the natives, and the water is named *Aqua rossa* or *acidula*. Less than a quarter of a mile from this are two sulphuretted springs. These are not constant, and an interruption portends an earthquake. The place is called *Burkano*, a corruption of *Vulcano*. To the north of the chief town is a place called *Santa Marina*, where is a saline spring, the *Aque d'Hippocrates*. The mineral waters of this island

deserve more attention than they at present receive.

Also (*L. cos*, akin to Sans. *cō*, to sharpen), a whetstone.

**C. lettuce.** A variety of the *Lactuca sativa*, brought originally from the island of *Cos*.

**C. medica.** (*L. medicus*, medical.) A stone slab for preparing ointments upon (Gr. *ἰκόνι*); mentioned by Galen, *de C. M. sec. Loc.* iv, 4.

**C., school of.** A name given to the school whence Hippocrates arose, and which adopted his teachings. These were characterised by the doctrine of crasis, which consists in the accurate constitution of the four fundamental humours: blood, bile, black bile, and phlegm; by the doctrine of coction, which, by the aid of the natural heat, transforms the humours one into another, and, by the aid of morbid heat, brings to maturity vicious humours; by the doctrine of crisis, which eliminated the concocted humours; and by the doctrine of prognosis, which, founded on crasis, coction, and crisis, assumes to foretell the progress of diseases, at least of those which are acute. It is this matter of prognosis which distinguishes them from the School of Cnidus. Their anatomy, and, consequently, their physiology, was little advanced; they did not know of the circulation of the blood, thinking that the arteries were full of air; they took the brain for a gland, and were ignorant of the functions of nerves, which they confounded with the tendons. But they were handy in surgery, especially in the treatment of fractures and dislocations. (Littre and Robin.)

**Coscina.** (*Κόσκινον*, a sieve.) A sieve for pharmaceutical purposes.

**Coscinismus.** (*Κόσκινον*, a sieve.) A pharmaceutical synonym of sifting.

**Coscinium.** (*Κόσκινον*, a sieve.) A Genus of the Nat. Order *Menispermaceæ*.

**C. fenestratum.** Colebr. (*L. fenestra*, a window.) Womivul, Venivel, tree turneric. A plant of Ceylon, employed as a tonic and diuretic. The wood contains heberin, and is known as Calumba wood and false Calumba root.

**C. indicum.** (*L. indicus*, Indian.) The wood and bark of this plant are regarded as furnishing, in infusion, an excellent stomachic.

**Cosculia.** Old name for the berries or grains of kermes. (Quincy.) Properly *Cusculia*.

**Cosentient.** (*L. co*, together; *sentio*, to feel.) Feeling or perceiving together.

**Cosme, Frère.** A name of Jean Basseillac, a French surgeon, born 1703, died 1781. An arsenical paste, an arsenical powder, and a cystotome, are named after him.

**Cosmet.** Old name for antimony. (Quincy.)

**Cosmetics.** (*Κοσμητικός*, from *κοσμέω*, to adorn, to embellish. *F. cosmétique*; *G. Schönheitsmittel*.) Substances which are supposed to beautify the skin. They usually contain oxides of lead, bismuth, mercury, or arsenic.

**Cosmibuena.** A Genus of the Nat. Order *Rubiacea*.

**C. hexandra.** The *Buena hexandra*, Rohl.

**C. obtusifolia.** The *Buena obtusifolia*.

**Cosmic.** (*Κόσμος*, the world.) Relating to the universe or the world.

**C. disease.** A synonym of *Syphilis*, from the universality of its prevalence.

**Cosmocephalus.** (*Κόσμος*, the world;

*κεφαλή*, the head.) A sexually mature Genus of the Order *Nematoda*, Class *Nematelmintha*.

**C. Diesingii**, Molin. (*Diesing*, a naturalist.) A species found in the oesophagus of *Larus capistranus*.

**C. papillosus**, Molin. (*L. papilla*, a small pimple.) A species found in the stomach of *Larus ridibundus*.

**Cosmogno'sis.** (*Κόσμος*, the world; *γνῶσις*, knowledge.) The instinct which teaches animals the right time for migration, and the fitting place to which to go.

**Cos'molin.** (*Κόσμος*; *L. oleum*, oil.) A name of purified solid paraffin.

**Cosmos.** (*Κόσμος*.) The universe, especially in relation to its natural order.

An old term, applied by Hippocrates, *de Morb. Mal.* xlii, 13, to the order and series of critical days.

**Cos'mo-tellu'rian influences.** (*Κόσμος*, the world; *L. tellus*, the earth.) Conditions, celestial and terrestrial, such as eclipses, stellar influences, the appearance of comets, the occurrence of volcanic eruptions, cyclones, earthquakes, and the like, which were formerly supposed to affect the constitution and to cause or modify the course of various diseases.

**Cos'sack.** The inhabitants of some of the southern steppes of Russia.

**C.'s asparagus.** The *Typha angustifolia*.

**Cos'si.** The larvæ of the *Cossus ligniperda*.

**Cos'sin.**  $C_3H_{35}O_{10}$ . An indifferent crystallisable constituent of kousoo. It is the active agent in the destructive power of that drug on worms.

**Cos'sis.** Old name for a little tubercle in the face, like the head of a worm.

**Cos'sum.** Old name for a malignant ulcer of the nose. (Paracelsus.)

**Cossus.** (*L. cossus*, the goat-moth larva.) A Genus of the Group *Bombycinae*, Suborder *Heterocera*, Order *Lepidoptera*.

**C. ligniperda**, Fabr. (*L. lignum*, wood; *perdo*, to destroy.) The goat moth. The larvæ live in the trunks of trees; they have a most offensive smell, but they were considered a great delicacy by the ancients.

**Costa.** (*L. costa*, a rib. *F. côte*; *G. Rippe*.) In Biology, a rib, or a rib-like structure such as may occur on a coral or a shell.

In Entomology, the vein next to the anterior margin of the wing.

In Botany, the tapering nerve or vein extending from the base to the apex of a leaf. Also, called *Midrib*.

**C. her'ba.** (*L. herba*, springing grass.) The *Hypochaeris maculata*.

**C. me'dia.** (*L. medius*, middle. *G. mittelrippe*.) The midrib or central vein of a leaf.

**C. pulmona'ria.** The *Hypochaeris maculata*, or broad-leaved Hungarian hawk-weed.

**Costæ.** Plural or genitive singular of *Costa*.

**C. capitulum.** (*L. capitulum*, a small head.) The head of a rib.

**C. fluctuan'tes.** (*L. fluctuo*, to move to and fro.) The floating ribs.

**C. interme'diæ.** (*L. intermedius*, that which is between.) Cartilaginous or semiosseous segments between the vertebral and sternal ribs in lizards.

# COSTAL—COSTOSTERNAL.

**C. mendo'sæ.** (L. *men losus*, false.) The false ribs.

**C. no'thæ.** (L. *nothus*, spurious.) The false ribs.

**C. prima'riæ.** (L. *primus*, first. G. *Hauptrippen*.) Primary ribs or costæ; such as are seen in the fruit of Umbellifers.

**C. secunda'riæ.** (L. *secundus*, second. G. *Nebenrippen*.) Secondary ribs; such as are sometimes seen in the fruit of Umbellifers.

**C. spuria.** (L. *spurius*, false. G. *falsche Rippen*.) The false ribs.

**C. verae.** (L. *verus*, true. G. *echte Rippen*.) The true ribs.

**Costal.** (L. *costa*, a rib. F. *costal*.) Of, or belonging to, a rib, or to the ribs.

**C. angle.** The angle formed by the anterior edge of the line of cartilages of the false ribs and the anterior middle line; that of the left side is slightly the more acute. The costal angle becomes more obtuse when the lung is increased in size by rapid infiltration, and becomes more acute in chronic pneumonia and diseases reducing the bulk of the lung.

**C. cartilages.** (F. *cartilages costaux*; G. *Rippenknorpel*.) The anterior or ventral cartilaginous prolongations of the ribs, twelve in number. The seven upper or anterior are attached by their outer or dorsal end to the ribs, and by their inner or ventral end to the sternum; the eighth, ninth, and tenth costal cartilages curve upwards towards their inner end, and each is attached to the cartilage above it; the eleventh and twelfth tip the ends of the floating ribs, and are unattached.

**C. nerves.** (F. *nervi costaux*.) See *Inter-costal nerves*.

**C. plates.** The expanded rib-ends in Chelonians.

**C. pleu'ra.** See *Pleura, costal*.

**C. respiration.** The form of respiration normal to the human female, in which the breathing movements are chiefly thoracic. It may be seen in man as the result of disease.

**Costalgia.** (L. *costa*; *άλγος*, pain.) Inter-costal neuralgia.

**Costalnerved.** (L. *costa*; *nervus*, a nerve.) In Botany, with nerves or veins springing from a costa or midrib.

**Costate.** (L. *costa*, a rib. F. *costé*; G. *geippt*.) Having ribs, or the appearance of ribs; ribbed.

In Botany, a leaf having a single rib or Costa.

**Costated.** Same as *Costate*.

**Costa'to-venose.** (L. *costa*; *vena*, a vein.) In Botany, with veins or nerves springing from a costa or midrib.

**Costebelle.** A suburb of Hyères, having a milder and softer air.

**Costellate.** (Dim. from L. *costa*, a rib.) In Botany, applied to a finely ribbed or veined leaf.

**Coster, Ja'ques.** A French surgeon, born at Châperly, in the Département du Haute Savoie, in 1795; died in Paris in 1868.

**C's paste.** One hundred and twenty grains of iodine dissolved in a fluid ounce of colourless oil of tar. Painted with a camel-hair brush on the skin in ringworm.

**Costiform.** (L. *costa*, a rib; *forma*, shape.) Having the shape of a rib.

**C. apoph'ysis.** (*Ἀποφύσις*, an offshoot.) The anterior of the two tubercles constituting the bifid extremity of the transverse process of a cer-

vical vertebra, because it is the representative of a rib.

**Cost'ive.** (F. *constipé*; from L. *constipo*, to constipate.) Suffering from *Costiveness*.

**Costiveness.** (Same etymon.) The condition in which the faeces are hard and unduly retained in the intestines.

**Cost'mary.** (L. *costus*, an oriental aromatic plant; *amyrus*, bitter; or St. Mary Magdalene.) The *Balsamita suaveolens*.

**Costo-.** (L. *costa*, a rib.) This word, used as a prefix in compound names, denotes connection with, or origin from, a rib or ribs.

**Costoabdom'inal.** (L. *costa*; *abdomen*.) Relating to the ribs and abdomen.

**C. mus'cle.** The external oblique muscle.

**Costocentral.** (L. *costa*; *centrum*, a centre.) Relating to the ribs and the centrum or body of a vertebra.

**C. articula'tions.** Same as *Costovertebral articulations*.

**Costochon'dral.** (L. *costa*; *χόνδρος*, cartilage.) Relating to the ribs and their cartilages.

**C. articula'tion.** The connection between the ribs and the costal cartilages. It consists of a depression on the anterior or ventral end of the rib, into which the extremity of the costal cartilage is received and retained by extension of the periosteum one to another.

**Costoclavic'ular.** (L. *costa*; *clavicula*.) Relating to the ribs and the clavicle.

**C. ligament.** (F. *ligament costo-claviculaire*.) A strong, broad ligament connecting the upper surface of the sternal end of the first costal cartilage, with a rough depression on the under surface of the sternal end of the clavicle.

**C. muscle.** Chaussier's term for the subclavius muscle.

**Costocolic.** (L. *costa*; *colon*.) Relating to the ribs and the colon.

**C. ligament.** A fold of peritoneum extending from the diaphragm, opposite the tenth or eleventh rib, to the splenic flexure of the colon.

**Costocor'acoid.** (L. *costa*; *coracoid* process.) Relating to the ribs and the coracoid process.

**C. ligament.** The same as *C. membrane*.

**C. membrane.** A membranous band extending between the clavicle above and the ribs and coracoid process below and externally. It partially invests the subclavius muscle. It is prolonged downwards over the axillary vessels to the fascia on the coracobrachialis muscle. It is perforated by the acromial thoracic artery and the anterior thoracic nerves.

**C. mus'cle.** (F. *costocoracoidien*, Chaussier.) Chaussier's term for the pectoralis minor.

**Costohyo'idæus.** (L. *costa*; *hyoid* bone.) The Omohyoid muscle.

**Costoinferior respiration.** See *Respiration, costoinferior*.

**Costopub'ic.** (L. *costa*; *pubes*, the bone of that name.) Relating to the ribs and pubis.

**C. muscle.** (F. *costopubien*, Portal.) The rectus abdominis muscle.

**Costoscapular.** (L. *costa*; *scapula*.) Relating to the ribs and the scapula.

**C. muscle.** (F. *costoscapulaire*, Chaussier.) Chaussier's term for the serratus magnus muscle.

**Costostern'al.** (L. *costa*; *sternum*.) Relating to the ribs and the sternum.

**C. articulations.** (L. *articulum*, a joint.) The articulations between the cartilages of the true ribs and the sternum.

**C. ligament, anterior.** A broad thin band of ligament, radiating from the anterior surface of the inner extremity of the costal cartilage of each true rib to the sternum. These ligaments unite with their fellows and with the tendinous origin of the pectoralis major to form a thick membrane, which covers the anterior face of the sternum.

**C. ligament, posterior.** A layer of thin fibres, radiating from the posterior surface of the inner end of the costal cartilage of each true rib to posterior surface of the sternum.

**Costosuperior respiration.** See *Respiration, costosuperior*.

**Costothoracic.** (L. *costa*; *thorax*, the chest.) Relating to the ribs and the anterior part of the chest.

**C. artery.** The inferior thoracic artery.

**Costotome.** (L. *costa*; Gr. *τομή*, section.) Large curved cutting scissors, with one blade concave and the other large and convex. Used for cutting through the ribs and other bones.

**Costotracheal.** (L. *costa*; Gr. *τράχηλος*, the neck.) Relating to the ribs and the neck.

**C. muscle.** Chaussier's term for the anterior and posterior scaleni muscles.

**Costotransversal.** (L. *costa*; *transverse* process.) Relating to the ribs and the transverse processes of the vertebrae.

**Costotransverse.** Same as *Costotransversal*.

**C. articulations.** The articulations between the tuberosities of the ribs and the transverse processes of the vertebrae; they possess a synovial membrane.

**C. ligament, anterior.** A broad strong ligament stretching upwards and outwards from the crest of the neck of each rib, except the first and last, to the lower border of the transverse process of the vertebra immediately above.

**C. ligament, interosseous.** (L. *inter*, between; *os*, a bone.) The *C. ligament, middle*.

**C. ligament, middle.** The short, strong ligament attaching the rough surface on the posterior part of the neck of each rib to the front of the transverse process of the adjacent vertebra.

**C. ligament, posterior.** A strong, short ligament between the tubercle of each rib and the transverse process of the adjacent vertebra.

**Costovertebral.** (L. *costa*; *vertebra*.) Relating to the ribs and the vertebrae.

**C. articulations.** The articulations between the heads of the ribs and the vertebrae; they possess a thin capsular ligament.

**C. ligament, anterior.** A ligament arising from the anterior part of the head of each rib and dividing into three bundles, the middle of which is attached to the intervertebral disc, and the two others to the vertebra above and below.

**C. ligament, interarticular.** (L. *inter*, between; *articulus*, a joint.) A short band of fibres within the costovertebral articulation attaching the crest or the head of the rib to the intervertebral disc.

**C. stellate.** (L. *stella*, a star.) The *C. ligament anterior*, from its shape.

**Costoxiphoid.** (L. *costa*; *xiphoid* car-

tilage.) Relating to the rib and the xiphoid cartilage or metasternum.

**C. articulation.** The articulation between the last true rib, the seventh, and the xiphoid cartilage.

**C. ligament.** (F. *ligament costoxiphoidien*.) A thin fasciculus of fibres connecting the cartilage of the seventh and sometimes the sixth rib with the xiphoid cartilage.

**Costula.** (Dim. of L. *costa*.) A little rib.

**Costulate.** Same as *Costulose*.

**Costulose.** (*Costula*.) Applied to a shell covered with longitudinal prominences.

**Costus.** (Κόστος.) The costus of the ancients is the root of *Aucklandia costus*, Falconer, *Aplotaxis auriculata*, or *A. lappa*, a plant inhabiting the moist open slopes surrounding the Valley of Cashmere. The roots have a strong aromatic pungent odour, are regarded as aphrodisiac, and are burnt as incense in temples.

At one time it was thought to be the product of *Costus speciosus*, Willd.

Dioscorides described three principal sorts: Arabian, Indian, and Syrian costus.

Also, a Genus of the Nat. Order *Amomaceae*.

**C. acré.** (L. *acer*, sharp.) The *Drimys Winteri*.

**C. amarus.** (L. *amarus*, bitter. F. *costus amer*.) A term for the root of *C. speciosus* after it has been kept some time, when it becomes bitter.

Also, an old name for a kind of cinchona bark.

**C., Arabian.** One of the varieties of the Κόστος of Dioscorides; it was white, light, and of a pleasant sweet smell. Probably the produce of *C. speciosus*.

**C. arabicus**, Linn. (L. *arabicus*, Arabian.) Probably the *C. speciosus*, Willd.

**C. corticosus.** (L. *cortex*, bark.) A name formerly given to the *Canella alba*, and also to the bark of *Drimys Winteri*.

**C. dulcis.** (L. *dulcis*, sweet.) A synonym of Winter's bark. See *Winteri*.

**C. hortorum.** (L. *hortus*, a garden.) A name given to the *Balsamita suaveolens*, the *Opeponax chironium*, the *Actaea spicata*, the *Laserpitium chironium*, and the *Achillea ageratium*.

**C. hortorum minor.** (L. *hortus*; *minor*, less.) The *Achillea ageratium*.

**C., Indian.** One of the varieties of the Κόστος of Dioscorides; it was light, stont, and of a black colour. It was less esteemed than the Arabian costus.

**C. nigra.** (L. *niger*, black.) The *Cinara scolymus*, or artichoke.

**C. speciosus**, Willd. (L. *speciosus*, beautiful. F. *costus elegant*.) Sweet costus. An aromatic, pungent root, stomachic, and tonic.

**C. spica tus**, Willd. (L. *spicatus*, pointed. F. *canne de riviere*.) Hab. Brazil. Root diuretic, diaphoretic, and emmenagogue. Used in gonorrhœa.

**C., sweet.** The *Costus speciosus*.

**C., Syrian.** One of the varieties of the Κόστος of Dioscorides; it was heavy, of the colour of boxwood, and had an oppressive smell.

**Costylé.** Same as *Cutylé*.

**Cota.** A name used by Pliny and Dioscorides for the *Anthemis cotula*.

**Cotarnic acid.** A compound obtained, along with apophyllie acid, by boiling cotarnin with very dilute nitric acid.

**Cotar'nin.**  $C_{12}H_{13}NO_3 + H_2O$ . A product of the disintegration of narcotin when boiled for a long time with water or heated with nitric acid.

**Cotaronium.** Old name, by Paracelsus, for a supposed liquor constituting a universal solvent.

**Cotis.** Old name (Gr. *κοτίς*), used by Hippocrates, *de Morb. l. ii.*, xii, 43, for the occiput and back part of the head.

**Coto barks.** Origin unknown, but probably from plants belonging to the *Lauraceæ* or *Trochanthaceæ*. The coto barks are barks similar to cinchona obtained from Bolivia, and known in commerce as *Cortex verus* and *Cortex para*. They contain cotoin, an ethereal oil of pepper-like aromatic taste, a substance analogous to trimethylamin, soft and hard resin, tannic acid, starch, gum, sugar, calcium oxalate, butyric, formic, and acetic acids. According to Jobst and Hesse, they contain several new principles—cotoin, paracotoin, leucotin, oxy-leucotin, hydro-cotoin, and coto-nin. These barks have been used to control diarrhoea and excessive perspiration.

**Coto'in.**  $C_{22}H_{18}O_6 + H_2O$ . A fragrant balsamic substance obtained from *Cortex coto verus*. It crystallises in yellowish white prisms, which dissolve with difficulty in cold, easily in hot water, readily in alcohol, ether, and chloroform. It appears to be without physiological effect on healthy men, but is said to be serviceable in gastric catarrh with colic, and in the diarrhoea of phthisis. Dose per diem, 0.05 to 0.1 gramme.

**Cotona'ria.** A name given to the *Artemisia maritima*.

**Coto'nè.** Italy; between Florence and Pisa. Mineral waters, springing from the clay slate, and containing a little sodium and calcium sulphate, and some calcium carbonate, with free carbonic acid.

**Coto'nea.** (L. *cotenea*, for *eydonia*; from *Kuḍonia*, Canva, a town on the north coast of Crete.) A quince.

Also, a synonym of the *Origanum vulgare*.

**Cotoneas'ter.** (Etyml. said to be L. *cotonia*, for *eydonia*, a quince; *aster*, cont. of *ad instar*, like.) A Genus of the Nat. Order *Rosaceæ*.

**C. microphylla.** (*Μικρός*, small; *φυλλον*, a leaf.) Fruit contains hydrocyanic acid.

**C. nummularia.** Fish. and Meyer. (L. *nummularius*, belonging to money.) A species said to produce the manna known as *Shir khist*.

**C. u'væ ur'si.** (L. *uva*, a grape; *ursus*, a bear.) Fruit contains hydrocyanic acid.

**C. vulgaris.** Lindl. (L. *vulgaris*, common.) Hab. Europe. Fruit astringent.

**Cotonetin.**  $C_{20}H_{16}O_2$ . Delicate white scales obtained from Coto bark; very similar in action to *Cotoin*.

**Cotonia.** Same as *Cotenea*.

**Cottage hospital.** See *Hospital, cottage*.

**Cot'to.** Italy; near Monti, in the island of Isehia. Hot springs, temperature  $39^{\circ} C.$  ( $102.2^{\circ} F.$ ), containing sodium carbonate, sulphate, and chloride, with a small amount of iron and manganese.

**Cot'ton.** (F. *coton*, from Ar. *qutn*. 1. *cotone*; 2. *algodon*; G. *Baumwolle*.) See *Gossypium*.

**C., benzo'ic.** An antiseptic dressing for

wounds, made, with the substitution of benzoic acid for salicylic acid, like *C., salicylic*.

**C. consump'tion.** See *Phthisis, cotton*.

**C., gun.** See *Gun-cotton*.

**C., lav'ender.** The *Santolina chamaecyparissus*.

**C. plant.** (F. *cottonier*; G. *Baumwollenbaum*.) The *Gossypium herbaceum*, and other species.

**C. pneumo'nia.** See *Pneumonia, cotton*.

**C. root.** See *Gossypii radicis cortex*.

**C. root bark.** See *Gossypii radicis cortex*, U.S. Ph.

**C. rose.** The plants of the Genus *Filago*, from their pubescence.

**C., salicylic.** G. Ph. Salicylic acid 50 or 100 grammes, and castor oil and resin, of each 10 or 20 grammes, are dissolved in four litres of alcohol; a kilogramme of cleaned cotton wool is soaked in the solution and then dried. Used as an antiseptic dressing for wounds.

**C. seed.** The seed of *Gossypium arboreum*. It is very demulcent, and has been used as a poultice, and in decoction for coughs, and in intermittent fever.

**C. shrub.** Same as *C. plant*.

**C. thistle.** The plant *Onopordium acanthium*, or white thorn; from its pubescent stem and leaves.

**C. tree.** The *Eriodendron anfractuosum*.

**C. tree gum.** Obtained from the *Eriodendron anfractuosum*, and used in diarrhoea and dysentery.

**C. weed.** The species of *Filago*, and of *Gnaphalium*; from their pubescence.

**C., wild.** The *Asclepias syriaca*.

**C. wool.** See *Gossypium*.

**C. wool, styptic.** Cotton wool that has been soaked in the tinctura ferri perchloridi. It is employed to arrest hæmorrhage.

**C. xyloidin.** (*Xyloidin*.) A synonym of *Colloxylin*.

**Cotu'gno, Dome'nico.** Better known as *Cotunnus*; an Italian anatomist born at Ravello in Naples in 1736, died at Naples, in the university of which city he was professor of anatomy, in 1818.

**Cotula.** U.S. Ph. (*Κοτὺλη*, anything hollow. F. *herbe de camomille pouant*, h. *de marouite*; G. *Handskampfenkraut*.) Mayweed. The *Anthemis cotula*. Used in colic and dysmenorrhœa.

**C. al'ba.** Linn. The *Eclipha erecta*.

**C. fœtida.** (L. *fœtidus*, stinking.) The *Anthemis cotula*, mayweed, or stinking chamomile.

**C. maderaspat'na.** Willd. The *Grangea maderaspatana*, Poir.

**C. multifida.** (L. *mutus*, much; *fido*, to cleave.) Hab. Cape of Good Hope. Used in rheumatism and skin diseases.

**Cotul'è.** See *Cotyle*.

**Cotunnus.** See *Cotugno, Domenico*.

**C., a'queduct of.** (F. *aqueduc de Cotugno*; G. *Cotunnische Wasserleitung*.) The *Aqueductus Cotunnii*.

**C., liq'uor of.** The perilymph of the internal ear.

**C., nerve of.** (F. *nerf de Cotugno*.) The naso-palatine nerve.

**C., water of.** (F. *eau de Cotugno*; G. *Cotunnisches Wasser*.) The perilymph.

**Cotur'nix.** (L. *coturnix*, a quail. G.

*Wachtel*.) A Genus of the Order *Gallina*, Class *Aves*.

**C. chinensis**. (*G. chinesische Zwergwachtel*.) The Chinese pigmy quail. Eaten as food.

**C. dactylisnans**, Meyer. (*L. dactylus*, a finger, a toe; *sono*, to sound. *F. caillé*; *G. Wachtel*.) The quail. Eaten as food.

**Cotylas'pis**. (Κοτύλι, anything hollow; ἄσπις, a round shield.) A sexually mature form of trematode worm.

**C. insignis**. (*L. insignis*, remarkable.) A species found in *Anodonta fluridulus*.

**Cotylé**. (Κοτύλη, a hollow. *F. cotyle*; *G. Gelenkhöhle*.) The acetabulum, or socket of the hip-joint.

Also (*F. cotyle*; *G. Napf*), a cup-shaped organ, of which there are many, on the arm of Cephalopoda, by which the animal attaches itself.

Also, an old Greek measure of liquids.

**Cotyleale os**. (*L. cotyla*, a cup; *os*, a bone.) Geoffroy St. Hilaire's name for a bone lying between the petrous bone and the outer part of the tympanic cavity of some animals. Also called *Bulla*.

**Cotyledon**. (Κοτυλήδων, a cup-shaped cavity. *F. cotyledon*; *G. Samenkuppe, Keimblatt der Samen*.) In Botany, the first leaf or leaves; or the first appendicular organ or organs of the vegetable embryo destined to supply to the young plant the pabulum required for its growth. As a rule, plants possess one or two cotyledons, whence the division into monocotyledonous and dicotyledonous plants; but some Coniferae have from ten to twelve cotyledons disposed in a whorl, whilst some plants, as the *Cuscuta*, are dicotyledonous. The Graminaeae, which are usually regarded as monocotyledonous, have a scale named epiblast, which is a rudimentary second cotyledon. In dicotyledons the two cotyledons coalesce at the base and surround the radicle; they are said to conferruncinate. Morphologically the cotyledons are the first leaves of the plant. They are usually white and fleshy, but may be thin, foliaceous, and greenish. They may be sessile or petiolated; when folded they may be conduplicate, equitant, or obovate, circinate or convolute, or plaited. They may be entire or variously lobed. In their position in regard to the radicle, they may be incumbent or accumbent. Lastly, they may be epigeous or hypogeous.

Also (*G. Nabelkraut*), a Genus of the Nat. Order *Crassulaceae*; so called from the cup-like cavity of some of their leaves.

Also, see *Placenta, cotyledonous*.

**C.s. epigae'ous**. (Ἐπίγειος, on the earth.) Cotyledons which, during the growth of the young plant, appear above the surface of the soil.

**C.s. hypogae'ous**. (ὑπόγειος, under the earth.) Cotyledons which, during the growth of the young plant, never appear above the surface of the soil.

**C. marina**. The *Umbilicus marinus*.

**C. orbiculatus**, Linn. (*L. orbiculatus*, circular.) Hab. Cape of Good Hope. The fresh juice is used in epilepsy; and the leaves are applied for the relief of hard corns.

**C. umbilif'cus**, Linn. (*L. umbilicus*, the navel. *F. nombril de Venus, cotylet*; *G. Nabelkraut*.) Venus's navel-wort, kidney-wort. Hab. Europe. Leaves applied to contusions, piles and

warts; juice used in epilepsy; flowers in urinary calculus and dropsy.

**C. umbilic'us ven'eris**. (*F. nombril de Venus*.) Same as *C. umbilic'us*.

**Cotyle'donal**. (Κοτυλήδων.) Relating to, or like, a *Cotyledon*.

**Cotyle'donary**. (Κοτυληδών.) Relating to a *Cotyledon*.

**Cotyle'dones**. (Κοτυληδών.) One of the primary divisions of plants consisting of those which possess cotyledons.

Also, plural of *Cotyledon*.

**C. cedri**. Same as *Grana cedri*.

**Cotyle'donous**. (Κοτυληδών.) *F. cotyledon*.) Belonging to, or having, cotyledons.

**C. placen'ta**. See *Placenta, cotyledonous*.

**Cotyleph'orous**. (Κοτύλη; φέρω, to carry. *F. cotyléphore*; *G. napftragend*.) Bearing a *Cotyle*. Applied to the arms of some Cephalopoda.

**Cotylid'ea**. (Κοτύλη.) A Class of the Subkingdom *Fernus*, according to Van Beneden, being endo- or ecto-parasites, consisting of flattened or ribbon-shaped worms, without ciliae, except in early life, or bristles, possessing cup-like or irregular suckers, hermaphrodite; they have no body-cavity, sometimes no intestines, and never an anus; they are divisible into *Privata* or *Polypodia*, *Hirudinea*, or *Bdellidae*, *Trematoda*, and *Cestoida*; or, according to some, *Cestoda* and *Trematoda* only.

**Cotyl'iform**. (*L. cotyla*, a cup; *forma*, shape. *G. becherförmig, napfförmig*.) Cup-shaped.

**Cotyl'oid**. (Κοτύλη, a small drinking cup; εἶκος, likeness. *F. cotyl'oid*.) Resembling an ancient drinking cup.

**C. cavity**. (*F. acetabule, cotyle, cavité cotyl'ide*; *G. Pfannengrube, Pfannenhöhlung*.) A deep socket for the joint end of a bone; especially the acetabulum, or socket which receives the head of the femur, forming the hip-joint.

**C. fos'sa**. (*L. fossa*, a ditch.) The *C. cavity*.

**C. lig'ament**. (*F. bourrelet cotyl'oidienne*; *G. Pfannenrand*.) A thick, prismatic, fibro-cartilaginous rim attached to the cotyl'oid margin of the acetabulum, its base to the bone, so as to deepen it; both surfaces are covered by synovial membrane, the outer in contact with the capsular ligament and the inner closely embracing the head of the femur. It is thickest above and behind, and consists of compact fibres, which interlace with each other. As it crosses the cotyl'oid notch it is called the transverse ligament.

**C. margin**. (*F. sourcil cotyl'oidien*; *G. Pfannenrand*.) The prominent uneven margin of the cotyl'oid cavity to which the cotyl'oid ligament is attached.

**C. notch**. (*F. échancrure cotyl'oidienne*; *G. Pfanneneinschnitt*.) A deep notch on the inner side of the cotyl'oid margin of the cotyl'oid cavity, which is continuous with the depression at the bottom of the cotyl'oid cavity, and is converted into a foramen by the cotyl'oid ligament, and transmits the nutrient vessels and nerves to the interior of the hip-joint.

**Cotyl'oph'ora**. (Κοτύλη; φέρω, to bear.) A Group of *Ruminantia*, having a cotyl'odonous placenta. It includes giraffes, deer, antelopes, sheep, and oxen.

**Cot'y'us**. Same as *Cotyle*.

**Cotz.** A synonym of *Koussou*.

**Couch.** (F. *coucher*, to lie down; from L. *colloco*, to place.) To lie down, to lay down.

**C. grass.** The *Triticum repens*, on account of its low-lying.

**Coughing.** (F. *coucher*, to lay down; from L. *colloco*, to place together.) Term for the operation of displacing, or breaking down and disturbing the opaque lens with a kind of needle for the purpose, in order to effect the reclination or absorption of a cataract.

**C. needle.** (F. *aiguille à cataracte*; G. *Staarndiel*.) The name of the instrument used in the operation of couching.

**Couchons.** France; Département des Pyrénées-Orientales. A weak bicarbonated chalybeate water.

**Cocuin'ea coccin'ea.** The *Cacoeva coccinea*.

**Coudes.** France; Département du Puy de Dôme. Athermal waters, containing a gramme of sodium chloride, and more than two grammes of sodium, calcium, potassium, and magnesium carbonates in a litre, with much carbonic acid.

**Cough.** (Of old low G. origin; Du. *kugchen*, *V. toue*; G. *Husten*.) Term for a sonorous and violent expulsion of air from the lungs produced by the act of *Coughing*.

**C., amphoric.** See *Amphoric cough*.

**C., bronchial.** A cough as heard through the stethoscope applied over the trachea, root of the bronchi, and even over subdivisions of the bronchi no larger than a goose-quill, when the lungs are hepaticized; each cough gives, besides its natural shock, a sensation as of air passing through a tube; it is therefore also called *tubal cough*.

**C., cavernous.** (L. *caverna*, a cavern.) See *Cavernous cough*.

**C., croupal.** A cough which has the peculiar sharp clanging sound of that of croup.

**C., dry.** Term for a cough generally unattended by expectoration, and often returning periodically; observed in highly irritable, nervous, and hysterical constitutions, being clearly nervous in its character.

**C., ear.** See *Ear cough*.

**C. frem'itus.** (L. *fremitus*, a roaring.) Same as *C. thrill*.

**C., hoop'ing.** See *Hoop'ing-cough*.

**C., hu'mid.** Term for a cough in which the expectoration, chiefly mucous, is excreted very freely.

**C., hyster'ical.** A cough which does not depend on any affection of the respiratory organs, but on that disturbed condition of nervous system called hysteria.

**C., mu'cous.** Same as *C. humid*.

**C., re'flex.** (L. *reflexus*, part. of *reflecto*, to turn back.) A dry, hard cough, produced by irritation of the nerves of some other part of the body than the lungs; such is the cough produced by ear disease, intestinal worms, and ovarian irritation.

**C. res'onance.** (L. *resono*, to resound.) The sound heard on auscultation of the chest during coughing; it is ordinarily a quick, somewhat dull, and non-tubular sound.

**C., spasmod'ic.** (Σπασμός, spasm.) A cough which is accompanied by excessive muscular action, as in *hoop'ing-cough*.

**C., stom'ach.** A form of reflex cough produced by the presence of some irritating substance in the stomach or small intestines.

**C. thrill.** (I. *trillare*, to shake.) The tremulous vibration felt on placing the hand on the chest walls during the act of coughing.

**C., tu'bal.** Same as *C. bronchial*.

**C., whoop'ing.** See *Hoop'ing-cough*.

**C., win'ter.** The form of chronic bronchitis which comes on usually every winter.

**C. wort.** The *Tussilago farfara*, from its medicinal use.

**Coughing.** (Same etymon. F. *cour*; I. *tossimento*; G. *Husten*.) The act of producing a cough; it consists first of a deep inspiration, then a closure of the glottis, and afterwards a sudden and violent attempt at expiration, immediately followed by a rapid opening of the glottis, by which means a strong current of air is expelled from the lungs, along with, probably, the substance causing the cough. Coughing is a reflex act, in which some branch of the pneumogastric nerve is excited by the presence of an unnatural substance in the air passages, or, it may be, in the stomach, in the external ear, or other part.

**Coulen.** The *Psoralea glandulosa*.

**Coulomb.** A French physicist of the present century.

**C.'s law.** The dogma that electric and magnetic attractions and repulsions are inversely as the squares of the distances.

**C.'s law of electrical repul'sion.** The force of electrical repulsion varies inversely as the square of the distance. This law refers also to magnetism. See *C.'s law*.

**C.'s tor'sion balance.** This consists of a cylindrical glass case, from the upper end of which rises another cylinder of smaller size, fitted at its top with a brass cap carrying an index. Outside of this cap, and capable of turning round it, is another cap, the top of which is divided into 360 degrees. In the centre of the latter cap is an opening, in which a small metal cylinder, having a slit at its lower end, can revolve with moderate friction. The cap and the cylinder can thus rotate together or separately. These parts constitute the torsion head. To the notch a fine metallic wire is attached with a bob of metal, through which passes a light needle of shellac, carrying at one end a small gilt ball. A circular scale runs round the outside of the large cylinder in the plane of the needle. Lastly, opposite the zero of this scale there is a fixed ball of some conducting material, supported by a rod of shellac, which passes through a hole in the cover of the cylindrical case.

**Coulte'ria.** A Genus of the Nat. Order *Leguminosae*.

**C. coria'ria.** The *Cesalpinia coriaria*.

**Coum.** The *Colehicum autumnale*.

**Cou'ma.** A Genus of the Nat. Order *Apocynaceae*.

**C. glauanensis**, Aubl. Fruit acid when young; pleasant and esculent when ripe.

**Coumar'ic acid.**  $C_9H_8O_9$ . A crystalline acid resulting from the action of caustic potash on coumarin.

**Cou'marin.**  $C_9H_8O_2$ . The concrete volatile substance which constitutes the odoriferous principle of the Tonka, or Tonquin bean, the product of the *Dipterix odorata*; it is found also in many sweet-smelling plants. It crystallises in colourless shining prisms, soluble in oils, alcohol, and hot water. In large doses it is poisonous; producing great weakness, vertigo, headache, and tremor.

**Cou'marine.** Name given by the natives of Guiana to the *Dipterix odorata*.

**Cou'maron.** The native name of the *Dipterix odorata*.

**Coumarou'na.** A Genus of the Nat. Order Leguminosae.

**C. odora'ta.** Aubl. The *Dipterix odorata*.

**Cou'maryl.** The hypothetical radical of coumarin and coumaric acid.

**Cou'mia.** A resinous product of *Icica icicariba*, De Cand.

**Countenance.** (F. *countenance*, from L. *continuo*, to preserve.) The face with its features and expression.

**Counter.** (L. *contra*, against. F. *contre*; G. *entgegen*.) A particle signifying opposition.

**C-action.** (L. *contra*; *ago*, to act. G. *Gegwirkung*.)

**C-extension.** (L. *contra*; *extendo*, to stretch out. F. *contre-extension*; G. *Gegenausdehnung*, *Gegenstreckung*.) The pulling or holding of the upper part of a broken limb, or of a dislocated joint, while extension is being employed with the lower part.

**C.fis'sure.** (L. *fissura*, a cleft. G. *Gegenspalt*.) A fracture of the skull occurring opposite the situation where a blow may have been inflicted or fall received.

**C.indica'tion.** (L. *contra*; *indico*, to point out. F. *contre-indication*; G. *Gegenanzeige*.) A term for the existence of some special circumstance opposed to, or forbidding, the adoption of treatment which would have been otherwise suitable, or which at first sight would have suggested itself.

**C.ir'ritants.** (L. *contra*; *irrito*, to make angry. G. *Gegenreizmittel*.) Drugs or other substances which produce irritation of the skin when they are used for the purposes of *Counter-irritation*. They are divisible into *Epispastics* and *Rubefacients*.

**C.irritation.** (L. *contra*; *irrito*, to make angry. G. *Gegenreiz*.) The production of irritation, redness, vesication, or destruction of the skin, for the purpose of favourably influencing diseases of deeper seated or distant parts, by modifying the nutrition or mode of action of their structures.

**C.opening.** (F. *contre-ouverture*; G. *Gegeneinschnitt*, *Gegenöffnung*.) An opening made in an abscess, opposite to and below one already existing in it, with the view of facilitating the discharge of matter and promoting the healing process.

**C.poi'son.** (G. *Gegengift*.) An antidote.

**C-stroke.** Same as *Contrecoup* and *Counter-fissura*.

**Country.** (F. *contrée*, from L. *contrada*; from Low L. *contrata*, a word which was extended from *contra*, against, by a Germanism, according to Max Müller, in that *Gegend*, country, being derived from *gegen*, against, or in L. *contra*, was translated *contratum* or *terra contrata*.) A region, a rural district.

**C.almonds.** The seeds of *Terminalia catappa*.

**C.ipecacuan'ha.** The *Tylophora asthmatica*.

**C.liq'uorice root.** The root of *Abrus precatorius*.

**C.sarsaparil'ia.** The root of *Hemidesmus indicus*.

**C.sen'na.** The leaves of *Cassia senna*.

**C.sick'ness.** Same as *Nostal'gia*.

**C.walnut.** The *Aluavites triloba*.

**Coup.** (Fr. *coup*, a blow; from Gr. *κόλαφος*, a blow. G. *Schlag*, *Stoss*.) A blow, shot, deed, or stroke.

**C. de soleil.** (F. *soleil*, the sun. G. *Sonnenschuss*.) A stroke of the sun: a term applied generally to any affection produced by a scorching sun; and specially to heat apoplexy or *Sunstroke*.

**Couperose.** (F. *couperose*, copperas, red pimples. G. *Kupferrrand*.) An old term applied to the metallic sulphates of copper, iron, and zinc, or different species of copperas.

Also (F. *couperose*, or *goutturose*; G. *Kupfer im Gesicht*), a term for *Acne*.

**Couple.** (F. *couple*, from L. *copula*, a band.) Two joined together.

In Physics, two equal parallel forces acting towards contrary parts.

**C., galvan'ic.** A galvanic cell composed of two metals.

**C.rhythm.** A term proposed by Cook for a deviation from regularity in the action of the heart, differing from intermission, irregularity, and reduplication, and consisting in two heart beats being represented by a single radial pulsation, which latter gives a sphygmographic tracing of double the normal amplitude both in length and height.

**C., thermo-electric.** See *Thermo-electric couple*.

**C., volta'ic.** An arrangement consisting of two metals, in metallic contact, immersed in a conducting liquid.

**C., volta'ic, closed.** The voltaic couple when the two metals are connected.

**C., volta'ic, open.** The voltaic couple when the two metals are not in contact.

**Coura'di.** The name in Malabar of *Grewia orientalis*.

**Coural'ium.** (Κοράλιον, for κοράλλιον.) Coral.

**Cour'ap.** Name given in India to cutaneous diseases attended with itching and eruptions.

**Cour'baril.** See *Hymenaea courbaril*.

**C.bifo'lia,** Plum. (L. *bis*, twice; *folium*, a leaf.) The *Hymenaea courbaril*.

**C., lo'tus.** The *Hymenaea courbaril*.

**C.res'in.** The *Anmë* gum.

**Cour'barin.** (F. *courbarine*.) Name by Guibourt for the resin of courbaril.

**Cour'mayeur.** Italy; in the Valley of Aosta, at the foot of Mont Blanc. Athermal or slightly heated mineral waters, containing calcium carbonate, a little iron, and much carbonic acid. Used to restore blood and strength, especially in affections of the bronchial and urinary mucous membranes, in skin diseases, and in scrofula.

**Cour'mi.** (Κοῦρμι.) An old name for a kind of beer.

**Couron'di.** An evergreen tree of India, said to be antidyenteric.

**Cou'ros.** (Κούρος, Ionic for κόρος, a boy.) Old term, used by Hippocrates, for the child when perfected in the womb. (Quincy.)

**Cou'rou moelli.** An Indian shrub, said to be antivenomous.

**Couroup'ita.** A Genus of the Nat. Order *Lecythidaceae*.

**C. guianen'sis,** Aubl. (F. *abricot sauvage*.) Cannon-ball tree. The fruit of this

plant is vinous and pleasant to the taste when fresh, but emits an insupportable odour in decay.

**Courpierré.** France; Département du Puy-de-Dôme. Athermal mineral waters, containing carbonate of soda, a little iron, and a large quantity of carbonic acid.

**Courrière.** See *Durtal*.

**Cours.** France; Département de la Gironde. Athermal mineral waters, containing a little bicarbonate of iron and some carbonic acid.

**Courses.** (L. *cursus*, a race, or course. F. *regles*; G. *Mondfluss*.) A popular term for the catamenia.

**Courtomer.** France; Département de l'Orne. Athermal mineral waters, containing a little iron and some carbonic acid.

**Court-plaster.** A plaster made by coating variously coloured silk with a solution of isinglass and allowing it to dry. It was so called because of its use by fashionable ladies for decorative patches on the face.

**Courry.** A name given by Heyne to the catechu in balls obtained from *Areca catechu*.

**Couscous.** Name of an African food, much used about the river Senegal; composed of millet flour, some flesh, and the bark called Lalo, or that of the *Adansonia digitata*.

The couscous of the Arabs is a granular preparation of wheat.

**Cousso.** Same as *Koussa*.

**Coutarea.** A Genus of the Nat. Order Rubiaceæ.

**C. latifolia.** Linn. (L. *latus*, broad; *folium*, a leaf.) A species thought by Guibourt to yield a form of *Copalchi* bark.

**C. speciosa.** Aubl. Hab. Guiana and Cayenne. It yields French Guiana bark, a valuable febrifuge.

**Coutoubea.** A Genus of the Nat. Order Gentianaceæ.

**C. alba.** Lamb. (L. *albus*, white.) The *C. spicata*.

**C. purpurea.** Lam. (L. *purpureus*, purple.) The *C. ramosa*.

**C. ramosa.** Aubl. (L. *ramosus*, branched.) Used as *C. spicata*.

**C. spicata.** Aubl. (L. *spicatus*, furnished with a point.) A bitter stomachic. Used in intermittent fever, in amenorrhœa, and as an antihelmintic.

**Couzan.** See *Sail-sous-Couzan*.

**Couzka.** The *Anisoplia austriaca*, a beetle of the size of the castor-oil seed and of a cinnamon colour. The process of development from egg to perfect insect lasts two years. The larvæ live in the soil, the perfect insect attacks the cereals and causes great destruction.

**Covalum.** A synonym of the *Ægle marmelos*, or Bael tree.

**Cove of Cork.** Ireland, a former name of Quenstown, County Cork; a winter resort for consumptives.

**Covellia.** A Genus of the Nat. Order Moraceæ.

**C. glomerata.** Miq. (L. *glomerata*, to form into a ball.) Bark astringent. Applied to tiger bites for the supposed purpose of removing poison; root used in dysentery; fruit esculent.

**C. oppositifolia.** Gaspar. The *Ficus oppositifolia*, Willd.

**Covenry.** A town in Warwickshire.

**C. bells.** The *Campanula trachelium*, from their abundance near that town.

**C. rampion.** The *Campanula rapunculus*.

**C. rapes.** The *Campanula rapunculus*.

**Cover.** (F. *couvrir*, to hide; from L. *cooprio*, to cover over.) Same as *Opereculum*.

**Covering.** (Cover.) That which covers.

**C. leaves.** See *Leaves, covering*.

**Coverts.** (F. *couvertures*.) The feathers ranged along and covering the base of the quills of the wing of a bird.

**Covolam.** A synonym of *Bael*.

**Cow.** (Sax. *cū*; from Sans. root *gu*, to bellow. F. *vache*; L. *vacca*; S. *vaca*; G. *Kuh*.) The female of *Bos taurus*.

**C.-bane.** (E. *banc*, harm; from Sax. *bana*, a murderer. F. *cicutaire vireuse*; G. *giftiger Wucherich*.) The *Cicuta virosa*, from its poisonous effect on cows.

**C.-bane, spotted.** The *Conium maculatum*.

**C. basil.** The *Stiponaria vaccaria*, Linn.

**C. bean.** The *Cicuta virosa*. Probably a misnomer, and should be *C. bane*.

**C. berry.** The *Vaccinium vitis idæa*.

**C. cherwil.** The *Anthriscus sylvestris*.

**C. cress.** The *Lepidium campestre*.

**C. herb.** The *Saponaria vaccaria*.

**C. itch.** Same as *Couchage*.

**C. lady.** The *Coccinella septempunctata*.

**C.'s lip.** The cow-lip, *Primula veris*.

**C.'s lungwort.** The *Verbascum thapsus*.

**C. mumble.** The *Heracleum sphondylium*.

**C. parsley.** The *Anthriscus sylvestris*.

**C. parsnip.** The *Heracleum sphondylium*, or allheal, and the *H. lanatum*.

**C. plant of Ceylon.** The Kiriaghuna plant or *Gymnema lactiferum*, which yields a milk made use of by the Cingalese for food. The leaves, when boiled, are also used.

**C. pock.** Same as *C.-pox*.

**C. pox.** (Sax. *poc*, a pustule. F. *vaccine*; G. *Kuhpocke*, *Schutzpocke*.) See *Vaccinia* and *Vaccination*.

**C. pox inoculation.** (L. *inoculo*, to implant.) Same as *Vaccination*.

**C. pox itch.** See *Itch, cow-pox*.

**C. pox vesicle.** (L. *vesicula*, a little bladder.) See *Vaccinia*.

**C. striplings.** The *Primula veris*.

**C. stropple.** The *Primula veris*.

**C. tree milk.** The milky juice of the *C. tree of South America*.

**C. tree of Equatorial America.** The *Tabernaemontana utilis*, or *Hya-Hya*.

**C. tree of Humboldt.** A plant belonging to the Nat. Order *Artocarpaceæ*.

**C. tree of India.** The *Ficus Sessureana*.

**C. tree of South America.** *Palo de vaca*. An unknown species of *Brosimum*, according to some; but probably the *Galactodendron utile*.

**C. weed.** The *Anthriscus sylvestris*.

**C. wheat, purple.** The *Melampyrum arvense*, Linn.

**C. wheat, wild.** The *Melampyrum pratense*, Linn.

**C. wheat, yellow.** The *Melampyrum pratense*, Linn.

**Cowage.** The *Mucuna pruriens*.

**C., Indian.** The *Mucuna pruriens*, Hook.

**Cowan.** (Cowan, an English merchant and botanist.) A Genus of the Nat. Order Rosaceæ.

**C. Stansburia'na.** (*Stansbury*, of the United States navy.) Hab. Salt Lake. An astringent and local styptic. (Dunglison.)

**Cowdie resin.** The turpentine of *Damara australis*.

**Cowhage.** (*F. dolie pruriteux*; *G. juckendes Fasel.*) The hairs covering the outer surface of the pods of the *Macuna pruriens*.

**Cowper, William.** An English anatomist, born at Alresford in Hampshire in 1666, died in London in 1709.

**C., glands of.** (*F. glandes du Cowper*; *G. Cowper'sche Drüsen.*) Two symmetrically placed glands lying below the membranous portion of the urethra, and close behind the bulb. Each gland is about the size of a pea, and is composed of lobules. The duct is about an inch in length, and perforating the wall of the urethra obliquely, opens into the urethral canal about half an inch in front of the triangular ligament.

Cowper's glands in the female are described as Bartholin's glands of.

**Cowperian cysts.** (*Cowper.*) The *Orula Nabothi*.

**Cowrie resin.** Same as Cowdie resin.

**Cowslip.** The *Primula veris*.

**C., com mon.** The *Primula veris*.

**C., French.** The *Primula auricula*.

**C., great.** The *Primula elatior*.

**C., Jeru'salem.** The *Pulmonaria officinalis*.

**C., moun'tain.** The *Primula auricula*.

**C. of Jeru'salem.** The *Pulmonaria officinalis*.

**Cowth'wort.** The *Chrysanthemum parthenium*.

**Cox'a.** (*L. coxa*; akin to Sans. root *cac*, to leap. *F. hanche*; *G. Hüfte.*) The hip, haunch, or hip-joint.

Also, applied to the *Ischium* and to the *Coccyx*.

Also, the name of the first segment of the leg of the *Arachnida* and *Insecta*, which articulates with the acetabulum.

**Coxæluvium.** (*L. coxa*, the hip; *lavo*, to wash. *F. bain de fenteuil*, *b. de siège.*) Term for a bath for the hips, or lower portion of the body; the hip-bath.

**Coxag'ma.** (*L. coxa*; *ἀγμα*, a fragment. *F. coragme*; *G. Hüftbruch.*) Fracture of the hip.

**Coxagmacatoch'us.** (*Coxagma*; *κάρσος*, holding fast. *G. Festhalter für Hüftbruch.*) A retinaculum or splint for fracture of the hip-joint.

**Coxag'ra.** (*L. coxa*; *ἄγρα*, a seizure.) Pain in the hip.

**Cox'al.** (*L. coxa.*) Belonging to the hip.

**C. bone.** The ilium.

**Coxalgia.** (*L. coxa*, the hip-joint; *ἄλγος*, pain. *F. coxalgie*; *G. Hüftsch.*) Term for pain in the hip-joint; hip-joint disease, or morbus coxarius.

**C. saturni'na.** A term for *Arthralgia saturnina* when occurring in the hip-joint.

**C. senilis.** (*L. senilis*, belonging to old age.) A synonym of *Arthritis diuturna*.

**Coxarius.** (*L. coxa*, the hip-joint.) Of, or belonging to, the hip-joint.

**Coxarthrit'is.** (*L. coxa*; *arthritis.* *F. coxarthrite*; *G. Hüftgicht.*) Gout in the hip.

**Coxarthrocacé.** (*L. coxa*; *arthrocacé.*) Hip-joint disease.

**Coxa'rum morbus.** (*L. coxa*; *morbus*, disease.) Hip-joint disease.

**Cozen'dix.** (*L. coxendix*, the hip.) An old term which has been promiscuously used for the hip, the ischium, and the ilium.

**Coxit'ic.** Relating to *Coxitis*.

**Coxitis.** (*L. coxa.* *F. coxite*; *G. Hüftgelenksentzündung.*) Inflammation of the hip-joint.

**C. scrofulo'sa.** (*Scrofula.*) Hip-joint disease.

**Coxoc'acé.** An abridgment of *Coxarthrocacé*.

**Coxocatoch'us.** (*L. coxa*; *κάρσος*, a holding fast.) A retinaculum or splint for the hip.

**Coxoc'erite.** (*L. coxa*; *κίρας*, a horn.) The basal segment of the antenna in Crustacea.

**Coxofem'oral.** (*L. coxa*; *femur*, the thigh-bone.) Same as *Hüftfemoral*.

**Coxog'nathite.** (*L. coxa*; *γνάθος*, the jaw.) The basal segment of the mandibles of Arthropods.

**Coxop'odite.** (*L. coxa*; *πούς*, a foot.) The short basal joint of the appendages of the abdomen in the crayfish and other Decapods. It is attached proximally to an articular cavity situated between the sternum and the epimeron, and distally to a long cylindrical second joint, the basipodite.

**Coxopoditic.** Belonging to the *Coxopodite*.

**C. se'tæ.** (*L. seta*, a bristle.) The straight stiff hairs connected with the basal joint of the legs of the Decapod Crustaceans. They are believed to prevent the intrusion of parasites and other foreign matters into the branchial chamber.

**Crab.** (*Sax. crabba*; possibly through *L. carabus*, from *Gr. κίραβος*, a prickly kind of crab, perhaps the crayfish. *F. crabe*; *I. granchio*; *S. cangrejo*; *G. Krebs.*) A name given to several decapod Crustaceans, but specially in England to the *Cancer pagurus*. It is much used as an article of diet; to some it is said to give nettle-rash.

Also (perhaps the same etymon, from the pinching quality of its sonness), the fruit of the *Pyrus malus*.

**C. apple.** (*Sax. crabapple.* *F. pomme sauvage*; *I. mela silvatica*; *S. munzana silvestre*; *G. Holzapfel.*) The fruit of the *Pyrus malus*.

**C. ap'ple tree.** (*F. pommier*; *G. Apfelbaum.*) The *Pyrus malus*.

**C.'s claws.** (*G. Krebszschere.*) The black tips of the chela of the common crab, *Cancer pagurus*, powdered; formerly used as an absorbent and antacid in virtue of the calcium carbonate they contain.

**C.'s eyes.** (*F. yeux d'écrevisses*; *G. Krebsaugen.*) Concretions found in the walls of the stomach of the river crayfish, *Astacus fluviatilis*, for triturating food. They are from 25" to 6" in diameter, weighing from one to twelve grains, and consist largely of carbonate and some phosphate of lime. They were formerly used, in fine powder, as an absorbent and antacid.

**C. fish.** The Crab.

**C. grass.** The *Salicornia herbacea*, because it was supposed to be eaten by crabs.

**C. louse.** (*F. morpion*; *G. Filzlaus.*) The *Pediculus pubis*.

**C. oil.** The oil of the seeds of *Carapa*

# CRACK—CRAMPUS.

*guianensis*. Used for lighting purposes, and as an anthelmintic.

**C. Orchard salts.** A purgative compound obtained from the mineral waters near Crab Orchard, Lincoln, Co. Kentucky, found on analysis to contain sulphates of magnesia, soda, potassa, and lime, chlorides of sodium and lithium, and carbonates of lime, magnesia, and ferrie oxide. (Dunglison.)

**C.'s stones.** (G. *Krebssteine*.) Same as *C.'s eyes*.

**C. willow.** The *Salix fragilis*.

**C. yaws.** A name in Jamaica for a species of ulcer on the soles of the feet, the edges of which are so hard that it is difficult to cut them. See *Yaws*.

**Crack.** (Sax. *cearcian*, to crack.) To break. Also, a crevice or fissure.

Applied to fissures of the skin or of the edges of apertures, as the mouth and anus.

**C. willow.** The *Salix fragilis*, from its bitterness.

**Crack'ed.** (G. *gesprungen*.) Participle of *Crack*.

**C. jar sound.** (G. *Schall des gesprungenen Kruges*.) Same as *C.-pot sound*.

**C. metal sound.** (G. *Amphorischer Schall des gesprungenen Topfes*.) Same as *C. pot sound*.

**C. pot sound.** (F. *bruit de pôt fêlé*; G. *Schall des gesprungenen Topfes*.) An accessory quality of a percussion sound under certain circumstances; it is a metallic chink or ring, like the false sound of money, produced by striking the back of one hand, when loosely, but closely, clasped by the other, on the knœ. It is produced most easily during expiration when the mouth is open, and may be heard in healthy chests when percussion is made over a large imperfectly closed cavity, and sometimes over resonant spots of lung surrounded by consolidated substance, as in some forms of pneumonia, and in cancer. See *Bruit de pôt fêlé*.

**C. voice.** The voice of a boy at puberty, when its character is changing and changeable, sometimes deep and hoarse, sometimes high and squeaking.

**Crack'ling.** (From *crack*. G. *Knaechen*.) Same as *Crepitation*.

Also, the same as *Crepitus*.

**C. of leather sound.** See *Bruit de cuir neuf*.

**C. rhon'chus.** (G. *Knarren*.) Same as *Râle, crepitant*.

**Crac'ow groats.** A synonym of *Semolina*, from the place of manufacture.

**Cra'dle.** (Sax. *cradel, cradol*, from a Celtic word; Ir. *cradhal*, or Gael. *creathall*; allied to L. *craticula*, a small hurdle.) A child's bed which can be rocked.

A series of arches of wire or wood, connected by longitudinal bonds, to put over a limb in order to remove the pressure of the bed-clothes.

Also, an arrangement whereby a fractured limb encased in splints is swung by cords, so as to prevent movement of the bones.

**Cræpalë.** (Κραιπάλη, the result of a debauch.) The sickness and headache resulting from too much stimulant and over eating.

**Cræpalia,** Schrank. A synonym of *Lolium*, Linn.

**C. temulen'tum.** The *Lolium temulen'tum*.

**Crails heim.** Germany; in Wurtemberg.

An athermal mineral water, springing from the upper new red sandstone, containing calcium sulphate and carbonate, magnesium and sodium sulphate, iron carbonate, some sulphur, and free carbonic acid. Used as a tonic.

**Crake berry.** (Old Dan. *kraka*, a crow.) The crowberry, *Empetrum nigrum*.

**Cra'ma.** (Κράμα, that which is mixed.) Wine mixed with water.

**Cram'bë.** (Κράμβη, colewort or cabbage.) A Genus of the Nat. Order *Crucifera*.

**C. Kotschya'na,** Lindl. Used as food in Asia Minor.

**C. marit'ima,** Linn. (L. *maritimus*, belonging to the sea. F. *chou marin*.) The sea-kale, indigenous on our shores, and cultivated for the table; it has a delicate flavour, and is much used when blanched.

**C. orienta'lis,** Linn. (L. *orientalis*, Eastern.) Used as an antiscorbutic.

**C. tarta'rica,** Linn. The large fleshy root of this plant, sometimes called Tartar bread, is eaten in Hungary, peeled and sliced with oil, vinegar and salt, or even when boiled.

**Cram'bion.** (Κραμβιον. G. *Kohlabsud*.) A decoction of cabbage, or, according to some, of hemlock.

**Crame'ria.** Same as *Krameria*.

**Cramp.** (An English word, according to Skeat, from Teutonic root *kramp*, to draw tightly together. F. *crampe*; I. *granchio*; S. *calambre*; G. *Krampe*.) Spasmodic, painful, and involuntary contraction of muscles.

**C. bark.** The bark of *Viburnum opulus*.

**C. bone.** The patella of a sheep; a popular charm against cramp.

**C., compos'itors'.** A disorder of the same nature as *Servicene's palsy*, occurring in those who set up type.

**C. fish.** A term applied to the electric fishes *Gymnotus* and *Torpedo*.

**C., milk'ers'.** A disorder of the same nature as *Servicene's palsy*, occurring in the hands of persons occupied in milking.

**C., music'ians'.** An affection of the nature of *Servicene's palsy*, occurring in the hands of musicians.

**C. of chest.** A synonym of *Angina pectoris*.

**C. of heart.** The condition of spasmodic contraction of the muscular fibres of the heart, which has been supposed to be the cause of the symptoms of angina pectoris.

**C. of stom'ach.** A term for acute pain about the epigastrium, which has been supposed to be caused by spasmodic contraction of the muscular coat of the stomach.

**C. ring.** A ring of gold or silver, blessed on Good Friday by an English king or queen, and worn as a preventive of cramp.

**C., scriv'eners'.** See *Servicene's palsy*.

**C., seam'stresses'.** A disorder, like *Servicene's palsy*, brought on by sewing.

**C., shoe'makers'.** A disorder of the hands, like *Servicene's palsy*, in shoemakers.

**C., writ'ters'.** Same as *Servicene's palsy*.

**Cramp'on.** (F. *crampou*, from G. *Krampe*, a cramp iron. G. *Kramm*.) An appendage of the stem of a plant which serves for support and is not a tendril which can roll round, or a root which can absorb nourishment; such are the clinging fibres of the ivy.

**Crampus.** A Latinised form of cramp.

**Cranberries.** (*Cranberry*.) The plants of the Nat. Order *Vacciniaceae*.

**Cranberry.** (That the berries are ripe in spring when the crane returns; that they are eaten by cranes; and that their stalks are like cranes' legs, are among the explanations given of the origin of the name.) The fruit of *Oxycoccus palustris*, and also the plant itself. The fruit of *O. macrocarpus* and of the *Vaccinium vitis idaea* have also been called by this name.

**C., Alpine.** The fruit of *Vaccinium vitis idaea*.

**C., American.** The *Oxycoccus macrocarpus*.

**C., Tasmanian.** The *Astroloma humifusum*.

**C. tree.** The *Fiburnum opulus*.

**C., upland.** The *Arbutus uva ursi*.

**C., white.** The *Phalerocarpus serpyllifolia*, Don.

**Crane.** (Sax. *cran*. F. *grue*; I. *gru*; S. *galla*; G. *Kranich*.) The *Grus cinerea*. The term is applied to many birds of the same Genus and Family.

**C.'s bill.** (F. *bec de grue*; G. *Storchschnabel*.) The plants of the Genus *Geranium*, from the shape of the seed-vessels.

**C.'s bill, American.** The *Geranium maculatum*.

**C.'s bill, bloody.** The *Geranium sanguineum*.

**C.'s bill, bulbous root'ed.** The *Geranium tuberosum*.

**C.'s bill, crow'foot.** The *Geranium pratense*.

**C.'s bill for'ceps.** Forceps having long blades.

**C.'s bill, long-stalk'ed.** The *Geranium columbinum*.

**C.'s bill root.** Same as *Geranium*, U.S. Ph.

**C.'s bill, round-lea'ed.** The *Geranium rotundifolium*.

**C.'s bill, spot'ed.** The *Geranium maculatum*.

**C.'s bill, stink'ing.** (F. *herbe à Robert*.) The *Geranium Robertianum*.

**C.'s bill, wood.** The *Geranium sylvaticum*.

**C.'s bills.** The plants of the Nat. Order *Geraniaceae*.

**C. wil'low.** The *Cephalanthus occidentalis*.

**Crangon.** (Κραγών, a shrimp.) A Genus of the Suborder *Macrura*, Order *Decapoda*, Class *Crustacea*.

**C. vulgaris.** (L. *vulgaris*, common.) The shrimp.

**Cran'ia.** (Κράνεια.) The cornel tree, *Cornus sanguinea*.

**Cran'iamat'oma.** (Κρανίον, the skull.) Same as *Cephal'hamatoma*.

**Cran'ial.** (Κρανίον, the skull.) Relating to the skull.

**C. ar'teries.** The arteries supplying the bones of the skull.

Also, a term applied to the superficial branches of the occipital artery.

**C. blood-swelling.** Same as *Cephal'hamatoma*.

**C. bones.** The bones of the skull. They are the occipital, the two parietal, the frontal, the two temporal, the sphenoid, and the ethmoid bones in man; there are also certain supernu-

merary bones, varying in number and size, the Wormian bones.

**C. cavity.** (L. *cavitas*, a hollow. F. *carité* *crânienne*; G. *Schädelhöhle*.) The interior of the skull. The cavity which contains the brain with its membranous coverings.

**C. diameters, ad'ult.** The diameters of the cranium may be measured from one external point, or from one internal point, to another; the former are the external, the latter the internal, dimensions of the skull. The following numbers represent centimeters. The sagittal diameter (G. *Längen-Durchmesser*), from the glabella to external occipital protuberance, in the male 20, in the female 18 centimeters. The temporal diameter or antero-transverse diameter (G. *Tempor'al- oder vordere Quer-Durchmesser*), between the tips of the ala magna, M. 12, F. 11. The parietal or postero-transverse diameter (G. *Parietal-Durchmesser* or *hintere Quer-Durchmesser*), between the tuberosities of the parietal bones, M. 16, F. 14. The vertical diameter (G. *Höhen-Durchmesser*), between the foramen magnum and the vertex, 13.5 M., 13 F. Height or length of the face, from root of the nose to the chin (G. *Höhe des Gesichtes*), M. 12, F. 11. Breadth of face from one malar bone to the other (G. *Breite zwischen den Wangenbeinen*), M. 11, F. 10. Breadth from one zygoma to the other (G. *Breite zwischen den Jochbögen*), M. 14, F. 13. Breadth from the ramus of one inferior maxillary bone to the other, M. 13, F. 9. Mento-parietal diameter, or from chin to vertex, M. 24, F. 22. The internal diameters of the skull are, for the inferior longitudinal or sagittal diameters, from the foramen caecum to the internal occipital protuberance (G. *unterer Längen-Durchmesser*), M. 15, F. 13.5. For the superior sagittal diameter, between the middle of the internal crest of the frontal bone and the superior linea cruciata of the occipital bone (G. *oberer Längen-Durchmesser*), M. 17, F. 15. For the transverse diameter between the junction of the petrous and squamosal parts of the temporal bone (G. *Quer-Durchmesser*), M. 11.5, F. 11. For the height, M. 12.1, F. 11.9.

**C. diameters, fœ'tal.** The diameters of the fetal head vary considerably. The average, according to Playfair, is: occipitontal, 5.2" to 5.5"; occipitofrontal, 4.5" to 5"; suboccipitobregmatic, 3.25" to 3.5"; cervicobregmatic, 3.75"; biparietal, 3.75" to 4"; bitemporal, 3.5; and frontontal, 3.25. According to Spiegelberg, the average is: occipitontal, 13.5 cm., with a periphery of 36 cm.; occipitofrontal, 11.75 cm., with a periphery of 33 to 34 cm.; suboccipitobregmatic, 9.5 cm., with a periphery of 28 to 29 cm.; cervicobregmatic, 9.5 cm.; biparietal, 9.25 cm.; bitemporal, 8 cm.; and frontontal diameter, 8 cm.

**C. flexure.** Same as *Mesencephalic flexure*.

**C. fos'sa, ante'rior.** (L. *anterior*, foremost. G. *vordere Schädelgrube*.) That part of the inner surface of the skull which is formed by the roof of the orbit and of the nasal cavity. The bones entering into its formation are the frontal, the cribriform plate and spine of the ethmoid, and the lesser wing of the sphenoid. It presents elevations and depressions, which correspond to the sulci and convolutions of the under surface of the anterior lobes of the cerebrum and grooves for the anterior meningeal arteries, the foramen caecum and groove for part of longitudinal sinus, the crista galli, the minute apertures for the ol-

factory nerves, the slit-like opening for the nasal branch of the ophthalmic nerve, the anterior and posterior ethmoidal foramina. It is traversed by three sutures, the ethmoido-frontal, the ethmoido-sphenoid, and the fronto-sphenoidal.

**C. fossa, mid dle.** (*G. mittlere Schädel-grube.*) That part of the inner surface of the base of the skull which is bounded in front by the posterior margin of the lesser wing of the sphenoid, the anterior clinoid process, and the anterior margin of the optic groove; behind, by the upper border of the petrous portion of the temporal and basilar suture; externally, by the squamous portion of the temporal and anterior inferior angle of the parietal bone; and internally, by the wall of the sella turcica. The floor is formed by the great wing of the sphenoid and the petrous portion of the temporal bones, and is marked by grooves for the middle meningeal artery. It presents the foramen opticum, the groove for the cavernous sinus, the sphenoidal fissure, the foramina, named respectively rotundum, ovale, Vesalii, and spinosum, the foramen lacerum medium, the hiatus Fallopii, the foramen for the passage of the smaller petrosal nerve, the depression for the Gasserian ganglion, and the orifice of the carotid canal. It is traversed by the squamous, sphenoparietal, sphenotemporal, and petro-sphenoidal sutures.

**C. fossa, posterior.** (*L. posterior, hindernst.* *G. hintere Schädelgrube.*) That part of the inner surface of the base of the skull which is formed by the occipital bone, the petrous and mastoid portions of the temporal, and the posterior inferior angle of the parietal bone. It is bounded anteriorly by the superior border of the petrous portion of the temporal bone, laterally and posteriorly by the groove for the lateral sinus. It is crossed by three sutures, the petro-occipital, masto-occipital, and masto-parietal. It presents the grooves for the superior and inferior petrosal sinuses, the foramina, named respectively the foramen magnum, the jugular or posterior lacerated, internal auditory, mastoid, and the anterior and posterior condyloid, the aqueductus vestibuli, and the inferior occipital fossa. The posterior cranial fossa lodges the cerebellum, pons Varolii, and medulla oblongata.

**C. fossæ.** (*L. fossa, a ditch*) Three surfaces situated at the base of the skull and on its inner aspect, of which the anterior is nearly flat, the middle and posterior are deeply hollowed.

**C. ganglia.** The ganglia of the sympathetic system in the head; they are the ophthalmic, sphenopalatine, submaxillary, and otic.

**C. lymphatics.** Two sets of lymphatic vessels, superficial and deep; the former accompany the occipital and the temporal arteries, and join the superficial cervical glands; the deep are meningeal, which accompany the meningeal blood-vessels, and cerebral, which are found in the pia mater and the choroid plexus, and run by the side of the carotid and vertebral arteries, both join the deep cervical glands.

**C. nerves.** (*F. nervi craniales; G. Kopfnerven.*) The nerves which arise from some part of the encephalon and pass through foramina at the base of the cranium. They consist, according to Sömmering and the classification commonly adopted now, of twelve pairs; the first pair or olfactory nerves, second or optic, third or oculo-motor, fourth or pathetic, fifth or trifacial, sixth or abducent, seventh or facial, eighth or au-

ditory, ninth or glossopharyngeal, tenth or pneumogastric, eleventh or spinal accessory, and the twelfth pair or hypoglossal nerves. According to Willis's classification, the first six pairs are the same as Sömmering's, the seventh includes Sömmering's seventh and eighth; the eighth is Sömmering's ninth, tenth, and eleventh; and Willis's ninth pair is Sömmering's twelfth pair. The part where they are attached to the superficies of the encephalon is called their superficial or apparent origin; the grey substance in the interior of the nerve centres, to which their fibres may be traced, is called their deep or real origin. Latterly it has been proposed to constitute a thirteenth pair, consisting of the portio intermedia of the seventh and of the chorda tympani.

**C. planes.** A term which has been applied to two horizontal planes passing through the fetal head; one, the biparietal plane, on the level of the parietal protuberance; and the other, the occipitofrontal plane, having one extremity at the occipital protuberance, and the other at the centre and most prominent part of the forehead.

**C. plexuses.** (*L. plexus, a weaving.*) The sympathetic plexuses of the head; they are the carotid and the cavernous plexuses.

**C. position.** (*G. Schädellage.*) A term applied to the position of the fetal head in labour at the time that it enters the brim of the pelvis; it is usually described as admitting of four main varieties, in which the long diameter of the head coincides with one or other of the oblique diameters of the pelvis; two of which are called occipitoanterior or occipitocotyloid, and two, occipitoposterior or occipitosacroiliac.

**C. position, first.** (*G. erste Schädellage.*) The left occipitocotyloid position, having the head in the right oblique pelvic diameter, the occiput pointing to the left foramen ovale, the forehead to the right sacroiliac synchondrosis.

**C. position, fourth.** (*G. vierte Schädellage.*) The left occipitosacroiliac position, having the head in the left oblique pelvic diameter, the occiput pointing to the left sacroiliac synchondrosis, and the forehead to the right foramen ovale.

**C. position, second.** (*G. zweite Schädellage.*) The right occipitocotyloid position, having the head in the left oblique pelvic diameter, with the occiput pointing to the right foramen ovale, and the forehead to the left sacroiliac synchondrosis.

**C. position, third.** (*G. dritte Schädellage.*) The right occipitosacroiliac position, having the head in the right oblique pelvic diameter, with the occiput pointing to the right sacroiliac synchondrosis, and the forehead to the left foramen ovale.

**C. presentation.** A term applied to express the condition in labour when the head of the child occupies the os uteri, or when it is the part which is first in the advance.

**C. sinuses.** (*L. sinus, a gulf.*) The great veins of the cavity of the skull; they are the superior longitudinal, inferior longitudinal, straight, lateral, and posterior occipital sinuses, contained in folds of the dura mater, and opening into the torcular Herophili; and the circular, cavernous, superior petrosal, inferior petrosal, and transverse sinuses lying at the base of the skull.

**C. souffle.** (*F. souffle, a puff.*) A low, soft murmur occasionally heard in auscultating the skull of infants and of anæmic adults. It

appears to be of no special significance as to disease, but is only present in anæmic cases and when an anæmic cardiac murmur is present. It is heard chiefly in the lateral parts of the head, and most loudly in the right temporal region; it is of systolic origin. Also called *Cephalic murmur*.

**C. sutures.** (L. *sutura*, a seam.) The junctions of the cranial bones, which are accomplished by interlocking of a series of irregular teeth projecting from the external table of the bones and the simple apposition of the internal table. They are the sagittal, the coronal, and the lambdoid sutures on the vertex; the sphenoparietal, the squamo-parietal, and the masto-parietal sutures on the side; the basilar in the centre of the base; and the petro-occipital, the masto-occipital, the petro-sphenoidal, and the squamo-sphenoidal at the sides of the base.

**C. vertebrae.** (F. *vertèbres crâniennes*.) The number of cranial vertebrae has been differently given by different anatomists. Goethe and Oken, and more lately Owen, recognised three; Goodsir four; Geoffroy St. Hilaire five; Carus six, three principal ones and three secondary or intervertebrae, which correspond to the organs of sense. The floor of the primordial cranium is a solid mass of cartilage, without segmentation into separate protovertebrae; but in the process of development the centres of ossification appear, which may be regarded as representing separate vertebrae, and these are the occipital, the parietal, and the frontal or sphenofrontal. The body of the occipital vertebra is the basilar process; the foramen magnum is the spinal foramen, the squamous portion represents the laminae; the occipital protuberance the spine; the condyles the articular processes; the jugular processes the transverse processes. The body of the parietal vertebra is the basisphenoid; the laminae the alae majores of the sphenoid; the spinous process the parietals; the transverse processes the mastoid processes. The body of the sphenofrontal vertebra is the presphenoid; the laminae the alae minores of the sphenoid; the spinous process the frontal bone; the transverse processes the external orbital process.

**C. vesicles.** (F. *vésicules crâniennes*.) A term applied to certain bulbous enlargements seen in the early development of the nervous system. These are at first three in number, but there are subsequently five. The first or anterior (F. *vésicule crânienne antérieure* or *frontale primaire*; G. *Vorderhirn*) represents the cerebral hemispheres; the second (F. *vésicule antérieure secondaire* or *vésicule intermédiaire*; G. *Zwischenhirn*) includes the optic thalami and infundibulum; the third (F. *vésicule crânienne moyenne*; G. *Mittelhirn*) forms the tubercula quadrigemina, cerebral peduncles and aqueduct of Sylvius; the fourth (F. *vésicule crânienne postérieure primaire*; G. *Hinterhirn*) forms the cerebellum; the fifth (F. *vésicule crânienne postérieure secondaire*; G. *Nachhirn*) forms the medulla oblongata and the fourth ventricle.

**Cranio-.** (Κρανίον.) In composite words, referring to the skull.

**Cranioabdominal.** Relating to the cranium and the abdomen.

**C. temperament.** See *Temperament, cranioabdominal*.

**Craniocele.** (Κρανίον; κήλη, a tumour.) The protrusion of a part of the encephalon from

the cranial cavity, the result of injury, disease, or malformation.

**Craniocla'sia.** Same as *Cranioclasm*.

**Cranioclasm.** (Κρανίον; κλάω, to break in pieces.) The mechanical breaking up of the fetal head and its extraction by the *Cranioclast*.

The operation is thus part of the operation of *Craniotomy*; for the perforation of the head is a necessary preliminary to the use of the *cranioclast*.

**Cranioclast.** (Κρανίον; κλάω.) An instrument for breaking up the fetal head during labour to render delivery possible, and for use as a tractor afterwards.

**C., Simp'son's.** A strong forceps-like instrument, consisting of two separable, curved, duck-billed blades, fastened by a button; the upper blade is broader and grooved, so as to allow the lower blade to sink into it and to crush and hold fast what is between them.

**Craniodidymus.** (Κρανίον; διδύμος, double. F. *craniodidymie*.) Term for monstrous twin fetuses whose heads are grown together.

**Craniofacial.** (Mod. L. *cranium*, the skull; L. *facies*, the face.) Relating to the skull and the face.

**C. angle.** Same as *Angle, facial*.

**C. axis.** (L. *axis*, an axle-tree.) The parts of the cranial and facial bones corresponding to the bodies of the vertebrae. They are the mesethmoid, the vomer, the presphenoid, the basisphenoid, and the basisoccipital bones.

**C. fenestra.** (L. *fenestra*, an opening.) The hourglass-shaped opening which, in the earlier stages of development, interrupts the continuity of the interorbital with the nasal cartilaginous septum. It is situated just in front of the parasphenoidal rostrum in the *owl*.

**Craniognomy.** (Κρανίον, the skull; γνῶσις, a judgment.) The science of the form and characteristics of the skull.

**Craniography.** (Κρανίον; γράφω, to write.) A description of the skull.

**Craniohamatoncus.** (Κρανίον; αἷμα, blood; ὄγκος, a tumour.) Same as *Cephaloæmatoma*.

**Craniolabis.** (Κρανίον; λαβίς, a pair of pincers.) A forceps for taking hold of the head of the foetus; midwifery forceps.

**Craniolaria.** A Genus of the Nat. Order *Pedaliaceæ*.

**C. annua.** Linn. (L. *annuus*, yearly.) The fleshy sweet root of this plant is preserved in sugar by the Creoles as a delicacy. In a dry state it is said to be a bitter cooling medicine; and from it a bitter and refreshing beer is made.

**Craniolaris.** (Κρανίον, the skull. F. *craniolaire*; G. *Schädel förmig*.) Like the cranium.

**Craniological.** Relating to *Craniology*.

**Craniologist.** One who treats of *Craniology*.

**Craniology.** (Κρανίον, the skull; λόγος, a discourse. F. *craniologie*; G. *Kraniologie, Schädellehre*.) The doctrine or study of skulls in their variety of shape, size, and proportion, as compared with each other, or with those of different classes of animals.

**Craniomalacia.** (Κρανίον, the cranium; μαλακία, softness.) Name given by Dr. Goëdchens, of Hamburg, to a disease of infancy, believed to occur not earlier than three or four

# CRANIOMANCY—CRANIUM.

months after birth, and the symptoms of which are profuse perspirations from the head, nocturnal restlessness, feebleness of the digestive apparatus, rachitic habit, slowness of development, and especially softening of the bones of the head.

**Craniomancy.** (Κρανίον; *μαντεία*, prophesying.) The art of prognosticating the character of a person by studying the proportions and characteristics of the cranium.

**Craniometer.** (Κρανίον, the skull; μέτρον, a measure. F. *craniomètre*.) An instrument for measuring the dimensions of the cranium or skull.

**Craniometry.** (Κρανίον; μέτρον. G. *Schädelmesskunst*, *Schädelmessung*.) The measurement of the dimensions of the skull.

**Cranion.** Same as *Cranium*.

**Craniopegus.** (Κράνιος; πᾶγος, from *πᾶγνυμι*, to make fast.) A fatal monster, consisting of twins united by the summits of their heads.

**Craniothy.** (Κρανίον; *πάθος*, disease.) Disease of the cranium.

**Cranio-pharyngeal.** Belonging to the *Cranium* and the *Pharynx*.

**C. ligament.** The thickened median part of the pharyngeal aponeurosis attached to the tuberculum pharyngeum of the basilar process of the occipital bone.

**Cra'niophore.** (Κρανίον; *φορέω*, to carry.) An instrument devised for demonstrating the relative situation of the orifices and prominences of the cranium, the inclination of its planes, the degree of prognathism, and other conditions.

**Cra'nioplasty.** (Κρανίον; *πλάσσω*, to form.) The restoration, by plastic operation, of deficiency of the cranial structures.

**Cranioseep'sis.** Same as *Cranioscopy*.

**Cranioschisis.** (Κράνιον; *σχίσις*, a cleaving.) A congenital fissure of some part of the skull.

**Cranioscopy.** (Κρανίον; *σκοπέω*, to examine. F. *cranioscopie*; G. *Untersuchung des Schädels*.) Term for an examination of the configuration, size, prominences, depressions, and other characters of the skull.

**Craniospinal.** (Mod. L. *cranium*, the skull; *spina*, the spine.) Relating to the skull and the spine.

**C. axis.** Same as *Cerebro-spinal axis*.

**Cranio-stegno'ma.** (Κρανίον, the skull; *στεγνόνω*, to make cover. F. *craniostegnisme*.) A contracted or constricted condition of the cranium.

**Cranio-stegno'sis.** (Same etymon. F. *craniostegnose*.) The progress of *craniostegnomia*.

**Cranio-steno'sis.** (Κρανίον; *στενύνω*, a being straitened.) A contracted condition of the skull.

**Cranio-sto'sis.** (Κράνιον; *οστίον*, a bone.) Congenital ossification of the cranial sutures.

**Cranio'ta.** (Κράνιον.) One of Hæckel's two divisions of *Vertebrata*, being those possessing a skull, a brain, and a muscular heart.

**Cranio'ta'bes.** (Mod. L. *cranium*; *tabes*, a wasting away. G. *Schädelverweichung*, *Schädelschwund*.) A form of rickets in which the skull bones especially are softened, and at the occiput, especially in the neighbourhood of the lambdoid suture, thinned in places, it may be altogether absorbed.

**Craniothorac'ic.** (Κρανίον; *θώραξ*, the chest.) Relating to the skull and the thorax.

**C. temp'orament.** See *Temperament*, *craniothoracæ*.

**Cra'niotome.** (Κρανίον; *τίνω*, to cut.) Name for the trephine.

Also, a name for the *Craniotomy forceps*.

**Craniotomy.** (Κρανίον; *τομή*, a cutting.) A name for the operation for the reduction of the size of the foetal cranium during labour and the subsequent procedures necessary for the extraction of the child by the natural passage. It consists, first, of the piercing of the skull by an instrument called the *perforator*; then of the breaking up of the intracranial structures and their more or less complete evacuation, which may be accomplished either by the perforator or the *crotchet*; and subsequently, if necessary, the extraction of the head by the *Crotchet*, *Craniotomy forceps*, *Cephalotribe*, *Cranioclast*, or other like instrument. The operation of craniotomy is needed if there be such disproportion between the size of the foetal head and the maternal passages that the former cannot be born entire; the disproportion is usually on the side of the mother, and most frequently consists in some deformity of the bones of the pelvis encroaching on the dimensions of the whole or of some part of the canal; but it may be caused by a tumour or swelling or morbid contraction of the soft parts; the disproportion may be on the side of the foetus, and it then consists in a too large or a deformed head. The pelvis may be so much distorted and its canal so narrow in some part that no breaking down of the foetal head will enable it to be extracted. Assuming the existence of not less than 3" in the transverse diameter, it is held that craniotomy may be performed with every prospect of success if the antero-posterior diameter be 1·75", but that the forceps should be used if the antero-posterior diameter at the brim amount to from 2·75" to 3".

Ordinarily, craniotomy is performed when the head presents, but the operation may be needed under other circumstances when the head is last, as in breech presentation, and in this case it may be perforated behind the ear.

**C. for'ceps.** (L. *forceps*, a pair of pincers.)

A pair of long strong forceps used to lay hold of and pull at the foetal skull after perforation in craniotomy to effect delivery. There are many forms; the blades are roughened or toothed, one is often fenestrated, the other closing into it.

**Craniotrype'sis.** (Κρανίον; *τρύπησις*, a boring.) Same as *Trephining*.

**Cra'nium.** (Κρανίον, the skull; akin to *κράν*, the head. F. *crâne*; G. *Schädel*, *Hirnschädel*, *Hirnschale*.) The skull, or upper part of the head, containing the brain and its connections.

**C., ab'sence of the.** See *Acrania*.

**C. bi'fidum.** (L. *bifidus*, divided into two parts.) Deficiency of skull wall with *encephalocele*.

**C., capac'ity of.** (F. *capacité du crâne*, *cubage de la cavité crânienne*; G. *der Cubikinhalt des Schädels*.) The cubical space of the skull varies greatly in magnitude in different races: in the male from 1220 to 1790 cubic centimeters, in the female from 1090 to 1550 (Welcker); 1290 to 1470 (Asby); on the average it is 1450 in males, 1300 in females (Krause); 1550 male, 1300 female (Huschke). The nature

## CRANOLOGY—CRAQUEMENT.

of the substance used to gauge the capacity materially affects the result; thus Wyman found the same skull had a capacity of 1193.0 when gauged with peas, of 1201.8 with shot, of 1206.2 with haricots, of 1220.2 with rice, of 1247.5 with linseed, of 1257.5 with coarse sand, and of 1313.0 with fine sand.

**C., development of.** The cranium in the chick appears in the course of the fourth day of incubation in the form of a membrane, consisting of slightly differentiated mesoblast surrounding the rudimentary brain. On the sixth day true hyaline cartilage makes its appearance in the form of a thick plate, called by Rathke the "investing mass," which surrounds the front end of the notochord. From the posterior part of this mass two alæ arise, which enclose the rudiments of the internal ear; anteriorly to the investing mass two trabeculae are formed, which subsequently unite with it, and which, passing forward, meet again in front, enclosing the pituitary space. In front of this junction the trabeculae expand into a broad plate, which subsequently develops into the ethmoid and nasal cartilages, and they then end in two horns in the interior of the frontonasal process. The front end of the notochord, which extends quite up to the pituitary space, defines the anterior boundary of the basioccipital, and in the cartilage in front of this the basisphenoid arises. The only segment of the skull which has a cartilaginous roof originally is the occipital segment. The roof of the remainder of the skull is formed by membrane bones. The trabeculae, together with the cartilage between the pituitary space and the end of the notochord, give rise to the sphenoid bone; in the cartilage in front of the trabeculae the ethmoid and nasal bones are formed. On, or soon after, the sixth day an upward growth of cartilage takes place from the investing mass behind to form the exoccipital and occipital condyles. The basisphenoid grows outwards on each side to form the alisphenoid, and the supraoccipitals expand and approximate to each other. The quadrate, at first appearing as a simple knob of cartilage at the side of the investing mass, sends a process forwards, the orbital process, and a long process backwards, which articulates with the petrotic capsule and the exoccipital, and one downwards, which articulates with the extremity of Meckel's cartilage. The palatine and pterygoid bars increase in length, the former being the longer, and between them and the base of the skull the tissue forming the sphenoidal rostrum or parasphenoid appears. Between the posterior end of the pterygoid and the rostrum a plate of cartilage called the basipterygoid is interposed, and the vomer begins to be formed in the middle line, half way along the palatines. The parietals, squamosals, frontals, lacrymals, nasals, premaxillæ, maxillæ, maxillopalatines, vomer jugals, quadratojugals, dentary, and bones of mandible, basitemporal, and rostrum are all splint bones, not preformed in cartilage; the other bones and parts of the bird's skull are either preformed in cartilage or remain cartilaginous.

**C., elastic'ity of.** The elasticity of the skull is great and apparently perfect. Its transverse diameter can be diminished by pressure to the extent of 10 per cent. without permanent injury. (Bruns.)

**C., fissures of.** (L. *fissura*, a cleft. G. *Fissuren des Schädels*.) These are the fissura

Glaseri, petrososquamosa, petrosomastoidea, petrosoangularis, and petrosobasilaris.

**C., fœ'tal, diam'eters of.** See *Cranial diameters, fœ'tal*.

**C. huma'num.** (L. *humanus*, human. F. *crâne humain*; G. *menschlicher Schädel*.) The human skull, from which various tinctures, oils, and other preparations were in former times made and used as alexipharmic and antiepileptic.

**C., ligaments of.** (L. *ligamentum*, a band.) The chief of these are the ligamentum pterygospinosum, between the spina angularis and the upper extremity of the lamina lateralis of the pterygoid process; the fibrous band extending between the intrajugular processes of the temporal and occipital bones; the fibrous bands connecting the clinoid processes together, so as to form a clinoid-carotic foramen; the thin band which runs beneath the hypoglossal nerve below and in front of the anterior condyloid foramen. A small ligament also completes the supraorbital notch.

**C., primitive.** The earliest or membranous condition of the cranial walls.

**C., primor'dial, cartilag'inous.** The early stage of the development of the cranium, in which it in great part consists of cartilage.

**C., primor'dial, membranous.** (F. *primordial*, from L. *primordius*, original.) See *Membranocranium*.

**C., suture's of.** (G. *Verbindungen der Schädelknochen*.) The most important and extensive are the coronal, sagittal, lambdoid, mastoid, squamos, spheno-frontal, and palatine; the shorter and those of minor importance are the parieto-mastoid and occipito-mastoid, zygomatico-frontal, spheno-zygomatic, spheno-temporal, and zygomatico-maxillary.

**C., thick'ness of walls of.** The cranial walls vary in thickness from about 15 mm. at the occipital protuberance to between 5 and 7 mm. at the vertex, and to 2 mm. at the squamous portion of the temporal bone.

**C., weight of.** (G. *Gewicht des Schädels*.) The weight of the skull after complete desiccation in air, which, however, does not imply the removal of the whole of the water it contains, varies from 468 to 1081 grammes. It is on the average in the male 731, in the female 555; that of the inferior maxilla alone is in males 88, in the female 58.

**Crano'logy.** Same as *Craniology*. The term originally used by Gall.

**Cran'sac.** France; Département de l'Aveyron. Athermal still waters, springing from the coal and iron slate formation, containing small quantities of calcium, sodium, magnesium, potassium, ammonium, and aluminum sulphates, and some iron and manganese; traces of iodide of sodium and ammonium, arseniate of iron, and sulphuret of arsenic are said to have been found. They are diuretic and laxative, and are used in digestive troubles, the sequelæ of intermittent fever, scrofula, scurvy, and neuralgias, and locally in chronic affections of the ear and eyes.

**Crante'ries.** (Κραντήριες, from κραίνω, to accomplish.) The dentes sapientie, or wisdom-teeth; because they appear last and complete the set. (Goræus.)

**Cra'num.** The cranium.

**Crap.** The buckwheat, *Polygonum fagopyrum*.

**Crap'ula.** Same as *Crapale*.

**Cra'quement.** See *Bruit de craquement*.

**Crasiology.** (Κράσις, a mixing; λόγος, a discourse. F. *crasiologie*; G. *Mischungslehre*.) The doctrine of blending or mingling of bodies. The doctrine of *Crasis*.

**Crasis.** (Κράσις, a mixing; from κρᾶνναι, to mix. F. *crase*; G. *Mischung*.) Term for the due mixture and distribution of the humours of the body, blood, phlegm, black bile and yellow bile, so as to constitute a state of health. By some the term has been used as synonymous with temperament and complexion, whether natural or acquired.

**C., parasitic.** (Παράσιτος, eating at the table of another, a parasite. F. *crase parasitaire*.) The cachectic, weak condition of system which renders a person more prone to the assaults of parasites, either vegetable or animal.

**Craspeda.** (Κράσπεδον, the edge of a thing.) Convoluted cords, containing thread cells, attached to the free border of the mesentery of some *Actinozoa*.

**Craspedcephlogiosis.** (Κράσπεδον, the border; cephalogiosis. F. *craspedcephlogiosis*; G. *die gefranzte Variolöde*.) Fringed or frimbriated varioloid.

**Craspedon.** (Κράσπεδον, the edge.) Old term for an elongation or relaxation or oedema of the uvula. (Quincy.)

**Craspedota.** (Κράσπεδον.) The true nudose, or *Haplanormpha*; so called because of their *Craspeda*.

**Crassamen.** Same as *Crassamentum*.

**Crassamentum.** (L. *crassamentum*, the thick sediment of a liquid; from *crasso*, to make thick. G. *Verdickte, Eingedickte*.) The thick part or clot of a fluid which has thickened or clotted; especially applied to the clot of blood. See under *Blood*.

**C. sanguinis.** (L. *sanguis*, blood. G. *Blutkuchen*.) Blood clot.

**Crassena.** A term by which Paracelsus designated the saline, putrefactive, and corrosive principles which, he thought, gave rise to ulcers and tumours of different kinds.

**Crassilingua.** (L. *crassus*, thick; *lingua*, the tongue.) A Suborder of the Order *Sauria*, having a short, fleshy, non-protractile tongue. It includes the Iguanas.

**Crassitudo.** (L. *crassitudo*, from *crassus*, thick.) Thickness, thickening.

**Crassocephalum.** (L. *crassus*; Gr. *κεφαλή*, the head.) A Genus of the Nat. Order *Compositæ*.

**C. sonchifolium**, Less. The *Emilia sonchifolia*, De Caud.

**Crassula.** (L. *crassus*, thick. G. *Fettlinne, Dickblatt*.) A Genus of the Nat. Order *Crassulaceæ*, so called from the thickness of its leaves.

Also, a name for the *Sedum telephium*.

**C. arborescens.** (L. *arboresco*, to grow to a tree.) The *Cotyledon orbiculata*.

**C. portulacaæca.** (Portulaca, the plant of that name.) Used as *C. tetragona*.

**C. tetragona.** (Τετράς, four; γωνία, an angle.) This plant, boiled in milk, is used at the Cape of Good Hope against dysentery.

**Crassulacæ.** (Crassula. G. *Fettpflanzen*.) A Nat. Order of perigynous calycifloral Exogens of the Alliance *Fiales*, or a Family of the Order *Saxifraginæ*, or an Order of the Cohort *Rosales*. Flowers polypetalous or monopetalous; calyx many-leaved; petals hypogynous; fruit follicular, apocarpous.

**Crasium intestinum.** (L. *crassus*, thick; *intestinum*, an intestine.) Old epithet for the colon, or large intestine, from its thickness.

**Crassus.** (L. *crassus*; perhaps akin to Sans. root *ruk*, to grow. F. *grassier*; G. *dick, klumpig*.) Thick; gross; fleshy.

**C. pulsus.** (L. *pulsus*, a beating.) A strong and full pulse.

**Cratægin.** (F. *cratégine*.) A term applied by Leroy to a bitter crystalline substance obtained from the bark of *Crataegus oxyacantha*.

**Cratægonum.** (Κραταίγονον, from κρατικός, strong; γόνος, offspring.) The *Polygonum persicaria*, or, according to some, the *Melampyrum pratense*, because of the aphrodisiac properties attributed to the seeds.

**Cratægus.** (Κραταγος, a flowering thorn. G. *Weissdorn*.) A Genus of the Nat. Order *Rosaceæ*.

**C. aria.** The *Pyrus aria*.

**C. azarolus**, Linn. (F. *azarolier, épine d'Espagne*.) The azarole. Fruit acidulous, refreshing.

**C. mespilus.** The *Mespilus germanica*.

**C. mexicana**, Less. Hab. Mexico. Root astringent; used in diarrhoea and dropsy. Fruit used as an expectorant.

**C. monogyna**, Jacq. (Μόνος, single; γυνή, a female.) Properties as *C. oxyacantha*.

**C. oxyacantha**, Linn. (Οξύς, sharp; ἄκανθα, a thorn. F. *épine blanche, aubépine*.) The hawthorn. Fruit, called haws, is astringent, and yields on fermentation a refreshing, acidulous liquor. The bark is said to be febrifuge.

**C. parvifolia**, Ait. (L. *parvus*, small; *folium*, a leaf.) Hab. North America. Fruit used to prepare a refreshing syrup.

**C. pyracantha**, Pers. (Πῦρ, fire; ἄκανθα, a thorn. F. *corail*.) The evergreen thorn. Fruit astringent.

**C. terminalis.** The *Prunus terminalis*.

**Cratæva.** (Κρατινός, a Greek botanist.) A Genus of the Nat. Order *Jurantiaceæ*. The fruit of nearly all the species has a peculiar alliaceous odour, and they have therefore been called garlic pears.

**C. gynandra**, Linn. (Γυνή, a female; ἀνδρ., a male.) Garlic pear. Hab. Jamaica. Root bark vesicant.

**C. inermis**, Linn. (L. *inermis*, inactive.) The *C. Norvata*.

**C. marmelos**, Linn. (Port. *marmelo*, quince.) The *Egle marmelos*.

**C. murva**, Lam. The juice of the berries of this plant is said to be agreeable. Leaves stomachic; bark given in convulsions, and, boiled in oil, applied to rheumatic joints.

**C. religiosa**, Ainslie. (L. *religiosus*, pious.) A species called in Tahiti *Pura-au*, there planted in burial grounds; the leaves are aromatic and stimulant.

**C. tapla**, Linn. Hab. West Indies. Bark bitter and tonic, and is esteemed a febrifuge. The bruised leaves are used in Brazil as a remedy against inflammation.

**Crater.** (Κρατήρ, a mixing vessel. F. *cratère*; G. *Becker*.) Old name for a brass vessel with a broad base and narrow mouth.

**Cratera.** (L. *cratera*, a goblet.) In Botany, a cup-shaped receptacle.

**Craterauchen.** (Κρατηρός, strong; αἰχμή, the neck.) A strong-necked person.

Also, a strong neck.

**Crateriform.** (L. *cratera*, a bowl;

# CRATEROID—CREDO.

*forma*, likeness. *F. crateriforme*; *G. becherformig.*) Applied to a body that is concave, hemispherical, and straightened at its base, like a more or less shallow cup.

**Crateroid.** (*Κρατήρ*, a bowl; *εἶδος*, likeness. *F. crateroide*; *G. becherähnlich.*) Resembling a bowl or eup.

**Cratævæsiûm.** The *Sisymbrium nasturtium*.

**Craticula.** (*L. dim. of crates*, wicker-work.) The grate which covers the ash-hole of a furnace.

**Cratophyte.** (*Κρατύς*, strong; *φυτόν*, a plant. *F. cratophyte.*) A plant reputed proper for strengthening.

**Cratoxylon.** (*Κράτος*, strength; *ξύλον*, wood.) A Genus of the Nat. Order *Hypericaceæ*.

**C. Hornschuchia.** Hab. Java. A slight astringent and diuretic.

**Craw.** (*Dan. kro.* *F. cabot*; *G. Kropf.*) Same as *Crop*.

**Craw-craw.** A native name of a species of pustulous itch common on the African coast, especially about Sierra Leone. It is most contagious, and results in very intractable ulcerations. It was supposed to be caused by a *Dermatophytus*, but, according to O'Neill, it is produced by a *Filaria*.

**Crawfish.** Same as *Crayfish*.

Also, the spiny lobster, *Palinurus vulgaris*.

**Grayfish.** (A corruption of *Mod. Eng. crevis*, or *crevess*; from Old *F. crevisse*, from Old High *G. creviz*, a fish, a crab.) The *Astacus fluviatilis*. It is good eating.

**C., river.** The *Astacus fluviatilis*.

**Craziness.** (*G. craze*, from Mid. *E. cracen*, to crack; from a Scandinavian root; *Sw. krassa*, to crackle, to break.) The state of being broken.

Applied to a form of chronic insanity or dementia, in which the mind is, as it were, broken; it is an intermediate stage between chronic mania and absolute fatuity.

Also, Good's synonym for insanity or *Ephronia*.

**Crazolaryngismus.** (*Κράζω*, to creak; *laryngismus.* *F. crazolaryngisme*; *G. Krähhehle.*) Term for laryngismus stridulus.

**Crazy.** Afflicted with *Craziness*.

**Cre'a.** Old name for the shin, or anterior ridge of the tibia. (Quincy.)

**Creak.** (An imitative word.) To make a harsh grating sound.

**Creaking.** (*G. kreischend.*) Part. of *Creak*.

**C. friction-sound.** See *Friction-sound*, *creaking*.

**C. rale.** See *Râle*, *creaking*.

**Cream.** (*F. crème*; from Low, *L. cremum*, cream; perhaps allied to *Sax. redin*, cream.) That part of milk which rises to the surface on standing. See *Milk*.

Also, a similar substance in other liquids.

**C., cold.** The *Cervatum Galeni*, from its consistence and appearance.

**C.s, medicinal.** A term applied by Beral to preparations made with yolk of egg, sugar, and milk; alone or combined with some drug.

**C. nuts.** Same as *Brazil nuts*.

**C. or bismuth.** Recently precipitated subnitrate of bismuth in a moist state. Used, with mucilage, in diarrhoea.

**C. of tar'tar.** (*F. crème de tartre*; *G. Weinsteinzahn.*) The *Potasse tartaras acida*.

**C. of tar'tar fruit.** The fruit of *Adansonia digitata*.

**C. of tar'tar whey.** Two drachms of bitartrate of potash are added to a pint of milk. The whey, diluted with water, is used as a diuretic in dropsy.

**Creasol.**  $C_8H_{10}O_2$ . The chief constituent of creasote. A colourless, highly refracting liquid, of pleasant smell and aromatic burning taste; and of sp. gr. 1.089; insoluble in water, soluble in alcohol and ether; it forms salts with metals.

**Creasote.** (*Kpîas*, flesh; *σάζω*, to save or preserve; from its antiseptic qualities.) See *Creasotum*.

**C., coal-tar.** A synonym of *Carbolic acid*.

**C. mix'ture.** See *Mistura creasoti*.

**C., poi'soning by.** In large doses creasote is an active irritant poison, producing epigastric pain, vomiting, oppression of the breathing, great prostration, tremors, and death. The digestive mucous membrane is highly congested with ecchymotic spots, and the lungs gorged with brown coloured blood.

**C. water.** See *Aqua creasoti*.

**Creasotum**, B. Ph., U.S. Ph. (Same etymon. *F. creasote*; *G. Kreosot.*) A colourless, or yellowish, neutral, oily liquid, having a strong empyreumatic odour and a caustic burning taste. It boils at 203° C. (397° F.), has a sp. gr. of 1.071, B. Ph., 1.046, U.S. Ph.; it is sparingly soluble in water, freely in alcohol, ether, glacial acetic acid, fixed and volatile oils; it burns with a white, sooty flame; it precipitates solutions of gum and albumen, but not gelatin. It is one of the numerous products of the dry distillation of wood, and is obtained from wood tar by distillation and purification. It is a very complex body, containing among other matters creasol, xylenol, phenol or carbolic acid, cresol, guaiacol, and phlorol. It is closely allied to carbolic acid, but differs from it in not coagulating collodion and in not staining a blue colour a splinter of pine-wood which has been dipped in it and then in hydrochloric acid. Creasote acts on living tissues in much the same way as carbolic acid; it has been used to restrain vomiting, to arrest hæmorrhage, to diminish the secretion of chronic catarrh of the mucous membranes, and in diarrhoea and cholera; locally as an escharotic in warts and condylomata, as a disinfectant in malignant and foul ulcers, and as an anodyne in toothache; mixed with lard, it has been used as an ointment in erysipelas. Dose, one to two drops, .05 to .10 gramme. Commercial creasote is often merely impure carbonic acid.

**Creata.** Same as *Chiretta*.

**Creatin.** See *Kreatin*.

**Creatinin.** See *Kreatinin*.

**Creatophagous.** (*Kpîas*, flesh; *φαγέιν*, to eat. *F. creatophage*; *G. Fleischessend.*) Flesh-eating.

**Creatozo'ma.** (*Kpîas*, flesh; *ζωόν*, broth. *F. créatozôme*; *G. Fleischbrühe.*) Name for flesh-broth.

**Creazoton.** Same as *Creasote*.

**Creches.** France; Département de Saône et Loire. Athermal mineral waters, containing calcium sulphate, a little iron, and free carbonic acid. Used as a tonic in anemia and chlorosis.

**Cre'do.** France; Département de la Gironde. Athermal mineral waters, containing calcium carbonate, iron carbonate and crenate in small quantity, and some carbonic acid. Used as a tonic.

**Credulitas.** (L. *credulitas*, easiness of belief.) One of the varieties of *Moria imbecilis*, according to Good, consisting in weakness and undue pliancy of the judgment, with a facility of being duped.

**Credulity.** See *Credulitas*.

**Creep'er.** (Sax. *creopan*, to creep.) One who, or that which, creeps.

**C., trumpet.** The *Tecoma radicans*.

**C., Virginia.** The *Ampelopsis quinquefolia*.

Also, the *Tecoma radicans*.

**Creeping.** (Sax. *creopan*, to creep.) Moving with the belly on the ground.

In Botany, growing with low lying branches close to, or under, the ground.

**C. bu'bo.** See *Bubo*, creeping.

**C. root.** Same as *C. stem*.

**C. sick'ness.** (G. *Kriebelkrankheit*.) A form of chronic *Ergotism*.

**C. stem.** A variety of the rhizome, according to many, consisting of a slender branch running beneath the surface of the ground, and sending roots from its lower, and buds from its upper, surface.

**C. wa'ter-par'snip.** The *Sium nodifolium*.

**Creeps.** (Same etymon.) A synonym of what is popularly called *Fidgets*.

**Cre'mas'ter.** (Κρεμαστήρ, a suspender; from κρεμάνω, to hang. F. *cremaster*; G. *Hodenmuskel*.) A muscle in the male consisting of a series of loops of muscular fibre, each longer than the other, connected with each other by areolar tissue, and lying upon the spermatic cord and the testicle, where some are attached to the tunica vaginalis; the fibres arise from the middle of Poupart's ligament, and have a common tendinous insertion into the crest of the os pubis and the neighbouring sheath of the rectus muscle. The cremaster is really the lengthened lower fibres of the internal oblique and of the transversalis muscles, carried down in the descent of the testicle. By its contraction it draws the testicle towards the abdominal ring. Its nerve supply is derived from the genital branch of the genito-crural nerve.

**C. re'flex.** (L. *reflecto*, to turn back.) A term applied to the elevation of the testicle from contraction of the cremaster produced by pinching or other irritation of the skin of the inner side of the thigh, where it is supplied by the anterior crural, internal and middle cutaneous, the two saphenous, and the anterior branches of the obturator nerves, through the intermediation of the lumbar enlargement of the spinal cord. It is a somewhat irregular action in health, so that its absence in disease is of not much diagnostic importance.

**Cre'mas'ter'ic.** Belonging, or relating, to the *Cremaster*.

**C. artery.** (F. *artère fémorulaire*.) A thin branch of the deep epigastric artery given off as it bends upwards from Poupart's ligament; it accompanies the spermatic cord to the testicle, where it anastomoses with branches of the spermatic artery. In the female, it accompanies the round ligament, and is distributed to the labium pudendæ.

**C. fas'cia.** See *Fascia*, cremasteric.

**Cre'mas'tes.** (Κρεμάνω, to hang.) The *Cremaster*.

**Cre'mas'tra.** (Κρεμαστήρ, a suspender. F. *crémastré*.) The hooks at the posterior ex-

tremitry by which certain chrysalides suspend themselves.

**Cre'ma'tion.** (L. *cremo*, to burn. G. *Verbrennung*.) The prompt destruction of the body after death by burning. It may be accomplished, as in India, by placing the body on a pile of wood, but this method is expensive and often imperfect. In the Siemens' method, employed in Germany, the body is subject to the hot flame produced by a mixture of gaseous hydrocarbons and air. A body weighing 227 lbs. can in this way be reduced to 5 lbs. of ashes in fifty-five minutes, at a cost of a few shillings. The advantages of this method of disposing of the body after death are the destruction of all infections or contagious substances and the absence of all the injurious products of decomposition. The chief disadvantages are the impossibility of recognition in cases of doubtful identity and of examination when poisoning is suspected when once the funeral rite has been performed.

**Cre'mno'cele.** (Κρημνός, a beetling crag; the labia pudendi; ἄλλη, a tumour. F. *cremnocèle*; G. *Schaumleichenbruch*.) Hernia of the labia pudendi.

**Cre'mnone'o'sis.** (Κρημνός; ὄγκωσις, an enlarging. F. *cremnoscose*.) The formation of a cremnonesc.

**Cre'mnon'cus.** (Κρημνός, the labia pudendi; ὄγκος, a tumour. F. *cremnuncus*.) A tumour of the labia pudendi.

**Cre'm'us.** (Κρημνός, a beetling crag.) Old term, used by Hippocrates, *de Loc. in Hom.* ed. Foësius, p. 423, for the lips and eminence or wing of the pudendum muliebre.

Also, the lip or edge of an ulcer, *de Loc. in Hom.* ed. Lindenus, and Foësius, *l.c.* p. 354.

**Cre'mo'carp.** (Κρεμῶς, to suspend; καρπός, fruit. F. *cremocarpe*, *cornodile*; G. *Hängefrucht*, *Dollenfrucht*.) A species of fructification occurring throughout the Umbelliferae, in which the simple fruit is united with the calyx, and divided into two indehiscent monospermatus œcæ, which remain for some time suspended by their summit from the central axis by means of a carpopore.

**Cre'mocar'pium.** See *Cremocarp*.

**Cre'mom'e'ter.** (L. *cremor*, cream; *metrum*, a measure.) An instrument for measuring the amount of cream in milk. It is a burette about 10 inches high, and is divided from above downwards into 100 parts. An equal volume of water and a pinch of bicarbonate of soda are added to the milk to be examined. The instrument is filled to the line marked 0, and allowed to stand at rest for twelve hours. The amount read off and doubled on account of the previous dilution gives the proportion of cream in the sample. Good milk contains from 10—16 per cent.

**Cre'mor.** (L. *cremor*, thick broth. F. *crème*; G. *Rahm*.) Cream.

Also, any substance floating on, and skimmed from, the surface of a fluid.

Also, a thick decoction of barley.

**C. cal'cis.** (L. *calx*, lime. F. *crème de chaux*.) The pellicle of carbonate of lime which forms on the surface of lime water on being exposed to the air.

**C. frig'idus.** (L. *frigidus*, cold.) Cold cream; the *Ceratrum Galeni*.

**C. lac'tis.** (L. *lac*, milk. G. *Milchrahm*.) The cream of milk.

**C. litharg'ryi.** (*Litharge*.) Solution of diacetate of lead one part, mixed with eight parts

# CREMOSPERMOUS—CREPITATION.

of cream. A cooling, somewhat astringent, application.

**C. ptisanæ.** (Πτισάνη, barley groats.) Thick barley water.

**C. tartari.** (G. *Weinsteinrahm*.) The *Potasse tartaras acida*, B. Ph.

**C. tartari boraxatus.** The *Tartarus boraxatus*, F. Codex.

**C. tartari purificatus.** (L. *purifico*, to purify.) Purified cream of tartar; the *Potasse tartaras acida*.

**C. tartari solubilis.** (L. *solubilis*, soluble.) The *Tartarus boraxatus*, G. Ph.

**C. urinæ.** (L. *urina*, urine.) The pellicle of phosphates which forms on some urine.

**Cremospermous.** (Κρεμώω, to suspend; σπέρμα, seed. F. *cremosperme*.) Applied to plants the seeds of which are attached by the summit or the middle part.

**Crena.** (L. *crena*, a notch.) In Botany, a notch producing with its neighbour a tooth on the edge of a leaf.

**C. clunium.** (L. *clunis*, the nates. G. *Gesässpalte*.) The depression or notch between the buttocks.

**C. cordis.** (L. *cor*, the heart.) The longitudinal groove on the anterior and posterior surface of the heart.

**Crenæ.** (L. *crena*, a notch.) The serrations on the edge of the external table of the cranial bones.

**Crenate.** (L. *crena*, a notch. F. *créné*; G. *gekerbt*, *kerbzähnigt*.) Notched; scalloped. Applied to leaves when the indentations produce teeth which are rounded or convex.

Also (F. *crénate*), a combination of crenic acid with a base.

**Crenatura.** Same as *Crenature*.

**Crenaturæ.** Same as *Crenæ*.

**Crenature.** (L. *crena*.) The tooth of a crenate edge.

**Crenel.** A small *Crena*.

**Crenellate.** Minutely *Crenate*.

**Crenic.** (Κρήνη, a spring. F. *crénique*.) Relating to a spring or fountain of water.

**C. acid.** (G. *Quellsäure*.)  $C_{12}H_{12}O_6$ . An organic acid discovered by Berzelius in the waters of Porla; and believed by him to contain nitrogen, but this is denied by Mulder. It is amorphous, yellow, and of an acid astringent taste.

Berzelius supposed that it was formed by the decomposition of the cellulose of the filamentous Algae found in some mineral waters.

**Crenosoma.** (Κρήνη, a well; σωμα, a body.) A sexually mature form of nematode worm.

**C. semiaratum.** Molin. (L. *semis*, half; *armatus*, armed.) A species found in the trachea and lungs of *Canis vulpes*.

**C. striatum.** Zed. (L. *striatus*, furrowed.) A species found in the bronchi of *Erinaceus europæus*.

**Crenulate.** (L. dim. of *crena*, a notch. F. *crénulé*.) Having very small notches; a diminutive of *Crenate*.

**Crenulure.** (L. dim. of *crena*. F. *crénulure*; G. *Kerbzahn*.) A term applied to each tooth of a crenate edge of a leaf.

Also, applied to each tooth of the serrated cranial sutures.

Also, the groove of a director or similar instrument.

**Creography.** (Κρέας, flesh; γράφω, to write.) A synonym of *Histography*.

**Creole.** (F. *créole*; S. *criollo*; from a

Negro word.) One born in the West Indies or Spanish America, but not of native blood.

**Creophagous.** (Κρέας, flesh; φάγειν, to eat. F. *creophage*; G. *fleischfressend*.) Flesh-eating, carnivorous.

**Creosol.** See *Creasol*.

**Creosote.** Same as *Creasote*.

**Creozoma.** Same as *Creatozoma*.

**Crepalia temulenta.** The *Lolium temulentum*.

**Crepanel'la.** The *Plumbago europæa*.

**Crepation.** (L. *crepo*, to burst or break.) The bursting of seeds till they burst their shells or coverings.

**Crepatura.** Same as *Crepation*. Also, a synonym of *Hernia*.

**Crepidines palpebrarum.** (L. *crepido*, a foundation; *palpebræ*, the eyelids.) The tarsal cartilages.

**Crepidopoda.** (Κρηπίς, a sandal; πούς, a foot. F. *crepidopode*; G. *sohl-füssig*.) An Order of the *Mollusca* having the bottom of the body formed by a fleshy disc like a sole.

**Crepidulate.** (L. *crepidula*, a shoe. F. *crepidulé*; G. *pantoffelchenformig*.) Like a small shoe or hoof.

**Crepinum.** Old term for tartar.

**Crepis.** (Κρηπίς, a half boot. G. *Pipau*.) A Genus of the Tribe *Cichoraceæ*, Nat. Order *Compositæ*.

**C. placera.** Tenore. Hab. Italy, Sicily. Said to be poisonous.

**C. sibirica.** An esculent species.

**Crepitaculum.** (L. *crepito*, to crackle. F. *crépitaile*.) Applied by Desvaux originally to a fruit known at present as a regma, because it opens with elasticity and noise.

Also, a mica-like spot at the base of the upper wings in some locusts.

**Crepitant.** (L. *crepito*, to crackle.) Crackling or finely rattling.

**C. râle.** See *Râle*, *crepitant*.

**C. rhonchus.** Same as *Râle*, *crepitant*.

**Crepitating.** (L. *crepito*.) Crackling.

**C. râle.** Same as *Râle*, *crepitant*.

**Crepitation.** (L. *crepito*, to crackle. F. *crépitation*; G. *Knistern*, *Knacken*, *Knarren*.) The same as *Decrepitation*.

The sensation or slight sound caused by pressure on any portion of cellular tissue in which air is collected, as in emphysema.

The noise heard and the sensation felt in the act of grating the ends of fractured bones together.

Also, the crackling noise sometimes heard and felt in gangrenous parts when examined with the fingers.

Also, the crackling of a joint when pulled or twisted.

Also (G. *Knister-Rasseln*, *crepitirendes Rasseln*), the fine crackling heard in the lungs on auscultation in pneumonia. See *Râle*, *crepitant*.

Also, a synonym of *Râle*, *mucoous*.

**C., dry.** A synonym of *Râle*, *crepitant*.

**C., fine.** A synonym of *Râle*, *crepitant*.

**C., fine, physiological.** A term applied by Renzi to a fine crepitation heard in the lungs of a healthy person; it is like the ordinary pneumonic crepitant râle, is heard in inspiration only, and after two or three deep respirations it ceases; a common site is above the clavicle. He attributes it to atelectasis. It is possible that the sound is produced in the subcutaneous areolar tissue.

According to Gee, a crepitation due to collapse is heard, especially at the base of the lung, at the beginning of a stethoscopic examination; it ceases after two or three deep breathings.

**C., large.** A synonym of *Râle, mucous*, from the resemblance of the sound to the breaking of somewhat large bubbles.

**C., metallic.** A term applied by Bristowe to a mucous râle when the sound is of a metallic or twanging character; it is developed in cavities or in large bronchial tubes.

**C., minute.** Same as *C., small*.

**C., small.** The same as *Râle, crepitant*, from its resemblance to the sound of the breaking of fine bubbles.

**Crep'itus.** (*L. crepitus*, a rattling; from *crepo*, to give a crack or crash, to make a noise. *F. crepitation*; *G. Knacken, Knarren*.) Term for the discharge upwards, or rejection downwards, of gas or flatus from the stomach and bowels.

The crackling noise occasioned by pressing a part of the body when air is collected in the cellular tissue.

Term for the grating sensation or slight noise produced by the ends of a fractured bone being rubbed against each other. See *Crepitation*.

**C. lupi.** (*L. lupus*, a wolf.) The *Lycopodium barista*, or puff-ball.

**C., pneu'monic.** The crepitant râle heard in pneumonia.

**C. re'dux.** A term applied to a crepitant or mucous râle occurring during the period of resolution of pneumonia.

**C., silk'en.** A term by Barwell for the sensation felt on moving a joint affected with dendritic synovitis or hydrarthrosis, which he likens to the rubbing together between the fingers of two pieces of stout silken ribbon.

**Crepus'cular.** (*L. crepusculum*, the twilight. *F. crépusculaire*.) Of, or belonging to, the twilight. Applied to certain species of the Order *Lepidoptera*, which generally appear only in the early morning or the evening.

Also, applied to any animal of similar habit.

**Crescent.** (*L. cresens*, part. of *cresco*, to grow. *F. croissant*; *I. luna crescente*; *G. Halbmond*.) The increasing or new moon; or a thing having the form of it.

**C.-shaped.** (*G. halbmondförmig*.) The shape of the new moon.

**Crescentia.** (*Crescentia*, an Italian.) A Genus of the Nat. Order *Crescentiaceæ*.

**C. ala'ta**, H. B. K. (*L. alatus*, winged.) Hab. Mexico. Fruit used as an expectorant.

**C. cuje'té**, Linn. (*F. calabassier*.) Calabash tree. A tree inhabiting tropical America, bearing a large gourd-like fruit, filled with a subacid pulp, which is eaten by the negroes, and from which poultices are prepared. It is used in diarrhoea, dropsy, and headache, and as a syrup in chest affections. The juice is laxative.

**Crescentia'ceæ.** (*Crescentia*.) A Nat. Order of epipetalous, corollifloral Exogens, of the Alliance *Rignoniales*, with parietal placentæ, succulent, hard-shelled fruit, and an amygdaloid embryo with a short radicle.

**Crescentiads.** The plants of the Nat. Order *Crescentiaceæ*.

**Crescentiæ.** (*L. cresco*, to grow.) Enlarged cervical or inguinal glands in young people; called also wax or waxing kernels, because they are popularly supposed to be caused by the growth of the body.

**Crescentin'æ.** A synonym of *Crescentiaceæ*.

**Cre'sol.**  $C_7H_6O$ . A substance occurring in coal tar and creasote, along with carbolic acid, from which it is not easy to separate it. There are several isomeric forms.

**Cre'sotic acid.**  $C_7H_6O_3$ . A generic term for three acids formed by the action of sodium and carbonic acid on the three isomeric cresols.

**Cresotin'ic acid.** A constituent of coal tar. Used as an antiseptic and in acute rheumatism. See *Oxytoluyl acids*.

**Cress.** (*Sax. cresse, cyrse, cressæ*; *G. Kresse*. *F. cresson*, and *I. crescione*, are both derived from *cresco*, to grow; the English word is from the Teutonic.) A name given to several plants of the Nat. Order *Crucifere*, having a pungent taste and flavour.

**C., amphib'ious.** The *Nasturtium amphibium*.

**C., bas tard.** The *Lepidium campestre*.

**C., Belle-isle.** The *Barbarea præcox*.

**C., bit'ter.** The Genus *Cardamine*, and especially the *C. amara*.

**C., gar'den.** (*F. cresson alenois*; *G. Garten-kresse*.) The *Lepidium sativum*, or dittander.

**C., In'dian.** (*F. cresson d'Inde*; *G. Indische Kresse*.) The *Trapaolum majus*.

**C., land.** The *Barbarea vulgaris*.

**C., mead'ow.** (*F. cresson des prés*.) The *Cardamine pratensis*.

**C., Para'.** The *Spilanthes oleracea*.

**C., pen'ny.** The *Thlaspi arvense*.

**C., sciatica.** The *Lepidium iberis*.

**C., scur'vy.** The *Thlaspi arvense*.

**C., swine's.** The *Scabiosa coronopus*.

**C., tower-wall.** The *Arabis turrita*.

**C., town.** The *Lepidium sativum*.

**C., wall.** The *Arabis turrita*.

**C., wart.** (*F. cresson sauvage*.) The *Scabiosa coronopus*.

**C., wa'ter.** (*F. cresson aquatique, c. de fontaine*; *G. Wasserkresse*.) The *Nasturtium officinale*. Used as an esculent, and in scurvy.

**C., wa'ter, marsh.** The *Nasturtium palustre*.

**C., wild.** Same as *C., water*; and also *C., wart*.

**C., win'ter.** The *Barbarea vulgaris*.

**C., win'ter, bit'ter.** The *Barbarea vulgaris*.

**C., win'ter, ear'ly.** The *Barbarea præcox*.

**Cres'sis.** A barbarous analogue for *Cress*. **Cres'son.** The town near which the *Alleghany Mountain springs* are situated, and from which they are sometimes named.

**Crest.** (*Sax. cræsta* is usually given as the origin. Skeat can find no such word, and refers it to Old *F. cræste*; from *L. crista*, a crest. *F. crête*; *I. cresta*; *G. Kamm*.) A tuft of feathers or a fleshy caruncle or excrescence on a bird's head; any structure or growth of the same nature or appearance as a crest. See also *Crista*.

In Botany, applied to a cushion covering the micropyle, as in *Euphorbia*.

Also, the ridge of a mountain-chain.

**C., au'ditive.** Same as *Crista acustica*.

**C., den'tal.** (*L. dens*, a tooth.) The ridge of epithelium which, at the earliest stage of the development of the teeth, covers in the dental

# CRESTED—CRETIN.

groove, and from the lower layers of which the enamel organ is developed.

**C., dorsal.** (L. *dorsum*, the back.) Same as *Lamina dorsalis*.

**C., frontal.** See *Crista frontalis*.

**C., nasal.** (L. *nasus*, the nose.) A grooved ridge formed by the conjoined inner borders of the palatal process of the superior maxillary bone which receives the anterior part of the lower edge of the vomer and the septum nasi. Its anterior pointed extremity is the nasal spine.

**C., occipital.** The *C., occipital*, external.

**C., occipital, external.** (F. *crête occipitale externe*; G. *äusserer Hinterhauptskamm*.) A median ridge on the outer surface of the occipital bone, extending from the external occipital protuberance, orinion, to the margin of the foramen magnum.

**C., occipital, internal.** (F. *crête occipitale interne*; G. *innerer Hinterhauptskamm*.) A median ridge on the inner surface of the occipital bone, extending from the internal occipital protuberance to the margin of the foramen magnum.

**C. of clitoris.** Winslow's name for the *Labia minora*.

**C. of ethmoid bone.** Same as *Crista galli*.

**C. of ilium.** See *Crista ilii*.

**C. of pubis.** See *Crista pubis*.

**C. of tibia.** See *Crista tibiae*.

**C. of urethra.** See *Crista urethrae*.

**C., sphenoidal.** (F. *crête sphénoïdale*.) A thin projecting median ridge on the anterior surface of the body of the sphenoid bone, extending from the ethmoidal spine to the rostrum, and articulating with the central plate of the ethmoid bone.

**C., turbinated, inferior, of palate bone.** A prominent ridge crossing the internal surface of the vertical plate of the palate bone at about half its height; the hinder extremity is nearer the horizontal plate than the front end. It articulates with the inferior turbinated bone, whence its name.

**C., turbinated, inferior, of superior maxillary bone.** A rough ridge on the inner surface of the nasal process of the superior maxillary bone for articulation with the inferior turbinated bone. It slopes upwards from before to behind.

**C., turbinated, superior, of palate bone.** A ridge crossing the internal surface of the vertical plate of the palate bone at about three fourths its height; it runs backwards and downwards, and articulates with the middle turbinated bone.

**C., turbinated, superior, of superior maxillary bone.** A ridge crossing the inner surface of the nasal process of the superior maxillary bone below its articulation with the ethmoid, by which it is connected with the middle turbinated bone.

**Crested.** (F. *crêté*.) Applied to portions of plants that have an arrangement of parts like a crest.

**Cresyl.** (K $\rho$ ias, flesh;  $\acute{\alpha}\lambda\eta$ , matter.) The hypothetical radical of cresylic alcohol.

**Cresylic acid.** A constituent of coal tar, closely analogous to carboic acid.

**C. alcohol.** A constituent of coal tar with difficulty to be separated from carboic acid.

**Cresylol.** C $_7$ H $_8$ O. A substance contained

in creasote and wood tar. It is a colourless liquid, boiling at 203° C. (397.4° F.)

**Creta.** B. Ph. (Κρήνη, *Creta*, the island of Crete, where the best was found. F. *craye*; G. *Kreide*.) Chalk; native friable calcium carbonate. Used in producing carbolic acid gas.

**C. gallica.** French chalk or steatite.

**C. præcipitata.** The *Calceis carbonas præcipitata*.

**C. præparata.** B. Ph., U.S. Ph. (L. *præpara*, to make ready. F. *craye préparée*; G. *präparirte Kreide*.) Chalk prepared by powdering, stirring with water, decanting after the coarser particles have settled, allowing it to stand till the powder subsides, separating and drying it. It is a white anophous powder, used as an antacid and in diarrhoea, and as a local application in erythema and ulcerations. Dose, 5–60 grains.

**Creta-ceous.** (L. *creta*, chalk. F. *crayeux*; G. *kreidig, kreideartig, kreideweiss*.) Of, or belonging to, chalk; chalky; of the colour of chalk.

**C. tubercle.** See *Tubercle, cretaceous*.

**Creta-ceously-pruinose.** (L. *creta*; F. *pruina*, hoar frost.) Having a white shining incrustation.

**Creta-ceum acidum.** (L. *creta*, chalk.) Carbonic acid, because it is obtained from chalk.

**Crete, dit'tany of.** (*Crete*, the island. F. *dictanne de Crète*; G. *kretischer Diptain*.) The *Origanum dictamnus*.

**Cretefaction.** (L. *creta*, chalk; *facio*, to make.) A synonym of calcareous degeneration.

**Cretici veri.** (L. *creticus*, Cretan; *cerus*, true.) A synonym of *Ammi officinalis*.

**Cretification.** (L. *creta*; *facio*, to make.) Same as *Calcareous degeneration*.

**Cretin.** (Etymology doubtful; some suggest that it is derived from L. *creta*, chalk, in allusion to the chalky appearance of the complexion; or from G. *Kreidling*, from *Kreide*, chalk; some believe it to be a corruption of L. *christianus*, a Christian, because Cretins have generally a happy disposition; in France cretins are in some parts called *Capots*, *Caffos*, or *Ca-gots*, which latter word see; in Austria they are called *Trotteln*, *Gackn*; in Germany *Kretins* and *Kreidlings*; in Italy *Garas*, *Totolas*, *Cristiani*; and in South America *Boros*, *Ton'os*, besides many other local applications; in old Latin books they are called *Christiani*.) One who suffers from *Cretinism*.

The true cretin is a thick-set, bony, deformed, degenerate, unintellectual being, generally thin, but sometimes bloated, with chalky, or sometimes dirty brown, or yellowish complexion, and rapidly assuming an age beyond his years. The head is much too large for the face and the body, and seems too heavy to be held up, especially in early life; the forehead is depressed and the occiput is small, so that the head appears irregularly conical, with a large base and an apex at the sagittal suture; the two halves are often unsymmetrical; the hair is short, thick, and matted, never becoming white, and seldom falling off. The face is large, puffy, and expressionless, the malar prominences large, the nose flat and broad, with wide nostrils, often without nasal cartilages. The lips are thick and parted, the lower drooping, with the big slobbering tongue often lapping out of the wide mouth; the lower jaw is large, heavy, and underhung;

the ears are big, thick, and projecting; the teeth are wide apart, irregular, and carious, the milk teeth slow in coming, the permanent teeth only rarely appearing; the eyes are distant from each other, often squinting, always expressionless; the eyelids are edematous and generally sore, with scanty eyelashes and eyebrows. The neck is short and thick, with more or less enlargement of the thyroid gland, amounting in some to goitre. The thorax is asymmetrical, and is sometimes large and short, sometimes narrow and compressed, with a gibbous back and small breasts. The abdomen is broad, large, and pendulous; the pelvis generally deformed, and always narrow. The genital organs are rudimentary. The limbs are either disproportionately short or long, usually fleshless, and often large at the joints; the hands are large, the fingers short and thick; the feet large and flat, and the toes irregular and deformed. The functions of every organ of the body are imperfectly performed, those of the brain being the most degraded, and of these the memory of things appears the least disturbed. The complete cretin is usually dumb, making only inarticulate groans; in those who can speak the voice is hoarse and possesses no power of inflection; hearing is always dull, and the power of smell is weak; the sight is usually good, but the sense of touch and the muscular sense are both obtuse. The muscles are feeble, sometimes almost powerless. Respiration is slow, as is also the pulse. The secretion of saliva and the flow of tears are copious. The sexual instincts are in abeyance, both sexes in complete cretinism being impotent. The mortality among cretins is large, especially in infancy.

**Cretinism.** (*Cretin*.) A congenital condition of organic and intellectual degeneration, endemic in the valleys of certain mountainous districts, and manifested in the physical and mental characteristics described under the word *Cretin*. It is the complete development of the morbid state which, in its imperfection, results in goitre. The disease is most prevalent in the Alpine valleys of Europe, Asia, and America, but it is also found in some lowlands; no country and no race is free from it, at least in its minor or goitrous form. To this latter milder stage dogs, pigs, sheep, goats, mules, antelopes, and other animals are subject; and it is said that where cretinism is markedly endemic even plants show signs of degeneration. The belief in the identity of causation of goitre and cretinism is not universally held, but the predominance of opinion is in its favour. But there is great doubt as to the real cause of the degeneration; most look to the condition of the drinking water for it, and many consider the excess of lime and magnesia which it contains as the essential cause, but do not exclude other unhygienic conditions, such as damp or vitiated air from the situation of the close valley, the badly constructed, undrained houses, and insufficient food, as not unimportant factors; whilst intermarriage of relations is believed to favour a continuance and an intensification of the degenerate taint. It has been latterly contended that there is a goitrogenous principle, which is a yet isolated matter, contained in the soil of certain districts, and conveyed by the drinking water. It has also been suggested, but apparently without a sufficient basis of fact, that in cretinous districts there is an absence of iodine and, according to some, of sodium chloride. The supposition

that the excess of earthy salts is the cause of the malady is in harmony with the theory based on post-mortem examinations, that there is too early and too rapid ossification of the base of the cranium, with consequent arrest of development of the skull and the encephalic centres. Cretinism is admittedly hereditary, and, though usually endemic, is sometimes sporadic. Cretinism is said to be complete or incomplete, according to the amount of abolition of the mental faculties.

**Cretinoid.** (*Cretin*; εἶδος, likeness.) Like a *Cretin*.

**C. state.** A term applied by Gull to the condition now usually called *Myxedema*.

**Cretinus.** Same as *Cretin*.

**Cretiris'mus.** Same as *Cretinism*.

**Cretomania.** (Etymon doubtful.) Mania with lust and satyriasis.

**Creuznach.** See *Kreuznach*.

**Cre'vis.** (Etymon, see *Crawfish*.) The *Ascaris fluvialis*.

**Crewel.** The cowslip, *Primula veris*.

**Crewels.** (A corruption of *F. ceruvelles*; from Low *L. serofellæ*.) Serofula.

**Greyat.** The Indian name of *Andrographis paniculata*.

**Cribrate.** (*L. cribrum*, a sieve.) Perforated like a sieve.

**Cribration.** (*L. cribrum*, a sieve. *F. cribration*; *G. Durchsieben, Sieben*.) The act or process of sifting, or passing through a sieve.

**Cribriform.** (*L. cribrum*, a sieve; *forma*, likeness. *F. cribriforme*; *G. siebförmig*.) Perforated like a sieve.

**C. bone.** The ethmoid bone.

**C. cells.** Long perforated cells or ducts found in the liber or endophloem of many trees, as the lime tree.

**C. compress.** A piece of lint or other substance spread with ointment, and perforated with holes, to let out the discharges when applied to a wound.

**C. fas'cia.** See *Fascia, cribriform*.

**C. lamella of ethmoid.** (*L. lamella*, a small plate. *G. Siebplatte*.) See *Ethmoid, cribriform plate of*.

**C. lamella of temporal bone.** The *Lamina cribrosa*.

**C. lam'ina.** See *Lamina cribrosa*.

**C. membrane.** Oslander's term for the membrana decidua of the human ovum.

**C. plate of ethmoid.** See *Ethmoid, cribriform plate of*.

**C. tis'sue.** Same as *Areolar tissue*.

**Cribose.** (*L. cribrum*. *G. siebförmig, durchlocher*.) Sieve-like; pierced with small holes.

**Cribrum.** (*L. cribrum*, akin to Sans. root *cri*, to separate. *F. crible, tunus*; *L. criello, staccio*; *S. criba, cedazo*; *G. Sieb, Durchschlag*.) A sieve.

**C. pollina'rium.** (*L. pollinarius*, belonging to flour.) A sieve for separating the bran from the meal.

**C. seta'ceum.** (*L. seta*, a bristle. *G. Haarsieb*.) A hair sieve.

**Cricarytenodes.** Same as *Cricocarytenoid*.

**Crick.** (A variant of *E. creek*, a bend, a creek; from Sax. *crecca*, a creek.) Pain, generally rheumatic, of the muscles of the neck, or other parts.

**Crick'le.** A mild disused sulphur water

## CRICO—CRIMINAL ABORTION.

near Broughton, in the West Riding of Yorkshire.

**Cr'ico-**. This word, in compound names, denotes attachment to, or connection with, the *Cricoid* cartilage.

**Cricoaerytæno'ides**. Same as *Cricoaerytænoid*.

**Cricoaerytæn'oid**. Relating to the *Cricoid* and *Arytænoid* cartilages.

**C. articulation**. The joint between the concave depression at the base of the arytenoid cartilage and the convex, elliptical, surface on the upper border of the cricoid cartilage on each side; it is enclosed by thin capsular fibres, and lined by a loose synovial membrane.

**C. ligament, capsular**. (L. *capsula*, a small chest.) A thin fibrous membrane surrounding and connecting the articular surfaces of the cricoarytenoid articulation.

**C. ligament, poste'rior**. (L. *posterior*, hinder.) A strong fibrous band extending from the inner and back part of the articulating surface of the arytenoid cartilage to the neighbouring part of the cricoid cartilage.

**C. mus'cle, poste'rior**. The *Cricoaerytænoides posticus*.

**C. mus'cles**. The *Cricoaerytænoides superior*, *C. lateralis*, and *C. posticus*.

**Cricoaerytæno'ideus**. Same as *Cricoaerytænoid*.

**C. ante'rior**. (L. *anterior*, in front.) The *C. lateralis*.

**C. latera'lis**. (F. *cricoaerytænoidien lateral*; G. *seitlicher Ringgiessbeckenmuskel*.) An oblong muscle, smaller than the posterior, arising from the upper border as far as the cricoarytenoid articulation, and, passing obliquely upwards and backwards, is inserted into the outer side of the base of the arytenoid cartilage in front of the insertion of the cricoarytænoides posticus. It is hidden by the ala of the thyroid cartilage, and is covered internally by mucous membrane; its upper fibres are often blended with the lower fibres of the thyroarytænoids. It draws the vocal cord to the middle line by rotating the base of the arytenoid cartilages inwards.

**C. posticus**. (F. *cricoaerytænoidien postérieur*; G. *hinterer Ringgiessbeckenmuskel*.) A large muscle arising from the broad depression on the posterior surface of the cricoid cartilage, and, passing upwards and outwards, is inserted by a narrower end into the outer angle of the base of the arytenoid cartilage. It dilates the glottis by rotating the base of the arytenoid cartilages outwards and backwards, and thus drawing the posterior extremity of the vocal cord away from the median line.

**C. super'ior**. (L. *superior*, upper.) Winslow's term for some of the lower fibres of the arytenoid muscle.

**Cricodes**. Same as *Cricoid*.

**Cricoid**. (Κρίκος, a ring; εἶδος, likeness. F. *cricode*; G. *ringförmig*.) Resembling a ring.

**C. cartilage**. (F. *cartilage cricoide*; G. *Ringknorpel*, *Grundknorpel*.) A ring-shaped cartilage forming the lower and back part of the larynx; in front it is narrow, '25" to '23" in height; behind it is much expanded, 1" in height, and partially fills up the space where the thyroid cartilage is deficient. The lower border is horizontal and circular, and connected by fibrous membrane with the first tracheal cartilage. The upper border is highest behind; in front and at the sides it gives attachment to the cricothyroid

membrane, and a little on each side of the posterior median line is a smooth oval articulating surface for the arytenoid cartilages. The external surface is smooth and convex in front and at the sides, and in the middle line behind is a vertical ridge, with a broad depression on each side of it, and outside this a raised surface for articulation with the inferior cornu of the thyroid cartilage. In some birds the cricoid cartilage consists of three pieces; in crocodiles it unites with the thyroid to form one ring.

**Cricoidéan**. Same as *Cricoid*.

**Cricoi'des**. Same as *Cricoid*.

**Cricoi'deus**. Same as *Cricoid*.

**Cricopharynge'al**. (F. *cricopharyngien*; G. *Ringknorpelschlundmuskel*.) Relating to the *Cricoid* cartilage and the *Pharynx*.

**C. mus'cle**. A name given by Winslow to a muscular fasciculus which forms part of the inferior constrictor of the pharynx.

**Cricostom'atous**. (Κρίκος, a ring; στήνα, a mouth. F. *cricostome*; G. *ringmundig*.) Having a round opening or mouth.

**Cricothyreo'des**. Same as *Cricothyroid*.

**Cricothyreo'i'des**. Relating to the *Cricoid* and *Thyroid* cartilages.

**Cricothyroid**. Relating to the *Cricoid* and the *Thyroid* cartilage.

**C. artery**. (F. *artère cricothyroïdienne*; G. *Schild-Ringknorpelarterie*.) A small branch of the superior thyroid artery which runs transversely across the cricothyroid membrane and joins its fellow of the opposite side; some of its branches perforate the membrane and supply the mucous membrane of the larynx.

**C. articulation**. The articulation between the inferior cornu of the thyroid cartilage and the projection on the side of the cricoid cartilage; it consists of a capsular ligament and a synovial membrane; the motion allowed is rotatory.

**C. mem'brane**. The membranous ligament which connects the cricoid and thyroid cartilages. The anterior middle portion, consisting chiefly of yellow elastic tissue, is attached to the contiguous portions of the two cartilages; the lateral portions, thin and membranous, extend from the upper border of the cricoid cartilage to the lower margin of the true vocal cords.

**C. mus'cle**. (F. *muscle cricothyroïdien*; G. *Ringschildknorpelmuskel*.) A short, thick, triangular muscle arising from the anterior and lateral part of the cricoid cartilage, and, passing obliquely upwards and outwards, is inserted into the lower border of the thyroid cartilage from near the median line to the anterior border of the inferior cornu. It produces tension of the vocal cords by depressing the thyroid cartilage.

**Cricothyroidéan**. Same as *Cricothyroid*.

**Cricot'omy**. (Κρίκος, a ring; τομή, a section.) The division of the cricoid cartilage as is sometimes advised in the performance of the operation of tracheotomy.

**Cricotrache'al**. Relating to the cricoid cartilage and to the trachea.

**C. ligament**. (G. *Ringknorpelluftröhrenband*.) The fibrous membrane connecting the first tracheal cartilage to the cricoid cartilage.

**Crido'nes**. A term for *Crinones*. See *Crino*.

**Crim'inal abort'ion**. See *Abortion*, *criminal*.

**Crimno'des.** (Κρινωδής, from κρίνω, coarse meal; εἶδος, likeness. F. *surfarace*; G. *kleinartig, kleinartig*.) Branny; furfuraceous; having, or full of, bran.

**C. urina.** (L. *urina*, urine.) Applied to urine which deposits a sediment like bran.

**Crimnoid.** (Same etymon.) Branny or bran-like.

**Crimson.** (Mid. E. *crimosine, cranny*; from Low L. *cramoisius*, or *carmesinus*; from *kermes*, the cochineal insect from which the colour was obtained.) A deep red colour.

**Crinal.** (L. *crinis*, hair.) Relating to, or like, hair.

**Crinalē.** (L. *crinis*, the hair.) Old name for an instrument formerly employed to exert pressure in fistula lachrymalis, from its having at one end a small cushion stuffed with hair; a figure of it is given by Senilictus.

**Crinanthemon.** (Κρινάνθεμον.) The plant so named by Hippocrates is by some supposed to be the houseleek, *Sempervivum tectorum*; and by others, a species of lily.

**Crinate.** (L. *crinis*, the hair. F. *capillaire*.) Having hair. Applied to plants, the roots of which shoot into the ground in many fibrils; such as some species of *Adiantum*.

**Crinataum.** (Κρίνω, a lily.) An old term for a species of fumigation into which the roots of lilies entered.

**Crinig'erous.** (L. *crinis*, the hair; *gero*, to bear.) Carrying, or growing, hair.

**Crinis.** (L. *crinis*; perhaps from *creceo*, to increase. F. *crin*.) A term for the hair of the head, but more especially that on the back part of the head.

**Crinitaria.** (L. *crinis*, the hair.) A Genus of the Nat. Order *Compositae*.

**C. lino'syris**, Lers. The *Linosyris vulgaris*.

**Crinite.** (L. *crinitus*, hairy. G. *gemüht*.) Having long and weak hairs, bearded.

**Crino.** (L. *crinis*, the hair. F. *crinon*.) A synonym of *Dracunculus*.

Also, see *Morbus à crinonibus*.

**Crinoid.** (Κρίνω, a lily; εἶδος, likeness.) Like a lily; or like to, or belonging to, the *Crinoides*.

**Crinoi'dea.** (Κρίνω, a lily; εἶδος, likeness.) A Class of the Subkingdom *Echinodermata*. Animals, mostly extinct, so called from their likeness to a lily on its stalk. The body is star-shaped or cup-shaped, fixed, during the whole or part of life, by a stalk attached to the ventral surface.

**Crinom'yron.** (Κρίνω, a lily; μύρον, ointment.) A name for an ointment made of the lily and aromatic substances; the *Unguentum ægyptium album*.

**Crinon.** (Κρίνω.) The *Lilium candidum*.

**Crino'nes.** Plural of *Crino*. Also, a synonym of *Comedones*.

**Crinose.** (L. *crinis*, the hair.) Hairy.

**Crinoses.** (Κρίνω, to separate.) Diseases caused by, or accompanied by, disturbances of the secretions.

**Crinule.** (L. dim. of *crinis*. F. *crinule*; G. *Haarchen*.) Name for the hygroscopic filament contained in the ovary of the *Marchantia* and supporting the seminules.

**Crinum.** (Κρίνω, a lily.) A Genus of the Nat. Order *Amoryllidaceae*.

**C. asiaticum**, Roxb. Hab. India. Root

emetic and alexipharmic. Leaves, mixed with castor oil, used as an application to whitlows.

**C. asiaticum**, var. **toxicarium**, Herbert. (L. *toxicum*, poison.) The species ordered in Ind. Ph. The fresh root in juice or syrup is the official part. Emetic, nauseant, and diaphoretic; and like squills.

**C. toxicarium**, Roxb. The *C. asiaticum*, var. *toxicarium*, Herbert.

**C. zeylan'icum.** A poisonous species.

**Criog'enes.** Old name for certain troches for cleansing foul ulcers, according to Paulus Ægineta, vii, 12, Adams's Transl. vol. iii, p. 333.

**Criom'yx'us.** (Κριόμυξ; from κρίος, a ram; μύξα, mucus.) An old term applied to a man with a snivelling nose, such as a ram often has.

**Cri'sis.** (Κρίσις, the final issue. F. *crise*; G. *Krise*.) Term for the sudden change which fevers are generally supposed to undergo at particular periods; a sudden variation of any kind, favourable or unfavourable, occurring in the course of a general disease, and influencing its character.

The term has also been applied to the phenomena accompanying the change, such as profuse perspiration or diarrhoea.

Also, used by French writers in the same sense as accession or paroxysm.

**C., fulguric.** (L. *fulgur*, a flash of lightning.) A term applied to a paroxysm of *Lightning pains*.

Also, the same as *C., gastric*.

**C., gastralgic.** (Γαστήρ, the belly; ἄλγος, pain.) Same as *C., gastric*.

**C., gastric.** (Γαστήρ, F. *crise gastrique*.)

A term by Charcot for certain gastric symptoms which, according to him, accompany the early stages of progressive locomotor ataxia, and in some instances precede any evidence of motor incoordination. They consist of paroxysms of acute pain starting from the groins, running up both sides of the abdomen, and fixing themselves in the epigastrium, so as to become a gastralgia; often accompanied by similar pains between the shoulders, which shoot downwards and outwards; there is a quick pulse without increased temperature, vomiting, and often vertigo. The attack may last two or three days. The pains appear to be of the same nature as the so-called *Lightning pains*.

**C., hæmatic.** (Αἷμα, blood.) A term applied by Hayem to a special condition of blood which accompanies the decline of a febrile attack. It consists in a sudden and great increase in number of the hæmatoblasts, as he calls them, or rudimentary red corpuscles. They begin to exceed their normal number, which is one to twenty red corpuscles at the time of the permanent fall of the temperature, and attain their maximum proportion of one to six or eight at the time when the temperature becomes normal. They then, as convalescence progresses and new blood corpuscles are formed, gradually decline to their normal value.

**C., vis'ceral.** (L. *viscus*, the inwards, or inner part. F. *crise viscerale*.) A term applied generally to the paroxysms of *Lightning pains*, when they are referred to any part of the interior of the trunk, as the rectum, urethra, intestines, or stomach.

Also, the same as *C., gastric*.

**Crisp.** (L. *crispio*, to curl. F. *crispé*; G. *gekrauselt, kraus*.) Curled. Applied to leaves

the border of which is more extensive than the disc, and so appears crisped, twisted, curled, or wrinkled.

**Crispate.** (L. *crispatus*, curled.) Crisped, irregularly curled, as the edge of some leaves.

**Crispation.** (F. *crispation*, from *crisper*, to shrivel; from L. *crispo*, to curl. G. *Krause*, *Zusammenziehung*.) The act of curling.

A slight contraction of any part, morbid or natural, as that of the minute arteries in a cut wound when they retract; or of the skin in the state called goose-skin.

Also, the sensation called fidgets.

**Crispative.** (L. *crispo*, to curl. F. *crispatif*.) Applied to prefoliation when the disc of the leaf is folded very irregularly and in some degree curled.

**Crispatu'ra.** (L. *crispo*, to curl. G. *Krausung*.) A curling. Properly applied to twisted hairs; but it was also formerly used for a spasmodic contraction of membranous or fibrous parts.

**C. ten'dinum.** (L. *tendo*, a tendon.) A term for contraction of the palmar fascia and tendons.

**Crisp'ed.** Same as *Crisp*.

**Crispiflorous.** (L. *crispus*, curled; *flor*, a flower. F. *crispiflore*; G. *krausblüthig*.) Having crisped petals.

**Crispifolious.** (L. *crispus*; *folium*, a leaf. F. *crispifolie*; G. *krausblättrig*.) Having curled flowers.

**Crispiscant.** (L. *crispus*; *sulcus*, a furrow.) Having undulating furrows.

**Crissaneurysma.** (Κρίσσις, for κρῖσις, a varix; ἀνεύρυσμα, a widening. F. *crissaneurysme*.) A varicose aneurysm.

**Cris'sum.** (Uncertain. F. *crissum*.) The extremity of the inferior part of the body of a bird from the thigh almost to the tail, covered by the anal plumes.

**Cris'ta.** (Akin to κῆρα, the head. F. *crête*; G. *Kamm*, *Leiste*.) A crest; anything like the comb of a cock, or tuft on the head of a bird, the mane of a horse, or top of a helmet.

Applied to certain parts, or processes of bones, bearing some resemblance to a crest.

Also, a term for the elitoris.

Also, to the ridge or summit of a mountain or chain of mountains.

Also, to certain excrescences, occurring about the anus and pudenda, from their form.

**C. acust'ica.** (Ἀκουστικός, belonging to hearing. F. *crête acoustique*.) A transverse projection into the ampulla of each membranous semicircular canal from the outer part, where it is attached to the bone; it is covered with columnar epithelium and *Auditory hairs*.

**C. al'ae magn'ae.** (L. *ala*, a wing; *magnus*, great.) The ridge which divides the anterior portion of the great wing of the sphenoid bone from the lower surface of the lamina triangularis.

**C. arcua'ta.** (L. *arcuo*, to bend.) The oblique line on the great wing of the thyroid cartilage.

**C. basila'ris.** (*Basilar*.) A short median ridge running from before backwards on the under surface of the basilar portion of the occipital bone.

**C. capituli cos'tæ.** (L. dim. of *caput*, head; *costa*, a rib.) A slight elevation traversing the articular surface of the head of each rib, from the fourth to the tenth.

**C. clitor'idis.** (L. *clitoris*.) The ridge situated at the point of junction of the descending ramus of the os pubis and the ascending ramus of the ischium in the female. It forms the anterior inferior border of the obturator foramen; to it are attached the crura clitoridis.

Also, see *Crista clitoridis*.

**C. cribro'sa.** (L. *cribrum*, a sieve.) The *Spina ethmoidalis* of the sphenoid bone.

**C. ethmoida'lis os'sis palatini.** The transverse ridge on the palate bones for articulation with the middle turbinal.

**C. fem'oris.** (L. *femur*, the thigh.) The linea aspera.

**C. fenest'rae rotun'dæ.** The sharp circular border of the fenestra rotunda.

**C. fib'ulæ.** (L. *fibula*, a clasp.) The anterior border of the fibula.

**C. fronta'lis.** (L. *crête frontale*.) A median ridge which forms the anterior or lower termination of the sulcus frontalis on the inner surface of the frontal bone.

**C. fronta'lis externa.** A synonym of the *Linea temporalis*.

**C. fronta'lis interna.** (L. *internus*, within.) The *C. frontalis*.

**C. galli.** (L. *gallus*, a cock. F. *crête de coq*; G. *Hahnenkamm*.) The thick, smooth, triangular, median process situated on the superior surface of the cribriform plate of the ethmoid bone, to the posterior border of which the falx cerebri is attached. The lower part of the anterior border articulates with the frontal, and has two projecting ala, which, being received into depressions of the frontal bone, in this way complete the foramen caecum behind. In most Mammals it is relatively smaller than in man, except in some Ungulates and Phocidae, in which it is very large.

**C. heli'cis.** (L. *helix*, ivy.) The anterior deep extremity of the helix auriculæ.

**C. il'ii.** (F. *crête iliaque*; G. *Hoftheinkamm*.) The upper, thick, sinuously curved border of the ilium; its anterior part is bent inwards, and ends in the anterior superior spine, its posterior part is bent outwards, and ends in the posterior superior spine; it is thicker at the extremities than at the middle. Its surface is broad, with an external and an internal lip; to the former is attached the tensor vaginæ femoris, the obliquus externus, and the latissimus dorsi muscles, and the fascia lata; to the latter, the transversalis, the quadratus lumborum, and the erector spinæ muscles, and the fascia iliaca; and to the interspace, the obliquus internus muscle.

**C. iliopectine'a.** The same as the *Linea arcuata externa ossis ilii*.

**C. infratempora'lis.** The same as *C. alæ magnæ*.

**C. interos'sea tibiae.** The external border of the shaft of the tibia.

**C. intertrochanterica.** The posterior intertrochanteric line.

**C. lacryma'lis os'sis lacryma'lis.** The vertical ridge on the outer surface of the lacrymal bone.

**C. lacryma'lis os'sis maxilla'ris superioris.** (L. *lacryma*, a tear.) The anterior or median sharp border of the sulcus lacrymalis of the superior maxillary bone.

**C. lacryma'lis poste'rior.** The same as *C. lacrymalis ossis lacrymalis*.

**C. mentalis externa.** The *Protuberantia mentalis*.

**C. muscularis ossis occipitis.** A transverse ridge on the inferior aspect of the basilar portion of the occipital bone.

**C. nasalis ossis maxillaris superioris.** (L. *nasalis*.) A sharp ridge which runs upwards from the pars incisiva of the superior maxillary bone to terminate in the spina nasalis.

**C. obturatoria.** The same as *C. pubis*.

**C. occipitalis externa et interna.** The vertical ridge on the outer surface and on the inner surface of the occipital bone.

**C. orbitalis.** The inferior border of the orbital surface of the ala magna of the sphenoid bone.

**C. ossis maxillaris superioris ethmoidalis.** (L. *os*, a bone; *maxilla*, a jaw; *superior*, uppermost; *ethmoid*.) A transverse ridge on the inner surface of the nasal process of the superior maxillary bone, to which the middle turbinal bone is articulated.

**C. penis.** (L. *penis*.) The ridge situated at the point of junction of the descending ramus of the os pubis and the ascending ramus of the ischium in the male; it forms the anterior and inferior border of the obturator foramen; to it are attached the crura penis.

**C. petrosa.** The process of bone bounding the external auditory meatus.

**C. pubis.** The prominent border of the pubes lying between the spine and the inner extremity of the body of the bone; it gives attachment to the rectus, the pyramidalis, and the conjoined tendons of the internal oblique and transversalis muscles.

**C. pyramidalis.** (L. *pyramidalis*, pyramidal.) The *C. vestibuli*, from its shape.

**C. radialis.** The internal border of the radius.

**C. sacralis.** (*Sacrum*.) The median posterior vertical ridge of the sacrum.

**C. semilunaris.** The anterior part of the *C. fenestra rotunda*.

**C. sphenoidalis.** The vertical ridge which projects from the anterior surface of the sphenoid bone.

**C. spiralis.** (L. *spira*, a coil.) The chondriform thickening of the upper border of the lamina spiralis just beyond the point of attachment of the membrane of Reissner.

**C. tibiae.** (F. *crête du tibia*; G. *Schienbeinkante*.) The anterior sharp border of the shaft of the tibia.

**C. turbinalis.** The ridge on the superior maxillary and palate bones articulating with inferior turbinal bone.

**C. turbinalis inferior.** The ridge on the inner surface of the nasal process of palate from articulating with the inferior turbinal.

**C. turbinalis superior.** The same as *C. ethmoidalis ossis palatini*.

**C. ulnae.** The external border of the ulna.

**C. urethrae.** (G. *Schnepfenkopf*.) A synonym of the *Caput gallinaginis*.

**C. urethralis.** See *C. urethrae*.

**C. vestibuli.** (*Vestibule*.) The ridge dividing the fovea hemispherica from the aqueduct of the vestibule.

**C. zygomatica.** The anterior border of the ala magna of the sphenoid.

**C. zygomatica orbitalis.** The ante-

rior border of the ala magna and the inferior border of the orbital plate of the ala magna.

**Cristae.** Plural of *Crista*.

**C. clitoridis.** (*Clitoris*.) The nymphæ.

**Cristal mineral.** French term for the *Sul prunellæ*, when in the form of cakes.

**Crystalloiditis.** See *Crystallitis*.

**Cristaria.** A Genus of the Nat. Order *Malvaceæ*.

**C. betonicaefolia.** Pers. (L. *betonica*, the plant betony; *folium*, a leaf.) Hab. Chili. Used as a febrifuge.

**Cristate.** (L. *crista*, a crest, or cock's comb. F. *crête*, *cristé*; G. *Kammförmig*.) Having a crest; crested.

**Crista rugose.** (L. *cristatus*; *rugosa*, a wrinkle.) In Botany, having deep wrinkles, or furrows, with sharp edges.

**Cristula.** Diminutive of *Crista*.

**Criterion.** (Κριτήριον, from κρίνω, to discern or judge.) A rule or foundation, according to which a certain judgment is arrived at. See *Crisis*.

**Crith.** (Κριθί, a barley-corn.) A term for the weight in vacuo of a litre of hydrogen gas at 0° C. (32° F.) and 76 centimètres barometrical height. It equals .09 gramme nearly.

**Crithamum.** Same as *Crithmun*.

**Crithē.** (Κριθί, barley.) Old name for hordeolum, or styte.

Also, the penis.

**Crithidion.** (Κριθίδιον, dim. of κριθί, barley.) A styte, or *Hordeolum*.

**Crithmun.** (Κριθμουν, the samphire. F. *basile*.) A Genus of the Nat. Order *Umbellifereæ*.

**C. marinum non-spinosum.** (L. *marinus*, marine; *non*, not; *spinosus*, spiny.) A name for the *Inula crithmoides*.

**C. maritimum.** Linn. (L. *maritimus*, belonging to the sea. F. *fenouil marin*, *criste-marin*; G. *Meerfenchel*.) The samphire or sea-fennel; also called rock samphire, and *Herba Sancti Petri*. It is perennial, growing on the sea coast, has a spicy, aromatic flavour, and is used as a pot-herb by the country people, and pickled as a condiment. It is probably the *Χρήμων* of Hippocrates, and the *Χρήμων* of Dioscorides.

**Crithoptes.** (Κριθί, barley.) A Genus of *Acarida*.

**C. monunguiculatus.** (Dim. of *unguis*, a nail.) A species the larva of which was discovered by Geber in spoiled barley. It has a stylet resulting from the fusion of the maxillary palps, by means of which it can excite considerable irritation of the skin, resembling urticaria, and proceeding to the production of eczema impetiginodes and other forms of dermatitis.

**Critical.** (L. *criticus*, suitable for deciding; from *crisis*, a decision. F. *critique*; G. *kritisch*.) Relating to a *Crisis*. Determining the issue of a disease. Applied to certain periods in the duration of fevers. Similarly applied to periods of life as decisive of certain changes of constitution and habits.

**C. age.** (F. *age*, or *temps critique*.) Term for that period of female life when the catamenia become irregular, and, in many cases, after considerable constitutional disturbance, altogether cease, generally occurring in this country between the 41st and 48th years.

**C. angle.** See *Angle, critical*.

**C. days.** (F. *jours critiques*; G. *kritische*

## CROCEOUS—CROCUS.

*Tage*.) Term formerly, and to some extent still, employed for certain days on which the crisis of fever was perfect and favourable, and certain others on which it was imperfect and unfavourable; or others, unmarked by any particular change. Galen reckoned the 7th day as particularly favourable; next, the 14th, 9th, 11th, and 20th; then the 17th, the 5th, the 4th, 3rd, and 18th; the 6th, 8th, 10th, 12th, 16th, and 19th, were very doubtful and unfavourable; the 13th day was intermediate, not indicating one way or other. Diocles and Archigenes regarded the 21st as a favourable day, but Galen agreed with Hippocrates in its rejection, and in the substitution of the 20th. This distinct arrangement, however, is not now in very good repute, the doctrine of critical days being only to a certain limited extent believed.

**C. period.** Same as *C. age*.

**C. perturbation.** (*L. perturbatio*, to throw into confusion.) The sudden rise of temperature and increase of gravity of symptoms which occasionally immediately precedes the decline or crisis of a febrile condition.

**C. point.** The point of temperature below which a gas cannot be liquefied by any amount of pressure. This point varies with different gases.

**C. temperature.** Same as *C. point*.

**Croc'ceous.** (*L. croceus*, saffron. *F. safrané*; *G. safrangelb.*) Of, or belonging to, saffron; of a deep yellow colour.

**Croc'etin.** A doubtful product of the action of hydrochloric acid on *Crocin*.

The crocetin of Roehleder is the crocin of Weiss.

**Croc'istig'mata.** (*Stigma*.) Saffron. See *Croceus*, B. Ph.

**Croc'ic acid.** A synonym of *Crocin*.

**Croc'idism'us.** (*Κροκιδίζω*, to pick or gather flocks of wool. *F. crocidisme*; *G. Fleckenlesen*.) Old term for *Carphology*.

**Croc'idix'is.** Same etymon and meaning as *Croc'idism'us*.

**Croc'in.** Weiss.  $C_{16}H_{18}O_6$ . A red powder resulting, along with a volatile oil, from the decomposition of polychroit from saffron by dilute sulphuric acid in the presence of hydrogen. It is freely soluble in alcohol and dilute alkalies; strong sulphuric acid colours it blue, changing to violet and brown; nitric acid colours it green, changing to yellow and brown. It is also obtained from the fruit of the *Gardenia grandiflora*, which is used to dye the robes of Chinese mandarins yellow.

The crocin of Roehleder is the same as *Polychroit*.

**Croc'inum.** (*Κρόκος*, saffron.) Old name for a collyrium and ointment, of which saffron formed an ingredient. Paulus Ægineta, vii, 16, and 20, Adams's Transl. vol. iii, pp. 555, 595.

**Croc'it'ation.** (*L. croceto*, to croak.) A croaking. Applied to similar noises.

**Croc'itus.** (*L. croceto*, to croak. *F. crosasement*; *G. Krächzen*.) The cry of the crow or raven.

Applied to a similar cry or cough.

**Croc'o'des.** (*Κρόκος*, saffron; *είδος*, likeness. *F. safrané*; *G. safrangelb.*) Having, or being like, saffron. Formerly applied to a collyrium and to a certain troche containing a large proportion of saffron.

**C. dialep'idos.** Name of a collyrium described by Marcellus, in which saffron was the

first ingredient; *λεπίδος* being the scales of burnt copper, or the black peroxide of copper.

**C. Paccia'num.** (*Pacrus*, the oculist who invented it.) Name of a collyrium formerly in repute.

**Croc'o'dile.** (*Κροκόδειλος*, the crocodile.) The name given to several species of *Crocodylus* and *Gavialis*, of the Order *Crocodylia*, Class *Reptilia*.

**Crocody'lia.** (*Κροκόδειλος*.) The excrement of the crocodile, which was used in the East in skin diseases and as a cosmetic.

Also, an Order of the Class *Reptilia*, having the teeth lodged in distinct sockets, and present only in the maxilla; the body covered with osseous plates, four short feet, webbed toes with claws, ribs with bifurcate heads, and a long-keeled tail.

**Crocody'lion.** (*Κροκοδειλιον*.) The plant thus named by Dioscorides is probably the *Echinops sphærocephalus*, or globe thistle; Linnaeus supposed it to be a centaury.

**Crocody'lum.** Same as *Crocodylion*.

**Crocomag'ma.** (*Κρόκος*, saffron; *μαγμά*, a kneaded mass.) Old name for a troche made of oil of saffron and spices; also, the dregs of saffron ointment. Galen, *de Antid.* ii, 5; Paulus Ægineta, vii, 20, Adams's Transl. vol. iii, p. 595.

**Croconate.** (*F. croconate*; *G. krokonsaures Salz*.) A salt of croconic acid.

**Crocon'ic.** (*L. crocus*, saffron. *F. croconique*.) Of, or belonging to, saffron, or of a yellow colour.

**C. acid.** (*F. acide croconique*; *G. Krokonsäure*.)  $C_5H_2O_8$ . A yellow crystallisable bibasic acid obtained by boiling a solution of potassium rhodizionate.

**Croc'us.** (*Κρόκος*, the crocus. *F. safran*; *G. Safranzpflanze*.) A Genus of the Nat. Order *Iridaceæ*.

Also, B. Ph., U.S. Ph. (*F. safran*; *G. Safran*), saffron; the dried stigma and part of the style of *Crocus sativus*, Linn., imported from Spain, France, and Italy; the stigmas are orange-brown in colour, 1" long, flattish, tubular, broadest at the summit, slit on the inner side, with several roundish teeth on the edge, usually united in threes to a portion of the thread-like yellow style. Saffron has an aromatic odour, and a bitter, aromatic, warm taste; it contains polychroit, gum, albumen, and wax. It is said to be a stimulant aromatic, having anodyne, antispasmodic, emmenagogue, and aphrodisiac properties; and is used in flatulent colic, dysmenorrhœa, spasmodic coughs, and neuralgia; it has also been given to promote the eruption of exanthematous diseases. Externally it has been used in rheumatism and neuralgia, as an ointment in piles, and as an eye-water in chronic conjunctivitis.

Also, a synonym of *Colcothar*.

Also, an old name for several preparations of metallic substances, from their colour, as *Crocus antimoni*.

**C. antimo'nii.** The residue of liver of antimony after washing with water, which removes from it potassium sulphate and sulphantimoniate and leaves the crocus, a mixture of oxide and sulphuret of antimony.

**C. austr'iacus.** The *C. sativus*.

**C. germa'nicus.** The *Carthamus tinctorius*.

**C. in fax'no.** (*L. in, in*; *fanum*, hay.)

Hay saffron, the kind described as *Crocus*, B. Ph.

**C. in placenta.** (L. *placenta*, a cake.) Cake saffron.

**C. indicus.** (F. *curcuma*; G. *Gelbwurz*, *Indianscher Safran*.) The *Curcuma longa*, or turmeric plant.

**C. Martis.** (L. *Mars*, a name for iron.) Old term for *Colcothar*, obtained by burning iron sulphate.

**C. Martis adstringens.** (L. *adstringo*, to contract.) Colcothar.

**C. Martis aperiens.** (L. *aperio*, to open.) A synonym of *Ferri peroxidum hydratum*.

**C. Martis vitriolatus.** Colcothar obtained by burning green vitriol, iron sulphate.

**C. metallorum.** (L. *metallum*, a metal.) The *C. antimonii*.

**C. odoratus.** (L. *odorus*, sweet smelling.) The source of Sicilian saffron.

**C. of antimony.** See *C. antimonii*.

**C. of Mars.** See *C. Martis*.

**C. officinalis.** Linn. (F. *safran cultivé*; G. *der cultivirte Safran*.) The *C. sativus*.

**C. orientalis.** (L. *orientalis*, eastern.) A species yielding some of the saffron of Ceylon.

**C., saffron.** The *C. sativus*.

**C. saracenicus.** The *Carthamus tinctorius*, or saffron flower.

**C. sativus.** Linn. (L. *sativus*, that which is planted.) *Crocus*, saffron *crocus*. Hab. East Europe and West Asia; cultivated in Spain and France; also in Pennsylvania. Supplies *Crocus*, B. Ph.

**C. solis.** (L. *sol*, the sun; an old name of gold.) Oxide of gold.

**C. ven'is.** (L. *Venus*, a name for copper.) The oxide of copper, formed by calcining the metal.

**Crocodysmus.** (Κροκὺδισμός, to pick loose flecks off a garment.) The same as *Carpologia*.

**Crocodydocarcinoma.** (Κροκὺς, the flock of woollen cloth; *καρκίνωμα*, cancer. F. *crocodydocarcinome*; G. *Faserkrebs*.) Fibrous cancer.

**Croft.** A mild sulphur water near Darlington. Used in skin diseases and chronic rheumatism.

**Crol.** See *Le Crol*.

**Crom chon'naill.** Same as *Blifed*.

**Crommyon.** (Κρόμμυον, an onion.) Old name for an onion. (Quincy.)

**Crommyoxyreg'mia.** (Κρόμμυον, an onion; *ὄξύς*, acid; *ἔργημα*, a belching.) Old term (Gr. *κρομμυοξυρεγμία* or *κρομμυοξυρεγμία*) used by Aristophanes, according to Castellus, for an acid eructation accompanied with a taste resembling onions.

**Crone-bawn.** Ireland, County Wicklow. A mineral water containing copper; used in skin diseases. If taken in large quantity it produces vomiting and diarrhoea.

**Cronthal.** See *Kronthal*.

**Croone, William.** M.D. Cantab and F.R.C.P. Born 1632; died of fever 1684. Published two treatises, 'De ovo' and 'De ratione motus musculorum.' Left a plan for two lectureships, one at the College of Physicians, and one at the Royal Society, which were endowed by his widow. Annual value about £10.

**Croonian.** Relating to *Croone*.

**C. lectures.** See *Croone, William*.

**Crop.** (Sax. *cropp*; Du. *krop*, from *kropen*, to cram, to grow to a round head. F. *jabot*; I. *gozzo*; S. *buche*; G. *Kropfe*.) A dilatation of the lower end of the oesophagus of birds, lying above and behind the furculum or merry-thought; it opens into the proventriculus, the true digestive cavity. In it the food is lodged for some time to soften; in pigeons it secretes a milky fluid, during the breeding season, which, when mixed with the softened food, is ejected by the old bird into the mouth of the young one to feed it.

It is also called *Ingluvies*.

The common dormouse, *Myoxus avellanarius*, alone among mammals has a similar dilatation of the lower end of the oesophagus.

Also, applied to a similar structure in masticating insects.

Also, a name of the buckwheat, *Polygonum fagopyrum*.

**Crophypoda.** A name for an Order of *Entomostraca*, usually divided into *Copepoda* and *Ostracoda*.

**Cross.** (Old E. *crois*, *croce*; from old F. *crois*, from L. *crux*, a cross.) A gibbet consisting of two pieces of timber placed across each other; anything of the same shape.

Adjectivally, passing from side to side.

To pass from side to side.

**C. birth.** The popular name for preternatural labour of any kind, more especially when the child lies transversely.

**C. breeds.** The produce of parents of different breeds.

**C. eye.** A term for *Strabismus*.

**C. fertilisation.** (L. *fertilis*, fruitful.)

The impregnation of the ovules of a plant with the pollen from another of the same species.

**C. flower.** The *Polygala vulgaris*, because it flowers in Rogation or cross week.

**C. foot.** A synonym of *Club-foot*.

**C.-leaved bed straw.** The *Galium cruciatum*.

**C. of aorta.** The transverse portion of the arch of the aorta.

**C. paralysis.** See *Paralysis*, *cross*.

**C. pollination.** (Pollen.) Same as *C. fertilisation*.

**Crossed.** (Cross.) Having a line drawn over; passed from one side to the other.

**C. diplopia.** See *Diplopia*, *crossed*.

**C. paralysis.** See *Paralysis*, *cross*.

**Crossing.** (Cross.) The fertilisation of a female by a male of the same species but not of the same stock.

**Crossophorus.** (Κροσσοί, tassels; *φορέω*, to bear.) A Genus of nematode Entozoa.

**C. collaris.** (L. *collare*, a collar.) Found in the *Hydrax capensis*.

**C. tentacula'tus.** (Mod. L. *tentaculum*, a feeler.) Found in *Hydrax capensis*.

**Crossopterin.** An alkaloid of the bark of *Crossopteryx Kotschiana*.

**Crossopteryg'idæ.** (Κροσσοί, tassels; *πτερυξ*, a fin.) A division of Ganoid fishes, having the fin-rays of the paired fins arranged in finger-like fashion round a central lobe.

**Crossopteryx.** (Κροσσοί, tassels; *πτερυξ*, a wing, a leaflet.) A Genus of the Nat. Order *Conchoneura*.

**C. febrifuga.** Afz. (L. *febris*, fever; *fugo*, to dispel.) The *C. Kotschiana*.

**C. Kotschiana.** Fenzl. Hab. Africa. Bark used as a substitute for cinchona.

**Cross'wort.** The *Eupatorium perfoliatum*, and also the *Lysimachia quadrifolia*, and the *Galium cruciatum*, from the cross-like arrangement of the leaves.

**Crotalaria.** (Κρόταλον, a rattle.) A Genus of the Nat. Order Leguminosae; so called from the rattling of the seeds in the pod.

**C. retusa**, Linn. (L. *retusus*, blunt.) Hab. India, Antilles. Esculent.

**C. verrucosa**, Linn. (L. *verrucosus*, warty.) Hab. India. The bitter juice of the leaves and young shoots is used in itch, impetigo, and other skin diseases, both internally and externally.

**Crotalidæ.** Pit-vipers. A Family of the Suborder Ophidiu viperiformes, Order Ophidia, Class Reptilia, including many very poisonous genera. Body robust, tail of moderate length or rather short, sometimes prehensile; head broad, subtriangular, frequently scaly above, or imperfectly shielded; a deep pit, the use of which is not known, on the side of the snout between the eye and nostril; eye of moderate size, with vertical pupil. Viviparous.

**Crotalin.** An albuminoid substance, not coagulable at 100° C. (212° F.), found in the venom of the species of *Crotalus*.

**Crotalophorus.** (Κρόταλον, a rattle; φορέω, to bear.) The rattlesnake, *Crotalus horridus*.

**Crotalus.** (Κρόταλον, a rattle. F. *crotale*; G. *Klapperschlange*.) The rattlesnake. A Genus of the Family Crotalidæ, Suborder Solenoglypha, Order Ophidia. Venomous serpents abounding in various parts of the American continent. Their most remarkable characteristic is the rattle appended to their tails, consisting of a number of horny joints movable on one another, which make a rattling noise when the animal moves; their bite is fatal, being followed by gangrenous inflammation of the injured part, and rapid sinking of the vital powers.

**C. durissus**, Linn. (F. *durisse*, serpent à sonnettes; G. *weisse Klapperschlange*.) Hab. North America. Venomous.

**C. horridus**, Linn. (L. *horridus*, savage. F. *boiquira*; G. *schreckliche Klapperschlange*.) Hab. Mexico, Equatorial America. Common rattlesnake. Very venomous.

**C. miliaris**, Linn. (L. *miliun*, millet. F. *millet*; G. *Frieselschlange*.) Hab. Oregon. Venomous.

**Crotaphæ.** (Κρόταφοι, the temples.) A pulsatory pain in the temples.

**Crotaphi.** (Κρόταφοι, plural of κρόταφος.) Old name for the temples. (Castellus and Gorraeus.)

**Crotaphite.** (Κρόταφος, the temple.) Belonging to the temple. Old term applied to the temporal muscles (Gr. *κροταφίται*), used by Galen, de Musc. Dissert. c. 6; (L. *crotaphites*), used by Bartholin, Anat. iii. II, p. 535.

**C. arteries.** The temporal arteries.

**Crotaphites.** (Κροταφίτης.) The temporal muscle.

**Crotaphitic.** (Κροταφίτης.) Relating to the temple.

**C. nerve.** The superior maxillary division of the fifth nerve.

**Crotaphium.** (Κρόταφος, the temple.) Old term for a pain in the temples. (Quincy.)

**Crotaphocephalus.** (Κρόταφος, the temple; κεφαλή, the head.) A form of twin moustosity observed in a calf; closely allied to

*Splenocephalus*, but differing from it in the existence of two distinct ears, and an anterior and median fusion of the temporal bones.

**Crotaphoganglion.** (Κρόταφοι, the temples; γάγγλιον, a ganglion. F. *crotaphoganglion*.) Name for the otic ganglion or ganglion of Arnold.

**Crotaphos.** (Κρόταφος, from κροτέω, to make to rattle.) Old term for the temple.

Also, for the temporal bone.

**Crotchet.** (F. *crochet*, a hook.) A straight or curved-shanked instrument with a sharp hook, for fixing into the hard structures, and so extracting the fetus, in cases of craniotomy or embryotomy.

Also, the hook-like extremity of the *Gyrus hippocampi*; also called *Gyrus uncinatus*.

**C. guarded.** A crotchet with an additional spoon-ended blade which can be locked on to it after fixing, in order to protect the sharp hook, and prevent it injuring the mother if it should slip.

**Crotelus.** The *Clavaria coralloides*.

**Croton.** (Κρότων, the vermin called dog-tick; from the resemblance of the seeds of certain species of the genus to this parasite. F. *croton*; G. *Kroton*, *Wunderbaum*.) A Genus of the Nat. Order Euphorbiaceæ.

**C. adipatum.** (L. *adipatus*, greasy.) A plant, growing on the banks of the Amazon, from which frankincense is obtained.

**C. antisiphiliticum**, Mart. The *C. perdisceipes*, A. de St. Hilaire.

**C. aromaticum**, Willd. (L. *aromaticus*, fragrant.) Hab. Ceylon. Used to give flavour to distilled liquors.

**C. aromaticum**, Spreng. The *C. lacciferum*, Linn.

**C. balsamiferum**, Linn. (L. *balsamum*, balsam; *fero*, to bear.) Hab. West Indies. A spirituous liquor, used in irregular menstruation, is distilled from this species.

**C. benzoë.** (Benzoin.) The *Terminalia angustifolia*.

**C. campes'tre**, A. St. Hil. (L. *campestris*, belonging to a field. Port. *velame do campo*.) Hab. South America. The root of this plant is purgative, and is used in syphilis.

**C. cascarilla**, Bennet. Hab. West India Islands. A species formerly thought to supply cascarilla bark; it may be an occasional source.

**C. chloral.** Same as *Chloral butyricum*.

**C. chloral hydrate.** Same as *Chloral butyricum*.

**C. dioicnum**, Cav. (*Dioicium*.) Hab. Mexico. Roots and seeds actively purgative.

**C. draco**, Schlecht. (L. *draco*, a dragon.) Hab. Mexico. A species yielding a red juice, which forms a kind of dragon's blood or kino, which is used as a vulnerary and astringent.

**C. eleutheria**, Bennet. (*Eleuthera*, one of the Bahama islands; from *ἐλευθερος*, free.) Hab. Bahamas. Supplies cascarilla bark. See *Cascarilla cortex*.

**C. gratissimum.** (L. superl. of *gratus*, pleasing.) A plant used as a perfume by the Koras of the Cape of Good Hope.

**C. hibiscifolium**, H. Brogn. and Kunth. (*Hibiscus*, the plant of that name; L. *folium*, a leaf.) Has similar properties to *C. draco*.

**C. humile**, Willd. (L. *humilis*, low.) A West Indian plant, used for its aromatic qualities in medicating baths.

**C. jalmagota**, Hamilton. The *C. tiglium*

# CROTONA, SCIOLOL OF—CROUP.

**C. lacciferum**, Linn. (*L. lacca*, lac; *fero*, to bear.) Hab. Ceylon. The bark of the root is aromatic and purgative. From incisions of the bark and, naturally, in the axils of the leaves, there exudes a kind of lac, which is not to be confounded with the shell-lac produced by the perforations of the *Coccus lacca*.

**C. lineare**, Jacq. (*L. linea*, a line.) The *C. casearilla*.

**C. lobatum**, Forst. (*L. lobatus*, lobed.) The *Jatropha glauca*.

**C. lucidum**, Linn. (*L. lucidus*, shining.) A species supplying a false cascarilla bark, which has been found amongst the true.

**C. Malam'bo**, Karsten. Supplies *Malambo* bark.

**C. micans**, Sw. (*L. micro*, to glisten.) A species said to supply some cascarilla bark.

**C. Molluccanum**, Willd. Hab. East Indies. Seeds, Banceul nuts, esulent.

**C. niv'eum**, Jacquin. (*L. niv'eus*, snowy.) Hab. West Indies, Mexico. Supplies *Copalchi* bark.

**C. oblongifolium**, Roxb. (*L. oblongus*, oblong; *folium*, a leaf.) Hab. India. Seeds purgative like those of *C. tiglium*.

**C. oil**. See *Oleum crotonis*.

**C. oil liniment**. See *Linimentum crotonis*.

**C. origanifolium**. (*L. origanum*, the plant of that name; *folium*, a leaf.) The balsam obtained from this plant is used as a substitute for copaiba balsam; the leaves and bark are considered to be diaphoretic and antispastic.

**C. pavanae**, Hamilton. A species supplying the oil of Tilly similar to croton oil.

**C. perdicipes**, A. de St. Hil. (*L. perdix*, a partridge; *pes*, a foot. Port. *pe de perdiz*.) A decoction of this plant is much esteemed in different provinces of Brazil as a cure for syphilis, and as a useful diuretic. Also called *Dicamphora cocallera*.

**C. philippinensis**, Lamk. The *Echinus philippinensis*.

**C. plicatum**, Vahl. The *Crotophora plicata*.

**C. polyan'drum**, Roxb. (*Πολύς*, many; *άνθρ*, a male.) The *Baliospermum montanum*, Muill.

**C. pseudo-China**, Schlecht. (*Ψευδής*, false; *China*, cinchona. *L. quina blanca*.) Copalchi bark. The *C. nivicum*, Jacq.

**C., purging**. The *C. tiglium*.

**C. racemosum**. (*L. racemosus*, clustered.) Hab. Malabar. Root, boiled in sesame oil, is used in headache and rheumatism.

**C. ricinus**. A synonym of *Ixodes ricinus*.

**C. sanguifluum**, H. Brogn. and Kunth. (*L. sanguis*, blood; *fluo*, to flow.) Hab. South America. Same properties as *C. draco*.

**C. sebiferum**, Linn. (*L. seba*, suet; *fero*, to bear. *F. arbor à suif*.) The tallow tree of China. Seeds covered with a white waxy or sebaceous substance. Used for making candles.

**C. seeds**. (*F. graines de Tilly*, *g. des moulques*, *petit pignon d'Inde*; *G. Purgirkörner*, *Granatöl*.) The seeds of *C. tiglium*.

**C. Sloanii**. A species originally confounded with *C. catteria*.

**C. squamosum**, Poir. The *C. micans*.

**C. suberosum**, Brogn. and Kunth. (*L. suberosus*, corky.) Hab. Peru. Used as an aromatic purgative. A species supplying part of *Copalchi* bark.

**C. thurifer**. (*L. thus*, frankincense; *fero*, to bear.) A tree growing on the banks of the Amazons, from which frankincense is extracted.

**C. tiglium**, Linn. (*Τίλος*, a thin stool.) Hab. Malabar. Seeds supply croton oil, *Oleum crotonis*; the wood, *Lignum pavanae*, is purgative, and a sudorific in a small dose.

**C. tinctorium**. The *Crotophora tinctoria*.

**Crotona, school of**. Crotona is a Greek town situated on the Italian coast, and which was celebrated in very early times for its medical school, although little is known of it except from the writings of Hippocrates; from which it may be inferred that a long series of its inhabitants devoted themselves to medicine, and that in the practice of the art they used many drugs and preparations and numerous surgical appliances. (Littre and Robin.)

**Crotonarin**. The solid fat deposited by croton oil in the cold.

**Crotoné**. (*Κρότων*, the dog-tick. *F. crotoné*.) Name for a fungous excrescence on trees, produced by an insect like a tick.

Applied to small fungous excrescences on the pericæum.

**Crotonæa**. (*Croton*.) A Tribe of the Order *Euphorbiaceæ*, having a solitary ovule and usually petaloid flowers in clusters of some sort.

**Crotonic**. (*F. crotonique*.) Oil, or belonging to, the croton oil.

**C. acid**. (*F. acide crotonique*; *G. Kroton-säure*.)  $C_4H_6O_2$ . One of three modifications of the same acid; the others being isocrotonic and methacrylic acids. It is a solid substance, crystallising in slender woolly needles or large plates.

**C. aldehyde**.  $C_4H_6O$ . A colourless liquid, of very pungent smell, produced by heating acetaldehyde to 100° C. (212° F.) with dilute hydrochloric acid.

**Crotonin**. (*F. crotonine*.) An alkaloid said by Brandes to exist in croton oil; but now known to be a combination of L. agnesia with a fatty acid.

**Crotonol**.  $C_8H_{16}O_4$ . A brown oil said by Schlippe to be obtained from croton oil, and to possess vesicating properties; its existence is doubtful.

Also, the same as *Croton oil*.

**Crotonolic acid**. An acid peculiar to croton oil, and to which its action on the skin and intestinal canal is attributed.

**Crotophium**. Same as *Crotophus*.

**Crotophus**. (*Κρότος*, a pulse.) Painful throbbing in the temples.

**Croup**. (Lowland Sc. *croup*, from Sax. *krōpan*, to cry aloud.) A term originally applied to an inflammatory disease of the larynx and trachea of children, and marked by a peculiar sharp ringing sound of the cough. Of late there has been much discussion as to the real existence of the disease, many, indeed a majority, of present observers contending that the cases of so-called croup are, on the one hand, acute spasmodic laryngitis, and on the other, laryngeal diphtheria; whilst some, admitting that many cases called croup are really cases of the above mentioned diseases, contend that there is a third disease like to the former in the spasm and the peculiar ring of the cough, and to the latter in the development of false membrane, but differing essentially from both, and so requiring a special designation. This disorder, croup or membra-

## CROUPAL—CROUPOUS.

nous croup, may begin very suddenly, or after some hours of an ordinary catarrh, with a little laryngeal uneasiness or pain; towards the end of the second day, with perhaps some increase of fever, the cough assumes the hard, ringing croupy character, shortly the inspiration becomes prolonged and stridulous, and then there is difficulty of breathing; these distressing symptoms intensify and become paroxysmal, with intervals of comparative repose and perhaps uneasy sleep; the paroxysms recur again and again, producing more and more distress, more and more persistent dyspnoea, until there is hardly any intermission, and the pulse becomes quick and weak, the lips livid, the extremities cold, the distress agonising, and at last the patient dies in a paroxysm of suffocating cough, or in coma or convulsions, if antimony or ipecacuanha, in emetic doses, administered early and freely, has not crushed the evil, or death been averted by opening the windpipe. After death the mucous membrane of the larynx is found reddened, softened, sometimes excoriated or ulcerated, and generally more or less completely covered with a false membrane; this morbid condition often spreads to the trachea, and occasionally to the bronchi. The false membrane is whitish or greyish or yellowish white, varying in consistence, capable of detachment, inasmuch as it involves the epithelium only and does not penetrate below the basement membrane, and consists of a fibrillated network enclosing altered epithelium, leucocytes, granular matter, and some fungoid spores. The contention that this disease is diphtheria is chiefly supported by reference to the character of the false membrane, which in its microscopical appearance differs little, if at all, from the acknowledged diphtheritic pellicle. It is protested that difference of position accounts for some difference in manifestation, and that the known sequelæ or accompaniments of diphtheria, albuminuria, and local paralysis, are occasionally found in cases of what the believers in the reality of the disease would undoubtedly call membranous croup. On the other hand, it is asserted that croup is a local disease, is caused by atmospheric conditions, is non-contagious, and generally of sudden accession, affects the general system only by the local troubles it produces, gives off no offensive odour, does not, except by accident, produce albuminuria, is successfully treated by emetics, is almost confined to infants, in whom it is very apt to recur, and is followed by no muscular paralysis; in all which things it is the opposite of diphtheria. That this is true of pure membranous croup, and that the error has arisen from confounding with it two other distinct diseases, acute spasmodic laryngitis and diphtheritic laryngitis. Moreover, that although the microscopical appearances of the false membrane of croup and diphtheria are very similar, yet that they differ in this, that the deposit never penetrates below the basement membrane in croup, and that it invariably attacks and infiltrates the mucous corium in diphtheria.

**C., ascend'ant.** (L. *ascendo*, to mount up.) A term applied to croupous deposits in the pharynx.

**C., bronch'ial.** Same as *Bronchitis, plastic*.

**C., catarrhal.** Ordinary croup.

**C., cer'ebral.** (L. *cerebrum*, the brain.) A synonym of *Laryngismus stridulus*.

**C., cer'ebral, spasmod'ic.** A synonym

of *Carpopedal spasm*, when occurring during an attack of *laryngismus stridulus*.

**C., chron'ic.** (Xρονικός, relating to time.) Chronic plastic bronchitis.

**C., descend'ant.** (L. *descendo*, to go down.) Croupous deposits descending from the pharynx to the larynx.

**C., diphtherit'ic.** A term for laryngeal diphtheria.

**C., epidem'ic.** A term for *Diphtheria*.

**C., false.** A synonym of *Laryngismus stridulus*.

Also, a term applied to cases of croup where the attack is of a spasmodic rather than of an inflammatory character.

**C., hyster'ic.** A term for an hysterical cough accompanied by a croupy sound and paroxysms of dyspnoea.

**C., idiopathic.** Same as true *Croup*.

**C., intesti'nal.** See *Intestinal croup*.

**C., larynge'al.** (L. *larynx*.) The same as *Croup*.

**C., membranous.** (L. *membrana*, a membrane.) The disease described as *Croup*.

**C., pal'pebral.** Same as *Conjunctivitis diphtheritica*.

**C., pharynge'al.** A term loosely applied to diphtheria or any sore throat with aphthous patches.

**C., pri'mary.** (L. *primus*, first.) True *Croup*.

**C., pseudomem'branous.** (Ψευδής, false; L. *membrana*, a membrane.) Ordinary *Croup*.

**C., sec'ondary.** Laryngeal diphtheria when it spreads from the fauces.

Also, that form of laryngitis which occurs in the course of acute infective or general constitutional diseases, pyæmic processes, and other acute or chronic affections.

**C., spasmod'ic.** Same as *C., false*, in both its meanings.

**C., spu'rious.** (L. *spurius*, false.) A synonym of *Laryngismus stridulus*.

**C., symptomatic.** The same as *C., secondary*.

**C., u'terine.** See *Uterine croup*.

**Croup'al.** Relating to, resembling, or of the nature of, *Croup*.

**C. laryngitis.** See *Laryngitis, croupal*.

**C. voice.** The peculiar stridulous voice heard in croup.

**Croup'ine.** A synonym, being a diminutive of croup, of *Laryngismus stridulus*.

**Croup'ous.** Same as *Croupal*.

**C. ang'i'na.** Term applied especially to that form of croup in which the croupy deposits are particularly well marked.

**C. bronchi'tis.** That form of bronchitis in which a croupous process originates in the bronchi. It is a rare affection, occurs chiefly between the ages of ten and thirty. It is usually chronic, and commences with symptoms of bronchitis, but is occasionally acute and sudden in its onset. The symptoms are dyspnoea, cough, with catarrhal expectoration at first, but afterwards with bloody sputa and fibrinous masses or casts of the bronchi. The respiratory murmur is absent, when large bronchial casts are firmly adherent; death, when it ensues, results from asphyxia. In the chronic cases the symptoms are much less severe, and recovery is more frequent.

Also called plastic bronchitis.

## CROUPY—CROWN.

**C. depos'it.** The same as *C. membrane*.  
**C. endarteri'tis.** Inflammation of the internal coat of an artery accompanied with effusion of plastic lymph on its inner surface.

**C. exuda'tion.** (*L. exudo*, to squeeze out.) The same as *C. membrane*.

**C. gastr'i'tis.** See *Gastritis, croupous*.  
**C. laryngi'tis.** (*L. larynx*.) The same as *Croup*.

**C. lymph.** See *Lymph, croupous*.

**C. mem'brane.** A whitish or yellowish-white deposit which appears on mucous membranes affected with croup. It has a dull lustre, is sharply defined at the border, has a thickness varying from a very thin layer up to one eighth of an inch, is firmly adherent to the subjacent tissue at first, and is elastic. After a few days it becomes grey or blackish and less adherent. Microscopically, it consists at first of a clear, homogeneous, glistening network, the interspaces of which contain serum or blood or pus corpuscles. The croupous membrane occupies the place of the middle layers of the epithelium, the upper layers soon disappearing, but the deeper layers being often preserved throughout the disease. It never extends into the mucous corium which, however, is hyperemic, infiltrated with serum or serum and pus, and presents hemorrhages. By some, the membrane is believed to be a product of the epithelium; by others, to be a fibrinous exudation and the result of the metamorphosis of white corpuscles and the direct formation of fibrine from transuded blood plasma. It is soluble in alkalies, and especially in lime water.

**C. pneumo'nia.** Lobular or less frequently lobar inflammation of the lungs, with fibrinous infiltration, usually caused by extension of inflammation from the larynx and trachea to the lungs.

**C. urethri'tis.** (*Urethra*.) A condition sometimes observed in the later stage of gonorrhoea, in which, owing to some excess, difficulty of micturition occurs, attended with the exudation of clear white membranous masses, which can be detached by the passage of a bougie and injection of water, and which appear to be chiefly formed in the membranous portion of the urethra.

**Croup'y.** Of the nature of *Croup*.  
**Crow.** (*Sax. cräwa*, from *cräwan*, to crow like a cock.) A general name given to the Genus *Corvus*.

**C.'s-beak pro'cess.** The coracoid process, from its shape.

**C. bel's.** The *Narcissus pseudonarcissus*.

**C. berry.** The *Empetrum nigrum*, from the black colour of the fruit.

**C.'s eyes.** (*G. Krähenaugen*.) A synonym of *Nux conica*.

**C.-flower.** The Genus *Ranunculus*, from the resemblance of the leaf to a crow's foot.

**C.-foot.** See *Crowfoot*.

**C. gar'lic.** The *Allium vineale*.

**C. leek.** The *Scilla nutans*.

**C. need'les.** The *Scandix pecten-veneris*, from the long beaks of its seed-vessels.

**C. silk.** The *Conjerva rivalis*, or hairy river-weed.

**C. toes.** The *Lotus corniculatus*, from the likeness of its cluster of legumes to a crow's foot.

**Crow'd.** (*Sax. cröda*, a crowd; from *crödan*, to press.) A throng, a number of people.

**C. poisoning.** The bad condition of

health produced by overcrowding of people in a house or houses.

**Crow'foot.** (*G. Krähenfüss*.) Common name for several species of the Genus *Ranunculus*.

Also, a name of *Geranium maculatum*.

**C., Alpine.** The *Ranunculus thora*.

**C., brist'ly.** The *Ranunculus pennsylvanicus*.

**C., bul'bous.** The *Ranunculus bulbosus*, from the shape of the root.

**C., bul'bous-root'ed.** The *Ranunculus bulbosus*.

**C., cel'ery-leav'ed.** The *Ranunculus secleratus*.

**C., corn.** The *Ranunculus arvensis*.

**C., crane's bill.** The *Geranium pratense*.

**C., croop'ing.** The *Ranunculus repens*.

**C., crush'ed.** The *Ranunculus secleratus*.

**C., globe.** The *Trollius europæus*.

**C., marsh.** The *Ranunculus secleratus*.

**C., mead'ow.** The *Ranunculus acris*.

**C., round-root.** The *Ranunculus bulbosus*.

**C., small-flow'ered.** The *Ranunculus abortivus*.

**C., tall.** The *Ranunculus acris*.

**C., wa'ter.** The *Ranunculus aquatilis*.

**C., wa'ter, small'er.** The *Ranunculus flammula*.

**C., white-flow'ered.** The *Ranunculus montanus*.

**C., wood.** The *Ranunculus auricomus*; and also the *Anemone nemorosa*.

**Crow'foots.** The plants of the Nat. Order *Ranunculaceæ*.

**Crowing.** (*Sax. cräwan*, to crow or croak.) Making a noise like a cock.

**C. inspira'tion.** (*L. inspiro*, to breathe in.) The noise made in inspiration in whooping-cough, laryngismus stridulus, and other temporary or permanent obstructions of the respiratory tube.

**Crown.** (*Mid. E. corone*; old *F. corone*; from *L. corona*, a wreath *F. couronne*; *L. corona*; *S. corona*; *G. Krone*.) A wreath, garland, or diadem for the head.

In Anatomy, applied to parts of a circular form which top other parts.

In Botany, applied to a series of cells, consisting in *Chara* of five larger, and in *Nitella* of five pairs of smaller, cells, which are separated at an early stage from the enveloping tubes of the nucule, and form a compact lid to the apical papilla.

See also *Corona* and *C. of root*.

**C. bark.** Same as *Bark, Loxa*.

**C. bark of Lox'a.** See *Bark, Loxa*.

**C. glass.** (*G. Kronglas*.) See *Glass, crown*.

**C. impe'rial.** The *Fritillaria imperialis*.

**C. lychn'is.** The *Lychnis coronaria*.

**C. of cups.** (*F. couronne des tasses*.) A voltaic battery consisting of a series of jars, each containing two slips of different metals partially immersed in dilute acid, but which are not permitted to touch in the fluid. The opposite metals are brought into connection by a wire passing over the edge of the adjoining cups, which is attached to that part of the slips which is not immersed.

**C. of glans.** See *Corona glandis*.

## CROWNED—CRUENTATE.

**C. of head.** The vertex, the topmost part of the head.

**C. of root.** The shortened stem at the top of the root, from which leaves arise when these are only radical.

**C. of tooth.** (*F. couronne de dent*; *G. Zahnkrone*.) The upper part of a tooth; that which projects above the gums.

**C. of trephine.** The tubular toothed sawing part of a trephine.

**C. of Venus.** See *Corona veneris*.

**C. this tie.** The *Fritillaria imperialis*.

**Crowned.** Having a crown or corona.

**Crowning.** The wearing of, or being invested with, a crown.

A term applied to that stage of labour in which the head, having passed under the pubic arch, distends the perinaeum, and is tightly surrounded by the vulva, as by a crown.

**Crown-worts.** The plants of the Nat. Order *Malesherbiaceae*.

**Crozophora.** (*Κρόσσαι*, battlements; *φρούρα*, to bear) A Genus of the Nat. Order *Euphorbiaceae*.

**C. plicata**, A. Juss. (*L. plicatus*, folded.) Hab. India. A decoction is used in leprosy diseases.

**C. tinctoria**, Juss. (*L. tinctorius*, belonging to a dyer. *Ἐλαιοχρῶνιον μασπὸν*; *F. mauve*.) Turnsole, a purple drug, which becomes blue on the addition of ammonia, is the inspissated juice of this plant. The juice is acrib and emetic, and the seeds cathartic.

**Crucial.** (*L. crux*, a cross. *F. crucial*, *croisé*; *G. kreuzförmig, gekreuzt, kreuzweise*.) Like, of, or belonging to, a cross.

**C. anastomosis.** The anastomosis at the back of the upper part of the thigh, between the terminal branch of the internal circumflex artery, the sciatic, external circumflex, and superior perforating arteries.

**C. bandage.** A synonym of *Bandage*, *T-shaped*.

**C. incision.** (*L. incido*, to cut. *F. incision cruciale*; *G. Kreuzschnitt*.) An incision made by dividing along two lines crossing each other at a right angle.

**C. ligament of atlas.** (*F. ligament croisé de l'odontoid*.) A name applied to the transverse ligament of the atlas and its upper and lower offshoots combined.

**C. ligaments of knee.** (*F. ligaments croisées de genou*.) Two ligaments in the interior of the knee-joint which cross each other. The *external* or *anterior* is attached by its lower extremity to the inner part of the fossa in front of the spine of the tibia, and by its upper extremity to the inner and hinder part of the external condyle of the femur, having a direction upwards, backwards, and outwards. The *internal* or *posterior* is attached by its lower extremity to the back of the fossa behind the spine of the tibia, and by its upper extremity to the front of the intercondylar fossa and to the side of the inner condyle of the femur, having a direction upwards and forwards.

**Cruciate.** (*L. crux*, a cross. *F. cruciforme, croisé*; *G. kreuzförmig*.) Having the appearance of a cross; crossed.

**Crucia ti dolores.** (*L. crucia*, to crucify, to torture; *dolor*, pain.) Agonising, excruciating pains.

**Crucia to-complicate.** (*L. cruciat*, part. of *crucio*; *complico*, to fold together.)

Applied by Kirby to the wings of insects which are at the same time crossed and folded, as those of the *Pentatoma*.

**C.-incumbent.** (*L. cruciatus*; *incumb*, to lie upon.) A term applied to the wings of insects when they are crossed but not folded, and when they cover the abdomen, as in the *Apis*.

**Crucible.** (Low *L. crucibulum*, a hanging lamp, a melting pot; from the root found in Old *F. cruche*, an earthen pot; and Dan. *kroes*, a cup or crucible. By some the word was supposed to be connected with *L. crux*, the cross; and it was said that formerly a cross was marked on a crucible to keep away the devil's interference. *F. creuset*; *G. Schmiedtiegel*.) A vessel made of baked earth, charcoal, metal, or other substance, for the various operations of fusion by heat.

**Cruciferae.** (*L. crux*, a cross; *fero*, to bear. *G. Kreuzbluthler*.) A Nat. Order of thalamifloral Exogens of the Alliance *Cistales*, or an Order of the Cohort *Parietales*, or a Family of the Order *Rheodineae* or *Cruciflorae*, having tetramerous flowers and tetradynamous stamens.

**Cruciferous.** (*L. crux*, a cross; *fero*, to bear. *F. crucifere*; *G. kreuztragend*.) Relating to the *Cruciferae*. Having flowers, petals, or other parts arranged in a cruciform manner.

**Crucifers.** The plants of the Order *Cruciferae*.

**Cruciflorae.** (*L. crux*; *flos*, a flower.) The same as *Cruciferae*.

**Cruciform.** (*L. crux*, a cross; *forma*, resemblance. *F. cruciforme*; *G. kreuzförmig*.) Like or resembling a cross.

**C. corolla.** (*L. corolla*, a flower cup) A corolla in which four petals are arranged two and two in the form of a cross.

**C. ligament.** Same as *Crucial ligament*.

**C. ligament of atlas.** Same as *Crucial ligament of atlas*.

**Crucigerous.** (*L. crux*, a cross; *gero*, to bear. *F. crucigere*.) Bearing a cross.

**Crucirostrate.** (*L. crux*; *rostrum*, a beak. *F. crucirostre*.) Having the mandibles crossed one upon the other, as in some birds.

**Crude.** (*L. crudus*, bloody, raw, unripe; probably from the same root as *error*, blood. *F. cru*; *L. crudo*; *S. crudo*; *G. roh*.) Raw; unripe; unprepared by any artificial process; not concocted; undigested.

**Cruditās.** (*L. crudus*, raw. *F. cruditi*; *G. Rohheit*.) A term for bad digestion; rawness; crudity. Applied to unripe fruits, raw flesh, and ill-concocted humours and excretions. See also *Crudity*.

**C. morbi.** (*L. morbus*, disease.) Applied of old to the ill-concoction of the morbid humours producing a disease.

**C. ventriculi.** (*L. ventriculus*, the stomach.) An undigested condition of the substances contained in the stomach.

**Crudity.** (*L. cruditas*, the being undigested.) A term applied to the condition of undigested food; also to a want of a proper concoction of the humours of the body, or of peccant humours.

**Cruels.** Same as *Crevels*.

**Cruenta.** (*L. cruentus*, bloody.) Bloody.

**C. cucurbita.** See *Cucurbita cruenta*.

**C. expuilio.** (*L. expuo*, to spit out.) Spitting of blood, hæmoptysis.

**C. sutura.** See *Sutura cruenta*.

**Cruentate.** (*L. cruentus*. *G. blutig*.) Bloody.

**Cruentation.** (L. *cruentatio*, a making bloody.) A term applied to the oozing of blood which occurs sometimes when an incision is made into the dead body; it is caused by the pressure of gas developed in the body by commencing putrefaction.

Originally the term had another signification. It meant the spontaneous bleeding from the wounds of a dead person in the presence of the murderer; it was looked on as a supernatural occurrence, the result of the direct intervention of God.

**Cruent'in.** (L. *cruor*, blood.) A product of the action of sulphuric acid on hæmoglobin, according to Thudichum.

**Cruent'ous.** (L. *cruentus*, bloody. F. *sanglant*, *sanguinolent*; G. *blutig*.) Red like blood; bloody. Formerly applied to the humours or excretions, sputa, sweat, and such like, when mixed with blood.

**Cruick'shank's battery.** A voltaic circle, composed of copper and zinc couples, immersed in dilute sulphuric acid or solution of copper sulphate in a wooden trough.

**Crumb.** (Sax. *cruma*.) A small fragment or morsel.

**C. of bread.** See *Mica panis*.

**Crum'na.** (L. *crumena*, a small money-bag.) A bag.

**C. nuptia'lis.** (L. *nuptialis*, belonging to a wedding.) The scrotum.

**C. vesicæ.** (L. *vesica*, the bladder.) The cavity of the urinary bladder.

**Crumpled.** (E. *crumple*, from Teut. root *kraump*, to pinch.) Pinched into folds; wrinkled.

**C. aestivation.** Same as *Estivation*, *corrugated*.

**Crumpling.** (Same etymon.) Wrinkling, folding irregularly.

**C. sound.** Same as *Bruit de froissement*.

**Cru'nion.** (Kρούσιον, a spring.) Old name (Gr. κρούσιον), used by Aëtius, l. 12, for a certain medicine, from the violence of its action as diuretic.

**Cru'or.** (L. *cruor*, blood; being the running thing, akin to Sansc. root *eri*, to go.) Term for the red or purplish coloured portion of the blood which forms the clot; gore.

Also, applied to venous blood especially.

**C. sanguinis.** (L. *sanguis*, blood.) The clot of blood.

**Cruoric.** Relating to *Cruor*.

**Cru'orin.** (L. *cruor*.) Stokes' term for *Hæmoglobin*.

**Crupper.** (F. *croupière*, from *croupe*, the rump; from a Teutonic root, as G. *Kropf*, a protuberance.) The buttocks, especially of a horse.

**C. bone.** The coccyx.

**Crup'sia.** Same as, and a contraction of, *Chroapsia*.

**Crura.** (L. plural of *crus*, a leg.) Legs. Applied to several objects from their supposed resemblance.

In Botany, the divisions of a forked tooth.

**C. arcus vertebralis.** The laminae of a vertebra.

**C. cerebelli.** (L. *cerebellum*, a small brain. F. *peduncles cerebellaris*; G. *Kleinhirnschenkel*.) Three thick strands of white nerve fibres which pass, one upwards to the corpora quadrigemina and brain, one horizontally to the pons, and one downwards to the spinal cord. See under *C. cerebelli ad cerebrum*, *C. cerebelli ad*

*medullam oblongatam*, and *C. cerebelli ad pontem*.

Also, called *Peduncles*.

**C. cerebelli ad cerebrum.** (L. *ad*, to; *cerebrum*, the brain. G. *Grosshirnschenkel des Kleinhirns*.) The superior peduncles of the cerebellum; being strands of white matter passing from the fore part of the cerebellum to the corpora quadrigemina.

**C. cerebelli ad corpora quadrigemina.** (G. *Vierhörschenkel*.) Same as *C. cerebelli ad cerebrum*, because of their connection with the corpora quadrigemina.

**C. cerebelli ad eminentias quadrigeminas.** (G. *Vierhörschenkel*.) Same as *C. cerebelli ad cerebrum*.

**C. cerebelli ad medullam oblongatam.** (G. *Medullarschenkel*.) The inferior peduncles of the cerebellum; being the upper extremities of the restiform bodies.

**C. cerebelli ad pontem.** (L. *pons*, a bridge. G. *Bruchenschenkel des Kleinhirns*.) The middle peduncles of the cerebellum; being the transverse fibres of the pons Varolii connecting the two halves of the cerebellum with each other.

**C. cerebri.** (L. *cerebrum*, the brain. F. *peduncles cerebraris*; G. *Grosshirnschenkel*.) Two white, rounded cords, somewhat flattened from above to below, extending from the anterior border of the pons Varolii to the thalamus opticus and the corpus striatum; the lower surface is free and rounded, and at its anterior part is crossed by and attached to the tractus opticus; the inner surface is in relation to the interpeduncular space; the outer surface is near the transverse fissure of the cerebrum; and the upper surface supports the tubercula quadrigemina. The crura cerebri are composed chiefly of white fibres, incompletely separated into two parts by a nucleus of grey matter, the *locus niger*. The lower part, the *crusta* or *basis*, consists of motor fibres from the anterior pyramid, which pass to the corpus striatum and form the internal capsule; and, according to Meynert, of some sensory fibres from the posterior columns of the cord by way of the deep part of the anterior pyramid, some of which go to the hinder part of the internal capsule, whilst others curve back to the occipital lobes of the cerebrum. The upper part, the *tegmenum*, is divided into two fasciculi, the external of which contains sensory fibres from the deep layer of the pyramid, and goes to the optic thalamus; while the internal fasciculus is composed of fibres from the crura cerebelli ad cerebrum, which pass to the cells of the nucleus of Stilling in the upper part of the tegmenum, and from thence upwards to the thalamus opticus. The crura cerebri are developed from the floor of the mid-brain or second cerebral vesicle of the embryo.

**C. clitoridis interna.** (*Clitoris*; *internus*, inner. F. *racines du clitoris*; G. *Schenkel des Kitzlers*.) The roots or attachments of the corpora cavernosa of the clitoris to the rami of the ischium and pubes on each side of the pubic arch.

**C. corporum cavernosorum penis.** (G. *Schenkel der Ruthe*.) The origins of the corpora cavernosa of the penis from the rami of the ischium and pubes on each side.

**C. diaphragmatis.** Same as *C. of the diaphragm*.

**C. fornicis anteriora.** (L. *fornix*, an

arch; *anterior*, foremost. *G. Säulen des Gehirns.*) Two rounded cords into which the fornix divides anteriorly, and which pass downwards in front of the thalami optici and behind the anterior commissure. They are separated from the thalamus on each side by a space named the *Foramen of Monro*. They appear at the base of the brain, when, bending back, they form the *Corpora albicantia*, and, reascending, terminate in a grey mass named the *Nucleus fornicis*.

**C. fornicis posteriora.** (*L. fornix*, an arch; *posterior*, hindmost. *G. die beiden dreiseitigen Schenkel des Gehirns.*) The posterior cornua of the fornix, which, triangular in form and diverging from each other, become the *Corpora fimbriata*. They are connected by a triangular lamella, termed the *lyra* or *psalterium*.

**C. ligamenti cruciati.** (*L. cruciatus*, from *crux*, a cross.) These are the ascending and descending vertical portions of the ligamentum cruciatum of the occipito-axoid articulation. Each is said to be divided into two *crura*, a right and a left.

**C. medullæ spinalis anteriora.** The anterior cornua of the grey substance of the cord.

**C. medullæ spinalis posteriora.** The posterior cornua of the grey substance of the cord.

**C. of clitoris.** See *C. clitoridis interna*.

**C. of diaphragm.** (*F. plicæ duæ diaphragmæ*; *G. Lendenschunkel des Zwerchfells*.) Two thick muscular bundles, arising by tendinous fibres continuous with the anterior vertebral ligament, from the anterior face of the bodies of some of the lumbar vertebrae; the right crura from the first, second, and third vertebrae, and the intervening fibro-cartilages, and the left crura from the first and second vertebrae; the two tendons unite to form an arch, which encloses the aorta, and from them muscular fibres spring, which diverge to be inserted into the central tendon of the diaphragm; the innermost fibres decussate to form an opening for the passage of the œsophagus above and in front of the aortic aperture.

**C. of fornix.** See *C. fornicis anteriora* and *posteriora*.

**C. penis.** (*G. Schenkel des Männlichen Glieds*.) The two diverging portions of the corpora cavernosa penis which are attached to the pubic arch.

**C. stigmatis.** The divisions of the *Stigma*.

**C. uteri.** (*L. uterus*. *G. runde Mutterbänder*.) The round ligaments of the uterus.

**Cruræus.** (*L. crus*, the leg. *F. musculus crural*; *G. mittlerer Schenkelmuskel*.) The deep portion of the *Vastus internus*, and inseparable from it.

**Crural.** (*L. crus*, the leg. *F. crural*; *G. zum Schenkelbein gehörig*.) Of, or belonging to, the leg or lower extremity.

**C. aponeurosis.** Same as *Femoral fascia*.

**C. arch.** (*F. arcade crurale*.) The arch formed by *Poupart's ligament*; and also the ligament itself.

**C. arch, deep.** A thickened band of ligamentous fibres attached to the inner surface of the centre of *Poupart's ligament*, and inserted into the crest of the pubes and the pectineal line behind the conjoined tendon of the internal oblique and transversalis muscles; it forms an arch over the femoral vessels.

**C. artery.** (*G. Schenkelschlagader*.) The *Femoral artery*.

**C. bandage.** A circular pelvic strap with an under thigh-strap and a pad to restrain the descent of the bowel in crural or femoral hernia.

**C. canal.** The *Canal, femoral*.

**C. hernia.** Same as *Hernia, femoral*.

**C. muscle.** The *Cruræus*.

**C. nerve.** Same as *C. nerve, anterior*.

**C. nerve, anterior.** (*L. anterior*, in front. *F. nerv. crural*; *G. Schenkelnerv*.) A large nerve, a branch of the lumbar plexus, derived from the third lumbar nerve, and its anastomoses with the second and fourth; it traverses the psoas muscle, leaving its external border near the sacrovertebral articulation, runs in the interval between the psoas and iliacus muscles, and passes under *Poupart's ligament* on the outer side of the femoral vessels and beneath the iliac fascia; it shortly divides into an anterior cutaneous and a posterior muscular part, from the former of which are given off the middle and internal cutaneous and the long saphenous nerves, and from the latter muscular and articular branches. It supplies the skin of the anterior and inner surface of the thigh, and the inner side of the leg and foot, the knee-joint, the muscles of the front and outer side of the thigh, and in part the pectineus muscle.

**C. nerve of genito-crural.** The external branch of the genito-crural nerve given off in or just beyond the psoas muscle. It supplies the skin of the upper part of the thigh and the upper part of the femoral sheath; occasionally also it gives a branch to the lower border of the internal oblique and transversalis muscles.

**C. neuralgia.** See *Neuralgia, crural*.

**C. plexus.** (*L. plexus*, a weaving. *F. plexus cruralis*.) *Chaussier's* term for the combined lumbar and sacral plexuses of the anterior branches of the last four lumbar and first four sacral spinal nerves.

**C. ring.** The *Femoral ring*.

**C. septum.** See *Septum crurale*.

**C. sheath.** Same as *Femoral sheath*.

**C. vein.** (*G. Schenkelblutader*.) The *Femoral vein*.

**Cruralis.** (*L. crus*.) Of, or belonging to, the leg.

A synonym of the *Cruræus*.

**Cruræus.** Same as *Cruræus*.

**Cruris radius.** (*L. crus*; *radius*, a staff.) An old name for the fibula.

**Cruro-inguinal.** (*L. crus*; *inguen*, the groin.) Relating to the thigh and the groin.

**C. bandage.** A bandage for the retention of dressings on the groin. It consists of a triangle or a long narrowish band of linen or cotton, the centre part lying on the fold of the groin, the outer end encircling the pelvis, the inner end passing backwards into the perineum, and curving round the outer surface of the thigh, to meet the extremity of the pelvic turn.

**Crus.** (*L. crus*, the leg; from *Sanse*, root *eri*, to run. *F. jambe*; *G. Bein*.) The leg, or lower extremity of either side. Sometimes applied to the whole limb, sometimes to the thigh only, and sometimes to the lower leg only.

Also, anything in the shape of, or acting the part of, a leg.

**C. ampullæ canalis semicircularis.** That portion of each semicircular canal which dilates into the ampulla.

**C. an'nulli inguina'lis anterie'ris anterie'ris.** (L. *inguinalis*, belonging to the groin; *anterior*, foremost.) The internal pillar of the external abdominal ring. See *Abdominal ring*, *external*.

**C. an'nulli inguina'lis anterie'ris internum.** The internal pillar of the external abdominal ring. See *Abdominal ring*, *external*.

**C. an'nulli inguina'lis anterie'ris posterius.** The outer pillar of the external abdominal ring.

**C. an'nulli inguina'lis exter'ni medidum.** The same as the *Ligamentum triangulare*.

**C. an'nulli obturatori tendin'eum.** (L. *annulus*, a little ring; *obturator*.) An irregular fibrous band which bounds the obturator foramen.

**C. Barba dicum.** Barbadoes leg.

**C. cerebelli ad cerebrum.** (L. *cerebrum*, brain. G. *Vierhörschenkel*.) See *Crura cerebelli ad cerebrum*.

**C. cerebelli ad medullam oblongatam.** (G. *Kleinhirnstiel*, *strickförmige Körper*.) See *Crura cerebelli ad medullam oblongatam*.

**C. cerebelli ad pontem.** (G. *Brückenschenkel*, *Brückenarm*.) See *Crura cerebelli ad pontem*.

**C. cerebri ad pontem.** (L. *pons*, a bridge. G. *Hirnschenkel*.) The same as *Crura cerebri*.

**C. clitoridis.** The same as the *Corpora cavernosa clitoridis*.

**C. curvilineum.** (L. *curvus*, bent; *linea*, a line. G. *der hintere Schenkel*.) The longer posterior crus of the stapes.

**C. fornicis.** See *Crura fornicis anteriora* and *posteriora*.

**C. helicis.** That portion of the anterior extremity of the helix which is prolonged into the cymba.

**C. helicis anterie'ris.** (L. *anterior*, foremost; *helix*, a kind of ivy.) The same as the *C. helicis*.

**C. in'cusdis bre've.** (L. *incus*, an anvil; *brevis*, short. F. *la branche supérieure de l'enclume*; G. *hintere Amboschenkel*.) The short process of the incus which is directed backwards.

**C. in'cusdis longum.** (L. *incus*, an anvil. F. *la branche inférieure de l'enclume*; G. *Amboschenkel*.) The anterior process of the incus which runs nearly parallel with the manubrium of the malleus.

**C. medullæ oblongatæ ad eminentiam quadrigeminam.** The same as *Fasciculus teres*.

**C. penis.** A term applied to each of the crura of the corpora cavernosa of the penis.

**C. rectilineum.** (L. *rectus*, straight; *linea*, a line. G. *der vordere Schenkel*.) The anterior limb or crus of the stapes.

**C. simplex canalis semicircularis.** The non-expanded portion of each semicircular canal.

**C. transversum.** The transverse portion of the cruciform ligament of the atlas.

**Crust.** (Old F. *cruste*, or *croûte*; from L. *crusta*, the skin, rind.) A more or less hard outer covering.

A term applied to an eschar and to a scab, whether of an ulcerated surface or not, as in some skin diseases. In the latter it differs from a scale, in being made up of dried exudation chiefly,

be it serum, pus, or blood, mixed in varying proportion with epidermic scales and sebaceous secretion.

**C.s, cock'le-sha'ped.** See *Cockle-shaped crusts*.

**C., lam'ellated.** Same as *Crusta lamellata*.

**C., milk'y.** See *Crusta lactea*.

**C. of the pe'duncle.** See *Crusta cruris cerebri*.

**Crus'ta.** (L. *crusta*, the skin, rind, crust; from Sansc. root *krit*, to split. F. *croûte*; G. *Kruste*, *Rinde*.) A crust.

Applied to the scum of a fluid.

Term for the external cover or shell in the Mollusca, Crustacea, and certain of the Insecta; the crust.

Also, same as *C. cruris cerebri*.

Also, in Botany, the frosted surface of the thallus of some lichens.

Also (G. *Borke*, *Grind*), a scab. A product of disease or injury, consisting of dried blood, or pus, or exudation matter, with debris of tissue.

**C. adaman'tina dent'ium.** (L. *adaman'tinus*, extremely hard; *dens*, a tooth.) The enamel of the teeth.

**C. carno'sa.** (L. *carnosus*, fleshy. F. *croûte charnue*.) The name given by Bartholin, *Anat.* i. 9, 10, to the middle or muscular coat of the stomach and intestines.

**C. crur'is cerebri.** (L. *crus*, a leg; *cerebrum*, the brain.) The superficial longitudinal fibres of the crus cerebri lying below the locus niger; it is coarsely fasciculated. See *Crus cerebri*.

**C. fibro'sa.** (L. *fibrosus*, fibrous.) A term for the cement of the teeth.

**C. genu equini.** (L. *genu*, a knee; *equinus*, belonging to the horse.) The callosity on the inner side of a horse's leg, below the knee. It was formerly used in epilepsy.

**C. inflammato'ria.** (L. *inflammo*, to inflame. G. *Entzündungshaut*, *Speckhaut*.) The buffy coat of the blood.

**C. lac'tea.** (F. *croûte de lait*, *croûte lacteuse*; G. *Milchschorf*, *Milchborke*.) Old term for the disease or diseases formerly known as porrigo larvatus; milk-scab or milk-blotch.

**C. lamello'sa.** (L. *lamella*, a thin plate. G. *Schuppengrind*.) A scab consisting of superposed layers.

**C. membrana'cea.** (L. *membrana*, a membrane.) The villous or mucous coat of the intestines.

**C. of the cru'ra cer'ebri.** See *C. cruris cerebri*.

**C. osteoi'des.** (ὀστέιον, a bone; εἶδος, form.) The Cement of the teeth.

**C. petro'sa.** (L. *petrosus*, stony.) The cement of the teeth. See *Cement*.

**C. phlogis'tica.** (φλογιστός, set on fire.) The buffy coat of the blood.

**C. pleuret'ica.** (Πλεurit'is, pleurisy.) The buffy coat of the blood, because it was marked in the blood of those suffering from pleurisy.

**C. prurigin'o'sa.** (L. *pruriginosus*, scabby, having the itch very much.) A synonym of *Aene rosacea*.

**C. serpigin'o'sa.** (L. *serpo*, to creep.) A synonym of *Aene rosacea*.

**C. vermicula'ris.** (L. *vermiculus*, a little worm. F. *croûte vermiculaire*.) De Graaf's name

# CRUSTACEA—CRYOPHORUS.

for the mucous lining of the stomach and intestines.

**C. villosa.** (*L. villosus*, rough. *F. croute membrancee*.) Term, by Willis, *Pharm. Rat.* part. 1. s. 1. c. 2, for the mucous coat, lining, or covering of the stomach and intestines.

**C. villosa lingue.** (*L. lingua*, the tongue.) The mucous membrane of the tongue.

**C. villosa ventriculi.** (*L. ventriculus*, the stomach.) The mucous membrane of the stomach.

**Crustacea.** (*L. crusta*, the hard surface of a body. *G. Krustenthier*, *Krabben*.) A Class of the Order *Condylo-poda* or *Arthro-poda*, characterised by the segments of the body being completely separate, or having the dorsal half rings of the sternum coalesced with the head to form the cephalothorax. They possess sternal and abdominal feet. The posterior part of the abdomen or post abdomen prolonged into a kind of tail, frequently with atrophied feet. The most perfect forms have two pairs of feelers. Respiration is effected by means of gills.

**Crustaceorubin.** (*Crustacea*; *L. ruber*, red.) A red colouring matter found in many deep-sea Deep-pods, and other Crustacea.

**Crustaceous.** (*L. crusta*, a shell. *F. crustacé*; *G. Krustig*, *schorfig*.) Having a hard shell or cover.

Also, having a crust or scab, as some skin diseases.

Also, belonging to the *Crustacea*.

**C. lichens.** A Division of Lichens in which the thallus is developed in the form of incrustations, covering stones and the bark of trees, into the substance of which they pass without any definite line of separation; the fructification alone being conspicuous.

**C. pericarp.** (*Ηερικάρπιον*, the case of the fruit.) A pericarp which is thin, brittle, and not softened by water.

**Crustata.** Same as *Crustacea*.

**Crustate.** (*L. crusta*, a shell. *G. bekrustet*.) Having an outer hard rind or shell.

**Crustose.** (*L. crusta*, *F. crouteux*; *G. dickrigig*.) Thick skinned. Applied to certain mushrooms which form laminae like crusts.

**Crustula.** (*L. dim.* of *crusta*, a shell.) A name for an effusion of blood, under the tunica conjunctiva of the eye, from a bruise or some such cause.

**Crustuliform.** (*L. crustula*, a kind of cake; *forma*, likeness. *F. crustuliforme*.) Applied to a mushroom resembling a crustula in form and colour.

**Crustumina'tum.** Old name for a kind of potion (*Gr. κρουστρομινάτον*), mentioned by Aëtius, *l. 5*, made from Crustuminian pears.

**Crustuminian.** (*L. crustuminus*, belonging to *Crustumium*, an ancient town in the country of the Sabines, north-east of Fidenæ.) Belonging to *Crustumium*.

**C. pears.** A pear so called by the Romans from its chief place of growth.

**Crutch.** (*Mid. E. crucehe*; allied to *Du. krak*; *Sw. krycha*; *G. krücke*.) A stick with a cross-piece at the top, which is placed in the armpit to support the lame in walking.

Also, a somewhat similar implement used to push up some part of the foetus during labour, which it is advisable to get out of the way, or to change the position of the child.

**C. palsy.** Loss of power of the muscles

of the arm from pressure on the axillary nerves by the cross-head of a crutch.

**Cruveilhier.** A French surgeon, born at Limoges in 1791, died at Sussac, near Limoges, in 1874.

**C.'s atrophy.** A synonym of *Atrophy*, *progressive muscular*; in recognition of his early description of the disease.

**C.'s disea'se.** Progressive muscular atrophy.

**C.'s paralysis.** Progressive muscular atrophy.

**Crux.** (*L. crux*.) A cross.

**C. cer'vi.** (*L. cervus*, a deer.) An old name for the somewhat cruciform bony substance around the orifices in the heart of a deer, which was used in diseases of the heart.

**Cry.** (*F. crier*, from *L. quiritus*, to raise a plaintive cry, to implore the aid of the Quirites, or Roman citizens. By some it is looked on as an onomatopoeitic word.) A shriek, a loud vocal sound.

**C., bronchophon'ic.** (*Βρόγχος*, the windpipe; *φωνή*, the voice.) The clear resonant cry heard over a piece of hepatized lung in children. See *Bronchophony*.

**C., epilep'tic.** (*Επιληψία*, a convulsive seizure.) A peculiar discordant cry or yell occasionally uttered just before the respiration is arrested in an epileptic fit; occasionally it partakes more of the character of a groan. It occurs once only.

**C., hydrocephal'ic.** (*Υδωρ*, water; *κεφαλή*, the head.) A sharp, plaintive cry uttered by a child suffering from hydrocephalus; it is accompanied by wide open eyes and a flushed face for the moment.

**Cryer'o'sis.** (*Κρυερός*, chilling. *F. cryé-rose*.) Applied to the coldness felt on touching reptiles, and the horror they generally inspire.

**Crymo'des.** (*Κρυμώδης*, icy cold; from *κρυός*, frost; *είδος*, likeness. *F. crymède*; *G. eiskalt*.) Cold, or full of coldness.

**C. fe'bris.** (*L. febris*, a fever. *G. Eiskeber*.) Applied to a fever in which the external parts are very cold, and the internal very hot.

**Crymodyn'ia.** (*Κρυός*, icy cold; *δύσιν*, pain. *F. crymodynie*; *G. kalter Gliederfluss*.) Cold, chronic rheumatism.

**Crymo'ses.** (*Κρυός*, frost.) Diseases caused by cold.

**Cryohydrate.** (*Κρύος*, frost; *υδωρ*, water.) A term applied by Guthrie to that particular strength of aqueous solution of a salt which requires the lowest temperature for solidification. When the solution is weaker water freezes out as the temperature is lowered, when the solution is stronger the salt is deposited under the same circumstances; but the cryohydrate freezes altogether. The proportionate strength of the solution varies for different salts.

**Cryolite.** (*Κρύος*, cold; *λίθος*, a stone.) A fluoride of sodium and aluminium found in Greenland. It is an important source of soda, which is obtained by boiling with an excess of quicklime, when insoluble calcium fluoride and aluminate are formed, and caustic soda remains in solution. From it aluminium also is obtained.

**Cryophorus.** (*Κρύος*, cold; *φορέω*, to bear. *F. cryophore*; *G. Kryophor*.) An apparatus, devised by Wollaston, to exhibit the lowering of temperature as the result of evaporation. It consists of a glass tube with a bulb at each

end, one end bent; a small quantity of water is introduced, boiled to expel all air, and the tube is then hermetically sealed; it thus contains only water and watery vapour. If the water is all accumulated in the bulb at the bent end, and the other bulb placed in a freezing mixture, the vapour is condensed, and the water in the bulb yields more so rapidly that a large amount of heat is abstracted from it and it becomes ice.

**Cryos.** (Κρύος.) Old term for cold. Applied by metaphor to the hardness of a shell. Linderus, *Ecce.* v. s. 41.

**Cryphalum.** (Κρυφάλος, a woman's head-dress or net.) The second stomach or reticulum of ruminant animals; from its net-like or honey-combed appearance.

Also, a four-cornered bandage for the head.

**Cryphiospermum.** (Κρυφίος, hidden; σπέρμα, seed.) A Genus of the Nat. Order Compositæ.

**C. repens**, Palis. (L. *repo*, to creep.) Hab. Africa. Used as a vulnerary.

**Crypsorchis.** Same as *Cryptorchis*.

**Crypt.** See *Crypta*.

**C., multilocular.** (L. *multus*, many; *loculus*, a little place.) A crypt or follicle with small pouches in the central tube.

**C.s. of Lieberkühn.** See *Lieberkühn*, *crypts of*.

**C.s. synovial.** (*Synovia*.) The *Bursæ mucosæ*.

**C.s. synoviparous.** (*Synovia*; *pario*, to produce.) A term given to sac-like offshoots of the synovial membrane of a joint having a small aperture into the joint-sac. By some, they are looked upon as natural structures for the purpose of increasing the secretory area; by others, as pathological products, being, in fact, the first stage in the formation of a ganglion.

**Crypta.** (Κρύπτω, to hide. F. *crypte*; I. *cripta*; S. *cripta*; G. *Höhle*, *Grüfchen*.) A hollow place; a crypt.

Applied to the small round points at the end of the minute arteries of the cortical substance of the kidneys.

Also (G. *Schleimhöhle*), a follicle or follicular gland.

**C. syphilitica.** (*Syphilis*.) A term applied by Salisbury to certain fungoid spores, or the likeness thereof, which he found in the discharge of a primary chancre.

**Cryptæ.** Plural of *Crypta*.

Also, in Botany, the oil receptacles of a leaf.

**C. iridis.** (L. *iris*, the rainbow. G. *Grübchen des Iris*.) The small depressions that exist between the fibres on the anterior surface of the iris, and especially near its inner margin.

**C. Lieberkühnia'næ.** See *Lieberkühn*, *crypts of*.

**C. mucosæ.** (L. *mucus*.) A synonym of *Lieberkühn's follicles*.

**C. præputiales.** (L. *præputium*, the foreskin.) The same as the *Glandulæ præputiales*, or glands of Tyson.

**C. sebaceæ.** The *Sebaceous glands*.

**Cryptander.** (Κρυπτός, hidden; άνδρ, a man. F. *cryptandre*.) Proposed by Fries for vegetables which he called heteronemata, because they have organs to a certain point analogous to the sexual parts of phanerogamous plants.

**Cryptanth'corus.** (Κρυπτός; άνθος, blooming. F. *cryptanthère*.) Applied to plants of which the sexes are unknown.

**Crypthelminthes.** (Κρυπτός; Έλμινς, a worm.) A term applied to infusorial Entozoa.

**Crypthoristic.** (Κρυπτός; όρίζω, to determine.) Relating to the investigation of unseen things by the aid of knowledge of things which are seen.

**C. meth'od.** A name by Ampère and Pidon for a method of investigating the deeper and minuter actions of the body, such as the molecular phenomena of nutrition, by the help of what is known of the actions of visible things.

**Cryptidin.** C<sub>11</sub>H<sub>11</sub>N. A product of the action of potash on quinine.

**Cryptobiotic.** (Κρυπτός; βίωτικός, of life. F. *cryptobiotique*; G. *kryptobiotisch*.) Applied to bodies in which life is hidden or in a latent state, as the capacity of growth in a crystal.

**Cryptobiotous.** Same as *Cryptobiotic*.

**Cryptobothrium.** (Κρυπτός; βόθρος, a pit.) A sexually mature form of cestode worm.

**C. longicollis.** (L. *longus*, long; *collis*, neck.) A form found in the intestine of *Coregonus oxyrinchus*.

**Cryptobranchiate.** (Κρυπτός; βράγχια, the gills. F. *cryptobranchie*; G. *verborgenekieimig*.) Having the branchiæ hidden or obscure.

**Cryptocarpæ.** (Κρυπτός; καρπός, fruit.) A synonym of *Haplomorpha*, the true Medusæ.

Also, a division of *Floridæ*, including *Chondrus*, and other genera.

**Cryptocarpous.** (Κρυπτός; καρπός, fruit. F. *cryptocarpe*.) Having the fruit hidden.

**Cryptocarya.** (Κρυπτός; κάρυον, a nut.) A Genus of the Nat. Order *Lauraceæ*.

**C. moschata.** (Mod. L. *moschatus*, musky.) This plant produces Brazilian nutmegs.

**C. pretiosa**, Mart. (L. *pretiosus*, precious.) Furnishes an aromatic bark like cannella.

**Cryptocephalous.** (Κρυπτός; κεφαλή, the head. F. *cryptocephale*; G. *mit kaum sichtbaren Köpfen*.) Having the head not prominent.

**Cryptocephalus.** (Κρυπτός, hidden; κεφαλή, a head. F. *cryptocephale*.) Name given to a monster fetus, in which the head is very small and rudimentary, and does not project from the trunk.

**Cryptococcus.** (Κρυπτός; κόκκος, a kernel.) A name given by Kützing to certain low plants now ranked among the *Oscillatorie*; and to the vegetable growths accompanying or causing fermentation, now called *Saccharomyces*.

**C. cerevisiæ**, Kütz. (L. *cerevisia*, beer.) The *Saccharomyces cerevisiæ*.

**C. fermentum**, Kütz. (L. *fermentum*, leaven. F. *champignon du ferment*.) The *Saccharomyces cerevisiæ*.

**C. glutinis**, Fries. The *Saccharomyces glutinis*.

**C. guttula'tus.** (L. *guttula*, a little drop.) A form found in the intestinal canal, along with *Sarcina ventriculi*; it is probably the spore of *Saccharomyces albicans*.

**Cryptocoryneæ.** (Κρυπτός; κόρυς, a club.) A Tribe of the Nat. Order *Araceæ*, having stamens distinct from the pistils, which are several, whorled round the base of the spadix,

where they combine to form a many-celled ovary.

**Cryptocotyledoneæ.** (Κρυπτός; κοτυλιδιών, a cup-shaped cavity.) Agardh's name for *Endogens*.

**Cryptodidymus.** (Κρυπτός; δίδυμος, double. *F. cryptodidymus*.) Name for a fetus in factu, or one contained in another.

**Cryptogamæ.** (Κρυπτός; γάμος, nuptials.) The same as *Cryptogamia*.

**C. cellulares.** (L. *cella*, a cell.) Plants that, like mosses and Hepaticæ, present a very simple form of leaf, the nervures being few in number or indistinct or absent.

**C. vasculares.** (L. *vas*, a vessel.) Cryptogams the leaves of which possess fibro-vascular bundles forming nerves, as Lycopodiaceæ, Ferns, and Equisetaceæ.

**Cryptogamia.** (Κρυπτός; γάμος. *G. Verborgenblüthe*.) A Linnean class of plants containing those which are flowerless and possess neither stamens nor pistil; so called because their mode of fertilisation was unknown.

Also, one of the two great divisions of plants, the other being Phanerogamia, containing plants destitute of flowers, which have anthers and ovules. It is subdivided into those that are exclusively cellular, viz. Algæ, Funzi, Lichens, Hepaticæ, Mosses, and Characeæ; and those that are cellulose-vascular, viz. Equisetaceæ, Lycopodiaceæ, Ferns, and Rhizocarps.

**Cryptogamic.** Relating to, or resembling, the plants of the Order *Cryptogamia*.

Having no visible agents of fructification.

**Cryptogamy.** (Κρυπτός; γάμος.) Concealed fertilisation; the fructification of *Cryptogams*.

**Cryptogena.** (Κρυπτός; γίνωμαι, to be born.) Applied to a Class of the *Acephala* that live within the bodies of different animals.

**Cryptogenous.** Having the habits of the *Cryptogena*.

**Cryptolith.** (Κρυπτός; λίθος, a stone.) A calculus concealed in a gland or mucous follicle.

**Cryptology.** (Κρυπτός; λόγος, a discourse.) The doctrine of occult or hidden things.

**Cryptoneurous.** (Κρυπτός; νεύρον, a nerve. *F. cryptoneure*; *G. verborgennervig*.) Applied by Rudolphi to a series of animals the nervous system of which is mingled and confounded with the mass which constitutes them, as the zöophytes.

**Cryptophanic acid.** (Κρυπτός; φαίνω, to bring to light.)  $C_{10}H_{18}N_2O_{10}$ . An amorphous, gummy, transparent substance, soluble in water, found by Thudichum in healthy human urine. The existence of this body as a distinct chemical body is doubted.

**Cryptophthalmus.** (Κρυπτός; ὀφθαλμός, the eye.) A condition in which the eyelids are congenitally united so as to hide the globe, which is usually defective; it is a persistence of an early foetal condition.

**Cryptophyceæ.** (Κρυπτός; φύκος, seaweed.) A Family of Algæ, according to Duchartre, including Palmella and Nostoc.

**Cryptophyte.** (Κρυπτός; φυτόν, a plant. *F. cryptophyte*; *G. verborgene Pflanze*.) Name by Link for the Algæ, Lichens, and mushrooms, which are the most imperfect of plants, of which the organisation and mode of reproduction is less known, and which do not possess true roots.

**Crypto'pia.** (Κρυπτός; ὅπιον, poppy juice.)  $C_{21}H_{23}NO_5$ . An alkaloid obtained by Smith, in 1837, from opium. It occurs in minute prisms, sparingly soluble in water, ether, and cold alcohol, soluble in chloroform. Its salts are bitter, and become jelly-like in aqueous solution. Sulphuric acid colours it blue, which becomes orange-yellow on the addition of potassium nitrate. Its action is very similar to that of morphia, but it is more poisonous on account of its paralyzing action on the respiration and circulation.

**Cryptopy'ic.** (Κρυπτός; πύον, pus.) Applied to the bad condition of general health produced by an abscess whose presence cannot be demonstrated.

**Cryptorchidism.** The condition of a *Cryptorchis*.

**Cryptorchis.** (Κρύπτω, to conceal; ὄρχις, a testicle. *F. cryptorchis*, *cryptorchis*.) Term for one whose testicles have not descended into the scrotum, but remain in the abdomen; by some faultily spelled *Cryptorchis*.

**Cryptorchis mus.** (Κρυπτός; ὄρχις) The condition in which the testicles are retained in the abdomen.

**Cryptoristic.** Same as *Crypthoristic*.

**Cryptostegia.** (Κρυπτός; στήλη, a chamber.) A Genus of the Nat. Order *Asclepiadaceæ*.

**C. grandiflora.** (L. *grandis*, great; *flos*, a flower.) A case of poisoning by the leaves of this plant has been recorded. There was great depression of heart's action, coldness of surface, retching, pain in chest, feeling of suffocation, and death.

**Cryptostemonous.** (Κρυπτός; στήμον, a thread, a stamen.) Applied to a plant with concealed stamens.

**Cryptostomata.** (Κρυπτός, hidden; στόμα, a mouth.) Circular nuclei on the surface of some Algæ.

**Cryptous.** (Κρύπτω, to hide.) Applied to that which is hidden or concealed; not apparent.

**Cryptozo'ous.** (Κρυπτός; ζῳή, life. *F. cryptozoö*.) That which is imperceptibly alive or apparently dead.

**Cryptozygous.** (Κρυπτός; ζυγόν, a yoke.) A term applied to the skull when the dental arches cannot be seen, if it is observed from above, when placed upon a plane surface.

**Crysor'chis.** (Κρυπτός ὄρχις, from κρύπτω, to hide; ὄρχις, a testicle.) Term for concealment or retrocession of the testicles. Galen, in *Def. Med.*

**Crystal.** A solid body, bounded by plane surfaces, arranged so as to assume a definite geometrical form; these plane surfaces are called faces, their line of junction edges, and their inclination to each other angles.

**Cs, blood.** Hæmatin, hæmatoidin, and hæmin; especially hæmatoidin.

**C., complex.** A crystal the faces of which are dissimilar or unequal and occupy different relative positions.

**C., mineral.** The *Sal prunella*.

**Cs of Venus.** (L. *Venus*, the goddess of love, an old name of copper.) Crystallised neutral acetate of copper.

**C., simple.** A crystal the faces of which are similar and occupy similar relative positions.

**C. style.** Same as *Crystalline stylet*.

**Crystalli.** (L. plural of *crystallos*.) Old

name applied to the transparent vesicular eruption of pemphigus; also, to that of varicella; and also to an eruption said to be attendant on gonorrhoea.

**C. lunæ.** (L. *Luna*, a name of silver.) Nitrate of silver.

**Crystalliferous.** (L. *crystallus*; *fero*, to bear. F. *crystallifere*; G. *krystalltragend*.) Applied to a geode the interior of which is garnished with crystals.

**Crystalligenous vesicles.** (L. *vesica*, a bladder.) Term for spaces in plants containing crystals.

**Crystallin.** (L. *crystallus*, crystal. F. *crystalline*.) The original name given by Unverdorben, its discoverer, in 1826, to Anilin. Also, same as *Globulin*.

**Crystallina tunica.** (L. *crystallinus*, crystalline; *tunica*, a tunic, a skin.) The arachnoid membrane.

**Crystallinae.** Same as *Crystalli*.

**Crystalline.** (L. *crystallum*, a crystal. F. *crystallin*; G. *krystallinisch*.) Of, or belonging to, or of the nature or appearance of, crystals, or of the substance named crystal. See also *Crystallin*.

**C. humour.** The *C. lens*.

**C. lens.** (L. *lens*, a lentil. F. *crystallin*; G. *Linse*.) A transparent body of biconvex form in Mammals, but spherical in many of the lower Vertebrates, which lies in a depression of the vitreous immediately behind the iris, and is held in position by the suspensory ligament. It is enclosed in a capsule, from which it is separated in front, by a layer of cells. It varies in consistence from a thin jelly to cheese, and is softer at the periphery than at the centre. It is more convex in infancy than in age. Its diameter is about 8 mm., and its thickness about 4 mm. The radius of the anterior surface is about 10 mm., and of the posterior about 6 mm. Its index of refraction varies in the different layers, but is collectively assumed to be 1.4511. Its composition is, water 60 per cent., soluble albumin 35, insoluble albumin 2.5, fat, with traces of cholesterolin, 2, ashes 0.5. It is composed of fibres arranged in laminae; the fibres are six-sided prisms, with dentated and interlocking edges, which pass from one pole to the other in spherical lenses, but in man from the sides and extremities of two stalks of three branching radii situated at each pole, the radii diverging from each other at an angle of 120°, and those of the posterior pole being intermediate in position to those of the anterior pole. The lens is the principal agent by which rays of light passing through the pupil are brought to a focus on the retina. It plays an important part in the act of accommodation, becoming, by the action of the ciliary muscle, which it is believed relaxes the anterior capsule, thicker when near objects are inspected, and flatter when distant objects are looked at.

**C. sty'let.** (Στῆλος, a pillar.) A transparent, glass-like body, contained in a sac, which is embedded in the liver and opens into the right side of the stomach of some lamellibranchiate Mollusca; it is a transparent rod, rounded at one end, and often attached to a triangular process.

**Crystallino-capsulitis anterior.** A term applied by Wharton Jones to iritis attended with exudations into the area of the pupil, and subsequent vascularization of the lymph.

**Crystallion.** A name for the *Plantago psyllium*.

**Crystallisation.** (Same etymon.) The act or process whereby a crystal is formed.

Also, the substance resulting from the process of crystallising.

**C., alternatè.** A term applied to the successive crystallisations of several different salts in solution.

**C., water of.** A term applied to the water which is chemically combined with some salts, and which determines their crystalline form; these salts fall into powder when the water is driven off by heat or is lost by evaporation.

**Crystallitis.** (F. *crystallite*; G. *Krystallitis*.) Inflammation of the crystalline lens. See *Phacitis*.

**Crystallocatapiësis.** (Crystalline lens; *καταπίεσις*, a pressing down.) Same as *Crystallocatathesis*.

**Crystallocataracta.** (L. *crystallinus*, crystalline; *cataracta*, F. *crystallocataracte*, G. *Linsestaar*.) Crystalline cataract.

**Crystallocatathesis.** (Crystalline lens; *catathesis*, F. *crystallocatathèse*; G. *Niederdrückung der Krystalllinse*.) Depression of the crystalline lens.

**Crystallod.** (Κρύσταλλος.) Reichenbach's term for the od or odylie force which exists in crystals.

**Crystallogenesis.** Same as *Crystallogeny*.

**Crystallogeny.** (Κρύσταλλος, a crystal; *γενεα*, to be born. F. *crystallogénésie*; G. *Krystallbildung*.) The science which treats of the formation of crystals, or the manner of their production.

**Crystallographic.** Relating to *Crystallography*.

**C. axes.** (L. *axis*, an axle-tree.) The lines drawn between two similar faces or parts of a crystal which intersect in the centre of a crystal.

**C. systems.** See *Crystallography*, systems of.

**Crystallography.** (Κρύσταλλος, a crystal; *γραφία*, to write.) A description of the form, nature, and other properties, of crystals.

**C., systems of.** For the better understanding of the nature and structure of crystals they have been arranged in six systems: the *cubic* system, also called *monometric* or *regular*, in which the axes are three, equal, and at right angles to each other; the *quadratic*, square prismatic, *dimetric*, or *pyramidal* system, with three axes at right angles to each other, two of which are equal in length; the *hexagonal* or *rhombic* system, with three unequal axes, two at right angles to each other, and the third at right angles to the rest and at right angles to the plane of the other three; the *rhombic*, *trimetric*, or *right prismatic* system, with three axes of unequal lengths placed at right angles to each other; the *monoclinic*, *monosymmetric*, or *oblique prismatic* system, with three unequal axes, two at right angles to each other, and the third at right angles to one and inclined obliquely to the other; and the *triclinic*, *asymmetric*, *orthic*, or *doubly inclined prismatic* system, with three unequal axes all obliquely inclined to each other.

**Crystalloid.** (Κρύσταλλος, ice, crystal; *ειδός*, likeness.) Like ice, like a crystal. The crystalline lens of the eye.

**C. tunica.** (L. *tunica*, a coat.) The capsule of the crystalline lens.

**Crystalloiditis.** Inflammation of the *Crystalloid*.

**Crystalloids.** (Same etymon.) Graham's term for substances which have great diffusibility. See *Diffusion of liquids*.

**Crystallometry.** (Κρύσταλλος; μέτρον, a measure.) The measuring of the shape and angles of crystals.

**Crystallonom'ia.** (Κρύσταλλος, a crystal; νόμος, a law.) The science of crystals.

**Crystalloparatopia.** (*Crystalline* lens; παρά, from; τόπος, a place.) Displacement or dislocation of the crystalline lens.

**Crystalliphorous.** Same as *Crystalliferous*.

**Crystallotech'ny.** (Κρύσταλλος, a crystal; τέχνη, art.) The art or process of obtaining or preparing perfect crystals.

**Crystalluridrosis.** (*Crystallum*; uridrosis.) Urinous sweat with formation of crystals on the skin.

**Crystallus.** (Κρύσταλλος, a crystal.) A *Crystal*.

**C. minera'lis.** Mineral crystal, being nitrate of potash mixed with a little sulphate of potash, fused and cast in moulds.

**Crystalliworts.** The plants of the Nat. Order *Ricciaceæ*.

**Cte'dones.** (Κτηδών, fibre; from κτεís, a comb.) Old term applied to fibres and filaments of the tunics of the body.

**Cteis.** (Κτεís, a comb.) Old name for the pubes; also, for the fingers and for the ribs.

**Cten'es.** (Κτένες, plural of κτεís, a comb.) Old name for the incisor teeth. (Quincy.)

**Ctenobranch'ia.** (Κτεís, a comb; βραγχία, the gills.) A Section of the Order *Prosobranchiata*, Class *Gasteropoda*, having the gills, which are enclosed in a respiratory cavity on the dorsal surface, confined to one principal pectinated branch and a small rudimentary branch.

**Ctenoc'era.** (Κτεís; κέρα, a horn.) A synonym of *Aleyonaria*.

**Ctenocyst.** (Κτεís; κύστις, a bladder.) An ovate, or spherical, centrally-situated body in the Ctenophora, supposed to be a sense organ, perhaps of hearing.

**Ctenoid.** (Κτεís; εἶδος, likeness.) Comb-like.

**C. scales.** Applied to those scales of fishes which have a row of spines on the free border like the teeth of a comb.

**Ctenoid'ei.** (Same etymon.) A Division of Fishes including those which have *Ctenoid* scales.

**Cten'omere.** (Κτεís; μέρος, a part.) The part of the body of the animals of the Class *Ctenophora* lying between the ctenophores.

**Ctenophora.** (Κτεís; φορέω, to bear.) A Class of the Subkingdom *Culenterata*. Oceanic, transparent, gelatinous, generally spherical or cylindrical, more or less lobed organisms, having on their surface eight rows of natatory cilia, disposed in comb-like meridional bands; they possess a stomachal tube and a vascular system.

**Ctenophoral.** (Same etymon.) Relating to a *Ctenophore*.

**C. canals.** Canals, blind at both ends, running in the direction of the ctenophores, into which the tertiary radial canals open at right angles in the *Ctenophora*.

**Ctenophore.** (Κτεís; φορέω, to bear.) One of eight meridional bands between the poles of the animals constituting the Class *Ctenophora*, and consisting of ciliated or comb-like plates; they are the organs of locomotion.

**Ctenophoric.** (Same etymon.) Relating to a *Ctenophore*.

**C. canals.** Same as *Ctenophoral canals*.

**Ctenophoridæ.** (Κτεís; φορέω.) Same as *Ctenophora*.

**Ctenostom'ata.** (Κτεís; στόμα, a mouth.) A Suborder of the Order *Gymnoleontata*, Class *Polyzoa*, in which the terminal opening of the cell has no tip and is surrounded by a crown of hairs.

**Ctesiphont'is malag'ma.** (Κτησιφών, the Metropolis of Assyria; μάλαγμα a poultice.) A plaster described by Celsus.

**Cuape'ba.** Same as *Caapeba*.

**Cuateron.** The child of a white father and a mulatto mother.

**Cu'bal sini.** A synonym of *Cubebs*.

**Cuba'ris.** An old name for the wood-louse.

**Cuba'tio.** (L. *cubatio*, from *cubo*, to lie down.) The position of lying down.

**Cube.** (L. *cubus*; from κύβος, a solid square. F. *cube*; I. *cubo*; S. *cubo*; G. *Würfel*.) A solid square, six-sided, equal-sided, and equal-angled.

**Cubeb.** Same as *Cubeba*.

**C. pepper.** Same as *Cubeba*.

**Cube'ba.** B. Ph., U.S. Ph. (Arab. *kabābat*; Pers. *kabābah*. F. *cubibes*, *poivre à queue*, *poivrier pédicellé*; G. *Kubeben*, *Schwanzpfeffer*.) Cubebs, tail pepper. The dried unripe fruit of the *Cubeba officinalis*. Cultivated in Java. Cubebs is of the size of black pepper, brownish to blackish grey, globular, reticulatedly wrinkled, rather pointed, with a stalk .35 inch long, and having a strong spicy odour and a warm camphoraceous taste. Cubebs contains a volatile and fixed oil, resin, cubebin, and cubebic acid. It is used in inflammation of the urinary passages, especially gonorrhœa, in vaginal discharges, in some throat affections, in chronic bronchitis, and in nervous disorders, such as headache and vertigo. Dose, 20 to 120 grains. It has been recommended to be smoked as a cigarette for the cure of coryza.

Also, a Genus of the Nat. Order *Piperaceæ*.

**C. cani'na.** Miq. (L. *caninus*, belonging to a dog.) A species having a smaller fruit than the official species, with a narrower stalk.

**C. Clusii.** Miq. Hab. Western Africa. Said to contain piperin and not cubebin.

**C. cras'sipes.** Miq. (L. *crassus*, thick; pes, a foot.) A species having the same properties as *C. officinalis*. Perhaps the same as *Piper anisatum*.

**C. lo'wong.** Miq. Fruit similar to that of *C. officinalis*.

**C. officina'lis.** Miq. (L. *officina*, a shop.) The species supplying the cubebs of the B. Ph.

**C. Wallichii.** Miq. Fruit similar to that of *C. officinalis*.

**Cube'bæ.** G. Ph. Same as *Cubeba*, B. Ph.

**C. condi'tæ.** (L. *conditus*, part. of *condio*, to make savoury. G. *abzuckerte Cubeben*.) Cubebs encased in sugar as a conuit.

**C. fruc'tus.** Belg. Ph. (L. *fructus*, fruit.) Same as *Cubeba*.

**C. tos'tæ.** (L. *tostus*, part. of *torreo*, to roast. G. *geröstete Cubeben*.) Cubebs roasted

# CUBEBENE—CUBITOPRÆPHALANGEAL MUSCLE.

like coffee. Used internally, and in infusion, 10 or 15 parts to 100 of water, as an injection.

**Cubebene.**  $C_{10}H_{16}$ , or  $C_{15}H_{24}$ , or  $C_{30}H_{48}$ . The chief constituent of oil of cubeb. It is levorotatory and isomeric with terebinthene.

**Cubebic acid.** (G. *Cubebensäure*.)  $C_{11}H_{16}O_4$ . An amorphous yellowish substance contained in cubeb, soluble in ether and chloroform. When cubeb is administered the cubebic acid is found in the urine in the form of a salt.

**Cubebin.**  $C_{10}H_{10}O_3$  or  $C_{30}H_{30}O_9$ . A crystallisable, indifferent substance, of which about 2 per cent. is contained in cubeb. It forms fine needles or silky laminae. It melts at  $125^{\circ}$  C. ( $257^{\circ}$  F.) It is insoluble in water, soluble in alcohol and ether. Its physiological action is unknown; probably it is inactive.

**Cubebis.** An old name for an aromatic plant of the genus *Fagara*.

**Cubebis.** The unripe dried fruit of the *Cubeba officinalis*. See *Cubeba*.

**C. African.** The fruit of *Cubeba elusii*.

**C. camphor.**  $C_{30}H_{32}O_4$  or  $C_{15}H_{20}O_2$ . A hydrate of cubebene, fusing below  $70^{\circ}$  C. ( $158^{\circ}$  F.)

**C. Guinea.** The fruit of *Piper Afzeli*.

**C., oil of.** (G. *Cubebenöl*.) See *Oleum cubeba*.

**C. resin.** A resinous substance found in cubeb; slightly soluble in ether and chloroform.

**Cubie.** (L. *cubicus*, cubical.) Having the form of a cube.

**C. nitre.** A synonym of *Sodium nitrate*.

**C. space.** This term is commonly applied to the space required for the respiration of a healthy adult. It has been found by experiment that about 3000 cubic feet must be supplied per hour in order to prevent the air from having a perceptible odour. If a man be confined in a room having a capacity of 1000 cubic feet, the air must be changed three times per hour, and so on.

**C. system.** See under *Crystallography*.

**Cubiform.** (L. *cubus*, a cube; *forma*, likeness.) Having the likeness, form, or shape of a cube.

**C. bone.** Applied to a bone of the foot, otherwise termed the *Cuboid bone*.

**Cubilose.** (L. *cubile*, a nest.) The chief constituent of the edible nests of the *Collocaria esculenta*, the edible nest swallow. According to Payen it is a kind of mucus excreted by the birds during the pairing season, and does not contain the immediate principles of the marine Algae.

**Cubit.** (L. *cubitus*, the elbow; from *cubito*, to be down.) The ulna.

Also, the elbow.

Also, the forearm.

Also, a measure of about twenty inches, less or more according to the country, in length; being the length of a man's forearm from the elbow to the tip of the middle finger.

**C., top of.** The olecranon.

**Cubitæus.** (L. *cubitus*.) Pertaining to the cubit or forearm.

**C. externus.** (L. *externus*, outward.) The *Extensor carpi ulnaris* muscle.

**C. internus.** (L. *internus*, inner.) The *Flexor carpi ulnaris* muscle.

**Cubital.** (L. *cubitus*.) Of, or belonging to, the forearm or ulna.

**C. artery.** (F. *artère cubitale*; G. *Ellenbogenpulsader*.) Name for the ulnar artery.

**C. bone.** The cuneiform bone of the carpus, from its attachment to the ulna or cubit.

**C. nerve.** (F. *nerf cubital*; G. *Ellenbogenm.*.) Name for the ulnar nerve.

**C. vein.** Same as *Ulnar vein*.

Also, the hinder nervure of the wing of an insect.

**Cubitalē.** A name given to the cuneiform bone of the carpus.

**Cubitalis.** Same as *Cubital*.

**C. anterior.** (L. *anterior*, in front.) The *Flexor carpi ulnaris* muscle.

**C. externus.** (L. *externus*, outward.) The *Extensor carpi ulnaris* muscle.

**C. gracilis.** (L. *gracilis*, slender. F. *cubital grêle*.) The *Palmaris longus* muscle.

**C. internus.** (L. *internus*, inward.) The *Flexor carpi ulnaris* muscle.

**C. musculus.** (F. *muscle cubital*; G. *Ellenbogenmuskel*.) A name for the anconeus muscle.

**C. posterior.** (L. *posterior*, hinder.) The *Extensor carpi ulnaris* muscle.

**C. Riola'ni.** (Riolan.) The anconeus muscle.

**Cubitocarpal.** (L. *cubitus*, the elbow; *carpus*, the wrist.) Relating to the ulna and the wrist.

**C. muscle.** The *Flexor carpi ulnaris* muscle.

**Cubitocutaneous.** (L. *cubitus*; *cutis*, the skin.) Relating to the ulna and the skin.

**C. nerve.** The internal cutaneous nerve of the arm.

**Cubitodigital.** (L. *cubitus*; *digitus*, a finger.) Relating to the forearm and fingers.

**C. neuralgia.** A form of neuralgia which proceeds from the elbow by the inner condyle of the humerus, and shoots into the back and inner border of the hand, along the course of the ulnar nerve.

**Cubitometacarpal.** (L. *cubitus*; *metacarpus*.) Relating to the ulna and the metacarpus.

**C. muscle, oblique.** A muscle in the horse and like animals which arises from the middle and external part of the ulna, and is inserted into the head of the splint bone of that side. It is the analogue of the adductor pollicis manus of man.

**Cubiton.** (Κόβιτον, the elbow.) The ulna; also the elbow.

**Cubitopalmar.** (L. *cubitus*, the forearm; *palma*, the palm of the hand.) Relating to the ulna and the palm.

**C. artery.** The part of the ulnar artery which is distributed to the palm of the hand.

**Cubitophalangean.** (L. *cubitus*; *phalanx*.) The flexor profundus digitorum muscle.

**C. muscle.** A name given to a flexor muscle situated in the posterior region of the forearm of the horse and like animals; it arises from the inner condyle of the humerus, the posterior border of the olecranon, and the posterior and middle surface of the ulna, and is inserted into the circular border of the lower surface of the bone of the foot.

**Cubitopræphalangeal muscle.** (L. *cubitus*; *præ*, in front of; *phalanx*.) An extensor muscle in the horse, which arises from

the extremity of the ulna, and is inserted into the front of the posterior.

**Cu'bito-ra'dial.** (*L. cubitus*; *radius*, the bone of that name.) Relating to the ulna and the radius.

**C. articula'tions.** See *Radio-ulnar articulations*.

**C. mus'cle.** The pronator quadratus muscle.

**Cubitosuprametacarp'al mus'cle.** (*L. cubitus*; *supra*, above; *metacarpus*.) The extensor carpi ulnaris muscle.

**C. of thumb.** The extensor ossis metacarpi pollicis muscle.

**Cubitosuprapal'mar.** (*L. cubitus*; *supra*, above; *palm*, the palm.) Belonging to the ulna and to the back of the hand.

**C. ar'tery.** The posterior ulnar carpal artery.

**Cubitosupraphalan'geal mus'cle.** (*L. cubitus*; *supra*, above; *phalanx*.) The extensor primi internodii pollicis muscle.

**Cubitosupraphalanget'tian mus'cle.** (Same etymon.) The extensor secundi internodii pollicis and extensor indicis muscles combined.

**Cubitus.** (*L. cubitus*, the elbow; from *cubo*, to lie down; because the ancients leaned on that part when lying along at their meals.) The forearm, extending between the elbow and the wrist, and consisting of the radius and ulna and their coverings.

Also, a name of the ulna.

Also, a measure; see *Cubit*.

**C. cos'tæ.** (*L. costa*, a rib.) The angle of a rib.

**C. supi'nus.** (*L. cubitus*, a lying down; *supinus*, backward.) The act or condition of lying on the back.

**Cu'bo-cu'neiform.** Relating to the cuboid and the cuneiform bones.

**C. articula'tion.** Same as *Cuneocuboid articulation*.

**C. lig'a'ments.** Same as *Cuneocuboid ligaments*.

**Cuboid.** (*Kúβos*, a solid square; *εἶδος*, likeness. *F. cuboide*; *I. cuboide*; *G. würfelförmig*.) Having the shape of a cube or solid square.

**C. bone.** (*F. os cuboide*; *G. Würfelstein*.) A wedge-shaped bone with the edge, formed by the dorsal and plantar faces, on the outer border of the foot. The dorsal surface is rough and flat; the plantar surface is crossed obliquely from without to within by the continuation of the groove for the tendon of the peroneus longus, which marks the outer border, having behind it a crest for the calcaneo-cuboid ligaments; the posterior face articulates with the calcaneum; the anterior face is divided by a vertical crest into two facets, the internal quadrangular one for the fourth metatarsal bone, and an external, larger, and triangular one for the fifth metatarsal bone; the internal face affords above and in the middle a smooth surface for the external cuneiform bone, and sometimes behind it a smaller articulating surface for the scaphoid. It is the homologue of the unciform bone of the carpus.

**C. bone, disloca'tion of.** This bone has been displaced upwards from violence.

**Cuboïdes.** Same as *Cuboid*.

**Cucatin.** The *Xanthorylon hermaphroditum*.

**Cuccum.** See *Coccus*.

**Cucha'ba.** A kind of bread used by the Mono Indians, said to be made of worms or larvae dried, and mixed with acorns, berries, grass, seeds, and other articles gathered in the mountains. (Dunglison.)

**Cuchunchullo.** Same as *Cuchunchilli*.

**Cucif'era.** (*L. cuc*, a tree like a palm; *fero*, to bear.) A Genus of the Nat. Order *Palmaræ*.

**C. theba'ica,** Delile. The *Hyphane thebaica*.

**Cuck'old.** The *Arctium lappa*. (Dunglison.)

**Cuck'oo.** (*F. coucou*; from *L. cuculus*, from the cry of the bird. *L. cuculo*; *S. cucullo*, *G. Kukuk*.) The *Cuculus canorus*. A decoction of the feces was used as a preventive of hydrophobia; and the ashes of the bird were given in stone of the bladder, epilepsy, and pain in the stomach.

**C. bread.** The *Oralis acetosella*; because it flowers at cuckoo time.

**C. bud.** The *Ranunculus bulbosus*.

**C. flower.** The *Cardamine pratensis*, because it flowers when the cuckoo sings.

Also, formerly the name of *Lychnis flos-cuculi*.

**C. gil'liflower.** The *Lychnis flos-cuculi*.

**C.'s meat.** Same as *C.'s bread*.

**C. pint.** (*Sax. cucu*, lively; *pintle*, the male organ) The *Arun maculatum*, or wake robin. So called, according to Prior, who gives the above derivation, because of the shape of the spadix and the supposed aphrodisiac virtues of the plant.

**C. sor'rel.** The *Oralis acetosella*; because it flowers at cuckoo time.

**Cucu'balus.** A Genus of the Nat. Order *Caryophyllaceæ*.

**C. baccif'erus,** Linn. (*L. bacca*, a berry; *fero*, to bear. *F. cornillet buccifere*.) The systematic name of the berry-bearing chickweed. Used as an emollient poultice.

**C. be'hen,** Linn. The spatling poppy, *Silene inflata*. Formerly used as cordial and alexipharmic.

**Cucula'tum ma'jus.** Old name for brandy, or spirit of wine. (Rudand.)

**Cucullæ.** (*L. cucullus*, a hood.) A synonym of the *Torbinal bones*.

**Cuculla'nus.** (*L. cucullus*, a covering. *G. Kappencurm*.) A Genus of the Family *Strongylidæ*, Order *Nematoda*, Class *Nematelmintha*. Fish parasites, with a truncated oral end and a pointed tail, which in the males of some species is winged. The embryo worms have a boring style, by means of which they perforate the carapace of some of the Entomostraca, and gain the perivisceral cavity, where they remain coiled up until their host is swallowed by a fish, in which they attain sexual maturity.

**C. Dumeril'ii.** Found in the intestine of *Emys picta*.

**C. ele'gans,** Zed. (*L. elegans*, nice.) Found in the intestines, stomach, pyloric appendages, and mesentery, as well as in the embryonic state in the vitreous humour of the eye in *Perca fluviatilis*.

**C. foveola'tus.** (*L. fovea*, a small pit.) Found in the plaice, *Platessa vulgaris*.

**C. globo'sus.** (*L. globosus*, spherical.) Found in the intestines and ovary of *Trutta furo*.

# CUCULLARIS—CUCURBITA.

**C. hy'dri.** Found in the intestine of *Hydrophis Russellii*.

**C. læviconchus.** (L. *lævis*, smooth; *concha*, shell.) Found in the stomach of *Synodontis schell*.

**C. melanocephalus.** (Μέλαις, black; κεφαλή, head.) Found in the intestines of *Scorpaenaruchel*.

**C. microcephalus.** (Μικρός, small; κεφαλή, head.) Found in the intestine of *Emys guttata*, *E. reticulata*, *E. latraria*, and *Chelydra serpentina*.

**C. papilliferus.** (L. *papilla*; *fero*, to bear.) Found in the stomach of *Acipenser sturio*.

**C. per'cae.** (L. *perca*, the perch.) Found in *S. bustes norvegicus*.

**C. roseus.** (L. *roseus*, rosy.) Found in the intestine of *Tistudo*.

**C. tinea.** (L. *tinea*, the tench.) Found in the intestine of the tench.

**Cucullaris.** (L. *cucullus*, a hood. F. *cucullare*, *cuculliform*; G. *mönchskappenförmig*.) Like a hood.

A synonym (G. *Mönchskappenmuskel*) of the *Trapézium muscle*.

**Cuculla'ta.** (L. *cucullus*.) A name for the *Sanicula europæa*, or for the *Pinguicula vulgaris*, from the shape of the flowers.

**Cucullate.** (L. *cucullus*. F. *cuculliforme*; G. *kaputzenförmig*.) Hooded; shaped or formed like a hood or hollow cone. Applied to leaves and other structures.

**Cuculliferous.** (L. *cucullus*; *fero*, to bear. F. *cucullifère*; G. *kaputzentragend*.) Bearing hoods, as certain plants or flowers.

**Cucullifolious.** (L. *cucullus*; *folium*, a leaf. F. *cucullifoliè*; G. *kaputzenblättrig*.) Having leaves like a hood.

**Cuculliform.** (L. *cucullus*; *forma*, shape. F. *cuculliform*; G. *kaputzenförmig*.) Hood-shaped.

**Cucullus.** (L. *cucullus*.) A hood; also, an old name for a quilted cap stuffed with spices, made for the head in nervous disorders, otherwise termed *Cucupha*. (Quincy.)

Also, a synonym of the *Infundibulum* of the *cochlea*.

**Cuculus.** (L. *cuculus*.) A Genus of the Family *Cuculidae*, Order *Scansores*, Class *Aves*.

Also, a synonym of the *Coccyz*, from its resemblance to a cuckoo's bill.

Also, a synonym of *Whooping-cough*.  
Also, a name of the *Cardamine pratensis*.

**C. canorus**, Linn. (L. *canorus*, melodious.) The cuckoo.

**Cucumber.** (F. *concombre*; from L. *cucumis*, a cucumber. L. *citrinulo*; S. *pepino*; G. *Gurke*.) The name of the species of *Cucumis*; especially the fruit of *C. sativus*.

**C., asses'.** The *Echbium officinarum*.

**C., bitter.** (F. *cologuinte*; G. *Koloquinte*, *Koloquinten-gurke*.) The colocynth, *Citrullus colocynthis*.

**C., com'mon.** (F. *concombre ordinaire*.) The *Cucumis sativus*.

**C., creeping.** The *Melothria pendula*, or American bryony.

**C., field.** The *Cucumis utilisissimus*.

**C., Indian.** The *Melocoe virginica*.

**C., spirting.** The *Echbium officinarum*, from the sudden opening of the fruit and the sudden expulsion of some of its contents.

**C., squirt'ing.** Same as *C. spirting*.

**C., star, one-seed'ed.** The *Sycios angulatus*.

**C. tree.** The *Magnolia Frazeri* or *auriculata* and the *M. acuminata*. Trees growing in the United States. The bitter and somewhat aromatic infusion of the green cones is extensively used in intermittent fevers and in rheumatic affections.

**C., wild.** The *Echbium officinarum*.

**Cucumer.** The same as *Cucumis*.

**Cucumiform.** (L. *cucumis*; *forma*, shape.) In shape like a cucumber.

**Cucumis.** (L. *cucumis*.) A Genus of the Nat. Order *Cucurbitaceæ*.

**C. agrostis.** (L. *agrostis*, from *ager*, a field.) The *Echbium officinarum*.

**C. anguria.** The *Concombre arada* of Brazil. A prickly fruit of the size of a nut.

**C. asininus**, C. Bauh. (L. *asinus*, an ass.) The *Echbium officinarum*.

**C. cha'te**, Linn. Edible fruit, with a pleasant refreshing juice.

**C. citrullus**, Seringe. The *Cucurbita citrullus*.

**C. colocyn'this**, Linn. The *Citrullus colocynthis*.

**C. echina'tus.** (L. *echinatus*, prickly.) The *C. anguria*.

**C. Hardwick'ii**, Royle. Hill colocynth. This plant has oval oblong bitter fruits, which are purgative.

**C. hortensis.** (L. *hortensis*, belonging to a garden.) The *C. sativus*.

**C. me'lo**, Linn. (L. *melo*, an apple-shaped melon. F. *melon*; G. *Melone*.) The melon plant.

**C. propheta'rum**, Linn. (L. *propheta*, a foreteller.) Fruit bitter and purgative.

**C. pseudo-colocyn'this**, Royle. (Πευδής, false.) The same as *C. trigonus*, Roxb.

**C. sativus**, Linn. (L. *sativus*, that which is planted.) The cucumber plant. It is cooling and aperient.

**C. sylves'tris.** The *Echbium officinarum*.

**C. trigo'nus**, Roxb. (L. *trigonus*, three-cornered.) A plant of the plains of Northern India, with a spherical or elongated, sometimes obscurely trigonous, bitter fruit, which resembles, and has been used instead of, colocynth.

**C. utilis'simus**, Roxb. (L. *utilis*, useful.) Field cucumber. The fruit is esculent; the seeds yield a meal which is used as food, and an oil used both for food and for lighting; the toasted seeds are used as a diuretic in stranguary from gravel.

**Cucupha.** (F. *cucuphe*; G. *Kräuterhaube*.) Old term, the same as *Cucullus*, or a cap with spices quilted into it, and worn for certain nervous disorders of the head. (Quincy.)

**Cucurbit.** (L. *cucurbita*, a gourd. F. *cucurbite*; L. *cucurbita*; G. *Destillirkalben*.) A gourd-shaped vessel used in distillation, being the part of the alembic containing the substance to be distilled, and which is introduced into the furnace.

Also, a cupping-glass, so called from its shape.

**Cucur'bita.** (L. *cucurbita*, a gourd; reduplicated form akin to *cavus*, bent.) A Genus of the Nat. Order *Cucurbitaceæ*.

Also, same as *Cucurbit*.

**C. anguria**, Duch. The *C. citrullus*.

**C. cathartica.** (Καθαίρω, to purge.) The colocynth, *Citrullus colocynthis*.

**C. citrullus**, Linn. (Dim. of *L. citrulus*, a lemon. *F. pastique*, melon d'eau; *I. coconero*; *S. sandia*; *G. Wassermelone*.) The water melon. A pleasant and refreshing fruit; the seeds have been used in strangury.

**C. cruenta**. See *Cucurbitula cruenta*.

**C. lævis**. (*L. lævis*, light.) The cupping glass used without the scarificator; dry cupping.

**C. lagenaria**, Linn. The *Lagenaria vulgaris*.

**C. leucantha**. (*Λευκός*, white; *ἄθος*, flower.) The *Lagenaria vulgaris*.

**C. maxima**, Duch. (*L. maximus*, greatest. *F. potiron*.) Seeds used to make an emollient drink. They are said to be useful for the expulsion of *Tænia*, in doses of four to eight drachms.

**C. melopepo**, Linn. (*Μελοπέπων*, an apple-shaped melon. *F. patisson*, *bonnet d'éclair*.) The squash. Fruit used as food.

**C. ovifera**, Linn. (*L. ovum*, an egg; *fero*, to bear. *F. courge à la moelle*; *G. Persischer Kürbis*.) The vegetable marrow. Used as food.

**C. pep'o**, Linn. (*Πέπων*, a kind of gourd. *F. citronille*, *gourmelon*; *I. zucca*; *S. calabaza*; *G. Kürbiss*.) The common pumpkin, white gourd. Fruit esculent; seeds cooling, and said to be anthelmintic; a decoction of the leaves is used as a purgative enema, and as an application to burns and inflamed surfaces. See *Pepo*, U.S. Ph.

**C. pinnatifida**. (*L. pinna*, a feather; *fido*, to cleave.) The *C. citrullus*.

**C. sic'ca**. See *Cucurbitula sicca*.

**C. ventosa**. (*L. ventosus*, windy.) A cupping glass.

**Cucurbitaceæ**. (*L. cucurbita*.) A Nat. Order of epigynous calycoidral Exogens, or a Family of the Order *Campanulinæ*, having monopetalous flowers, inferior, pulpy fruit, parietal placentæ, and an exalbuminous embryo.

**Cucurbitaceus**. (*L. cucurbita*, a gourd. *F. cucurbitace*; *G. kürbissartig*.) Having an arrangement of parts as in the Genus *Cucurbita*.

Also, like a gourd.

**Cucurbitain**. (*L. cucurbita*, a gourd.) A name given by the French to the separated segment or proglottis of a tapeworm, from its likeness to a pumpkin seed.

**Cucurbitales**. The cucumber alliance. An alliance of diclinous Exogens, having monodichlamydeous flowers, inferior fruit, parietal placentæ, and embryo without a trace of albumen. (Lindley.)

**Cucurbitatio**. (*L. cucurbita*, a cupping-glass.) The operation of cupping.

**Cucurbitææ**. A Tribe of the Nat. Order *Cucurbitaceæ*, having the anthers sinuous, the placentæ adherent on the axis of the fruit, and the seeds numerous.

**Cucurbitin**. A doubtful alkaloid of the seeds of the pumpkin, *Cucurbita pepo*.

Also, same as *Cucurbitain*.

**Cucurbitinus**. (*L. cucurbita*, a gourd.) Of, or belonging to, a gourd. Applied to the separate joints, lumbrici cucurbitini, of the *Tænia solium*, as if they were distinct worms; from their resemblance to gourd seeds in shape.

**Cucurbitive**. (*L. cucurbita*.) Like a melon seed.

**Cucurbitula**. (*L. dim. of cucurbita*, a gourd; from its supposed resemblance. *F. corni-*

*cule*, ventouse; *G. Schröpfkopf*.) A cupping-glass.

**C. cruenta**. (*L. cruentus*, bloody.) A cupping-glass used with a scarificator.

**C. cum ferro**. (*L. cum*, with; *ferum*, iron.) A cupping-glass used with scarification.

**C. sic'ca**. (*L. siccus*, dry.) A cupping-glass used without scarification; a dry cupping-glass.

**Cud**. (*Sax. cud*, from *cēdēan*, to chew. *F. bol alimentaire*.) The regurgitated food of oxen and other ruminants brought up for second mastication.

**Cudbear**. (After Dr. Cuthbert Gordon, who first brought it into use as a dye. *F. orseille de terre*; *G. Persia*.) A purplish-red powder obtained from the *Lecanora tartarea*, and the other lichens which yield litmus. It is made by macerating the lichens in an ammoniacal liquor in a covered wooden vessel, then drying and powdering them. Used sometimes for staining test papers like litmus.

**Cuddy**. The coal fish, *Gadus carbonarius*.

**Cudo'wa**. Germany; a village in Silesia. Here are iron springs, with some Glauber's salt, sodium, magnesium and calcium carbonate, and sulphate; and a small quantity of arseniate of iron. Used as a tonic, resolvent, and analeptic in chronic liver and urinary affections, and in depressed states of the body generally.

**Cudweed**. (Perhaps a corruption of *Cotton-weed*.) The plants of the Genus *Gnaphalium*.

Also, the *Filago germanica*, and the *Antennaria plantaginifolia*.

**C., gold'en**. The *Tonacetum amumum*.

**C., High'land**. The *Gnaphalium sylvaticum*.

**C., Jer'sey**. The *Gnaphalium luteoalbum*.

**C., least**. The *Filago minima*.

**Cue'ma**. Same as *Cy'ma*.

**Cuer'vo**. Spain; near Medina Sidonia. A mineral water containing sulphate of iron.

**Cuichunchilli**. The Peruvian name of the *Tonidium purpureum*, a purgative and emetic plant, used in the cure of elephantiasis tuberculata.

**Cuirass'**. (*F. cuirass*, from *cuir*, leather, of which it was made.) A buckler.

**C. can'cer**. See *Cancer en cuirass*.

**Cuissinier's syrup**. A syrup of sarsaparilla containing guaiacum and other substances, like *Syrupus sarsæ compositus*.

**Cujetè**. See *Crescentia cajele*.

**Cujumary beans**. The produce of the *Ajodtron eujumary*.

**Culbic'io**. Ancient term for an affection similar to strangury; or, rather, a heat of urine.

**Cul'bute**. (*F. culuter*, to turn head over heels; from *cul*, bottom; *bouter*, to place. *G. Burzalbawon*, *Sturzalbawon*.) Ancient term for the change of position of the infant in the later periods of pregnancy, from that of having the head above, the breech below, the belly in front; to having the head where the breech was before, the breech above and the back in front, which change is produced by bending its head forwards, whether gradually or all at once. The idea is erroneous.

**Cul'cita**. (*L. culcita*, a pillow.) A pillow.

**C. salina.** (L. *sal*, salt.) A pillow filled with salt, supposed to be useful in croup.

**Cul de sac.** (F. *cul*, the bottom; from L. *culus*, the fundament; F. *de*, of; *sac*, a bag.) A blind alley. A term employed to express a membranous or other cavity that is closed at one end.

**Culeus.** (L. *culeus*, a leather bag.) Name of a measure used by the Romans, containing twenty amphore.

Also, a synonym of *Scrotum*.

The term has also been applied to the vagina, and to the pericardium.

**Culex.** (L. *culex*, a gnat. F. *cousin*; G. *Floh*.) A Genus of the Suborder *Nonocera*, Order *Diptera*, constituting the gnat family.

Also, a name of the *Plantago psyllium*.

**C. annulatus.** Fabr. (L. *annulatus*, ringed. F. *cousin annelé*.) A species with transverse white spots, having a more painful bite than the common gnat.

**C. auxifer.** (L. *aurifer*, bringing anxiety.) One of the mosquitoes.

**C. ferrox.** Wiedm. (L. *ferox*, savage.) The mosquito. There are several other species called by this name and equally noxious, such as *C. mosquito*.

**C. pipiens.** Linn. (L. *pipio*, to chirp. F. *cousin commun*; G. *Mücke*, *Stechmücke*, *Gelse*.) The common gnat.

**C. pulicaris.** Linn. (L. *pulex*, a flea. F. *cousin-puce*.) A large species which produces much irritation.

**Culgask.** Scotland; near Crieff. Indifferent waters, containing much carbonic acid.

**Culiciform.** (L. *culex*; *forma*, shape.) Like a gnat.

**Culicium mor'sus.** (L. *culex*, a gnat; *mor'sus*, a bite.) An old term applied to gnat bites and to flea bites, as well as to petechiae.

**Culiflos.** (L. *culus*, the posterior; *flos*, a flower.) The *Cardamine pratensis*.

**Culilaban.** Same as *Culilawan*.

**Culilawan.** Same as *Culilawan bark*.

**C. bark.** A bark, tasting of cloves, obtained from *Cinnamomum culilawan*.

**Culina sativa Plin'ii.** See *Plinii culina sativa*.

**Cullen, William.** A Scotch physician born at Hamilton, in Lanarkshire, in 1710 or in 1712; died in 1790. His classification of disease or nosology had great influence. He divided diseases into three great classes: pyrexia, nervous diseases, and cachexia.

**Cullion.** (Old F. *conillon*, from L. *colus*, from L. *colus*, a testicle.) A name of the plants of the Genus *Orchis*, from the shape of their roots.

**Culm.** (L. *culmus*, a stalk; akin to *culmen*. F. *channe*; G. *Halm*.) A reed or straw; the proper stem or trunk of grasses, rushes, and the like.

**Culmen.** (L. *culmen*, that which is high, a mountain-top, a column.) Same as *Culm*.

Also, the superior vermiform process of the cerebellum.

**C. cranii.** The thick ridge of the tegmen cranii in certain fish, as in the salmon.

**Culmicolous.** (L. *culmus*; *colo*, to inhabit.) Living on straw or the stems of graminaceous plants.

**Culmiferous.** (L. *culmus*, straw; *fero*, to bear. F. *culmifère*; G. *halmitragend*.) Having or bearing straws, or stalks like those of straw.

**Culmigenous.** (L. *culmus*, a stalk;

*gigno*, to produce. F. *culmigène*; G. *kulmher-vorgebracht*.) Produced or growing on straw.

**Culminate.** (L. *culmen*, a mountain top.) To attain the highest point.

**Culmination.** (L. *culmen*, a mountain top. F. *culmination*; I. *culminazione*; S. *culminacion*; G. *Gipfelung*.) The attaining of the highest point, as of a disease.

**Culmus.** Same as *Culm*.

**Cul'rage.** (F. *cul*, the bottom; from L. *culus*, the posterior; F. *rage*, madness.) The *Polygonum hydropiper*, from its operation and effect when it is used in those parts. (Gerarde.)

**Cultellus.** (L. dim. of *cutter*, a knife.) A small knife.

Also, the mandible of dipterous insects.

**C. an'ceps.** (L. *anceps*, two-headed.) A double-edged knife.

**C. uncus.** (L. *uncus*, hooked.) A cutting crochet.

**Culter.** (L. *cutter*, a ploughshare, a butcher's knife; from Sans. *krit*, to split.) A name for the thin lobe of the liver (Gr. *παχυντα*), applied by Theoph. Protospatharius, de H. C. F. ii, 13, 4, from its fancied resemblance.

Also, old name for a knife with which to dissect solid and soft bodies, that is, flesh and membranes.

**C. curvus.** (L. *curvus*, bent.) A curved knife or bistoury.

**C. falcat'us.** (L. *falcat'us*, scythe-shaped.) A curved knife.

**C. lenticula'ris.** See *Knife*, *lenticular*.

**C. rect'us.** (L. *rectus*, straight.) A straight knife.

**C. tonsor'ius.** (L. *tonsorius*, belonging to shaving.) A razor.

**Cultrate.** (L. *cutter*.) Shaped like a broad knife-blade.

**Cultriform.** (L. *cutter*; *forma*, shape. G. *messerförmig*.) The same as *Cultrate*.

**Cultri'strate.** (L. *cutter*; *rostrum*, a beak. F. *cultristré*.) Coulter-beaked. Having the beak thick, strong, and of considerable length, as in the cranes and storks.

**Cultriros'tres.** (Same etymon.) The birds whose beaks are *Cultriros'trate*.

**Cultrivorous.** (L. *cutter*; *voro*, to devour.) A term applied to those who swallow knives with apparent impunity.

**Culus.** (L. *culus*, the fundament.) Old name for the anus.

**Cul'ver's phys'ic.** The *Leptandra virginica*.

**C.'s root.** The *Leptandra virginica*, and *L. purpurea*.

**Culverwort.** (Sax. *culfer*, a pigeon; *wyrt*, a herb.) The columbine, *Aquilegia vulgaris*, from the resemblance of its nectaries to pigeons' heads.

**Cumacaca'o.** The *Theobroma leicocarpa*.

**Cumamus.** The *Piper cubeba*, or cubeb.

**Cumana brassica.** (L. *cumans*, of Cumæ; *brassica*, a cabbage.) A name for red cabbage, *Brassica rubra*.

**Cumarin.** C<sub>10</sub>H<sub>6</sub>O<sub>2</sub>. An anhydride of cumaric acid corresponding to the salicylid. It is obtained from *Melilotus officinalis*, from *Asperula odorata*, and from the Tonka beans of *Dipterix odorata*. It crystallises in agreeably-smelling, colourless crystals, soluble with difficulty in water. It is an hypnotic and anæsthetic, produces paralysis of the cerebrum and of reflex excitability without antecedent excitation.

# CUMBI GUM—CUNEIFORM.

It first excites, then paralyzes, the inhibitory apparatus of the heart. The blood-pressure, respiratory activity, and temperature all sink. The peripheral nerves are not affected. It causes nausea, vomiting, vertigo, dulness of apprehension, and headache. It reappears in the urine.

**Cum'bi gum.** A resinous exudation from the *Gardenia lucida*.

**Cum'boo.** The Tamil name of *Panicum spicata*, spiked millet.

**Cum'ene.**  $C_6H_{12}$  or  $C_{10}H_{14}$ . A hydrocarbon found in cumin seed oil. It is obtained also by distilling cuminic acid with lime.

**Cum'ic acid.** Same as *Cuminic acid*.

**C. al'dehyde.** Same as *Cuminaldehyde*.

**Cum'in.** (*L. cuminum*, cumin; *κύνινον*; from Heb. *kammôn*, *F. cumin*; *G. Römische Kümmel*, *Mutterkümmel*.) The *Cuminum cyminum*.

**C., Arme'nian.** The *Carum carui*.

**C., black.** The plant thus named in Holy Scripture is probably the *Nigella sativa*, var. *Indica*, Linn., the *N. indica*, Roxb.

**C., Ethio'pian.** The *Thapsia asclepium*, Linn.

**C., moun'tain.** The *Carum carui*.

**C., oil of.** According to Reybaud, it consists of three hydrocarbons, one, cymene, having the composition  $C_{10}H_{14}$ , and the two others cymol and cuminol.

**C. o'pium.** A narcotic obtained from the *Hypecoum pendulum* and the *H. procumbens*.

**C. plas'ter.** The *Empistrum cumini*.

**C., Ro'man.** The *Cuminum cyminum*.

**C., roy'al.** The *Sison ammi*, Linn.

**C. seed.** (*F. fruits de cumin*; *G. Mutterkümmel*, *Kreuzkümmel*, *Mohrenkümmel*.) The fruit of *Cuminum cyminum*. It is about .25" long, oblong, laterally compressed, and yellowish brown, usually consisting of the two mericarps; the ribs are five, filiform, beset with short hairs; vittæ six. Cumin seeds have an aromatic odour and taste, due to a compound volatile oil. They are stimulant and carminative.

**C., wild.** The *Lagoclea cuminoides*.

**C., wild, cod'ded.** The *Hypecoum pendulum*.

**C., wild, horn'ed.** The *Hypecoum procumbens*.

**Cuminal'dehyde.**  $C_{10}H_{12}O$ . A constituent, along with cymene, of the essential oil of cumin; it is also contained in the essential oil of *Cicuta virosa*. It is a colourless liquid, with an aromatic odour and a sharp, burning taste.

**Cumin'ic acid.**  $C_{10}H_{10}O_3$ . A substance obtained by the action of caustic potash on oil of cumin. It crystallises in colourless plates, which smell like a bug.

**C. al'cohol.**  $C_{10}H_{14}O$ . A substance obtained by the action of a strong solution of potash in alcohol on cuminic aldehyde. It is isomeric with thymol. It is colourless, slightly aromatic, insoluble in water, soluble in all proportions in alcohol and ether.

**C. al'dehyde.** The same as *Cuminaldehyde*.

**Cum'inol.** Same as *Cuminaldehyde*.

**Cum'inum.** (*Cumin*.) A Genus of the Nat. Order *Umbellifera*.

**C. cymi'num.** Linn. (*F. le cumin officinal*.) The cumin. A native of Egypt and Ethiopia, but cultivated in Sicily and Malta.

**C. minu'tum.** (*L. minutus*, small.) The *C. cyminum*.

**C. ni'grum.** (*L. niger*, black.) The *Nigella sativa*.

**C. praten'se.** (*L. pratensis*, growing in meadows.) The *Carum carui*.

**C. roma'num.** (*L. romanus*, Roman. *G. Römischer Kümmel*.) The *Cuminum cyminum*.

**C. siliquo'sum.** (*L. siliqua*, a pod.) The *Hypecoum pendulum*.

**C. sylves'tre.** (*L. sylvestris*, belonging to a wood.) The *Lagoclea cuminoides*.

**Cuminur'ic acid.**  $C_{11}H_{11}NO_3$ . A homologue of hippuric acid. It is obtained by the action of chloride of cumyl on argentic glycol. It is soluble in alcohol, and separates on evaporation in yellowish-brown prisms.

**Cum'min.** Same as *Cumin*.

**Cu'mol.** A synonym of *Cumene*.

**Cumulative.** (*L. cumulo*, to increase by heaping. *F. cumulatif*; *I. and S. cumulativo*; *G. aufgehäuft*.) Having the power to grow in intensity of action by addition. Applied to that explosive action of a drug which exhibits itself in great intensity after a continuance of small and apparently inert, or almost inert, doses.

**Cu'mulo-cir'ro-strat'us.** (*L. cumulus*, a heap; *cirrus*, a curl; *stratus*, a thing spread.) A rain cloud. A synonym of *Nimbus*.

**Cu'mulo-strat'us.** (*L. cumulus*, a heap; *stratus*, a thing spread.) In Meteorology, cirro-stratus bleuded with cumulus.

**Cumulus.** (*L. cumulus*, a heap.) A thickened portion of the tunica granulosa of the Graafian follicle in which the ovum is embedded; the *Discus proligerus*.

Also, in Meteorology, applied to hemispherical or conical heaps of cloud resembling mountains rising from a horizontal base. Such clouds are often compared to balls of cotton.

**C., germ'inal.** (*L. germen*, a sprout.) The *Discus proligerus*.

**C., germin'ative.** (*L. germen*.) The *Discus proligerus*.

**C. ovig'erus.** (*L. ovum*, an egg; *gero*, to bear.) A synonym of *Discus proligerus*.

**C., prolig'erus.** The *Discus proligerus*.

**Cu'myl.**  $C_{10}H_{11}O$ . The hypothetical radical of the compounds derived from oil of cumin.

**Cu'mylene.**  $C_{10}H_{12}$ . A hypothetical radical contained in some cuminic compounds.

**Cumyl'ic.** Relating to *Cumyl*.

**C. al'cohol.** Same as *Cumyl alcohol*.

**Cu'mys.** Same as *Kumiss*.

**Cunduran'go.** Same as *Condurango*.

**Cu'neal.** (*L. cuneus*, a wedge. *F. cuneiforme*; *G. keilförmig*.) Of, or belonging to, a wedge.

**Cunealis sutu'ra.** (*L. cuneus*; *sutura*, a seam.) Old term, by Blasius, for the suture between the sphenoid and the frontal bone.

**Cu'neate.** (*L. cuneus*. *F. cuneiforme*; *I. cuneiforme*; *G. keilförmig*.) Wedge-shaped.

**C. leaf.** A leaf with a truncated end, tapering gradually to the stipule.

**Cu'neated.** Same as *Cuneate*.

**Cuneiform.** (*L. cuneus*, a wedge; *forma*, likeness. *F. cuneiforme*; *G. keilförmig*.) Formed or shaped like a wedge.

**C. bone.** (*F. os cuneiforme*, as pyramidal; *G. Dreieckigenbein*, *Pyramidenbein*, *Keilbein*.) The third and inner bone of the upper row of carpal bones, counting from the radial side. It is wedge-shaped, the base articulating with the sesuilunar bone; above, it articulates with the

# CUNEIFORMIA OSSA—CUNILAGO.

ulna, and below, with the unciform bone; on the outer half of its anterior surface is a circular articulating facet for the pisiform bone.

Also, a term for three bones of the tarsus, the external, middle, and internal *Cuneiform bones*.

Also, a synonym of the sphenoid bone.

Also, a term given to the basilar process of the occipital bone.

**C. bone, external.** (*L. ectocuneiforme*; *F. troisième, or moyen cuneiforme*; *I. osso cuneiforme terzo, or medio cuneiforme*; *G. drittes, or äusseres Keilbein*.) Intermediate in size, between the two other tarsal cuneiform bones, both lateral surfaces presenting two articular facets. See *C. bones*.

**C. bone, first.** The *C. bone, internal*.

**C. bone, great.** The *C. bone, internal*.

**C. bone, internal.** (*L. entocuneiforme*; *F. premier, or grand cuneiforme*; *I. osso primo cuneiforme, or gran cuneiforme*; *G. erstes, or inneres Keilbein*.) The largest of the three tarsal cuneiform bones, the anterior surface reniform, the dorsal surface presenting a groove, and the internal a facet for the tibialis anticus. The inferior surface has a tubercle for the tibialis posticus. See *C. bones*.

**C. bone, internal, dislocation of.** This bone has been dislocated from the scaphoid carrying the first metatarsal bone with it; it has also been dislocated with all its connections.

**C. bone, middle.** (*L. mesocuneiforme*; *F. second, or petit cuneiforme*; *I. osso secundo cuneiforme, or piccolo cuneiforme*; *G. zweites, or mittleres Keilbein*.) The smallest of the tarsal cuneiform bones, with square dorsal surface, and the upper and posterior part of its inner surface marked by an angular articular facet. See *C. bones*.

**C. bone, second.** The *C. bone, middle*.

**C. bone, third.** The *C. bone, external*.

**C. bones.** (*L. ossa cuneiformia, or ossicula calcidea*; *F. os cuneiformes*; *I. ossa cuneiformi*; *G. Keilbeine*.) Three bones of the second row of the tarsus, named internal, middle, and external, or first, second, and third, proceeding from the inner margin of the foot outwards. They are all wedge-shaped and six-sided. The dorsal surface is quadrilateral and rough for ligaments. The inferior surface is rough and rounded, that of the inner bone having a tubercle for the tibialis posticus. The posterior surface is triangular and concave from above downwards, and all three articulate with the scaphoid, the articulation lying in the same transverse line. The anterior surface is triangular in the external and middle, reniform in the internal bone. They articulate with the bases of the three innermost metatarsal bones. The line of the articulation presents a deep indent opposite the middle cuneiform, which is shorter than the others. The internal surface of the internal cuneiform is a rounded border, that of the middle articulates with the internal, and that of the external articulates with the middle, and with the second metatarsal bone. The external surface of the internal cuneiform articulates with the middle cuneiform and with the external cuneiform, that of the middle with the external cuneiform, and that of the external with the cuboid bone. They are the homologues of the trapezium, trapezoid, and magnum of the carpus.

**C. bones, dislocation of.** All three bones have been dislocated together upwards.

**C. bones, tarsal.** See *C. bones*.

**C. cartilages.** A synonym of the *Cartilages of Wrisberg*.

**C. teeth.** A synonym of the incisor teeth.

**C. tubercles.** (*L. tuberculum*, a small swelling.) The cartilages of Wrisberg.

**Cuneiformia ossa.** (*L. cuneus*, a wedge; *forma*, shape; *os*, a bone.) The cuneiform bones of the tarsus.

**Cuncocuboid.** Relating to the cuneiform and the cuboid bones.

**C. articulation.** The joint between the external cuneiform and the cuboid bones of the tarsus; it consists of two facets united by a plantar, a dorsal, and an interosseous ligament; the synovial membrane is sometimes a separate one, sometimes an offshoot of that of the cuneoscapoid articulation.

**C. ligaments.** See *C. articulation*.

**Cuneolus.** (*Dim. cuneus*, a wedge.) A little wedge. Old name for a crooked tent to put into a fistula.

**Cuneoscapoid.** Relating to the cuneiform and scaphoid bones.

**C. articulation.** The joint between the three cuneiform and the scaphoid bones. The scaphoid has three facets for the three cuneiform bones, and a plantar and dorsal ligament for each bone; the synovial membrane is common.

**Cuneus.** (*L. cuneus*, a wedge.) The *Gyrus* or *Lobulus cuneatus*.

**C. cinereus.** (*L. cinereus*, ash colored.) The grey mass on the floor of the fourth ventricle, near the nucleus of the vagus.

**Cuniculate.** (*L. cuniculus*, a rabbit burrow.) Having a cuniculus or long narrow passage, with an opening at one end, as in the peduncles of some leaves.

**Cuniculus.** (*L. cuniculus*, a rabbit-burrow, or subterranean retreat.) A furrow or sinus.

A term applied to the burrow of the itch insect, *Sarcoptes hominis*, best seen about the wrist; it is an eighth of an inch long, like an old pin scratch, with a beaded appearance along its course, and a rugged orifice.

**Cuniform.** Same as *Cuneiform*.

**Cunila.** A Genus of the Nat. Order *Labiate*.

**C. bubula.** (*L. bubulus*, belonging to oxen.) An old term applied to *marjoram*, *Orygantum vulgare*.

**C. gallina'cea.** (*L. gallina'cea*, belonging to fowls.) The *Orygantum heracleoticum*, Linn.

**C. maria'na.** Linn. Dittany. Hab. North America. This plant is beneficially employed in infusion in slight fevers and colds with a view to excite perspiration.

**C. Ma'ryland.** The *C. mariana*.

**C. mas'cula.** (*L. masculus*, male.) The *Inula dysenterica*.

**C. microcephala.** (*Μικρός*, small; *κεφαλή*, the head.) A Brazilian plant, employed as a tonic, and to subdue irritation in cold.

**C. mint leav'ed.** The *C. mariana*.

**C. pulegioides.** Linn. The *Hedoma pulegioides*.

**C. sat'va.** (*L. sativus*, that which is planted.) The *Saturia hortensis*.

**C. transmar'ina.** (*L. trans*, on the other side; *mare*, the sea.) The *Saturia capitata*, Linn.

**Cunila'go.** The *Inula dysenterica*.

# CUNNINGHAMIA VERTICILLATA—CUPRALUM.

**Cunninghamia verticilla'ta.**  
The *Antirrhoea verticillata*.

**Cun'us.** (L. *cunus*, akin to *καύω*, to cover.) Old name for the female pudendum.

**Cunonia'ceæ.** A Nat. Order of the Alliance *Saxifragales*, or a Tribe of the Family *Saxifragaceæ*, Order *Saxifraginæ*. They are perigynous Exogens, with distinct styles and opposite leaves, having large interpetiolar stipules.

**Cuno'niads.** The plants of the Order *Cunoniaceæ*.

**Cup.** (Sax. *cuppe*; from L. *cupa*, a vat.) A drinking vessel.

Also, the vessel for receiving the blood in venesection, and then considered to hold four ounces.

Also, the glass vessel used to receive the blood in cupping.

Also, to perform the operation of cupping.

Also, the calyx of a flower.

**C., antimo'nial.** A small vessel made of antimony, in which wine was allowed to stand for twelve hours, in order to obtain emetic properties.

**C., Chi'nese purg'ing.** A cup made of red sulphuret of arsenic, in which wine was left for a night, to be drunk in the morning as a purgative.

**C., emetic.** Same as *C., antimonial*.

**C.-fern.** Same as *Bladder-fern*.

**C., glauco'matous.** (*Glaucoma*. F. *excavation de la papille*; G. *glaukomatöse Excavation*, *Druck-excavation*, *Aushohlung der Papille*.) A depression of the optic disc, which results from the increased tension of the eye in glaucoma and the inherent weakness of this part of the globe, causing it to yield to the internal pressure. The depth varies from a mere depression to a pit 2 mm. in depth, but always affects the whole surface of the disc, by which circumstance it is distinguished from a normal or physiological depression. The edges of the pit are sharply defined, and sometimes undermined; the veins are large, often pulsate, and lie on different planes on the floor and at the margin of the pit, enabling the observer to determine its depth by the strength of the concave glass required to see the details of the surface on examination with the erect image. The retinal veins, on reaching the disc, often suddenly bend away from the observer, appearing to end by a conical extremity, and they reappear on the surface of the depressed disc, either in the same line or shifted to the right or left. In many instances the cribriform layer is very well marked, and the colour of the disc is greyish or white.

**C. li'chen.** The *Cladonia pixidata*, from its cup-like shape.

**C. li'chen, scar'let.** The *Cladonia coccifera*.

**C. moss.** The *Cladonia pixidata*, from its cup-like shape.

**C. plant.** The *Silphium perfoliatum*.

**C. rose.** The *Papaver rhoeas* and other poppies.

**C. sha'ped.** In Botany, applied to flowers having the form of a drinking cup.

In Medicine, applied to the crusts of favus.

**Cupame'ni.** The *Acalypha indica*.

**Cupa'nia.** A Genus of the Nat. Order *Sapindaceæ*. Several of the American species are used as astringents.

**C. edu'lis**, Schum. and Thönn. (L. *edulis*, eatable.) The *C. sapida*.

**C. sap'ida.** (L. *sapidus*, well-tasted.) The aloe tree. The succulent aril of this plant is an article of food. A decoction of the seeds is used in diarrhoea, and the distilled water of the flowers as a cosmetic. Also called *Blighia sapida*.

**Cup'el.** (L. *cupella*, a small vat. F. *cou-pelle*; G. *Kupelle*.) Term for a small vessel made of phosphate of lime mixed with clay, in which gold and silver are refined by melting them with lead.

**Cupella'tion.** (Same etymon.) Term for the act or process of refining gold and silver by melting them in a cupel with lead.

**Cupero'sa.** Same as *Copperas*.

**Cuphe'a.** A Genus of the Nat. Order *Lythraceæ*.

**C. antisyp'hilit'ica**, H. B. and Kunth. Hab. Tropical America. Used in gonorrhoea and syphilis.

**C. balsamo'na.** A decoction of this plant is used in Brazil in intermittent fevers.

**C. lanceola'ta**, H. B. K. (L. *lanceolatus*, lance-shaped.) Used in Mexico as a corroborant after childbirth.

**C. microphy'lla**, H. B. and Kunth. (Μικρός, little; φάλλον, a leaf.) Hab. Peru. Used in gonorrhoea and syphilis.

**Cupho'sis.** Same as *Cuphosis*.

**Cupid'itas.** (L. *cupiditas*, a desire; from *cupio*, to long for a thing.) Desire.

**C. desiden'di.** (L. *desideo*, to sit down.) The desire to evacuate the bowels.

**Cupola.** (I. *cupola*, a dome; dim. of L. *cupa*, a cup.) A dome. The arched, dome-shaped extremity of the osseous spiral canal forming the summit of the cochlea.

**Cup'ped.** (*Cup.*) Hollowed on the surface like to a cup. Especially applied to the buffy coat of blood when it presents a cup-like appearance.

**Cupping.** (F. *couper*, to cut; or from the *Cup*-like form of the glasses employed. F. *action de ventouser*; I. *ventosare*; G. *Schröpfung*.) A form of bloodletting accomplished by means of an instrument, called a scarificator, having concealed lancets, which being released by a spring, cut through the skin of the part to which it is applied; the continuance of the bleeding is secured by the application of a cupping-glass, from which the air is more or less exhausted by burning a hand-lamp in it for a short time, or by means of an exhausting syringe.

**C., dry.** (F. *ventouses sèches*.) The application of the cupping-glass without previously cutting the skin. Used as a revulsive and counter-irritant.

**C. glass.** (F. *ventouse*; I. *ventosa*, *co-petta*; S. *ventosa*; G. *Schröpfglas*, *Schröpfkopf*.) A bell-shaped or leech-shaped glass used in cupping, to apply to the part after scarification has been effected, after the air in it has been rarefied by the introduction of a spirit lamp.

Sometimes the air is exhausted by attaching it to a small air-pump.

**C., wet.** (F. *ventouses scarifiées*.) The ordinary cupping when blood is abstracted.

**Cupralum.** (L. *cuprum*, copper; *alum*.) A composition of copper sulphate, alum, a little potassium bichromate, and terebene. It is a powerful deodorant, counteracting ammonia and hydrogen sulphide, and masking faecal odour as much as carbolic acid.

## CUPRAMMONIUM—CUPRIC.

**Cuprammonium.** The *Cuprum ammoniatum*.

**Cupreous.** (L. *cuprum*, copper.) Like, or consisting of, or containing, copper.

**Cupressæ.** (*Cupressus*.) A Suborder of the Order *Conifera*, having erect ovules and spheroidal pollen.

**Cupressi fructus.** (L. *fructus*, fruit. F. *noix de cyprès*.) The nuts of *Cupressus sempervirens*. Used in infusion in bronchial catarrh and diarrhoea.

**Cupressinæ.** (*Cupressus*. G. *Cypressengewächse*.) A Family of the Suborder *Araucariacæ*, Order *Conifera*, having the carpellary scale fused with the bract, the leaves and scales in whorls, and the micropyle of the ovule directed upwards.

**Cupressinum vinum.** Same as *Cedreum vinum*.

**Cupressus.** (Κυπάρισσος, the cypress.) A Genus of the Suborder *Cupressæ*, Nat. Order *Conifera*.

**C. fastigiata**, De Cand. (L. *fastigo*, to make pointed.) The *C. sempervirens*.

**C. sempervirens**, Linn. (L. *semper*, always; *viridis*, to be green. F. *cyprès*; G. *Cypresse*.) The cypress. Every part of the plant abounds with a bitter, aromatic, terbinthinate fluid, and is said to be a remedy against intermittent fevers. The berries are astringent and vermifuge; the strobiles are astringent.

**C. thyoides.** (Θύα, the incense tree; ἴδιος, likeness.) Hab. North America. An infusion of the tops is given cold as a stomachic, warm as a diaphoretic.

**Cupreum filum.** (L. *cupreus*, of copper; *filum*, a thread.) Copper wire. See *Cuprum*, B. Ph.

**Cupri acetat.** (F. *crystaux de Venus*; G. *krystallisirter Grünspan, essigsaurer Kupferoxyd*.)  $\text{Cu}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{H}_2\text{O}$ . Acetate of copper. Prepared by dissolving impure verdigris in hot acetic acid, and leaving the filtered solution to cool and crystallise. It consists of blue-green oblique rhombic prisms, and is used in making the *Tinctura cupri acetici Rademacheri*.

**C. ammoniosulph'as.** Same as *Cuprum ammoniatum*.

**C. arsenis.**  $\text{CuIAsO}_3$ . Scheele's green. Prepared by precipitating a solution of potassium arsenite with copper sulphate. It is, or rather was, often used as a pigment for wall-papers, muslins, and other articles, with much damage to humanity, evidenced by irritation of the throat and conjunctiva, sometimes with great secretion, loss of appetite, nausea, gastralgia, colicky pains, and sometimes jaundice, feverishness of an intermittent character, perspirations, a greenish skin, falling off of the hair and urticaria. The cerebral system suffers in time, especially after internal administration; there is headache, dullness of the special senses, loss of memory, and sometimes want of power over the muscles. It is said that it will produce abortion. The injurious influence is generally attributed to the arsenic, and not to the copper.

**C. diacetat.** Same as *C. subacetat.*

**C. et ammoniæ sulph'as.** The *Cuprum ammoniatum*.

**C. flo' res.** (L. *flos*, a flower. G. *Kupferblumen*.) The red oxide of copper, or cuprous oxide, obtained as a finely divided powder by pouring water on to freshly melted copper.

**C. limatu'ra.** (L. *limatura*, filings. F.

*limailles de cuivre*.) Have been used in hydrophobia.

**C. ni'tras.**  $\text{Cu}(\text{NO}_3)_2 \cdot 3\text{H}_2\text{O}$ . Blue deliquescent corrosive crystals, obtained by dissolving copper in nitric acid. Has been used as a caustic.

**C. oxidum.** See *Cuprum oxydatum*, G. Ph.

**C. rubi'go.** (L. *rubigo*, rust.) Verdigris.

**C. subace'tas.** (F. *sous-acetate de cuivre, vert-de-gris, verdet*; G. *Grünspan*.)  $2\text{Cu}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot \text{CuO} + 6\text{aq}$ . Impure subacetate of copper, or verdigris, is obtained by exposing sheets of copper to the air in contact with the marc of the wine-press. It forms a blue mass, containing crystals, and consisting of several green basic cupric acetates, and some oxide of copper. When digested in warm water, and the soluble part allowed slowly to evaporate, a blue crystalline mass of basic cupric acetate or verdigris is left. Verdigris is used as a stimulant and escharotic in ulcers, lupus, warts, and condylomata.

**C. sulph'as**, B. Ph. (F. *sulfate de cuivre, vitriol bleu*; G. *Kupfervitriol, Blauvitriol, schwefelsaures Kupfer*.)  $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ . Obtained by heating copper and sulphuric acid together, dissolving in hot water, and evaporating to crystallisation. It occurs in blue oblique prisms, soluble in water; when heated it parts with its water of crystallisation, and becomes whitish and friable. It is used as an emetic, in doses of 5 to 10 grains; as an astringent, in doses of  $\frac{1}{4}$  to 2 grains, in diarrhoea and dysentery; it has also been given in malignant sore throat, and has been recommended as an antidote to phosphorus. Externally it is used in substance or solution, in ulcerations of the cornea, in granular conjunctivitis, in acne and other skin diseases, in ulcerations of the mouth and other mucous membranes, and as an injection in dysentery.

**C. sulph'as ammoniacal'is.** The *Cuprum ammoniatum*.

**C. vitriol'um.** (F. *vitriol*.) The *C. sulph'as*.

**Cu'pric.** (L. *cuprum*. F. *cuprique*; G. *kupferu*.) Relating to copper.

Also, relating to the higher degree of oxidation of copper.

**C. chlor'ido.** Same as *Copper chloride*.

**C. compounds.** Compounds containing one atom of the metal combined with two atoms of a univalent radicle, as  $\text{CuCl}$ , or one atom of a bivalent negative radicle, as  $\text{CuO}$ . They are more stable than the cuprous compounds.

**C. hydrate.**  $\text{CuH}_2\text{O}_2$ . A greenish-blue pulverulent substance, which dissolves readily in ammonia, forming a deep blue liquid, which has the property of dissolving cellulose. The blue verditer of commerce is chiefly composed of this substance.

**C. hydrox'ide.** Same as *C. hydrate*.

**C. ni'trate.** Same as *Cupri nitras*.

**C. oxide.**  $\text{CuO}$ . Molecular weight 79.4. ἄλλος χαλκός of Dioscorides; flos aeris of Pliny. It occurs native, sometimes in the crystalline form; sp. gr. 5.952 to 6.25; melts at full red heat, but is not decomposed, unless in the presence of reducing agents. It dissolves in melted silicates, communicating to the mass a fine green colour.

**C. peroxide.**  $\text{CuO}_2 \cdot \text{H}_2\text{O}$ . A yellowish-brown powder formed by the action of dilute hydrogen dioxide on cupric hydrate.

**C. sulphate.** The *Cupri sulphas*.

## CUPRICO—CUPULE.

**C. sulphide.**  $\text{CuS}$ . Molecular weight 95.4. Crystallizable, occurs native as indigo copper, forming soft, flexible laminae, or more frequently in compact, bluish-black masses, with resinous lustre, and sp. gr. 3.8. Slightly soluble in solution of ammonium sulphide, but not in sodium sulphide. See also *Copper sulphide*.

**Cuprico-**. (F. *cuprico*-, or *cuivrico*-.) A prefix in several compound epithets applied by Berzelius to double salts resulting from combinations of a cupric salt with another denoted by the terminal portion of the epithet, as cuprico-aluminicus.

**Cupricum sulphuricum.** Same as *Cupri sulphas*.

**C. vitriola'tum.** (*Vitriol*.) Same as *Cupri sulphas*.

**Cuproammoniacal test.** See *Schweitzer's test*.

**Cupropotas'sic test.** A term applied to Trommer's test for sugar in the urine, and its modifications by Barreswell, Fehling, Pavy, and others.

**Cupro'so-potas'sic.** (F. *cuivroso-potassique*.) Applied by Berzelius to double salts, from the combination of a cuprons with a potassic salt.

**Cuprosulphate of ammonium.** A synonym of *Cuprum ammoniatum*.

**Cuprotartrate of potash.** The fluid used in Trommer's test.

**Cuprous.** (L. *cuprum*, copper.) Relating to copper.

Also, relating to the lower degree of oxidation of copper.

**C. compounds.** Compounds containing an equal number of atoms of the metal and the radical, as  $\text{CuCl}$ ,  $\text{Cu}_2\text{Cl}_2$ . They are very unstable.

**C. oxide.**  $\text{Cu}_2\text{O}$ . Molecular weight 142.8. Crystalline, forming octahedrons or cubes of a fine red colour. Sp. gr. 5.85—6.15. Occurs naturally as red copper ore.

**C. sulphide.**  $\text{Cu}_2\text{S}$ . Occurs native as copper-glance; obtained by burning copper foil in sulphur vapour as a black brittle mass.

**Cuproxide.** (L. *cuprum*; *oxydum*. F. *cuproxide*.) A combination of copper with oxygen.

**Cuprum**, B. Ph., U.S. Ph. (Late L. from *cuprium* *æs*, Cyprian brass; from *Cyprus*, whence it was originally brought. F. *cuivre*; I. *rame*; S. *cobre*; G. *Kupfer*.) Copper wire used for generating nitrous acid in the preparation of *Spiritus ætheris nitrosi*. See also *Copper*.

**C. acet'icum**, G. Ph. See *Cupri acet'as*.

**C. acet'icum crystallisa'tum.** The *Cupri acet'as*.

**C. alumina'tum**, G. Ph. (L. *lapis divinus*, or *ophthalmicus*. G. *Kupferalun*.) A substance obtained by melting together 16 parts each of cupric sulphate, potassium nitrate, and alum sulphate, with 1 part of camphor. It is of a bright blue-green colour, and is applied in the form of stick. It is an astringent. Used in chronic conjunctivitis.

**C. ammoniaca'lë.** Same as *C. sulfuricum ammoniatum*.

**C. ammonia'tum**, U.S. Ph. (F. *cuivre ammoniacal*; G. *schweifelsaures Kupferoxyd-Ammoniak*.) Ammoniated copper. Sulphate of copper, half a troy ounce, is rubbed in a mortar with ammonium carbonate until effervescence ceases; the salt is wrapped in bibulous paper, and dried at a gentle heat. It has been used in

epilepsy and chorea, and for the same purposes as *Cupri sulphas*.

**C. bichlora'tum.** A synonym of *Copper chloride*.

**C. carbon'icum.** See *Copper carbonate*.

**C. chlora'tum.** Same as *Copper chloride*.

**C. chlora'tum ammoniaca'lë.** (G. *Kupferchlorur-Ammoniak*.) A colourless, easily soluble, and unstable compound, without special physiological or therapeutic properties.

**C. chlora'tum ammoniaca'lë solu'tum.** The *Tinct. antimitasmatia Kochlini*. A solution of cuprum sulfuricum ammoniatum.

**C. hydrocarbon'icum.** Same as *Copper carbonate*.

**C. ioda'tum.** (G. *Kupferjodür*.) A white powder, soluble in water. Has been employed as an application to glandular swellings.

**C. muriaticum.** A synonym of *Copper chloride*.

**C. ni'tricum.** See *Cupri nitras*.

**C. oxida'tum nigrum.** (L. *niger*, black. G. *schwarzes Kupferoxyd*.) Same as *C. oxydatum*, G. Ph.

**C. oxyda'tum**, G. Ph. (G. *Kupferoxyd*.)  $\text{CuO}$ . A brownish-black powder, prepared by precipitating a solution of copper sulphate with an excess of potash or soda. Used as an ointment in the proportion of 1 to 10.

**C. perchlora'tum.** The *Copper chloride*.

**C. subace'ticum.** Same as *Cupri subacet'as*.

**C. sulfu'ricum.** (G. *Kupfervitriol*.) See *Cupri sulphas*.

**C. sulfu'ricum ammoniaca'lë.** A basic salt obtained by the incomplete precipitation of copper sulphate with ammonia.

**C. sulfu'ricum ammonia'tum**, G. Ph. (F. *ammonure de cuivre*; G. *Kupfervitriolsalmiak*, *Kupfersalmiak*.) Same as *C. ammoniatum*, but made by dissolving one part of sulphate of copper in three parts of solution of ammonia, adding to the filtered liquor six parts of alcohol, collecting the precipitate on a filter, and drying it without heat. Dose, 0.01—0.06 grm.

**C. sulfu'ricum cru'dum**, G. Ph. (L. *crudus*, raw. G. *roher Kupfervitriol*.) Commercial sulphate of copper.

**C. sulfu'ricum pu'rum**, G. Ph. (G. *reiner Kupfervitriol*.) Same as *Cupri sulphas*.

**C. us'tum.** (L. *ustus*, burnt. G. *gebräuntes Kupfer*.) See *Copper*, burnt.

**C. vitriola'tum.** (*Vitriol*.) The *Cupri sulphas*.

**Cupula.** The rounded apex of the cochlea. Also, the same as *Cupule*.

**Cupular.** The same as *Cupulate*.

**C. caut'ery.** (*Καυτήριον*, a branding iron.) A cup-shaped cautery, formerly used for destroying portions of the skin of the head in epilepsy and other diseases.

**Cupulate.** (L. *cupula*, a little tub. F. *cupulaire*; G. *becherförmig*.) Furnished with a cupule, or cup.

**Cupule.** (L. *cupula*. F. *cupule*; G. *Schälchen*, *Näpfchen*, *Becher*, *Becherhülle*.) An elevation of the flower-stalk, at first annular, formed below the flower, growing up afterwards in the form of a cup or saucer, and bearing scaly or spiny protuberances. In the acorn of the oak the cupule surrounds only one flower, in the sweet-chestnut and beech, on the other hand, it encloses a small inflorescence.

# CUPULIFERÆ—CURATIVE.

**Cupuliferæ.** (L. *cupula*; *fero*, to bear.) A synonym of *Corylaceæ*.

**Cupuliferous.** (L. *cupula*; *fero*, to bear. F. *cupulifère*; G. *bechertragend*.) Bearing a cupule.

**Cupuliform.** (L. *cupula*; *forma*, likeness. G. *becherförmig*.) Formed like a cupule, or acorn cup.

**Cura.** (L. *cura*, care, attention. F. *cure*; L. *cura*; G. *Kor*.) A cure, a healing. Also, meaning treatment.

**C. avena cea.** (L. *avenaceus*, eaten.) Old name for a decoction of oats and sugary roots, in which a little nitre and sugar were dissolved. Used in fevers. (Quincy.)

**C. derivativa.** Same as *Derivation*.

**C. famis.** (L. *famis*, hunger.) A term applied to a form of treatment of severe cases of syphilis and of cancer, introduced by Winslow. It consists in severe abstinence and the use of extract of wild cicely, *Anthriscus sylvestris*. Delaurius substituted guaiacum.

**C. fumigatoria.** (L. *fumigo*, to smoke.) The treatment of disease by inhalations of perfumes, or other substances.

**C. magna.** (L. *magnus*, great.) A term applied to that kind of treatment which is preferable to other or milder kinds in any special disease.

**C. Meadeana.** (After Richard Mead.) A synonym of *Transfusion of blood*.

**C. palliativa.** (L. *pallium*, a cloak.) A mode of treatment which aims at relief only and not removal of a disease.

**C. radicalis.** (L. *radix*, a root.) A mode of treatment which attempts the complete removal of a disease.

**C. revulsoria.** Same as *Revulsion*.

**Curable.** (L. *cura*; F. *guérissable*, *curable*; L. *curabile*, *sanabile*; S. *curable*; G. *heilbar*.) Capable of being cured.

**Curacoa.** (*Curacoa*, the island where it was first made; or the name of the oranges used in its manufacture.) A cordial liquor made from the skins of bitter or Curacoa oranges, cloves, cinnamon, sugar, spirit, and water. Used as a liquor, as a pleasant stimulant, and, very much diluted, to assuage thirst in fever.

**Curadapala.** The *Aerium antidyserterium*, Linn.

**Curanga.** A Genus of the Nat. Order *Scrophulariaceæ*.

**C. amara.** Juss. (L. *amarus*, bitter.) Hab. Moluccas, Java, and Philippine Islands. Used in malarious fevers.

**Curatæ.** (G. *Curare*. Woorara, Woorare, Woorali, Ourari, or Urari.) A blackish-brown, resinous-looking, bitter, hygroscopic substance, used by the natives of several parts of South America, especially the Indians of the Orinoco, Rio Negro, and Cassiquari rivers, as an arrow poison. The active constituent of curare is curarin, but its exact composition and source is not known; it is an extract of barks and other vegetable substances, of which that of a *Strychnos* is always present; the *Strychnos toxifera*, *S. cognata*, *S. castelnaui*, *Rouhamon guyanensis*, *Didymopanax cucurbitaria*, *Paullonia curaru*, and others have been mentioned as ingredients. It acts much more energetically when introduced into the blood than when ingested by the stomach, because in the latter case it is only slowly absorbed, whilst it is rapidly excreted by the kidneys. After ligation of the renal arteries it acts

rapidly even when swallowed. In the Invertebrata it acts chiefly on the central organ of the voluntary movements, and not upon the motor nerve endings, and both in the lower and in the higher animals affects those nerves which are distributed to striated muscle. In man small doses, 0.01—0.05 gramme (15—75 gr.), cause flow of blood to the head, violent but transitory headache, heaviness and dragging of the muscles, and remarkable increase of the secretion of saliva, tears, sweat, urine and nasal mucus; sugar appears in the urine, the pulse and respiratory movements become quicker, and the temperature rises. With larger doses, whilst the consciousness remains unaffected, anxiety is felt, and paralysis of the voluntary muscles supervenes. Curara, even in very small doses, paralyzes the intramuscular terminations of the motor nerves, the muscular fibres remaining irritable, but the sensory reflex apparatus must also be acted on, since reflex acts are in the first instance accelerated and strengthened, then diminished, and ultimately abolished. The heart and vaso-motor nerves are only affected after the administration of very large doses. The cardiac and intestinal movements are first increased in frequency and strengthened, owing to paralysis of the vagus and splanchnics, and are then diminished. Metabolism of tissue is extraordinarily reduced by curara. Death results from paralysis of the respiratory muscles and asphyxia, and may therefore be postponed or prevented by artificial respiration. It has been employed in tetanus, in hydrophobia, and in poisoning by strychnia, three grains having been injected in four hours by seven injections of a five per cent. solution. It has also been used in epilepsy and chorea, but not with success.

**Curari.** Same as *Curare*.

**Curaria.** Same as *Curarin*.

**Curarin.**  $C_8H_{13}N$ . Preyer;  $C_{18}H_{35}N$ , Sachs. An alkaloid obtained by Preyer from *Curare*. It crystallises in colourless prisms, having a bitter taste; it is coloured red by nitric acid, and, with sulphuric acid and bi-chromate of potassium, behaves very like strychnia.

**Curarinum.** Same as *Curarin*.

**C. aceticum.** The crystalline product of acetic acid and curare.

**C. hydrochloricum.** The crystalline product of curare and hydrochloric acid.

**Curarise.** To put under the influence of *Curare*.

**Curasso'a apples.** Same as *Aurantia curassavensis*.

**C. oranges.** The *Aurantia curassavensis*.

**Curatella.** (L. *curo*, to heal.) A Genus of the Nat. Order *Dilleniaceæ*.

**C. gambaiiba.** The *C. sambaiba*.

**C. sambaiba.** Lindl. Hab. Brazil. Used as an astringent and detergent.

**Curatio.** (L. *curo*, to care for, to heal. F. *curation*; L. *curatio*; G. *Heilung*, *Arznei*.) The treatment of a disease or wound.

**C. contrarium per contraria.** (L. *contrarius*, opposite; *per*, by means of.) The same as *Allopathy*.

**C. morbi per inedia.** (L. *morbus*, a disease; *per*, by means of; *inedia*, fasting.) The treatment of disease by hunger or fasting.

**Curatio.** Same as *Curatio*.

**Curative.** (L. *curo*, to heal. F. *curatif*; G. *heilend*.) Pertaining to a cure; capable of healing or curing.

# CURATOE—CURETTE.

**C. treatment.** The treatment which aims at the complete removal of a disorder in contradistinction to palliative.

**Curat'ô.** The *Agave vivipara*.

**Curat'or.** (L. *curo*.) A cure-taker.

**C. infirmorum.** (L. *infirmus*, weak.) A sick or hospital nurse.

**Cur'cas.** The *Jatropha curcas*.

**C. in'dica.** The *Jatropha curcas*.

**C. multifidus.** Endlicher. (L. *multus*, many; *fido*, to cleave.) The *Jatropha multifida*, Linn.

**C. pur'gans.** Adanson. (L. *purgo*, to purge.) The *Jatropha curcas*.

**Curcul'igo.** (L. *curculio*, a weevil.) A Genus of the Nat. Order *Hypocixidae*; so called from the seeds resembling the rostrum of a weevil.

**C. brevifolia.** (L. *brevis*, short; *folium*, a leaf.) Used as *C. orchioïdes*.

**C. malabarica.** Used as *C. orchioïdes*.

**C. orchioïdes.** Gärtn. (ὄρχις, the orchis; ἰδος, likeness.) Hab. India. Used by Hindû doctors in gonorrhoea, dysuria, menorrhagia, and similar disorders.

**C. stans.** Labillardière. (L. *stans*, part. of *sto*, to stand.) Hab. New Caledonia Island. Tubers esculent.

**Curculio.** (L. sometimes *gurgulio*; redupl. form, from Sans. root *gri*. L. *glutio*, to devour.) The weevil. An old Genus of the Subsection *Rhynchophora*, Section *Tetramera*, Order *Coloptera*, now subdivided into many genera.

Also, name for the throat; also, the trachea or windpipe.

Also, a name for the penis.

**C. palma'rum.** Linn. (L. *palma*, a palm tree.) The larva lives in the pith of palm trees, and is esteemed as a delicate food.

**Cur'cum.** A name for the *Chelidonium majus*.

**Cur'cuma.** (Ar. *curcum*; or Pers. *kur-kum*, saffron.) A Genus of the Nat. Order *Zingiberaceæ*.

Also (F. *souchet des Indes*; G. *Kurkuma*, *Gelbwurz*), the official name, U.S. Ph., of turmeric, the rhizome of *C. longa*. It is used as a condiment in curry powder, as a yellow colouring agent, and for preparing a test-paper for the detection of alkalis, which turn it reddish brown. See *Turmeric*.

**C. ama'da.** Roxb. Mango ginger. Hab. India. Used as a condiment, and as a carminative and stomachic.

**C. angustifolia.** Roxb. (L. *angustus*, narrow; *folium*, a leaf.) A plant from which an excellent kind of arrowroot is made in Travancore, called East India arrowroot.

**C. aromatica.** Roscoe. (L. *aromaticus*, fragrant.) A species which furnishes round zedoary.

**C. arrowroot.** The arrowroot from *C. angustifolia*, *C. leucorrhiza*, and other varieties of *curcuma*.

**C. bez'oar.** Cavvet. A species which furnishes yellow zedoary.

**C. domestica ma'jor.** Rumph. (L. *domesticus*, belonging to the house; *ma'jor*, greater.) A variety of *C. longa*.

**C. domestica mi'nor.** Rumph. (L. *mi'nor*, less.) A variety of *C. longa*.

**C. leucorrhiza.** Roxb. (Λευκός, white;

βίζα, a root.) A species which supplies East India arrowroot.

**C. longa.** Linn. (L. *longus*, long. F. *curcuma*; G. *Gelbwurz*.) Hab. India. The species which supplies turmeric. The root is considered a stomachic cordial, and is used in diarrhoea; the juice is used as an antelmintic. It is also applied to wounds and bruises.

Also, see *Turmeric*, long.

**C. pa'per.** Same as *Turmeric paper*.

**C. rotun'da.** (L. *rotundus*, round. F. *curcuma rond*.) Same as *Turmeric*, round.

**C. rubes'cens.** Roxb. (L. *rubesc*, to reddens.) The pendulous tubers of this plant yield a very beautiful pure starch like arrowroot.

**C. starch.** The arrowroot from *C. angustifolia*, *C. leucorrhiza*, and *C. rubescens*.

**C. tinctoria.** Guib. (L. *tinctorius*, belonging to a dyer.) The *C. longa*.

**C. viridin'ora.** Roxb. (L. *viridis*, green; *flos*, a flower.) A species which supplies turmeric.

**C. zedoaria.** Roscoe. A species which supplies long zedoary. It is used as a carminative tonic, and in kidney diseases.

**C. zedoaria.** Roxb. The *C. aromatica*, Roscoe.

**C. zerum'bet.** Roxb. Same as *C. zedoaria*, Roscoe.

**Cur'cumæ ra'dix.** (L. *radix*, the root.) The rhizome of *Curcuma longa*.

**Cur'cumin.** (F. *curcumine*.)  $C_{10}H_{10}O_3$ . The yellow colouring matter in the rhizomes of the *Curcuma longa*, turmeric. It occurs in yellow crystals, fusing at 165° C. (329° F.), smelling like vanilla, and soluble in alcohol, ether, and alkalis, which latter turn it brown, and from which it is precipitated by acids.

**Cur'cumol.** A volatile oil found in turmeric, probably analogous with thymol.

**Curd.** (Ir. *cruth*; Gael. *gruth*. F. *lait caillé*.) Term for the coagulum of milk, separated by the action of acids.

**C., al'um.** The *Coagulum albuminis*.

**C. soap.** The *Sapo animalis*, B. Ph.

**Cur'dy.** Having the appearance of *Curd*.

**C. pus.** See *Pus*, curdy.

**Cure.** (L. *curo*, to take care of, to heal. F. *cure*; G. *Heilung*.) The healing of a disease or wound.

Also, used to denote the course of treatment by mineral waters, or by some alimentary substance, as whey or grapes.

**C. by sympathy.** See *Sympathy*, cure by.

**C., grape.** See *Grape cure*.

**C., milk.** See *Milk cure*.

**C., movement.** See *Movement cure*.

**C., rad'ical.** (L. *radix*, a root.) That which endeavours to effect the complete removal of a disease, or structure, or deformity.

**C., wa'ter.** See *Hydrotherapy*.

**C., whey.** See *Whey cure*.

**Cur'eall.** The *Geum virginianum* and the *Enothera biennis*.

**Curet'te.** (F. *curer*, to cleanse; from L. *curo*.) A small instrument like a scoop used in the removal of wax from the outer ear.

Also, a similar instrument used to assist the exit of the lens in the operation of extraction, and for removing any opaque matter that may remain behind the pupil after the operation for cataract.

Also (G. *Blasenräumer*), a spoon-ended instru-

## CURL—CURRENT.

ment used for the removal of fragments from the bladder in lithotomy.

Also, an instrument, blunt or cutting, used for scraping the interior of the canal of the womb, such as to remove granulations, cysts, small polypi, or enlarged glands of Naboth.

**C., pharyngeal.** (Φάρυγγ, the throat.) A form of the instrument, consisting of a metal stem terminating in a sharp loop, and capable of being fixed at any angle on a handle. It is used for the removal of granulations, and the scraping off of dried mucus from the throat.

**C., suction, of Teale.** An instrument employed for the removal of a soft cataract from the eye. It consists of a glass tube, to one end of which is fastened a tubular curette, whilst to the other extremity is attached a piece of india-rubber tubing, with a glass mouth-piece. The curette is introduced through a small incision, made with a lance-shaped knife, through the cornea, and the other extremity of the instrument being inserted into the mouth of the operator, the soft substance of the lens is slowly sucked out. It was invented by Teale of Leeds.

**Curl.** (Du. *krul*, a curl; from *krullen*, to curl.) A ringlet, an undulation or twist.

**C. cloud.** A synonym of *Cirrus*, from its shape.

**Curl'ed.** (Du. *krullen*, to curl.) Twisted into ringlets or ripples.

**Cur'mi.** (Κούμια.) Old name, used by Dioscorides, ii, 110, for a kind of potion made from barley; a kind of cere-visia or ale.

**Curn'berries.** A corruption and contraction of *Current berries*.

**Cur'rant.** (A corruption of *Corinth*.) Corinth berries. The dried fruit or grape of several species of *Vitis*; used in cookery.

Also, the fruit and the shrub of the species of *Ribes*.

**C., black.** (F. *groseillier noir*.) The *Ribes nigrum*.

**C., na'tive, of Tasmania.** A species of *Coprosma*.

**C., red.** (F. *groseillier commun*.) The *Ribes rubrum*.

**C. tree.** (F. *groseillier*; G. *Johannisbeer-strauch*.) The *Ribes rubrum* and *R. nigrum*.

**C., white.** A variety of *Ribes rubrum*.

**Cur'rantworts.** The plants of the Order *Grossularaceæ*.

**Current.** (L. *curro*, to run. F. *courant*, *corrente*; G. *Strom*.) A stream or flow of something, such as an atmospheric or electric current.

**C., an'gular.** A term applied to two rectilinear electric currents when they meet at an angle; they attract each other when both approach or both pass away from the angle; and they repel each other if one approaches and the other passes from the angle.

**C., ascend'ing.** A synonym of *C., inverse*.

**C., bat'tery.** A synonym of *C., continuous*, because it is derived direct from the battery.

**C., branch.** Same as *C., divid'ed*.

**C., centrif'ugal.** (L. *centrum*, a centre; *fugo*, to fly.) A synonym of *C., direct*.

**C., centrip'etal.** (L. *centrum*; *pelo*, to seek.) A synonym of *C., inverse*.

**C., con'stant.** The current of a constant galvanic battery. See *Battery, constant*.

The term has sometimes been used as a synonym of *C., continuous*.

**C., contin'uous.** The direct current from a galvanic battery; it may be constant or not, according to its source, as from a Daniell's battery or a voltaic pile. The term is used in opposition to *C., interrupt'ed*.

**C., contin'uous interrupt'ed.** A contradictory synonym of *C., continuous*.

**C., deriv'ed.** The current obtained in a circuit made by the addition of a second conducting wire to a part of an already closed circuit, and also to the current passing through that part of the original circuit which lies between the points of junction of the ends of the second wire.

**C., descend'ing.** Same as *C., direct*.

**C., di'aphragm.** (Διάφραγμα, a partition wall.) A term applied to the electric current observed on forcing a liquid through a diaphragm by mechanical means.

**C., direct'.** In medical electricity, applied to the track of the galvanic current in the body or part galvanised, from its centre to the negative pole of the battery; being centrifugal to the body.

**C., divid'ed.** The condition occurring in a *C., deriv'ed*.

**C., elec'tric.** A constant discharge of electricity between two bodies differently electrified.

**C., electric'ity.** Electricity generated by chemical action, not by friction.

**C., extra.** (L. *extra*, on the outside.) A term applied by Faraday to the additional strength of the voltaic current which is observed on the sudden opening of a closed circuit when the traversed wire is long and with many loops or spirals, as compared with the current exhibited through a short straight wire. He attributed it to the development of an induced current in each coil by the action of the neighbouring coil.

**C., ex'tra, direct'.** The extra current on opening a closed circuit, which, being in the same direction as the original current, increases its density. See *C., extra*.

**C., ex'tra, inver'se.** The extra current on closing a voltaic circuit, which, being in the opposite direction to the original current, decreases its intensity. See *C., extra*.

**C., galvan'ic.** The current of electricity traversing the conducting body or bodies which connect the two poles of a galvanic battery.

**C., gas'tro-hepat'ic.** (Γαστήρ, the belly; ἥπαρ, the liver.) Matteucci's name for an electric current which passes from the stomach to the liver, and which, according to him, was the cause of the evolution of acid in the stomach and soda in the liver, from the decomposition of saline matters. It is now believed that this current is an ordinary electro-chemical phenomenon, resulting from the different conditions of the two organs concerned.

**C., gland'ular.** An electric current observed in the skin of Amphibia, between the two extremities of a galvanometer, when they are made to communicate with the surface of the skin by means of pads of paper moistened with salt water; the direction is away from the last touched point. It is supposed that it is connected with the layer of skin glands.

**C., individ'ual, of finger.** A term applied to the current which is found to occur between two fingers when they are placed in Du Bois Reymond's multiplier; it varies in different

persons in direction and intensity, and in the same person, at different times.

**C., induced.** The galvanic current derived from an *Induction apparatus*. It is an interrupted current, existing only at the time of making and breaking contact. See *Induction current*.

**C., induction.** See *Induction current*.

**C., intensity of.** In a galvanic circuit the intensity of the current is synonymous with the amount of the electricity, and is in direct proportion to the size of the pair of metals.

**C., interrupted.** A galvanic current whose continuity is interrupted by a contact-breaker or rheotome; this may be applied to a continuous current as well as to an induced current.

**C., inverse.** (F. *inverse*, from L. *inversus*, part. of *inverti*, to turn bottom upwards.) In medical electricity, applied to the track of the current from the positive end of a galvanic battery to the centre of the body or part of the body through which it passes; being centripetal to the body.

**C., labile.** (L. *labilis*, fleeting.) A term used to designate a mode of applying a continuous galvanic current, by means of a damp sponge slowly drawn along the surface, whereby the circuit is frequently broken and closed.

**C., muscular.** See *Muscular currents*.

**C., partial.** Same as C., *divided*.

**C., primitive.** The original current through a closed voltaic circuit, as distinguished from C., *derived*.

**C., rectilinear.** (L. *rectus*, straight; *linea*, a line.) An electric current passing along a more or less straight wire.

**C. regulator.** A synonym of *Rheostat*.

**C. reverser.** (L. *revertor*, to turn back.) The same as *Commutator* and *Rheotrope*.

**C., secondary.** (L. *secundus*.) A current produced in a wire placed parallel to another through which a current of electricity is made to pass or is suddenly arrested. The current in the secondary is in the opposite direction to that of the primary when the primary is started; when the primary is stopped the current in the secondary is in the same direction as that in which the current flowed before stoppage in the primary.

**C., sinuous.** (L. *sinuo*, to bend.) An electric current passing along a wire arranged in waves or spirals.

**Currier.** (F. *corroyeur*, from *corroyer*, to dress leather; from Old F. *couroi*, from L. *con*, with; old F. *roi*, ally.) A dresser of tanned skins.

**C.'s su-mach.** The *Coriaria myrtifolia*.

**Curry.** (Perhaps from Pers. *kura*, a name of one of the herbs used; or from Pers. *khur*, meat, flavour.) The name is applied to several dishes seasoned with a powder variously compounded, generally containing black pepper, cardamoms, chillies, cinnamon, coriander seed, cummin, fennigreek, garlic, ginger, mustard, turmeric, and poppy seed; but allspice, almonds, assafoetida, cloves, cocoa nut, mace, mangoes, nutmeg, saffron, tamarinds, and other substances are also used.

**C. powder.** See *Curry*.

**Curryleaf tree.** The *Berbera Kōnigii*.

**Cursores.** (L. *cursor*, a runner.) An Order of the Class *Aves*, consisting of those birds, such as the ostrich, which are fitted for running

and not for flying; the wings are rudimentary; sternum keelless; legs very strong; hind toe wanting or rudimentary; barbs of feathers with no barbules, so that they remain unconnected with each other.

**Curso'ria.** (Same etymon.) A Suborder of the Order *Orthoptera*, having the hind legs formed for walking; body ovate, depressed; head retracted into the prothorax; anal segment without a forceps.

**Cursu'ma.** A name for the *Ranunculus ficaria*, or pilewort.

**C. hæmorrhoida'lis her'ba.** (L. *hæmorrhoidis*, piles; *herba*, springing grass.) The *Ranunculus ficaria*.

**Curs'us.** (L. *curro*, to run.) A running.

**C. matricis.** (L. *matrix*, the womb.) Lencorrhœa.

**C. men'struus.** (L. *menstruus*, monthly.) The menses.

**Cursu'ta.** Name of a foreign root not well known; a strong bitter, and resembling the gentian in appearance and taste; hence termed by Home of Edinburgh *Gentiana lutea sylvestris*, in distinction from the common gentian, which he called *Gentiana lutea sativa*. Probably the *Gentiana purpurea*.

**Curtain.** (F. *courtine*, from Low L. *cortina*, a small court.) Same as *Indusium*.

**Curtu'ma.** Same as *Cursu'ma*.

**Curu'ba.** According to Martius, a form of psoriasis occurring in Brazilian Indians on the hands and feet.

**Curu'ra.** See *Paullinia curura*.

**Curva'men.** (L. *curvo*, to bend.) A curve.

**Curvate.** (L. *curvo*, to bend. F. *courbé*; G. *gekriimmt*.) Bent; bowed; arched.

**Curva'tio.** (L. *curvo*, to bend.) A bending. Applied to an imperfect fracture of a soft bone or a cartilage; a semifracture with bending.

**Curvative.** (L. *curvo*.) Applied to leaves whose margins are very slightly bent from the plane of the blade.

**Curva'tor.** (L. *curvo*.) A bender.

**C. coccy'gis.** (L. *coccyx*, the bone of that name.) A muscle in man, consisting of a few muscular slips extending from the sacrum to the coccyx in front.

**Curv'ature.** (L. *curvo*, to bend. F. *courbure*; I. and S. *curvatura*; G. *Krümmung*.) A bending in the form of a segment of a larger or smaller circle.

**C. of concus'sion.** (L. *concussio*, a shaking.) The persistent bending that takes place in a growing shoot, when the part below, which has ceased to grow, is suddenly and violently struck. The concavity of the curvature is on the side on which the blow has been received. In *Digitalis* and *Lythrum* a single blow is effective; some other plants require fifty or more blows.

**C. of spine.** See *Spinal curvature*.

**C., Pott's.** See *Pott's curvature*.

**Curve.** (L. *curvo*.) A bending.

**C.s. magnet'ic.** See *Magnetic curves*.

**C. of Ca'rus.** (*Carus*, a German obstetrician.) A segment of a circle, having its centre at the symphysis pubis, forming the curve along which the fetal head progresses in its course through the pelvis to emerge at the outlet. It is the central longitudinal axis of the female pelvis.

**C. o. false prom'ontory.** A term by

Barnes for the curve along which the foetal head progresses in its passage through the pelvic brim when the promontory of the sacrum is more prominent than natural; its centre is at the sacral prominence itself.

**Curved.** (L. *curvo*, to bend. F. *courbé*; I. *curvato*; G. *gekrummt*.) Bent like a curve.

**C. line, inferior.** (L. *inferior*, lower. F. *ligne courbe inférieure*.) An arched line extending from the upper part of the anterior inferior spinous process of the ilium to the anterior part of the great sciatic notch.

Also, a synonym of *Occipital ridge, inferior*.

**C. line, middle.** Arises about one inch above the anterior extremity of the crest of the ilium, and arches backwards to the upper part of the great sacro-sciatic notch.

Also called *C. line, superior*.

**C. line, superior.** (L. *superior*, upper. F. *ligne courbe supérieure*.) An arched line extending from about two inches in front of the posterior extremity of the crest of the ilium to the upper part of the great sacro-sciatic notch.

This term is often applied to the line here called *C. line, middle*.

Also, a synonym of *Occipital ridge, superior*.

**Curvembryæ.** (L. *curvus*, bent; *embryo*, F. *curvembryé*.) Applied by De Candolle to a Division of the *Lygynoseæ*, having the radicle bent on the commissure of the cotyledons.

**Curvicau'date.** (L. *curvus*, crooked; *cauda*, a tail.) Having a bent tail.

**Curvico'state.** (L. *curvus*; *costa*, a rib.) Having bent ribs, or rib-like markings.

**Curviden'tate.** (L. *curvus*; *dens*, a tooth.) Having bent teeth.

**Curvifoliate.** (L. *curvus*; *folium*, a leaf.) Having curved or bent leaves.

**Curviform.** (L. *curvus*; *forma*, shape.) Bent evenly; having a curved shape.

**Curvilin'ear.** Same as *Curvilinear*.

**Curvilinear.** (L. *curvus*; *linea*, a line.) Having, being bounded by, or consisting of, a curved line.

**Curvimer.** Same as *Cucumber*.

**Curvinervate.** Same as *Curvinervous*.

**Curvinerv'd.** Same as *Curvinervous*.

**Curvinervous.** (L. *curvus*, curved; *nervus*, a nerve. F. *curvinervé*.) Having curved nerves, applied to leaves.

**C. leaves.** Leaves in which the nerves curve outwards from their origin at the base and approach each other at the apex.

**Curviro'strate.** (L. *curvus*; *rostrum*, a beak. G. *krummschnäbelig*.) Having a crooked beak.

**Curviserial.** (L. *curvus*; *series*, a row.) A term applied to that form of leaf-arrangement in which the leaves of the stem are not inserted on it in vertical ranks one over the other, but distributed on an infinite curve. See *Phyllotaxis*.

**Cus'co.** An Italian physician.

**C.'s speculum.** (L. *speculum*, a mirror.) A bivalve uterine speculum.

Also, same as *Cusco*.

**Cuscocinchonia.** A synonym of *Arquin*.

**Cuscocinchonin.** A synonym of *Arquin*.

**Cuscon'idin.** A substance obtained from Cinchona bark by Hesse.

**Cus'conin.**  $C_{22}H_{26}N_2O_4 + 2H_2O$ . An al-

kaloid obtained from Cinchona bark. Probably the same as *Arquin*.

**Cusculium.** (L. *cusculium*, from *σκόλλω*, to stay.) Old name for kermis berries.

**Cus'cus.** The *Andropogon muricatus*.

**Cuscutha.** (Arab. *chassuth*, or *chessuth*, or *kerhout*, G. *Flachseide*.) A Genus of the Nat. Order *Convolvulaceæ*.

**C. americana.** Jacq. Hab. Antilles. Aperient, laxative, and hydragogue.

**C. chlorocarpa.** (Xλωρός, pale green; καρπος, fruit.) Used as *C. glomerata*.

**C. epilinum.** Vah. (Ἐπί, on; λίνον, flax. F. *cuscutte de lin*.) Used as *C. epithymum*.

**C. epithymum.** Murr. (Ἐπί, upon; θύμος, thyme. F. *epithyme*.) The dodder of thyme. A parasitical plant, having a strong disagreeable smell and pungent taste; recommended in melancholia as laxative and to purify the blood; it was also used in splenic diseases, rheumatism, and gout.

**C. europæa.** Linn. (F. *cuscutte commune*.) Parasitic on the nettle, hop, potato, and other plants. Used as *C. epithymum*.

**C. filiform'is.** (L. *filis*, a thread; *forma*, shape.) The *C. europæa*.

**C. glomerata.** (L. *glomer*, to gather into a round heap.) Hab. United States. Used as a tonic, antiperiodic, and a mild astringent.

**C. major.** (L. *major*, greater.) The *C. europæa*.

**C. minia'ta.** Mart. (L. *miniatus*, cinnabar red.) Hab. Brazil. Used as *C. racemosa*.

**C. mi'nor.** (L. *minor*, less.) The *C. epithymum*.

**C. racemo'sa.** Mart. (L. *racemosus*, full of clusters.) A plant used in Brazilian pharmacy. The juice of the fresh plant is prescribed in sub-inflammatory complaints, hoarseness, and spitting of blood; the plant dried and powdered is applied to wounds to promote cicatrization.

**C. reflexa.** Roxb. (L. *reflexus*, bent back.) Hab. India. Used by the natives to purify the blood, and in bilious disorders. It is also used externally in skin diseases.

**C. tetrandra.** (Τετράς, four; άνδρ, a male.) The *C. europæa*.

**C. umbella'ta.** Kunth. Hab. Brazil. Used as *C. racemosa*.

**C. verrucosa.** (L. *verrucosus*, warty.) The *C. reflexa*.

**C. vulga'ris.** (L. *vulgaris*, common.) The *C. europæa*.

**Cuscuta'ceæ.** (*Cuscuta*.) An Order of the Alliance *Solandra*, or of the Cohort *Polemoniales*, or a Tribe of the Family *Convolvulaceæ*, Order *Tubiflora*. Perigynous Exoëans, with basal placenta and filiform spiral embryo.

**Cuscutææ.** Same as *Cuscuta'ceæ*.

**Cuscutinææ.** Same as *Cuscuta'ceæ*.

**Cushia.** The *Heracleum spondylium*.

**Cushion.** (Old F. *coussin*; Low L. *culectinum*, from L. *culeina*, a cushion.) A soft pillow for support.

In Botany, the enlargement at, or just below, the point of attachment of some leaves.

**C., chaff.** (Sax. *ceaf*.) A long, thin bag, filled with chaff or chopped hay or straw, used as a pad to a fracture splint; or more loosely filled and larger, and arranged with a hollow down the middle, to lay a fractured limb when put up in splints, so that it may be kept still.

**C. pink.** The *Armeria vulgaris*, because of its tufted growth.

# CUSP—CUTANEOUS.

**Cusp.** (*L. cuspis*, a point of a spear.) A point formed by the union of two curved lines, as the point of a leaf.  
Also, the projecting points of the crown of a tooth.

**C., supplemental.** A projection, like a supernumerary tooth, arising from the neck of a tooth, and sometimes found in man.

**Cusparia.** A Genus of the Nat. Order *Rutaceæ*. Same as *Galipaea*.

**C. bark.** See *Cusparia cortex*.

**C. bark, false.** The same as *Angustura bark, false*.

**C. febrifuga.** (*L. febris*, a fever; *fugo*, to put to flight.) The *Galipaea cusparia*.

**C. trifoliata**, Engler. (*L. tres*, three; *folium*, a leaf.) A synonym of *Galipaea cusparia*.

**Cuspariæ cortex**, B. Ph. (*L. cortex*, bark.) *Cusparia* bark. The bark of *Cusparia cusparia*. Also called *Angustura bark, true*.

**Cusparin.** A solid substance found in the bark of *Galipaea cusparia*. It crystallises in tetrahedra, soluble in hot water, alcohol, acids, and alkalis.

**Cuspid.** Same as *Cuspidate*.

**Cuspidate.** (*L. cuspis*, a point of a spear or other weapon. *F. cuspid*; *G. feingespitzt*.) Having a pointed extremity; sharp-pointed. Applied to leaves terminating in a spine.

**C. teeth.** The canine teeth, so called from their shape.

**Cuspidiferous.** (*L. cuspis*; *fero*, to bear. *F. cuspidifere*; *G. spitztragend*.) Having a point.

**Cuspidifoliate.** (*L. cuspis*; *folium*, a leaf. *F. cuspidifolié*; *G. spitzblattrig*.) Having pointed leaves.

**Cuspidiform.** (*L. cuspis*; *forma*, shape. *F. cuspidiforme*; *G. spitzförmig*.) Having the shape of a point.

**Cuspis.** (*L. cuspis*, a point.) Formerly applied to the glans penis.

Also, an old name for a bandage.

Also, the same as *Cusp*.

**Cusset.** France, Département de l'Allier, two miles from Viehy. Mineral waters from two springs, of a temperature of 16° C. (60.8° F.), containing four to five parts per 1000 of sodium carbonate, with a little iron and manganese, and traces of alkaline iodides and bromides with much carbonic dioxide. Used in disorders of the digestive and urinary organs, especially of an anemic or gouty character, in diabetes, and in the results of malarial poisoning.

**Cusso.** B. Ph. (*F. couso*, *kouso*; *G. Kosso*, *Kusso*, *Cusso*.) The flowers and tops of *Brayera anthelmintica*, De Cand. The flowers are small, reddish brown, on hairy stalks; outer limb of calyx five-parted; the segments oblong or oblong-lanceolate, reticulated. It is used as an anthelmintic in tania, usually in infusion. Dose, '25 to '50 oz.

**Custard.** (Mid. E. *crustade*, from *F. crustade*, a pie with a crust.) Formerly a tart or pie with a crust; now applied to a light, soft pudding made of eggs and milk, with some sugar.

**C. apple.** A name of the fruit of several species of *Anona*, from the softness of their pulp.

**Custo'dia virginita'tis.** (*L. custodia*, a keeping of guard; *virginitas*, maidenhood.) The hymen.

**Custos.** (*L. custos*, a guard.) A protection.

A name of the hymen.

**C. oculi.** (*L. oculus*, the eye.) Old name of an instrument for fixing the eye in certain operations.

**Cut.** (A Celtic word; Welsh *cutan*, to shorten.) A wound made with a sharp instrument.

Also, to divide by means of a sharp instrument.

Applied to leaves that are deeply cleft.

**C. throat.** See *Throat, wounds of*.

**Cutam'bulus.** (*L. cutis*, the skin; *ambulo*, to walk.) Old name for a small worm under the cuticle; supposed to be the *Gordius medinensis*.

Also, a former term for an excessive scorbutic itching.

Also, a name for a pain felt under the skin.

**Cutaneal.** Same as *Cutaneous*.

**Cutaneous.** (*L. cutis*, the skin. *F. cutané*; *G. hautig*, zur Haut gehorig.) Of, or belonging to, the skin; skin-like.

**C. absorption.** Absorption by the skin is feeble, and its amount has not been satisfactorily determined even in the case of water, but there seems to be reason for believing that a small quantity, as half a pound, may be absorbed by the skin in half an hour on total immersion of the body after much fluid has been lost by perspiration; small quantities of other substances, as of potassium iodide, veratrin, strychnine, nicotine, cantharides, and mercury, appear to undergo absorption, especially if rubbed into the skin.

**C. anæsthe'sia.** (*An. neg.*; *αἰσθησις*, perception by the senses, sensation.) The loss or diminution of the ordinary tactile sensibility of the skin; its amount is best determined by the aesthesiometer. The skin thus affected is more easily injured by extremes of temperature, and there is frequently a numb or pricking sensation.

**C. blush.** The blush of redness of erythema, erysipelas, and such like skin affections.

Also, a synonym of *Roseola*.

**C. cyst.** See *Cyst, dermoid*.

**C. disea'ses.** Diseases of the skin.

**C. exhalation.** The entire loss by the skin is said to be 1-67th of the total weight of the body in twenty-four hours. The chief substances exhaled are aqueous vapour and carbonic acid gas. The average quantity of carbonic acid gas exhaled is about 4 grammes (61.6 grains) per diem. Temperature has great influence on the quantity, 2.9 grammes at 29.6° C. and 6.3 at 33° C. The average quantity of water exhaled is about 2 lbs. per twenty-four hours, but it varies much with temperature, amount of fluid taken, and exercise. A dead body loses between one and two ounces in twenty-four hours at ordinary temperature by evaporation.

**C. glands.** (*F. glandes cutanéæ*.) The sudoriparous and the sebaceous glands.

**C. hæmorrhage.** See *Hæmorrhage, cutaneous*.

**C. horns.** See *Horn, cutaneous*.

**C. hyperæsthesia.** (*Υπέρ*, above; *αἰσθησις*, sensation.) Excessive sensitiveness of the skin. It is observed in some neuralgias and in other nervous disorders.

**C. medicine.** That which relates to the diseases of the skin.

## CUTANEOUS

**C. nerve of accessory obturator.** A branch of the accessory obturator nerve which joins with one from the anterior branch of the obturator nerve to aid in forming the *C. nerves of obturator*.

**C. nerve of anterior tibial.** The terminal branch of the anterior tibial nerve. It supplies the adjacent sides of the great and second toes, and communicates with the internal division of the musculo-cutaneous nerve.

**C. nerve of arm, external.** A branch of the outer cord of the brachial plexus. It perforates and supplies the coracobrachial muscle, then lies between and supplies the biceps and brachialis anticus, and finally perforates the fascia in front of the elbow at the outer side of the tendon of the biceps, and descends beneath the median cephalic vein to the skin of the forearm. Also, called *Musculocutaneous nerve*.

**C. nerve of arm, internal.** A branch of the inner cord of the brachial plexus. It divides into two branches, which perforate the fascia of the upper arm, the external running beneath the median basilic vein to the front of the forearm, and the internal winding over the inner condyle of the humerus to the back of the forearm.

**C. nerve of arm, small internal.** A branch of the inner cord of the brachial plexus. It pierces the fascia a little below the axilla, and extends to the interval between the olecranon and the inner condyle of the humerus. It supplies the skin of the lower third of the arm on the posterior surface.

**C. nerve of foot, sole of.** This is a branch of the posterior tibial which arises above the os calcis, and, piercing the internal annular ligament, terminates in the integuments of the heel.

**C. nerve of ilioinguinal.** The terminal branch of the ilioinguinal nerve which supplies the integument of the scrotum, labia majora, and the upper part of the thigh.

**C. nerve of lumbar plexus, external.** The same as *C. nerve of thigh, external*.

**C. nerve of median.** A branch arising from the median nerve at the lower part of the forearm. It pierces the fascia above the annular ligament, and divides into two branches, of which the outer supplies the skin over the ball of the thumb communicating with the anterior branch of the external cutaneous nerve; and the inner supplies the integument of the palm of the hand, anastomosing with the cutaneous branch of the ulnar. Both nerves cross over the annular ligament.

**C. nerve of musculocutaneous of arm.** The terminal portion of the musculocutaneous nerve. It passes behind the median cephalic vein, and divides opposite the elbow-joint into an anterior and a posterior branch. The anterior branch descends along the radial border of the forearm to the wrist. It communicates with a branch of the radial and the palmar cutaneous branch of the median, and supplies the skin over the ball of the thumb. The posterior branch supplies the integument of the lower third of the forearm, communicating with the radial nerve and the external or lower cutaneous branch of the musculospiral.

**C. nerve of musculospiral.** These are two in number, and both perforate the outer head of the triceps at its attachment to the humerus. The upper and smaller one follows the

course of the cephalic vein to the front of the elbow, supplying the integument of the lower half of the upper arm on its anterior aspect. The lower branch pierces the deep fascia below the insertion of the deltoid, and runs down the outer side of the arm and forearm to the wrist; near its termination it joins the posterior branch of the external cutaneous or musculocutaneous nerve.

**C. nerve of plantar.** This branch perforates the internal annular ligament, and supplies the integument of the heel and inner side of the sole of the foot.

**C. nerve of thigh, external.** Arises from the second branch of lumbar plexus or from the second and third, pierces the psoas, crosses the iliacus, and appears in the thigh between the anterior iliac spinous processes and beneath Poupart's ligament. It gives a branch backwards to the buttock, and, descending, supplies the outer part of the thigh.

**C. nerve of thigh, internal.** A branch of the anterior crural. It divides into an anterior and an inner branch, the former piercing the fascia lata about the middle of the thigh and supplying the integuments; the latter remains beneath the fascia as far as the knee, and lies along the inner border of the sartorius. It joins with offsets of the obturator and internal saphenous nerves.

**C. nerve of thigh, middle.** A branch of the anterior crural nerve. It perforates the fascia lata, and sometimes also the sartorius, about three inches below Poupart's ligament. It extends to the knee.

**C. nerve of tibial, posterior.** The same as *C. nerve of plantar*.

**C. nerve of ulna.** This nerve arises from the ulna about the middle of the forearm, and divides into a superficial and deep branch. The superficial branch (often absent) pierces the deep fascia near the wrist, and supplies the integument of that region after communicating with a branch of the internal cutaneous nerve. The deep branch lies on the ulnar artery, and ends in the integuments of the palm, communicating with branches of the median. A dorsal cutaneous branch arises about two inches above the wrist, and supplies the inner side of the little finger and the adjoining sides of the little and ring fingers; it sends communicating filaments to the posterior cutaneous branch of the internal cutaneous nerve and to that branch of the radial which supplies the adjoining sides of the middle and ring fingers.

**C. nerves of abdomen.** (*F. rameaux cutanés de l'abdomen*; *G. Hautnerven des Bauchs*.) These are divided into two sets, the lateral and the anterior; the lateral are derived from the five or six lower intercostal nerves, appear between the digitations of the external oblique muscle, and immediately divide into an anterior and posterior branch. The anterior cutaneous nerves reach the surface by piercing the sheath of the rectus muscle. Two other cutaneous offsets from the lumbar plexus, the iliohypogastric and ilioinguinal, appear at the lower part of the abdomen.

**C. nerves of arm.** (*F. nerfs cutanés du membre thoracique*; *G. Hautnerven des armes*.) These are the intercosto-humeral, the two external cutaneous branches of the musculospiral nerve, the internal cutaneous nerve, the lesser internal cutaneous nerve or nerve of Wrisberg, and the internal cutaneous nerve of the

## CUTANEOUS.

musculo-spiral; all of which are derived from the brachial plexus, except the first.

**C. nerves of back.** These nerves are derived from the posterior primary branches of the spinal nerves.

**C. nerves of buttock.** These are branches of the external cutaneous of the thigh, offsets from the posterior primary branches of the lower spinal nerves, from the last dorsal nerve and iliohypogastric nerves, two or three branches of the lumbar and sacral nerves, and from the lesser sciatic nerve.

**C. nerves of cervical plexus.** These are the superficialis colli, the auricularis magnus, and occipitalis minor, which ascend, and the sternal clavicuilar and acromial branches of the supraclavicular nerves, which descend.

**C. nerves of circumflex.** These are branches that are given off from both the upper and the lower divisions of the circumflex nerve. They supply the integument over the lower two-thirds of the deltoid, and the upper part of the triceps muscle.

**C. nerves of dorsal nerves.** These are twelve in number: the six upper being derived from the internal branches of the dorsal nerves, and the six lower from the external branches. The former pierce the rhomboid and trapezius muscles close to the spinous processes. The latter pierce the serratus posticus inferior and the latissimus dorsi in a line with the angles of the ribs.

**C. nerves of face.** These are derived from each of the three divisions of the fifth pair and from the portio dura of the seventh.

**C. nerves of foot, dorsum of.** These are chiefly derived from the musculo-cutaneous and anterior tibial branches of the external popliteal nerve, and from the external saphenous nerve of the internal popliteal; a few twigs proceed from the internal saphenous and the external popliteal trunks.

**C. nerves of forearm.** The inner side of the forearm is supplied from the internal cutaneous nerve, and the outer by the two external cutaneous nerves of the musculo-spiral and by the musculo-cutaneous nerve. The lower part in front is supplied by cutaneous twigs from the ulnar and median nerves.

**C. nerves of hæmorrhoidal, inferior.** These are the superficial perineal nerves. The posterior nerve supplies the back part of the ischiorectal fossa and the integument in front of the anus, communicating with the inferior hæmorrhoidal nerve. The anterior supplies chiefly the anterior part of the ischiorectal fossa, the scrotum, and under part of the penis.

**C. nerves of head.** The skin of the part of the head in front of the ear is supplied by branches of the three divisions of the fifth pair and from the facial; the part just behind the ear also receives a few small branches from the facial; and the remainder of the head is supplied by the great auricular, the great occipital, and the small occipital.

**C. nerves of iliohypogastric.** The terminal branches of the iliohypogastric nerve; the upper or iliac branch supplies the integument of the gluteal region behind the lateral cutaneous branch of the last dorsal nerve. The lower or hypogastric branch supplies the integument of the hypogastric region.

**C. nerves of inguinal region.** (L. *ingeni*, the groin.) These are derived from the

ilioinguinal, the genito-crural, and the anterior crural.

**C. nerves of intercostals.** The same as *C. nerves of dorsal nerves*.

**C. nerves of ischioec'tal region.** These are branches of the inferior hæmorrhoidal nerve, of the fourth sacral nerve, and of the perineal nerves.

**C. nerves of leg, back of.** These are branches of the internal and external saphenous, the external popliteal, the small sciatic, and the internal cutaneous nerve of the thigh.

**C. nerves of leg, front of.** These are derived from branches of the popliteal trunks, viz. the musculo-cutaneous and anterior tibial nerves of the external popliteal, and from the external saphenous nerve of the internal popliteal.

**C. nerves of lumbar nerves.** Branches of the three upper lumbar nerves which pierce the sacrolumbalis and latissimus dorsi muscles, and descend over the back part of the crest of the ilium, to be distributed to the integument of the gluteal region, some filaments passing as far as to the trochanter major.

**C. nerves of neck.** The neck is supplied in front by the superficial cervical and by the inframaxillary branches of the facial nerve, behind, by the posterior primary branches of the spinal nerves.

**C. nerves of obturator.** One of these is an occasional branch which communicates with the accessory obturator nerve, and supplies the integument of the inner part of the thigh as low down as its middle. Instead of this branch the accessory obturator sometimes gives off a large branch, which has a similar distribution.

**C. nerves of patella.** The largest cutaneous patellar branch is derived from the long saphenous nerve, but other branches proceed from the internal branch of the internal cutaneous nerve; some are branches of the long saphenous given off below the knee; and others, branches of the middle and external cutaneous nerves.

**C. nerves of penis, dorsal nerve of.** Branches of the dorsal nerve of the penis, which chiefly run along the sides of the organ.

**C. nerves of perineal nerve.** These are two in number, posterior and anterior. The posterior supplies the back part of the ischioectal fossa, the sphincter ani, and the integument in front of the anus, where it communicates with the inferior hæmorrhoidal nerve, and the back of the scrotum communicating there with the anterior branch and with the inferior pudendal. The anterior branch passes to the fore part of the ischioectal fossa, the scrotum, and the under part of the penis. This branch gives off one or two twigs to the levator ani.

**C. nerves of perineum.** These are derived from the inferior hæmorrhoidal, the superficial perineal nerves, the inferior pudendal, the hæmorrhoidal branch of the fourth sacral nerve, and one or two small branches of the small sciatic.

**C. nerves of popliteal, external.** These are two or three in number, and supply the integument along the back part and outer side of the leg as far as its middle or lower part. The largest is named the communis peronei.

**C. nerves of radial.** These are external and internal. The external is the smaller, and supplies the integument of the radial side and ball of the thumb, joining with the posterior

## CUTANEUS—CUTIDURIS.

branch of the external cutaneous nerve. The internal branch communicates above the wrist with the anterior branch from the anterior cutaneous, and on the back of the hand forms an arch with the dorsal cutaneous branch of the ulnar nerve. It then divides into four digital nerves, the first supplying the ulnar side of the thumb, the second the radial side of the index finger, the third the adjoining surfaces of the index and middle fingers, and the fourth the contiguous sides of the middle and ring fingers. The last named communicates with a filament from the dorsal branch of the ulnar nerve.

**C. nerves of sacral nerves.** Cutaneous branches from those loops of the external branches of the sacral nerves, which are found beneath the gluteus maximus. They are usually three in number, and pierce the gluteus maximus; one near the posterior inferior spine of the ilium, another opposite the end of the sacrum, and the third midway between the other two. They supply the integument over the posterior part of the gluteal region.

**C. nerves of sciatic, les'ser.** These are arranged in two groups, internal and ascending. The internal supply the skin of the upper and inner part of the thigh on its posterior aspect; one of the branches is named the *inferior pudendal*. The ascending branches turn round the lower border of the gluteus maximus, and supply the integument covering its surface; and a few branches descend along the outer side of the thigh. Two or three cutaneous branches are given off from the lesser sciatic as it descends beneath the fascia of the thigh, which supply the back part of the thigh, popliteal region, and upper part of the leg.

**C. nerves of shoulder.** These are the supra-acromial derived from the cervical plexus and a cutaneous branch of the circumflex nerve.

**C. nerves of thigh, front of.** These are derived from the external cutaneous, genitocrural, ilioinguinal, middle cutaneous, lateral cutaneous, and internal saphenous.

**C. nerves of thorax.** These are derived from the cervical plexus (sternal and clavicular) and from the intercostals, which give off lateral and anterior branches.

**C. palmar nerves.** These are small twigs derived from the median and ulnar nerves.

**C. respiration.** See *Respiration, cutaneous*.

**C. vein, cubital.** (L. *cubitus*, the forearm.) The basilic vein.

**C. vein, radial.** (L. *radius*, the bone of that name.) The cephalic vein.

**C. vermination.** See *Malis*.

**Cutaneus.** Same as *Cutaneous*.

**C. musculus.** (F. *muscle cutané*; G. *Hautmuskul, breiter Hautmuskel*.) A name for the platysma myoides muscle.

**Cutch.** A name in India for catechu.

**Cuteera gum.** See *Kuteera gum*.

**Cuterebra.** (L. *cutis*, the skin; *terebro*, to bore.) A Genus of parasitic insects of the Family *Estridae*, Order *Diptera*. The females deposit their eggs under the skin of animals, such as squirrels, hares, and kangaroos, where they develop into a fleshy, ovoid, annulated larva.

**C. noxia'lis**, Goud. The Macaeo worm-fly. Hab. New Granada. The larva is 27 mm. long, white, and consisting of eleven rings, of which the three first are tuberculated, and the

three following are furnished with a double row of black hooks directed backwards. Growing under the skin it causes a painful swelling having an external aperture, from which serum oozes.

**Cut-heal.** (Dan. *kutte*; Sax. *cwith*, the womb.) The *Faleriana officinalis*; probably so called from its efficacy in uterine affections; and then, in apparent conformity with its name, used in wounds. (Prior.)

**Cuti.** A name of catechu.

**Cuticle.** (L. *cuticula*, dim. of *cutis*, the skin. F. *cuticule*; G. *Oberhäutchen*.) The general name for the epidermis, or scarf-skin.

Also, the outer covering of any animal.

In Botany, the outer layer of the epidermal tissue of plants, which may be stripped off the leaves and petals in a thin film; it lines the openings of the stomata and covers the hairs; it consists of cells of epidermic tissue, having their outer walls thickened. The inner layer of epidermic tissue is called epidermis, but some writers reverse terms, the outermost layer with them being the epidermis, the innermost the cuticle.

Also, a pellicle or covering formed on the surface of liquids.

**C., ligneous.** (L. *lignum*, wood.) Term applied by Fremy and Terrel to that part of wood which is insoluble in sulphuric acid. It constitutes about 20 per cent. of oak wood. It is insoluble in potash, but dissolves without residue in chlorine water or nitric acid.

**C., liquid.** A synonym of *Collodion*.

**C. of enamel.** A synonym of *Nasmyth's membrane*.

**C., transplanta'tion of.** A mode of treatment of ulcers or unhealed surfaces for the promotion of cicatrization. It consists in the careful snipping off from a healthy surface of one or more small pieces of skin, so as to include some of the papillary layer of the corium, and placing them at intervals on the granulating surface, where they are retained by an appropriate dressing; if things do well, they are adherent at the end of the fourth day, and cicatrization speedily spreads from them.

**Cuticulous.** (L. *cutis*, the skin; *colo*, to inhabit. F. *cuticule*; G. *hautbewohnend*.) Applied to a Family of the *Æsthi*, the larvae of which live under the skin of animals.

**Cuticula.** Same as *Cuticle*.

**C. dentis.** (L. *dens*, a tooth.) A synonym of *Nasmyth's membrane*.

**Cuticular.** (L. *cuticula*, the skin. F. *cuticulaire*; G. *der Haut betreffend*.) Of, or belonging to, the cuticle.

**C. conjunctiva.** Same as *Conjunctiva, cuticular*. See *Xerophthalmia*.

**C. tissue.** A generic term for the varieties of cellular tissue covering the skin, mucous and serous membranes, and lining the heart, blood-vessels, and lymphatics.

**Cuticularis.** Same as *Cuticular*.

**C. membra'na.** (L. *membrana*, a membrane.) A synonym of the *Dura mater*.

**Cuticulisa'tion.** (L. *cuticula*.) The hardening and thickening of cell structure which occurs in epidermic tissues when forming a cuticle.

**Cuticulo'sus.** (L. *cuticula*.) The sphincter ani; so called because it is close to the skin.

**Cutidur'is.** (L. *cutis*, the skin; *durus*,

hard. *F. bourrelet.*) A synonym of *Coronary cushion*; from its structure.

**Cutification.** (*L. cutis*; *facio*, to make.) A term for *Cuticle*, *transplantation of*.

**Cutig'eral.** (*L. cutis*; *gero*, to bear.) Carrying or bearing skin.

**C. cavity.** (*L. caritas*, a hollow.) A circular depression in the upper border of the hoof of the horse, into which the coronary cushion is received.

**Cutin.** The cuticle of leaves. According to Frémy, it is distinguished from cellulose by its insolubility in an ammoniacal solution of copper sulphite.

**Cutio.** A synonym of the wood-louse.

**Cutis.** (*L. cutis*, akin to Gr. root *κυθ*, *κέρθω*, to cover. *F. peau*; *G. Haut.*) The Skin.

Also, a term for the peridium of some fungi.

**C. ærea.** (*L. æreus*, made of brass.) Bronzed skin, the accompaniment of adrenal disease.

**C. anserina.** (*L. anser*, a goose. *F. peau anserine*; *G. Gänsehaut.*) A term for that condition of the skin, produced by cold and other causes, in which the papillæ become rigid and erect, resembling the skin of a plucked goose; goose-skin.

**C. callosa.** (*L. callosus*, thick, hard. *G. Schwielenhaut*, *Hautverhärtung.*) A hard and thick skin.

**C. carnosæ.** (*L. carnosus*, fleshy.) The *Panniculus carnosus*.

**C. extima.** (*L. extimus*, superl. of *exter*, on the outside.) The epidermis.

**C. gallina'cea.** (*L. gallinaceus*, belonging to poultry.) Same as *C. anserina*.

**C. horrida.** (*L. horridus*, standing on end.) Same as *C. anserina*.

**C. lingua.** (*L. lingua*, a tongue.) The mucous membrane of the dorsum of the tongue.

**C. pendula.** (*L. pendulus*, hanging.) Abnormal relaxation and flabbiness of the skin.

Also, a synonym of *Molluscum fibrosum*.

**C. suilla.** (*L. suillus*, belonging to swine. *F. couenne.*) A term applied to a condition in which parts of the skin are congenitally hard, brownish, elevated, and scantily covered with stiff hairs.

**C. summa.** (*L. summus*, superl. of *supermus*, upper.) The epidermis.

**C. ten'sa chronica.** (*L. tensus*, drawn tight; *chronicus*, lingering.) Induration of the subcutaneous connective tissue.

**C. testa'cea.** (*L. testa*, a shell.) A term applied to the seborrhœa of new-born children when resulting in dry scales.

**C. ultima.** (*L. ultimus*, superl. of *ulter*, further.) The epidermis.

**C. unctuosæ.** (*L. unctus*, anointed.) A synonym of *Stearrhœa*.

**C. variegata.** (*L. variegus*, to make of various colours.) Partial and local removal of the colour of the skin.

**C. vera.** (*L. verus*, true.) The true skin. Same as *Dermis*.

**Cutisation.** The alteration of structure, drying, thickening, and hardening, which takes place in a mucous membrane, when, by change of position, as from prolapsus, it has become exposed to the air and to friction.

**Cutitis.** (*L. cutis*, the skin.) Inflammation of the skin.

**Cutt.** An Indian name for catechu.

**Cutter.** A synonym of *Excavator*. See also *Enamel cutter*.

**Cutting.** The act of making a *Cut*.

A term for a small branch, bearing one or more buds, cut from a plant and fixed in a convenient soil to grow into a new plant.

**C. on the gripe.** (*Eng. gripe*, to hold fast; from Sax. *gripan*, to seize.) A term applied to the mode of cutting for the stone called *Apparatus minor*, from the manœuvre whereby the stone is held firm and caused to project into the perinæum.

**Cuttle.** (*Sax. cudele.*) A cuttlefish.

**C. bone.** Same as *C. fish bone*.

**C. fish.** Common name for the Species of *Sepia*, especially the *S. officinalis*.

**C. fish bone.** The internal skeleton of the Cephalopoda. See *Os sepia*.

**Cut-toothed.** Applied to a leaf which is at the same time cut and toothed.

**Cutubæa.** A Genus of the Nat. Order *Gentianaceæ*.

**C. spica'ta.** Aub. (*L. spicatus*, pointed.) Hab. Guiana. A stomachic and emmenagogue.

**Cutubuth.** (*Arab.*) A name for a kind of melancholia, with extreme restlessness.

**Cutu'cha noxialis.** The *Dermatobia noxialis*.

**Cuur'do canella.** The cinnamon tree, *Cinnamomum zeylanicum*.

**Cuvier, Georges L. C. D.** A French naturalist born at Montpéliard in 1769, died in 1832.

**C., canals' of.** The same as *C., ducts of*.  
**C.'s classification of animals.** *Vertebrata*—including Mammifera, Aves, Reptilia, Pisces; *Mollusca*—Cephalopoda, Pteropoda, Gastropoda, Acephala, Brachiopoda, Cirriopoda; *Articulata*—Annelida, Crustacea, Arachnida, Insecta; *Radiata*—Echinodermata, Vermes intestinales, Acalepha, Polyipi, Infusoria.

**C., ducts of.** Two lateral trunks by means of which the vertebral veins formed by the union of all the intercostal veins open into the heart at an early period of its development. At a later period the left duct of Cuvier atrophies, whilst the right duct enlarges and forms the lower portion of the vena cava superior.

**Cuvierian.** Relating to Cuvier.

**C. organs.** Thread-like tubes opening into the cloaca of some Holothuræ.

**Cuz'co.** A town in Peru.

**C. bark.** A cinchona bark obtained from *Cinchona pubescens*, var. *Pelleteriana*, as well as from *C. scrobiculata*, var. *delondriana*, as described under *Bark, Cusco*.

**C. China.** Same as *C. bark*.

**Cyam'elide.** A white, amorphous, inodorous, insoluble substance, polymeric with cyanic acid.

**Cyamoid.** (*Κύαμος*, a bean; *ειδος*, likeness. *F. cyamoïde*; *G. bohnenhüch.*) Resembling a small bean.

**Cyamus.** (*Κύαμος*.) A bean.

Also, the wood louse, on account of its shape. Also, a Genus of the Order *Lamodipoda*, Subclass *Edriophthalma*, Class *Crustacea*, parasitic on the skins of many whales, which they eat.

**C. ægyptiacus.** A name for the Egyptian bean, *Nelumbium speciosum*.

**Cyanæmia.** (*Κυάνεος*, dark blue; *αἷμα*, blood.) The condition of the blood in *Cyanosis*.

**Cyanæmochrosis.** (*Κυάνεος*, dark blue; *αἷμα*, blood; *χρῶς*, the colour of the skin.

# CYANALLYL—CYANOSIS.

G. *Blutblausucht*.) Term for a blue-blood-like colour of the skin. The same as *Cyanosis*.

**Cyanallyl.** (*Cyanogen*; L. *allium*, garlic)  $C_3H_3CN$ . A substance obtained from oil of mustard.

**Cyanamide.**  $CN.NH_2$ . Obtained by acting on ammonia with chloride or bromide of cyanogen. It forms colourless, deliquescent crystals, easily soluble in water. On adding nitric acid to an ethereal solution of cyanamide nitrate of urea is produced. It differs from urea only in containing one molecule less of water.

**Cyanas.** Same as *Cyanate*.

**C. ammonicus anomalos.** (L. *anomalos*, not according to rule.) A synonym of *Urea*.

**Cyanate.** (F. *cyanate*; G. *cyansaure Salze*.) A salt of cyanic acid. The cyanates have the same composition as the fulminates, but their properties are different.

**C. ammonium.** See *Ammonium cyanate*.

**Cyanea.** Same as *Cyanosis*.

**Cyanella.** A Genus of the Nat. Order *Liliaceæ*.

**C. capensis.** Linn. Hab. Cape of Good Hope. Bulb esculent.

**Cyaneous.** (Κυάνεος, blue. F. *cyané*; G. *himmeblau*, *cyanblau*.) Of a deep blue colour, like Prussian blue.

**Cyanephro'sis.** (Κυάνεος; ἐπιδρωσις, slight perspiration. F. *cyanéphrose*; G. *blauer Schweiss*.) Blue sweat. See *Cyanhidrosis*.

**Cyanes'cent.** (Κυάνεος, blue. G. *cyan-blau*.) Of a dark bluish colour.

**Cyanetum.** Same as *Cyanuretum*.

**Cyanhæmatin.** (Κυάνεος; hæmatin.) A substance supposed to be formed by adding potassium cyanide to an ammoniacal solution of hæmatin; it is only known to exist in consequence of its spectroscopic characters.

**Cyanhidrosis.** (Κυάνεος; ἰδρώς, sweat.) A variety of *Chromhidrosis*, in which the sweat has a bluish tinge. In one case the sweat contained oxide of iron and phosphoric acid; blue sweat has been noticed in copper workers.

**Cyanhydrate.** Same as *Hydrocyanate*.

**Cyanhydric acid.** Same as *Hydrocyanic acid*.

**Cyani flores.** (L. *cyaneus*, blue; *flos*, a flower. F. *fleurs de bleu*, *f. barbeau*; G. *Kornblumen*.) The blue flowers of *Centaurea cyaneus*.

**Cyania.** (Κυάνεος, blue.) A synonym of *Cyanosis*.

**Cyanic.** (L. *cyaneus*, blue.) Of a blue colour.

Also, one of the two series, the others being *Xanthic*, into which De Candolle divided the colours of flowers; this has blue for its base, and will become red or white, but not yellow, the basic colour of the other series.

Also, a term applied to the blue condition of surface in malignant cholera.

Also, of, or belonging to, *Cyanogen*.

**C. acid.** (F. *acide cyanique*; G. *Cyansaure*.)  $CNHO$ . A monobasic acid which does not exist in the free state, inasmuch as on liberation from a cyanate it either changes into its polymeric modifications, cyanuric acid and cyanmelide, or it forms carbon dioxide and urea by combination with water.

**Cyanide.** A salt of *Cyanogen*. The cyanides are known by the white curdy precipitate of cyanide of silver thrown down by silver

nitrate; they are unalterable by light, soluble in ammonia, and insoluble in cold, but soluble in boiling, nitric acid.

**C., gold.** See *Auri cyanidum*.

**C., mercury.** See *Hydrargyri cyanidum*.

**C. of ethyl.** See *Ethyl cyanide*.

**C., potas'sium.** See *Potassii cyanidum*.

**C., silver.** See *Argentii cyanidum*.

**C., zinc.** See *Zinci cyanidum*.

**Cyanidum.** A cyanide.

**C. hydricum.** A synonym of *Hydrocyanic acid*.

**Cyanifer'ruet.** Same as *Ferricyanide*.

**Cyanin.** (Κυάνεος, blue.) A blue, uncrystallisable, colouring matter of flowers, soluble in water and alcohol, insoluble in ether, and reddened by acids.

Also,  $C_{22}H_{25}NI$ , a blue dye prepared from quinolin and iodide of anyl.

**Cyanite.** A salt of *Cyanous acid*.

Also, the name of a native basic aluminium silicate.

**Cyanocho'rous.** (Κυάνεος, dark blue; χλωρός, green. G. *blaugrün*.) Bluish green.

**Cyanocho'ria.** (Κυάνεος; χροιά, the surface of the skin.) A blue colour of the skin.

**Cyanoderma.** (Κυάνεος; δέρμα, the skin.) A blue discoloration of the skin; very often a fictitious appearance.

Also, the same as *Cyanosis*.

**Cyanoder'mia.** (Κυάνεος; δέρμα, the skin.) Same as *Cyanosis*.

**Cyan'odide.** Same as *Cyanide*.

**Cyanoferre'tum kalicum.** (Kali.) Potassium ferrocyanide.

**Cyanofer'ruet.** Same as *Ferrocyanide*.

**Cyan'oform.**  $CH(CN)_3$ . Obtained, by heating chloroform with potassium cyanide and absolute alcohol, in the form of small colourless crystals.

**Cyan'ogen.** (Κυάνεος, blue; γεννίον, to generate. F. *cyanogène*; G. *Blaustoff*, *Kyan*, *Kyanogen*.)  $CN$  or  $Cy$ . A monad compound radical which combines with metals to form cyanides, and with hydrogen to form hydrocyanic acid.

**C. gas.**  $C_2N_2$  or  $Cy_2$ . Density 25.98. It is obtained by heating mercuric cyanide and collecting the gas which is given off over mercury. It is a colourless gas, with an odour of peach kernels; it burns with a purple flame with formation of carbon dioxide and nitrogen. It is very poisonous; it can be solidified under pressure and cold.

**Cyanohydric.** Relating to *Cyanogen* and to *Hydrogen*.

**C. acid.** A synonym of *Hydrocyanic acid*.

**Cyanoil.** An oily fluid formed during the decomposition of the cake left after the expression of almonds and other nuts for the oil. It has an acrid taste, and smells of bitter almonds.

**Cyanol.** (Κυάνεος, blue.) Name given to an artificial basic substance found in the naphtha of coal gas.

**Cyanop'athy.** (Κυάνεος, blue; παθός, disease. F. *cyanopathie*, *ictère bleu*, *maladie bleue*; G. *Blausucht*.) The blue disease. A term for *Cyanosis*.

**Cyanosed.** Afflicted with, or having the appearance of, *Cyanosis*.

**Cyano'sis.** (Κυάνωσις, a dark blue colour. F. *cyanose*, *ictère bleu*; I. *cianosi*; S. *cianosis*; G. *Blausucht*.) Blueness or lividity of

the surface dependant on the circulation of imperfectly oxygenated blood, whether caused by malformation of the organs of circulation or by disease or injury of these or of the respiratory organs in such manner as to interfere with the due aëration of the blood; it is very noticeable in malignant cholera. By some the term has been restricted to the results of malformation of the heart, especially a permanent patency of the foramen ovale; in addition, an open ductus arteriosus, stenosis of the arterial orifices of either side of the heart, an aorta connected with both sides of the heart, and a defective interventricular septum, have been noticed in cases of cyanosis. The cyanosis of congenital malformation probably only differs from the lividity of disease in degree, and is dependent on the same cause, deficient aëration of the blood. In congenital cyanosis, and sometimes in cyanosis from acquired cardiac disease, the fingers become bulbous at the ends.

**C. cardiac.** (*Kardia*, the heart.) Cyanosis depending on malformation of the heart.

**C. encephalic.** (*Ἐνκεφαλος*, the brain.) Cyanosis caused by disease or injury of the central nervous system.

**C. pulmonalis.** (*L. pulmo*, the lung.) The blue condition of skin caused by *Atelactasis pulmonum*.

**Cyanotic.** (Same etymon.) Possessing the features of Cyanosis.

**C. induration.** (*L. induro*, to make hard.) A thickening of the connective tissue of parts and organs under the influence of the condition called Cyanosis.

**Cyanotis.** A Genus of the Nat. Order *Commelyneaceæ*.

**C. axillaris.** (*L. axilla*, the arm-pit.) A decoction of this plant is administered in the East Indies in cases of tympanitis.

**Cyanourine.** Same as Cyanurin.

**Cyanum.** A Cyanide.

**Cyanuramide.**  $C_3N_3H_6$ . Obtained as a polymeric substance when cyanamide is heated. It crystallises in brilliant, rhombic octahedra, soluble in water, and insoluble in alcohol and ether.

**Cyanure'nic acid.** Same as Cyanuric acid.

**Cyanuret.** (*G. Cyanür*.) A cyanide.

**C. of ethyl.** A synonym of *Ethyl cyanide*.

**C. of gold.** Same as *Auri cyanidum*.

**C. of mer'cury.** Same as *Hydrargyri cyanidum*.

**C. of potas'sium.** Same as *Potassii cyanidum*.

**C. of sil'ver.** Same as *Argenti cyanidum*.

**C. of zinc.** Same as *Zinci cyanidum*.

**Cyanuretum.** A cyanuret or Cyanide.

**C. auri.** The *Auri cyanidum*.

**C. ferri duplex.** (*L. duplex*, double.) The *Ferri ferri cyanidum*.

**C. ferri-potas'sicum.** Potassium ferri cyanide.

**C. ferrosofer'ricum.** Same as *Ferri ferrocyanidum*, U.S. Ph.

**C. ferroso-potas'sicum.** The *Potassii ferrocyanidum*, U.S. Ph.

**C. ferrozinc'icum.** Zinc ferrocyanide.

**C. hydrargyricum.** The *Hydrargyri cyanidum*, U.S. Ph.

**C. ka'licum.** (*Kali*.) The *Potassii cyanidum*.

**C. potas'sicum.** The *Potassii cyanidum*.

**Cyanuric acid.** (*Cyanogen*; *urca*.)  $C_3N_3H_3O_3$ . Obtained by heating dry urca in a flask, when it gives off ammonia and leaves a dirty-white, amorphous solid, which is dissolved by heat in strong sulphuric acid, nitric acid added till the liquid is colourless, then mixed with water, when the cyanuric acid separates in colourless, efflorescent, oblique, rhombic prisms; soluble in hot, very slightly in cold, water.

**Cyanurin.** (Same etymon. *F. cyanourine*; *G. Harnblau*.) A blue colouring matter found in some diseased conditions of the urine, and produced by the decomposition of indican, or by the action of acids on that body; it forms dark blue prismatic crystals, soluble in alcohol, ether, and chloroform. See *Urine, blue*.

**Cyanus.** (*Κύανος*, blue.) The *Centaurea cyanus*.

**C. ægypti'acus.** The Egyptian bean, *Nelumbium speciosum*.

**C. arvensis.** Münch. (*L. arvensis*, belonging to a field.) The *Centaurea cyanus*.

**C. ma'jor.** (*L. major*, greater.) The *Centaurea montana*.

**C. seg'etum.** Bank. (*L. seges*, a cornfield.) The *Centaurea cyanus*.

**C. vulga'ris.** Lob. The *Centaurea cyanus*.

**Cy'anyl of Bou'tin.** A product of the action of nitric acid on aloes.

**C. of Gibbs.** The group NCHO in combination.

**Cyar.** (*Κόρα*, a hole.) Old name, used by Hippocrates, *de Rat. Viet.* in *Acut. t.* 123, for the *Meatus auditorius internus*.

**Cyasma.** (*Κύα*, to be pregnant.) The freckles which are sometimes seen on the forehead, lips, and hands of pregnant women.

**Cyath.** An abbreviation of *Cyathus*, which see.

**Cyathe'a.** (*Κύαθος*, a cup.) A Genus of the Tribe *Polypodiaceæ*, Nat. Order *Filices*.

**C. frag'ilis.** The *Cystopteris fragilis*.

**C. medulla'ris.** (*L. medulla*, marrow.) Ponga. This plant has been used for food. The resin is used as a vermifuge.

**Cyatheaceæ.** (*Cyatheæ*.) A Tribe of the Order *Filices*, having an oblique, excentric annulus, with transverse dehiscence, and often without an indusium.

**Cyathiform.** (*L. cyathus*, a cup or glass; *forma*, resemblance. *F. cyathiforme*; *G. becherförmig*.) Shaped like a drinking glass or cup. Applied to corollæ of this appearance.

**Cyathis'cus.** (*Κύαθος*, a cup. *G. Becherchen*.) A little cup.

Old name for a kind of probe with a small cup or spoon-shaped hollow at one end, for extracting anything out of a cavity. (Goræus.)

**Cyathium.** (*L. cyathus*, a cup. *G. Kelchkätzchen*.) The inflorescence terminating each of the branches of the cymose umbels of the Euphorbia. It consists of a calyx-like involucre, between the five lobes of which glandular or scaly appendages are placed; within it are situated numerous male flowers and one female flower.

**Cyathocéphalus.** (*Κύαθος*; *κέφαλη*, head.) A sexually mature form of cestoid worm.

**C. trunca'tus.** (*L. truncus*, to cut off.) Found in the pylorus of *Perea fluviatilis*.

**Cyathoid.** (*Κύαθος*, a cup; *εἶδος*, like-

# CYATHOLITH—CYCLIC.

ness. *F. cyathoides*; *G. becherähnlich*.) Resembling a cup.

**Cyatholith.** (Κύαθος; λίθος, a stone.) A coccolith having the form of two cups placed foot to foot; found in certain of the Radiolaria.

**Cyathostoma.** (Κύαθος; στόμα, a mouth.) A parasitic worm found in nasal fossae of some gulls; the female is much the larger.

**Cyathozoid.** (Κύαθος; ζῶον, an animal, εἶδος, likeness.) The hindermost division of the blastoderm of the egg of Pyrosoma, one of the Tunicata; it is a rudimentary zooid, and eventually atrophies.

**Cyathus.** (Κύαθος, a drinking cup. *G. Becher*.) Term employed in prescriptions to signify a wine-glass.

Ancient term for a liquid measure, the twelfth part of a sextarius; also for a solid measure equal to ten drachms.

Also, a term for the cup-shaped receptacles on the upper surface of the rhalloid stem of some of the *Marchantiaceae*, and which contain gemmae or buds which develop agamously into new plants.

**C. cerebri.** (*L. cerebrum*, brain.) The infundibulum of the brain.

**Cybe.** (Κύβη.) The head.

**Cybellion.** (Κυβέλιον.) The violet.

**Cybiton.** (Κύβιτον, the elbow.) Same as *Cybitus*.

**Cybium.** (Κύβιον, a kind of tunny fish.) A Genus of the Group *Acanthopterygii*.

**C. Commersonii**, Cuv. Scir fish. The liver supplies an oil which has been used as cod-liver oil.

**Cyboïdes.** Same as *Cuboïdes*.

**Cybotium.** See *Cibotium*.

**Cycada'ceæ.** (*Cycas*.) A Nat. Order of gymnospermous dicotyledons, with a simple continuous stem, parallel-veined pinnate leaves, and antheriferous cone scales. Small trees resembling palms, but closely related to ferns. Natives of the tropics and temperate parts of America and Asia; not found in equinoctial Africa. They once formed a large part of the vegetation of Great Britain.

**Cyca'deæ.** Same as *Cycadaceæ*.

**Cycads.** The plants of the Genus *Cycadaceæ*.

**Cycas.** (Κύκας, a kind of Ethiopian palm tree. *G. Sagouum*.) A Genus of the Nat. Order *Cycadaceæ*.

**C. cafræ'a**, Thunb. Meal bark tree. The pith of the trunk is made into a kind of sago.

**C. circinnalis**, Linn. (*L. circinnus*, a curl.) A kind of sago is extracted from the pith of this plant called Bourbon sago; the fruit is eaten in the Moluccas, and a kind of flour of bad quality is procured from the kernels pounded in a mortar. It also yields a clear transparent gum resembling tragacanth, which is applied to malignant ulcers, in which it excites suppuration very rapidly. The scales of the cone are narcotic.

**C. inermis**, Lour. (*L. inermis*, unarmed.) A sago, called Cochín China sago, is obtained from this species.

**C. revoluta**, Thunb. (*L. revolutus*, part. of *revolver*, to roll back.) In Japan a kind of sago is procured from the cellular substance occupying the interior of the stem of this species.

**Cyc'con.** (Κυκείων, from κυκλῶν, to mix.) Ancient term for an article of diet, or miscel-

laneous potion, having at the same time the quality of food and of drink. There were two kinds: one made of flour and water, and the other, more generous and delicate, of various kinds of flour with wine, also sometimes prepared with honey and cheese; the word is rendered *Caudle* by Latin lexicographers; mentioned by Hippocrates, *de Diet.* ix, 1, 2.

**Cy'cima.** (Κυκάω, to mix.) Old name for litharge; because formed from a mixture of the ore with lead. (Ruland.)

**Cyclamen.** (Κυκλαμῖς, from κύκλος, a circle; from the spiral peduncle, or from the roundness of its leaves and roots. *F. cyclame*; *L. pan porcino*; *G. Erdscheibe*, *Schweinsbrod*.) A Genus of the Nat. Order *Primulaceæ*.

**C. europæum**, Linn. (*F. cyclame*, pain de pourceau; *G. Saubrod*, *Schweinsbrod*, *Alpen-eichelchen*.) The sowbread, the tuber of which is drastic, purgative, and emetic; it has been used to procure abortion; the fresh tuber is used as a stimulating application to carbuncle and abscesses. Dose, five grains. Also called *Arthanita*.

**C. hederæfo'lium**, Ait. (*L. hederæ*, ivy; *folium*, a leaf.) Hab. South Europe. Properties as *C. europæum*.

**C. persicum**, Mill. (*L. persicus*, Persian.) Properties as *C. europæum*.

**Cyclamen.**  $C_{20}H_{34}O_{10}$ . A glucoside obtained from the roots of *Cyclamen europæum*. It is emetic and purgative, its action resembling that of apomorphin and emetin. Also called *Arthanitin* and *Primulin*.

**Cyclaminum.** Same as *Cyclamen*.

**Cyclaminus.** Same as *Cyclamen*.

**Cyclantha'ceæ.** (Κύκλος, a circle; ἄνθος, a flower.) A synonym of *Pandana'ceæ*, the screw-pines.

**Cyclanth'eæ.** Same as *Cyclanthaceæ*.

**Cycle.** (Κύκλος, a circle. *F. cycle*; *G. Zirkel*.) Term for a continual revolution of numbers which go on without any interruption from the first to the last, and then return again to the first. See also *Cyclos*.

Also, in Botany (*G. Blattwirbel*), the series of leaves or of spirals, passing through their insertion, which intervene between any leaf on a stem and the one perpendicularly above it.

**C. hebdom'adal.** (ἑβδομάς, seven.) The supposed period of seven units, days or years, which was supposed to be influential over the bodily functions.

**C., hep'tal.** (ἑπτὰ, seven.) Same as *C., hebdomadal*.

**Cyclea.** (Κύκλος.) A Genus of the Nat. Order *Menispermaceæ*.

**C. Burman'ni**, Miers. Hab. Malay. Used as a bitter and antiperiodic.

**C. pelta'ta**, Hook and Thomp. (*L. pelta*, a shield.) Hab. Malay. A bitter febrifuge.

**Cyclenceph'alus.** (Κύκλος; ἐγκέφαλος, the brain.) Same as *Cyclocephalus*.

**Cycle'sis.** (Κύκλσις, a revolution.) Same as *Cyclosis*.

**Cy'clis.** (Κυκλικός, circular. *G. kreisförmig*.) Of, or belonging to, a cycle or circle.

Also (*G. kreisrund, zirkelrund*), the same as *Verticillate*.

**C. flower's.** A term applied to those flowers whose foliated parts are arranged in whorls.

**C. meth'od.** The plan of treatment described under *Cyclos*.

**Cyclical.** (Same etymon.) Relating to, or arranged in, a cycle or circle.

Also, in Botany, rolled or coiled up circularly; as is the case with the embryos of some seeds.

**Cycliotomy.** (Κυκλικός, circular; τομή, section.) The division of the ciliary body. See *Hancock's operation*.

**Cyclis'cus.** (Κυκλίσκος, from κύκλος, a circle.) Old term, used by Galen, *de Simp. Facult.* x, § Chole, for a lozenge.

Also, a name for an instrument of a semilunar shape for scraping bones. Galen, *de Mat. Med.* vi, 6, Paulus Ægineta, vi, 90, Dr. Adams's Transl. vol. ii, p. 433.

**Cyclis'mus.** Same as *Cyclis'cus*.

**Cyclitis.** (Κύκλος, a circle. *F. cyclite*; *G. Strahlenkörperentzündung*.) Inflammation of the region of the ciliary processes in the eye, and but slightly implicating either the iris in front or the choroid behind, though when protracted it often extends to these parts. The inflammation may assume the serous, the plastic, or the suppurative form. In all cases the ciliary region of the sclerotic is injected with blood. The aqueous and vitreous are rendered more or less cloudy, reducing the sharpness of vision, and greatly interfering with ophthalmoscopic examination. There is ciliary neuralgia around and tensive pain in the eye. The iris is of medium size and sluggish in action. Hyphæma and hypopyon are often present. See *Iridocyclitis*.

**C. plastica.** (Πλάσσω, to form.) Cyclitis attended with effusion of lymph matting together adjoining parts, and hence producing more or less complete posterior synechia and occlusion of the pupil.

**C. purulen'ta.** Cyclitis attended with the effusion of pus, which may either form a persistent hypopyon or may come and go with exacerbation of the usual symptoms of cyclitis.

**C. serosa.** (*L. serium*, whey.) Cyclitis in which, whilst the symptoms of inflammation of the ciliary region are well marked, there is little tendency to adhesion between the adjoining parts.

**C. vasomoto'ria.** (*L. vas*, a vessel; *motus*, motion.) A peculiar form of cyclitis referred by Samuelsohn to lesion of the sympathetic system, and accompanied by hemimerania, injection of the ciliary region, contraction of the pupil, and herpes of the face. It is properly an angioneurosis.

**Cyclobranchia'ta.** (Κύκλος; βράγχια, the gills.) A Suborder of the Order *Prosobranchiata*, Class *Gastropoda*, having conical, inoperculate shells, two tentacles, with eyes at the bases; foot large, flat, around the base of which, under the border of the mantle, the foliated branchiæ form a complete circle.

**Cyclobranchiate.** (Same etymon.) Having the branchiæ arranged in a circle.

**Cyclocarpous.** (Κύκλος; καρπός, fruit. *F. cyclocarpe*; *G. kreisfruchtig*.) Having orbicular fruit.

**Cyclocaute'rium.** (Κύκλος; καντήριον, a branding iron.) A circular cautery.

**Cyclocentric.** (Κύκλος; κέντρον, the centre.) A term applied to those coiled shells which have the starting-point of the spiral at a little distance from the centre, so that the first whorl runs around it.

**Cyclocephalic.** (Κύκλος; κεφαλή, the head.) Having the characters of a *Cyclocephalus*.

Also, applied to the form of the head of an hydrocephalic person.

**Cyclocephalus.** (Κύκλος; κεφαλή, the head.) A monster having two contiguous eyes, or a double eye in the median line, with only an atrophied nasal organ.

**Cycloce'alous.** (Κύκλος; κοιλία, the bowels. *F. cyclocæle*; *G. kreisdarumig*.) Having a circularly-disposed intestinal canal.

**Cyclocot'yle.** (Κύκλος, a circle; κοτύλη, a small cup.) A sexually mature form of trematode worm.

**C. belo'nes.** (Βελόνη, a sea fish.) Found on the body of *Belone acus*.

**Cycloganglia'ta.** (Κύκλος; γάγγλιον, a nerve knot.) Grant's term for Mollusca, in allusion to the circular disposition of the cephalic ganglia round the œsophagus.

**Cycloganglion'ic.** (Κύκλος; γάγγλιον, a nerve knot.) A term applied by Marshall Hall as synonymous with *Ganglion'ic*.

**Cyclog'enous.** (Κύκλος; γεννώω, to produce.) Having wood disposed in concentric circles.

**Cy'clogens.** (Κύκλος; γεννίω, to produce.) A division of plants which includes all whose wood is formed in concentric circles; synonymous with *Æcogens*.

**Cy'cloid.** (Κύκλος, a circle; είδος, likeness.) Term for a curve described by a point in the periphery of a circle rolling on a straight line.

**C. scales.** Fish scales which are circular or elliptical in shape, with a more or less even posterior margin, without a covering of enamel, and with concentric striation.

**Cyclolo'bæ.** (Κύκλος; λόβος, a lobe.) A Division of the Nat. Order *Cheimorodiaceæ*, in which the embryo is curved around a farinaceous endosperm.

**Cyclone.** (Κυκλῶν, pres. part. of κυκλώω, to whirl round.) A circular storm revolving at a great rate round a calm centre which moves on at a speed of two to thirty miles an hour; a cyclone is preceded by a considerable fall of the barometer and by complete calm.

**Cycloneu'ra.** (Κύκλος; νεύρον, a nerve.) A synonym of *Radiata*, in allusion to the circular arrangement of the nervous axis.

**Cycloneu'rous.** (Κύκλος, a circle; νεύρον, a nerve.) Having a circular nervous arrangement, as the *Radiata*.

**Cyclon'ic.** Relating to a *Cyclone*.

**Cyclopanophthal'mia.** (Κύκλωψ, a Cyclops; αν, neg.; ὀφθαλμός, the eye.) A foetal monstrosity having a central orbit like a Cyclops, with or without eyelids, but with no ball of the eye.

**Cyclophor'ia.** (Κύκλος, a circle; φορέω, to carry. *G. Kreislauf*.) A term for the circulation of the blood or other fluids.

**Cyclop'ia.** (Κύκλωψ, a Cyclops. *F. cyclop'ie*; *G. Kyklopie*.) A kind of monstrosity consisting in the fusion of two eyes into one place in the middle of the forehead, like the Cyclops.

It is a normal condition of some Crustacea, as the Daphnia.

Also, a Genus of the Nat. Order *Leguminosæ*.

**C. genisto'ides.** (*L. genista*, the broom; *Gr. είδος*, likeness. *G. Honigthee, Capthee*.) Bush tea. Hab. South Africa. Used as an expectorant in chronic bronchitis and phthisis. The leaves are employed in the Cape of Good

Hope as a substitute for tea; they appear to be mixed with the leaves of the *C. brachypoda*, *galvodes*, *longifolia*, and *Vogelii*.

**Cyclopion.** (Κύκλωσις, to surround; ὤψ, the eye.) Term used by Aristotle for the white of the eye. (Gorras.)

**Cyclops.** (Κύκλωψ, the round-eyed; from κύκλος, a circle; ὤψ, the eye.) A fetal monstrosity having the two eyes united into one and placed medially.

**Cyclopteris.** (Κύκλος; πτερίς, a fern.) A Genus of the Nat. Order Filices.

**C. fragilis.** The *Cyclopteris fragilis*.

**C. rhætica.** (L. *rheticus*, Rhætian.) The *Cyclopteris fragilis*, var. *dentata*.

**Cyclopterus.** (Κύκλος; πτερόν, a wing. G. *rundflügelig*.) Round-winged.

Also (G. *rundflossig*), round-finned.

**Cyclo'sis.** (Κύκλωσις, to travel in a circle.) Term for the act of girding about, or leading around.

Also, a synonym of *Circulation*.

Also, a name given by Schultz to the circulation of the latex in the laticiferous vessels or cinenchyma, a condition which has been doubted.

Also, applied to the revolution of the protoplasm and chlorophyll granules in Desmids, Diatoms, the cells of Chara, Anacharis, and other higher plants.

Also, applied to a similar movement seen in the pseudopodial network of Rhizopods.

**Cyclostomata.** (Κύκλος; στόμα, a mouth.) A Suborder of the Order *Gymnolaemata*, Class *Polysora*, in which the cells are tubular, partially free or wholly connate, with large terminal orifices; no avicularia nor vibracula.

Also, a synonym of *Cyclostomi*.

**Cyclostomi.** (Κύκλος; στόμα. G. *Rundmäuler*.) Cuvier's term for a Subclass of the Class *Pisces*, with a circular or semicircular suctorial mouth, as the lampreys. Same as *Marsipobranchii*.

**Cyclostomous.** (Κύκλος; στόμα. G. *rundmäulig*.) Round-mouthed.

**Cyclosyphillidochthus.** (Κύκλος, a circle; *syphillidochthus*.) Circular, syphilitic tubercle.

**Cyclotome.** (Κύκλος; τομή, a cutting.) An old instrument intended to fix the eye and to make the corneal incision in the operation for cataract. It consisted of a metallic ring, which was placed on the anterior part of the eye, and a cutting blade impelled by a spring.

**Cyclovertebral.** (Κύκλος; L. *vertebra*, a spine bone.) A term for the body or centrum of a vertebra.

**Cyclozo'a.** (Κύκλος, a circle; ζῶον, an animal. F. *cyclozoaire*; G. *Kreisthier*.) An old name for a type of animals the body of which is generally constructed upon a circular plan, including the *Aclepha* and *Radiaria*.

**Cyclus.** (Κύκλος. G. *Kreis*.) A circle. See *Cycle*.

Also, a term applied by the disciples of the methodic school of physicians to a mode of administration of remedies, hygienic and medicinal, through a fixed consecutive series of days. It was used chiefly in chronic diseases. Cœlius Aurelianus distinguished three kinds of cycles or periods: the first, *Cyclus resumptivus*; the second, *C. metasyncriticus*; and the third, an unnamed form, which was used after the metasyncritic. It consisted chiefly in the abstraction of all the acrid and salt foods which were al-

lowed in the second form, and in the administration of an emetic on the second day. The cycle was resumed several times if needed.

**C. amphigenes.** (Ἀμφί, around; γίνωμαι, to produce.) The production of bionta by the sexual congress of parents. See *Metagenesis* and *Hypogenesis*.

**C. generationis.** (L. *generatio*, a begetting. G. *Zeugungskreis*.) A term applied by Hæckel to a genealogical individual of the first order, that is to say, it represents the complete sum of the organic forms which proceed from a single physiological individual from the moment when this is generated to the time when the same organic form is directly or indirectly (through the intercalation of one or more intermediate generations) produced. He distinguishes two chief forms of cycles: *Monogenesis*, or development without sexual intercourse, an example of which is afforded in fission or Schizogenesis, and also in Sporogenesis; and *Amphigenesis*, in which the development of the bionta takes place by sexual act, of which there are two subordinate modes, namely by *Metagenesis* and by *Hypogenesis*.

**C. metasyncriticus.** (Μετασυνκρίνω, to discharge peccant humours through the pores.) The second period of the cycle of the Methodist, in which stronger forms of food were allowed.

**C. monogenes.** (Μόνος, alone; γίνωμαι, to produce.) The same as *Monogenesis*.

**C. resumptivus.** (L. *resumptivus*, restorative.) The first period of the cycle of the Methodists. Its purpose was to restore the patient after the administration of drugs, perhaps imprudently used, by nourishing simple diet and gentle exercises, gradually increased in activity. It lasted nine days.

**Cydar.** (Arab.) Old name for stannum or tin. (Ruland.)

**Cy'der.** Same as *Cidr*.

**Cy'derach.** The *Polygonum hydropiper*.

**Cydis'ta.** A Genus of the Nat. Order *Bignoniaceæ*.

**C. æquinoctialis.** Miers. The *Bignonia æquinoctialis*, Linn.

**Cydonia.** (L. *cydonia*, from *Cydon*, in Crete, now called Canea, where it grows wild.) A Genus of the Nat. Order *Rosaceæ*.

**C. europæa.** Sav. The *Cydonia vulgaris*.

**C. maliformis.** (L. *malum*, an apple; forma, shape.) The *C. vulgaris*.

**C. vulgaris.** Pers. (L. *vulgaris*, common. F. *coignassier*; G. *Quittenbaum*.) The quince tree.

**Cydoniæ.** Plural and genitive singular of *Cydonia*.

**C. fructus.** (L. *fructus*, fruit. F. *coing*; I. *mela cotogna*; S. *membrillero*; G. *Quitte*.) Quince, the fruit of *Cydonia vulgaris*; it is astringent and stomachic, and is used, when cooked, as food.

**C. semen.** (L. *semen*, a seed. F. *semences*, or *pépins de coings*; G. *Quittensamen*, *Quittenkerne*.) Quince seed. It contains 20 per cent. of vegetable mucus, cydonin, which is used as the basis of collyria, in the form of *Mucilago cydonie*.

**Cydonian.** (L. *cydonia*, the quince tree.) Of, or belonging to, the quince tree; made of quinces.

**Cydoniatum.** (L. *cydonia*, a quince.)

Old term for a confection made of quinces and aromatic substances.

**Cydonin.** (L. *cydonia*, a quince. G. *Quittenschleim*.)  $C_{18}H_{28}O_{14}$ . The mucilage of quince seeds, forming the chief part of the secondary membrane of the epidermis of the seed; it exists in two modifications, soluble and insoluble. Heated with dilute sulphuric acid it takes up one equivalent of water, and forms an equivalent of cellulose and two of gum.

**Cydonites.** (Κυδωνίτης.) Quince wine.

**Cydonium**, U.S. Ph. The seeds of the quince, *Cydonia vulgaris*. See *Cydonia semen*.

Also (F. *coing*; G. *Quitte*), a quince.

**C. malum.** (L. *malum*, an apple.) The quince, the fruit of the *Cydonia vulgaris*.

**Cye'ma.** (Κύημα, that which is conceived; from *κύω*, to bear in the womb.) Old term for the ovum or product of conception, or rather the complete rudiments of the fetus.

**Cyesicolica.** Same as *Encycolica*.

**Cyesidiarrhoea.** (Κήσις, pregnancy; *δαρρροια*, diarrhoea.) The diarrhoea which was supposed to be caused by pregnancy.

**Cyesio'gnomon.** (Κήσις; γνώμων, one that knows. G. *Schwangerschaftszeichen*.) A sign of pregnancy.

**Cyesio'gnos'is.** (Κήσις; γνώσις, a knowing.) The diagnosis of pregnancy.

**Cyesio'gnostics.** (Κήσις; γνωστικός, the power of knowing.) The art of detecting pregnancy.

**Cyesiology.** (Κήσις; λόγος, an account. G. *Schwangerschaftslehre*.) The doctrine of pregnancy.

**Cye'sis.** (Κήσις.) Pregnancy. Also conception.

**Cye'steine.** Same as *Kiestin*.

**Cyetic.** (Κυητικός, relating to conception.) Relating to pregnancy.

**Cygnus.** (Κύκνος, a swan.) The swan. A Genus of the Group *Lamellirostres*, Order *Anseres*.

**C. ol'or.** Linn. (L. *olor*, a swan.) The swan.

**Cyla.** (Κύλα, the parts under the eyes.) Old term for the lower eyelids.

**Cylich'ne.** (Κυλίχνη, a cup.) Old name for a pill box, a small cup, or gallipot, or a box for medicines. Galen, *Exeg. Dict. Hipp.*

**Cylicot'omy.** (Κυλίξ, a cup; *τομή*, a cutting.) Division of the ciliary muscle; so called from the form of the muscle.

**Cylides.** (Κυλίδης, the parts under the eyes.) The lower eyelids.

**Cylinder.** (Κύλινδρος, from *κυλίνδω*, to roll. F. *cylindre*; G. *Cylinder*, *Zylinder*, *Walze*.) A solid formed by the rotation of a rectangle about one of its sides; so that it is extended in length, equally round, and its ends or extremities are equal circles.

Also, a name given to the stethoscope.

Also, a roll of plaster.

**C.-axis.** (L. *axis*, an axle-tree. F. *cylindrer d'axe*; G. *Axencylinder*.) Parkinje's term for the central or axial part of a nerve tube; it is greyish in colour, somewhat flattened, continuous, homogeneous, and of a diameter varying from .001 mm. to .004 mm.; it may be coloured by carmine and gold chloride, and is caused to swell by acetic acid; silver nitrate produces transverse dark marks. According to some, it is faintly fibrillated; near their termination

some divide, as in the cornea, and some present enlargements, as in the retina. The cylinder-axis is the essential conducting part of the nerve tube, and is continuous with the cylinder-axis processes of the nerve cells.

**C.-axis pro'cess.** (F. *prolongement axile*; G. *Axencylinderfortsatz*.) A term applied to the process of a nerve cell which becomes the cylinder-axis of a nerve tube; each cell only sends off one of these processes.

**C. machine.** An apparatus for developing Franklinic electricity, in which the electricity is generated by rotating a cylinder of glass against a rubber coated with amalgam. The electricity produced by the friction is received upon a row of points projecting from the prime conductor, which are placed in immediate proximity to the cylinder on the opposite side to the rubber.

**C.s, re'nal.** (L. *ren*, the kidney.) Same as *Renal casts*.

**Cylindra'ceous.** (Κύλινδρος. G. *walzenförmig*.) Approaching to a cylindrical shape.

**Cylindraneurysma.** (L. *cylindrus*, a cylinder; *aneurysm*. F. *cylindraneurysme*; G. *cylindrerförmiges Aneurysma*.) Cylindriform aneurysm.

**Cylindranther'eæ.** (L. *cylindrus*; *anther*.) A Tribe of the Nat. Order *Compositæ*, so called from the cylinder produced by the united anthers.

**Cylindren'chyma.** (Κύλινδρος; *εγχυμα*, an infusion.) Plant tissue composed of cylindrical cells.

**Cylindri.** (L. *cylindrus*.) Cylinders.

**C. membrana'cei re'num.** (L. *membranaceus*, formed of membrane; *ren*, the kidney.) The infundibuli of the kidney.

**Cylindric'al.** (L. *cylindrus*, a cylinder. F. *cylindrique*; G. *cylindrisch*, *walzenförmig*.) Shaped like a cylinder.

**C. epithelium.** See *Epithelium*, *cylindrical*.

**C. eye.** See *Eye*, *cylindrical*.

**C. lens.** (G. *Cylinderbrille*.) A lens which has been ground upon a cylinder instead of a sphere. Such a lens is plane in one direction, that is to say, has no refractive power, whilst in the other, which is known as the axis, and which answers to the surface upon which it was ground, it possesses a certain refractive index, and is either concave or convex. If a cylindrical convex lens is placed upon a cylindrical concave lens of corresponding strength, so that the two axes are parallel, the surfaces of the two lenses are parallel and their refractory power is *nil*; but, in proportion to the obliquity of direction, the refractive power becomes greater until the maximum is reached perpendicular to the axis. Cylindrical lenses are employed to remedy defects in the eye due to astigmatism.

**Cylindri'form.** (L. *cylindrus*; *forma*, shape.) Shaped like a cylinder.

**Cylindristach'yous.** (Κύλινδρος, a cylinder; *στάχυς*, an ear. F. *cylindristachyè*; G. *cylinderröhrig*.) Having flowers disposed in cylindrical ears or spikes.

**Cylindrobasioste'monous.** (Κύλινδρος; *βάσις*, the base; *στήμων*, a thread. F. *cylindrobasiostémone*.) Applied to plants having the stamens soldered together by the base of the filaments.

**Cylindrocar'pous.** (Κύλινδρος; *καρ-*

πος, fruit. *F. cylindrocarpe*; *G. cylinderfruchtig.*) Having cylindrical fruit.

**Cylindrocephalic.** (Κύλινδρος; κεφαλή, the head.) Having a cylindrical or long head.

**Cylindroid.** (Κύλινδρος; εἶδος, likeness.) Having a cylindrical shape.

**C. protuberance.** (*L. protubero*, to swell out.) A synonym of the *Hippocampus major*.

**Cylindroides.** Same as *Cylindroid*.

**Cylindroma.** (Κύλινδρος, a cylinder. *G. Cylindrom*, *Siphonum*, *Röhrengeschwulst*, *Schlauchknorpelgeschwulst*.) A term applied by Billroth to a tumour occurring chiefly in the orbit and stomach, and characterised by hyaline cylinders with globular or club-like processes, which form a framework, within which winds another system of embryonic cellular cylinders resembling cactus branches. These two sets of branches are surrounded by a fibrous capsule, which breaks up the tumour into nodules. It would appear that several varieties of morbid growth undergoing partial colloid change have been included under this term; but it is contended that there is a distinct new formation, probably arising from the connective tissue, or from a combination of sarcoma and myxoma, and having many of the characteristics of some forms of angioma and sarcoma. *Cylindroma* in some of its varieties has been described as a plexiform sarcoma, as adenoid cancer, mucous canceroid, cylindrical epithelioma, and under other names.

**C. carcinomatoïdes.** (Καρκινος, cancer; εἶδος, likeness.) A form of carcinoma in which the cell-nests contain in their interior hyaline spheres from colloid degeneration.

**Cylindrophorus.** (Κύλινδρος, a cylinder; φέρω, to bear.) A sexually mature form of cestode worm.

**C. typicus.** (*L. typicus*, figurative.) Found in the large intestine of *Carcharias Rondeletii*.

**Cylindro-sarcoïma.** A tumour presenting the characteristics of cylindroma and sarcoma.

**Cylindroïsis.** (Κύλινδρος.) One of the forms of suture of the cranium, according to Schultz; that where an osseous plate is rolled upon itself so as to form a canal, and then a suture.

**Cylindrosomatous.** (Κύλινδρος; σῶμα, a body. *F. cylindrosome*; *G. kylinderkörperig.*) Having a cylindrical body.

**Cylindrotænium.** (Κύλινδρος; ταῖνιαι, a band.) A name given to a supposed new fungoid growth found in choleraic discharges.

**C. cholerae asiaticæ.** The fully developed form said to be obtained by Klob from the cultivation of the microcooccus found in the discharges of Asiatic cholera.

**Cylindrus.** Same as *Cylinder*.

**Cylissoceolorrhaphia.** (Κύλινδρος, to roll about; *celorrhaphia*.) Term by B. Signorini for a circumvolved hernial suture.

**Cyloepus.** Same as *Cyllopus*.

**Cylopodia.** (Κυλόπους, crook-footed.) Term for the condition of having a crooked or distorted foot, especially that known as *Talipes varus*.

**Cylopodion.** Same as *Cylopodia*.

**Cylopus.** (Κυλόπους.) Club-foot, especially the form *Talipes varus*.

**Cyloïsis.** (Κύλλωσις, from κύλλω, to bend or crook. *F. cylluse*.) Old term, used by Hippocrates and Galen, for crookedness or lameness of the leg, distortion, or mutilation; also, a bending or curvature of the leg outwards, or the condition called bandy-leg.

Also, a generic term for club-foot.

**Cylosoïmus.** (Κυλλός, crooked; σῶμα, a body.) A fetal monstrosity characterised, according to Geoffroy Saint-Hilaire, by a lateral evagination occupying principally the lower abdominal region, and by the absence or imperfect development of the corresponding lower limb.

**Cyma.** A *Cyme*.

**Cymatium.** (Κυμάτιον, dim. of κύμα, a wave. *F. cymation*; *G. Fruchtgehäuse*, *Flechtfrucht*.) Name by Wallroth for the apothecium of lichens.

**Cymatoïdes.** (Κύμα, a wave or fluctuation; εἶδος, form. *F. cymatoide*; *G. fluetuirend*, *wellenförmig*.) Having, or full of, fluctuation. Anciently applied to an unequal fluctuating pulse.

**Cymatoid.** (Κύμα, a wave; εἶδος, likeness. *G. wellenförmig*.) Wave-like. Same as *Cymatodes*.

**Cymatophorous.** (*Cymatium*; φέρω, to bear.) Bearing or having cymatia.

**Cymba.** (Κύμβος, a hollow recess.) A boat or pinnace.

A name for the scaphoid bone of the carpus, and navicular bone of the tarsus, from a fancied likeness.

Also, a name of the vulva.

**Cymbæform.** Same as *Cymbiform*.

**Cymbalaria.** (Κύμβαλον, a cymbal. *G. Cymbelkraut*.) The *Linaria cymbalaria*.

Also, the *Hydrocotyle vulgaris*, which was said to be poisonous; and that it was a decoction of this plant, into which arsenic was put, which formed one of the poisons termed *Aquetta*.

**C. elatīnē.** The *Antirrhinum elatine*.

**C. muraīis.** (*L. muralis*, belonging to a wall.) The *Linaria vulgaris*.

**Cymbalaria cartilago.** (Κύμβαλον.) An old epithet for the cricoid cartilage. (Quincy.)

**Cymbalion.** (Κυμβαλίον.) The plant thus named by Dioscorides is believed to be the *Umbilicus pendulinus*.

**Cymbaloid.** (Κύμβαλον, a cymbal; εἶδος, likeness. *F. cymbaloide*; *G. zimbälähnlich*.) Resembling a cymbal.

**Cymbecephalic.** Having the characters of *Cymbocephaly*.

**Cymbellæ.** (*L.* dim. of *cymba*, a boat.) A term for a boat-shaped antherozoid of some Algae.

**Cymbellæ.** A Suborder of the Order *Diatomaceæ*; the individuals are free, angular, and siliceous.

**Cymbicarpous.** (Κύμβη, a small boat; καρπός, fruit. *F. cymbicarpe*; *G. kahfruchtig*.) Having boat-like fruit.

**Cymbidium.** (Dim. of κύμβη, a boat.) A Genus of the Nat. Order *Orchidaceæ*.

**C. tessaloides**, Roxb. The *Vanda Roxburghii*.

**Cymbifoliate.** (*L. cymba*, a boat; *folium*, a leaf. *F. cymbifolius*; *G. kahnbütrig*.) Having boat-like leaves.

**Cymbiform.** (*L. cymba*, a boat or pinnace; *forma*, likeness. *F. cymbiforme*; *G. kahnförmig*, *nachenförmig*.) Shaped like a boat.

**C. bone.** The os naviculare, a bone of the tarsus.

**Cymbocephaly.** (Κύμβη, the hollow of a vessel; κεφαλή, the head.) A bilobed form of the head.

**Cymbopogon.** (Κύμβος, a cup; πόγων, a beard.) A Genus of the Nat. Order Gramineæ.

**C. citratum.** The *Andropogon citratus*.

**C. nardus.** The *Andropogon nardus*.

**C. schoenanthus.** (Σκωάνθος, the flower of the aromatic rush.) The *Andropogon citratus*.

**Cyme.** (Κύμα, anything swollen, the young sprout of a cabbage. F. *cyme*; I. and S. *cima*; G. *Trugdolde*.) A generic term applied to all the forms of determinate or definite inflorescence. The typical cyme is a flower cluster with a terminal flower, producing, below its apex, one or more lateral branches, each with a terminal flower, and all growing to about the same level, so as to resemble a corymb or umbel; its development, thus, is centrifugal; these secondary axes, or branches, may develop in the same way as the primary, and so on.

**C., biparous.** (L. *bis*, twice; *pario*, to produce. F. *cyme bipare*.) That form of cyme in which, as in *Radiola linoides*, each axis gives off below the terminal flower two subordinate and symmetrical axes, sometimes opposite, as in *Cerastium collinum*, but sometimes not so.

**C., bostrichoid.** (Βοστρυχος, a lock of hair; εἶδος, likeness.) Same as C., *helicoid*.

**C., cincinnal.** (Κίκυνος, a curl of hair.) Same as C., *scorpioid*.

**C., circinnate.** (L. *circinnus*, a curl.) Same as C., *helicoid*.

**C., contracted.** (F. *cyme contractée*.) Term employed by De Candolle to indicate that form of cyme in which the secondary axes are very short. Same as *Fascicle*.

**C., dichotomous.** (Δίχα, doubly; τέμνω, to divide.) A cyme in which the division takes place by two branches at the base of each terminal flower. Same as C., *biparous*.

**C., gyrate.** (Γύρος, a circle.) Same as C., *helicoid*.

**C., helicoid.** (Ἑλῆξ, a coil; εἶδος, likeness. F. *cyme helicoide*.) A form of uniparous cyme which resembles the scorpioid cyme in its stem being composed of a number of secondary axes, and in each flower being opposite a bract; but it differs from it in the flowers and bracts being arranged in a spiral manner along the axis. It is seen in various monocotyledons, as *Hemerocallis* and *Phormium*. Also called *Bostryx*.

**C., panicled.** (L. *panicula*, a tuft.) A cyme in which the secondary axes branch so as to resemble a panicle, as in the Privet.

**C., racemose.** (L. *racemus*, a cluster of grapes.) A cyme in which the pedicels are of equal length, so that the inflorescence resembles a raceme, as the *Campanula*.

**C., scorpioid.** (Σκορπίος, a scorpion; εἶδος, likeness.) That form of uniparous cyme in which, owing to the suppression of one of the subordinate or secondary axes below the terminal flower, the stem presents a coiled or spiral form. Each flower has usually a bract on the opposite side of the stem, and the flowers are arranged in two parallel longitudinal rows on the same side of the stem. An example is presented in the *Symphytium asperinum*.

Also called *Cincinnus*.

**C., spiked.** (L. *spica*, an ear of corn.) A

cyme, the flowers of which are nearly sessile, so that it resembles a spike, as the *Sedum*.

**C., trichotomous.** (Τρίχα, in three parts; τέμνω, to divide.) A cyme in which the division takes place by three branches at the base of each terminal flower. Same as C., *triparous*.

**C., triparous.** (L. *tri*, for *tres*, three; *pario*, to bring forth.) That form of cyme in which the axis gives off below the terminal flower three subordinate axes.

**C., uniparous.** (L. *unus*, one; *pario*, to bring forth. F. *cyme unipare*.) That form of cyme in which, by the abortion of one of the two subordinate axes of the ordinary cyme, there is only one subordinate axis springing from the axil of a bract below the terminal flower.

**Cymene.**  $C_{10}H_{14} = C_6H_4[CH_2CH(CH_3)_2]$ . Methylisopropyl benzene. An aromatic principle found in the oil of cummin seeds, *Cuminum cyminum*, *Psychotria ajowan*, *Eucalyptus globulus*, and other plants, and in coal tar; it may be prepared by gently heating two parts of camphor with one of phosphorus pentasulphide. It has a sp. gr. of .8732, and boils at 175° C. (347° F.) It produces pain when subcutaneously injected, but has no other known physiological action, except when injected several days in succession, when headache, nausea, and vomiting are produced, probably from the presence of cuminic acid in the blood. When cymene is administered cuminic acid is found in the urine.

**Cymenol.** A synonym of *Carvacrol*.

**Cymiferous.** (L. *cyma*, a young sprout of cabbage; *fero*, to bear.) Bearing or producing a cyme.

**Cyminum.** Same as *Cuminum*, or *Cumin seeds*.

**Cymo-botryose.** (Κύμα, the young sprout of a cabbage; βότρυς, a cluster of grapes.) Applied to cymes arranged in a racemose manner.

**Cymogene.** A gaseous substance, consisting chiefly of butane, given off during the distillation of crude paraffin, and which, when condensed by pressure, is used for the production of extreme cold by evaporation.

**Cymographion.** See *Kymographion*.

**Cymoid.** (Κύμα, a young sprout of cabbage; εἶδος, likeness.) Like a cyme.

**Cymol.** Same as *Cymene*.

**Cymophenol.** A synonym of *Carvacrol*.

**Cymosæ.** (Cyme.) One of the Linnean Natural Orders of plants, including *Lonicera* and *Loranthus*.

**Cymose.** (F. *cymeux*; G. *trugdoldenblüthig*.) Having the character or arrangement of a cyme; full of cymes.

**C. branching.** That form of branching of a plant in which the lateral axes grow more freely than the primary axis, and themselves branch in like manner.

**C. inflorescence.** See *Inflorescence*, *cymose*.

**C. umbel.** (Umbel.) This form of inflorescence is produced when three or more shoots standing in a true or spurious whorl develop more strongly than their mother shoot, and thus produce an umbrella-shaped or umbellate system. It occurs in *Euphorbia*.

**Cymothoa.** (Κυμοθήν, a Nereid; from κύμα, a wave; θός, nimble.) A Genus of the Order *Isopoda*, Subclass *Edriophthalma*. The species are parasitic in the mouths of fishes.

**Cymous.** Same as *Cymose*.

**Cymule.** A small, simple cyme.

Also, a branch of a cyme.

**Cymyl.**  $C_{10}H_{12}$ . A hypothetical radical.

**C. alcohol.**  $C_{10}H_{11}O$ . A colourless liquid obtained, along with cuminic acid, by the action of alcoholic potash on cuminic aldehyde.

**Cyna.** Same as *Cina*.

**Cynagrostis.** (Κύων, a dog; ἀγρόστις, a grass.) The *Panicum repens*.

**Cynanchē.** (Κυνάγχη, from κύων, a dog; ἄγχω, to strangle. F. *angine*, *cynanche*, *cynancie*; G. *Bräune*, *Halsentzündung*.) Term for pharyngeal and tonsillitic inflammations of the throat, accompanied by swelling of the parts and some impediment to deglutition and respiration; because dogs were supposed to be particularly subject to it; or because those suffering made a noise like a strangled dog; or because they breathed with open mouth and hanging-out tongue like a dog.

**C. contagiosa.** A synonym of *Diphtheria* and of *Diphtheritic laryngitis*, from their contagious quality.

**C. epidemica.** (Επιδήμιος, among the people.) Same as *C. maligna*.

**C. externa.** (L. *externa*, outward.) A synonym of *Mumps*.

**C. faucium.** (L. *fauces*, the back of the throat.) A synonym of *Quinsy*.

**C. gangrænoſa.** (Γάγγραινα, a gangrene.) Same as *C. maligna*.

**C. laryngea.** (Λάρυγξ, the larynx.) A term for croup, or for laryngitis.

**C. maligna.** (L. *malignus*, of an evil nature. F. *angine maligne*.) See *Sore throat*, *putrid*.

**C. maxillaris.** (L. *maxilla*, the jaw.) A synonym of *Mumps*.

**C. œsophagea.** A synonym of *Œsophagitis*.

**C. parotideſa.** (Parotid.) Inflammation of the parotid gland, or *Mumps*.

**C. pharyngea.** Same as *Pharyngitis*.

**C. prunella.** (Mod. L. *prunella*, dim. of *pruna*, a burning coal; or of *prunum*, a plum.) A synonym of *Quinsy*, from the painful heat of the tonsil, or from its likeness to a plum.

**C. purpuro-parotidæſa.** (L. *purpureus*, purple; *parotid*.) A synonym of *C. maligna*.

**C. simplex.** (L. *simplex*, simple.) Simple catarrhal sore throat.

**C. strepitoria.** (L. *strepito*, to make a rattling.) A synonym of *Croup*.

**C. stridula.** (L. *stridulus*, hissing.) A synonym of *Croup*.

**C. sublingualis.** (L. *sub*, under; *lingua*, the tongue.) A synonym of *Angina Ludovici*.

**C. suffocativa.** (L. *suffoco*, to strangle.) A synonym of *Croup*.

**C. tonsillaris.** (L. *tonsilla*, the tonsils.) A term for quinsy.

**C. tonsillitis.** Same as *C. tonsillaris*.

**C. trachealis.** (L. *trachea*, the wind-pipe.) A term for croup.

**C. trachealis spasmodica.** Spasmodic croup, or *Laryngismus stridulus*.

**C. ulcerosa.** (L. *ulcus*, an ulcer.) A synonym of *C. maligna*.

**Cynanchica.** (Κυνάγχη, the quinsy. F. *cynanchiques*.) Applied to medicines for the relief of quinsy.

Also, the *Asperula cynanchica*.

**Cynanchin.** A crystalline substance occurring in shining rhombic plates, found in

*Cynanchum acutum*. Probably the same as *Asclepiadin*.

**Cynanchocoïn.** A crystalline substance, consisting of lance-shaped needles arranged in star shape, obtained from *Cynanchum acutum*. Probably the same as *Cynanchol*.

**Cynanchol.**  $C_{13}H_{12}O$ . A crystalline substance found in the juice of *Cynanchum acutum*. It is nearly insoluble in cold, soluble in hot, alcohol, from which it is deposited in small white needles, or brilliant lamellæ, arranged in star-shaped pattern.

**Cynanchorthopncea.** (Κυνάγχη, quinsy; ὀρθόπνοια, upright breathing.) A synonym of *Croup*.

**Cynanchum.** (Κύων, a dog; ἄγχω, to strangle. F. *cynanche*; G. *Hundscirger*.) A Genus of the Nat. Order *Asclepiadaceæ*.

Also, the root of the swallow-wort, *Vincetoxicum officinale*.

**C. acutum**, var. **monspelliacum**, Linn. (L. *acutus*, sharp-pointed.) The inspissated juice is said to possess drastic properties, and to be known as French or Montpellier scammony; but latterly it is believed that all the so-called Montpellier scammony comes from Germany, especially from Stuttgart.

**C. Arghel**, Delile. An Egyptian plant, the leaves of which are used in adulterating those of senna. Now called *Solenostemma argel*.

**C. extensum**, Jacq. The *Demia extensa*.

**C. ipecacuanha**, Willd. The *Tylophora*

*asthmatica*.

**C. lævigatum**, Retz. (F. *cynanche lisse*.)

The *Tylophora lævigata*.

**C. mauritianum**, Lamb. The root furnishes Isle of France ipecacuanha. Also called *Camptocarpus mauritanicus*.

**C. monspelliacum**, Linn. (F. *scammonie de Montpellier*.) A variety of *C. acutum*.

**C. oleæfolium**, Hect. (L. *oler*, an olive tree; *folium*, a leaf.) The *Solenostemma argel*.

**C. ovalifolium**. (L. *ovatis*, egg-shaped; *folium*, a leaf.) A plant producing excellent caoutchouc at Penang.

**C. rindera**. The *Tylophora lævigata*.

**C. tomentosum**, Lam. (L. *tomentum*, cushion-stuffing. F. *cynanche cotonneuse*.) The *Tylophora asthmatica*.

**C. vincetoxicum**, Pers. The *Vincetoxicum officinale*, Monch.

**C. viridiflorum**, (L. *viridis*, green; *flos*, a flower.) The *Tylophora asthmatica*.

**C. vomitorium**, Lam. (L. *vomitorius*, emetic.) The *Tylophora asthmatica*.

**Cynanthemis.** (Κύων, a dog; ἀνθεμῖς, chamomile.) The *Anthemis cotula*.

**Cynanthropia.** (Κύων, a dog; ἀνθρωπος, a man.) Term for a particular kind of melancholia, in which the patient fancies himself changed into a dog, and imitates its bark and actions.

**Cynanthropos.** One suffering from *Cynanthropia*.

**Cynapin.** A poisonous alkaloid said to be discovered by Fieinus in the *Æthusa cynapium*. It crystallises in rhombic prisms, soluble in water and alcohol, insoluble in ether.

**Cynapium.** (Κύων, a dog; ἀπιν, parsley. G. *Hundspetersilie*.) A term for fool's parsley, *Æthusa cynapium*.

**Cynara.** (Κυνάρα, the dog-brier, or perhaps the artichoke.) A Genus of the Suborder *Tabuleflora*, Nat. Order *Compositæ*.

# CYNARACEÆ—CYNOGLOSSUM.

**C. cardunculus**, Linn. (L. dim. of *carduus*, a thistle. F. *artichaut-cardon*; G. *Kardone*, *spanische Artischoke*.) Cardoons. The blanched leaf stalks, and stems are eaten. It has the reputation of being aperient, diuretic, and aphrodisiac. The flowers are used to curdle milk.

**C. scolymus**, Linn. (Σκόλυμος, an artichoke. F. *artichaut commun*; G. *Artischoke*.) The artichoke, under which name the succulent receptacles of this plant are eaten; an infusion of the flowers is used in remittent; the juice of the leaves, with white wine, was used as a diuretic, and antipyretic, and in scurvy, dropsy, and jaundice.

**Cynara'ceæ.** Same as *Cynaroccephalæ*.

**Cynara'ceous.** Like to the *Cynaraceæ*.

**Cynar'æ.** (*Cynara*.) A Family of the Suborder *Tubifloræ*, Nat. Order *Compositæ*, having a style thickened upwards and often fringed at the swelling.

**Cynarin.** (Κυνάρι.) Same as *Cnicin*.

**Cynarine.** A substance resembling aloe, contained in an extract obtained by Guiteau from the artichoke, *Cynara scolymus*, which extract resembles aloes in its appearance, its taste, and its fracture; and also in furnishing an acid analogous to chrysammic acid.

**Cynarocephalæ.** (Κυνάρα, the artichoke; κεφαλή, the head.) A Group of the Order *Compositæ*, according to Jussieu, having capitula composed of hermaphrodite flowers, of which the outer row is sometimes sterile; a receptacle furnished with numerous hairs and alveoli; and a style swollen at the base of the stigma, and possessing hairs.

**Cynarrhodium.** (Κυνάρα, the dog brier; ρόδον, the rose. F. *cynarrhode*.) Name for a fleshy fruit formed of a great number of achenia situated on a concave or flask-shaped thalamus, to which the calyx is attached, as in the *Rosa*. It is a variety of the *eterio*.

**Cynch'nis.** (Κυχνίς.) Old name for a small cup or vessel in which medicines were kept or exhibited.

**Cynene.** Same as *Cinene*.

**Cynic.** (Κύνω, a dog. F. *cynique*; G. *cynisch*, *hündisch*.) Like a dog; churlish.

**C. spasm.** (F. *spasme cynique*; G. *Hundskrampf*.) A convulsive contraction of the facial muscles of one side so as to draw towards each other the angle of the mouth and the outer angle of the eye, so that the teeth are shown in the manner of an angry dog.

**Cynical.** Same as *Cynic*.

**Cynip'idæ.** (*Cynips*.) A Family of the Group *Pipirora*, Order *Hymenoptera*. The gull flies. They lay their eggs by means of ovipositors in the leaves or other parts of plants, and thus produce *Galls*.

**Cynips.** (Κύνις, from *κνῶω*, to scrape. G. *Gallwespe*.) A Genus of the Group *Pipirora*, Order *Hymenoptera*.

**C. gall'æ tincto'riæ.** Oliv. (L. *galla*, a gall; *tinctor*, a dyer. F. *Färbergallwespe*.) The producer of the official galls by puncture and oviposition in the leaves of the *Quercus infectoria*.

**C. Kolla'ri**, Hartig. A species affecting the *Quercus robur*, and producing an inferior gall. **C. quercus to'lii**, Linn. (L. *quercus*, an oak; *folium*, a leaf.) The insect the puncture of which gives origin to the round gall-nuts on the *Quercus pubescens*.

**C. quercus infecto'riæ.** The *C. gallæ tinctoriæ*.

**C. ro'sæ**, Linn. (L. *rosa*, a rose.) The insect the puncture of which gives rise to the excrescences on different kinds of the wild rose, called *Bedequar*.

**C. scutella'ris**, Ob. (L. *scutella*, a salver.) Produces large apple-shaped galls on the under side of the leaves of the oak, *Quercus robur*.

**Cynisin.** A synonym of *Cnicin*.

**Cynocephalic.** (Κύνω, a dog; κεφαλή, the head. F. *cynocephale*; G. *hündekopfig*.) Having a head like a dog's.

**Cynocop'rus.** (Κύνω, κόπρος, dung. G. *Hundskoth*.) Dog's dung, *Album græcum*, which see.

**Cynocram'bë.** (Κύνω, a dog; κράμβη, cabbage. G. *Hundskohl*.) The *Mercurialis perennis*.

**Cynocram beæ.** (Same etymon.) A synonym of *Chenopodiaceæ*.

**Cynoc'tonum.** (Κύνω, a dog; κτείνω, to kill.) Name for a species of *Aconitum*, said to be fatal to the dog.

**Cynocytisus.** (Κύνω, a dog; κύτις, the plant cytisus.) A former name for the *Rosa canina*, or dog rose; said to be because it cures the distemper in dogs.

**Cynodect'os.** (Κυνόδεκτος, from *κύνω*; δάκνω, to bite.) Old term for one bitten by a mad dog. Dioscorides, ii, 99.

**Cynod'es.** (Κύνω; εἶδος, likeness.) Dog-like, cynic.

**C. orex'is.** (Ὁρεξις, a longing for.) Term for the canine appetite, or *Bulimia*.

**Cynodes'mion.** (Κύνω, a dog; δέω, to bind.) Old term (Gr. *κυνόδεσμιον*) for the frenum of the prepuce, which is particularly developed in the dog. (Goræus.)

Also, the ring used in *Infibulation*.

**Cynodes'mium.** Same as *Cynodesmion*.

**Cynodes'mus.** Same as *Cynodesmion*.

**Cynodin.** A crystallizable substance very similar to *Asparagin*. It is contained in the *Cynodon dactylon*.

**Cynodon.** (Κύνω; δόους, a tooth. G. *Hundszahn*.) A Genus of the Nat. Order *Graminaceæ*.

**C. dact'ylon**, Pers. (Δάκτυλος, a finger. F. *gros chienlent*, *chiendent pied-de-poule*.) Doorba, Luriale grass, Indian fodder grass. A grass very common in the South of Europe and North Africa and India. The rhizome resembles that of couch grass, but is more woody, and the cellular tissue is loaded with starch. The decoction has been employed as a diuretic, and as a substitute for sarsaparilla; the fresh juice is astringent, and is used locally in epistaxis; the bruised plant is applied to bleeding wounds.

**C. linea'rë.** (L. *linea*, a line.) Used as a substitute for sarsaparilla.

**Cynodon'tes.** (Κύνω, a dog; δόους, a tooth.) Old term (Gr. *κυνόδοντες*), used by Hippocrates, *Aph.* iii, 25, for the canine teeth.

**Cynogloss'in.** An alkaloid found in the *Cynoglossum officinale*; it is also a constituent of several plants belonging to the *Boraginaceæ*, as the *Anchusa officinalis* and *Echinum vulgare*.

**Cynoglossum.** (Κύνω, a dog; γλῶσσα, a tongue, from its fancied likeness.) A Genus of the Nat. Order *Boraginaceæ*.

**C. amplexicaul'is.** (L. *amplecto*, to embrace; *caulis*, a stem.) The *C. virginicum*.

**C. cheirifol'ium**, Linn. (*Cheiri*, the wall-flower; L. *folium*, a leaf.) Hab. Europe. Leaves used as a vulnerary.

**C. major.** (L. *major*, greater.) The *C. officinale*.

**C. officinalis.** (L. *officina*, a shop. F. *langue de chien*; G. *Hundszunge*.) The hound's tongue. It is fetid and mucilaginous, and is said by some to have narcotic powers, by others to act as emetic; was also used against scrofula, coughs, diarrhoea, and hemorrhages. It yields a strong-scented oil. In Russia it is a popular remedy in hydrophobia. It is the *κυνόγλωσσον* of Dioscorides.

**C. virginicum.** Wild comfrey. Hab. United States. Mucilaginous; the leaves are smoked instead of tobacco.

**C. vulgare.** (L. *vulgaris*, common.) The *C. officinale*.

**Cynoidea.** (Κύων; εἶδος, likeness.) A Suborder of the Order *Carnivora*, containing the dogs and dog-like animals.

**Cynolophi.** Same as *Cynolophoi*.

**Cynolophoi.** (Κύων, a dog; λόφος, a protuberance.) Old term for the spinous processes of the vertebrae, which are very marked in the dog.

**Cynolys'sa.** (Κύων, a dog; λύσση, madness.) Old term for canine madness, or *Rabies canina*. (Castellus.)

Also (G. *Tollwurm*), the worm believed to exist under the tongue of dogs, and which caused rabies.

**Cynometra.** A Genus of the Nat. Order *Leguminosæ*.

**C. agallocha.** Sprengel. The *Aquilaria agallocha*.

**C. cauliflora.** Linn. (L. *caulis*, a stem; *flos*, a flower.) Hab. Tropical Asia. Root purgative and tonic; oil of the seeds used in itch and other skin diseases.

**C. laxiflora.** Benth. (L. *laxus*, loose; *flos*, a flower.) A species supplying part of the copal of the western coast of Africa.

**C. ramiflora.** Linn. (L. *ramus*, a branch; *flos*, a flower.) Hab. Malabar. Root purgative; leaves, boiled in milk and mixed with honey, used in scabies, leprosy, and other skin diseases; as is also the oil of the seeds.

**C. spruceana.** A source of copal.

**Cynomaja.** Old name for the *Plantago psyllium*, according to Oribasius.

**Cynomorium.** (Κύων; μόριον, the penis. G. *Hundskolben*.) A Genus of the Nat. Order *Balanophoraceæ*.

**C. coccineum.** (L. *coccineus*, scarlet. F. *champignon de Malte*; G. *Malteser-Schwamm*.) The *Fungus melitensis* of pharmacologists, a small plant which grows in Sicily and Malta. Used as a styptic in dysentery and hæmorrhage. It is sometimes substituted for *Calaguala*.

**Cynomorpha.** (Κύων; μορφή, form.) Applied to a Family of the Order *Pinipedia*, from the dog-like form of their head.

**Cynomyia.** (Κύων; μυία, a fly.) A Genus of the Family *Muscidæ*, Suborder *Brachycera*, Order *Diptera*.

**C. mortuorum.** (L. *mortuus*, dead. F. *cynomyie des morts*.) Head golden yellow; antennæ fawn-coloured, drooping; thorax bluish-black; abdomen violet-blue. Larva feeds on the bodies of dead animals, especially dogs.

**Cynopemphix.** (Κύων, a dog; πέμφιξ, a bubble. F. *cynopemphix*; G. *Hundesblatter*.) The dog-pock or eruption. Also called *Terminthus*.

**Cynophobia.** (Κύων; φόβος, fear.) A term applied to the semihysterical symptoms which

are produced by the bite of a healthy dog in a nervous person.

**Cynopitheci.** (Κύων; πίθηκος, an ape.) A Subfamily of the Suborder *Catarrhine*, Order *Primates*. The baboons. They are quadrupedal forms, with prominent muzzles, having the nostrils at its extremity, cheek pouches, and natal callosities, generally of some bright colour.

**Cynopora.** (Κύων, a dog; πόρα, the itch. F. *cynopore*; G. *Hunderaude*.) Dog's itch.

**Cynorexia.** (Κύων, a dog; ὄρεξις, a longing for. F. *cynorexie*, *faim canine*; G. *Hundshunger*.) Old term for canine appetite, or *Bulimia*.

**Cynorhæstes.** Herm. (Κυνορυστής, a dog-tick.) A synonym of *Ixodes*.

**C. ricinus.** Herm. The *Ixodes ricinus*, Linn.

**Cynorrhodon.** (Κύων, a dog; ῥόδον, a rose.) An old term for the *Rosa canina*, and also for its fruit.

**Cynosbata.** (G. *Hagebutthen*.) Hips, the fruit of the *Cynosbatus*.

**Cynosbaton.** Same as *Cynosbatus*.

**Cynosbatus.** (Κύων, a dog; βάτος, a bramble or thorn.) A former name for the *Rosa canina*, or dog rose; because dogs are said to be attracted by its smell.

**Cynosorchis.** (Κύων; ὄρχις, a testicle. G. *Hundshodden*.) The *Orchis muscula*.

**Cynospasmus.** Same as *Cynic spasm*.

**Cynospasum.** (Κύων, a dog; σπάω, to attract.) An old term for the *Rosa canina*.

**Cynosurus.** (Κύων, a dog; οὐρά, a tail. G. *Kammgras*.) A Genus of the Nat. Order *Graminaceæ*.

**C. coracæus.** Linn. The *Eleusine coracæa*, Gärtner.

**Cynurenic acid.** (Κύων; ούρον, urine.)  $C_{20}H_{14}N_2O_6$ . A crystalline substance frequently occurring in small quantity in the urine of the dog; it crystallises in silky colourless needles. It is less plentiful when the animal is chiefly fed on hydrocarbons, such as starch and fat.

**Cynuric acid.** (Same etymon.) Same as *Cynurenic acid*.

**Cynurin.** (Same etymon.)  $C_{12}H_{14}N_2O_2$ . A crystalline basic substance obtained by heating cynurenic acid to  $265^{\circ}C$ . ( $509^{\circ}F$ .)

**Cyon.** (Κύων.) The frænum of the prepuce; also, the penis.

**Cyonorrhaphia.** See *Cionorrhaphia*.

**Cyophoria.** (Κύος, a fetus; φορέω, to hear.) Old term for pregnancy. Dokeus, *Encycl. Pract.* iii, 13, p. 588.

Also, latterly, the duration of pregnancy.

**Cyophorin.** (Same etymon.) A substance which Ranche found in the urine of pregnant women; also called *Gravidin*. Probably the same as *Kiestin*.

**Cyophorinistegno-ma.** (Cyophorin; στεγνός, to solder.) A concretion of cyophorin or kiestin.

**Cyopin.** (Κυάπειος, dark blue; πόνος, pus.) The colouring matter of blue pus.

**Cyotocia.** (Κυοτοκία.) Childbirth.

**Cyotrophy.** (Κύος; τροφή, nutrition.) The nutrition of the embryo.

**Cyparissus.** (Κυπάρισσος.) The *Cupressus sempervirens*.

**Cyperaceæ.** (*Cyperus*. G. *Cypergräser*, *Reutgräser*.) Sedges. A Nat. Order of the

# CYPERACEOUS—CYPRINUM OLEUM.

Subclass *Glumaceæ*, Class *Monocotyledones*, or a Family of the Order *Glumaceæ*. They are glumal endogens, with whole leaf-sheaths, a one-celled ovary, and an embryo enclosed within the base of the albumen. They are grass-like herbs found in marshes and running streams, in meadows and on heaths, on the seashore, and on the tops of mountains, from the Arctic to the Antarctic circle.

**Cypera'ceous.** Resembling the plants of the Order *Cyperaceæ*.

**Cyperis'sias.** The *Euphorbia cypris-sias*.

**Cyperoid'eous.** (Κύπειρος; εἶδος, likeness.) Having an arrangement of parts like that in the *Cyperus*.

**Cyperoid'es.** (Κύπειρος; εἶδος, likeness.) The *Typha latifolia*.

**Cyperus.** (Κύπειρος, a kind of rush. *G. Cyperngras.*) A Genus of the Nat. Order *Cyperaceæ*.

**C. antiquo'rum.** (L. *antiqui*, the ancients.) The *Lawsonia inermis*.

**C. articula'tus.** Linn. (L. *articulatus*, jointed.) A drue. Root aromatic and stimulant. Used as a substitute for serpentry.

**C. bulbo'sus.** Vahl. (Tam. *Sheelandie*.) The tubers of this plant, roasted or boiled, are eaten, and taste like potatoes.

**C. esculen'tus.** Linn. (L. *esculentus*, edible. *F. souchet comestible, amande de terre*; *G. Erdmandel*.) Rush nut. The tubers or oorns of this plant (μαλινοβάλλη of Theophrastus) are eaten in the South of France and Italy. They contain 28 per cent. of a fatty oil, which has a camphorous taste. When roasted they are used as coffee.

**C. hexastach'yus.** Rottl. ("Εξ, six; στάχυς, an ear of corn. Hind. *Moothoo*.) The tubers of this plant are tonic and stimulant, and are administered in cases of cholera by the Hindoo practitioners; they are used as a demulcent in fevers, and are also said to be diuretic and vermifuge.

**C. iris.** (L. *iris*, the rainbow.) This plant has a reputation in India as a useful medicine in amenorrhœa and in colic.

**C. jemen'icus.** Roxb. A synonym of *C. bulbosus*.

**C., long-root'ed.** The *C. longus*.

**C. lon'gus.** Linn. (L. *longus*, long. *F. souchet long*; *I. odorant*; *G. langes Cypergras*.) The English galangale. The *κύπειρος* of Hippocrates. A succulent plant with a bitter principle superadded, rendering its roots tonic and stomachic.

**C. lon'gus odo'rus.** (L. *odorus*, sweet smelling.) The *Dorstenia contrayerva*.

**C. odora'tus.** Linn. (L. *odoratus*, sweet-scented.) The root of this plant has a warm aromatic taste, and is given in infusion in India as a tonic and stomachic.

**C. odo'rus.** (L. *odorus*, sweet-smelling.) The *Dorstenia contrayerva*.

**C. pap'y'rus.** Linn. The *Papyrus antiquorum*.

**C. peren'nis.** (L. *perennis*, perennial.) The *C. pertenuis*.

**C. perten'uis.** Roxb. (L. *per*, intense; *tenuis*, thin. Hind. *Nagurmutha*.) The tubers of this plant are, when dried and pulverised, used by the Indian ladies for cleansing and perfuming their hair. It is said to be diaphoretic, stomachic, and astringent.

**C. perua'nus.** The *Dorstenia contrayerva*.  
**C. roma'nus.** (L. *romanus*, Roman.) The *C. longus*.

**C. rotun'dus.** Linn. (L. *rotundus*, round. *F. souchet rond*; Hind. *mutha*.) Believed by some to be the *C. hexastachyus*. Used as *C. pertenuis*.

**C., round-root'ed.** The *C. hexastachyus*.  
**C., sweet.** The *C. longus*.

**Cyphel.** The *Sempervivum tectorum*.

**Cyphella.** (Κύφελλα, the hollows of the ears.) Name given to a kind of pit or pore, being a *Soredia*, on the under side of the thallus of those lichens included in the Section *Sticta*.

**Cyphellate.** (Same etymon.) Having *Cyphellæ*.

**Cyphi.** (Κύφι.) Old term for an aromatic confection used by the priests of Egypt; it was also applied to several alexipharmic medicines. Dioscorides, i, 24.

**Cyphia.** (Κυφός, bent.) A Genus of the Nat. Order *Campanulaceæ*.

**C. digita'ta.** (L. *digitus*, a finger.) The tuberous roots of this plant are said to be eaten by the Hottentots.

**C. glandulif'era.** (L. *glandula*, a small acorn; *fero*, to bear.) Roots eaten in Abyssinia.

**Cyphia'ceæ.** (*Cyphia*.) A synonym of *Campanulaceæ*, by De Candolle.

**Cypho des.** (Κυφοειδής; from κύφι, an Egyptian aromatic; εἶδος, likeness.) Useful for fumigations.

Also, same as *Cyphoid*.

**Cyphoid.** (Κύφος, a hump; εἶδος, likeness. *F. cyphoide*; *G. buckelformig*.) Resembling a hump.

**Cypho'ma.** (Κύφωμα, a hump on the back.) Old term for incurvation; gibbosity; humpback.

**Cyphortho'sis.** (Κύφος, a hump; ὀρθωσις, a making straight. *F. cyphortose*.) A straightening of deformities.

**Cyphoscolio'sis.** (Κύφος; σκολιωσις, crookedness.) Curvature of the spine.

**Cypho'sis.** (Κύφωσις, a being hump-backed.) The development of *Cyphoma*.

Generally used to denote a posteriorly projecting curvature of the spine, or humpback.

**Cyphot'ic.** (Κύφος, a hump.) Hump-backed.

**Cypra.** Old name for turmeric. (Quincy.)

**Cypress.** The *Cupressus sempervirens*.

**C., American.** The *Taxodium distichum*.

**C., bald.** The *Taxodium distichum*.

**C. oil.** See *Cyprinum oleum*.

**C. root.** The *Cyperus longus*.

**C. spurge.** The *Euphorbia cypris-sias*.

**C. tree.** The *Liriodendron tulipifera*.

**C., Virgin'ia.** The *Taxodium distichum*.

**Cypressi fructus.** See *Cupressi fructus*.

**Cypria.** (*Cyprus*, the island whence copper was first obtained.) Term proposed to be used as distinctive of diseases caused by the use or abuse of the salts of copper.

**Cyprian vitriol.** (*Cyprus*.) A salt prepared at Chessy, near Lyons, and composed of cupric sulphate and zinc sulphate.

**C. tur'pentine.** Same as *Turpentine, Chian*.

**Cyprinum o'leum.** (L. *cyprinum*, cypress oil; *oleum*, oil.) An oil made of olive oil, cypress flowers, calamus, myrrh, cardamom, iulula, Intumen of Judæa, and other matters, and used

as a stimulant and emollient in uterine disease and pleurisy.

**Cyprinus.** (Κυπρίνος, a kind of carp.) A Genus of the Suborder *Physostomi abdominales*, Order *Teleostei*.

**C. abramis**, Cuv. The *C. brama*.

**C. alburnus**, Linn. (*L. alburnus*, the bleak; from *albus*, white. *F. able*, *ablette* commune; *G. Weissfisch*.) The bleak.

**C. barbatus**, Linn. (*L. barbatus*, from *barba*, a beard. *F. barbeau*; *G. Flussbarbe*.) The barbel, thus named from having four appendages hanging from the under jaw like a beard.

**C. brama**, Linn. (*F. brème commune*; *G. Brassen*.) The bream; an insipid fresh-water fish.

**C. carpio**, Linn. (*F. carpe*; *G. Karpfen*.) The carp.

**C. gobio**. The *Gobio fluviatilis*.

**C. leuciscus**. The *Leuciscus vulgaris*.

**C. rutilus**. The *Leuciscus rutilus*.

**C. tinca**, Linn. The *Tinca vulgaris*.

**Cypripediæ.** (Same etymon.) A Tribe of the Nat. Order *Orchidaceæ* having two anthers.

**Cypripedin.** (Same etymon.) A name given to a substance obtained by precipitating the tincture of the *Cypripedium*, U.S. Ph., and employed as an antispasmodic.

**Cypripedium.** (Κύπρις, Venus; πόδιον, dim. of πούς, a foot. *G. Frauchschuh*.) Ladies' slipper, mossassin plant. A Genus of the Nat. Order *Orchidaceæ*.

Also (*F. valériane américaine*; *G. Gelbfrauchschuh*), the official name, U.S. Ph., of the rhizome and rootlets of *C. pubescens* and *C. parviflorum*. It contains a volatile oil, a volatile acid, and two resins. Used in nervous diseases, such as chorea, hysteria, and epilepsy.

**C. acaulis.** (*L. a*, neg.; *caulis*, a stem.) Hab. United States. Roots used in nervous disorders as valerian. Said to be narcotic.

**C. calceolus**, Linn. (*L. calceolus*, a small shoe.) The *C. luteum* and the *C. spectabile*.

**C. canadense.** The *C. spectabile*.

**C. flavesens.** (*L. flavesco*, to become golden yellow.) The *C. luteum*.

**C. guttatum.** (*L. gutta*, a drop.) This plant is used in Siberia for the cure of epilepsy.

**C. humile.** (*L. humilis*, lowly.) The *C. acaule*.

**C. luteum.** (*L. luteus*, yellow.) The *C. parviflorum*.

**C. parviflorum**, Salisb. (*L. parvus*, small; *flor*, a flower.) One of the species supplying *Cypripedium*, U.S. Ph.

**C. pubescens**, Willd. One of the species supplying the *Cypripedium*, U.S. Ph.

**C. spectabile.** (*L. spectabilis*, remarkable.) Hab. Canada. An antispasmodic like *C. parviflorum*; said to be somewhat narcotic.

**Cyprium æs.** (*L. Cyprus*; *æs*, brass.) A name, used by Scribonius Largus, n. 16, for copper, from the place whence it was obtained.

**Cyprus.** The island of that name.

**C. turpentine.** (*F. terebinthine de Chio*, or *de Scio*; *G. Cyprinischer Terpentin*.) A limpid, fragrant, and grateful substance obtained by wounding the bark of the trunk of the *Pistacia terebinthus*. Also, and more commonly, called Chian or Chio turpentine. See *Turpentine*, *Chian*.

**Cypsela.** (Κύψιλη, a hollow vessel.) A dry, inferior, indehiscent fruit, with an adherent

pericarp, containing an upright seed without perisperm, as in the *Compositæ*. It is similar to the achæmium, except that it is inferior.

**Cypselæ.** (Κύψιλη, the hollow of the ear.) The external auditory meatus.

Also, a capsule.

Also, a synonym of *Ceramen*.

**Cypselis.** (Κύψις, wax in the ears.) *Cerumen*.

**Cypselomorpha.** (Κύψιλος, the sand martin; *μορφή*, form.) An Order of agithognathous birds, with the single vomer truncated in front, and a broad sternum having no forked manubrium nor notches. It includes the swifts, goatsuckers, and humming-birds.

**Cyrtarion.** Old name for a certain antidote.

**Cyrba'sia.** (Κυρβασία, a tiara or cap.) Old name, used by Hippocrates for a sort of covering for the female breasts. (Quincy.)

**Cyrceon.** Same as *Cyrseon*.

**Cyre'bia.** Old term (Gr. κυρίβια), used by Hippocrates, *de Nat. Med.* liv, 5, for the husks of barley, or of other corn; chaff.

**Cyre'na.** A Genus of lamellibranchiate *Molluscs* inhabiting the rivers of tropical districts. Many of the species are esculent.

**C. papua**, Lamk. Hab. Australia. Said to have produced poisonous symptoms.

**Cyrenaicus.** (*Cyrenaica*, a region of Africa, called after *Cyrene*, daughter of Peneus.) Of, or belonging to, Cyrenaica, where the substance benzoin abounds, whence it was called *Liquor cyrenaicus*. Quincy renders it *L. Siniacus*.

**Cyre'næ.** An ancient Greek town in Libya on the African coast.

**C., school of.** A sect of physicians apparently holding the same views as the school of Crotona; they flourished before Hippocrates.

**Cyriacus.** (Κυριακός, belonging to a lord.) Old epithet for a certain pastil good against ulcerous sores and corruptions. (Goræus.)

**Cyrilla'ceæ.** A Nat. Order of thalamifloral Exogens of the Alliance *Berberales*, having regular, symmetrical flowers, axile placenta, stamens all fertile, alternate with the petals if equal to them in number, pendulous ovules, and imbricated petals, smooth on the inside.

**Cyrones.** Same as *Sirones*.

**Cyr'seon.** Old name for the anus.

**Cyr'sotomy.** Misspelling of *Cirsotomy*.

**Cyrtandra'ceæ.** (Κυρτός, curved; *άνθη*, a male, and so a stamen.) A synonym by Jack of *Gesneraceæ*.

**Cyrtandrea.** (Same etymon.) A Tribe of the Nat. Order *Gesneraceæ*, in which the seeds have no albumen, and the fruit is wholly free.

**Cyrtodes.** Same as *Cyrtoides*.

**Cyrtograph.** (Κυρτός, curved; *γράφω*, to write.) An instrument for measuring and recording the curves of the thorax.

**Cyrtoid.** (Κυρτός, humped; *ειδος*, likeness.) Resembling a hump or swelling on the back.

**Cyrto'ma.** (Κύρτωμα, a curve; from *κύρτω*, to bend or crook.) Synonymous with *Cyphoma*.

**Cyrtometer.** (Κυρτός, curved; *μέτρον*, a measure.) An instrument, originally designed by Andry, and perfected by Woillez, to measure and record the curves of the chest. It consists of a number of small pieces of whalebone jointed

## CYRTOMETRY—CYST.

so as to form a band, which may be so accurately applied to the two sides of chest that it takes and retains the outline; the two sides are attached to each other by an easily detachable adjustment. A piece of soft metal will effect the same purpose.

**Cyrtometry.** (Same etymon.) Measurement of the chest by the aid of the *Cyrtometer*.

**Cyrtionosus.** (Κυρτός, curved or crooked; νόσος, a disease.) Old term for rickets; also, distortion of the spine. (Quincy.)

**Cyrtosiphyle.** (Κυρτός, curved; φυ-όν, a plant. F. *cyrtosiphyle*.) Applied to plants the fruit of which is formed of many compartments making a bunch.

**Cyrtosis.** (Κύρτωσις, a being curved.) The same as *Cyphosis*.

Also, Good's generic term for contortion of the bones; in which the head is bulky, especially anteriorly; the stature short and incurvated; and the flesh flabby, pale, and wrinkled.

**C. cretinismus.** Good's term for *Cretinism*.

**C. rhachia.** Good's term for *Rickets*.

**Cyso.** (Κυσός.) Old term, used by Hippocrates, *de Nat. Puer.* ix, 16, for the anus.

Also, the vulva.

**Cyssanthemon.** Same as *Cissanthemon*.

**Cyssaros.** (Κύσσαρος.) An old term for the anus and for the vulva.

**Cyssites.** An old name for *Ætites*.

**Cyssophyllon.** See *Cissophyllon*.

**Cys'sotis.** (Κυσός, the anus.) Old term for inflammation of the anus. (Quincy.)

Also, the lower end of the rectum.

**Cyst.** (Κύστις, the bladder. F. *kyste*; I. *ciste*; S. *quisto*; G. *Kyste*, *Cyste*, *Balggeschwulst*.) A closed bag, more or less spherical, containing liquid or semisolid matter; it may be a new formation or a distension of an old structure, by accumulation of its secretion or by the development of new products. The bag or cyst-wall may consist, in the former case, of a new, more or less dense, distinct, fibrous capsule, or of condensed and hardened surrounding connective tissue; in the latter case, it retains more or less the characteristics of the original structure, including its epithelial lining. The cyst and its contents vary with their origin and position; and from these varieties cysts obtain their adjectival names. The cyst-wall may develop new growths, or may degenerate, as by calcification; the contents also may undergo fatty or other retrograde metamorphosis.

Some pathologists restrict the term cyst to that form which, in its origin, is a glandular degeneration, and which has its wall lined with epithelium. According to their mode of origin, cysts have been divided into those produced by dilatation of natural cavities, those produced by distension of ducts, those produced by extravasation of blood, and those produced by softening of tissues.

Also, a normal structure with a thin wall enclosing contents, as the gall-bladder.

**C., adventitious.** (L. *adventitus*, foreign. F. *kyste adventice*.) See *Adventitious cyst*.

**C., aneurysmal.** The sac of an aneurysm.

**C., apoplectic.** See *Apoplectic cyst*.

**C., arachnoid.** See *Arachnoid cyst*.

**C., arachnoid, hæmorrhagic.** Same as *Arachnoid cyst*.

**C., atheromatous.** (Ἀθήρα, gruel or panada. G. *Grützbutelgeschwulst*.) A cutaneous cyst or sebaceous tumour in which the contents are pultaceous.

**C., autogenous.** (Αὐτός, self; γέννω, to beget.) The same as *Cysts, primary*.

**C.s, barren.** (Old F. *baraigne*.) Cysts containing fluid or unorganised matter. Same as *C., simple*.

**C., blood.** Same as *Hæmatoma*.

**C., branchial.** (L. *branchiæ*, gills.) A congenital cyst of the neck or face, arising in connection with imperfect closure of a branchial cleft in the embryo; these cysts are usually dermoid in character, but sometimes include skeletal elements.

**C., cancerous, proliferous.** (L. *proles*, offspring; *fero*, to bear.) Cysts in which cancerous growths take place. In one form the cyst occurs within a cancerous growth. In another, cancerous matter forms within a cyst, thus converting an innocent into a malignant tumour.

**C., cholesteatomatous.** Same as *Cholesteatoma*.

**C., colloid.** (Κόλλα, glue; εἶδος, likeness.) Cysts containing pellucid jelly-like substances, resembling the material found in colloid cancer. Such contents are common in the cysts of bronchioles and in those of the kidney.

**C., compound.** (L. *compono*, from *com*, for *cum*, together; *pono*, to place.) A cyst which consists of more than one space or cavity, either entirely isolated from one another or communicating by an opening.

Also, the same as *C. proliferous*.

**C., congenital.** (L. *congenitus*, born together.) A cyst which was in existence at birth. These often contain hair, bones, and teeth, and would appear to be blighted ova.

**C., congenital of neck.** Same as *C., branchial*.

**C., Cowperian.** A cyst developed in *Cowper's gland*.

**C., cutaneous.** (L. *cutis*, the skin.) Cysts within which a tissue grows having more or less the structure and productive properties of the skin. They occur in the ovaries, in the subcutaneous connective tissue, and elsewhere. Same as *C., dermoid*.

**C., cutaneous, proliferous.** (L. *proles*, an offspring; *fero*, to bear.) The same as *C.s, cutaneous*.

**C., cuticular.** (L. *cutis*, the skin.) The same as *C., sebaceous*.

**C., cystic, complex.** Same as *C., cystigerous*.

**C., cystigerous.** (Cyst; L. *gero*, to bear.) A cyst containing or producing from it other cysts, as in the vesicular mole.

**C., degeneration.** (L. *degenero*, to depart from its kind.) A cyst which is caused by the softening down of the structure of a tumour or other structure.

**C.s, dentigerous.** (L. *dens*, a tooth; *gero*, to bear.) Cysts containing teeth. One form occurs in the ovaries, and in this form hair and epidermis are often found. Another form occurs within the jaws, and is probably a tooth capsule expanded with fluid, from which the tooth is not extruded.

**C., dermoid.** (Δέρμα, the skin; εἶδος,

likeness. *F. kyste dermoïde*; *G. Dermöideyste*.) A sebaceous cyst not developed in connection with a gland, and having a wall with structure like that of the skin. They are usually, after Lebert, divided into three varieties: one with a simple epithelial lining, similar to a wen, except in its origin, which is extra-glandular; a second, in which the wall possesses papillæ, sebaceous glands, and hair follicles; they contain sebaceous matter and often numerous hairs, and they give rise from their interior to warts, condylomata, and even horns; and a third variety, in which, besides sebaceous matter and hair, other structures, such as teeth, bony plates, and ill-developed nerve tubules are found; this form has its chief seat in the ovary and the testicle; it is congenital, and has been thought to be a fetal structure.

**C., dilata'tion.** (*L. dilato*, to enlarge.) Same as *C. retention*.

**C., endog'enous.** (*Ἐνδον*, within; *γεννᾶν*, to produce.) A cyst containing other cysts, which grow from its wall.

**C.s, endog'enous conver'ging.** Endogenous cysts, in which the parent cyst wall bears at one point oval and spherical membranous cysts developed beneath its lining membrane, which they raise in low convex projections into its cavity; or cysts, in which groups of small leaf-like, narrow-stalked, pendulous cysts form.

**C.s, epider'mal.** The same as *C. sebaceous*.

**C., extravasa'tion.** (*L. extra*, out of; *vas*, a vessel.) A cyst caused by hæmorrhage into a closed cavity, as in hæmatocele; or into the substance of an organ, as the cyst which is produced by the absorption of an apoplectic clot.

**C., exuda'tion.** (*L. exudo*, to sweat out.) A cyst which is produced by exudation into a naturally closed cavity, as in hydrocele.

**C., follicu'lar.** (*L. folliculus*, a small bag.) Virchow's name for such cysts as sebaceous cysts, and mucous cysts which are caused by the closure of the mouth, and distension of the sac of a follicle of some sort.

**C., gaseous.** (*Gas*.) A rare form. Specimens obtained by Jenner from the intestine of a hog, examined by Cavendish, who found them to contain carbonic acid gas, and mounted by Hunter, exist in the Hunterian Museum.

**C., hair'y.** A dermoid cyst containing hair.

**C., hemat'ic.** (*Ἀἷμα*, blood.) Same as *C. sanguineous*.

**C., hydat'id.** See *Hydatid*.

**C., hygro'matous.** A synonym of *Hygroma*.

**C., maxillary.** (*L. maxilla*, the jaw.) A synonym of *C. dentigerous*, from its place of growth.

**C., Meibom'ian.** Same as *Chalazion*.

**C., melic'ereous.** A synonym of *Meliceris*.

**C., menorrhag'ic.** (*Menorrhagia*.) A term for an ovarian cyst, with obstruction of the Fallopian tube; at the menstrual periods the Graafian follicles are supposed to empty themselves into it.

**C.s, mu'cous.** A cyst formed from a mucous gland which has lost its outlet; such are found in the alimentary mucous membrane, as ramula; in Nabothian and Cowperian cysts, and in the cysts connected with Bartholin's or Duverney's glands, which probably arise from obstruction and dilatation of the ducts of these

glands. The contents are often colourless, pellucid, or opaline ropy fluid, or thick, turbid, and even opaque. They are apt to inflame and suppurate.

**C.s, multilocu'lar.** (*L. multus*, many; *loculus*, a little place.) These are sometimes only groups of close-packed single cysts, but the term is properly limited to cysts containing other cysts, which have arisen by endogenous growth.

**C., Nabothi'an.** A cyst originating in the glandule Nabothi.

**C. of broad ligament.** See *C. Wolfian*.

**C., oily.** A form sometimes found in the breast gland from obstruction of a milk tube, and so named from its contents.

**C., os'seous.** See *Osteoma, cystic*.

**C., ova'rian.** See *Ovarian cyst*.

**C., o'vular.** (*Dim. of L. ovum*, an egg.)

A term applied by Roberts to an abdominal cyst unconnected with uterus, ovary, or their appendages, and consisting of a vascular thin fibrous envelope enclosing a clear, feebly albuminous fluid. He supposed it to be a non-fecundated escaped ovule which had attained a peritoneal attachment.

**C., parasit'ic.** (*Παράσιτος*, a parasite.) A cyst containing, or being, a parasite, such as the cysticercus.

**C., pa'rent.** (*L. parens*, a parent.) The principal cyst in compound cysts, within which other cysts are developed.

**C., primary.** (*L. primus*, first.) Cysts that originate *de novo* in a part or tissue, and that are not a mere distension of a natural cavity.

**C., prolifera'tion.** Same as *C. proliferous*.

**C., prolif'eros.** (*L. proles*, offspring; *fero*, to bear.) A cyst containing other cysts within it; they are usually found in the ovary, where they appear to originate in buds from the surface epithelium. A proliferous cyst may contain variously organised bodies.

**C., pu'ulent.** (*L. purulentus*, mattery.) A term which has been applied to a cardiac concretion which has undergone central softening.

Also, a thick-walled abscess.

**C.s, recur'ring prolif'eros.** Proliferous cysts, such, for example, as the form known as serocystic sarcoma, which recur after removal.

**C., re'nal.** (*L. ren*, the kidney.) See *Kidney, cystic*.

**C., reten'tion.** (*L. retinco*, to keep back.) A cyst which originates in the retention of natural secretions.

**C., reten'tion, retrotrache'al.** (*L. retro*, behind; *trachea*, the windpipe.) A form of mucous cyst caused by retention of the secretion, and hypertrophy, of the mucous glands at the back of the trachea.

**C., sal'ivary.** See *Salivary cyst*.

**C.s, sanguineous.** (*L. sanguineus*, bloody.) These are sometimes primary, and sometimes seem to result from hæmorrhage into a serous cyst. In the former case the blood is usually fluid, in the latter partially coagulated.

**C., seba'ceous.** (*L. seba*, suet.) A cyst originating in a sebaceous gland by occlusion of its excretory duct or pore, and containing numerous epidermic cells and the natural secretion in a more or less altered form.

Some authors divide sebaceous cysts into two

# CYSTADENOMA—CYSTERNA LYMPHATICA.

groups, dermoid cysts and those above described. In some instances they are only distended hair follicles, and their contents can be made, by pressure, to exude through a small opening on the surface of the skin; others do not appear to have an orifice. The walls are sometimes thin, at others thick and fibrous. They may contain soft epidermic scales, fatty particles, cholesterol, and more or less fluid.

**C.s, secondary.** (*L. secundus*, second.) Cysts, of the size of a pin's head or larger, found in the walls of other cysts, especially in the proliferous cysts of the ovary; they are by some believed to arise from the union of the apices of neighbouring papillae, so as to leave a cavity at the base.

Also, cysts which result from the growth or expansion of the normal tissues and parts of the body, such, for example, as ranula, burse, and many mammary cysts.

**C.s, seminal.** (*L. semen*, seed.) Cysts usually found near the epididymis, the walls of which are formed of connective tissue lined with delicate tessellated epithelium. The contents are usually an opaline fluid, in which are spermatozoa. They may arise from the dilatation of the tubes forming the remains of the Wolffian body and of the small hydatid of Morgagni.

**C.s, serous.** (*L. serum*, the watery part of a thing.) Cysts having thin liquid or honey-like contents, which may be variously coloured, and sometimes contain cholesterol scales. They are most common near secreting glands or membranes, but occasionally occur in bone, in intermuscular connective tissue, and in fibrous tumours. Such are hygroma, meliceris, the subcutaneous enlarged burse, hydrocele, and many cysts in the midst of organs, as the ovary and the kidney.

**C., simple.** A cyst consisting of one cavity only.

**C.s, spermatic.** (*Σπέρμα*, seed.) Same as *C.s, seminal*.

**C., sublingual.** (*L. sub*, under; *lingua*, the tongue.) A term for *Ranula*.

**C.s, subsynovial.** (*L. sub*, beneath; *synovia*.) Cysts caused by the distension and enlargement of the synovial follicles which ordinarily open into joints, owing to obstruction of their ducts.

**C.s, synovial.** (*L. synovia*.) Cysts resulting from the expansion or distension of burse and synovial sheaths of tendons. The contents are sometimes a thin, limpid, albuminous fluid, at others gelatinous or honey-like. They occasionally contain considerable numbers of free bodies resembling fibro-cartilage.

**C., tarsal.** (*Ταρσός*, the edge of the eyelid.) Same as *Chalazion*.

**C., testicular.** (*L. testes*, the testicles.) Same as *C.s, seminal*.

**C. wall.** (*G. Balg*.) The tissue limiting the contents of a cyst. It varies considerably in character, sometimes being a delicate membrane with a few nuclei and a lining of epithelial cells, sometimes being laminated with many layers of nucleated fibrous tissue.

**C., Wolffian.** A term for cyst of the broad ligament of the uterus, on the supposition that it originates in unabsorbed remains of the Wolffian body.

**Cystadenoma.** (*Κύστις*; *adenoma*.) An adenoma which has undergone cystic degeneration from dilatation of the sacculi.

**C. papilliferum.** (*L. papilla*, a small pimple; *fero*, to bear.) The form in which, from excessive growth of connective tissue, small papilliform outgrowths into the cavity of the cyst are seen on section.

**Cystalgia.** (*Κύστις*, the bladder; *ἀλγος*, pain. *F. cystalgie*; *G. Blasenschmerz*.) Term for painful spasmodic affection of the urinary bladder; the spasms coming on in paroxysms, often as severe as those of the stone. Also, a term for pain in the bladder generally.

**Cystanastrophē.** (*Κύστις*, the bladder; *ἀναστροφή*, a turning upside down. *F. cystanastrophe*; *G. Umkehrung der Blase*.) Inversion of the urinary bladder.

**Cystanencephalia.** (*Κύστις*, the bladder; *ἐν*, neg.; *ἐγκέφαλος*, the brain. *F. cystanencephalie*; *G. Blasenhirn*.) Term for the state of a monster foetus having a membranous bag containing fluid instead of a brain.

**Cystatrophia.** (*Κύστις*; *ἀτροφία*, want of nourishment.) Atrophy of the urinary bladder.

**Cystauchēn.** (*Κύστις*, the bladder; *αὐχὴν*, the neck. *F. cystauchēn*; *G. Blasenhals*.) The neck of the bladder.

**Cystauchēnitis.** (*Κύστις*; *αὐχὴν*. *F. cystauchēnitis*; *G. Blasenhalsentzündung*.) Inflammation of the neck of the bladder.

**Cystauchēnotomy.** (*Κύστις*; *αὐχὴν*; *τμήνω*, to cut. *F. cystauchēnotomie*; *G. Blasenhalsschnitt*.) Cutting the neck of the urinary bladder, as in lateral lithotomy.

**Cystauxē.** (*Κύστις*, a bladder; *αὔξη*, increase. *F. cystauxe*; *G. Blasenvergrößerung*.) Increase of the urinary bladder; its enlargement, especially thickening of its coats.

**Cystē.** (*Κύστη*, the bladder.) A term for the urinary bladder.

Also, a term for the female pudendum.

**Cystectomy.** (*Κύστις*, the bladder; *ἐκτασις*, extension.) Dilatation, either normal or abnormal, of the bladder.

Also, a term for a form of lithotomy in which, after having opened the membranous urethra in the ordinary way, the grooved sound is removed and a dilator of the prostate is introduced on the left forefinger into the wound, and by its means the neck of the bladder is dilated to a sufficient size to allow of the introduction of the forceps and the removal of the calculus.

**Cystelco'sis.** See *Cystheleosis*.

**Cystencephalia.** The state of a *Cystencephalus*.

**Cystencephalus.** (*Κύστις*, a bladder; *ἐγκέφαλος*, the brain. *F. cystencephale*; *G. Blasenkopf*.) Name by Geoffroy Saint-Hilaire for a monster foetus in which the brain contained in its membranes has the appearance of a papillous bladder.

**Cystolithus.** (*Κύστις*, the bladder; *λίθος*, a stone. *F. cystolith*.) Old term (*Gr. κύστεόλιθος*), used by Schröderus, iii, 8, n. 19, for stone, or calculus in the urinary bladder or in the gall-bladder.

Also, a medicine for the cure of stone in the bladder.

**Cysterethism.** (*Κύστις*; *ερεθισμός*, irritation.) Irritability of the bladder.

**Cysterina lymphatica.** (*L. cisterna*; *lymphatic*.) A large sac in the frog situated in front of the vertebral column, but separated from the abdominal cavity by the peritoneum. Properly *Cisterna*.

**Cysthemorrhoides.** (Κύστις, the bladder; αιμορροΐδης, piles. F. *cysthemorrhoides*; G. *Blasenhäorrhoiden*.) Hemorrhoids of the bladder.

**Cysthelcosis.** (Κύστις, the bladder; ἔλκος, an ulcer. F. *cysthelcosis*; G. *Harnblasengeschwür*.) Ulceration of the bladder.

**Cysthepatic.** (Κύστις; ἥπατις, of the liver.) Belonging to the gall-bladder and to the liver.

**C. ducts.** A term formerly applied to some ducts which were supposed to pass directly from the liver to the gall-bladder.

**Cysthepatolith.** (Κύστις; ἥπαρ, the liver; λίθος, a stone. F. *cysthepatolithe*; G. *Gallenstein*.) Gall-stone found in the gall-bladder.

**Cysthepatolithiasis.** (Κύστις; ἥπαρ; λίθος, a stone. F. *cysthepatolithiase*; G. *Gallensteinkrankheit*.) The gall-stone disease.

**Cystitis.** (Κύστις, the vulva.) Inflammation of the vulva.

**Cystos.** Same as *Cysthus*.

**Cysthus.** (Κύσθος, any hollow.) Old term for the anus.

Also, a term for the pudendum muliebres.

**Cysthygroma.** (Κύστις, a bag; *hygroma*. F. *cysthygrome*; G. *Sacklymphgeschwulst*.) Term for a cystico-lymphatic tumour; as the congenital cyst of the neck of the child, which sometimes obstructs labour.

**Cysthypersarcosis.** (Κύστις, the bladder; ὑπέρ, in excess; σάρκωσις, the growth of flesh. F. *cysthypersarcose*.) A fleshy growth or thickening of the coats of the bladder.

**Cystic.** (Κύστις, a bag. F. *cystique*; G. *cystisch*.) Belonging to a bag.

Of, or belonging to, the urinary bladder or the gall-bladder.

Also, containing cysts.

**C. artery.** (F. *artère cystique*; G. *Gallenblasenschlagader*.) A branch of the right division of the hepatic artery behind the cystic duct; it passes upwards and forwards upon the neck of the gall-bladder and divides into two branches, one of which ramifies in the walls of the gall-bladder, and the other between it and the liver.

**C. bile.** Bile contained in the gall-bladder.

**C. bronch'oceles.** Same as *Goitre, cystic*.

**C. calculus.** (L. *calculus*, a little stone.) A gall-stone.

**C. can'cer.** See *Cancer, cystic*. It is used also as a synonym of *Colloid*.

**C. degeneration.** See *Degeneration, cystic*.

**C. duct.** See *Duct, cystic*.

**C. duct, valve of.** The series of crescentic folds of mucous membrane in the cystic duct which form an apparently spiral valve.

**C. fissure.** (L. *fissura*, a cleft.) The *C. fossa*.

**C. fos'sa.** (L. *fossa*, a ditch. G. *Gallenblasengrube*.) The depression on the fore part of the under surface of the right lobe of the liver for the reception of the gall-bladder.

**C. goitre.** See *Goitre, cystic*.

**C. hæmato'ma.** See *Hæmatoma, cystic*.

**C. oxide.** A synonym of *Cystin*.

**C. oxide calculus.** See *Calculus, cystine*.

**C. plex'us.** (L. *plexus*, a weaving. F. *plexus cystique*; G. *Gallenblasengeflecht*.) A

plexus of sympathetic filaments on the gall-bladder furnished by the hepatic plexus.

**C. polypus.** See *Polypus, cystic*.

**C. sar'cocele.** See *Sarcocele, cystic*.

**C. sarco'ma.** See *Sarcoma, cystic*.

**C. tu'mour.** A tumour containing cysts.

**C. valve.** The valve at the neck of the Gall-bladder.

**C. vein.** (G. *Gallenblasenblutader*.) A vein which collects the blood from the gall-bladder and joins sometimes the trunk of the portal vein, but more frequently its right division.

**C. worms.** (F. *vers cystiques*.) Same as *Cestoda*.

**Cystica.** (Κύστις. F. *cystiques*.) Medicines believed to act specially on the bladder.

Also, formerly, a term applied to the cystic larval forms of tapeworms which were then thought to be distinct individuals.

**Cysticæ.** (Κύστις.) One of the divisions of tapeworms, being those which are cystic as larvae.

**Cysticer'cus.** (Κύστις, a bladder; κύριος, a tail. F. *cysticerque*; G. *Blasenschwanz, Blasenwurm, Finne*.) The tailed bladder-worm, otherwise termed hydatid. They consist of a cylindrical body terminated posteriorly by a bladder, their head furnished with four suckers. They are the sexually immature larval form of one or other of the several kinds of *Tenia*. The embryonal sac possesses the head of the future *Tenia*, and there is usually only one head. Regarded from a morphological, as well as from a developmental, point of view, the cysticerus is composed of two segments; the *Tenial* head immediately produced from the embryonal sac, and the original embryonal sac now become the tail or caudal vesicle. The two most important forms in regard to man are the cysticerus of the *Tenia solium* and the cysticerus of *Tenia mediocanellata* (or *saginata* of Goetze). The mature ovum of the sexually mature *Tenia* consists of a mass of protoplasm without cell wall, but with nucleus or germinal vesicle, which is the primitive egg, and of a nutritive or secondary yolk. As it travels along the oviduct it is fertilised with the semen, and receives an albuminous covering. It then enters the ovisac, undergoes repeated cleavage, obtains an investment composed of slender rods closely applied to each other, and is provided with three pairs of stylet-like, slightly curved, hooklets. Arrived at this stage, and still contained within the segments of the parent *Tenia*, the embryo is discharged from the body of the host, which in the case of the *Tenia mediocanellata* and *T. solium* is man himself. These segments, or the ova, are consumed with herbage by the pig, ox, or other animal. Arrived at the stomach the embryo is freed from its envelopes by the gastric juice, and immediately bores with its hooklets through the walls of the alimentary canal, gains entrance into the vessels, and is carried by the circulation to remote parts; there it becomes attached, and the first phase of its history is completed. It now throws off the hooklets and develops into a sac composed of contractile protoplasmic cell wall and fluid contents. The connective tissue around the sac becomes condensed and the embryo is said to be encapsuled, and coincidentally the protoplasm wall becomes invaginated at one point, forming a hollow bend, which projects internally and terminates in a blind extremity, though the peripheric

# CYSTICLE—CYSTICULE.

opening remains unclosed. Suckers, as in *Tenia medicanellata*, or suckers with a rostellum and a crown of hooklets, as in *Tenia solium*, appear at the extremity of the hollow internal bend. With the formation of these, the organs of adhesion of the head of the *Tenia*, the second phase of the history is completed; the embryo has now become a *Cysticercus*. The third phase commences when the encysted embryo in meaty flesh is eaten by an animal adapted to permit the sexually mature *Tenia* or *Strobilus* to develop. The capsule is dissolved in the stomach of the new host, the tail disappears, and the head, adhering to the intestinal wall, and now called a scolex, produces a chain of segments by basilar budding in a longitudinal direction. Thus the first host is usually herbivorous, and carries the *cysticercus* or larval form; the secondary host is carnivorous, and carries the *strobilus* or sexually mature.

**C. acanthotrifas**, Weinland. (Ακανθα, a thorn; τρίς, the number three.) A species found in the connective tissue and the dura mater of the human brain. The adult form is not known. It has 42 to 48 hooklets in three rows.

**C. arionis**, Siebold. The larva of *Tenia arionis*. Found in the respiratory cavity of *Arion emporicorum*.

**C. bovis**. (L. *bos*, an ox. G. Rindsfinne.) The larva of *Tenia medicanellata*. Found in the muscles of cattle.

**C. cellulosa**, Red. (L. *cellula*, a little cell; because of its presence in the cellular tissue. G. *Schweinefinne*.) The larva of *Tenia solium*. It is an oval body, 10 mm. long, with four suckers and twenty-six hooklets in two rows round the mouth. Found in the muscles of swine and other animals and under the tongue; occasionally in the muscles and brain of man.

**C. cerebralis**. (L. *cerebrum*, the brain.) The larva of *Tenia caninus* of the dog occurring in sheep.

**C. cobitidis**, Bellingham. Found encysted in the liver and intestines of *Cobitis barbata*.

**C. cordatus**, Tschudi. (L. *cordatus*, heart-shaped.) Found in the liver and omentum of *Futorius putorius*.

**C. cucumerinus**, Cobbold. (L. *cucumis*, a cucumber.) Found in the liver of *Lepus cuniculus*.

**C. delphini**, Rud. (L. *delphinus*, the dolphin.) The larva of a *Phyllobothrium*. Found in the fat of the dolphin, *Delphinus delphis*.

**C. diceysus**. (Δίς, twice; κύστις, a bladder.) A species presenting two vesicles; the one the ordinary caudal bladder, the other embracing the body anteriorly.

**C. dubius**, Otto. (L. *dubius*, uncertain.) Found in *Pedetes caffer*.

**C. elongatus**, Leuckart. Found in the peritoneum of *Lepus cuniculus domesticus*, and in the uterus of *Lepus sylvaticus*.

**C. fasciolaris**, Rud. (L. *fasciola*, a small blade.) The larva of *Tenia crassicolis* of the cat. Found in the liver of the long-eared bat, *Plecotus auritus*, and of rats and mice.

**C. finnia**. A species which is always enclosed in a delicate cyst; it is usually hidden within its caudal bladder, and is opaque and yellowish, of the size of a flax seed.

**C. fischerianus**. Name given to a species in honour of M. Fischer of Leipzig.

**C. fistularis**, Gurlt. (L. *fistularis*, like a shepherd's pipe.) Found in the peritoneum of *Equus caballus*.

**C. hypudæi**, Leuckart. Found in the liver of *Arvicola arvalis*. The larva of *Tenia tenuicollis*.

**C. longicollis**, Rudolphi. (L. *longus*, long; *collis*.) The larva of *Tenia crassiceps*, Rudolphi. Found in the axillary sacculi of *Arvicola amphibius*, a field mouse, and in the liver of *Arvicola arvalis*. It is the larva of the *Tenia crassiceps* of the fox.

**C. lumbriculi**, Ratzel. (L. *lumbricus*, a worm.) Found in the abdominal cavity of *Sæurnis variegata*, Hoffm.

**C. macrocystis**, Diesing. (Μακρός, long; κύστις, bladder.) Found in the liver, abdominal cavity, and between the muscles of *Lepus brasiliensis*.

**C. minioterti**, Kolenati. Found in the *Cheiroptera*.

**C. physeteris**, Debell Bennet. (Φυσήτης, hellsows.) Found in the fat of *Catodon macrocephalus*.

**C. pileatus**, Bojanus. (L. *pilatus*, bonneted.) Found in the subcutaneous connective tissue of *Inuus caudatus*.

**C. pisiformis**, Zederer. (L. *pisum*, a pea; *forma*, shape. F. *cysticercus du lapin*.) The larva of the *Tenia serrata* of the dog. Found in the hare, rabbit, and the domestic mouse.

**C. punctatus**. (L. *punctatus*, spotted.) A species in which the caudal bladder is spotted and presents several white spots.

**C. sphaerocephalus**, Rudolphi. (Σφαῖρα, a ball; κεφαλή, a head.) Found in the peritoneum of *Lemur mongoz*.

**C. taeniæ cucumerinæ**, Bloch. (L. *taenia*, a band; *cucumis*, a cucumber.) Found in the abdominal cavity of *Trichodectes canis*.

**C. taeniæ gracilis**, v. Linstow. (L. *gracilis*, thin.) Found in the intestine of *Perca fluviatilis*.

**C. taeniæ mediocanella ta.** The larva of the *Tenia medicanellata* of man found in the ox. The *C. bovis*.

**C. talpæ**, Rud. (L. *talpa*, a mole.) The larva of *Tenia tenuicollis*. Found beneath the skin and in the liver of *Talpa europæa*.

**C. telæ cellulosa**. (L. *tela*, a web; *cellulosus*.) Same as *C. cellulosa*.

**C. tenuicollis**, Rudolphi. (L. *tenuis*, thin; *collum*, the neck.) A species about an inch long, 12 to 15 centimeters, when full grown, with a neck-like process. It is the larva of *Tenia marginata* of the dog, and is found in the omentum and liver of ruminants, and swine, and occasionally in man.

**C. turbina**, Köber. A doubtful species with larger hooklets than *C. cellulosa*, said to have been found in the human brain.

**C. viscera lis**. (L. *viscera*, the entrails.) A synonym of *C. tenuicollis*, because it is found in the omentum and liver.

**Cysticle**. (Dim. from κύστις, a bladder.) A small cyst.

**Cysticoxydum**. Cystic oxide or *Cystin*.

**Cysticule**. (Κύστις. F. *cysticule*.) Name by Breschet for a part of the membranous labyrinth of the ear of teleostean fishes. It is a process of the sacculus, and is a rudimentary canalis cochlearis.

# CYSTID—CYSTITIS.

**Cystid.** (Κύστις.) The sac-like ciliated embryo of some of the Polyzou.

**Cystideloosis.** Same as *Cysthelcosis*.

**Cystidepatic.** Same as *Cysthepatic*.

**Cystidepatolithiasis.** Same as *Cysthepatolithiasis*.

**Cystidia.** Plural of *Cystidium*.

**Cystidialgia.** Same as *Cystalgia*.

**Cystidioblennorrhœa.** Same as *Cystoblennorrhœa*.

**Cystidium.** (Κύστις, a bag. F. *cystidium*; G. *Blasenchen*, *Schlauchfrucht*.) A one-celled, indehiscent, superior, membranous, apocarpous fruit (Link). Ex. *Amaranthus*.

Also, a name for certain cells, filled with air, found in aquatic plants at the time of fecundation.

Also, in Fungi, a name given to the spore-case or theca; and also to certain prominent cells which are supposed to be antheridium cells.

**Cystidocatarhus.** Same as *Cystocatarrh*.

**Cystidocoele.** Same as *Cystocoele*.

**Cystidocercus.** Same as *Cysticercus*.

**Cystidolaparotomy.** See *Laparo-cystidotomy*.

**Cystidomyeloma.** (Κύστις, the bladder; μυελός, marrow. G. *Harnblasenmarkschwamm*.) Medullary cancer of the urinary bladder.

**Cystidoplegia.** (Κύστις, the bladder; πλῆγη, a stroke.) Paralysis of the urinary bladder.

**Cystidorrhœgia.** Same as *Cystorrhœgia*.

**Cystidorrhœxis.** Same as *Cystorrhœxis*.

**Cystidorrhœa.** Same as *Cystorrhœa*.

**Cystidorrhœncus.** Same as *Cystorrhœncus*.

**Cystidosomatotomy.** Same as *Cystosomatotomy*.

**Cystidospasmus.** Same as *Cystospasm*.

**Cystidostenochœria.** Same as *Cystostenochœria*.

**Cystidotomy.** Same as *Cystotomy*.

**Cystidotrachelotomy.** (Κύστις, the bladder; τραχήλος, the neck; τομή, a cutting.) The incision of the neck of the bladder, as in lithotomy.

**Cystifelleotomy.** (Κύστις, a bag; L. *fel*, bile; τμήνω, to cut.) Term for the operation by which a gall-stone is extracted from the gall-bladder.

**Cystin.** (Κύστις, the bladder. F. *cystine*; I. *ossido cistico*; G. *Blaseneyd*.)  $C_2H_7NSO_2$ . The chief constituent of certain calculi found in the urinary bladder of man. It has also been found in the kidney, in the liver in typhus and in jaundice, and it has been detected in the sweat. It crystallises in regular six-sided plates; it is insoluble in water, alcohol, and acetic acid, soluble in nitric, sulphuric, oxalic, and other acids, and also in potash, soda, and ammonia, and the carbonates of the first two. See *Cystinuria*.

**Cystine.** Same as *Cystin*.

**Cystingorrhœncus.** (Κύστις, a little bladder; ῥήγχο, a snoring. G. *Knistengerusch*.) A small vesicular râle or rhœncus.

**Cystinous.** Containing *Cystin*.

**Cystinuria.** (*Cystin*; L. *urina*, urine.) The condition of body in which cystin is found in the urine. When there is a sediment of cystin it

is amorphous, and whitish or fawn-coloured or crystalline; not dissolved by heat, by carbonate of ammonia, dilute hydrochloric or acetic acids, soluble in ammonia, and in soda and potash and their carbonates. From this solution it crystallises in six-sided plates.

**Cystinx.** (Κύστις, dim. of κύστις, a bladder.) A small vesicle or cyst.

**Cystipathy.** (Κύστις; πάθος, disease.) A general term for disease of the bladder.

**Cystiphlogia.** (Κύστις, the bladder; φλόγω, to burn.) Old term for inflammation of the bladder.

**Cystirrhœgia.** (Κύστις, the bladder; ῥήγνυμι, to burst forth. G. *Blasenblutung*.) A discharge of blood from the bladder.

Also, the same as *Cystirrhœa*.

**Cystirrhœma.** Same as *Cystorrhœma*.

**Cystirrhœa.** (Κύστις, the bladder; ῥοία, a flow. F. *cystirrhœe*.) Term for a mucous discharge from the bladder; vesical catarrh.

**Cystis.** (Κύστις, a bag.) A bag or bladder; specially the urinary bladder.

Also, a cyst.

**C. bilis.** (L. *bilis*, bile.) The gall-bladder.

**C. choledochus.** (Χολή, bile; εἰσχομαι, to receive.) The gall-bladder.

**C. fellea.** (L. *fel*, bile.) The gall-bladder.

**C. serosa.** See *Cyst. serous*.

**Cystitis.** (Κύστις, the bladder. F. *cystite*; I. *cistite*; G. *Blasenzündung*, *Blasencatarrh*.) Inflammation of the urinary bladder. It seldom arises spontaneously, but is caused by extension from pyelitis or gonorrhœa, by cantharides, calculi, or pieces thereof, the passage of instruments, and such like. It is described as acute and chronic. There is more or less local pain and tenderness, more or less constitutional symptoms, and more or less pain on passing water; the urine contains mucus or pus, sometimes blood and shreds of lining membrane.

**C., acute.** This form is accompanied by more or less severe febrile symptoms, by pain and tenderness in the neighbourhood of the organ, by strangury and tenesmus, and by high-coloured urine containing pus and sometimes blood. It may prove fatal from ulceration or sloughing of the mucous membrane or extravasical suppuration. The inflammation may extend upwards to the kidneys.

**C., ammoniacal.** Chronic cystitis caused by, or accompanied by, ammoniacal decomposition of the urine.

**C., calculous.** (L. *calculus*, a small stone.) Inflammation of the bladder set up by the irritation of a stone or fragments of it.

**C., cantharidal.** Inflammation of the mucous membrane of the bladder in poisoning by cantharides or after the application of a blister. The bladder inflammation is secondary, the kidneys being the parts first affected by the irritant. Camphor has been mixed with blister plaster to avoid this complication, and lately it has been proposed to use bicarbonate of soda for the same purpose. False membranes are often passed in the urine.

**C., chronic.** Occurs as a sequel of acute cystitis, or is originally of a less intense form. There is the pain and irritability of bladder; the urine contains much pus, and easily becomes alkaline and offensive.

# CYSTITOME—CYSTOID.

**C., croup'ous.** (*Croup.*) Inflammation of the bladder, accompanied by the passage of false membranes along with the urine. It occurs occasionally in the course of severe cases of typhus and other infectious diseases.

**C., diphtherit'ic.** (*Diphtheria.*) Same as *C., croupous.*

**C., fel'lea.** (*L. fel, bile.*) Inflammation of the gall-bladder.

**C., gonorrhœ'al.** Inflammation of the bladder produced by extension of gonorrhœal inflammation from the urethra.

**C. mucosa acu'ta.** Acute cystitis affecting chiefly the mucous membrane.

**C. parenchymato'sa.** Cystitis affecting chiefly the parenchyma of the walls of the bladder.

**C., pseudomem'branous.** (*Φευδής, false; L. membrana, a membrane.*) A form generally met with as a variety of *C., catarrhal.*

**C., scle'rous.** (*Σκληρός, hard.*) A term applied to cases of chronic cystitis in which there is thickening and hardening of the wall of the bladder with contraction of its cavity. The thickening does not depend on muscular hypertrophy, but on a deposit of a white, lardaceous, fibrous substance under the mucous membrane, which stretches into the muscular coat; it may extend into the prostate gland.

**C. submucosa.** A variety of *C. parenchymatosa* affecting the submucous tissue.

**C. subserosa.** A variety of *C. parenchymatosa* affecting the subserous tissue.

**C., tuber'cular.** A term applied to tuberculos of the urinary mucous membrane, sometimes accompanying pulmonary and genital tuberculos. It is marked by paroxysms of intense pain, by nrethral and vesical spasms, and by hæmaturia. On the mucous membrane are found tubercular granulations and ulcerations. It may spread to the kidneys or travel down the ureters from them.

**C. urica.** (*L. urina, urine.*) Inflammation of the urinary bladder.

**Cystitome.** (*Κύστις, a bag; τέμνω, to cut. F. cystotome.*) A bag or cyst cutter; a term for an instrument for opening the capsule of the crystalline lens in the operation for cataract.

**Cystitomy.** (*Κύστις, a bag; τομή, a section.*) The division of the capsule of the crystalline lens.

**Cystoadeno'ma.** (*Κύστις; αδέν, a gland.*) A term applied to an adenoma which contains cysts; such are many goitres.

**Cystoblast.** (*Κύστις, a bladder; βλαστός, a sprout.*) Same as *Cytoblast.*

**Cystoblennorrhœ'a.** (*Κύστις; βλίννα, mucus; ροία, a flow.*) Vesical catarrh.

**Cystobubon'oele.** (*Κύστις, the bladder; βουβών, the groin; κήλη, a tumour.*) Term for a form of hernia, in which the urinary bladder protrudes through the inguinal opening.

**Cystocarcino'ma.** (*Κύστις, a bag; καρκίνωμα, a cancer.*) A cancer which has undergone cystic degeneration. See *Cancer, cystic.*

**Cystocarp.** (*Κύστις, a bag; καρπός, fruit. G. Kapsel Frucht, Schlauchfrucht.*) A term applied in Floridæ to the organ usually named receptacle in Algæ. It results from the fertilisation of the trichogyne.

**Cystocatarrh'.** (*Κύστις; κατάρροος, a catarrh.*) Vesical catarrh.

**Cystocele.** (*Κύστις, the bladder; κήλη, a tumour. F. cystocele; G. Blasenbruch.*) Term for a hernia, in which the urinary bladder is protruded. It is very rare.

Also, applied to a prolapsus or relaxation of the anterior wall of the vagina containing the prolapsed bladder. This has occasionally occurred in labour from pressure of the head on a distended bladder.

**C., bil'liary.** (*L. bilis, bile.*) A prominence produced by a distended gall-bladder.

**C., cru'ral.** Same as *C. femoral.*

**C., femoral.** Hernia of the bladder into the femoral canal.

**C., inguinal.** (*L. inguen, the groin.*) Hernia of the bladder into the inguinal canal.

**C., perine'al.** A hernia of the bladder protruding at one or other side of the raphe of the perineum.

**C., vagi'nal.** A condition in which prolapsus of the womb and of the anterior wall of the vagina has carried with them a part of the bladder.

**Cystoceph'alus.** Same as *Cystencephalus.*

**Cystochondro'ma.** Same as *Enchondroma, cystic.*

**Cystocolpitis.** Same as *Colpocystitis.*

**Cystoscope.** (*Κύστις; σκόπος, a blow.*) A sound provided with an ear-plate like that of a stethoscope, to render more distinct the noise of its impact on a urinary calculus.

**Cystodialysis.** (*Κύστις; διάλυσις, a separating. F. cystodialyse; G. Blasenaufl.*) A wound of the urinary bladder.

**Cystodynia.** (*Κύστις; δόδυμ, pain. F. cystodynie; G. Blasen Schmerz.*) Pain in the urinary bladder, especially rheumatism of the muscular coat.

**Cystoenterocele.** (*Κύστις; έντερον, an intestine; κήλη, a tumour.*) A hernia containing both bladder and intestine.

**Cystoenteroëpiplocele.** (*Κύστις; έντερον; επίπλοον, the omentum; κήλη, a tumour.*) A hernia containing a portion of the bladder as well as intestine and omentum.

**Cystoëpiplocele.** (*Κύστις; επίπλοον; κήλη.*) A hernia containing a portion of the bladder and some omentum.

**Cystofibro'ma.** Same as *Fibrocystic tumour.*

**Cystoflagella'ta.** (*Κύστις; L. flagellum, a whip.*) A division of flagellate *Infusoria*, having a vesicular body with a flagellum, but no ciliary crown.

**Cystogen'y.** (*Κύστις; γέννω, to produce.*) A new formation or growth in the urinary bladder.

**Cystohæ'mia.** (*Κύστις; αίμα, blood. F. cystohémie.*) Congestion of blood in the bladder. (*Littre and Robin.*)

**Cys'toid.** (*Κύστις, a bag; είδος, likeness. G. blasenähnlich.*) Resembling a cyst.

Also, a synonym of *Cestoda.*

**C. cica'trix.** (*L. cicatrix, a scar. G. cystoide Vernarbung.*) A term applied by von Gräfe to a condition which is sometimes presented by the cicatrix which is formed after the incision in iridectomy; it is marked by the occurrence of vesicular projections of the cicatricial tissue, and is due to the pressure of the fluids within the eyeball.

**C. degenera'tion of the retina.** (*F. dégénérescence cystoïde de la rétine.*) Term ap-

plied by Iwanoff to a condition of the retina in which accumulations of serous fluid form in the substance of the retina. The affection is common in the aged. The collections of fluid are at first small, appear in the external and then in the internal granule layer, separating the elements of the retina from each other. As the cysts increase they coalesce, and the supporting or radiating fibres remain and traverse or form the lateral walls of the cysts, whilst their external and internal walls are formed by the granule layers compressed against the external and internal limiting membranes.

**C. growths, compound.** The same as *Cysts, proliferous*.

**C. tumour.** A tumour containing cysts.

Also, a synonym of *Cyst* as a morbid condition.

**Cystolipoma.** (Κύστις; λίπος, fat.) An encysted lipoma.

**Cystolith.** (Κύστις, the bladder; λίθος, a stone. F. *cystolith*; G. *Harnblasenstein*.) Stone or calculus of the bladder.

Also (G. *Träubenkörper*), a cluster of microscopic crystals of calcium carbonate, arranged in a radiated manner, in club-shaped stratified outgrowths of the cell wall, which project into the cavity of the cells in plants. They are well seen in the epidermic cells of the leaves of many Urticaceae, and in the stem of species of *Jussiaea*.

**Cystolithiasis.** (Κύστις; λίθος. F. *cystolithiasis*; G. *Harnblasensteinkrankheit*.) Urinary calculous disease.

**Cystolithic.** (Same etymon.) Relating to urinary calculus.

**Cystolitein.** (Κύστις; L. *luteus*, yellow.) A term applied to the form of lutein which is contained in the yellow fluid of some ovarian cysts.

**Cystoma.** (Κύστις, a bag.) A cyst or cystic tumour which is a new development; in contradistinction to a cystic tumour in which the sac is a natural formation, and which is called simply a *Cyst*.

The term is also used synonymously with cyst or cystic tumour.

**C. ovarii.** Same as *Ovarian cyst*.

**Cystomerocele.** (Κύστις, the bladder; μέρος, the thigh; κύλη, a tumour. F. *cystomerocele*; G. *Blasenschenkelbruch*.) Term for a hernia in which the bladder protrudes through the femoral ring.

**Cystomyxoma.** Same as *Myxoma, cystoid*.

**Cystoncus.** (Κύστις; ὄγκος, a mass. G. *Harnblasengeschwulst*.) Increased thickness of the urinary bladder.

**Cystoneuralgia.** (Κύστις; νῦρον, a nerve; ἄλγος, pain.) Neuralgia of the urinary bladder.

**Cystoöpsis.** (Κύστις, a bladder; ὄψις, appearance.) A sexually mature form of nematode worm.

**C. acipenseris.** Wagn. (L. *acipenser*, sturgeon.) Found beneath the scutes of *Acipenser ruthenus*.

**Cystoparalysis.** (Κύστις; παράλυσις, palsy. G. *Harnblasenlähmung*.) Paralysis of the urinary bladder.

**Cystophlegmatic.** (Κύστις; φλέγμα, phlegm.) Relating to vesical mucus.

**C. disease.** A synonym of *Vesical catarrh*.

**Cystophlogia.** Same as *Cystiphlogia*.

**Cystophthisis.** (Κύστις; φθίσις, de-

easy.) The hectic condition resulting from ulceration of the mucous lining of the urinary bladder.

**Cystophthoë.** (Κύστις; φθόη, a wasting. G. *Harnblasenschwindsucht*.) Wasting of the bladder.

**Cystoplast.** (Κύστις, a bag; πλάσσω, to form.) A cell concerned in growth and possessing a cell wall.

**Cystoplastic.** Of, or belonging to, the operation of *Cystoplasty*.

**Cystoplasty.** (Κύστις, the bladder; πλάσσω, to fabricate or form.) Term applied to the operation for the cure of vesico-vaginal fistula, consisting in the dissection of a flap from the external labium, and uniting it by suture to the newly pared edges of the fistulous opening.

**Cystoplegia.** (Κύστις, the bladder; πλῆγη, a stroke. F. *cystoplegie*; G. *Harnblasenlähmung*.) Paralysis of the urinary bladder.

**Cystoplegic.** Relating to *Cystoplegia*.

**Cystoplexia.** (Κύστις; πλῆξις, a stroke.) Paralysis of the urinary bladder.

**Cystopteris.** (Κύστις; πτερίς, a fern. G. *Blasenfarne*.) A Genus of the Nat. Order *Filices*; so called from the appearance of the basally attached membranous indusium.

**C. dentata.** Hooker. The *C. fragilis*, var. *dentata*.

**C. fragilis.** Bernh. (L. *fragilis*, brittle.) Brittle bladder fern. Used as the *Adiantum capillus veneris*.

**C. fragilis**, var. *dentata*, Hook. (L. *dentatus*, toothed.) Used as *C. fragilis*.

**Cystoptosis.** (Κύστις; πτώσις, a falling. F. *cystoptose*; L. *cystoptosi*; G. *Harnblasenvorfall*.) Prolapse of the mucous membrane of the urinary bladder through its neck.

**Cystopyelitis.** (Κύστις; pyelitis.) Inflammation of the urinary bladder and of the pelvis of the kidney combined.

**Cystopyic.** (Κύστις; πῦον, pus. F. *cystopyique*; L. *cistopyico*.) Relating to suppuration in the bladder.

**Cystorrhagia.** Same as *Cystirrhagia*.

**Cystorrhœma.** (Κύστις; ῥίμα, a humour.) Rheumatism of the urinary bladder.

**Cystorrhexis.** (Κύστις, the bladder; ῥήξις, a bursting. F. *cystorrhexis*; G. *Harnblasenzerreissung*.) Rupture of the bladder.

**Cystorrhœa.** Same as *Cystirrhœa*.

Also, a synonym of *Diabetes*.

**Cystorrhœis.** Same as *Cysthemorrhœis*.

**Cystorrhonchus.** (Κύστις, a bladder; ῥόγχος, a snoring. F. *cystorrhonchus*; G. *Blasenrasselgeräusch*.) The large vesicular râlè or rhonchus heard by means of the stethoscope.

**Cystosacculus.** See *Saccocystis*.

**Cystosarcoma.** A term by Müller for a firm, vascular, fibrous tumour containing cysts. See *Sarcoma, cystic*.

**C. phylloides.** (Φύλλον, a leaf; εἶδος, likeness.) A term applied to a form of mammary cystic sarcoma in which the tumour contains retention cysts, with lobulated leaf-like growths in their interior.

**Cystoschisis.** (Κύστις; σχίσις, a cleaving. G. *Blasenspaltung*.) An imperfect development of the urinary bladder resulting in a cleft condition.

**Cystoscirrhus.** (Κύστις; σκίρρος, a hard swelling. G. *Harnblasenkrebs*.) Scirrhus cancer of the bladder.

# CYSTOSCOPE—CYTISUS.

**Cyst'scope.** (Κύστις; σκοπέω, to view.) A form of *Endoscope*, for the examination of the interior of the bladder.

**Cystos'copy.** (Same etymon.) The use of the *Cystoscope*.

**Cystose.** (Κύστις.) Resembling, or possessing, a cyst.

**Cystoseira.** (Κύστις; σείρα, a cord. G. *Blasen schnur tang*, *Fuchertang*.) A Genus of the Family *Fucaceæ*.

**C. siliquosa**, Agardh. The *Halidrys siliquosa*.

**Cystosei'ridæ.** (Same etymon.) A Tribe of the Nat. Order *Fucaceæ* having conceptacles or receptacles distinct from the frond, which is polysiphonous.

**Cystosomatotomy.** (Κύστις; σῶμα, the body; τομή, a cutting. G. *Blasenkörperschnitt*.) Incision into the body of the bladder.

**Cystospasm.** (Κύστις; σπασμός, a spasm. G. *Blasenskrampf*.) Spasmodic contraction of the urinary bladder.

**Cystospastic.** (Κύστις; σπαστικός, stretching.) Relating to *Cystospasm*.

**Cystospermittis.** (Κύστις, a bag; σπέρμα, seed.) Inflammation of the vesicule seminales.

**Cystosteato'ma.** (Κύστις; στείτωμα, a sebaceous tumour.) An encysted sebaceous tumour.

**Cystostenochoria.** (Κύστις, the bladder; στενοχωρία, to be pressed for room.) A contracted condition of the bladder.

**Cystotania.** (Κύστις; ταινία, a band.) Leuckart's term for the tapeworms that are vesicular in their larval state.

**Cystothromboid.** (Κύστις; θρόμβος, a clot; είδος, likeness.) Relating to clots of blood in the urinary bladder.

**Cystotome.** (Κύστις; τέμνω, to cut.) An old instrument for incising the bladder in lithotomy; there were many forms, single, double, and with a concealed blade.

**Cystotomy.** Same as *Cystotomy*.

**C. cum apparatu alto.** (L. *cum*, with; *apparatus*, a preparation, tool; *altus*, high.) Same as *Apparatus altus*.

**C. cum apparatu magno.** (L. *magnus*, great.) Same as *Apparatus major*.

**C. cum apparatu parvo.** (L. *parvus*, small.) Same as *Apparatus minor*.

**C. hypogastrica.** (Υπό, under; γαστήρ, the belly.) The same as *Apparatus altus*.

**C. lateralis.** Lateral lithotomy. See also *Cystotomy*.

**Cystotomic.** Relating to *Cystotomy*.

**Cystotomy.** (Same etymon.) The operation of cutting into the bladder for whatever purpose. Opening the bladder in perineæ or elsewhere has been advised in ulceration of the cystic mucous membrane and in cystitis, as a mode of providing a free exit for the urine and physiological rest for the bladder as a means of cure; and in other diseases of the bladder for the purpose of introducing the finger to aid in diagnosis.

The term cystotomy has latterly been employed to designate an operation which is really urethrotomy, being the opening into the membranous urethra only either by median or lateral incision.

Also, a synonym of *Lithotomy*.

**Cystotrachelotomy.** (Κύστις; τρά-

χλος, the neck; τομή, an incision.) A synonym of lateral lithotomy, because the neck of the bladder is then incised.

**Cystotraum'a.** (Κύστις; τραύμα, a wound.) Wound of the bladder.

**Cystous.** Same as *Cystic*.

**Cystovarium.** (Κύστις, a bag; L. *ovarius*, an egg-keeper.) An ovary containing cysts.

**Cystula.** (Dim. of *cyst*.) A term applied to the closed apothecia of lichens; and also to the small cup-shaped bodies on the upper surface of the thallus of *Marchantia*.

**Cysus.** (Κυσός, any hollow.) The anus.

**Cytophyte.** (Κύτος, a cavity; φυτόν, a plant.) A plant that has a carina or hollow keel.

**Cythere'an shield.** (Κυθήρεια, Venus; from Κύθηρα, an island in the Ægean Sea, now Cerigo, famed for the worship of Venus.) A synonym for *Condom*.

**Cytheromania.** (Κυθήρεια, surname of Aphrodite or Venus; μανία, madness.) A synonym of *Nymphomania*.

**Cythion.** An old name for a collyrium described by Celsus, vi, 7.

**Cytinaceæ.** (*Cytinus*.) The eistus rapes. A Nat. Order of monochlamydeous Exogens, parasitic on roots, and having perfect or unisexual flowers, solitary and sessile, or clustered at the top of a scaly stem, with a 3—6 parted calyx, sessile anthers, opening by longitudinal slits, and very numerous ovules on parietal placentæ.

**Cytin'ea.** Same as *Cytinaceæ*.

**Cytinus.** (Κύτινος, the calyx of the pomegranate.) A Genus of the Nat. Order *Cytinaceæ*.

**C. hypocist'us.** (Υπό, under; *cistus*.) A plant parasitic on the roots of the *Cistus incanus*, and other species. The juice of the fruit is acid and astringent, and is used in hæmorrhage and mucous fluxes.

**Cytisin.** (G. *Bohnenbaum bitter*.)  $C_{20}H_{27}N_3O$ . A yellowish-white, crystallisable, deliquescent substance, with a bitter and somewhat acrid taste, found in the seeds, flowers, and leaves of the *Cytisus laburnum*, and other species. It is an active emetic and purgative, and is poisonous.

Also, a similar substance said to exist in the flowers of the *Arnica montana*.

**Cyrtis'ma-eczema.** Same as *Eczema*.

**C.-herpes.** A synonym of *Herpes*.

**Cytisogenis'ta.** The common broom, *Sarothamnus scoparius*.

**Cytisus.** (Κύτισος. G. *Geisklee*, *Baumklee*.) A Genus of the Nat. Order *Leguminosæ*.

**C. alpinus**, Lamb. (L. *alpinus*, belonging to the Alps.) See *Laburnum*.

**C. ca'jan**, Willd. The *Cajanus indicus*.

**C. græ'cus.** (L. *græcus*, Grecian.) The *Anthyllis Hermannia*.

**C. hirsu'tus**, Linn. (L. *hirsutus*, hairy.) Hab. South Europe. Leaves used as a diuretic.

**C. labur'num**, Linn. (F. *aubour*; G. *Goldregen*.) The *Laburnum*.

**C. lanig'erus.** (L. *lana*, wool; *gero*, to bear.) A species supposed to be the *Aspalathos* of Greek and Roman writers.

**C. scopari'us**, Link. The *Sarothamnus scoparius*, Koch.

**C. spino'sus**, Linn. (L. *spinus*, thorny.) A species which contains indigo.

**Cytl'tis.** (L. *cutis*, the skin.) Inflammation of the skin.

**Cytoblast.** (Κύτος, a cell; βλαστός, a sprout.) Schleiden's term for the nucleus of a cell on the hypothesis that it is the germ from which the cell springs.

**Cytoblastema.** (Κύτος; βλάστημα, increase. F. *cytoblastème*; G. *Cytoblastem*, *Grundsubstanz*.) Schleiden's term for the protoplasm of the cell.

**Cytoblastion.** (Κύτος; βλαστήιον, a sprout.) A term applied to the free nuclei of spherical or oval shape which, when developed, form connective-tissue cells, embryoplastic cells, or the cells of granulations.

**Cytocormi.** (Κύτος; κορμός, the trunk of a tree.) Cell stocks or fusions; they originate through the coalescence of previously separated cells or by the incomplete division of cells. Häckel names these organs of the first order. They are represented by the laticiferous and spiral vessels of plants, and by muscle and nerve fibres of animals.

**Cytode.** (Κύτος.) Häckel's term for the lowest form of life as represented by a mass of non-nucleated protoplasm; the protamoeba.

Also, applied to the lymph and lymphoid cells; called also *Leucocytes*.

**C., generating.** Van Beneden's term for the first stage of development of a Gregarina, consisting of a granular, non-nuclear, moneriform mass of protoplasm without cell wall, which emits a pseudopodium or pseudocilia, which develops into the perfect form.

**Cytogenesis.** (Κύτος, a cell; γίνεσις, generation. G. *Bildung*.) Term for the generation or production of cavities or cells; cell-development. In most instances it is generally admitted that cells are formed from pre-existing cells by a process of segmentation or budding; but there are some who believe that there exists a form of spontaneous generation, but only from pre-existing organised matter. Of the latter mode of origin the development of the vitelline nucleus in the centre of the ovule after fertilisation, the intercellular formation of spores in the thecae of fungi, the development of nuclei in the deep epithelial layers of glands, and the formation of leucocytes in non-cellular fluids, are given as instances, of which it may be remarked that they are in no way generally admitted. Cytogenesis by segmentation commences in the nucleus, and is followed by indentations of the cell wall, which increase and cut the cell in two; this is the mode of growth of many of the lowest animals and vegetables, of the cells of the ovum of animals, and of many of the cell structures of the highest forms. Cytogenesis by budding may commence in the protoplasm, which pushes out from the surface of the cell, carrying with it a portion of the cell wall, which in time becomes separated at its base, and, a nucleus becoming developed within it, a new cell is formed; or the cell may remain non-nucleated; or it may commence in the nucleus by a piece of it splitting off, approaching the surface, pushing out, and separating as a new cell. Such is the mode of formation of the polar globules of the vitellus of the ovum of some Mollusca, and of the external layer of the blastoderm of some Diptera, which

remain without a nucleus. This mode of development, ending in a nucleated cell, is seen in many animal and vegetable structures. See *Nucleus*, *division of*, *Gemmation*, *Karyokinesis*.

**Cytogenetic.** Relating to *Cytogeny*.

**Cytogenic.** (Κύτος; γένναιον, to produce.) Producing cells.

**Cytogenous.** (Κύτος, a cell; γιννύω, to produce.) Cell-producing.

**C. tis'sue.** Kölliker's term for the adenoid tissue of Ills. Same as *Connective tissue*, *retiform*.

**Cytogeny.** (Κύτος; γίνεσις, generation.) Bergeret's term for the development of cells.

**Cytoid.** (Κύτος; εἶδος, likeness.) Cell-like.

**C. corpus'cles.** Henle's term for *Leucocytes*.

**C. glob'ules.** Same as *C. corpuscles*.

**Cytaleichus.** (Κύτος; λείχαι, to lick.) A Genus of the Family *Sarcophagidae*, Order *Acaridea*.

**C. sarcoptor'des**, Megnin. (Σάρξ, flesh; κόπτω, to cut.) A species inhabiting, often in large numbers, the aerial sacs of gallinaceous birds, and through their diverticula travelling to the bronchial tubes and the bones. They produce cough when in great abundance, and occasionally death, from asphyxia and congestion of the lung, when they occupy the bronchial tubes.

**Cytology.** (Κύτος; λόγος, an account.) The description or doctrine of cells and their formation.

**Cytoplasm.** (Κύτος; πλάσμα, anything formed.) Kölliker's name for the contents of a cell; the same as *Protoplasm*.

**Cytostasis.** (Κύτος; στάσις, a standing.) Arrest of the blood corpuscles in the small vessels, supposed to depend on altered conditions of the corpuscles themselves.

**Cytostoma.** (Κύτος; στόμα, the mouth. G. *Zellmund*.) The mouth of a cell.

**Cytozo'a.** (Κύτος, a cell; ζῶον, an animal.) Elongated, fusiform, mobile bodies occasionally found by Gaule in the red cells of defibrinated frog's blood when acted on by a 0.6 per cent. solution of common salt at a temperature of 30°–32° C. Gaule thought they were detached portions of the protoplasm of the blood cells—secondary nuclei; Arndt that they were Spirochaetes.

**Cytha'ria.** A Genus of *Fungi*.

**C. Berteri.** Hab. Chili. Used as food.

**C. Darwinii.** Hab. Terra del Fuego. Used as food.

**Cyrtaros.** (Κύρταρος, the flowering tuft of a pine.) The glans penis.

**Cyze'ner.** Term for swelling of the wrists.

**Cyzice'nus.** An ancient plaster for chronic ulcers and wounds of tendons and nervous parts.

**Cza'ko.** Hungary; Honter County. A mineral water containing iron and calcium carbonate and free carbonic acid. It is diuretic as well as tonic.

**Czigelka.** Hungary; Sarose County, near Bartfeld. A mineral water containing sodium, calcium, magnesium and iron carbonate, sodium chloride, and some sodium iodide and bromide.

## D.

**D.** Contraction of *Da*, or *detur*, give, or let it be given.

**D. t. d.** Contraction of *Da tales doses*, give such doses.

**Da'aurith.** An Arabian term for a disease of animals called *Mal de coit* by the French.

**Dab.** Common name for the *Pleuronectes limanda*; used as food.

**Da'bach.** The mistletoe, *Viscum album*.

**Da'ber locks.** Common name for the *Fucus esculentus*, or edible fuens.

**Daboia.** A Genus of the Family *Viperidae*, Suborder *Solenoglyphæ*, Order *Ophidia*. They are poisonous snakes.

**D. elegans**, Gray. (L. *elegans*, neat.) A synonym of *D. Russellii*.

**D. pulchella**, Gray. (L. *pulchellus*, beautiful, little.) A synonym of the *D. Russellii*.

**D. Russellii**, Günther. *Tie prolonga* of Ceylon; *Uloa bora* of the natives of Calcutta; *Jessur*, or *Siah chunder Amaiter* of Bengal; *Katuka rekula pada*. A very venomous Indian snake. Family *Viperidae*, Suborder *Ophidia viperiformes*. Colour light chocolate, with three series of black white-edged rings, those of the middle series ovate, those of the outer circular; sometimes very small, black, white-edged ocelli are scattered between the rings; a yellow line on each side of the upper surface of the head, the two lines convergent on the snout; rostral and labial shields yellow, with brown margins; a subtriangular brown, black-edged spot below the eye; belly uniform, yellowish, or marbled with brown, generally more or less numerous semicircular brown spots on the hinder margins of the ventral shields; ventrals 163—170. Subcaudals 45—60. The bite less rapid in its action, but just as poisonous as the cobra. A horse died in 11½ hours in one of Sir J. Fayrer's experiments. It is nocturnal and terrestrial in habits, but will take to the water. When disturbed it hisses fiercely, and strikes with great vigour. It attains to a length of 50 inches.

**Daburi.** Old name for the *Bixa orellana*.

**Dace.** (According to some, it comes through the F. name *dard*, from Low L. *dardus*, a dart, in allusion to its quick movements; according to others, it is a corruption of the latter half of its F. name *vandoise*. F. *vandoise*, *dard*; G. *Heur-ling*.) Common name for the *Leuciscus vulgaris*; edible.

**Dacha.** Name by which the Hottentots call a native hemp which they smoke like the *Cannabis indica*.

Also, a name of the *Phlomis leonurus*.

**Dacne'ron.** (Δάκνω, to bite.) Old name for a collyrium made of burnt copper, pepper, cadmia, saffron, myrrh, gum arabic, and opium. (Quincy.)

**Dacnid'ia.** (Doenitis.) A Family of the Order *Nematoda*, having the mouth situated obliquely or laterally near the anterior extremity, but not terminal.

**Dacni'tis.** (Δάκνω, to bite.) A Genus of nematode *Entozoa*, having a spherical head, a large vertical mouth, with two thick fleshy lips and numerous small teeth.

**D. abbrevia'ta**, Dnj. (L. *abbrevio*, to shorten.) Found in the intestine of *Scorpana cirrhosa*.

**D. attenua'ta**, Molin. (L. *attenuo*, to weaken.) Found in the intestine of *Leuciscus cavendish*.

**D. con'ger**, v. Beneden. Found in the intestine of *Conger vulgaris*.

**D. fusiformis**, Molin. (L. *fusus*, a spindle; *forma*, shape.) Found in the intestine of *Platessa flesus*.

**D. gado'rum**, v. Beneden. (L. *gadus*, a codfish.) Found in the intestine of *Gadus morhua*.

**D. globo'sa**, Dujardin. In the intestine of the trout, *Salmo fario*.

**D. hi'ans**, Duj. (L. *hio*, to gape.) Found in the intestines and mesentery of *Conger Casinii*.

**D. plates'sæ**, v. Beneden. Found in the intestine of *Platessa vulgaris*.

**D. rotunda'ta**, Molin. (L. *rotundo*, to round.) Found in the intestine of *Cantharus vulgaris*.

**D. sphæroceph'ala**, Duj. (Σφαῖρος, a ball; κεφαλή, head.) Found in the intestine of *Acipenser Guldenstädtii*.

**D. squa'li**, Dujard. (L. *squalus*.) Found in the intestine of *Galeus canis*.

**Dacno'sis.** (Δάκνω, to bite. F. *dacnose*; G. *Beissen*.) A biting or pungency.

**Dacremor'rhy'sis.** Same as *Dacry-hæmorrhysis*.

**Dacry.** (Δάκρυν, a tear. L. *lacryma*; G. *Thräne*.) A tear.

**Dacryadenal'gia.** (Δάκρυ, a tear; ἀδην, a gland; ἄλγος, pain. F. *dacryadénalgie*; G. *Dakryadenalgie*, *Thrânendrüsenschmerz*.) Neuralgic pain in the lachrymal gland.

**Dacryadeni'tis.** The same as *Dacryo-adenitis*.

**Dacryadenoscir'rhus.** (Δάκρυ, a tear; ἀδην, scirrhus. F. *dacryadénoscirrhé*; G. *Thrânendrüsenskrebs*.) Scirrhus of the lachrymal gland.

**Dacryagogatré'sia.** (Δάκρυ; ἄγω, to lead; ἀτρεία. F. *dacryagogatrésie*; G. *Ver-schliessung der Thränengänge*.) Obstruction or contraction of the lachrymal duct.

**Dacryagogue.** (Δάκρυ, a tear; ἄγω, to lead. F. *dacryagogue*; G. *thrauenführend*.) Conveying the tears; applied to the lachrymal duct.

Also, a term for those medicines which promote the secretion of the tears; such are iodide of potassium, onions, ammonia, and erubines in general. This secretion is increased by certain mental and physical conditions, as in the act of weeping.

**Dacryallœo'sis.** (Δάκρυ, a tear; ἀλλοίωσις, change. F. *dacryallœose*; G. *Ausartung der Thränen*.) An alteration or change in healthy secretion of the tears.

**Dacrydium.** (Δακρυδίων, dim. of δάκρυ, a tear.) Old name for scammonium, or scammony, which exudes and hardens into tears.

Also, a Genus of the Nat. Order *Tazaceæ*.

**D. cupres'sinum**, Lamb. (L. *cupressinus*, like cypress.) Hab. New Zealand. Bark and leaves astringent.

**D. taxifo'lium.** (L. *taxus*, the yew; *fo-lium*, a leaf.) Hab. New Zealand. An antiscorbutic beer is made from the twigs.

## DACRYELCOSIS—DACRYOLIN.

**Dacryelco'sis.** (Δάκρυον, a tear; ἔλκος, an ulcer. F. *dacryelcose*; G. *Verschwärung der Thränenwerkzeuge, Thränenschwür.*) Ulceration of the lachrymal apparatus.

**Dacrygelosis.** (Δάκρυον; γελῶ, to laugh.) A form of insanity, characterised by the patient weeping and laughing alternately.

**Dacryhæmorrhysis.** (Δάκρυον; αἱμorrhῆσις, a flux of blood. G. *Thränenblutfluss.*) The discharge of sanguinolent fluid from the eyes, or the discharge of tears mingled with blood.

**Dacryin.** (Δάκρυον, a tear. F. *dacryine*; F. *Thränenstoff.*) Name for a peculiar substance formerly thought to exist in the tears.

**Dacryma.** (Δάκρυμα.) A tear.

**Dacryo.** (Δάκρυω, to weep.) A term used as a prefix in certain compound names of affections, denoting a reference to, or connection with, the lachrymal apparatus or the tears.

**Dacryoadenalgia.** The same as *Dacryadenalgia*.

**Dacryoadenitis.** (Δάκρυον, a tear; ἀδέν, a gland. F. *dacryoadenite*; G. *Thränen-drüsenentzündung.*) Inflammation of the lachrymal gland. A rare disease, more frequently chronic than acute, occasionally bilateral, characterised by swelling, with more or less pain and tenderness, in the position of the gland, with diminished or increased secretion of tears, chemosis of the conjunctiva, displacement of the globe of the eye, and impairment of its movements; with optic neuritis in some cases, owing to pressure on the nerve, and occasionally symptoms of compression of the brain, owing to the enlarged gland eroding and penetrating the roof of the orbit, or making its way through the fissures of that cavity. In acute cases fatal symptoms may occur with delirium and coma. Microscopic examination usually shows that the acini of the gland are enlarged, that there are cysts and tortuous and enlarged tubes with colloid contents, but there may be hypertrophy of the gland tissue. The diagnosis from cysts and from nodes is difficult. Resolution may occur, or it may pass into suppuration, and, bursting, leave a fistulous passage.

**Dacryoblennorrhœa.** (Δάκρυον; βλήννα, mucus; ῥέω, to flow. G. *Thränenschleimfluss.*) Discharge of mucus from the lachrymal sac and tear ducts.

**Dacryocystalgia.** (Δάκρυον; κύστις, a sac; ἄλγος, pain. G. *Thränensackschmerz.*) Disease or pain in the lachrymal sac.

**Dacryocystatonia.** (Δάκρυ, a tear; κύστις, a bag; ἀτονία, slackness. F. *dacryocystatonie*; G. *Erschlaffung des Thränensacks.*) Atony of the lachrymal sac.

**Dacryocystis.** (Δάκρυ; κύστις, a bag. F. *dacryocyste*; G. *Thränensack.*) Term for the lachrymal sac.

**Dacryocystitis.** (Δάκρυ; κύστις, a sac. F. *dacryocystite*; G. *Entzündung des Thränensacks.*) Term for inflammation of the lachrymal sac.

**D. blennorrhœica.** (Βλήννα, mucus; ῥέω, to flow. G. *Blennorrhœa des Thränensacks.*) Inflammation of the lachrymal sac attended with the formation of pus. If the sac be laid open, the mucous membrane is seen to be dark or brownish red and swollen, whilst the surface is uneven from warty or villous growths and enlarged mucous glands, which resemble granulations. The symptoms are those of dacryocysti-

tis catarrhalis, only more intense. Some conjunctivitis, with swelling of the caruncle and plica semilunaris, and blepharitis are usually present.

**D. catarrhalis.** (*Catarrh.*) Inflammation of the lachrymal sac from cold. The secretion is at first augmented, clear, and transparent, then it becomes cloudy from the presence of epithelial scales and small masses of coagulated albumen, and is finally puriform. The sac gradually becomes distended, partly with tears and partly with the increased normal and abnormal products of the secretion of the mucous membrane. At first the contents of the sac can be made by pressure partly to descend through the nasal duct into the nose, and partly to regurgitate through the puncta lachrymalia, the tears first appearing and then the puriform secretion.

**D. phlegmonœsa.** (Φλεγμονή, inflammation beneath the skin.) Intense inflammation of the lachrymal sac, which is converted into an acute abscess. The superjacent parts become infiltrated with blood, serum and white blood cells; a hard swelling of considerable size appears over the sac, and the reddened and oedematous condition of the connective tissue extends over the cheek and lower lid, sometimes resembling erysipelas. The matter, if not let out by the surgeon, bursts at the most prominent part, but stricture or closure of the nasal duct and necrosis of the lachrymal and adjoining bones often occur. The pain is severe, and febrile symptoms are usually well marked.

**Dacryocystoblennorrhœa.** (Δάκρυ; κύστις, a bag; βλήννα, mucus; ῥοία, a flow. F. *dacryoblennorrhœe*; G. *Thränenschleimfluss.*) A term for a discharge of mucus from the lachrymal sac.

**Dacryocystoblennos'tasis.** (Δάκρυ; κύστις; βλήννα; στάσις, a standing.) Accumulation of the tears and mucous secretion of the conjunctiva and lachrymal sac in the lachrymal sac, causing it to be distended and form a smooth, rounded tumour at the inner angle of the eye.

**Dacryocystoptosis.** (Δάκρυ; κύστις; πτώσις, a falling.) Relaxation or hernia of the lachrymal sac.

**Dacryocystosyringokatakic'is.** (Δάκρυ; κύστις; σφύριξ, a pipe; κατακλιεσις, a shutting up.) A term proposed by Dieffenbach for an operation intended to effect the closure of a lachrymal fistula by refreshing the edges of the orifice of the fistula, freeing the borders, and bringing them into apposition.

**Dacryodes.** (Δακρυόδης, like tears. G. *thränenartig, thränenähnlich.*) Lachrymose, weeping; resembling tears.

Also, the same as *Dacryopyosis*.

Also, a wound or sore which, instead of healthy pus, exudes a watery humour.

**Dacryohæmorrhœa.** (Δάκρυ; αἱμorrhῆσις, a flow of blood. F. *dacryohæmorrhœe*; G. *Thränenblutfluss.*) A term for sanguineous lachrymation, or a flow of tears mingled with blood.

**Dacryoid.** (Δάκρυ; εἶδος, likeness. F. *dacryoïde*; G. *thränenähnlich.*) Resembling a tear.

In Botany, applied to seeds which are oblong and somewhat pointed at one extremity.

**Dacryolin.** (Δάκρυ, a tear.) Term applied to the form of albumin found in the tears. It is not coagulated by acids or heat, but is con-

# DACRYOLITE—DACTYLOCAMPSODYNIA.

verted by slow evaporation into a yellow insoluble substance. It is found in small quantity only in the lachrymal secretion when normal, but in conjunctivitis it is secreted in much greater quantity. It coagulates into a flocculent mass when water is added to it, and in this way forms a pseudomembranous film over an inflamed eye to which water is applied.

**Dacryolite.** (Δάκρυ; λίθος, a stone. F. *dacryolithe*; G. *Thränenstein*.) Term for a calcareous concretion in the lachrymal ducts, canaliculi, or sac, or in the nasal duct.

**Dacryolith.** Same as *Dacryolite*.

**Dacryolithiasis.** (Δάκρυον; λιθίασις, the disease of the stone. G. *Thränensteinbildung*.) The formation of calculi in the tear ducts.

**Dacryolithus.** Same as *Dacryolite*.

**Dacryoma.** (Δακρύω, to weep.) Term for a stoppage or obstruction in one or both of the puncta lachrymalia, causing *Stillicidium lachrymarum*, or an effusion of tears.

**Dacryon.** (Δάκρυον, a tear.) A tear. Also, a term employed in craniometry to denote the point on the side of the root of the nose where the frontal, the lachrymal bone, and the ascending or nasal process of the superior maxillary bone can be simultaneously touched.

Also, applied by Theophrastus to the *Coir lachryma*.

**Dacryon'omē.** (Δάκρυ, a tear; νομαί, eating sores. F. *dacryonome*.) An old term for lupus exedens of the lachrymal organs.

Also, a term for *Epiphora*.

**Dacryopæus.** (Δάκρυ; ποιῶν, to make. F. *dacryope*; G. *Thränen machend*.) Making or causing the secretion of tears; applied to onions, horse-radish, and such like.

**Dacryops.** (Δάκρυον, a tear; ὄψ, sight. G. *Thränensackgeschwulst*.) A cystiform dilatation of one of the ducts of the lachrymal gland. It is situated beneath the conjunctiva in the fold of the upper lid, near the outer canthus. On pressure a tear may sometimes be squeezed out of a minute orifice near the most prominent part of the tumour. It is of rare occurrence.

Also, a watery or weeping eye. Obstruction of the lachrymal sac.

**D. fistulo'sa.** (L. *fistulosus*, full of holes.) Fistula of the lachrymal sac.

**Dacryopto'sis.** (Δάκρυον; πτώσις, a falling.) The shedding of tears.

**Dacryopyorrhœa.** (Δάκρυον; πύον, pus; ροία, a flow. G. *Thräneneiterfluss*.) A discharge of tears mixed with pus.

**Dacryopyosis.** (Δάκρυον; πύωσις, suppuration.) Suppuration in the lachrymal sac.

**Dacryorrhœa.** (Δάκρυον; ροία, a flow. F. *dacryorrhée*; G. *Thränenfluss*.) An unnatural flow of tears.

**Dacryor'rhysis.** (Δάκρυον; ρύσις, a flowing.) An unnatural flow of tears.

**Dacryosolen.** (Δάκρυον; σωλήν, a channel. F. *dacryosolen*; G. *Thränengang*.) The lachrymal canal or duct.

**Dacryosolenitis.** (Same etymon. F. *dacryosolénite*; G. *Thränengangsentzündung*.) Inflammation of the lachrymal duct.

**Dacryostag'ma.** (Δάκρυον; στάγμα, a drop. F. *dacryostagme*; G. *Thränentropfen*.) Term for stillicidium lachrymarum, or a dropping of tears.

**Dacryos'tagon.** (Δάκρυον; σταγών, a drop.) The same as *Dacryostagma*.

**Dacryosyrinx.** (Δάκρυον; σφύριγξ, a pipe. F. *dacryosyrinx*; G. *Thränenfistel*.) The fistula lachrymalis.

**Dacryorrhœa.** Same as *Dacryorrhœa*.

**Dacry'r'hysis.** Same as *Dacryor-rhysis*.

**Dacryuria.** (Δάκρυ, a tear; ούρον, urine. F. *dacryurie*; G. *Thränenharnen*.) A supposed aberration of the tears into the urine.

**Dactylate.** (Δάκτυλος, a finger. F. *dactylé*.) Like a finger. Applied to a Family of the *Holobranchia* with isolated rays on their pectoral fins.

**Dactylene.** (Δάκτυλος, a date.) Same as *Jelly*, *analeptic*.

**Dactylethra.** (Δακτυλήθρα, a finger-sheath; from δάκτυλος, a finger.) Old name for certain topical remedies, especially one shaped like a finger, introduced into the throat to excite vomiting; either so called from their form, or because applied with the finger.

**Dactyletus.** (Δάκτυλος, a date.) An old name for the *Hermodactyl*. (Quincy.)

**Dactyliferous.** (L. *dactylus*, a date; *fero*, to bear. F. *dactylifère*.) Producing dates.

**Dactylinus.** (L. *dactylus*, a finger. G. *fingerartig*.) Pertaining to fingers or toes.

**Dactylion.** (Δάκτυλος, a finger.) A term for adhesion between two or more fingers, either congenital, or the consequence of burns.

Also, the little finger.

Also (δακτυλῖος, a ring), a finger-ring.

Also, a name given by Pliny to the scammony.

**Dactylis glomerata.** The *Egyptian cock's-foot* grass.

**Dactylitis.** (Δάκτυλος. F. *dactylite*; G. *Fingereizündung*.) Inflammation of a finger or toe.

Also, a synonym of *Paronychia*.

**D. gummo'sa.** The same as *D. syphilitica*.

**D. syphilitica.** A chronic syphilitic disease affecting the bones and soft parts of one or more fingers and toes. It may be congenital, but usually occurs as a tertiary affection in adults. The first phalanx becomes swollen, hard, and elastic, and the skin is smooth and livid. There is tenderness, but little or no pain. Motion is interfered with. The disease is of the nature of a gumma, which develops in the loose connective tissue, or in the periosteum in the form of periostitis, or as osteomyelitis. Resorption of the swelling may take place, or degenerative processes may occur in the bone, leading to the formation of fistulous ulcers.

**Dactylius.** (Δακτύλιος, a ring.) Old term for the anus, from its ring-like appearance.

Old name for a circular-shaped pastil or lozenge.

Also, a Genus of lumbricoid worms made in order to include the following species.

**D. aculeatus.** Curling. (L. *aculeatus*, thorny.) A small round worm, about '8" long, found in some numbers by Curling in the urine of a girl during several days. The body is round, elastic, armed with clustered spines, tapering at each end; head round, blunt; mouth circular; anal extremity obtuse, annulate; anus three-lipped. Davaine is of opinion that this is not a parasitic worm, but was conveyed in the water used for washing.

**Dactylobous.** (Δάκτυλος, a toe; λοβός, a lobe. F. *dactylobe*; G. *fingerlappig*.) In Ornithology, having lobe-like toes.

**Dactylocampsodynia.** (Δάκτυλος,

a finger; κάμψις, a bending; δόνη, pain. F. *dactylocampodynie*.) Painful bending of the fingers.

**Dactylocotylō.** (Δάκτυλος; κοτύλη, a small cup.) A Genus of trematode *Entozoa*.

**D. pollachii**, van Beneden. In the gills of the pollach, *Merlangius pollachius*.

**Dactylodochmē.** (Δάκτυλος; δοχμή, a Greek measure of length.) A Greek measure of about four fingers' breadth.

**Dactylorhypo'sis.** (Δάκτυλος; γυρ-πός, curved.) Morbid incurvation of the fingers.

**Dactylogyrus.** (Δάκτυλος, a finger; γυρος, round.) A sexually mature form of trematode worm.

**D. amphibothrium**, Wagener. (Ἀμφί, on both sides; βόθρος, a pit.) Found attached to the gills of *Acerina cernua*.

**D. anchora**, Dujardin. (L. *ancora*, an anchor.) Found in the branchiae of *Cerassius auratus*.

**D. auricula'tus**, Diesing. (L. *auricula*, the ear-lap.) Found attached to the branchiae of *Cyprinus carpio*.

**D. crucifer**, Wagener. (L. *crucifer*, cross-bearer.) Found attached to the branchiae of *Scardinius erythrophthalmus*. The same as *D. Dujardinianus* of v. Linstow.

**D. difformis**, Wagener. (L. *dis*, for *dis*, away; *forma*, shape.) Found attached to the branchiae of *Scardinius erythrophthalmus*.

**D. Dujardinia'nus**, Diesing. Found attached to the branchiae of *Cyprinus carpio*.

**D. echene'is**, Wagener. (Ἐχένη, the sucking-fish.) Found attached to the branchiae of *Chrysophrys aurata*.

**D. falcatus**, Wedl. (L. *falcatus*, scythe-shaped.) Found attached to the branchiae of a species of *Cyprinus*.

**D. fallax**, Wagener. (L. *fallax*, deceitful.) Found attached to the branchiae of *Scardinius erythrophthalmus*.

**D. forceps**, Leuckart. (L. *forceps*, pin-cers.) Found on the branchiae of *Squalius cephalus*.

**D. gracilis**, Wedl. (L. *gracilis*, slender.) Found on the branchiae of *Hydrocyon dentex*.

**D. major**, Wagener. (L. *major*, greater.) Found on the branchiae of *Gobio fluviatilis*.

**D. malleus**, Linstow. (L. *malleus*, a hammer.) Found on the branchiae of *Barbus fluviatilis*.

**D. megas'toma**, Wagener. (Μέγας, great; στόμα, mouth.) Found on the branchiae of *Rhodeus amarus*.

**D. minor**, Wagener. (L. *minor*, less.) Found on the branchiae of *Alburnus lucidus*.

**D. mollis**, Wedl. (L. *mollis*, soft.) Found on the branchiae of *Cyprinus carpio*.

**D. paradox'us**, Creplin. (L. *paradoxus*, marvellous.) Found on the branchiae of *Leucoperca sandra*.

**D. silu'riglan'idis**, Wagener. (L. *glanis*, a kind of shad.) Found on the branchiae of *Silurus glanis*.

**D. tenuis**, Diesing. (L. *tenuis*, thin.) Found on the branchiae of *Perca fluviatilis*.

**D. trigonos'toma**, Wagener. (Τρίγωνος, three-cornered; στόμα, mouth.) Found on the branchiae of *Leuciscus rutilus*.

**Dactylōid.** (Δάκτυλος; είδος, like. G. *fingervnhelch*.) Resembling a finger.

**Dactylogy.** (Δάκτυλος; λόγος, a discourse.) Communication carried on by signs

made with the fingers, as is frequently done by the deaf and dumb.

**Dactylo'lysis.** (Δάκτυλος; λύσις, a loosing.) Separation of the fingers or toes by disease, as in *Ainhum*.

**Dactylon.** (Δάκτυλος, a finger.) The *Cynodon dactylon*.

**D. officina'le**, Vill. (L. *officina*, a work-shop.) The *Cynodon dactylon*.

**Dactylo'podite.** (Δάκτυλος; πούς, a foot.) The terminal joint, excluding the fingers, of the leg of Crustaceans.

**Dactylo'pore.** (Δάκτυλος; πόρος, a pore.) A name given to the pores in the corallum of Hydrocorallinae, from which the dactylozoids protrude.

**Dactylo'pterous.** (Δάκτυλος; πτέρων, a wing. F. *dactyloptere*.) Having the rays of the pectoral fins free to a certain length.

**Dactylosmyleu'sis.** (Δάκτυλος; σμυλεύω, to cut off artificially. G. *Abmässelung der Finger*.) An ancient and expeditious mode of amputating a finger, in which the finger was extended and removed by a single stroke of a mallet on a chisel applied to the volar aspect.

**Dactylospas'mus.** (Δάκτυλος; σπασμος, spasm. G. *Fingerkrampf*.) Term for cramp or contraction of the fingers.

**Dactylose.** (Δάκτυλος. F. *dactyleux*; G. *mit Fingern*.) Having fingers, or finger-shaped.

**Dactylosym'physis.** (Δάκτυλος; σύμφυσις, a growing together.) Adhesion of two or all of the fingers to each other.

**Dactylo'tenium.** A Genus of the Nat. Order *Graminaceae*.

**D. ægyptia'nus**, Willd. Hab. Africa. A decoction of the seeds is used for nephritic pains.

**Dactylothe'ca.** (Δάκτυλος;θήκη, a sheath. G. *Fingerhut*.) A finger stall or finger hood.

Also, an instrument for keeping the fingers extended when wounded.

Also, a bandage carefully applied to one finger, separating it from the rest.

Also (G. *Zehenschelde*), the cutaneous investment of each toe of mammals.

**Dactylozo'id.** (Δάκτυλος; ζώον, an animal.) One of two forms of zooids, the other being *Gasterozooid*, occupying the pores of the Hydrocorallinae. They are cylindrical, tapering at the free extremity, mouthless, without gastric cells, and bearing 5 to 20 tentacles. The extremities of the tentacles possess numerous nematocysts.

**Dactylus.** (Δάκτυλος, a finger.) The same as *Digitus*; a finger.

Also (Δάκτυλος, a date. F. *datte*; G. *Dattel*), the date, or fruit of the *Phoenix dactylifera*.

Also, the smallest measure of the Greeks, a finger's breadth, about 7 of an inch.

**D. aceto'sus.** (L. *acetum*, vinegar.) The tamarind, from its acidity.

**D. idæus.** (L. *idæus*, Idaean.) A form of *Belamnite*; so called because of its likeness to a man's finger. Formerly used in stone of the bladder.

**Dādyl.** (Δαίς, a pine terch; ύλη, matter, stuff.) A synonym of *Campylogen*.

**Dædalea.** (Δαίδαλος, cunningly wrought.) A name for a Genus of the Family *Polyporei*, Suborder *Hymenomyces*.

**D. quercina**, Pers. (L. *quercus*, the oak.)

# DÆDALENCHYMA—DALLEIOCHIN.

A sessile, suberous fungus growing on the trunk of the oak and fir. Used in Austria to make amadou of an inferior quality, and in other countries as a help to cleaning the person, a scrubbing-brush.

**D. suaveolens.** (L. *suaveolens*, fragrant. F. *bolet odorant*; G. *wohlriechende Weiden-schwamm*, *Eichenwirschwamm*.) A fungus growing on old willows. It smells like anise, and has been recommended in phthisis pulmonalis in scruple doses four times a day. The *Trametes suaveolens*.

**D., sweet-scented.** The *Trametes suaveolens*.

**Dædalen'chyma.** (Δαίδαλος, cunningly wrought; ἔγχυμα, an infusion.) Entangled cells, such as are seen in some fungi.

**Dædalus.** (Δαίδαλος, the cunning worker. F. *hydrargyre*; G. *Quecksilber*.) Old term for hydrargyrum, or quicksilver.

**Dædion.** Same as *Dædium*.

**Dædium.** (Dim. of *δαίς*, a torch.) Old term for a small torch or candle.

Also, a bougie or pessary.

**Dæmia.** A Genus of the Nat. Order *Asclepiadaceæ*.

**D. exten'sa**, R. Brown. (L. *extensus*, spread out.) Hab. India. Emetic, expectorant, and anthelmintic. Said to have been successfully used in snake-bite; the juice of the leaves mixed with lime is applied to rheumatic swellings.

**Dæmon'ia.** (Δαίμων, a devil.) The same as *Dæmonomania*.

**Dæmon'iac.** (Δαίμων.) One possessed, or violently mad.

**Dæmonology.** (Δαίμων, a devil; λόγος, a discourse. F. *démonologie*; G. *die Lehre von den Dämonen*.) The doctrine of demons.

**Dæmonoma'nia.** (Δαίμων, a devil; μανία, madness. G. *Besessenheit*.) Term for a kind of madness in which the patient fancies himself possessed by devils; it is a variety of melancholia, originating in mistaken views on religious subjects.

**Dæmonomelancho'lia.** (Δαίμων; melancholia.) Same as *Dæmonomania*.

**Dæmonopath'ia.** (Δαίμων; πάθος, a suffering.) The same as *Dæmonomania*.

**Dæmon'rops.** (Δαίμων; ῥόψ, a bush.) A Genus of the Nat. Order *Palmaraceæ*.

**D. dra'co**, Mart. The *Culamus draco*, Willd., from which dragon's blood is obtained.

**Dæs.** (Δαίς, a torch.) A pessary.

**Daffodil.** (In Mid. Eng. *affodille*; from Old F. *asphodile*, or *affrodile*; from L. *asphodelus*; from Gr. ἀσφόδελος. F. *narçisse des prés*, n. *des bois*, *porrillon*; G. *doppelte Narçisse*, *gelbe Narçisse*, *Affodil*.) Common name for the *Narçissus pseudonarçissus*.

**Daffy's elixir.** Senna half a pound, jalap, aniseed, caraway seeds, of each 10 drachms, juniper berries, 20 drachms, proof spirit 6 pints; macerate fourteen days, and add treacle 10 5 oz., and water 1 lb. and 5 oz.; mix and strain.

**Dagger-pointed.** Same as *Mucronate*.

**Dag'get.** A name in Russia for birch tar from the *Betula alba*.

**Dagous'sa.** The Abyssinian name of the grain of *Eleusine tucusso*, from which a beer is made.

**Dahlia.** (Dahl, a Swedish botanist. G. *Dahlsblume*, *Georgine*.) A Genus of the Nat. Order *Compositæ*. The roots of the several species

are eaten when cooked, and supply *Dahlin*. The flowers yield a colouring matter, used as a staining agent in microscopical examination of tissues and structures; see also *D. paper*.

**D. paper.** Filter paper stained a violet blue with the colouring matter of dahlia flowers. It is turned red by acids and green by alkalis.

**Dahlin.** (F. *dahliné*.)  $C_6H_{10}O_5$ . Name by Payen for inulin extruded from the radical tubers of the dahlia.

**Dahn.** A Hindustani name for coarse rice.

**Daib.** (Arab.) Alchemical term for aurum, or gold.

**Da'is.** A Genus of the Nat. Order *Thymelacææ*.

**D. octan'dra.** (Ὀκτώ, eight; ἀνὴρ, a male.) A doubtful species the seeds of which are said by Horsfield to be employed in Java as purgatives.

**Daisy.** (Sax. *dægesige*, day's eye. F. *marguerite*; I. *margheritina*; S. *margarita*; G. *Masliebchen*, *Tausendschön*.) Common name for the Genus *Bellis*; because the flowers open in the day and close at night.

Also, the *Erigon philadelphicum*.

**D., com'mon.** Name for the *Bellis minor*, or *B. perennis*.

**D., great.** The *Chrysanthemum leucanthemum*.

**D., ox-eye.** The *Chrysanthemum leucanthemum*.

**D., white.** Same as *Daisy*.

**Dajasksch.** The arrow poison used in Borneo. It causes death by paralyzing the cardiac ganglia. It is not the same as the Java arrow poison.

**Dakh trees.** The *Butea frondosa* and *B. superba*. East Indian trees, yielding a substance analogous to kino.

**Dak'ha.** A Hottentot name for the Indian hemp. See *Dacha*.

**Dalbergia.** (Dalberg, a Swedish botanist.) A Genus of the Nat. Order *Leguminosææ*.

**D. arborea**, Willd. (L. *arboreus*, tree-like.) The *Pongamia glabra*.

**D. frondo'sa**, Roxb. (L. *frondosus*, leafy.) Hab. India. Bark given in dyspepsia; bruised leaves applied in leprosy; root juice to ulcers; and the oil of the seeds used in rheumatism.

**D. moneta'ria**, Linn. Yields a resin like dragon's blood.

**D. oogenen'sis**, Roxb. Hab. India. Extract of the bark used in diarrhoea and dysentery.

**D. sympathetica.** (Συμπαθητικός, affected by like feelings.) Hab. India. Leaves used as an alterative.

**Dalberg'icæ.** (Dalbergia.) A Tribe of the Order *Leguminosææ*, with monadelphous or diadelphous stamens, indehiscent legume, and fleshy cotyledons.

**Dalby's carmin'ative.** Oil of peppermint 1 minim, oil of nutmegs 2, oil of aniseed 3, tincture of castor 30, tincture of assafoetida 15, tincture of opium 5, spirit of pennyroyal 15, compound tincture of cardamoms 30 minims, peppermint water 2 fluid oz. Dose, half to one teaspoonful.

**Dalea.** A Genus of the Nat. Order *Leguminosææ*.

**D. citriodo'ra.** (L. *citrus*, the lemon; *odorus*, fragrant.) Hab. Mexico. An antispasmodic.

**Dallei'ochin.**  $C_{15}H_{10}O_5N$ . The green

precipitate which appears when ten volumes of a solution of quinine or one of its salts is mixed with one volume of chlorine water, and a drop of ammonia is added. It is inodorous and bitter.

**Dalton, John.** An English physician and chemist; born at Eaglesfield in Cumberland in 1766, died at Manchester in 1844.

**D.'s laws.** The tension and, consequently, the quantity of vapour which saturates a given space, are the same for the same temperature, whether this space contains a gas or is a vacuum. The tension of the mixture of a gas and a vapour is equal to the sum of the tensions which each would possess if it occupied the same space alone. (Ganot.)

**D.'s theory.** The Atomic theory.

**Daltonian.** (*Daltonism*.) One affected with *Daltonism*, or that form of colour blindness in which red cannot be distinguished from green.

**Daltonism.** (*Dalton*, who first described it, from personal experience.) Colour blindness, consisting in an inability to distinguish between green and red; red blindness, *anerythropsy*. The term is sometimes used as a synonym of *Dyschromatopsy* or of *Achromatopsy*.

**Dama.** (*L. dama*, a fallow deer.) A deer. See *Cervus dama*.

**Damalic acid.** The same as *Damolic acid*.

**Damalicon.** (*Δάμῆλις*, a young cow.) Term for *Vaccina*.

**Damalicum.** The same as *Damalicon*.

**Damaluric acid.** (*Δάμῆλις*, a young cow; *οὐρον*, urine.)  $C_7H_{12}O_2$ . An acid originally obtained by Stædeler from the urine of the cow. It crystallises in rhomboidal crystals, which fuse at  $50^\circ$  to  $53^\circ$  C. ( $122^\circ$  to  $128^\circ$  F.), and are slightly dextrogyrous. In vacuo crystals are obtained, fusing at  $39^\circ$  to  $40^\circ$  C. ( $102^\circ$  to  $104^\circ$  F.), which are levogyrous. It is said to be a constituent of human urine, and of that of the horse.

**Damaria.** Same as *Dammur*.

**Damascena.** (*Damascus*.) An old name for prunes.

**Damask rose.** (*Damascus*. *F. le rosier à cent feuilles*; *G. Damascenrose*, *Centifolien-rose*.) The common name of the *Rosa centifolia*.

**D.violet.** See *Dame's violet*.

**Damasonium.** A Genus of the Nat. Order *Alismaceæ*.

Also, a name for the *Alisma plantago*.

**D. stellatum.** Pers. (*L. stella*, a star.) A detersive, and refrigerant. Locally applied to the breasts to disperse the milk.

**D. vulgaris.** Coss. (*L. vulgaris*, common.) The *D. stellatum*.

**Dambonite.**  $C_6H_8O_3$ . A sweet-tasting substance obtained in the form of delicate white needles on heating a species of caoutchouc flowing from the leaves of a hitherto undetermined tree of the Gaboon, called by the natives atchimé, iboa, and n'dambo. It is very soluble in water and in ordinary alcohol, but not in pure alcohol. It melts at  $190^\circ$  C. ( $374^\circ$  F.), and volatilises without decomposition at  $200^\circ$  C. ( $392^\circ$  F.).

**Dambose.**  $C_6H_{12}O_6$ . A kind of sugar obtained from dambonite by the action of fuming nitric acid.

**Dame.** (*F. dame*, from *L. domina*, a lady.) A lady.

**D.'s violet.** (A corruption of *F. violet de Damas*, *Damascus violet*. *G. Nachtviole*.) The *Ilspiris matronalis*.

**Damia'na.** A Mexican drug believed to be obtained from the *Turnera aphrodisiaca*, *T. microphylla*, De Cand., the *Haplopappus discoidens*, De Cand., and perhaps other species, and stated to be nervine, tonic, aphrodisiac, and a laxative. The leaves are the parts used, but their composition is unknown.

**Damicornis.** (*L. dama*, a buck; *cornu*, a horn. *F. damicorne*; *G. gemshornig*.) Having the appearance of a buck's horn.

**Dammar.** A Malay word signifying resin which drops from a tree and is inflammable. See *D. resin*.

Also, a name in India for the resinous exudation from the *Shorea robusta*. Used as a substitute for pine resins.

**D., aromatic.** A kind of Dammar resin, described by Guibourt, which is soluble in ether, and almost insoluble in turpentine.

**D., Australian.** (*F. dammara d'Australie*.) Kauri resin. The product of the kauri tree of Australia and New Zealand, *Dammara Australis*.

**D.ba'tu.** Same as *D. puti*.

**D., black.** A resinous exudation sold under this name in the Indian bazaars, the produce of *Canarium strictum* and of *Fatica tumbagaia*.

**D., Indian.** (*Dammara puti*, *Dammara-batu*. *F. dammara des indés*.) Cat's-eye resin. The product of *Dammara orientalis*.

**D. pine.** The *Dammara orientalis*.

**D. pitch.** The product of *Shorea robusta*. It is used for incense in India.

**D. puti.** The product of *Dammara orientalis*, Lamb.

**D. resin.** (A Malay name. *F. résine de Dammar*; *G. Dammarharz*.) A resin obtained from some of the *Conifere*, as *Dammara orientalis*, *D. australis*, and other species; also, from some *Dipteraceæ*, as *Hopew micrantha* and *splendida*, and *Vateria indica*. It is hard, colourless, transparent, friable, breaking with conchoidal fractures. It softens at  $100^\circ$  C. ( $212^\circ$  F.), and when melted forms a colourless fluid, soluble in boiling alcohol and ether. It consists of dammarylie acid and dammaran. It has been used in the composition of adhesive plaster, and as an application to the outer side of plaster-of-Paris bandages, rendering them air tight, and in the mounting of microscopic objects.

**D. selan'.** Malay dammar. A resin obtained from the *Vateria selanica*.

**D. varnish.** A solution of dammar resin in double its weight of turpentine, used to mount diatoms and other microscopic objects.

**D., white.** A resinous matter principally obtained from the *Vateria indica*.

**Dammara.** (A Malay name. *G. Dammarfichte*.) A Genus of the Nat. Order *Conifere*. The fruit has only one carpel.

**D.al'ba.** Rumph. (*L. albus*, white.) The *D. orientalis*, Lamb.

**D. australis.** Lamb. (*L. australis*, southern.) Cowrie tree, Kaurie pine. Hab. New Zealand. Yields a resin, Australian dammar.

**D. loranthifolia.** Link. (*Loranthus*, the plant of that name; *L. folium*, a leaf.) The *D. orientalis*.

**D. orientalis.** Lamb. (*L. orientalis*, eastern.) The Ambony pitch tree. One of the sources of *Dammara resin*.

**Dammaran.** A white resin which, with dammarylie acid, composes dammar resin.

**Dam'marin.**  $C_{40}H_{64}O_3$ , or  $C_{45}H_{72}O_3$ . Anhydrous dammaric acid. It is dissolved out of dammar resin by the action of absolute alcohol. It melts at  $60^{\circ}$  C. ( $140^{\circ}$  F.).

**Dam'marol.**  $C_{40}H_{56}O_3$ . A yellowish oil obtained by the dry distillation of dammar resin.

**Dammaron.**  $C_{28}H_{46}O$ . A product of the dry distillation of dammar resin with lime.

**Dammaryl.**  $C_{10}H_{16}$ . An amorphous powder remaining when dammar resin is treated with hot alcohol of 80 per cent. It melts at  $190^{\circ}$  C. ( $374^{\circ}$  F.).

**Dammarylic acid.** ( $C_{15}H_{17}O_4$ , or  $C_{16}H_{20}O_4$ ). A dibasic acid obtained in solution by the action of hot alcohol of  $80^{\circ}$  per cent. on dammar resin. It melts at about  $60^{\circ}$  C. ( $140^{\circ}$  F.).

**Damna'tus.** (L. *damno*, to condemn. F. *condamné*.) Condemned. Applied to any dry useless feces left in a vessel after the moisture has been distilled from it, called *Terra damnata*, *Terra mortua*, or *Caput mortuum*.

**Damocrate.** Same as *Mithridate*.

**Damollic acid.**  $C_7H_8O$ . A doubtful substance said to occur in the urine of man, the ox, and the horse, in conjunction with damaluric acid.

**Damp.** (An English word. G. *Dampf*, vapour.) Moisture, vapour.

**D., after.** The gases existing in a coal mine after explosion of combustible gases. It is chiefly composed of carbon dioxide.

**D., black.** A synonym of *D., after*.

**D., choke.** A synonym of *D., after*.

**D., cold.** Cold, moist air loaded with carbonic acid.

**D., fire.** Marsh gas or *Methyl hydride*.

**Damper.** (*Damp*.) That which damps or checks.

A term applied, in electricity, to a copper frame on which the needle of a galvanometer is coiled to bring it more speedily to rest.

Also, an Australian name for an unfermented flour cake baked on a stone, covered by a tin plate, in the ashes of a wood fire.

**Dam'son.** (Contr. of *Damascene*; from F. *damaisine*; from *Damascus*. F. *prune de Damas*; G. *Damascenerpfleume*.) Common name for the fruit of the *Prunus domestica*, var. *Damascena*; because it was first brought from Damascus.

**D., moun'tain.** The *Quassia simarouba*.

**Danææ'ceæ.** A Suborder of the Order *Filices*, or an Order of the Alliance *Filicales*, with circinnate fronds and exannulate sporangia.

**Danææ.** Same as *Danææceæ*.

**Danææ'aworts.** The plants of the Order *Danææceæ*.

**Dan'ais.** The herb fleabane. Ancient name of a plant supposed to be the conyza.

Also, a Genus of the Nat. Order *Rubiaceæ*.

**D. fragrans,** Commerson. (L. *fragrans*, sweet smelling.) Used as a substitute for cinchona.

**Dance.** (F. *danser*, from Old High G. *danson*, to trail, to draw along.) A stepping to the measure of a tune.

**D., St. Guy's.** A synonym of *Chorea*.

**D., St. John's.** A name of some of the epidemics of the dancing mania.

**D., St. Vitus's.** See *Chorea*.

**Dancing.** (Same etymon.) The action of a *Dance*.

**D. ma'nia.** See *Mania*, dancing.

**Dan'dellion.** (F. *dent-de-lion*, tooth of the lion; from the toothed appearance of the edges of its leaves. Some have supposed that its yellow florets being like to the golden teeth of an heraldic lion have suggested the name; others have seen the origin in the whiteness of the root like to a tooth; according to Prior, the name was given by a German surgeon, Master William, who, having great faith in its virtues, called it *Dens leonis*, lion's tooth. F. *pissenlit*; G. *Löwenzahn*.) The common name for the plant *Taraxacum dens-leonis*.

**D. root.** See *Taraxaci radix*.

**Dan'der.** A synonym of *Scurf*, *Pityriasis*.

**Dan'driff.** (Perhaps from Welsh *ton*, surface, skin; *drwg*, bad. G. *Schorf*.) A synonym of *Scurf*, *Pityriasis*.

**Dan'druff.** Same as *Dandriff*.

**Dandy.** A synonym of *Dengue*; so called because the pain in the limbs produces the constrained walk of an affected person or dandy; or it may be a corruption of *Dengue*.

**D. fever.** Same as *Dengue*.

**Dan'esweed.** The *Sambucus ebulus*.  
**Dan'eta.** An old name for the tansy, *Tanacetum vulgare*.

**Dan'ever.** A village near Upsala, in Sweden. Here is a carbonated ferruginous spring, containing also sulphates of soda and lime, chloride of sodium, and silica.

**Dan'eweed.** The *Sambucus ebulus*.  
**Dan'ewort.** (F. *hygie*; G. *Attich*, *Niederholder*, *Zwerghollunder*.) Common name for the *Sambucus ebulus*, or dwarf elder.

**Dan'ich.** An Arabian weight of eight grains.

**Daniell, John Fred'erick.** An English physicist, born in London in 1790, died there in 1845.

**D.'s bat'tery.** A constant galvanic battery, consisting of a glass or porcelain jar containing a saturated solution of copper sulphate, in which is immersed an open copper cylinder with perforations, containing a jar of porous earthenware holding a solution of common salt or dilute sulphuric acid, in which is placed a cylinder of amalgamated zinc.

**D.'s hygrom'eter.** See *Hygrometer*, *Daniell's*.

**Daniel'lia.** (After Dr. Daniell.) A Genus of the Nat. Order *Coniferae*.

**D. thurif'era,** Bennet. (L. *thus*, frankincense; *fero*, to bear.) The *Frankincense tree* of Western Africa, which yields African frankincense.

**Danse de Saint Guy.** (F. *chorée*; G. *Chorea Sancti Viti*.) The common name among the French for chorea, or St. Vitus's dance.

**Daphna'ceæ.** A synonym of *Thymelacææ*.

**Daph'nads.** (*Daphne*.) The plants of the Order *Thymelacææ*.

**Daph'nal alliance.** Same as *Daphnales*.

**Daphnales.** (*Daphne*.) An Alliance of perigenous Exogens with monochlamydeous flowers, a solitary carpel, and an amygdaloid embryo without albumen. It includes the Orders *Thymelacææ*, *Proteacææ*, *Lauracææ*, and *Cassythacææ*. (Lindley.)

**Daph'né.** (*Δάφνη*, the name of a nymph fabled to have been changed into this tree. F.

*daphne*.) A Genus of the Nat. Order *Thymelacææ*.

Also, the *Laurus nobilis*.

**D. alpi'na**, Linn. (*L. alpinus*, alpine.) A species of dwarf olive tree, said to be purgative; also called *Chamaela*.

**D. can'dicans**, Lam. (*L. candico*, to be white. *F. daphne tarton-raire*.) Hab. South Europe. Purgative; used like mezercon.

**D. cannab'ina**, Wallich. (*Karvâñnos*, like hemp.) The *D. papyracea*.

**D. cestri'folia**. (*L. cestron*, the betony; *folium*, a leaf.) Hab. Bogota. Fruit said to be poisonous.

**D., charm'ed**. The *D. laureola*.

**D. cneo'rum**, Linn. (*Kvînpov*, some stinging plant.) Properties as *D. mezercon*.

**D., flax-lea'ved**. The *D. gnidium*.

**D. gnid'ium**, Linn. (*L. gnidius*, belonging to Gnidus, *Kvîdos*, a city of Caria. *F. daphne de Gnide, saintois, garou*; *G. Italienischer Kellerhals*.) The tree from which the Garou bark is obtained; the spurge flax or flax-leaved daphne; also called *Thymelæa*. This shrub is indigenous to the whole Mediterranean region as far as Morocco. Supplies some of *Mezercon*, U.S. Ph.

**D. laget'ta**, Swartz. The *Lagetta lin-tearea*, Lam.

**D. laureo'la**, Linn. (*L. laureola*, a small laurel crown. *F. la laureole*; *G. Kellerhals, Seidelbast*.) The spurge laurel, the bark of which has been recommended for like use as the Mezercon bark. Supplies part of *Mezercon*, U.S. Ph., and *Mezeri cortex*, B. Ph.

**D. Leollardi**. The *D. mezercon*.

**D. major**. (*L. major*, greater.) The *D. laureola*.

**D. mezer'con**, Linn. (*F. daphne, bois gentil, laureole femelle*; *G. gemeiner Kellerhals*.) The systematic name of the plant which affords mezercon bark; spurge olive; widow wail. It is considered stimulant and diaphoretic, and in large doses is emetic. See *Mezeri cortex*, B. Ph., and *Mezercon*, U.S. Ph.

**D. meze'reum**. The same as *D. mezercon*.

**D. odo'ra**, Don. (*L. odoros*, sweet-smelling.) The *D. papyracea*.

**D. oleæ'folia**, W. (*L. olea*, the olive; *folium*, a leaf.) The *D. oleoides*.

**D. oleoi'des**, Schreb. (*L. olea*, the olive tree; *ei'dos*, likeness.) Hab. South Europe, Asia. Leaves and fruit purgative; used in intestinal obstructions. Said to enter into the composition of the Theriaca of the ancients.

**D. panicu'la**, Lam. (*L. paniculatus*, tufted.) The *D. gnidium*.

**D. papyra'cea**, Wallich. (*L. papyracea*, like paper.) Hab. Nepal. An excellent paper is made from the inner bark.

**D. pont'ica**, Linn. (*L. ponticus*, relating to the Black Sea.) Properties as *D. mezercon*. It is said that the poisonous honey of Asia Minor is collected from this species.

**D. tar'ton-ra'i'ri**, Linn. The *D. candicans*.

**D. thymelæ'a**, Linn. (*Θυμ'λαα*, the daphne. *F. thymelée*.) Leaves used in Spain as a purgative.

**Daph'nein**. Same as *Daphnin*.

**Daphnelæ'on**. (*Δάφνη*, the laurel; *ἐλαϊον*, oil.) Term for the oil of bay berries, *Laurus nobilis*.

**Daph'netin**.  $C_{10}H_{14}O_9$ . A product of the decomposition of daphnin by sulphuric and muriatic acids. It crystallises in oblique prisms, soluble in water and hot alcohol, insoluble in ether. It has a slight acid reaction and an astringent taste; it melts at  $250^{\circ}$  C. ( $482^{\circ}$  F.) into a yellowish liquid, which is volatile.

**Daph'nia**. (*Δάφνη*, the laurel.) Name of a gem which was believed to have the power of curing epilepsy; so called from a laurel being represented on it.

**Daphnid'ium**, Nees. (Dim. of *δάφνη*.) A Genus of the Nat. Order *Lauracææ*.

**D. cube'ba**. An Asiatic plant, the berries of which are aromatic, and possess properties similar to those of cubebs.

**Daphn'in**.  $C_{21}H_{32}O_{10} + 2H_2O$ . A non-volatile glycoside, of bitter taste, obtained from the bark of *Daphne alpi'na* and *D. mezercon*. It crystallises in triangular prisms or in needles; it is slightly soluble in cold water, readily soluble in hot water and in alcohol. The solutions have an acid reaction. It melts at  $200^{\circ}$  C. ( $392^{\circ}$  F.), and undergoes decomposition, yielding *Unhelliferon*. It is said to be purgative in its qualities.

**Daphniphylla'cææ**. A Suborder or Group of *Euphorbiacææ*, characterised by having a small embryo concealed in perisperm and a ventral raphe.

**Daphni'tis**. (*Δάφνη*, the laurel. *F. la laureole*; *G. Kellerhals, Seidelbast*.) A name for the *Daphne laureola*, or spurge laurel.

Also, the *Ruscus aculeatus*.

**Daphnoi'dææ**. (*Δάφνη*; *ει'dos*, likeness.) A synonym of *Thymelacææ*.

**Daphnoi'des**. (*Δάφνη*, the bay tree; *ει'dos*, likeness. *F. daphnoide*.) The *Daphne laureola*, or spurge laurel.

Also, the *Pinæa major*.

**Dapsilophyte**. (*Δαψιλόφης*, abundant; *φύτον*, a plant. *F. dapsilophyte*.) Applied by Necker to plants having numerous stamens.

**Darda'na**. Same as *Bardana*.

**Dardan'ion**. The *Aristolochia clematilis*.

**Dar'danis**. A name by Dioscorides for the *Cuscuta major*.

**Dare**. Same as *Dacc*.

**Darin'yphyte**. (*Δαρρήννη*, to break through; *φύτον*, a plant. *F. darinyphyte*.) Applied to plants the fruit of which opens of itself.

**Darlingism**. A form of *Mesmerism* called after one of its devisers.

**Darnel**. (According to Skeat, a F. word, probably of Teutonic origin, akin to old F. *darne*, stupefied; Prior suggests that it is a corruption of *Zerna*, an old name for some skin diseases for which this grass was used. *F. ieræie*; *G. Lolch*.) The *Lolium temulentum*. It has been mixed with corn, accidentally or as an adulterant; and when ground and made into bread has produced giddiness, delirium, convulsions and paralysis, with vomiting and colic.

**D., bearded**. The *Lolium temulentum*.

**Dar'seni**. (Arab. *darzin*. *F. canelle blanche*; *G. der weisse Zimmtbaum*.) Arabian name for the *Canella alba*.

**Dar'sini**. Same as *Darseni*.

**Dar'sis**. (*Δάρσις*, from *δέρω*, to excoriate.) An excoriation. Old term (Gr. *δάρσις*), used by Galen. *Anat. Admin.* iii, 2, for the process of separating the skin from the subjacent parts by the scalpel.

**Dart.** (Old F. *dart*; of old low G. origin.) A javelin.

A term applied to a sharp quadrangular organ, consisting of calcified epithelium, enclosed in a sac which opens near to the mucous glands of the male organ of some snails.

**Darta.** (Δαρτός, flayed.) Old name for a severe impetigo. (Castellus.)

**D. excoriativa.** (L. *excoria*, to strip off the skin.) A synonym of *Herpes excorians*.

**D. maligna.** (L. *malignus*, of an evil nature.) A synonym of *Herpes exedens*.

**Dartois.** Like the *Dartos*.

**D. fibres.** See *Fibres, dartois*.

**Dartoid.** Like the *Dartos*.

**D. tissue.** See *Tissue, dartoid*.

**Darton.** Same as *Dartos*.

**Dartos.** (Δαρτός, flayed. F. *dartos*; G. *Fleischhaut*.) The subcutaneous investment of the scrotum. It is a thinish layer of reddish-brown structure continuous with the neighbouring subcutaneous tissue, very vascular, and consisting of areolar tissue, chiefly longitudinal in direction, and containing much unstriped muscular tissue, which is slowly stimulated to contraction by cold and mechanical stimuli, but not by electricity. It consists of two distinct sacs, one for each testicle, united along the middle line so as to form the septum. It is closely united to the skin, but loosely to the subjacent parts.

**Dartre.** (Etymology obscure. According to Littre, it is derived from a Celtic word having origin from the Sans. *dardra*, and was originally or occasionally written *dertre* or *derdre*; others look for its derivation in Gr. *δάρτος*, flayed.) A generic term used since the middle ages, about the end of the fifteenth or beginning of the sixteenth century, to denote certain skin diseases, which, although differing greatly among themselves, had their origin in the same constitutional disorder. The varieties of herpes form the chief cutaneous diseases included, but others, such as pityriasis, lepra, eczema, lichen, impetigo, acue, sycois, and lupus, have been by many authors ranged under this head as species. Of late the word has been discarded as useless, misleading, and not tending to scientific accuracy.

**Dartrous.** Relating to *Dartre*.

**Darts.** Plural of *Dart*.

**D., caustic.** (Καυστικός, corrosive. F. *fiches caustiques*.) Pointed sticks of nitrate of silver or other caustic, which are either inserted directly into the tissue or into a wound made by a knife. They are used for the purpose of destroying malignant growths.

**Daruvar.** Slavonia; Poszegor or Pozega County. A place known to the Romans for its hot springs, of which there are five, the temperature ranging from 40° to 46° C. (104° to 115° F.) There are two bathing establishments. The scenery around is beautiful, the climate mild. It is recommended as a salubrious resort in cases of nervous disease.

**Darwin, Erasmus.** An English naturalist, born 1731, died 1802. Author of the 'Botanic Garden,' 'Loves of the Plants.'

**Darwin, Charles.** An English naturalist, born 1809, died 1882.

**Darwinian theory.** Same as *Darwinism*.

**Darwinism.** A term applied to the theory of evolution as enunciated by Charles Darwin in the 'Origin of Species,' 'Descent of Man,' and other works. The main points are

that every animal and plant multiplies in a geometrical ratio, so that if there were no checks to its increase each would overrun the world, but as each creature thus multiplies there comes to be a struggle for existence, which results in the survival of the fittest; the weakest, or those ill adapted to the surrounding conditions, dying out, whilst those that are well adapted maintain themselves. But every animal and plant is liable to variation, which is due to laws at present very imperfectly known. If the variation assists the animal or plant in its struggle for existence, it tends to preserve its life, and such characters being transmitted to its progeny, become intensified by hereditary influence, and thus after many generations, each varying but slightly from the foregoing, the first and last individuals of the series present such differences as to constitute different species. A new species has been evolved from the old. This he considers to be the result of natural selection, acting through descent with modification. On the older or special creation theory every species was originally created separately, and was fixed in type. Darwin showed another mode in which species might arise, namely, as the result of slight changes or modifications of structure, giving an advantage in the struggle for existence, and becoming more and more marked or intensified by hereditary transmission. The multiplication of every form of animal or vegetable life is such that it would ultimately overrun the world. But each is subordinated or kept in check by other forms, and the balance is constantly undergoing change by reason of the tendency to variation which seems to be constantly in operation in all organisms. Such variations may be disadvantageous to the individual, when the race dies out; or it may be advantageous, in which cases it tends to the preservation of the race; and slight variations handed down from generation to generation, caused by the climate, soil, food, and other surroundings, as well as by sexual selection, ultimately eventuate in what appear to be new species, but which are in reality only modified descendants of the same ancestral type, the characters of which sometimes reappear by reversion. By pushing this theory to its extreme limit, all existing forms of life are derived from a single and probably extremely simple organism. Notwithstanding many gaps, the teaching of paleontology seems to be in favour of this view, whilst the history of the development of each individual has been especially shown by Haeckel to support the theory of Darwin, ontogeny being abbreviated phylogeny, that is, the history of the development of the individual, presenting in a short period the history of the race from its most remote origin.

**Dasjes'pis.** A synonym of *Hydracum*.

**Dasmophon.** The *Cupsella bursa-pastoris*.

**Dasyanthous.** (Δασός, hairy; ἄθος, a flower. F. *dasyanthe*; G. *haarblumig*.) Having hairy or villous flowers.

**Dasyarpous.** (Δασός, hairy; καρπός, fruit; also the wrist. F. *dasyarpe*; G. *haarfruchtig, haarhandwurzelzig*.) Having hairy fruit or a hairy carpus.

**Dasycauline.** (Δασός; L. *caulis*, a stem. F. *dasycaule*; G. *haarstammig*.) Having a hairy stem.

**Dasyclonon.** (Δασός, shaggy; κλών, a young shoot.) The *Nephrodium filix-mas*.

**Dasygastic.** (Δασός, hairy; γαστήρ,

the belly. *F. dasygastre*; *G. haarbauchig.*) Having a hairy belly.

**Dasyglottic.** (*Δασύς*, hairy; *γλωττίς*, the tongue. *F. dasyglotte*; *G. haarzungig*.) Having a hairy tongue.

**Dasyma.** (*Δασύς*, rough.) Old name (*Gr. dasyema*) for trachema, when attended with a tettery or scabby roughness of the eyelids. *Aëtius*, vii. (*Garricus*.)

**Dasymallous.** (*Δασύς*, hairy; *μαλλός*, a lock of wool. *F. dasymalle*; *G. haarvaessig.*) Having long and woolly hairs.

**Dasymeter.** (*Δασύς*, thick; *μέτρον*, a measure. *F. dasymetre*; *G. Dichtigkeits-messer*.) Name of an instrument by Defouchey for measuring the variations of the density of the air, and which differs little from the manometer of Guericke.

**Dasyphyllous.** (*Δασύς*, hairy; *φύλλον*, a leaf. *F. dasyphyllé*; *G. haarblatrig.*) Having hairy or woolly leaves.

**Dasypleurous.** (*Δασύς*, hairy; *πλευρά*, a rib. *F. dasypleure*; *G. haarrippig.*) Having hairy ribs.

**Dasypodion.** (*Δασύπους*, a rough foot.) An old term for the violet, *Viola odorata*.

**Dasypous.** (*Δασύς*, hairy; *πούς*, a foot. *F. dasype*; *G. haarfüssig.*) Having hairy feet.

**Dasystachyous.** (*Δασύς*, hairy; *στάχυς*, an ear. *F. dasystachyé*; *G. haarrohrig.*) Having hairy spikes.

**Dasystemonous.** (*Δασύς*, hairy; *στήμον*, a stamen. *F. dasystemone*; *G. haarstachdig.*) Having hairy stamens.

**Dasystephana.** (*Δασύς*, *στέφανος*, a crown.) A Genus of the Nat. Order *Gen. unacée*.

**D. punctata.** The *Gentiana punctata*.  
**Dasytes.** (*Δασύτης*, hairiness. *G. Rau- higkeit, Struppigkeit.*) Roughness, especially of the tongue and voice. Hairiness.

Also, an herpetic eruption on the eyelids.

Also, a Genus of poisonous spiders.

**Dasyurous.** (*Δασύς*, hairy; *οὐρά*, a tail. *F. dasyure*; *G. haarschwanzig.*) Having a hairy tail.

**Date.** (*F. date*; from *L. dactylus*; from *Gr. ἐκτύλος*, a date. *L. dactylus*; *F. datte*; *I. dattaro*; *S. dattil*; *G. Dattel*.) Common name for the fruit of the *Phoenix dactylifera*. The ripe fruit is eaten largely; when unripe it is astringent.

**D. palm tree.** (*F. dattier*.) Common name for the *Phoenix dactylifera*.

**D. plum, Indian.** (*F. alize*.) Common name for the fruit of the *Diospyros lotus*. When ripe it is agreeable and wholesome; unripe, it is very astringent.

**D. tree.** The *Phoenix dactylifera*.

**D., wild.** The fruit of *Chamerops humilis*.  
**Datisca.** (*Δατίσκια*, to divide. *G. Streichkraut*.) A Genus of the Nat. Order *Datisceae*.

**D. cannab'ina.** *Linn.* (*Καννάβινος*, like hemp. *F. chanvre de Crète*; *G. gelbes Hanf*.) The yellow hemp. A plant indigenous in Crete and the East. The leaves contain a bitter extractive and yellow colouring matter, and have been recommended in doses of 5 to 15 grains in intermittents.

**Datisca'ceæ.** (*Datisca*.) A Nat. Order of monocotyledonous Exogens of the Alliance *Cucurbitales*; being diclinous apetalous herbs or

trees, with alternate, exstipulate, simple or compound leaves, and parietal placentae.

**Datis'ca'ds.** The plants of the Nat. Order *Datisceae*.

**Datis'cea.** Same as *Datisceae*.

**Datis'cetin.**  $C_{15}H_{16}O_6$ . A product of the decomposition of datiscin under the influence of weak acids or concentrated potash. It is almost insoluble in water, but dissolves readily in ether, in alcohol, and in alkaline solutions.

**Datis'cin.**  $C_{21}H_{22}O_{12}$ . A glycoside contained in the leaves and roots of *Datisca cannab'ina*. It crystallises in needles or silky lamellae, slightly soluble in cold and hot water and in ether, very soluble in alcohol. Their reaction is neutral, and their taste bitter. They melt at 180° C. (356° F.) and sublime.

**Datura.** (*Sms. d'hustura*. *F. datura*, *stramonium*; *G. Stechapfel*.) A Genus of the Nat. Ord. *r. Solanaceæ*.

**D. alba.** *Nves.* (*L. albus*, white. *Arab. jouz-mas'*.) A large spreading annual plant, with handsome tubular white flowers, 5 to 6 inches long; capsule pendulous, and splitting irregularly. The seeds and fresh leaves are powerfully narcotic. Indigenous in India. Used like stramonium.

**D. arbor'ea.** *Linn.* (*L. arboreus*, tree-like. *F. datura arborescent*.) Properties as *D. stramonium*.

**D. fastuo'sa.** *Linn.* (*L. fastosus*, superb.) An Indian plant, probably a variety of *D. alba*.

**D. fe'rox.** *Linn.* (*L. ferox*, savage.) Hab. India. Root and lower part of stem used for smoking in asthma.

**D. læ'vis.** *Linn.* (*L. laevis*, smooth. *F. datura à fruits lisses*.) Capsules smooth. Properties as *D. stramonium*.

**D. me'tel.** *Linn.* Hab. Africa, South Asia. Used as stramonium. Fruit, called meth nuts, used as a soporific. Probably the same as *D. alba*.

**D. nilhumma'tu.** *Dun.* Hab. Malabar, Java. Seeds used in intermittent fevers; juice of leaves applied to syphilitic sores, and bruised leaves and seeds as resolvent cataplasms.

**D. sanguinea.** *Roiz and Pavon.* (*L. sanguineus*, bloody.) Red thorn-apple. A plant from which the Peruvian Indians prepare a narcotic drink called *Tunga*. The seeds produce furious excitement; and the bruised leaves make a resolvent poultice.

**D. stramo'nium.** *Linn.* (*F. la pomme épineuse, herbe aux sorciers*; *G. Dornapfel, Stechapfel*.) The systematic name of the herb thorn-apple, called also *Barrypoccalon*, *Dutray*, *Solanum maniacum*, *S. factidum*, *Stramonium*, *S. spinosum*, and *S. majus album*. The seeds, the leaves and the root are all used in medicine. They are narcotic and poisonous; are given internally as narcotics and antispasmodics; and applied externally in fomentations as sedatives. The seeds are smoked like tobacco in asthma. Dose of the powder, 1 to 8 grains. See *Stramonii folia* and *S. semina*.

**D. tatula.** *Linn.* (A North American word.) A species indigenous in the warm parts of America. It differs from *D. stramonium* in the stem, petiole, and nerves of the leaves being purplish instead of green, and the corolla and anthers violet instead of white. Used in asthma. By some it is thought to be a variety only of *D. stramonium*.

**Daturin.** An alkaloid obtained from the *Datura stramonium*, and *D. tatula*, apparently identical with atropin, except that it is more poisonous; in all essential respects, in chemical and physiological action they agree.

**Daturina.** Same as *Daturin*.

**Daturium.** Same as *Daturin*.

**Datyra.** The *Datura stramonium*.

**Daubenton.** A French physician born 1716, died 1799.

**D's angle.** See *Angle*, occipital, of *Daubenton*.

**Dauci radix.** (L. *daucus*, the carrot; *radix*, root.) See *Daucus carota*.

**Dauciform.** (L. *daucus*; *forma*, shape. G. *möhrnähulich*, *rübenförmig*.) Having a root like that of a carrot.

**Daucites vinum.** (L. *daucus*; *vinum*, wine.) Old name for must in which bruised carrots, or the seeds of the carrot, as is said, had been steeped. Used as antispasmodic. (Quincy.)

**Daucoïd.** (Δαῦκος, a carrot; εἶδος, likeness. G. *möhrnähulich*.) Like a carrot.

**Daucus.** (Δάκος, a kind of parsnip, or carrot. F. *carotte*; G. *Möhre*.) A Genus of the Nat. Order *Umbelliferae*.

**D. alsaticus.** A name for the *Athamanta oreoselinum*, or black mountain parsley.

**D. annuus minor.** (L. *annuus*, yearly; *minor*, less.) A name for the *Caucalis anthriscus*.

**D. candidus.** (*Candia*.) A synonym of *Athamanta cretensis*.

**D. carota.** Linn. (Καρωτόν, a carrot. F. *la carotte commune*; G. *Möhre*, *gelbe Rübe*.) The systematic name for the common garden carrot; an article of diet. The root, in the form of a poultice, is used as an emollient application to fœtal and ill-conditioned sores.

**D. copticus.** Pers. The *Ptychotis coptica*, De Cand.

**D. creticus.** A name for the *Athamanta cretensis*, or Candy carrot.

**D. cyanopus.** (Κυάνεος, blue; ὤψ, the eye.) The *Pimpinella magna*.

**D. gingidium.** Linn. Hab. Europe. Supplies part of *Bdellium sicutum*. Same as *D. gummiifer*.

**D. gummiifer.** Lamarck. (L. *gumma*, gum; *fero*, to bear.) The source of Sicilian bdellium.

**D. hispanicus.** De Cand. (L. *hispanicus*, Spanish.) The *D. gummiifer*, Lamarck.

**D. leptophyllus.** Scop. (λεπτός, thin; φύλλον, a leaf.) The *Caucalis daucoides*.

**D. macedonius.** (F. *ache*; G. *wilder Eppich*.) A name for the *Apium graveolens*, or celery plant.

**D. maritimus.** Lamk. (L. *maritimus*, maritime.) Young shoots eaten as salad.

**D. montanus.** (L. *montanus*, mountainous.) A name for the *Athamanta oreoselinum*.

**D. nostras.** (L. *nostras*, of our country.) The *D. carota*.

**D. sativus.** (L. *sativus*, that which is sown. F. *la carotte commune*; G. *gelbe Rübe*.) A name for the *D. carota*, the garden carrot.

**D. selinoides.** A name for the *Athamanta oreoselinum*.

**D. seprinus.** The *Anthriscus ccerifolium*.

**D. sylvestris.** (L. *sylvestris*, belonging to a wood.) The *Ammi visnaga*, Lamk. Also, the *D. carota*.

**D. visnaga.** The *Ammi visnaga*.

**D. vulgaris.** (L. *vulgaris*, common. F. *la carotte sauvage*.) A name for the *D. sylvestris*.

Also, the *D. carota*.

**Daud.** A form of psoriasis which prevails in Assou, especially during the rainy season.

**Daughter.** (Mid. E. *daughter*; from Sax. *döhter*; said to be from Sans. *dah*, for *dugh*, to milk.) A female child.

**D. cell.** See *Cell*, daughter.

**Dauke.** (L. *daucus*, the carrot.) The wild carrot.

**Daungat'ta gambir.** Rumph. The *Uncaria gambir*.

**Daura.** (F. *hellébore noir*; G. *schwarze Nieswurz*.) Old name for *Helleborus niger*, or black hellebore.

Also, formerly a term for leaf gold.

**Davallia'ceæ.** (*Davall*, a Swiss botanist.) A Subfamily of the Family *Polypodiaceæ*, having the sori marginal and the indusium cup-shaped.

**David's flower.** The *Chrysanthellum indicum*.

**Davilla.** (After Don Pedro Franco *Davilla*, a Peruvian and Spanish naturalist, who wrote a 'Natural History of Peru.') A Genus of the Nat. Order *Dilleniaceæ*.

**D. Brasili'na.** De Cand. The same as *D. rugosa*.

**D. elliptica.** Lindl. Hab. Brazil. A plant with astringent properties.

**D. rugosa.** Poir. (L. *rugosus*, wrinkled.) Hab. Brazil. An astringent.

**Davium.** A recently discovered metal, whose existence depends wholly upon spectroscopic evidence.

**Davos.** Switzerland. A well-known health resort in the Canton Graubünden, 4800' above the sea. The climate is moderately warm in summer, from May to October, and cold from November to April. There is accommodation for about 900 visitors, and the arrangements for food, air, exercise, and baths are excellent. It is recommended in scrofulosis, the early stages of phthisis, and in chronic bronchial catarrh. The chief advantage of Davos as a winter residence for consumptive cases consists in the dryness and stillness of the atmosphere, and in the purity and freedom from organic contamination of the air; conditions which it may be hoped that its recent popularity will not destroy.

**Davy, Marie.** French chemist.

**D's battery.** A zinc carbon element of small size. The outer vessel contains water or brine, and the porous vessel sulphate of mercury with a little water. The carbon is placed in the porous vessel. Chemical action only takes place when the pile is closed. Hydrogen and liquid mercury are set free. The electromotor force is one quarter greater than Daniell's element, but it has greater resistance and undergoes rapid exhaustion when continuously worked. It is adapted for discontinuous work, as alarms.

**Davy, Sir Humphrey.** An English natural philosopher, born at Penzance in 1778, died at Geneva in 1829.

**D's experiment.** An arrangement of two concave mirrors, with a platinum wire made incandescent by the galvanic current in one, and

in the other the bulb of a delicate thermometer, both of which can be placed in a vessel exhausted of air to show that heat can be reflected in a vacuum.

**D.'s lamp.** An ordinary oil lamp, the flame of which is enclosed in a cage of wire gauze made double at the upper part, containing about 400 apertures to the square inch. The tube for supplying oil to the reservoir reaches nearly to the bottom of the latter, whilst the wick admits of being turned by a bent wire passing with friction through a small tube in the body of the lamp; the flame can thus be kept burning for any length of time without the necessity of unscrewing the cage.

**Davyum.** (After Sir Humphrey Davy.) A metal. See *Davium*.

**Dawamesk.** (An Arabic term meaning musky drug.) A compound containing the fatty extract of Indian hemp, made by boiling the fresh flowering tops of *Cannabis indica* with butter and evaporating, and many aromatic substances, such as musk, with pistachio nuts, almonds, and sugar. It is used by the Arabs as an intoxicant, like hashish, and, with the addition of cantharides, as an aphrodisiac.

**Dawlish.** A health resort in Devonshire, frequented by phthisical invalids during the winter.

**Day.** (Sax. *dæg*. F. *jour*; I. *giorno*; S. *dia*; G. *Tag*.) The time of one complete revolution of the earth round its axis, from midnight to midnight; as ordinarily used, the time when it is light from sunrise to sunset.

**D-blindness.** (F. *nyctalopie*; G. *Nachtssehen*, *Nyktalopie*, *Tagblindheit*.) Common name for the disease *Nyctalopie*.

**D.'s eye.** (Sax. *dæg*, day's; *éye*, eye.) The daisy, *Bellis perennis*.

**D. lilies.** The plants of the Tribe *Heimerocallæ*.

**D. lily.** See *Heimerocallis*.

**D. lily, tawny.** Common name for the *Heimerocallis fulva*.

**D. mare.** A similar condition to night-mare occurring during wakefulness.

**D. nettle.** The plants of the Genus *Lamium*.

**D. sight.** (F. *héméralopie*; G. *Hemeralopie*, *Nachtblindheit*.) Common term for the disease *Hemeralopie*.

**D. vision.** Same as *D. sight*.

**Day, John.** An English physician, born at St. Botolph's Priory, Pembrokeshire, in 1816, died at Geelong, Victoria, in 1881.

**D.'s blood test.** Freshly made tincture of guaiacum is applied to the suspected stain, and then a small quantity of peroxide of hydrogen in watery or ethereal solution. Blood produces a bright sapphire blue colour.

**Dax.** France; Département des Landes, on the Adour, and about twenty-eight miles north-east of Bayonne. It is the ancient *Aquæ Tarbellicæ*, *Aqs* or *Ax*. It lies in a valley open to the west. In the centre of the town is a thermal spring, from which a great volume of water issues, temperature of about 59.8° C. (139.6° F.); and in the immediate neighbourhood are six other springs. The water contains about one per cent. of salts, the principal being sodium chloride, lime sulphate, and carbonate and lime carbonate. At the bottom of the basin of the Source de la Fontaine Chaude grow large quantities of green *Convolv*, among them being *Tre-*

*mella thermalis*, *Oscillaria Grateloupii*, and others. The waters are used for drinking and bathing, and the mud is used for local or general baths. Rheumatism and rheumatic affections, chronic gout, and neuralgic affections are the diseases which derive the most benefit from treatment at Dax.

**Daxin.** (Dax.) Same as *Barcine*.

**Daz'zling.** (E. *dazzle*, to confuse with much light.) The disturbance and confusion of sight which is caused by a sudden bright light, or by some retinal disturbance produced by affection of the central nervous system, or by sympathy with some affection of the stomach.

**De.** (L. *de*.) A prefix signifying down, from, away.

Also (F. *de*, equivalent to L. *dis*), asunder.

It has both a negative and an intensive meaning; the former in the word deformity, the latter in desiccation.

**De Blainville.** See *Blainville*, *Henri Marie Ducrotat de*.

**De Val'engin's solution.** The *Liquor arsenici chloridi*.

**Dead.** (Sax. *deaf*; from the base part of Mesogoth. *diwan*, to die; Dan. and Swed. *død*; G. *tot*. L. *mortuus*; F. *mort*; I. *morto*; S. *muerto*.) Deprived or destitute of life; exanimate.

**D. arse-smart.** The *Polygonum persicaria*.

**D. nettle.** The *Lamium album*, because, though like a nettle, it does not sting.

**D. nettle, common.** The *Lamium album*.

**D. nettle, red.** The *Lamium purpureum*.

**D. nettle, white.** The *Lamium album*.

**D. nettle, yellow.** The *Lamium galeobdolon*.

**D. oil.** A heavy oily liquid obtained in the distillation of coal tar after the light oil containing benzol has been separated. It contains anilin, quinolin, naphthalin, carbolic acid, and other matters.

**D. tongue.** The *Oenanthe crocata*, on account of its supposed paralyzing influence on the vocal organs.

**Deadhouse.** (F. *morque*.) A room in which bodies are kept before burial, and in which post-mortem examinations are made.

**Deadly.** (Dead.) That may cause death, resembling death.

**D. agaric, milk'y.** The *Agaricus necator*.

**D. car'rot.** The *Thapsia asclepias*.

**D. nightshade.** (F. *belladonne*; G. *gemeine Wolfskirsche*, *tüdtlicher Nachtschatten*.) The *Atropa belladonna*, so called because of its poisonous properties, and for its loving the shade of night.

**Deadman's fingers.** The *Orexis mascula*, from the colour and hand-like form of the tubers.

**Deadmen's bells.** A synonym of *Digitalis*.

**Deaf.** (Sax. *deaf*. L. *surdus*; F. *sourd*; G. *tauh*.) Devoid of hearing; hard of hearing.

**D. nettle.** Same as *Dead nettle*.

**Deaf dumbness.** A term for *Aphonia*, arising from deafness, either congenital, or happening during infancy.

**Deafmute.** (F. *sourd-muet*; G. *Taumbstumme*.) One who suffers from so high a degree

## DEAFMUTISM—DEATH.

of deafness as to prevent entirely, or to a marked degree, the development of the power of speech.

**Deafmutism.** Congenital hardness of hearing leading to prevention or impaired development of the power of speech. There may be either imperfect development or disease of the auditory, or of the articulating, organs. The proportion in the chief countries of Europe is 1:1580, but in Switzerland 1:503, probably owing to cretinism. It is more common in males than in females, and it is very frequently met with amongst the Jews. It is also common when the parents are related to each other, and amongst the poor. Deafmutes write and spell accurately, and can perceive the vibrations of a tuning fork applied to the teeth.

**Deafness.** (Sax. *deaf*. L. *surditas*; F. *surdité*; I. *sordità*; S. *sordera*; G. *Taubheit*.) Impairment or loss of the faculty of hearing.

**D., hysterical.** (*Hysteria*.) An affection sometimes occurring in severe cases of hysteria, in one or both ears, without apparent disease. It may suddenly disappear, or be supplanted by other hysterical symptoms.

**D., malarial.** (*Malaria*.) More or less complete loss of hearing occurring in the course of malarial fever; it is usually associated with other anæsthesiæ.

**D., throat.** Deafness resulting from enlargement of the tonsils, or from inflammation of the Eustachian tubes.

**Deafspots.** Certain spots at which, if a vibrating tuning fork be placed, it is not heard. Urbantschitsch recognises three such spots for each ear; one is at the lower end of the tragus, a second where the helix intersects a line running from the lower edge of the zygoma through the tragus to the occiput, and a third near the crista helicis.

**Dealbate.** (L. *dealbo*, to whiten over.) To whiten.

Also, presenting a whitened surface, as though covered with a white powder or delicate pubescence.

**Dealbation.** (L. *dealbo*. F. *déalbation*; I. *dealbazione*; G. *Weissmachen*.) The art of making white the skin and teeth; also of whitening bones for the purposes of anatomy.

Also, the same as *Leucosis*.

**Deambulation.** (L. *deambulo*, to walk abroad.) Old term (Gr. *περίπατος*), used by Hippocrates, *Epid.* vi, §, t. 11, for the more moderate movement and gentle exercise of the body; also applied in like manner to the mind.

**Deargentation.** (L. *deargento*, to silver over. G. *übersilbern*.) The act of silvering; the covering of pills with silver leaf.

**Dearticulate.** (L. *de*, a prefix signifying separation; *articulus*, a joint.) To dis-joint.

**Dearticulation.** (L. *de*, a prefix signifying separation; *articulus*, a joint. F. *déarticulation*.) An articulation admitting of movement in several directions. A synonym of *Diarthrosis*.

**Dearticulation.** Same as *Dearticulation*.

Also (G. *Ausgliederung*, *Aussenkung*), a term for dislocation.

**Deasciation.** (L. *de*, from; *ascio*, to chip as with a hatchet.) A wound of cranium in which a piece of the skull is chipped out as with a hatchet.

**Death.** (Sax. *death*. F. *mort*; I. *morte*;

S. *muerle*; G. *Tod*.) The cessation of life; the state of not living after living.

**D. ad'der.** The species of the Genus *Acanthophis*, very poisonous.

**D. ag'ony.** (F. *agonie*; from L. *agonia*; from Gr. *ἀγῶνία*, a contest, anguish.) A term for the struggle, accompanied by manifestations of pain and distress, which is occasionally observed in the act of dying; in many, or in most, cases it is probable that the semiconvulsive movements and the means are automatic actions, unaccompanied by painful sensation or consciousness.

**D., appa'rent.** (L. *appareo*, to appear at.) The condition in which the breathing, the heart's action, the corporeal warmth, and the other manifestations of life, are so feeble as to reduce the affected person to the similitude of a corpse. This condition may last some hours or days, and persons in this state have doubtless been buried alive.

**D., black.** The *Pestis nigra*.

**D., cau'ses of.** The causes of death are usually classified as follows:—Zymotic diseases, including smallpox, measles, scarlatina, diphtheria, hooping-cough, typhus, diarrhoea, dysentery, and other zymotic diseases; constitutional diseases, including cancer, scrofula and tabes, phthisis and hydrocephalus; local diseases of the brain, heart, lungs, stomach and liver, kidneys, generative organs, joints, and skin; childbirth and metria; violent deaths. Each age is more liable to some of these forms of disease than others, and tables of mortality have been constructed which give the numbers dying of the several diseases at different ages. Some diseases, as rheumatism, it is difficult to classify.

**D., gen'eral.** Death of the whole body.

**D., interstit'ial.** (L. *interstitium*, space between.) The same as *D. molecular*.

**D., lo'cal.** Death of a part of the body, as in gangrene of a toe.

**D., modes of.** The classification of Bichat into death beginning at the head, or death by coma; death beginning at the heart, or death by syncope; and death beginning at the lungs, or death by asphyxia or apnoea, has been largely adopted; but it is evident that this classification is unsatisfactory, inasmuch as it does not include all the observed conditions. Watson speaks of death by anæmia, by asthenia, by apnoea, and by coma; and these different modes of, or tendencies to, death may be blended with each other.

**D., molec'ular.** (L. *mole*, a mass.) The change from living to dead tissue that takes place continuously throughout the organs of the body. The passage of the several compounds of which the body is made up into lower planes, which are no longer of service, but are ready to be cast out. The change is probably not in any case sudden, but presents many intermediate steps, the albuminous compounds, for example, existing in various conditions between their state when forming part of the protoplasm of the body and the urea, carbonic acid and water, in which they are discharged from it.

**D., natural.** Death occurring in the course of nature from disease or decay.

**D. of man.** A name for the *Cicuta maculata*.

**D. rate.** The rate of mortality in any collection of living beings in a given period. According to Farre, it is a ratio between three elements, living men, time, and deaths; the first

of these data only being capable of approximate estimation. The following may be taken as an example:—The number of deaths registered in a district with an estimated population of 11,312 during a quarter of the year amounting to 56, the annual death rate per thousand represented by this number would be approximately determined as follows:

$$\frac{56 \times 4 \times 1000}{11,312} = 19.7$$

The rate of infant mortality is usually measured by the proportion of deaths under one year to births registered, and is also expressed as so many per thousand.

In order to calculate the mean age at death of a population, all the ages at death during a given period are added up, and this sum is divided by the total number of deaths.

To obtain more correctly the monthly or quarterly death rates of various towns, the Registrar-General takes into account the number of days in a month or quarter. The populations to be dealt with are divided by 365/21225 (the number of days in the year), and are then multiplied by the number of days in the month or the quarter; and thus the population is arrived at, which may be applied to the deaths in that month or quarter.

**D. rattle.** A sound sometimes emitted by the dying, occasioned by the expulsion of air from the lungs through mucus in the trachea.

**D., signs of.** The fact of death having occurred is not always easy of verification at first; the signs which are pointed out as those which prove that death is real, not apparent, are the total and permanent cessation of the heart's action and of breathing, the gradual cooling of the body to the temperature of the air, the occurrence of cadaveric rigidity, the lustrelessness of the cornea and the insensibility of the pupil to light, and the occurrence of putrefaction.

**D. smell.** A peculiar and somewhat musky odour, described by Ismah as occurring for a few hours before death, and attributed by him to the evolution of ammonia combined with a volatile fatty acid from the blood.

**D., somatic.** (Σωμα, a body.) The death of the body as a whole. The cessation of the various actions, circulation, respiration, digestion, and the like, by which the body is maintained.

**D. stiffening.** Same as *Rigor mortis*.

**D. struggle.** Same as *D. agony*.

**D., sudden.** Death occurring without warning, or unexpectedly. The chief causes of sudden death are diseases of the heart or blood-vessels, effusions of blood on or into the brain, pulmonary apoplexy and hæmorrhage, the giving way of visceral abscesses, ulcers of the alimentary canal, extrauterine foetation, rupture of the uterus, peri-uterine and retro-uterine hæmatoceles, apoplexy of the ovary, rupture of the urinary bladder or of the gall-bladder, cholera or other zymotic disease, draughts of cold water when heated, alcoholic draughts, mental emotions, and choking from the entrance of a foreign body into the trachea or pharynx.

**D., systemic.** The same as *D., somatic*.

**D. trance.** A term for *P., apparuit*.

**D., violent.** Death occurring as the result of injury or poison.

**Deaurate.** (L. *deauro*, to gild. G. *Ver-golden*.) To gild, to cover a pill with gold leaf.

**Deauration.** (L. *deauro*. G. *Ver-*

*goldung*.) The act of gilding; the covering of pills with gold leaf.

**Deaurent pilulæ.** (L. *deauro*, to gild over; *pilula*, a pill.) A direction to the dispenser of medicine to coat pills with gold leaf in order that their bitter or nauseous flavour may be concealed.

**Debile.** (L. *debilis*, weak. Gr. ἀσθενής; F. *debile*; I. *debole*; S. *debul*; G. *Schwach*.) Weak, feeble.

In Botany, applied to a stem which is too weak to support the weight of leaves or flowers in an upright position.

**Debilitants.** (L. *debilito*, to weaken. G. *Schwächendemitel*.) Remedies or means employed to depress the powers of the body, such as antimony and low diet.

**Debilitas.** (L. *debilito*, to make weak. F. *debilité*; I. *debolizza*; S. *debididad*; G. *Kraftlosigkeit*, *Schwäche*, *Schwachheit*.) Weakness, debility.

**D. animi.** (L. *animus*, the mind. G. *Geisteschwäche*.) Weakness of mind, imbecility.

**D. erethistica.** (Ερεθισμα, to excite.) A morbid irritability of temper and disposition.

**D. memoria.** (L. *memoria*, memory.) Defect, or weakness, or want, of memory.

**D. nervosa.** (L. *nervosus*, nervous.) The condition called *Neurasthenia*.

**D. visus.** (L. *visus*, sight.) Weakness of sight.

**Debilitating.** (Same etymon.) Making weak, exhausting.

**Debilitation.** (Same etymon.) The action of *Debilitants*.

**Debility.** (L. *debilito*, to make feeble. F. *debilité*; I. *debolezza*; G. *Kraftlosigkeit*, *Schwäche*, *Schwachheit*.) Feebleness, weariness, infirmity, weakness, exhaustion, deficiency of tone.

**Debridement.** (F. *débrider*, to unbridle. G. *Abzäumung*.) An unbridling. A term for the enlargement of gunshot wounds, by cutting the skin, aponeuroses, or muscles, that is, one or all the parts implicated, according to the peculiar practice of the operator.

Also, the cutting of any part which injuriously confines another, as the constricting part in paraphimosis to relieve the inflammation of the glans, and the abdominal ring in strangulated hernia.

**Debris.** (F. *débris*; from *de*, from; *bris*, to break; from Gael. *bruish*, a fragment.) Broken bits, refuse.

**Dec.** An abbreviation of *Decetum*.

**Deca-.** (Δέκα.) Used as a prefix in many compound words, and signifying ten.

**Decacanthous.** (Δέκα; ἄκανθα, a spine. F. *decacanthé*; G. *zehnspitzig*.) Having ten spines.

**Decacerate.** (Δέκα; κέρα, a horn. F. *decacère*; G. *zehnhornig*.) Having ten horns.

**Decacuminate.** (L. *de*, from; *caecumen*, a point.) Having the point or top cut off or truncate.

**Decadactylous.** (Δέκα; δάκτυλος, a finger. F. *decadactyle*; G. *zehnfingerig*.) Having ten rays or fingers.

**Decafid.** (Δέκα; I. *findo*, to cleave. G. *Zehnpaltig*.) Same as *Decemfid*.

**Decagon.** (Δέκα, ten; γωνία, an angle. G. *Zehneck*.) Term for a figure having ten equal angles and sides.

**Decagonal.** (Same etymon. *F. déagone*; *G. zehneckig*.) Of, or belonging to, a decagon.

**Decagramme.** (*Δέκα*, ten; *F. gramme*. *G. Dekagramm*.) A French weight of 10 grammes; equal to 154.32348 grains avoirdupois; 132.8 grains troy.

**Decagnia.** (*Δέκα*, ten; *γυνή*, a female.) A Linnaean order of plants in which there are ten pistils. Ex. *Phytolacca*.

**Decagnian.** Same as *Decagnious*.

**Decagnious.** (*Δέκα*, ten; *γυνή*, a woman, the symbol of the pistil, or female organ of flowers. *F. décagnie*; *G. Zehnweibig*.) Having ten pistils.

**Decahe'dral.** (*Δέκα*; *ἔδρα*, a base. *F. décaédrique*.) Having ten sides.

**Decalcification.** (*L. de*, neg.; *calx*, lime.) The removal of lime from a substance containing it.

**Decalcify.** (*L. de*; *calx*.) To deprive of lime.

**Decalegi.** See *Dikalegi*.

**Decalitre.** (*Δέκα*, ten; *F. litre*.) A French metrical measure of 10 litres, being the measure of 10,000 grammes of water, and equal to 610.2800 English cubic inches.

**Decalobate.** (*Δέκα*; *λοβός*, a lobe. *F. décalobé*; *G. zehnlappig*.) Having ten lobes.

**Decalvant.** (*L. de*, *calco*, to make quite bald.) Rendering bald.

**Decamerous.** (*Δέκα*, ten; *μέρος*, a part.) Possessed of ten segments or members.

**Decametre.** (*Δέκα*, ten; *F. metre*.) A French measure of 10 metres, equal to 393.7079 English inches, or about 32½ English feet.

**Decamphora coccifera.** A synonym of *Croton perlicyos*.

**Decamylon.** (*Δέκα*, ten; *μύρον*, an ointment.) Old name for a certain ointment which was composed of ten ingredients, according to Oribasius; malabathrum, mastich, euphorbium, spikeard, strax calamita, carbonate of lime, common pepper, unguentum nardi, opobalsamum, and wax.

**De Candolle, Augustin Pyr- amus.** French botanist, born at Geneva 1778, died 1841.

**De C.'s classifica'tion of plants.** De Candolle divided plants into nine classes, of which five were dicotyledonous, two monocotyledonous, and two acotyledonous. The dicotyledonous were divided into those with corolla polypetalous and hypogynous; corolla polypetalous and perigynous; corolla monopetalous and perigynous; corolla monopetalous and hypogynous; and those with flowers apetalous, or with a single perianth. The monocotyledons were divided into those with phænogamous, and those with cryptogamous flowers; and the acotyledons into those that are leafy and have organs of impregnation, and those without leaves and without any known organ of impregnation.

**Decandria.** (*Δέκα*, ten; *άνήρ*, a male. *G. Zehnmannigkeit*.) The tenth class of Linnaeus' system of plants in which there are ten stamens. Ex. *Dianthus cæsius*.

**Decandrian.** Same as *Decandrous*.

**Decandrous.** (*Δέκα*, ten; *άνήρ*, a man, the symbol of the stamen, or male organ of flowers. *F. décandrie*; *G. Dekandrie*, *Zehnmannigkeit*.) Having ten stamens.

**Decane.** (*Δέκα*.)  $C_{10}H_{22}$ . A hydrocarbon contained in paraffin; it boils at 160°—162° C. (320°—323.6° F.)

**Decan'gular.** (*Δέκα*; *L. angulus*, a corner. *F. décangulaire*; *G. zehneckig*.) Having ten corners.

**Decant'.** (*F. décanter*; from *L. decantare*, which originally was a chemical term meaning to let a vessel down on one side; from *L. de*, down from; *L. canto*, a side; or from *F. de*; *cantier*, from old *F. cant*, a rim.) To pour out liquid from one vessel to another; to pour off a clear liquid from the dregs which have settled.

**Decantation.** (Same etymon. *F. decantation*; *L. decantazione*; *S. decantación*; *G. Klarabgessen*.) Term for the pouring off of any liquor from its dregs or fæces.

**Decantha'tion.** (*L. de*; *canthus*, a tire of a wheel.) Same as *Decantation*.

**Decantherous.** (*Δέκα*; *άνθηρ*. *F. décanthere*; *G. zehnstaubbeutelig*.) Having ten anthers.

**Decapar'tite.** (*Δέκα*; *L. pars*, a part. *F. décaparte*; *G. zehnteilig*.) Having ten parts.

**Decapetalous.** (*Δέκα*; *πίταλον*, a petal. *F. decapétale*; *G. zehnbloemenblättrig*.) Having ten petals.

**Decaphyllous.** (*Δέκα*, ten; *φύλλον*, a leaf. *F. decaphylle*; *G. zehnbliättrig*.) Having ten leaves; applied to a peianth.

**Decapita'tio.** (*L. de*, from; *caput*, the head.) The severance of the head from the body.

**D. articulo'rum.** (*L. articulus*, the joint.) Removal of the joint end of a bone for disease.

**Decapita'tion.** (*L. de*; *caput*.) The act of beheading; a procedure sometimes required to effect delivery. It is performed by means of a blunt hook with the concave surface cutting, or with a chain saw, or with a pair of strong scissors; after the trunk is separated and removed the head is extracted by the craniotomy forceps, cephalotribe, or ordinary forceps.

Also, the spontaneous division and detachment of the hydranths of tubularian Hydrozoa when mature. In this process the entoderm breaks across at a little distance from the base of the hydranth, and the entodermal stalk or stem slips out of the ectoderm, which separates at a line somewhat more distally placed. Soon after two constrictions occur around the closing and rounded stump, and opposite these the proximal and distal tentacular crowns are developed, and the new-formed hydranth projects from the investing tube of perisarc.

**Decapitator.** (Same etymon.) An instrument for performing decapitation; being a hook with a cutting edge on its concave surface.

**Dec'apod.** (*Δέκα*, ten; *πούς*, a foot. *F. décapode*.) Having ten feet; belonging to the Order *Decapoda*.

**Decap'oda.** (*Δέκα*; *πούς*, a foot.) An Order of the Subclass *Podophthalma*, Class *Crustacea*, having five pairs of legs, and lamellate branchiæ enclosed in a cavity on each side of the thorax.

Also, a Suborder of the Order *Dibranchiata*, Class *Cephalopoda*, possessing two long tentacular prehensile arms in addition to the eight ordinary ones, which are provided with suckers.

**Decapodal.** Belonging to, or like, the *Decapoda*.

**Decapod'iform.** (*Decapod*; *L. forma*, likeness. *F. décapodiforme*.) Applied by Kirby to the larvæ of the *Coleoptera* that are herbivorous, hexapodous, antennated, and the body of

# DECAPODOUS—DECIDUA.

which, long, convex, and flattened, has natatory laminae.

**Decapodous.** Belonging to, or like, the *D. capoda*.

**Decaposphinxis.** (Σφίγξις, a binding tight.) Strangulation.

**Decapterygious.** (Δέκα; πτερυγί, a fin. F. *decapterygien*; G. *zehnflössfedert*.) Having ten fins.

**Decarbonate.** (L. *de*, from; *carbonic acid*.) To deprive of carbonic acid.

**Decarbonated.** (L. *de*, from; *carbonic acid*.) An old term applied to an oxide, such as quicklime, which has been formed by expelling the carbonic acid from a carbonate of the metal.

**Decarbonisation.** (L. *de*, from; *carbo*, charcoal. G. *Entkohlenstoffung*.) The freeing from carbon. A term applied to the purification of the blood during its transit through the lungs by the exchange of oxygen for carbon dioxide.

**Decarbonise.** (Same etymon. G. *entkohlen*.) To free from carbon.

**Decarburisation.** (L. *de*; *carbure*.) The removal of carburets or of carbon from a substance.

**Decaspermous.** (Δέκα, ten; σπέρμα, a seed. F. *déasperme*; G. *zehnsamig*.) Having ten seeds.

**Decatoma.** A Genus of the Order *Coleoptera*.

**D. luna'ta**, Fabr. (L. *lunatus*, crescent-shaped.) Hab. Cape of Good Hope. Used as a vesicating agent.

**Decatortho'ma.** (Δέκα, ten; ὁρθώω, to set straight.) Old term for a compound medicinal preparation which used to be made of ten ingredients.

**Decatyl group.** (Δέκα, ten; ἔλη, matter.) The group of organic compounds containing ten atoms of carbon.

**Decay'.** (Old F. *decœr*; from *de*, down; *cœr*, to fall; from L. *de*, down; *cadō*, to fall.) A failure of excellence; a decline to a less perfect condition; putrefaction.

**D. of nature.** The general decline of strength and size which occurs in consequence of old age.

**Decease.** (F. *décès*; from L. *decedo*, to depart.) A synonym of *Death*.

**Decemdentate.** (L. *decem*, ten; *dentatus*, toothed. F. *decemdenté*; G. *zehnzahlzig*.) Having ten teeth.

**Decemfid.** (L. *decem*, ten; *findo*, to cleave. F. *décemfide*; G. *zehnspaltig*.) Cleft into ten parts; applied to perianths.

**Decemflo'rous.** (L. *decem*; *flos*, a flower. G. *zehnblühig*.) Having ten flowers.

**Decemjugate.** (L. *decem*, ten; *juga*, a yolk. G. *zehnjoehig*, *zehnpaarig*.) Having ten pairs of leaflets, or of other organs.

**Decemloc'ular.** (L. *decem*, ten; *loculus*, a little pocket. F. *décemloculaire*.) Having ten little compartments; ten-celled; applied to certain capsules.

**Decempe'date.** (L. *decem*, ten; *pes*, a foot. F. *décempède*; G. *zehnfüssig*.) Having ten feet.

**Decemplex.** (L. *decem*; *plico*, to fold. G. *zehnfoeh*.) Tenfold.

**Decempli'cate.** (L. *decem*; *plicatus*, plaited. G. *zehnfoehacht*, *zehnfaeltig*.) Having ten plaits or folds.

**Decempunc'tate.** (L. *decem*, ten; *punctum*, a point. F. *décempunctué*; G. *zehn-punktirt*.) Having ten points or spots.

**Decemstriate.** (L. *decem*; *striatus*, grooved. G. *zehnstreifig*.) Having ten striae.

**Decend'ium.** (L. *decem*; *dies*, a day.) A period of ten days.

**Decentration.** (L. *de*, from; *centrum*, a centre.) Removal from the centre.

Applied to the condition of a *Decentred lens*.

**Decentred.** (L. *de*, from; *centrum*, a centre.) Having lost its centre, or away from the centre.

**D. lens.** A lens cut from a larger lens outside its centre, so that being thicker at one side it acts as a prism; also an ordinary lens, so arranged in regard to the eye of the observer that the visual line passes through some other part than its centre.

**Deces'sio.** (L. *decessio*, the disappearance of an object. G. *Fortgang*, *Abgang*, *Abnahme*, *Abweichung*.) Departure, decrease.

An old term for fracture of the skull with depression of the bone.

**Decidentia.** (L. *decido*, to fall down.) A falling down. Anciently used synonymously with *Cataplexis*, which see.

Also, an old term for some acute diseases which were protracted beyond the fourteenth day.

**Decid'ua.** (L. *deciduus*, falling off, from *decido*, to fall down from. F. *caduque*; G. *Haar'sche Haut*, *hinfaellige Haut*, *Hinfallshaut*.) The external envelope of the ovum, being the one which is derived from the mother. It consists of the thickened and developed mucous membrane of the uterus, which at the time of the entrance of the fertilised ovum into the womb has become swollen, more vascular, and more distinct from the muscular tissue, as it is in the period before each menstruation; the columnar epithelium has become almost spherical, the glands have increased in size, the interglandular tissue has thickened by proliferation of the epithelial cells and of the connective-tissue corpuscles, and the blood-vessels have grown in size and in number. On the arrival of the ovum in the uterus, at about perhaps the eighth or tenth day after fecundation, it is arrested in the neighbourhood of the entrance of the Fallopian tube by the swollen mucous membrane, where it is retained, either in the substance of the membrane or by a fold, in which position the villi of the chorion are speedily developed. Coincidentally the uterine mucous membrane, or decidua as it is now to be called, is continuing its growth, and as early as the second week after conception, is from 4—6 mm. thick, soft, of deep red tint, with its surface finely wrinkled, and presenting numerous small openings, which have usually been thought to be the dilated mouths of the tubular uterine glands, but which are now believed to be the mouths of crypt-like depressions in the interglandular substance which serve to receive the villi of the chorion. The part of the decidua on which the ovum rests becomes, as it grows, the decidua serotina; the remainder, lining the uterine walls, is the decidua vera. Very soon after the arrival of the ovum in the uterus it becomes surrounded and enveloped by a growth of the superficial epithelial layer of the decidua, the decidua reflexa; and in this manner it comes to pass that at first there is a space between the decidua vera and reflexa, which may be entered by a probe passed through the cervix uteri, and which contains some mucus, the hydropri-ne. As the ovum grows this cavity decreases in size, and about the third month of

## DECIDUAL—DECIMAL.

pregnancy the reflexa is everywhere in contact with the vera, and shortly afterwards coalesces with it, so as to constitute one membrane, which can only here and there be split into two. At this time the decidua attains its maximum thickness of from 4—7 mm. It is composed of numerous decidual cells and lymphoid tissue, with a sparing quantity of connective tissue. The vessels are very numerous, the superficial ones being venous loops, and the deeper wide venous sinuses, which are most developed at the time when the reflexa and the vera meet, and they here enter the marginal sinus of the commencing placenta. The whole tissue is traversed by a multitude of glands, distended with cylindrical epithelium and a milky fluid, which run vertically, and which, with the blood-vessels, are enclosed in lymphatic spaces. At first the whole decidua reflexa is penetrated by the chorionic villi, but, as pregnancy advances the decidua serotina undergoes especial development along with the corresponding villi of the chorion, and forms the maternal part of the placenta; the remainder of the conjoined decidua vera and reflexa, together with their corresponding chorionic villi, becomes thinner and less and less vascular with the growth of the ovum, until there remains at the end of pregnancy a mere fibrous, non-vascular structure, which is cast off, on the completion of delivery, with the placenta and the other membranes.

**D. catamenialis.** (*Kataménios*, monthly.) Same as *D. menstrualis*.

**D., cavity of.** The space between the decidua reflexa and the decidua vera; the remains of the uterine cavity; it exists only in the first few months of pregnancy.

**D., interuteroplacental.** (*L. inter*, between; *uterus*, the womb; *placenta*.) The *D. serotina*, from its position.

**D. membrana.** (*L. membrana*, a membrane.) The structure described under *Decidua*.

**D. menstrua'lis.** A hyperemic, spongy condition of the mucous membrane of the uterus, with increased secretion, occurring coincidentally with menstruation. It differs only from the early decidua of pregnancy in that the cells of the interglandular tissue contain very large nuclei.

The term has also been applied to the membrane of membranous dysmenorrhœa.

**D. placentalis.** (*Placenta*.) The *D. serotina*, in consequence of its ultimately forming the maternal part of the placenta.

**D. protrusa.** (*L. protrusus*, from *protrudo*, to thrust forward.) A synonym of *D. reflexa*.

**D. reflexa.** (*L. reflexus*, part. *reflecto*, to turn back.) That portion of the uterine mucous membrane which grows up around the ovum and gradually encloses it, as in a sac. The exact mode in which the ovum is encapsuled by the reflexa is not yet demonstrated; the generally received account is given under *Decidua*.

**D. serotina.** (*L. serotinus*, late ripe.) That part of the decidua vera to which the ovum is attached. As early as the second month of pregnancy it is seen to be more vascular than the rest of the decidua vera, and at the same time the villi of the chorion which penetrate it undergo considerably increased ramification and bulk; the growth on both sides continues, and by the middle of the third month the interdigitation of the two structures is so close that they

cannot be separated, and the placenta exists. See also *Placenta*.

**D. tunica reflexa.** (*L. tunica*, a coating. The *Decidua reflexa*.)

**D. tunica uteri.** The *Decidua vera*.

**D. uterina.** The *D. vera*.

**D. vera.** (*L. verus*, true.) The part of the decidua first formed; that which lines the uterine walls, with the exception of the part to which the ovum is attached, which is the decidua serotina.

**Decidual.** Relating to the *Decidua*.

**D. cells.** (*F. cellules de la cavité*; *G. Decidualzellen*.) Large cells, some spherical and others elongated, with distinct nucleus, sometimes a nucleolus, and somewhat granular contents, which proceed from the connective tissue and the endothelial cells of the uterine mucous membrane; the fusiform cells are more superficially, the spherical more deeply, situated.

**D. glands.** The highly developed and enlarged glands of the original mucous membrane of the uterus.

**D. umbilicus.** (*L. umbilicus*, the navel.) A small depression or cicatricial mark at the most prominent part of the ovum in the early times of its sojourn in the uterus, which Coste believes to be the place of closure of the decidua reflexa, when it forms a complete envelope.

**Deciduata.** Term applied to all placental mammals in which the fetal placenta is so intimately connected with the maternal placenta, that in parturition a part of the uterine mucous membrane is thrown off.

**Deciduate.** Possessing a *Decidua*.

**Deciduoma.** (*Decidua*, *G. Geschwulstbildungen mit dem Bau des Deciduaorgans*.) Term applied by Maier to tumours of the uterus presenting the characters of the decidual tissue, being composed of connective tissue with large areolæ containing decidual cells.

**Deciduuous.** (*L. deciduus*, part. *decido*, to fall off. *F. decidu*; *G. abfallend*.) Falling off. Applied to certain membranes or tumours of the uterus, and to other animal structures, as teeth and horns, which fall off at certain times.

Also, applied to leaves, particularly those which fall off before new ones appear, and to petals after anthesis.

Also, applied to those skin diseases which are accompanied by frequent and extensive shedding of crusts or scales.

**D. calyx.** (*Kάλεξ*, a flower cup.) A calyx which falls off as the flower opens.

**D. corolla.** (*Corolla*.) A corolla which falls off as the flower opens.

**D. dentition.** (*L. dentitio*, teething.) The occurrence of milk or temporary teeth.

**D. leaves.** Leaves which fall off at the end of the year.

**D. membrane.** The *Decidua*.

**D. plants.** Plants which shed the whole of their leaves every year.

**D. teeth.** The first or milk teeth, which fall out to give place to the permanent teeth. See *Teeth*, temporary.

**Decigramme.** (*L. decem*, ten; *F. gramme*.) A French weight, the tenth part of a gramme, equal to 1·5432348 grains avoirdupois, or 1½ grains troy.

**Decilitre.** (*L. decem*, ten; *F. litre*) A French metrical measure, the tenth part of a litre; equal to 6·1028 English cubic inches.

**Decimal.** (Old *F. decimal*; from Low *L.*

# DECIMANA FEBRIS—DECOCTION.

*decimalis*, belonging to tithes; from *L. decimus*, a tenth; from *decem*, ten.) Relating to tens; increasing or diminishing by ten or the power of ten.

**D. meas'ure of capac'ity.** See *Metric measure of capacity*.

**D. measure of length.** See *Metric measure of length*.

**D. measure of weight.** See *Metric measure of weight*.

**Decima'na febris.** (*L. d. cimannus*, of the tenth part; *febris*, a fever.) An intermittent fever, the paroxysms of which were believed to return every tenth day.

**Decima'nous.** (*L. decimannus*.) Breaking out or appearing every tenth day. Formerly applied to certain erratic fevers of this periodical character.

**Decimetre.** (*L. decem*, ten; *F. metre*.) A French measure, the tenth part of a metre; equal to 3.9371 English inches.

**Decip'ium.** An element discovered by Delafontaine by the aid of the spectroscope. It occurs in association with Samarium in Samarskite, which comes from North Carolina. It gives no absorption spectrum, and its oxide has an equivalent of about 130. Its symbol is *Dp*.

**Declinal.** Same as *Declinate*.

**Declinate.** (*L. declino*, to bend off. *F. declin*; *G. niederbogen, gesenkt*.) Bending down; declining. Applied to stems that are bent, but with the arch downwards; curved downwards or forwards.

**Declina'tio.** (*L. declino*, to bend off. *F. declin*; *G. Abnehmen*.) Old term for a remission of a disease, or of the paroxysm of a disease. Also, applied formerly to a species of dislocation.

Also, the declension of a being, or an organ, or a structure, from the healthy type.

**Declina'tion.** (*L. declino*.) The act or state of bending down.

**D., magnet'ic.** The variation of the magnetic needle east or west from due north. At present the needle points 17° west of north. This angle is the angle between two vertical planes, one passing through the earth's axis and the other through the needle. The needle pointed due north in 1657, and continued to move westerly till 1818, since which date it has begun slowly to return to north.

**Declina'tor.** (*L. declino*.) An instrument by which the dura mater is pushed away in the operation of trephining.

**Decline.** (*F. decliner*; from *L. declino*, to bend aside. *F. declin*; *G. Abnehmen*.) A bending downwards, a deterioration; old age. The period of diminution of a disease.

A term applied to the decay of bodily and mental powers and faculties in advancing years.

Also, applied to the later stages of phthisis pulmonalis.

Also, a term for the condition formerly called *Tubercles*.

**Declined.** In Botany, the same as *Declinate*.

**Declining.** Same as *Declinate*.

**Decliv'ate.** (*L. de*, downward; *clivus*, the descent of a hill. *F. declive*; *G. abhangig, schrag*.) Descending; declining; inclining downward.

**Decliv'e.** (*L. decliv*, a sloping place.) A declivity, or incline.

**D. cerebelli.** (*G. Abdachung*.) The term

applied to the lateral inclined surfaces of the body or vermis superior of the cerebellum.

**Decoct.** An abbreviation used in prescriptions for *Decoctum*, a decoction.

**Decoc'tio.** Same as *Decoction*.

**Decoction.** (*L. decoctio*, from *decoquo*, to boil down. *F. decoction*; *G. Abkochen, Absiedung*.) Term for a continued ebullition with water to separate such parts of bodies as are soluble only at that degree of heat 100° C. (212° F.)

Also (*G. Absud*), a medicine made by boiling some medicinal substance in a watery fluid.

**D., bit'ter.** See *Decoctum amarum*.

**D. of aloe's, compound.** See *Decoctum aloes compositum*.

**D. of arrowroot.** *Reiz. Ph.* Arrowroot 40 parts; boil with a sufficiency of water for a little while, and make up to 1000 parts.

**D. of bark, red.** The *Decoctum cinchonæ rubræ*.

**D. of bark, yellow.** The *Decoctum cinchonæ flavæ*.

**D. of barley.** See *Decoctum hordei*.

**D. of barley, compound.** See *Decoctum hordei compositum*.

**D. of bit'tersweet.** See *Decoctum dulcamare*.

**D. of broom.** The *Decoctum scoparii*.

**D. of broom, compound.** The *Decoctum scoparii compositum*.

**D. of cabbage-tree bark.** The *Decoctum geoffrææ incrimis*.

**D. of cham'omile.** The *Decoctum anthemidis nobilis*.

**D. of cincho'na, compound lax'ative.** The *Decoctum kina compositum et laxans*.

**D. of cincho'na, red.** The *Decoctum cinchonæ rubræ*.

**D. of cincho'na, yellow.** The *Decoctum cinchonæ flavæ*.

**D. of Ceylon' moss.** The *Decoctum gracilarie*.

**D. of dan'dellion.** The *Decoctum taraxaci*.

**D. of dog'wood.** The *Decoctum cornus florida*.

**D. of elm bark.** The *Decoctum ulmi*.

**D. of ergot of rye.** The *Decoctum secalis cornuti*.

**D. of flax'seed, compound.** The *Decoctum lini compositum*.

**D. of fox'glove.** The *Decoctum digitalis*.

**D. of harts'horn, burnt.** The *Mistura cornuusti*.

**D. of hel'lebo're, white.** The *Decoctum veratri*.

**D. of Ice'land moss.** The *Decoctum cetrariæ*.

**D. of i'singlass.** The *Decoctum ichthyocolle*.

**D. of liv'erwort.** The *Decoctum cetrariæ*.

**D. of log'wood.** The *Decoctum hamatolyli*.

**D. of mal'low, compound.** The *Decoctum malvæ compositum*.

**D. of marshmal'low.** The *Decoctum althææ*.

**D. of meze'reon.** The *Decoctum daphnes mezerei*.

**D. of nim bark.** The *Decoctum azadirachtæ*.

# DECOCTO-INFUSUM—DECOCTUM.

**D. of oak bark.** The *Decoction quercus*.  
**D. of oak bark, white.** The *Decoction quercus alba*.

**D. of pipsissewa.** The *Decoction chimaphila*.

**D. of pom'egranate rind.** The *Decoction granati corticis*.

**D. of pom'egranate root.** The *Decoction granati radicis*.

**D. of pop'pies.** The *Decoction papaveris*.

**D. of quince seeds.** The *Decoction cydonie*.

**D. of rice.** The *Decoction oryzae*.

**D. of ro'hun.** The *Decoction soyimida*.

**D. of sarsaparilla.** The *Decoction sarsae*.

**D. of sarsaparilla, false.** The *Decoction aralie nudicaulis*.

**D. of sen'eka.** The *Decoction senega*.

**D. of snails.** The *Decoction helicum pomatium compositum*.

**D. of starch.** The *Decoction amyli*.

**D. of whor'tleberry.** The *Decoction uvae ursi*.

**D. of winter'green.** The *Decoction chimaphila*.

**D. of woods.** The *Decoction guaiaci compositum*.

**D. of woody night'shade.** The *Decoction dulcamarae*.

**D., white.** The *Decoction album Sydenhami*.

**D., Zitt'man's, mild'er.** The *Decoction sarsaparillae compositum mitius*.

**D., Zitt'man's, strong'er.** The *Decoction sarsaparillae compositum fortius*.

**Decocto-infusum.** (*L. decoctus*, part. of *decoquo*, to boil down; *infusus*, part. of *infundo*, to pour into. *G. Absud-Aufguss*.) A decoction which, while still hot, has had some fresh material added to and infused in it.

**Decoctum.** See *Decoction*.

**D. ad ictericos.** (*L. ad*, for; *ictericus*, ill of the jaundice.) An old compound of the Edinburgh Pharmacopœia containing celandine.

**D. album Sydenhami**, Fr. Codex. (*Sydenham*, the English physician. *F. apozème de mie de pain composé*.) Calcined stag's horn 10, bread crumb 20, gum arabic 10, white sugar 60, orange flower water 10, water sufficient; powder together the solid ingredients, add about a litre of water, boil for a quarter of an hour, then add the orange flower water. The final result should measure a litre.

**D. alchemillae arvensis.** Decoction of parsley breakstone; being an ounce of the flower heads boiled for ten minutes in 20 oz. of water and strained. Used as an astringent, tonic, and diuretic, to facilitate the passage of urinary sand. Dose, a wineglassful three times a day.

**D. al'oës compositum**, B. Ph. Compound decoction of aloes. Extract of aloes 120 grains, myrrh 90, carbonate of potash 60 grains, extract of liquorice an ounce, are boiled for five minutes with a pint of distilled water, and then 90 grains of saffron is added; on cooling, compound tincture of cardamoms 8 fluid ounces is added, and the ingredients allowed to macerate in a closely-covered vessel for two hours, then strained, and water added to make 30 ounces of product. A stomachic and purgative, exciting the action of

the liver and intestinal glands. Dose, 2 drs. to 2 oz.

**D. althææ.** (*G. Eibischabsud*.) Decoction of marshmallow. Marshmallow root, dried, 4 oz., raisins 2 oz., water 7 pints. Boil to 5 pints. A demulcent.

**D. althææ e foliis**, Belg. Ph. The same as *D. althææ foliorum*.

**D. althææ e radicē**, Belg. Ph. The same as *D. althææ radicis*.

**D. althææ foliorum**, Belg. Ph. (*L. folium*, a leaf.) Marshmallow leaves 30 parts, water q. s.; boil for ten minutes, and make up to 1000 parts.

**D. althææ radicis.** (*L. radix*, a root.) Marshmallow root 50 parts, water q. s.; boil for a quarter of an hour, and make up to 1000 parts.

**D. amarum.** (*L. amarus*, bitter.) Gentian root, 1 drachm, is boiled in water 2-5 pints.

**D. amyli.** The *Mucilago amyli*.

**D. anthelmin ticum.** (*F. con mercurielle de Rosenstein*.) This contains dandelion, orange peel, cannella, and mercury.

**D. anthem'idis nob'ilis.** Decoction of chamomile. Chamomile flowers an ounce, caraway seeds half an ounce, water 5 pints. Boil for 15 minutes and strain.

**D. aralie nudicaulis.** *Aralia nudicaulis* 6 oz., digested in water, 8 pints, for 4 hours; boiled down to one half and strained. A stomachic.

**D. asparagi**, Belg. Ph. Decoction of asparagus. Made in the same way as *D. althææ radicis* of Belg. Ph., with asparagus root.

**D. avenæ.** (*L. avena*, the oat.) An old pharmacopœial name for oatmeal gruel.

**D. azadirach tæ**, Ind. Ph. Decoction of nim bark. The inner layer of nim bark, *Azadirachta indica*, bruised, 2 oz., water a pint and a half; boil for fifteen minutes, and strain whilst hot. An antiperiodic and tonic. Dose, 1-5 to 3 fluid oz.

**D. harda'næ.** Same as *Ptisana bardana*.

**D. Car'rageen.** Carrageen moss, 5 parts, boiled for 10 minutes in water 1000 parts. Demulcent.

**D. cas'siæ.** Ten parts of cassia pulp boiled in 1000 parts of water for a few minutes and strained. Some add manna or syrup of violets. A laxative drink.

**D. cetra'riæ**, B. Ph. Decoction of Iceland moss. Iceland moss, an ounce, is washed in cold water, and then boiled in a pint of distilled water for 10 minutes, strained, and made up to a pint with water. Used in chronic affections of the respiratory and alimentary mucous membranes. Dose, 2 to 4 oz.

The U.S. Ph. orders half a troy ounce to a pint.

**D. chamæm'e'li.** (*Xaiaim'el*, the chamomile.) The *D. anthemidis nobilis*.

**D. chimaph'ilæ**, U.S. Ph. Decoction of pipsissewa. Pipsissewa a troy ounce, boiled in a pint of water for fifteen minutes and made up to a pint. A diuretic, tonic, and astringent. Dose, a pint in twenty-four hours.

**D. cicho'rii**, Belg. Ph. Decoction of chicory. Made as *D. althææ radicis* with chicory root.

**D. cincho'næ fla'væ**, B. Ph. Decoction of yellow cinchona. Yellow cinchona bark 1-25 ounce boiled for ten minutes in a pint of water, strained, and made up to a pint. Dose, 1 to 2 oz.

# DECOCTUM.

The U.S. Ph. orders a troy ounce to a pint.  
**D. cincho'næ rubræ**, U.S. Ph. Decoction of red cinchona. Red cinchona bark, a troy ounce, boiled in a pint of water for fifteen minutes, strained and made up to a pint. Dose, 2 fluid oz.

**D. cor'nu**. (L. *cornu*, horn.) The *D. album Sydenhami*.

**D. cor'nu cer'vi compositum**, Belg. Ph. (L. *cornu*, horn; *ceruus*, stag; *compositum*, compound.) Shavings of stag's horn 40 parts, crumb of white bread 40, sugar 30, spring water 1500; boil the bread and horn shavings for half an hour, strain, adding sugar to 1000 parts.

**D. cornus floridæ**, U.S. Ph. Decoction of dogwood. Dogwood, a troy ounce, boiled in a pint of water, strained and made up to a pint.

**D. corticis peruvia'ni**, Belg. Ph. Grey bark 100 parts, water q. s., macerate for an hour, boil for a quarter of an hour, strain and express; make up to 1000 parts.

**D. corticis peruvia'ni febrifu'gum**, Belg. Ph. (L. *cortex*, bark; *Febru*; *febrifuge*.) Powdered yellow bark 30 parts, diluted sulphuric acid 15, water 730; boil in a porcelain or glass vessel and strain, so that there shall be 300 grms., then add crystallized sodium carbonate 4 grms., sugar 30.

**D. corticis peruvia'ni fla'vi**, Belg. Ph. Decoction of yellow bark. Made in same way as *D. corticis peruvia'ni*, with yellow bark.

**D. corticis peruvia'ni fus'ci**, Belg. Ph. (L. *fuscus*, reddish brown.) The same as *D. corticis peruvia'ni*, with grey bark.

**D. corticis peruvia'ni ru'bri**, Belg. Ph. (L. *ruber*, red.) Made in the same way as *D. corticis peruvia'ni*, with red bark.

**D. cydo'nizæ**. Decoction of quince seeds. Quince seeds 2 drs., boiled with a pint of water for ten minutes, and strained. A demulcent; used externally and internally.

**D. daph'nes meze'rei**. Decoction of mezereon. Mezereon 2 drs., liquorice root an ounce, boiled with 2 pints of water to one and a half, and strained. Used in secondary syphilis. Dose, 3 to 6 oz.

**D. diaphoreticum**. (*Diaphoreticus*, perspiration.) The *D. guaiaci compositum*.

**D. digita'lis**. Decoction of foxglove. Foxglove leaves, dry, a drachm, boiled in water 8 oz., and strained. Dose, 2 to 3 drs.

**D. dulcamara'æ**, U.S. Ph. Decoction of bittersweet. Bittersweet, a troy ounce, boiled in water a pint for fifteen minutes, strained, and made up to a pint. Dose, 1 to 2 ounces. See *Dulcamara*.

Belg. Ph. Made in same way as *D. althææ radiceis*.

**D. fæ'culæ sola'ni tubero'si**, Belg. Ph. Decoction of potato starch. Made in the same way as *D. amyli*, with potato starch.

**D. Feltz**, Belg. Ph. Sarsaparilla 65 parts, gelatin 10, powdered antimony sulphide enclosed in a linen bag 80, water q. s.; boil for an hour so that there may be a litre of fluid.

**D. filicis ma'ris**, Belg. Ph. (L. *filix*, a fern; *mas*, male.) Decoction of male fern. Made in the same way as *D. althææ radiceis*, with the root of *Nephrodium filix-mas*.

**D. fraga'riæ**, Belg. Ph. Decoction of strawberry root. Made in the same way as *D. althææ radiceis*, with the root of *Fragaria vesca*.

**D. fructuum pectora'tium**. Fifty

parts of *Fructus pectorales* boiled in 1000 of water and strained. Demulcent in cough.

**D. gallæ**. Decoction of galls. Bruised galls 5 parts, boiled in 80 of water down to 40, and strained. An astringent and hæmstatic application.

**D. geoffræ'æ iner'mis**. Decoction of cabbage-tree bark. Cabbage-tree bark, 1 oz., boiled in 2 pints of water and strained. Anthelmintic and purgative; in large doses, narcotic. Dose,  $\frac{1}{2}$  to 2 oz.

**D. gracila'riæ**, Ind. Ph. Ceylon moss, *Gracilaria lichenoides* and *confervoides*, ground to a fine powder, 25 oz., water 2 pints; boil for twenty minutes and strain. Demulcent and nutritive.

**D. gram'inis**, Belg. Ph. (L. *gramen*, grass.) Decoction of grass. Made in the same way as *D. althææ radiceis*, with the root of *Triticum repens*.

**D. grana'ti corticis**, Ind. Ph. Dried pomegranate rind, bruised, 2 oz., water a pint; boil for fifteen minutes, strain, and make up to a pint. Astringent in doses of 1 to 1½ oz.

**D. grana'ti radiceis**, B. Ph. Pomegranate root 2 oz., distilled water 2 pints, boiled down to a pint, and strained. An anthelmintic, and an astringent in relaxed mucous membranes. Dose, 1 to 2 oz.

**D. guai'aci compos'itum**. Guaiacum wood 3 oz., raisins 2 drs., sassafras root, liquorice root, of each 1 oz., water 10 pints. Boil to 5 pints and strain.

**D. gum'mi ru'bri**. Decoction of red gum from the bark of *Eucalyptus rostrata*. One part of gum boiled ten minutes in 40 parts of water, and strained. An astringent in diarrhoea and dysentery.

**D. hæmatoxy'li**, B. Ph. Logwood, an ounce, boiled for ten minutes in a pint of water, and 60 grs. of cinnamon added towards the end.

The U.S. Ph. orders logwood, a troy ounce, boiled with 2 pints of water to a pint. Dose, 1 to 2 fluid oz.

**D. hel'icum**. (L. *helix*, a snail. F. *tisane de limaçons composée*, lait d'amorce artificielle.) Snails 6, raspings of stag's horn 12, pearl barley 12, distilled water 790 parts; boil till reduced to 373 parts, and add 30 parts of syrup of capillaire.

**D. helleb'ori albi**. The same as *D. veratri*.

**D. hibis'ci**, Ind. Ph. Fresh immature capsules of *Hibiscus esculentus* 3 oz., water 1½ pint; boil to a pint and strain. Emollient, demulcent, and diuretic, in catarrh of the respiratory and vesical mucous membranes. Dose, 3 to 6 oz.

**D. hor'dei**, B. Ph. (L. *hordeum*, barley. F. *decotion d'orge*, *tisane commune*; G. *Gerstenschleim*.) Barley water. Two ounces of pearl barley, after being washed in cold water, are boiled with a pint and a half of distilled water for twenty minutes, and strained.

The U.S. Ph. orders two troy ounces of barley well washed to be boiled for ten minutes in water 8ss, strained, and the water thrown away; then add boiling water Oij; boil to Oij and strain. It is nutritive and demulcent, and is chiefly used as a common drink, flavoured or not with fresh lemon and sugar, and in clysters.

**D. hordei compos'itum**. (L. *compositus*, compound. F. *decotion d'orge composée*.) Compound decoction of barley. Decoction of barley Oij, caraway seeds, bruised, ʒiiss, cut liquorice

# DECOCTUM.

root 5vj, stoned raisins 3iiss, water Oj; boil to Oij, and strain. Has similar properties to *D. hordei*.

**D. hor'dei dis'tichi.** The same as *D. hordei*.

**D. ichthyocol'æ.** Decoction of isinglass. Sarsaparilla 3 oz., sassafras bark 1, sassafras wood 1, macerated for twelve hours in 9 pints of boiling water, then boiled, and isinglass 3 oz. dissolved in sufficient water to make the whole up to 8 pints, added. Sometimes sulphuret of antimony 2 oz., tied in a linen bag, is added during the boiling. It is a form of Lisbon diet drink.

**D. ispaghu'læ.** Ind. Ph. Bruised seeds of *Plantago ispaghula* 2 drs., water a pint; boil for ten minutes and strain. Demulcent and mildly astringent, in diarrhoea and dysentery. Dose, 2 to 4 oz. three or four times daily.

**D. ki'næ compos'itum et lax'ans.** Compound laxative decoction of cinchona bark. An ounce of cinchona bark is boiled with 2 pints of water for fifteen minutes; to this, senna leaves 2 drs., sulphate of soda 2 drs., and syrup of senna 1 oz., are added, and in half an hour it is strained.

**D. lap'athi acu'ti.** Belg. Ph. Decoction of sharp-pointed dock. Made as *D. althææ radiceis*, with the root of *Rumex acutus*.

**D. liehe'nis islan'dici.** The *D. cetraria*.

**D. liehe'nis islan'dici ablu'ti.** Belg. Ph. (*L. ablutus*, washed.) Decoction of washed Iceland moss. Iceland moss 40 parts, water q. s.; boil the lichens with 20 parts of water and throw away; wash again till all bitterness is removed; then boil the residuum with water for half an hour and strain. Make up the strained liquor to 1000 parts.

**D. ligno'rum.** (*L. lignum*, wood.) The *D. guaiaci compos'itum*.

**D. li'ni.** One part of flax seed boiled in 25 parts of water down to 15 and strained. Demulcent.

**D. li'ni compos'itum.** Flax seed an ounce, liquorice half an ounce, are boiled in a pint and a half of water for ten minutes; strain. Demulcent.

**D. li'ni e semin'ibus.** The *D. seminum lini*.

**D. lusitan'icum.** (*L. Lusitania*, the western part of Spain.) See *Lisbon diet drink*.

**D. mal'væ.** Belg. Ph. Made in the same way as *D. althææ foliorum*, with mallow.

**D. mal'væ compos'itum.** Mallow 1 oz., chamomile flowers  $\frac{1}{2}$  oz., water a pint; boil for fifteen minutes and strain. Used for fomentation and enemata.

**D. mercu'ril.** (*F. decoction de mercure, eau mercurielle simple*.) Mercury 60, water 2000 parts; boil for two hours and decant. The water takes up a small quantity of mercury. It is used in France as an anthelmintic for infants in doses of 20 to 100 grammes.

**D. mercu'rii compos'itum.** (*L. compos'itus*, compound. *F. decoction mercurielle composée*.) Mercury 60, hydrolate of tansy 2000, syrup of peaches 30 parts.

**D. meze'rei.** The *D. daphnes mezerei*.

**D. nu'cis juglan'dis compos'itum.** Compound decoction of walnuts. A synonym of *D. Pollini*.

**D. ory'zæ.** (*G. Reiswasser*.) Rice water. Rice 20 to 50 parts, water 1000; boil and strain. A demulcent in intestinal catarrh.

The Belg. Ph. orders it to be made in the same way as *D. hordei*.

**D. pan'is biscoc'ti.** (*L. panis*, bread; *biscoc'tus*, biscuit. *G. Zwi-backwasser*.) Biscuit boiled with water for ten minutes, pressed through a sieve, and sugar and milk added. Nutrient.

**D. papav'eris.** B. Ph. Decoction of poppies. Poppy capsules, bruised, 2 oz., water 1½ pint; boil for ten minutes, strain, and make up to a pint. Used as an anodyne fomentation and addition to poultices.

**D. papav'eris al'bi.** Belg. Ph. (*L. albus*, white.) Made in the same way as *D. althææ radiceis*, with the capsules of the *Papaver album*.

**D. parei'zæ.** B. Ph. Pareira root, 1½ oz., boiled in a pint of water for fifteen minutes, strained and made up to a pint.

**D. partu'riens.** (*L. parturiens*, part. *parturio*, to bring forth. *F. thé noisai*.) Powdered ergot 2, boiling water 125 parts; boil, and add syrup 45 parts.

**D. pectora'lē.** (*L. pectoralis*, belonging to the breast.) The same as *D. hordei compos'itum*.

**D. Poll'ni.** (*Pollini*, the originator of it.) Sarsaparilla, cinchona, of each 15 parts, cortex juglandis nucum interior 75, pumice stone, black sulphuret of antimony, of each, enclosed in a bag, 75, water 1000; boil to 350 parts.

**D. polyg'alæ sen'e'gæ.** The *D. sen'e'gæ*.

**D. polypo'dii commu'nis.** Belg. Ph. Decoction of polypody. Made in the same way as *D. althææ radiceis*, with the root of *Polypodium vulgare*.

**D. pro enem'atē.** (*L. enema*, a clyster.) The *D. mal'væ compos'itum*.

**D. pro fomen'to.** (*L. pro*, for; *fomentum*, a fomentation.) The *D. papav'eris*, from its use.

**D. quer'cus.** B. Ph. Oak bark, 1-25 oz., boiled in a pint of water for ten minutes; strain and make up to a pint.

**D. quer'cus al'bæ.** U.S. Ph. White oak, a troy ounce, boiled in a pint of water for half an hour, strained, and made up to a pint.

**D. ratan'hizæ.** Belg. Ph. Decoction of rhatany. Made in the same way as *D. althææ radiceis*, with rhatany.

**D. rham'ni fran'gulæ.** Bruised bark of *Rhamnus frangula* 1 part, water 40; boil down to 20 parts and strain. An aperient. Dose, 2 or 3 tablespoonfuls night and morning.

**D. sa'lep.** (*G. Salepschleim*.) The same as *Mucilago salep*, G. Ph.

**D. sapona'riæ.** Belg. Ph. Decoction of soapwort. Made in the same way as *D. althææ radiceis*, with the herb and root of *Saponaria officinalis*.

**D. sar'sæ.** B. Ph. Jamaica sarsaparilla, cut transversely, 2-5 oz., is digested in 1½ pint of boiling water for an hour, then boiled for ten minutes, strained, and made up to a pint. Dose, 2 to 10 fluid oz.

**D. sar'sæ compos'itum.** B. Ph. Compound decoction of sarsaparilla. Jamaica sarsaparilla 2-5 oz., sassafras root, guaiacum root, fresh liquorice root, of each 25 oz., mezereon root 60 grs., are digested for an hour in boiling water 1½ pint, then boiled for ten minutes, strained, and made up to a pint.

**D. sarsaparill'æ.** The *D. sar'sæ*.

**D. sarsaparill'æ compos'itum.** U.S. Ph. Sarsaparilla 6 troy oz., sassafras root-bark, guaiacum root, liquorice root, of each a troy

# DECOCTURE—DECOLORIMETER.

ounce, mezereon 180 grs., boiled in 4 pints of water for fifteen minutes, digested for two hours at about 200° F., strained, and made up to 4 pints.

**D. sarsaparillæ compositum fortius**, G. Ph. (*L. fortis*, comp. *fortior*, stronger; *G. starkeres Zittmannsches Decoct.*) Sarsaparilla 100 parts, water 2600; digest for twenty-four hours, add powdered sugar 6, powdered alum 6; heat in water bath, with frequent agitation, for three hours, then add powdered anise seed 4, powdered fennel seeds 4, cut senna leaves 24, cut liquorice root 12 parts; press and strain; make up to 2 00 parts. Dose, 1-8th of this amount.

**D. sarsaparillæ compositum mitius**, G. Ph. (*L. mitis*, comp. *mitior*, milder. *G. milderes Zittmannsches Decoct.*) Take of the residue employed in the preparation of the stronger decoction of sarsaparilla 50 parts, add water 2600, and heat for three hours; then add lemon peel, cassia bark, small cardamoms, and liquorice root, of each 3 parts; press and strain, and make up to 2500 parts.

**D. scillæ**. Squill 3 drs., juniper 4 oz., and senega 3 oz., boiled in 4 pints of water to 2 pints, and strained; when cool, spirit of nitrous ether 4 oz. is added. Dose, half an ounce.

**D. scoparii**, B. Ph. Decoction of broom. An ounce of broom tops is boiled with a pint of water for ten minutes, strained, and made up to a pint. Diuretic. Dose, 2 to 4 oz.

**D. scoparii compositum**. Compound decoction of broom. Broom tops, juniper berries, and dandelion root, of each half an ounce, boiled in 1-5 pint of water to a pint. Diuretic. Dose, 1 to 2 oz.

**D. secalis cornuti**. (*L. cornutus*, horned.) This decoction is made by boiling one drachm of ergot in six ounces of water for ten minutes.

**D. seminum lini**, Belg. Ph. Linseed tea. Linseed 16 parts, water q. s.; boil for half an hour, and let the strained liquor equal 1000 parts.

**D. senegæ**, U.S. Ph. Senega, a troy ounce, boiled in a pint of water for fifteen minutes, strained, and made up to a pint. Expectorant. Dose, 2 oz.

**D. smilacis sarsaparillæ**. The *D. sarsæ*.

**D. soyimidæ**, Ind. Ph. Rohun bark, *Synoda febrifuga*, bruised, 1-5 oz., water a pint; boil for fifteen minutes, strain, and make up to a pint. Astringent, tonic, and antiperiodic; used also as a gargle and a vaginal injection.

**D. sudorificum**. (*L. sudor*, sweat; *facio*, to make.) The *D. guaiacum compositum*.

**D. symphiti**, Belg. Ph. Decoction of comfrey. Made in the same way as *D. althææ radices*, with the root of *Symphytum officinale*.

**D. tamarindorum**, Belg. Ph. Decoction of tamarinds. Tamarinds 50 parts, water q. s.; boil for fifteen minutes and strain, so that there may be 1000 parts.

**D. tamarindorum compositum**, Belg. Ph. Tamarinds 50 parts, stoned grapes 100, water q. s.; boil for a quarter of an hour and strain that there may be 1000 parts.

**D. taraxaci**, B. Ph. Dried dandelion root, an ounce, boiled for ten minutes with a pint of water, strained, and made up to a pint. Dose, 2 to 4 fluid oz.

**D. tormentillæ**. Tormentil root, 2 oz.,

boiled with water 1-5 pint to one pint and strained. Astrigent. Dose, 1 to 2 fluid oz.

**D. tritici repentis**. Root of *Triticum repens* one part, boiled in water 20 oz. for ten minutes and strained. Used in vesical catarrh. Dose, 4 to 8 oz. three times a day.

**D. ulmi**, B. Ph. Decoction of elm bark. Elm bark, 2-5 oz., boiled with water a pint for ten minutes, strained, and made up to a pint. Mucilaginous, bitter, and astringent. Dose, 1 to 2 oz.

**D. uvæ ursi**, U.S. Ph. Uva ursi, a troy ounce, boiled for fifteen minutes with a pint of water, strained, and made up to a pint. Dose, a fluid ounce.

**D. veratri**. White hellebore root, an ounce, boiled with 2 pints of water down to a pint, then 2 ounces of rectified spirit added. Used as a local application in tinea and iteli.

**D. Zittman'ni**, G. Ph. The same as *D. sarsaparillæ compositum fortius*, except that calomel 4 parts, cinnamon 1, is added to the sugar and alum in the linen bag.

**D. Zittman'ni de bilē**. (*L. debilis*, weak.) The *D. sarsaparillæ compositum mitius*.

**D. Zittman'ni fortē**. (*L. fortis*, strong.) The *D. sarsaparillæ compositum fortius*.

**D. Zittman'ni fortius**, Aust. Ph. The *D. sarsaparillæ compositum fortius*.

**D. Zittman'ni mitius**, Aust. Ph. The *D. sarsaparillæ compositum mitius*.

**Deco'cture**. A substance prepared by *Decoctio*.

**Decollated**. (*L. decollo*, to strike off the head.) A term applied to certain univalve shells which lose their apex as they grow.

**Decollation**. (*F. decollation*, a beheading; from *L. decollo*, to behead; from *L. de*, from; *collum*, the neck.) The separation of the head from the body. A proceeding required in some cases of difficult labour. The same as *Decapitation*.

**Decollator**. (*L. d.*; *collum*. *G. Schlüsselhaken*.) A blunt-ended hook, with a cutting concave surface, devised by Carl Braun, for the performance of *Decapitation*.

**Decolorant**. (*L. de*, from; *color*, colour.) A substance which is able to remove or destroy colour.

**Decolorate**. (*L. de*; *color*. *F. décoloré*; *G. entfärbt*.) Having lost its colour. Also, to deprive of colour.

**Decoloratio**. (*L. decoloro*, to discolour. *G. M's.färbung*.) A discoloring.

**D. argentea**. (*L. argentum*, silver.) The bluish livid discoloration of the skin produced by the long-continued internal use of a silver salt.

**Decolora'tion**. (*L. de*, from; *color*, colour. *F. decoloration*; *G. Entfärbung, Verfärbung*.) The deprivation of any substance of colour. It is accomplished in many fluids by filtration through animal charcoal, but is also effected by chemical means, as by the action of chlorine or sulphurous acid.

**Decolo'res**. (*L. decoloro*, to discolour.) Diseases which disagreeably change the colour of the skin.

**Decolorim'eter**. (*L. decoloro*; *Gr. μέτρον*, a measure.) An instrument, suggested by Payen, by means of which the decolorising power of animal charcoal can be determined by comparing its effects on a typical black fluid taken as a test fluid.

# DECOLORISATION—DECUBITUS.

**Decolorisation.** (L. *decoloro*.) The process of depriving of colour.

**Decolorise.** (L. *decoloro*.) To deprive of colour.

**Decombustion.** (L. *de*, neg.; *comburo*, to consume.) Fourcroy's term for *Deoxygenation*.

**Decomplex.** (L. *de*, intens.; *complexus*, part. of *complector*, to fold together.) Repeatedly compound.

**Decomposable.** (L. *de*, from; *compono*, to put together. G. *zersetzbar*.) Having the capacity to be decomposed.

**Decompose.** (L. *de*, neg.; *compono*, to put together. F. *décomposer*; G. *auflösen, zersetzen*.) To separate into its constituent or elementary parts, especially by chemical agents. Also (G. *verfaulen*), to putrefy.

**Decomposed.** (L. *de*; *compono*.) A term applied to leaves, the lamina of which is subdivided beyond the third degree, or that of a tripinnatifid or tripinnatisected leaf.

**Decompositæ.** (L. *de*; *compono*, to put together.) Applied to a Class of plants by Sauvage, containing such as have a common footstalk supporting a number of lesser leaves, each of which is compound, as in several of the *Umbelliferae*.

**Decomposite.** Same as *Decomposed*.

**Decomposition.** (L. *de*, from; *compono*, to put together. F. *décomposition*; I. *decomposizione*; S. *decomposicion*; G. *Auflösung, Zersetzung, Zertheilung*.) Term for the separation of compound bodies into their constituent parts or principles.

Also, a synonym of *Putrefaction*.

**D., chemical.** The resolution of a compound into simpler compounds or into its primary elements.

**D., double.** Term applied in chemistry to the interchange of compounds that takes place when the solution of two salts are mixed, as when solutions of silver nitrate and calcium carbonate produce silver carbonate and calcium nitrate.

**D., electro-chemical.** See *Electro-chemical decomposition*.

**D., gas'es of.** The gases eliminated from decomposing human excreta and household slops consisting of ammonium sulphide, sulphuretted and carburetted hydrogen, ammonia, nitrogen, carbonic acid, and organic matters.

**D., hydrolytic.** (Υῑωσ, water; λῑω, to loose.) The combination of water with a compound to produce a new substance. Thus, the ethers and anhydrides are converted into alcohols and acids by the addition of water, a process of hydrolytic decomposition. This kind of decomposition sometimes occurs on mere contact with water, especially at 212°, or under the influence of boiling water and mineral acids, or under the influence of certain hydrolytic ferments.

**D. of for'ces.** The resolution of a given force into others which are collectively equal to it.

**D. of light.** The separation of the several primary colours that are found in a beam of light. It is well seen in the action of the prism on the light of the sun.

**D., simple.** A decomposition in which the elements of the decomposed body are rearranged to form one or more new compounds without the addition of new or foreign elements.

**Decom'pound.** (L. *de*, ineret.; *compono*, to put together. F. *décomposé*; G. *mehrfach-zusammengesetzt*.) A term applied to leaves which are subdivided beyond the third degree, or that of a tripinnate or a triterminate leaf. Also applied to flowers which contain within a common calyx several smaller calyces.

**Decorticate.** (L. *decortico*, to peel; from *ae*, priv.; *cortex*, bark.) To deprive of bark or husk or skin.

**Decorticated.** (L. *decortico*.) Deprived of its husk or outer covering.

**D. barley.** A term for pearl barley.

**Decortication.** (L. *de*, priv.; *cortex*, bark. G. *Abschabung*.) Term for the removal of bark, husk, or shell from a plant or fruit.

**Decostate.** (L. *de*, from; *costa*, a rib.) Term applied to one who has no ribs.

**Decrement.** (L. *decrementum*, a decrease.) Decrease, waste.

**D., e'qual, of life.** A term employed in relation to annuities to signify that the periodical decrease that occurs in any given number of lives is conformable to law, and may be estimated mathematically.

**Decrementum.** (L. *decrementum*; from *de*, from; *creasco*, to grow. G. *Abnahme, Verminderung*.) The decline of a malady.

**D. morbi.** (L. *morbus*, disease. G. *Abnahme der Krankheit*.) The decline of a disease.

**D. vir'ium.** (L. *vires*, strength. G. *Abnahme der Kräfte*.) The decay of strength.

**Decrepit.** (L. *decrepitus*, without noise; from *de*, neg.; *crepo*, to crackle. F. *décrepit*; G. *abgelicht*.) Worn out with age.

**Decrepitate.** (L. *de*, intens.; *crepito*, to crackle.) To produce a crackling noise when heated.

**Decrepitation.** (L. *de*; *crepito*, to creak or crackle. F. *décrépitation*; G. *Verpuffung, Verpuffen, Verknistern*.) Term for the crepitation or crackling noise produced by certain bodies, as common salt, when heated. It is generally due to the vapourisation of water contained in cavities of the crystal.

**Decrepitude.** (L. *decrepitus*, decrepit. G. *Abgeletheit*.) Senility; the decay of the physical and mental powers, which usually accompanies old age, or which characterises an exhausted constitution.

**D., infantile.** A synonym of *Alydity*, *progressive*.

**Decrescen'tia.** (L. *de*; *creasco*, to increase.) Advanced age; the period of involution or senility.

**Decretori'i dies.** (L. *decretorius*, decisive; from *decerno*, to determine; *dies*, a day.) Critical days.

**Decrustation.** (L. *de*, from; *crusta*, a crust.) The renewal of a crust or scab.

**Decubation.** (L. *decumbo*, to lie down.) The act of lying down.

**Decu'bitus.** (L. *decumbo*, to lie down. F. *décubitus*; G. *Liegung, Durchliegen*.) Term for a lying down or reclining in the horizontal position.

Also, the attitude assumed by a sick person in bed.

Also (*Druckbrand, Wundliegen*), a synonym of *Bedsore*.

**D. acu'tus.** (L. *acutus*, sharp, violent.) The rapidly advancing form of sloughing bed-sore which occurs in some brain diseases. It

# DECUMBENCE—DEDENTITION.

commences on the region of pressure, generally on the sacral and gluteal regions, by an erythematous redness, on which blisters rapidly rise, and which soon becomes gangrenous. It occurs on the paralysed parts, generally within two or three days of the occurrence of central nerve lesion, or of an exacerbation.

**D. chronicus.** (*Xpovwds*, of time) The ordinary form of bed sore produced by long continuance of a sick person in the recumbent position.

**D., dor'sal.** (*L. dorsum*, the back.) The act or attitude of lying on the back.

**D., for'ced.** The tying down of a delirious or insane patient on a bed by means of bandages or sheets.

**D., lat'eral.** (*L. latus*, the side.) The act or attitude of lying on the side.

**D. omino'sus.** (*L. omen*, a sign.) A synonym of *D. acutus*, because it is an unfavourable sign.

**D. paral'ysis.** Paralysis depending upon pressure on a nerve from lying in a constrained posture.

**D., prone.** (*F. prone*; from *L. pronus*, inclined towards.) The lying down with the face downwards.

**D., supi'ne.** (*L. supinus*, thrown backwards.) The lying on the back.

**D., vent'ral.** (*L. venter*, the belly.) The act or attitude of lying on the face.

**Decumbence.** (*L. decumbo*.) The state or attitude of lying down.

**Decumbency.** Same as *Decumbence*.

**Decumbent.** (*L. decumbo*, to lie down. *F. decumbant*, languissant; *G. niederlegend*.) Drooping; lying down.

In Botany, reclining, but with summit ascending.

**Decunx.** (*L. decem*, ten; *uncia*, an ounce.) An old term for ten ounces.

**Decurrency.** (*L. decurro*, to run down.) The condition or appearance of a decurrent leaf.

**Decurrent.** (*L. decurro*, to run down. *F. decurrent*; *I. decorrente*; *S. decurrente*; *G. ablaufend*, *herablaufend*.) Extending downwards from the attachment. Applied to leaves which run down the stem in a leafy border or wing, as in many thistles; also, to leaf-stalks.

**Decursive.** (*L. decurro*, to run down. *F. decursif*; *G. herablaufend*.) Running down. Applied to leaves or leaflets the petioles of which run down the stem; also, to a style, when its base descends on one side of the ovary.

**Decursively pin'nate.** (*L. pinnæ*, a feather.) A term applied to leaves having their leaflets decurrent or running along the petiole.

**Decur'sus.** (*L. decursus*, a course or progress of anything.) A downward course.

**D. mor'bi.** (*L. morbus*, a disease. *G. Verlauf einer Krankheit*.) The course of a disease.

**Decur'tate.** (*L. decurto*, to cut off. *G. abgekürzt*.) Shortened by rapid diminution of diameter.

**Decurta'tus.** Same as *Decurtate*.

**D. pul'sus.** A weak or deficient pulse, showing a progressive diminution in the strength of the arterial pulsations, which at last ceases.

**D. pul'sus recip'rocus.** (*L. reciprocus*, turning back the same way.) A *D. pul'sus* in which the pulsations return and gradually acquire all their strength.

**Decus'sate.** (*L. decusso*, to divide cross-

wise. *F. déussatif*; *G. kreuzständig*, *kreuzweisstehend*.) To intersect, or cross each other, so as to make acute angles.

Applied to nerves or muscular fibres that cross or decussate each other.

Also, applied, as an adjective, to leaves and spines alternately crossing each other in pairs.

**Decussatio.** See *Decussation*.

**D. nervo'rum optico'rum.** The *Chiasma* of the optic nerve. See *Commissure, optic*.

**D. pontis Varo'lii.** (*L. pons*, a bridge; *Varolius*, the anatomist.) The decussation of fibres that takes place in the median raphe of the pons Varolii.

**D. pyram'idum an'tero-poste'rior.** (*L. pyramis*, a pyramid; *anterior*, foremost; *posterior*, hindmost.) The crossing of fibres from the posterior part of the lateral columns forwards and to the opposite side of the spinal cord at the lower part of the medulla oblongata.

**D. pyram'idum inte'rior.** (*L. pyramis*, a pyramid; *inferior*, that which is below.) The crossing of fibres from the anterior antero-lateral and posterior columns of opposite sides of the spinal cord, which takes place at the lower and fore part of the medulla oblongata.

**D. pyram'idum latera'lis.** (*L. pyramis*, a pyramid; *lateralis*, lateral. *G. seitliche Decussatio*.) The decussation of fibres from the lateral columns that takes place at the lower part of the medulla oblongata.

**D. pyram'idum super'ior.** (*L. pyramis*; *superior*, uppermost. *G. obere Pyramidenkreuzung*.) A crossing of fibres on the front aspect of the lower part of the medulla oblongata above the decussatio pyramidum inferior. The connection of the fibres with the pyramids is doubtful.

**D. tegmento'rum.** (*L. tegmentum*, a covering. *G. Haubenkreuzung*, *Wernicke'sche Commissur*.) The crossing in the middle line of the innermost fibres of the tegmentum of the crus cerebri of each side. Also called *Commissure, Wernicke's*.

**D. tractuum optico'rum.** (*L. tractus*, a tract; *οπτική*, optics.) The *Chiasma* of the optic nerve. See *Commissure, optic*.

**Decussatio.** (*L. decussatio*, an intersecting of two lines crosswise; from *decussis*, the number ten, and so the intersection of two lines in the form of a cross, because the Roman sign for ten was X. *F. déussation*; *I. decussatione*; *S. decusacion*; *G. Durchschneidung*, *Durchkreuzung*, *Kreuzung*.) The act or condition of crossing at an angle, or as in the letter X.

**D. of pyramids.** See subheadings of *Decussatio pyramidum*.

**Decus'sative.** (*L. decusso*, to divide crosswise.) Having the shape of a cross.

**Decus'sorium.** (*L. decutio*, to shake off; or *decusso*, to divide crosswise. *F. décussoire*.) Name of an instrument for keeping down, or separating to a sufficient extent, the dura mater in the operation of trepanning, to protect it from injury, and to facilitate the discharge of matters from its surface; so called from its mode of use, or from its grooved extremity.

**Decyl.**  $C_{10}H_{21}$ . A high member of the methyl series, the general formula of which is  $C_nH_{2n+1}$ . It only exists in combination.

**Dedentition.** (*L. de*, neg.; *dens*, a tooth.) The shedding of teeth. Especially applied to the shedding of the milk teeth at the permanent or second dentition.

**Dedolation.** (L. *dedolo*, to hew away. F. *dédolation*; G. *Abhobclung, Horizontalschnitt*.) The shaving off of a portion of the skin or other part of small importance by an oblique cut.

**Deduplication.** (L. *de*; *duplico*, to double. F. *dédoublément*.) The division of that which is morphologically one organ into two or more; the separation of a leaf or other organ into two or more. It is seen in a compound leaf, especially one of a palmate type, and in the stamen clusters of *Hypericum*. Same as *Chorisis*.

**D., collateral.** (L. *collatero*, to admit on both sides.) That form of deduplication in which the members stand side by side. This is the original and typical form of chorisis, and is seen in the stamens of *Elodea virginica*. Same as *Chorisis, collateral*.

**D., median.** Same as *Chorisis, median*.

**D., parallel.** (Πάραλληλος, parallel.) That form of deduplication in which an organ becomes double or multiple in an antero-posterior direction. Same as *Chorisis, transverse*.

**D., transverse.** Same as *Chorisis, transverse*.

**D., vertical.** Same as *Chorisis, vertical*.

**Deep.** (Sax. *deep*. G. *tief*; L. *profundus*; F. *profond*.) Much below the surface; extending far downwards. A term used in Anatomy in opposition to superficial with reference to two similar vessels or nerves.

**D. percussion.** See *Percussion, deep*.

**Deer.** (Sax. *deor*, a wild animal. F. *cerf*; G. *Hirsch*.) A name for the species of the Genus *Cervus*.

**D.-ball.** See *Boletus cervi, Lycoperdon cervinum, Elaphomyces granulatus*.

**D.-berry.** The *Gaultheria procumbens*, and also the *Vaccinium stamineum*.

**D.-food.** The *Hydrophilis purpurea*.

**D.'s tears.** The bezoar of the deer.

**D.'s tendon.** The substance has been recommended as a ligature for the tying of arteries.

**D.'s tongue.** The *Liatrix odoratissima*.

**Deeringia.** A Genus of the Nat. Order *Amarantaceae*.

**D. celosoides.** Hab. Java. Leaves bitter and acrid. Used in measles.

**Defæcate.** (L. *defæco*, to separate from dregs.) To purify, to clarify, to separate from dregs; to empty the bowels.

**Defæcatio.** Same as *Defæcation*.

**Defæcation.** (L. *defæcatio*, a cleansing; from *defæco*, to separate from dregs; from *de*, from; *fæx*, dregs. F. *défécation*; I. *defecazione*; S. *defecation*; G. *Abklärung, Reinigung, Klärung*.) Term for the removal of the feces, lees, or sediment from anything; depuration; despumation.

The act of discharging the feces (G. *Kothentleerung*); the evacuation of the bowels. The act is of complex character. A centre situated in the spinal cord is excited by the stimulus of the feces in the rectum, and active peristaltic contraction of the rectum and lower bowel occurs, whilst the contraction of the sphincter is inhibited by an impulse proceeding from the brain; in addition, the abdominal muscles may be contracted, the diaphragm being fixed, and the levatores ani of each side compressing by their contraction the rectal contents. The stimulus of the contents of the rectum, as in diarrhœa, may cause inhibition of the contraction of the sphincter without the

participation of the brain, in which case the act is said to be performed involuntarily.

**Defatigatio.** (L. *defatigo*, to completely weary. G. *Ermiüdung, Übermüdung*.) The over-fatigue of muscular or nervous tissue.

**Defæcate.** Same as *Defæcate*.

**Defecation.** Same as *Defæcation*.

**Defectio.** (L. *defectio*, from *deficio*, to lack or fail. F. *défection*; G. *Abfall*.) A forsaking. The act of failing of heart, or strength, or courage; defection.

**D. animi.** (L. *animus*, the mind. F. *défaillance*; G. *Ohnmacht*.) The same as *Deliquium animi*.

**D. virium.** (L. *vis*, strength. F. *abattement*; G. *Kraftlosigkeit, Mattigkeit*.) Term for a failing or loss of strength, a sense of weakness or depression; faintness; weariness.

**Defectivi.** (L. *defectus*, from *deficio*, to fail.) A term applied to diseases resulting from want of strength; adynamic diseases.

**Defectus.** (L. *defectus*, from *deficio*, to separate oneself, to fail.) The state induced by failing, a failure.

**D. lac'tis.** (L. *lac*, milk.) Insufficiency or arrest of the secretion of milk.

**D. loquæ'læ.** (L. *loquela*, speech.) The same as *Aphasia*.

**D. mensium.** (L. *menstrues*, the monthly periods.) The same as *Aménorrhœa*.

**D. ven'eri.** (L. *Venus*, the goddess of love.) A synonym of *Anaphrodisia*.

**Defensive.** (L. *defensus*, part. of *defendo*, to protect. F. *défensiv*; G. *schützend, vertheidigend*.) Protecting. Applied formerly to certain plasters and dressings of wounds; also, to cordial medicines and such as preserve from infection.

**Defensivum.** Same as *Defensive*.

**Deferens.** (L. *deferens*, part. of *def.ro*, to bear away. F. *déferent*.) Conveying; bringing away.

**D., vas.** (L. *vas*, a vessel. G. *Samengang*.) See *Vas deferens*.

**Deferent.** Same as *Deferens*.

**Differential.** (L. *different*.) Same as *Deferens*.

**D. artery.** (G. *Samenleiter, Samenader*.) A small branch supplied to the vas deferens by one of the branches of the superior vesical artery; it ramifies on the coats of the duct, and anastomoses with the spermatic artery on the testicle.

**Deferred.** (Old F. *differer*; from L. *differo*, to carry from each other, to bear away.) Put off, delayed.

**D. shoots.** The shoots produced from dormant buds in the axils of bud-scales.

**D. inspiration.** See *Inspiration, deferred*.

**Deferves cence.** (L. *defervesco*, to cease boiling; from *de*, from; *ferresco*, to become hot. G. *Nachlass der Fiebertemperatur, Fieberabnahme*.) The period of a febrile attack in which the temperature falls.

**Defervescent.** (L. *defervesco*.) That which can reduce fever and high temperature, as cold and bloodletting.

**Defibrinate.** Same as *Defibrinize*.

**Defibrinated.** (L. *de*, from; *fibrin*.) Term applied to blood or lymph from which the fibrin has been removed.

**Defibrination.** (L. *de*; *fibrin*.) The removal of fibrin from the blood.

**Defibrinize.** (L. *de*, from; *fibrin*.) The act of removing fibrin from the blood.

**Defibrinized.** Same as *Defibrinated*.  
**Defiguration.** (L. *de*, neg.; *figura*, shape.) Same as *Deformation*.

**Defining.** (L. *definio*, to bound off.) Determining with accuracy and distinctness.

**D. power.** In Microscopy, the capacity of an object-glass for *Definition*.

**Definite.** (L. *definitus*, distinct; from *definire*, to bound off. G. *bestimmt*, deutlich.) Having precise limits; fixed, precise.

In Botany, used when the number of organs or of parts is of a fixed number, not exceeding twenty; or, of a fixed order.

**D. inflorescence.** (L. *infloresco*, to begin to blossom.) That form of inflorescence in which the axes of inflorescences end in a flower.

**D. proportions.** A term in Chemistry to denote the fact that chemical combinations occur in fixed, constant proportions.

**Definition.** (L. *definitio*, from *definire*, to bound off.) A short description of a thing by which it may be known as itself and not another thing.

In Microscopy, a term used to describe the power of an object-glass to show distinct, clear outlines of the substance or structure under view; it depends upon accuracy of correction for spherical and chromatic aberration.

**Defixus.** (L. *defigo*, to fasten. F. *impotent*, *impuissant*; G. *unvermögend*, *zeugungsunfähig*.) Impotent; incapable of performing the generative act; because those to whom it applies were as if fastened by a spell or charm.

**Deflagrate.** (L. *deflagro*, to burn up. G. *verbrennen*, *abbrennen*.) To consume or burn rapidly.

**Deflagration.** (L. *de flagro*, to be burned up. *Ἐπιφλογίσμα*, *ἐμπρησμός*; F. *déflagration*; G. *Verbrennung*.) Term for the rapid combustion of a substance, as when sulphur or powdered charcoal is thrown into melted nitre, or any inflammable substance.

**Deflagrator.** (L. *deflagro*.) A voltaic arrangement invented by Hare, and consisting of two large sheets of copper and zinc separated from each other by leathern bands or by horse-hair, rolled in a spiral and connected with each other above the acidulated water in which they are immersed by a metallic wire. It is so called because of its great heating capacity.

**Deflect.** (L. *deflecto*, to bend aside.) To cause to deviate from a straight course.

**Deflected.** (L. *deflecto*, to bend down. F. *défléchi*; G. *herabhängend*, *herabbiegend*.) Bending a little downwards throughout the whole length.

**Deflectent.** (L. *deflecto*, to turn downwards.) A synonym of *Derivative*.

**Deflectio.** (L. *deflecto*.) Same as *Derivation*.

**Deflection.** (L. *deflecto*.) In Optics, a bending from its course.

A term applied to the bringing back to its normal direction of the head of the fetus when too far bent back on the vertebral column in some face presentations.

**Defective.** (L. *deflecto*.) Causing deflection.

**D. forces.** In Mechanics, those forces which act upon a moving body in such manner as to turn it from the course which it is primarily pursuing.

**Deflexed.** Same as *Deflected*.

**Deflexion.** Same as *Deflection*.

**Deflorate.** (L. *defloro*, to shed its blossoms.) Past the flowering state. Applied to the anthers of flowers that have shed their pollen, and to plants that have shed their flowers.

Also, having lost virginity.

**Defloration.** (L. *defloratio*, a stripping off of flowers from the tree. *Ἀποκαθαρσις*; F. *défloration*; G. *Entjungferung*, *Scheidung einer Jungfrau*.) A deflowering. A term for sexual connection for the first time without violence, in distinction from rape. Applied to the loss of the marks of virginity in the female by connection with the male.

**Defloratus.** Same as *Deflorate*.

**Defluvium.** (L. *defluvium*, from *defluo*, to fall off.) A falling off; especially of the hair, so as to produce baldness.

**D. capillorum.** (L. *capillus*, the hair.) The rapid falling off of the hair; alopecia.

**D. pilorum.** (L. *pilus*, a hair.) The falling off of the hair; alopecia.

**Defluxio.** Same as *Defluxion*.

**D. catarrhalis.** (*Κατάρρεος*, a running down.) A synonym of *Influenza*.

**D. ciliarum.** (L. *cilium*, an eyelash.) A falling off of the eyelashes.

**Defluxion.** (L. *defluxio*, from *defluo*, to flow down. F. *écoulement*; G. *Abfluss*.) Term for a flowing of humours downwards; a discharge, especially from the nose, as in coryza.

Also, a wasting.

**Defluxus.** (L. *defluxus*, a flowing or running off.) A discharge of fluid.

**D. dysentericus.** Dysentery.

**Defecatio unguium.** (L. *de*; *fecus*, dirty; *unguis*, a nail.) Degeneration of the nails. A morbid condition in which the nails are discoloured and thickened.

**Defoliate.** (L. *de*, from; *folium*, a leaf. G. *entblättert*, *entlaubt*.) Having cast, or being deprived of, its leaves.

**Defoliation.** (L. *de*, from, or priv.; *folium*, a leaf. F. *défoliation*; G. *Entblätterung*, *Entlaubung*, *Abfallen der Blätter*.) Term for the fall of the leaf, as antithetical to frondescence or its renovation. It is usually effected in dicotyledons by a kind of disintegration of a transverse layer of cells, which cuts off the petiole by a regular line and leaves a clean scar. In palms and other endogens the leaves die and wither on the stem.

**Deformation.** (L. *deformatio*, a deforming; from *deformo*, to mar or disfigure. F. *déformation*; G. *Verunstaltung*.) The process by which a distortion of any part or a general deformity of the body is effected.

**Deformitas.** Same as *Deformity*.

**Deformity.** (L. *deformitas*; from *deformis*, misshapen. G. *Missgestaltung*, *Formfehlen des Körpers*, *Gestaltsveränderung*.) The defective condition of a limb or part of the body from congenital malformation, or the result of disease.

**D. acquired.** (L. *acquiro*, to get in addition.) Any malformation or distortion appearing as the result of accident or disease after birth, as rickets, contracture.

**D. congenital.** (L. *congenitus*, born together.) Any malformation occurring at, before, or very soon after, birth, such as club-foot, cataract, and harelip.

**Defrutum.** (L. *defrutum*, for *defervitum*, from *de*; *ferreo*, to boil.) Term applied in France to extracts made by evaporating the juice

## DEFURFURATION—DEGENERATION.

of fruits; especially applied to the must of grapes when reduced to two thirds its bulk.

**Defurfuration.** (L. *de*, from; *furfur*, bran. G. *Abklebung*, *Abhäutung*.) The detachment of fine scales from the skin.

**Defusion.** (L. *defusio*, a pouring out; from *de*; *fundo*, to pour. G. *Abgessen*, *Abfüllen*.) Decantation.

**Degeneracy.** A state of *Degeneration*.

**Degenerate.** (L. *d. degeneratus*, part. of *degenero*, to be unlike his ancestors.) To fall off from the proper quality or the healthy structure of its kind; to deteriorate.

**Degeneratio.** Same as *Degeneration*.

**D. unguis.** (L. *unguis*, a nail.) Same as *Defæctio unguis*.

**Degeneration.** (L. *d. degeneratio*, a changing for the worse; from *degenero*, to be unlike his ancestors. F. *abâtardissement*, *dégénération*; G. *Ausarten*, *Entartung*.) Term for a gradual falling off, depravation, or deterioration in any race of animals or plants, or of a particular organ in the animal or vegetable body, from natural causes.

Also, a morbid change for the worse in the structure of parts, consisting in a granular or molecular disintegration of tissue, unaccompanied by a sufficient, or by any, reintegration; or in a substitution of a lower for a higher form of structure, as of fat for protoplasm.

In Botany, usually applied to the transformation of the parts of a flower, as when in *Scrophularia* the fifth stamen is reduced to a scale, and in many flowers where the formation of a nectary results from the degeneration of the stamens.

**D., albuminoid.** The same as *Amyloid degeneration*.

**D., albuminous.** The same as *Amyloid degeneration*.

**D., amylaceous.** See *Amyloid degeneration*.

**D., amyloid.** See *Amyloid degeneration*.

**D., atheromatous.** (*Atheroma*.) See under *Arteritis*.

**D., baccony.** Same as *Amyloid degeneration*, from its appearance.

**D., black.** A synonym of *Melanosis*.

**D., calcareous.** (L. *calcareus*, belonging to lime.) A change in the nutrition of parts resulting in the deposit of salts of lime, especially the phosphate and carbonate in conjunction with an albuminous substance. It is seen in old age, in the gradually increasing proportion of lime, and consequent brittleness of the bones, and in earthy deposits in the arteries, lymphatic glands, cartilages, tendons, skin, and lens; and in many morbid structures, as lymph deposits and tubercle. There may be a mere deposition of lime salts in the form of granules, a cretification; or a true process of ossification, with the formation of lacunæ and canaliculi, may occur.

**D., caseous.** Same as *Caseation*.

**D., cellulose.** A synonym of *Amyloid degeneration*; because it was thought that the morbid change consisted in the production of cellulose.

**D., colloid.** See *Colloid degeneration*.

**D., cystic.** (Κύστις, a bag.) The formation of a cyst as a new structure; such as an apoplectic cyst, which is the result of an extravasation of blood, or a cyst which is formed by the softening of tissue, as in abscess and some malignant growths.

**D., earthy.** The same as *D., calcareous*.

**D., fatty.** A term which is often loosely applied so as to include an accumulation or excess of fat in places, organs, or tissues, where it is normally present as well as the true fatty degeneration. This latter consists in the substitution of oil globules for the healthy protoplasm of cells, or other structures, by transformation or metamorphosis of the protoplasmic compound. The fat is first seen in the form of minute, highly refracting granules, with a sharp outline. These gradually increase in number, replacing the protoplasm, running into each other, distending the cell, bursting its wall, infiltrating the tissues, and becoming a whitish-yellow, soft, greasy mass, containing crystals of cholesterin. This degeneration may occur in connective-tissue corpuscles, cartilage cells, pus globules, cancer cells, muscular tissue, and other structures; and in the inflammatory processes it produces what is known as the *Exudation corpuscle*, or *Granule cell*. Fatty degeneration may be regarded as an indication of defective nutrition, and hence is common in old age. It may be either local or general.

**D., fatty, acute.** An occasional affection of the liver in newborn children, rare in man, common in animals, especially amongst pigs, lambs, and foals, in which it is known as foot-halt. It is characterised by fatty degeneration of the heart, of the muscles generally, of the liver and kidneys. Its cause is unknown, but there seems to be increased decomposition of albumin, with simultaneous defective supply of oxygen. It has been observed in puerperal women.

**D., fibroid.** See *Fibroid degeneration*.

**D., gelatiniform.** (*Gelatin*.) A term applied by Cruveilhier to the atrophic degeneration of the posterior columns of the spinal cord seen in locomotor ataxy.

**D., granular, of kidney.** See *Kidney, granular degeneration of*.

**D., hyaloid.** (Υαλος, glass; είδος, likeness.) A term applied to *Amyloid degeneration*, from the translucent appearance it often presents.

**D., lardaceous.** Same as *Amyloid degeneration*, from its resemblance in appearance to lard. This is now probably the more common term.

**D., lipomatous.** See *Lipoma*.

**D., liquefactive.** (L. *liquefacio*, to melt.) A term applied to degenerations of structure which produce extreme softening of tissue.

Also, applied by Paget to the fatty degeneration of effused fibrine whereby it becomes liquid again.

**D., mineral.** See *D., calcareous*.

**D., muroid.** (L. *mucus*, slime; Gr. είδος, likeness.) Same as *D., mucous*.

**D., mucous.** (L. *mucosus*, slimy.) The form of degeneration in which cellular and intercellular substances become converted into a translucent gelatinous matter of greater or less consistence, and of varying shades of colour, from white to red, and containing mucin. It occurs in the epithelial cells of mucous membranes in catarrh, in the cartilages and cartilaginous tumours, and in the various connective-tissue tumours. Mucoid degeneration closely resembles colloid, from which it is distinguished by the mucin being precipitated by acetic acid.

**D., myxomatous.** (Μύξα, mucus.) The alteration of tissue constituting *Myxoma*.

## DEGENERATIVE—DEGLUTITION.

**D. of spinal cord, grey.** The same as *Leucomotor ataxy*.

**D. of spinal cord, secondary.** (*G. Degeneration secundaire des Rückenmarkes*.) Disease of certain strands of fibres following lesion of definite regions of the brain or spinal cord. It may be either ascending or descending, and in both instances may be regarded as the atrophy of fibres which have been severed from their centres or ganglion cells. Descending degeneration of the spinal cord may be observed after lesion of the motor area of the central convolutions, when atrophy of certain strands of fibres extending from the cortex of the hemispheres through the inner capsule, the pyramids, and the anterior column of the cord of the same side, and of the lateral column of the opposite side occurs. Ascending degeneration occurs after limited lesion or a myelitis of the spinal cord, and after compression of the cauda equina. The appearances presented are that the posterior columns for a short distance above the lesion are entirely degenerated; a little higher up the degeneration is limited to Goll's columns, and these are affected as high up as to the clavæ at the lower end of the calamus scriptorius; a sharply defined area situated at the posterior and external border of the lateral columns, the lateral cerebellar column of Flechsig, usually also undergoes degeneration, providing the lesion of the cord is situated above the level of the fourth dorsal vertebra, but does not usually occur when the lesion is below this level. The parts affected appear of a greyish colour, and are atrophied, the changes being perceptible as early as the eleventh day, the white substance of Schwann breaks up into clumps, which undergo fatty degeneration and disappear, the sheaths undergo vitreous degeneration and become fissured, and the axis-cylinder at a later period degenerates. The interstitial tissue presents many nuclei and wavy fibres, but does not otherwise present any material change.

**D., parenchymatous.** (*Παρίχυμα*, anything poured in beside.) A synonym of *Cloudy swelling*.

**D., pigmentary.** (*L. pigmentum*, a paint.) An unnatural deposit of pigment in otherwise healthy tissues, of which an example is seen in the lungs, the gastric and intestinal mucous membrane of old people, the arteries of some animals. The deposit of pigment in the skin is a frequent accompaniment of disease of the suprarenal capsules, and in the spleen of malarial fever. It may also occur in diseased tissues, as in certain forms of cancer, and as a result of the extravasation of blood. The pigment, especially in the lungs, comes occasionally from the outside, but in most cases it is derived from the altered red corpuscles of the blood. See also *Pigmentation*.

**D., Quain's.** See *Quain's degeneration*.

**D., theroid.** (*Θήρ*, a wild beast; *εἶδος*, likeness.) A term applied to those cases of insanity where the patient conducts himself, in regard to his dirty habits, the exhibition of his passions, and his ferocity, like a wild beast.

**D., trabecular.** (*L. trabes*, a beam.) Term applied to a change observed in interstitial pneumonia in the walls of the bronchia, in which the muscular fibres gradually disappear, the mucous membrane is thinned, and the trabeculae, composed of elastic and connective tissue, are increased in volume.

**D., uratic.** The deposit of urate of soda in the articular and some fibro-cartilages, in tendons, and about joints.

**D., vitreous.** (*L. vitrum*, glass.) A form of colloid degeneration seen in the voluntary muscles in some cases of enteric fever, whereby they are rendered waxy or glassy in appearance, whitish grey and shining, brittle, and without striae. This condition has been observed also in tuberculosis, uræmia, and other grave disorders.

**D., waxy.** (*F. d'ég'nérescence circuse*.) A synonym of *Amorphoid degeneration*, from its frequently waxy appearance and consistence.

**D., waxy, of muscle.** Same as *D., vitreous*.

**Degenerative.** (Same etymon.) Undergoing, or producing, degeneration.

**D. reaction of muscles.** The disordered condition of reaction of the muscles in which they give no response to faradaic or interrupted currents, but respond readily to galvanic or continuous currents.

**Degenerescence.** Same as *Degeneration*.

**D. of mineral waters.** The change of sulphides into sulphates which occurs in some mineral waters, thereby destroying their special medical properties.

**Deglutinate.** (*L. deglutino*, to glue.) To loosen the cohesion of substances which adhere to each other by means of an intervening medium.

**Deglutination.** (*L. deglutino*, to unglue. *F. décollement*.) The separation of a part from the structures with which it is naturally connected by some morbid process.

**Deglutitio.** Same as *Deglutition*.

**D. difficilis.** (*L. dyffilis*, difficult.) A synonym of *Dysphagia*.

**D. impedita.** (*L. impeditus*, hindered.) A synonym of *Dysphagia*.

**D. læsa.** (*L. læsus*, injured.) A synonym of *Dysphagia*.

**Deglutition.** (*L. deglutio*, to swallow down. *F. deglutition*; *I. deglutizione*; *S. deglutition*; *G. Niderschlucken, Verschlucken*.) Term for the act of swallowing any substance, solid or gaseous; a swallowing down.

The act of deglutition of solids embraces three periods. First, the voluntary carrying back of the bolus to the palatine arch, which is effected by the contraction of the mylohyoid muscle and of the muscular mass of the tongue, which is drawn somewhat backward by the styloglossi and palatoglossi; secondly, the, partly voluntary, partly reflex, still further elevation of the dorsum of the tongue, the elevation of the larynx, and depression of the epiglottis, with closure of the glottis, and contraction of the posterior palatine arch, with raising of the uvula; the orifices of the nasal and respiratory passages are thus closed. The third stage, which is wholly involuntary, is accomplished by the contraction of the constrictors of the pharynx and by the peristaltic muscular contractions of the œsophagus. In the deglutition of coloured liquids the parts stained are found to be the whole internal surface of the mouth, the velum palati, uvula, pillars of the fauces, the anterior surface of the epiglottis, and the pharynx generally, with the posterior surfaces of the epiglottis and arytenoid cartilages. The nerves implicated in deglutition spring from a reflex centre situated in the lower

part of the medulla oblongata; the sensory nerves are derived from the fifth, the glossopharyngeal and vagus, the motor chiefly from the vagus, spinal accessory and glossopharyngeal, hypoglossal, the facial, fifth, and branches of the cervical plexus.

**D., centre of.** A centre situated in the medulla oblongata, and in immediate relation with the origin of the fifth, eighth, ninth, and tenth nerves.

**D., difficult.** Same as *Dysphagia*.

**Deglutitory.** (*L. deglutitio*.) Serving for *Deglutition*.

**Degmus.** (*Δυνμός*, from *δύνω*, to bite.) A bite. Term used by Hippocrates, *Conc. Frænot.* 636, for a gnawing pain; but particularly applied to such a pain in the cardiac or superior orifice of the stomach.

**Degradation.** (*L. de-gredior*, to descend; from *de*, down; *gradus*, a step. *F. dégradation*; *I. degradazione*; *G. Entartung, Verschlechterung*.) A reducing in rank. Term applied to arrest of development or degeneration of the body or of any organ. It may be due to inappropriate surrounding conditions, such, for example, as insufficient nourishment, light, or heat, or to reversion to some lower ancestral form.

**D. products.** A term applied to such compounds as gum in plants.

**D., senile.** (*L. senilis*, old.) The gradual failure of the mental and bodily powers due to age.

**Degree.** (*F. degré*; from *L. de*, of or concerning; *gradus*, a step. *G. Grad*.) Quality; rank; station. The 360th part of a circle; each part or degree is supposed to be farther divided into 60 equal parts, called minutes, and each minute into 60 seconds.

Also, the division or interval marked on a thermometer, or other instrument, for measurement.

Also, a term for the charter or writing granted by the Senatus Academicus, or by the Medical Faculty of a University, which confers the title of Medicinæ Doctor on the successful candidate; also, applied to the rank or title itself.

**Degustation.** (*L. degustatio*; from *de-gusto*, to taste. *F. dégustation*; *G. Kosten, Versuchen*.) The appreciation of sapid qualities by the taste organs, a tasting.

**De'heb.** (Arab.) Old name for gold.

**Dehebeb.** Same as *Deheb*.

**Dehene.** (Arab.) Old term for blood.

**Dehenez.** (Arab.) Old name for vitriol.

**Dehim.** (Arab.) Old word for blood.

**Dehis'ce.** (*L. dehisco*, to split open.) To burst along a definite line.

**Dehiscence.** (*L. dehisco*, to split open. *F. déhiscence*; *G. Aufspringen*.) A gaping or bursting open, without tearing, along a definite line of attachment or suture; an opening. Applied to the bursting of capsules or anthers. The point of dehiscence is that part at which the capsule or the anther opens to throw out the seed or the pollen.

Also, applied to the bursting open of mucous follicles for the expulsion of their contents; and of the Graafian follicles for the release of the ovum.

**D., ab'normal.** (*L. ab*, from; *norma*, a rule.) The mode of dehiscence of a pericarp other than that described under *D., normal*.

**D., ap'ical.** (*L. apex*, a point.) The bursting of an anther at its upper extremity.

**D. by pores.** The bursting of an anther by pores or small apertures, as in the heaths; or of a capsule in the same manner, as in the poppy.

**D. by teeth.** The bursting of a capsule at the apex only, so that tooth-like projections are formed, as in the lychnis, by the partial separation of the valves.

**D., circumscis'sile.** See *Circumscissile dehiscence*.

**D., dentici'dal.** (*L. dens*, a tooth; *cædo*, to cut.) Same as *D. by teeth*.

**D., ex'torse.** (*Mod. L. extrorsus*, on the outside.) A term applied to the bursting of an anther on the outside towards the corolla, as in the iris.

**D., in'torse.** (*L. introrsus*, towards the inside.) A term applied to the bursting of an anther on the inside towards the pistil, as in most plants.

**D., irreg'ular.** Same as *D., abnormal*.

**D., later'al.** (*L. lateralis*, belonging to the side.) The bursting of an anther at the side.

**D., loculici'dal.** (*L. loculus*, a cell; *cædo*, to cut.) The bursting of a capsule in such fashion that each loculus splits along its dorsal nervure and carries the septum on its middle, as in the violet.

**D., longitu'dinal.** (*L. longitudo*, length.) The bursting of an anther lengthwise, from base to apex, as in the tulip; it is the most common form.

**D., normal.** (*L. norma*, a rule.) The mode of dehiscence of a pericarp in a longitudinal direction along the middle line of the carpel, or along the line of junction with an adjoining carpel.

**D., porici'dal.** (*L. porus*, a pore; *cædo*, to cut.) Same as *D. by pores*.

**D., porous.** Same as *D. by pores*.

**D., pyxidiate.** (*L. pyxidum*, dim. of *pyxis*, a box.) Same as *D., transverse*.

**D., regul'ar.** (*L. regularis*, belonging to a bar.) Same as *D., normal*.

**D., septic'i'dal.** (*L. septum*, a partition; *cædo*, to cut.) The bursting of a capsule by a separation of the carpels through the septa, so that each septum splits into two and remains attached, one half to each adjoining valve, as in the colechicum.

**D., septifra'gal.** (*L. septum*; *frango*, to break.) The bursting of a capsule along the line of attachment of the septa with the valves, the former remaining and the latter falling off, as in the datura.

**D., su'tural.** (*L. sutura*, a seam.) The bursting of a capsule down to its base in the line of junction of the carpels, as in the pea and broom.

**D., trans'verse.** (*L. transversus*, directed across.) The bursting of an anther by a transverse slit, as in *alechemilla*.

Also, the transverse bursting of a capsule, whereby it becomes a pyxis, as in the henbane.

**D., val'vular.** (*L. valve*, the folds of a door.) The bursting of an anther by means of recurving valves, as in the berberry.

Also, the same as *D., sutural*.

**Dehis'cent.** (*L. dehisco*, to split open. *F. déhiscent*; *G. aufreissend, aufspringend, zer-springend*.) Gaping, or bursting open; the state of dehiscence; opening.

**D. fruits.** A term which includes the

forms of fruit known as the follicle, legume, silique, capsule, and pyxidium.

**Dehis'cing.** (*L. dehisco.*) Splitting into regular parts.

**Dehumanisa'tion.** (*L. de, from; humanus, belonging to man.*) The degradation which takes place in many insane persons, by which they are brought, as it were, to the level of a brute beast.

**Dehydration.** (*L. de, from; ōdōp, water.*) The removal of water from a chemical compound.

**Deiamba.** (*F. tabac de Congo.*) A narcotic substance which appears to have the properties of stramonium.

**Deic'ticus.** (*Δεικτικός, able to show; from δείκνυμι, to point out.*) The index finger.

**Deinosauria.** (*Δεινός, terrible; σαύρος, a lizard.*) An extinct Order of colossal lizards, including the *Megalosaurus* and *Iguanodon*.

**Deiron'cus.** (*Δειρή, the neck; ὄγκος, a swelling.*) Bronchocele.

**Deiters.** A German anatomist and histologist, born at Bonn in 1834, died there in 1863.

**D., cells of.** (*G. innere Haarzellen.*) The cells which, conjoined with the external hair cells or cells of Corti, form the so-called twin cells of the organ of Corti. They are conical and non-nucleated, and are said to be in connection by their broader end with the cells of Corti near their nucleus.

The name has also been applied to the branching cells of the grey nervous tissue which send off a *D.'s process*.

**D.'s pro'cess.** That process of a nerve-cell which becomes a cylinder axis. Each branched cell possesses only one off-shoot, which becomes a cylinder axis, the rest lose themselves in the grey substance; this one retains its diameter, and is more deeply coloured by carmine. The accuracy of this view is contested.

**Dejectio.** Same as *Dejection*.

**D. al'vi.** (*L. alvus, the belly.*) The evacuation of the bowels.

**D. alvi'na.** (*L. alvinus, affected with a flux.*) The feces.

**D. an'imi.** (*L. animus, the mind. G. Niedergeschlagenheit.*) Lowness of spirits, melancholy.

**Dejection.** (*L. dejectio, from dejicio, to throw down, to go to stool. Υποχώρημα; F. déjection, abaissement; I. egestione; G. Herabziehung, Niederschlagung, Niedersinken, Niederziehung, Stuhlgang.*) The state of being cast down. Term for the discharge of any excrementitious matter, but particularly of the feces.

Also, the matter or faeces discharged; a stool, or evacuation of the bowels.

Applied also to depression, exhaustion, or prostration.

**Dejection'es.** Plural of *Dejectio*.

**D. nig'rae.** (*L. niger, black.*) Black dejections; melana.

**Dejectory.** (*L. dejicio, to thrown down.*) Capable of promoting evacuation of the bowels.

**Dejecture.** (*L. dejicio.*) That which is thrown down; feces.

**Dekalem.** Same as *Dikalegi*.

**Delabe'chea.** (*De la Beche, the geologist.*) A Genus of the Nat. Order *Sterculiaceæ*.

**D. rupes'tris.** (*L. rupes, a cliff.*) A species which supplies a nutritive gum.

**Delacera'tion.** (*L. delacero, to tear to pieces.*) A tearing in pieces, a severe rent.

**Delacryma'tion.** (*L. delacrymatio, from de, from; lacrymo, to weep.*) A synonym of *Epiphora*.

**Delacrymative.** (*L. de, neg.; lacrimo, to shed tears.*) Having power to stop the flow of tears; also, applied to substances which produce a great flow of tears.

**Delacta'tion.** (*L. de, away; lac, milk.*) The artificial arrest of the secretion of milk.

Also, a synonym of *Weaning*.

**Delamina'tion.** (*L. de, from; lamina, a layer.*) The formation and separation of layers. Applied to the formation of the blastodermic layers in meroblastic ova.

**Delap'sio.** (*L. delapsus, from delabor, to fall down. F. prolapsus; G. Vorfall.*) Old term for prolapsus.

**Delap'sus.** (*L. delapsus, G. Herabfallen, Abfall, Abfluss.*) Prolapsus, a falling down.

**D. pal'pebrae.** (*L. palpebra, the eyelid.*) A falling down of the upper eyelid; ptosis.

**Delat'io.** (*L. delatio, from de-fero, to bring an account of. G. Anzeige, Angabe.*) Indication; accusation.

**Delesseriæ.** A Suborder of the Order *Ceramaceæ*, having the frond cellular and the tetraspore in definite heaps, or collected in sporophylls.

**Deleter'ious.** (*Δηλητήριος, from δη-λίσμα, to do a hurt. L. deleterius; F. délétère; G. tödlich, verderblich, giftig.*) Poisonous; hurtful; injurious; destroying.

**Deleter'ium.** (Same etymon.) Poison.

**Deletocephalus.** (*Δέλετρον, a lantern; κεφαλή, head.*) A sexually mature form of nematode worm.

**D. amphisbæ'næ.** (*Αμφίσβαινα, a serpent that can go either backwards or forwards.*) Found in the intestines of *Anops Kingii*.

**Del'hi boil.** (*F. tubercule d'orient, bouton de Bussarah, bouton d'Alep; G. Delhibeule; Pers. salek; Algerian biskra.*) An endemic disease, perhaps a form of lupus, affecting persons of all races and ages and both sexes, and occasionally dogs and horses, in the East, Syria, Egypt, Persia. It can be propagated by inoculation in an early, but not in the suppurative, stage. It especially affects those of lymphatic temperament and cachectic condition. It consists of an indurated indolent sore, papular in the early, encrusted or fungating in the advanced, stages, spreading by ulceration of the skin, single or multiple, often occupying extensive surfaces of the exposed parts of the body. It is very intractable. Its causation has been referred to the *Distoma hamatobium*, and also to a special fungoid growth.

**D. sore.** Same as *D. boil*.

**D. ulcer.** See *D. boil*.

**Deligat'io.** (*L. deligo, to bind.*) A bandage.

Also, the same as *Deligation*.

**Deligat'ion.** (*L. deligo, to bind up. Ἐπιδέσις; F. deligation; I. deligazione; S. deligation; G. Verbindung, Verband.*) The act or process of binding or applying bandages, including the adjustment of apparatus and dressings to a wound; and also the ligation of arteries.

**Deligatura.** Same as *Deligatio*.

**Delimeæ.** A Suborder of the Order *Illenaceæ*, having the connective of the anthers dilated at the point.

# DELINIMENT—DELIRIUM.

**Deliniment.** (L. *delino*, to smear all over.) A liniment or soft oily application.

**Deliquate.** Same as *Deliquesce*.

**Deliquation.** (L. *de*, down; *liquatio*, a melting.) Same as *Deliquescence*.

**Deliquesce.** (L. *deliquesco*, to melt away.) To soften and melt by absorption of water from the air.

**Deliquescence.** (L. *deliquesco*, to melt away. F. *deliquescence*; I. *deliquescenza*; S. *deliquescencia*; G. *Zerfließbarkeit*, *Zerfließung*, *Verwitterung*.) Term for the moist or fluid condition assumed by certain saline bodies which attract water from the air when exposed to it.

**Deliquescent.** (L. *deliquesco*, to dissolve.) Becoming moist or liquid by the attraction of water from the air.

In Botany, dissolving or melting away, as a stem which rapidly divides into branches. It is seen in the elm and other deciduous leaved trees, and in some panicles.

**Deliquate.** Same as *Deliquesce*.

**Deliquium.** (L. *deliquium*, from *delinquo*, to fail. F. *deliquescence*; G. *Zerfließbarkeit*, *Zerfließung*.) A failing, want, or defect.

Also, the condition of a body which has undergone *Deliquescence*.

Also, the same as *Syncope*.

**D. animi.** (L. *animus*, the mind. F. *défaillance*; G. *Ohnmacht*.) A defect of the mind, spirit, or heart. A term for swooning or fainting, because in that state respiration and the heart's action are suspended, or, at least, greatly weakened; also called *Defectio animi*.

**Deliramentum.** (L. *deliramentum*; from *deliro*, to be crazy.) Delirium.

**Delirant.** (L. *deliro*. F. *delirant*.) Delirious.

**Deliratio.** (L. *deliratio*, a going out of the furrow; from *deliro*.) Madness, delirium.

**D. senum.** (L. *senex*, old.) Senile insanity, dotage.

**Deliria.** (L. *deliro*, to rave.) Insanity.

**Deliriant.** (L. *deliro*, to be crazy.) Having power to produce delirium. Applied to such drugs as henbane, Indian hemp, and such like.

**Delirious.** (L. *deliro*, to rave.) Being in a state of *Delirium*.

**Delirium.** (L. *delirium*; from *deliro*, to rave, to deviate from a straight line; from *de*, from; *lira*, a furrow; the word has also been derived, but incorrectly, from *lūpos*, silly talk, with the addition of the prefix *de*, as a strengthener. G. *Geistesabwesenheit*, *Wahnsinn*.) Disturbance of the functions of the brain, characterised by incoherent speech, hallucinations, restlessness, watchfulness, and inability to fix the attention; conditions that may pass into fixed delusions and maniacal excitement. It may occur in any acute febrile disease or in cases of direct injury, and inflammation of the brain and its membranes; also in blood-poisoning, in exhaustion, and as an effect of various poisons, such as cantharides, opium, Indian hemp, belladonna, chloroform, and alcohol; and it is one of the common characteristics of the several forms of insanity.

**D., acute.** (L. *acutus*, sharp. F. *delire aigu*.) A term applied to a sudden attack of the form of insanity usually called *Mania*.

**D. alcoholicum.** (*Alcohol*.) A synonym of *D. tremens*.

**D. ambitiosum.** (L. *ambitiosus*, vain-

glorious.) The boasting delirium which accompanies general paralysis of the insane.

**D., chronic.** (L. *chronicus*, pertaining to time.) A term synonymous with *Insanity*.

**D. cordis.** (L. *cor*, the heart.) Tumultuous action of the heart.

**D. cum mussitan'tia.** (L. *mussito*, to mutter.) Muttering delirium.

**D. e potu.** (L. *e*, from; *potus*, drink.) A synonym of *D. tremens*, from its cause.

**D. ebriosita'tis.** (L. *ebriositas*, addiction to drink.) A synonym of *D. tremens*.

**D. ebriosorum.** (L. *ebriosus*, a drunkard.) A synonym of *D. tremens*.

**D., emotion'al.** A term by Morel to describe the form of insanity in which the patient submits at once to a false idea without allowing any reason or previous experience to correct the first impression, and he believed it to be caused by disturbance of the ganglionic nervous system.

**D., epilep'tic.** The wandering of mind, often accompanied by acts of violence, which sometimes follows an epileptic fit.

**D. ex inaniti'o'ne.** (L. *ex*, from; *inanitio*, from *inano*, to make empty.) The delirium of starvation.

**D. febril'e.** (L. *febrilis*, febrile. G. *Fieberdelirien*.) Delirium accompanying, or accompanied by, fever.

**D. fe'rox.** (L. *ferox*, fierce.) Delirium accompanied by violent and angry excitement.

**D. furibun'dum.** (L. *furibundus*, raging. G. *Tobsucht*.) The delirium of insanity.

**D. furio'sum.** (L. *furiosus*, raging, mad.) Mania.

**D. grandio'sum.** (L. *grandis*, great.) The form of insanity in which the delusions are all of greatness, greatness of power or riches, of form, or of position. It often accompanies general paralysis.

**D., hyst'erical.** Same as *Mania*, *hysterical*.

**D., idio'path'ic.** (*ἰδίος*, peculiar; *πάθος*, disease.) Delirium occasioned by injuries of the brain or of its membranes, or by intoxicating or narcotic substances.

**D., incohe'rent.** (L. *in*, neg.; *cohero*, to stick together.) The form of insanity in which there is no connection between the delirious ideas of the patient.

**D., intellec'tual.** A term for that form of mental disturbance in which, without hallucinations, or illusions, or insane acts, the person suffers from the presence of groundless, causeless ideas or imaginations.

**D. maniaca'l'e.** Same as *D. maniacum*.

**D. mania'cum.** (L. *mania*, madness.) Mania.

**D., melanchol'icum.** A synonym of *Melancholia*.

**D. metabo'licum.** (*μεταβολικός*, changeable.) The form of insanity in which the person believes himself to be some one else than he really is.

**D. metamorpho'sis.** (L. *metamorphosis*, from *μεταμόρφωσις*, a transformation.) The form of delirium or insanity in which the patient believes that his body is changed into that of a beast.

**D., microman'i'acal.** (*μικρός*, little; *μανία*, madness.) The form of insanity in which the patient believes himself to be a little child, or a dwarf with shrunken limbs.

## DELIRIUM.

**D. mitē.** (*L. mitis*, mild.) Quiet wandering of mind, with muttering instead of wild talking.

**D. moribundum.** (*L. moribundus*, dying.) The delirium of a dying person; it possesses different characters, according to the mode of death.

**D. nervosum.** (*L. nervosus*, nervous, sinewy. *F. delir. nerveux*.) The term was applied by Dupuytren to the delirium which follows surgical operations or severe injuries, and is unaccompanied by fever.

Also, delirium of a subacute or chronic character proceeding from intoxication with alcohol or other poison, or from psychic causes.

Also, that form of delirium which is accompanied by distinct organic nervous lesion.

**D. palinognosticum.** (*Παλιγνωστός*, learnt again. *G. Delirium des Wiedererkennens*.) A term applied to that form of insanity in which the person believes himself to have been for a long time, or at a previous time, in a place where he has been only a very short time, and never before. It is a translation into belief or actuality of the sensation sometimes experienced on first going to a new place, that one has been there under similar circumstances before.

**D., partial.** (*L. partio*, to share.) Delusion affecting one only or very few of the mental faculties.

**D. persecutio'nis.** (*L. persecutio*, a following after. *G. Verfolgungswahnsucht*.) The form of insanity in which the patient believes himself to be followed by enemies devoted to his annoyance or destruction.

**D. placidum.** (*L. placidus*, gentle. *F. delire doux*.) Quiet delirium without violence.

**D. potato'rum.** (*L. potator*, a drinker.) A synonym of *D. tremens*.

**D., reflex.** (*L. reflexus*, part. of *reflecto*, to turn back.) A term applied to the occurrence of delirium when a peripheral nerve is irritated, of which a few cases have been related; as, for instance, one in which a piece of glass under the skin of the foot caused ungovernable delirium when it was pressed upon.

**D., rhythmic.** The form of mania in which the patient speaks always in verses, which, although they may be meaningless, have a similarly sounding rhythm.

**D., senile.** (*L. senilis*, old.) Senile insanity, dotage.

**D., sensorial.** (*L. sensorium*, the place where the senses reside.) Delirium accompanied by, or caused by, hallucinations.

Also, the form of insanity in which hallucinations and illusions are present, in contradistinction to *D., intellectual*.

**D. sine materia.** (*L. sine*, without; *materia*, matter.) Delirium without appreciable lesion of brain.

**D., sympathetic.** (*Συμπαθής*, of like feelings.) Delirium occurring in the course of febrile, inflammatory, and some chronic diseases.

**D., symptomatic.** (*Συμπτωμα*, a chance.) A synonym of *D., sympathetic*.

**D., toxic.** (*Τοξικόν*, poison.) The delirium which accompanies the action of many poisons.

**D., traumatic.** (*Τραυματικός*, relating to wounds.) That form of delirium which follows on surgical operations or severe injuries.

**D., traumatic, inflammatory.** The

form of traumatic delirium in which there is a full hard pulse, flushed cheeks, and high temperature, with fierce, restless delirium.

Also, delirium accompanying any acute inflammation.

**D., traumatic, iritative.** The form of traumatic delirium in which there is a feeble, quick pulse, a cool, pale, perspiring surface, muscular tremors, and muttering delirium.

**D., traumatic, nervous.** The form of traumatic delirium which occurs in feeble hysterical persons, after injury, without fever; it resembles delirium tremens.

**D. traumaticum.** Same as *D., traumatic*.

**D. tremens.** (*L. tremens*, trembling. *F. alcoolisme aigu, delire tremblant*; *L. delirio tremante*; *S. delirio tremulo*; *G. Sauerwahnsum, Sauerwahn*.) The trembling delirium. A condition in which there is delirium accompanied with trembling, the consequence of excessive indulgence in the use of ardent spirits or other strong liquors, or sometimes of opium.

The term was introduced by Dr. Sutton, in 1813, for that form of delirium which is rendered worse by bleeding, but improved by opium. By Rayer and subsequent writers it has been almost exclusively applied to delirium resulting from the abuse of alcohol. It commonly results from some great excess rather than from protracted tipping. Its outbreak is usually sudden, and commences with hallucinations of the several senses, moving and alarming or disgusting objects being seen, musical or dreadful sounds being heard, and pricking and stinging sensations being felt. A maniacal condition, with destructive propensities, sometimes supervenes, and epileptic convulsions occasionally occur. The patient is restless and sleepless; the hands and feet are constantly in motion and tremble. The patient looks fevered and perspires freely. His pulse, at first quiet, becomes quick, small, and very weak. He is worse at night. The temperature rises two or three degrees, and sometimes more. The pupils are dilated; the tongue covered with a thick creamy fur. The duration of the attack is usually only a few days, and recovery takes place slowly. A fatal result is sometimes observed, the patient dying from asthenia, coma, or convulsions. The disease is generally ascribed to the direct action of alcohol on the brain substance; but the morbid condition of central nervous system which produces delirium tremens is not yet certainly made out. After death congestion of the encephalic centres is usually found, and the small blood-vessels not unfrequently contain in their walls hæmatoidin crystals and refracting granules.

**D. tremens chronicum.** (*L. tremens*; *chronicus*, lingering.) A form occurring in old drinkers, with little violence, and lasting many weeks.

**D. tremens febrilē.** (*L. tremens*; *febris*, a fever.) A form in which there is high temperature, very quick pulse, and great muscular weakness.

**D. tremificiens.** (*L. tremor*, trembling; *facio*, to make.) A synonym of *D. tremens*.

**D. verbo'rum.** (*L. verbum*, a word. *G. Idonfluent*.) The form of insanity in which there is great talkativeness.

**D. vesanicum.** (*L. resania*, madness. *F. delire raisonné*; *G. Delirium bei Geisteskrankheiten*.) The delirium of insanity.

# DELIRUS—DELPHINIUM.

**Delirus.** (*L. delirus*, crazy.) A term for *Delirium*.

Also, one delirious.

**Delitescentia.** (*L. delitescere*, to lie hid. *F. delitescence*; *I. delitescenza*; *S. delitescencia*; *G. Delitescenz*, *Zurücktreter*.) The state of being concealed. Term applied to the sudden disappearance of inflammation, or of its events, by resolution, no other part of the body being affected, by which feature it is distinguished from *Metastasis*.

Also, the period during which poisons, as those of rabies and smallpox, remain in the system before they produce visible symptoms.

Also, applied in Chemistry to that condition of a crystal in which, having lost its water of crystallisation, it splits into laminae or crystals. Also to a body which, on absorbing water, loses its aggregation and falls into powder.

**Delitescencia.** See *Delitescence*.

**Deliver.** (*F. délivrer*; from low *L. libero*, to set free; from *L. de*, from; *libero*, to free. *G. entbinden*.) To set free; to put to bed; to disburden of a child.

**Delivery.** (*F. délivrance*; from *délivrer*, to free. *G. Auslieferung*, *Entbindung*.) The act of setting free, or releasing. Childbirth.

In the French writings the word signifies the natural expulsion or the artificial extraction of the placenta and membranes.

**D. paralysis.** (*F. paralysie obstétricale*. *G. Entbindungslähmung*.) Paralysis affecting the child as the result of violence applied to it in the act of delivery.

**D., signs of recent.** Outlet of vagina relaxed, os uteri open, cervix uteri short, body of womb large, lochial discharge, skin of abdomen relaxed and possessing linear abricants.

**Delocatio.** (*L. de*, from; *locus*, a place. *F. dislocation*, *luxation*.) An old term for *Dislocation*.

**Delodontous.** (*Δηλός*, visible; *ὀδός*, a tooth. *F. delodonté*; *G. sichtbarzahnig*.) Having manifest teeth.

**Delomorphous.** (*Δήλος*, conspicuous; *μορφή*, form.) Conspicuous in appearance.

**D. cells.** See *Cells*, *delomorphous*.

**Del'pech, Jacques Mathieu.** A French surgeon, born at Toulouse 1777; assassinated 1832.

**Delphia.** Same as *Delphinia*.

**Delphin.** (*Δελφίν*, the dolphin.) A neutral fat obtained from several species of dolphin.

**Delphinia.** Same as *Delphinia*.

**Delphinapterus.** (*Δελφίς*, the dolphin; *ἀ, neg.*; *πτερόν*, a wing.) A Genus of the Order *Cetacea*.

**D. albicans.** Fabr. (*L. albicans*, shining white.) The *D. leucas*.

**D. leucas.** Gm. (*Αλευός*, light.) The beluga or white whale. The flesh resembles beef, and the oil is very fine.

**Delphinic.** A salt of *Delphinic acid*.

**Delphine.** Same as *Delphinia*.

**Delphinia.**  $C_{27}H_{49}NO_2$  Couerbe, or  $C_{27}H_{35}NO_2$  Erdmann. An alkaloid obtained from the seeds of *Delphinium staphisagria*. It crystallises in rhombic prisms or tables or in stellæ. It is slightly soluble in water, moderately so in alcohol. Added to syrup, and tested with one drop of sulphuric acid, it gives a pale yellow colour (Schneider's test). Its alcoholic solution has a bitter taste, followed by a sensa-

tion of cold, and then of imperfect sensibility, which lasts a long time. It augments the buccal, mucous, and salivary secretions. It produces nausea and vomiting, with colic and purgation. The respiratory movements are retarded, the inspirations become short and deep, the expirations long and stertorous. Death results from asphyxia. The heart is at first excited, then weakened. It acts as a diuretic. The nervous system is excited, then paralysed. It has been used locally in neuralgia, toothache, and earache.

It is said that digitalis is an antidote to poisoning by delphinia.

**Delphinic.** (*Delphinus*. *F. delphinique*, *phocéanique*.) Relating to the dolphin.

**D. acid.** (*F. acide delphinique*, *acide phocéique*; *G. Delphinsäure*.) Name given to an acid extracted from the fat of the *Delphinus globiceps*, one of the dolphins. It has been found in the ripe berries of the Guelder rose, and is identical with inactive valeric acid, or isopentioic acid.

**Delphinin.** Same as *Delphinia*.

**Delphininum.** Same as *Delphinia*.

**D. hydrochloricum.** A salt of the alkaloid, which has been used internally.

**Delphinium.** (*Δελφίν*, the dolphin, whose head the flowers resemble. *F. dauphinelle*; *G. Rittersporn*.) A Genus of the Nat. Order *Ranunculaceæ*.

Also, the pharmacopœial name, U.S.A., for the seed of the larkspur, *D. consolida*.

**D. aja'cis.** Linn. (*F. pied-d'ahouette des jardins*.) A garden plant, the properties of the seeds of which are similar to those of *D. consolida*; they are often substituted for those of *D. staphisagria*.

**D. azureum.** Mich. (*Mod. L. azarcus*, light blue.) Properties as *D. consolida*.

**D. consolida.** Linn. (*L. consolida*, to make firm. *F. pied d'ahouette des champs*, *bec d'oiseau*, *dauphinelle des champs*.) The species which supplies *Delphinium*, U.S.A. The flowers are diuretic, vermifuge, and emmenagogue, and have been used in ophthalmia; the seeds and root are diuretic; they have been used as a substitute for stavesacre in itch and phthoriosis. An alcoholic tincture of the plant is recommended in asthma and nervous dyspnoea. The plant derives its specific name from its supposed power of healing wounds.

**D. elatum.** Willd. (*L. elatus*, lofty.) Siberian bee larkspur. Properties somewhat like *D. consolida*.

**D. exaltatum.** Ait. (*L. exalto*, to raise.) Properties as *D. consolida*.

**D. grandiflorum.** Linn. (*L. grandis*, great; *flos*, a flower.) Hab. China, Siberia. A narcotic, used in headache, syphilis, and epilepsy.

**D. napellus.** A synonym of *Aconitum napellus*.

**D. ornatum.** Bruch. (*L. ornatus*, adorned.) Properties as *D. aja'cis*.

**D. peregrinum.** Linn. (*L. peregrinus*, foreign.) Used against the bites of insects.

**D. requienii.** De Cand. Properties as *D. staphisagria*.

**D. segutum.** (*L. seges*, a cornfield.) The *D. consolida*.

**D. staphisagria.** Linn. (*F. staphisaigre dauphinelle*, *herbe aux poux*; *G. Lauskraut*.) Stavesacre. Hab. Italy, Greece, Asia Minor. Known to the ancients. It is the *Ἀγροπύρι*

*σταφίς* of Nicædon in second century before Christ. See *Staphylococcus*.

**D. tenuissimum**, Sibth. (*L. tenuis*, thin.) Properties as *D. peregrinum*.

**D. versicolor**. (*L. versicolor*, of changeable colour.) The *D. consolidæ*.

**Delphinoidea**. (*Δελφίς*, a dolphin; *ἰδῶς*, form. *G. Zahnwaale*.) A Division of the *Cetacea*, which includes the seals and dolphins. The jaws are beset with conical teeth of equal size. The anterior cervical vertebrae ankylosed. The posterior ribs articulate only with the transverse processes of the vertebrae.

**Delphinoidin**.  $C_{42}H_{68}N_2O_7$ . An amorphous alkaloid obtained from the seeds of *Delphinium staphisagria*. The alcoholic solution is acid and bitter, and somewhat diminishes the sensibility of the tongue. It melts between  $110^\circ$  and  $112^\circ$  C. If added to syrup, and tested with one drop of sulphuric acid, it gives a green colour.

**Delphinus**. (*Δελφίς*.) The dolphin. A Genus of the Order *Cetacea*.

**D. globiceps**, Cuv. (*L. globus*, a sphere; *caput*, the head.) A species from the fat of which *Delphinic acid* is obtained.

**D. phocaena**. The *Phocaena communis*.

**Delphisia**.  $C_{27}H_{46}N_2O_4$ . An alkaloid obtained from the seeds of *Delphinium staphisagria* in warty crystals. Its properties are similar to those of *Delphinoidin*.

**Delphys**. (*Δελφίς*. *F. matrice, uterus*; *G. Gebärmutter*.) Old name, used by Hippocrates, *de Steril.* xii, 8, for the uterus.

Also (*F. vulve*; *G. weibliches Schamglied*), the vulva, or pudendum muliebre.

**Delta**. (Greek  $\Delta$ , or  $\delta\epsilon\lambda\tau\alpha$ . *F. vulve*; *G. das weibliche Schamglied*.) A name anciently used by Suidas for the pudendum muliebre, from its triangular shape. *Lindenus, Ex. Physiol. Med.* vii, 15.

**Deltidium**. (*Δίλτα*; *ἰδῶς*, likeness.) A triangular space, covered by an operculum, lying between the beak and the hinge of the shells of Brachiopoda.

**Deltifirm**. (*Δίλτα*; *L. forma*, shape.) In the form of the Greek letter delta.

**Deltoïdes**. Same as *Deltoïdes*.

**Deltoïd**. ( $\Delta$ , the Greek letter  $\delta\epsilon\lambda\tau\alpha$ ; *ἰδῶς*, form. *F. deltoïde*.) Having the shape of the Greek letter  $\Delta$ .

In Botany, applied to triangular or trowel-shaped leaves.

In Anatomy, to objects having a triangular form.

**D. aponeurosis**. (*Ἀπνευρώσις*, the tendinous end of a muscle.) A layer of fibrous structure covering the deltoid muscle and sending in prolongations between its fasciculi; it is attached to the clavicle, acromion, and border of the scapular spine, and is continuous with the fascia covering the pectoralis major and the muscles of the back of the arm.

**D. impressio**. (*F. empreinte deltoïdienne*.) The triangular surface on the outer surface of the humerus for the insertion of the tendon of the deltoid muscle.

**D. ligament**. (*F. ligament deltoïdien*.) The triangular ligament which passes from the malleolus internus of the tibia to the astragalus, os calcis, and os naviculare; the internal lateral ligament of the ankle joint.

**D. muscle**. (*F. muscle deltoïde, sous acromio-claviculaire* of Dumas, *sous acromio-*

*huméral* of Chaussier; *G. dreieckiger Armmuskel, Armheber*.) The muscle which forms the prominence of the shoulder. It is of triangular form, the base being above and arising from nearly the whole of the lower edge of the spine of the scapula, from the anterior border of the acromion, and from the outer third of the clavicle; the apex, below, is inserted into a triangular impression above the middle of the outer surface of the humerus. It is supplied by the circumflex nerve and by the posterior circumflex artery. It raises the arm and abducts it from the trunk. The deltoid is a constant muscle in Vertebrates, but it varies much in proportionate size, and may be divided into several parts.

**D. rheumatism**. See *Rheumatism, deltoïd*.

**D. ridge**. A rough prominence for the insertion of the deltoid in some Vertebrata, as the mole, which takes the place of the deltoid impression on the humerus of man.

**Deltoïdes**. ( $\Delta$ , the Greek letter  $\delta\epsilon\lambda\tau\alpha$ ; *ἰδῶς*, likeness. *F. deltoïde*.) Shaped like the Greek letter  $\Delta$ , or delta. Trowel-shaped. A term for the *Deltoid muscle*.

**Deltoïdeus**. (Same etymon.) Belonging to the deltoid muscle or to its origin.

Also, a synonym of *Deltoïdes*.

**Deltorach**. The *Atriplex patula*, because its leaves are somewhat like the Greek letter delta.

**Deluge**. (*F. déluge*; from *L. diluvium*, from *diluo*, to wash away.) A flood, an inundation.

A term applied to a variety of the douche or shower bath, in which a large volume of water is directed upon the part.

**Delusion**. (*L. deludo*, to mock at; from *de*; *ludo*, to play. *G. Verspottung*.) A deception, an hallucination. Although the term delusion is ordinarily used in such manner as to include an illusion and an hallucination, in strictness it is to be defined as a false judgment on objective matters.

**Delusional**. Relating to a delusion.

**D. insanity**. See *Insanity, delusional*.

**Dem**. (Arab. *F. sang*; *G. Blut*.) Old term for blood.

**Dem el muia**. (Ar. *dem*, blood; *muia*, water.) A name given by Prosper Alpinus to a disease which, he says, is proper to Egypt. He considers it to be inflammation of the brain; but others describe it as a pernicious intermittent.

**Demagnetisation**. (*L. de*, from; *magnet*.) The act of depriving of the condition of magnetisation.

**Demagnetise**. (*L. de*; *magnet*.) To remove magnetic force.

Also, used by the mesmerists to indicate the restoration of a mesmerised person to a natural condition.

**Dem'anus**. (*L. de*, neg.; *manus*, a hand.) Old term applied to one who is without hands.

**Demarca'tion**. (*F. démarcation*, from *de*, down; *marquer*, to mark. The latter word is of Teutonic origin, as *G. Mark*, a boundary; Sax. *meare*, a bound.) A marking off of bounds, a separation.

**D. inflammation**. The inflammation which affects the tissues immediately above or around the point from which an eschar, gangrenous, or mortified portion of the body is about to separate.

**D., line of.** The bright red line of inflammation which limits the gangrenous part when it is about to be arrested and to become separated.

**Dem'as.** (Δίμας, the body. F. *corps*; G. *Körper*.) An old term for *Corpus*, or a body.

**Demati'e'i.** (Δηματίον, dim. of δέμα, a bundle.) An Order of filamentous haplomycetes Fungi.

**Dema'tium.** A doubtful Genus of hyphenomycetous Fungi.

**D. gigante'um.** Cheval. (L. *giganteus*, giant.) Oak leather. Used as a dressing for ulcers, and a substance on which to spread plasters.

**Dement'ed.** (L. *dementia*, madness.) Insane; the subject of *Dementia*.

**Demen'tia.** (L. *dementia*, from *de*, neg.; *mens*, the mind. F. *démence*, *bêtise*; G. *Töb-sucht*, *Schwachsinn*, *Blödsinn*.) A species of insanity characterised by unconnected and imperfect ideas following each other in rapid succession, and by the loss of the powers of reflection, continued attention, and eventually of perception, as well as of the moral faculties; it is usually the final stage of the other forms of insanity, and then partakes in some degree of their peculiarities; it is a sequel of many forms of brain disease, of acute fevers, of severe mental shocks, of persistent drunkenness, and of masturbation.

**D. accident'al'is.** (L. *accidens*, part. of *accido*, to happen.) A term for insanity occurring in a person who has once possessed healthy reasoning power.

**D., acu'te.** Same as *D., primary*.

**D. adventitia.** (L. *adventitus*, coming from abroad.) Same as *D. accident'al'is*.

**D. affect'a'ta.** (L. *affectatus*, studied.) The delirium of drunkenness.

**D., alco'holic.** The weakness of mind produced by the excessive use of alcohols.

**D. apath'ica.** (A, neg.; πάθος, a suffering.) The form of dementia in which the patient takes little or no notice of surrounding things.

**D. apoplec'tica.** (Ἀποπληξία, apoplexy.) The progressive weakness of intellect which not infrequently supervenes on an apoplectic attack.

**D. chore'ica.** The weakness of mind produced by *Chorea*.

**D., chron'ic.** (L. *chronicus*, long continued.) The condition which ultimately occurs in the progress of other forms of insanity.

**D. natura'lis.** (L. *naturalis*, natural.) A synonym of *Idiocy*.

**D., organ'ic.** The form which results from organic disease of the brain, such as cerebral hæmorrhage.

**D. paraly'tica.** (L. *paralyticus*, struck with palsy.) General paralysis of the insane.

**D., primary.** (L. *primarius*, of the first rank.) The form which occurs in young persons of feeble mental texture, often as an immediate result of mental shock.

**D. sen'il'is.** (L. *senilis*, aged.) The failure of the mental powers which accompanies old age.

**D. toxic.** (Τοξικόν, poison.) Dementia produced by the long-continued and excessive use of alcohol, opium, Indian hemp, and similar drugs, as well as of the fatuity which sometimes accompanies chronic lead poisoning.

**Deme'phitisa'tion.** (L. *de*, neg.;

*mephitis*, a noxious exhalation from the ground.) The destruction of foul vapours in, or the purifying of, the air.

**Deme'phitise.** (Same etymon.) To remove the foulness from impure air.

**Demera'ra pink.** The *Spigelia anthelmia*.

**Demers'ed.** (L. *demergo*, to dip in water. F. *submergé*; G. *untergetaucht*.) Placed, or growing, beneath the surface of water. Applied to leaves naturally so situated.

**Demes'merise.** (L. *de*, from; *mesmerism*.) To deprive of mesmeric influence.

**Dcme'trium.** (Δημήτριον, Ceres.) An old name of *Cerium*.

**Dem'i.** (Old F. *demi*; from L. *dimidius*, half; from *dis*, a part; *medius*, middle.) A prefix signifying half.

**Demiamplexicauline.** (F. *demi*, half; L. *amplecto*, to embrace; *caulis*, a stem.) Same as *Semiamplexicauline*.

**Demia'poneurotic'us.** (F. *demi*; *aponeurosis*.) The *Semimembranosus* muscle.

**Demia'zygos.** (F. *demi*; *azygos*.) The small azygos vein.

**Demibath.** (F. *demi*.) A bath in which the lower half of the body only is immersed; a slipper or sitz bath.

**Demica'dence.** (F. *demi*, half; L. *cadere*, to fall down.) In Music, an imperfect cadence, or one which falls on any other than the key note.

**Demicir'cular.** (F. *demi*; L. *circulus*, a circle.) Same as *Semicircular*.

**Demiflos'culous.** (F. *demi*; L. *flos*, a flower.) See *Semiflosculous*.

**Deminterosseus.** (F. *demi*; L. *inter*, between; *os*, a bone.) Winslow's name for the *Flexor brevis pollicis*.

**Demilune.** (F. *demi*; L. *luna*, the moon.) A half moon.

**D. of Giannuz'zi.** A granular mass of protoplasm, of semilunar form, which forms part of the cell-contents of the salivary cells. After prolonged action it diminishes, after long rest it increases. It is also described as a series of granular cells, of semilunar form, that are found in the salivary glands between the membrana propria of the alveoli and the cells of the acini.

**Demimembranosus.** (F. *demi*.) Same as *Semimembranosus* muscle.

**Demimet'al.** (F. *demi*.) An old term applied to metals, such as antimony, arsenic, and bismuth, which were not possessed of malleability and ductility, and so were imperfect as compared with the perfect metals, such as gold and silver.

**Demimonstros'ity.** (F. *demi*; *monstruosité*, from L. *monstruosus*, preternatural.) A term applied to such a deformity of an organ as does not interfere with its due functional action.

**Deminervo'sus.** (F. *demi*; L. *nervus*, a tendon.) The *Semitendinosus* muscle.

**Deminer'vous tis'sue.** (Same etymon.) A term for tendinous tissue.

**Demiorbicular'is.** (F. *demi*.) Winslow's name for each half of the *Orbicularis oris* muscle.

**Demiot'ici.** (Δήμιος, an executioner.) Injuries produced by the public executioner.

**Demipetaloid.** (F. *demi*; L. *petalum*, a metal plate, a petal.) See *Semipetaloid*.

**Dempolychrestes.** A homeopathic

term applied to remedies which are next most frequently used to the polychrestes; such are common salt, nitric acid, phosphoric acids, cantharides, cicuta virosa, and others.

**Demissio.** (L. *demissio*, a sinking; from *demitto*, to let down.) A lowering, a sinking.

**D. animi.** (L. *animus*, the mind.) Depression of spirits.

**Demissor.** (L. *demitto*, to send down.) A catheter.

**Demitendinosus.** (F. *demi*.) The *Semitenidinosus* muscle.

**Demitransparent.** (F. *demi*.) Same as *Semitransparent*.

**D. granulations.** A term applied to grey translucent tubercles.

**Demodex.** Owen. (ἡμῶς, fat; ἐμῆ, a worm in wood. G. *Haarbalgmilch*.) A Genus of the Order *Acaridea*, having a vermiform, hairless body; thorax flattened below, semi-cylindrical above, bearing eight feet; abdomen soft, conoidal, finely striated transversely in the adult; rostrum covered above by a membranous prolongation of the epistome, and consisting of two pointed mandibles, two pointed maxillae united towards the base, and lying on them a triangular, mobile, retractile tongue. The females are ovo-viviparous. The larvae are apodous, contractile, and without buccal organs, but possess three pairs of papilliform tubercles; the pupae are like the larvae, but longer; they possess eight papilliform feet and an imperfect rostrum. The internal organs have not yet been seen in the adults; but an anus is brought into sight by the act of defecation.

**D. caninus.** Talb. (L. *caninus*, pertaining to a dog.) See *D. folliculorum*, var. *caninus*, Megnin.

**D. folliculorum.** Owen. (L. *folliculus*, a small bag.) A species which inhabits the sebaceous follicles, especially those of the nose and forehead, lying with the head towards the base of the follicle; the female is 36 to 40 mm. long, the male 30 mm. It produces little injurious effect, but sometimes a pustule results.

**D. folliculorum**, var. **caninus**, Megnin. (L. *canis*, a dog.) A smaller variety with a stronger rostrum and a shorter abdomen than the *demodex* of man. It is found in the sebaceous follicles of the whole skin of the dog, and produces a form of skin disease known as black or follicular mange.

**D. folliculorum**, var. **cat'i**, Megnin. (L. *catius*, a cat.) A variety about a fourth smaller than that of the dog; it inhabits the sebaceous glands of the ear.
